A

DICTIONARY

OF

MUSIC AND MUSICIANS.

IMPROPERIA, *i. e.* 'The Reproaches.' A series of Antiphons and Responses, forming part of the solemn Service, which, on the morning of Good Friday, is substituted for the usual daily Mass of the Roman Ritual.

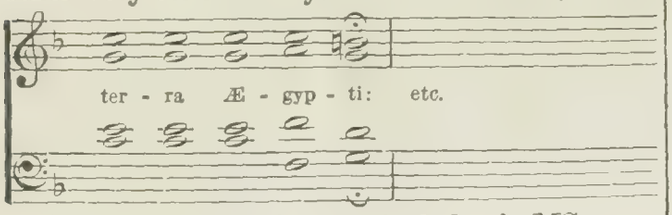
The text of the *Improperia*, written partly in Latin, and partly in Greek, is designed to illustrate the sorrowful remonstrance of our Lord with His people, concerning their ungrateful return for the benefits He has bestowed upon them. The touching words in which these remonstrances are expressed were originally sung to well-known Plain Chaunt melodies, preserved in the *Graduale Romanum*, and still retained in very general use, both in England, and on the Continent: but, since the Pontificate of Pope Pius IV, they have been invariably chaunted, in the Sistine Chapel, to some simple, but exquisitely beautiful *Faux bourdons*, to which they were adapted, by Palestrina, in the year 1560. In depth of feeling, true pathos, and perfect adaptation of the music to the sense of the words, these wonderful *Improperia* have never been exceeded, even by Palestrina himself. We may well believe, indeed, that he alone could have succeeded in drawing, from the few simple chords which enter into their construction, the profoundly impressive effect they never fail to produce; an effect so strictly in accordance with that of the solemn Ceremony with which they are associated that we can only hope to render the one intelligible by describing it in connexion with the other.

A small Crucifix having been laid upon the Altar Step, the Clergy, first, and afterwards the people, kneel down to kiss its Feet. While they are slowly approaching the Sanctuary, by two and two, for this purpose, the *Improperia* are sung, very softly, and without any accompaniment whatever, by two Antiphonal Choirs, which answer each other, by turns, in Greek, and Latin, sometimes in full Chorus, and sometimes employing the Voices of a few leading Choristers only, on either side. After the last 'Reproach,' and the Response which follows it, the two Choirs unite in singing the first Verse of the Psalm, 'Deus misereatur nostri,' preceded, and followed, by the Antiphon, 'Crucem tuam adoramus.' The Hymn 'Pange lingua' is then sung, entire, with the Verse, 'Crux fidelis,' divided into two portions, which are sung, alternately, between the other Strophes. It is the duty of the *Maître de Chapelle* to take care that this music occupies exactly the same time as the ceremony of 'Creeping to the Cross' (as it was formerly called, in England). Should there be but few people present, he is at liberty to omit any portion of it: should there be many, he may cause as much as he considers necessary to be sung over again.[1] In either case, when all present have kissed the Crucifix, the Candles on the Altar are lighted: a new Procession is formed: the Blessed Sacrament is carried, with great solemnity, from the Chapel in which it has been reserved since the Mass of Holy Thursday, to the High Altar, the Choir singing the Hymn, 'Vexilla regis,' as they precede it on its way: and the Service called 'The Mass of the Presanctified' then proceeds in accordance with directions contained in the Missal.

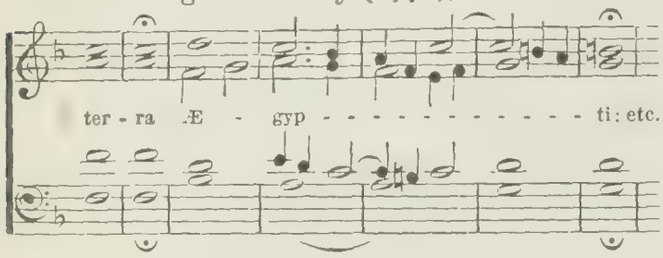
No printed copy of the Improperia was issued, either by Palestrina himself, or the assignees of his son, Igino. They were first published in London, by Dr. Burney; who, on the authority of a MS. presented to him by the Cavaliere Santarelli, inserted them, in the year 1771, in a work entitled 'La Musica della Settimana Santa,' which has now become very scarce. Alfieri also printed them among his Excerpta, published, at Rome, in 1840; and, in 1863, Dr. Proske included them in the fourth volume of his *Musica*

[1] Mendelssohn, who, in the year 1831, was much impressed, both by the music, and the Ceremony, laments, in his well-known letter to Zelter, that, the crowd not being very great, he had not an opportunity of hearing the Responses repeated so often as he could have wished.

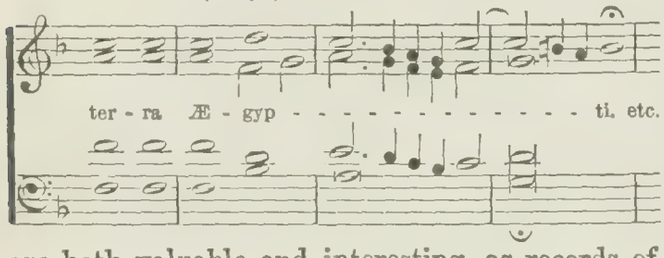
Divina. These three editions differ from each other very considerably. That of Proske,



copied from the Altämps-Otthoboni MS. preserved in the Vatican Library, may fairly be assumed to represent the work exactly in the condition in which Palestrina left it: but the varied readings of Burney (1771),



and of Alfieri (1840),



are both valuable and interesting, as records of the *abellimenti* used in the Pontifical Chapel at the time of their transcription. Burney's version was reproduced, by Choron, among his examples of the Great Masters, in 1836; and again, in 1840, by Vincent Novello, in 'The Music of Holy Week,' which is still in print. [W.S.R.]

IMPROVISATION, an equivalent term for Extempore Playing or Extemporising. Moscheles has left a curious account of the way in which Mendelssohn and he used to amuse themselves by improvising *à quatre mains*, a feat already mentioned in respect to Beethoven and Wölffl under Extempore. 'We often,' says he (Life, i. 274), 'improvise together on his magnificent Erard, each of us trying to dart as quick as lightning on the suggestions contained in the other's harmonies and to make fresh ones upon them. Then, if I bring in a theme out of his music, he immediately cuts in with one out of mine; then I retort, and then he, and so on *ad infinitum*, like two people at blind man's buff running against each other.'

Nottebohm remarks in his 'Beethoveniana' (p. 54) that of all Beethoven's string quartets that in C♯ minor (op. 131) has most the character of an Improvisation, but at the same time he quotes alterations from the sketchbooks (15 of one passage only) which show that the work was the very reverse of an impromptu, and the result of more than ordinary labour and vacillation, thus corroborating the remark made in the article on Beethoven in this Dictionary (p. 174 *a*) that the longer he worked at his phrases, the more apparently spontaneous did they become. [G.]

INCLEDON, Charles Benjamin,—the second of which names he despised and seldom used,—was the son of a medical practitioner at St. Kevern, Cornwall, where he was born in 1763. At 8 years of age he was placed in the choir of Exeter Cathedral, where he received his early musical education, first from Richard Langdon and afterwards from William Jackson. In 1779 he entered on board the Formidable, man-of-war, 98 guns, under Capt. (afterwards Rear-Admiral) Cleland. On the West India station he changed his ship for the Raisonable, 64 guns, Captain Lord Hervey. His voice had now become a fine tenor, and his singing attracted the attention of Admiral Pigot, commander of the fleet, who frequently sent for him to join himself and Admiral Hughes in the performance of glees and catches. Incledon returned to England in 1783, when Admiral Pigot, Lord Mulgrave, and Lord Hervey gave him letters of introduction to Sheridan and Colman. Failing to obtain an engagement from either manager he joined Collins's company and made his first appearance at the Southampton Theatre in 1784 as Alphonso in Dr. Arnold's 'Castle of Andalusia.' In the next year he was engaged at the Bath Theatre, where he made his first appearance as Belville in Shield's 'Rosina.' At Bath he attracted the attention of Rauzzini, who gave him instruction and introduced him at his concerts. In 1786 he made his first appearance in London at Vauxhall Gardens with great success, and during the next three years he was engaged there in the summer and at Bath in the winter. On Sept. 17, 1790, he made his first appearance at Covent Garden Theatre as Dermot in Shield's 'Poor Soldier,' and from that time for upwards of 30 years held a high position in public favour, singing not only at the theatre and Vauxhall, but also at concerts, the Lenten oratorios, and the provincial music meetings. In 1817 he visited America, and made a tour through a considerable part of the United States, where he was received with great applause During the latter years of his life he travelled through the provinces under the style of 'The Wandering Melodist,' and gave an entertainment which was received with much favour. Early in 1826 he went to Worcester for the purpose of giving his entertainment, where he was attacked by paralysis, which terminated his existence on Feb. 11. He was buried at Hampstead, Middlesex. Incledon's voice and manner of singing were thus described by a contemporary:—'He had a voice of uncommon power both in the natural and falsette. The former was from A to G, a compass of about fourteen notes; the latter he could use from D to E or F, or about ten notes. His natural voice was full and open, neither partaking of the reed nor the string, and sent forth without the smallest artifice; and such was its ductility that when he sung pianissimo it retained its original quality. His falsette was rich, sweet and brilliant, but totally unlike the other. He took it without preparation, according to circumstances either about D, E, or F, or ascending an octave, which

was his most frequent custom; he could use it with facility, and execute ornaments of a certain class with volubility and sweetness. His shake was good, and his intonation much more correct than is common to singers so imperfectly educated. . . . He had a bold and manly manner of singing, mixed however with considerable feeling, which went to the hearts of his countrymen. He sang like a true Englishman. . . . His forte was ballad, and ballad not of the modern cast of whining or wanton sentiment[1], but the original manly energetic strain of an earlier and better age of English poesy and English song-writing, such as 'Black-eyed Susan' and 'The Storm,' the bold and cheering hunting song, or the love song of Shield, breathing the chaste and simple grace of genuine English melody.' All who had heard Incledon's singing of 'The Storm' (which he sang in character as a sailor) were unanimous in pronouncing it unique, both as a vocal and an histrionic exhibition. Of the songs written expressly for him it may suffice to mention Shield's 'Heaving the lead' and 'The Arethusa.'

CHARLES VENANZIO INCLEDON, his eldest son, originally engaged in agricultural pursuits, but on Oct. 3, 1829, appeared at Drury Lane Theatre as Young Meadows in 'Love in a Village,' and shortly afterwards played Tom Tug in Dibdin's 'Waterman.' Meeting however with but very moderate success he returned to his former avocation, and, it is believed, emigrated to one of the colonies. [W.H.H.]

INGANNO, *i.e.* Deception. Any false or deceptive Cadence, in which the Bass proceeds, from the Dominant, to any other note than the Tonic :—

[W.S.R.]

INGLOTT, WILLIAM, born 1554, became organist of Norwich Cathedral. He was distinguished for his skill as a performer on the organ and virginals. He died in Dec. 1621 aged 67, and was buried Dec. 31 in the cathedral, where on the west side of the southern pillar adjoining the entrance to the choir a painted monument to his memory was placed June 15, 1622. Nearly 90 years afterwards the monument, having become dilapidated, was restored at the expense of Dr. Croft. An engraving of it in its restored state is given in 'The Posthumous Works of Sir Thomas Browne,' 1712. [W.H.H.]

INITIALS, ABSOLUTE. Though it is not necessary that a Plain Chaunt Melody should begin on the Final, Dominant, or even Mediant, of the Mode in which it is written, the choice of the first note is not left entirely to the Composer's discretion. He can only begin upon one of a series of sounds, selected from the Regular or Conceded Modulations of the Scale in which he writes, and invariably occupying the first place in all Plain Chaunt Melodies referable to that Scale. These sounds are called Absolute Initials. Their number varies, in different Modes; no Tonality possessing less than three, or more than six: and, among them, there are a few, which, though freely permitted, by law, are, in practice, very rarely used.

In the following Table, the letters, enclosed in brackets, denote the more unusual Initials: while those printed in Italics indicate that the sounds they represent are to be taken in the lower Octave, even though they should thus be brought beyond the normal bounds of the Mode.

Mode I.	*C.* D. F. G. A.
Mode II.	A. C. D. F. [E.]
Mode III.	E. [F] G. *C.*
Mode IV.	C. D. E. F. [G.] [A.]
Mode V.	F. A. C.
Mode VI.	F. [*C.*] [D.]
Mode VII.	G. [A] B. C. D.
Mode VIII.	*C.* D. F. G. A. C.
Mode IX.	*G.* A. C. D. E.
Mode X.	E. G. A. C. [B.]
(*Mode XI.*)	B. [C.] D. G.
(*Mode XII.*)	G. A. B. C. [D.] [E.]
Mode XIII.	C. [D.] E. G.
Mode XIV.	[*G.*] [A.] C. [D.]

The selection of some of these sounds may seem, at first sight, a little arbitrary: but, in truth, it is sometimes very difficult to decide upon a suitable first note. This is particularly the case with regard to Antiphons, the first notes of which exercise a marked effect upon the Tones to which the corresponding Psalms are sung. It will be remembered that the entire Antiphon is always repeated, immediately after the Psalm. It follows, therefore, that, unless care be taken to bring the last note of the Ending of the Psalm Tone into true melodic correspondence with the first note of the Antiphon, forbidden intervals may arise. By a careful arrangement of the Absolute Initials, the earlier writers on Plain Chaunt did their best to reduce the danger of introducing such intervals to a minimum. [See ANTIPHON; MODES, THE ECCLESIASTICAL.] [W.S.R.]

INNIG. A word used by Beethoven during his German fit (op. 101, 1st movement; 109, last do.; 121 *b*), and Schumann (op. 12, 'Des Abends'; op. 24, No. 9; op. 56, Nos. 2 and 4, Manfred music, No. 2, etc.) to convey an intensely personal, almost devotional, frame of mind. [G.]

IN NOMINE. A somewhat vague name, bestowed, by old English writers, on a certain kind of Motet, or Antiphon, composed to Latin words. It seems to have been used, in the first instance, for compositions the text of which began with the words in question, or in which those words were brought prominently forward: such as the Introit, 'In nomine Jesu'; the Psalm, 'Deus, in nomine tuo'; and other similar cases. But its signification certainly became more extended: for Butler, writing in 1636, commends 'the *In nomines* of Parsons, Tye, and Taverner,' just as we should commend the Madrigals of Weelkes, or Morley, or Gibbons. The name is even employed for instrumental pieces.

[1] This was written in 1818, during Incledon's absence in America.

The term, *In nomine*, is also very reasonably applied to a Fugue, in which the solmisation of the answer does not correspond with that of the subject, and which, therefore, is a fugue in name only. [See HEXACHORD.] [W.S.R.]

IN QUESTA TOMBA OSCURA. A song of Beethoven's for contralto, with P. F. accompaniment, to words by Carpani, written probably at the invitation of the Countess von Rzewuska, and forming one of sixty-three compositions to the same words by various musicians, professional and amateur. Among the most eminent of the contributors are Salieri, Sterkel, Cherubini, Asioli, Righini, Zingarelli, Weigl, Dionis Weber, Tomaschek, Alois Förster, Paer, Eberl, Czerny. Zingarelli sent ten versions with quartet accompaniment. Czerny's single setting occupied 11 folio pages. Beethoven's was the last in the volume, and is the only one which has survived. The Allgemeine Musik. Zeitung for Oct. 19, 1808, in announcing the publication, prints two of the settings, by Salieri and Sterkel, and in Jan. 1810, two more by Reichardt. For another joint-stock volume in which Beethoven took part, see VATERLÄNDISCHE KÜNSTLERVEREIN. [G.]

INSCRIPTION (Lat. *Inscriptio*, Ital. *Motto*). A Motto, or Sign, or combination of both, placed at the beginning of a Canon, to indicat , more or less clearly, the manner of its Resolution.

During the latter half of the 15th century, the founders of the Flemish School—by whom the more abstruse forms of Imitation were assiduously cultivated—seem chiefly to have aimed at rendering the solution of their *Enimme*, or Ænigmatical Canons, impossible. Some of their most extravagant conceits are presented in the shape of Crosses, Circles, Squares, Triangles, Rainbows, Chess-boards, Sun-dials, and other equally fantastic designs, without the addition of any clue whatever to their hidden meanings. (See examples in Hawkins, Hist. chap. 67.) But, more frequently, they are written in a single line—called, the *Guida*—headed by some old proverb, or well-known quotation from Holy Scripture, which, though ostensibly vouchsafed for the purpose of giving the student some little insight into the secret of their construction, tends rather, as a general rule, to increase his perplexity. Headings, such as these, are called Inscriptions: and so obscure is their occasional meaning, that even Glareanus calls one of them *τῆς σφιγγὸς αἴνιγμα*.

Foremost among the composers of these ingenious works, and high above them all, stands Josquin des Prés, the refinement of whose scholarship is as clearly proved, by the grace of his *Motti*, as his quite exceptional genius is by the smooth flow of the Canons to which they are prefixed. In the second Agnus Dei of his 'Missa L'Ami baudichon,' he intimates that the Tenor is to be silent, by the pretty Inscription, 'Agnus secundum non est cum grege.' In another place, he veils the same meaning under the Greek proverb, *βάτραχος ἐκ Σερίφου*, in allusion to Ælian's statement that the frogs on the Island of Seriphos do not croak. Other writers have contented themselves with 'Vox faucibus hæsit.'

To shew that the second Voice is to begin at the end, and sing backwards, Hobrecht says, plainly enough, 'Ut prius, sed dicitur retrograde.' Pierre de la Rue more sternly exclaims, 'Vade retro, Sathanas.' Another quaint old Composer writes, 'Canit more Hebræorum'; referring to the custom of reading Hebrew from right to left. Josquin sums up the whole matter in a single word—'Cancriza,' *i.e.* walk like a crab. Equally terse is the motto prefixed to the third Agnus Dei in his 'Missa L'Omme armé'; where the omission of all rests, in one of the parts, is indicated by the direction 'Clama ne cesses.' Sometimes he gives us a French motto, as in his 'Missa de Beata Virgine,' where 'Vous jeunerez les quatre temps' shews that one part is to wait four semibreves, before taking up the Subject—a direction which is less poetically expressed by another writer, in the words 'Fuga in epidiapason, post duo tempora'—'a Canon in the Octave above, after two Semibreves.'

Some of Hobrecht's Inscriptions are very obscure. 'Accidens potest inesse et abesse præter subjecti corruptionem' implies that the part may be sung, or omitted, at will, without injury to the music. 'Decimas reddo omnia quæ possideo' shews that the (unwritten) Bass must sing a Tenth below the Discant. 'Tu tenor cancriza, et per antifrasin canta' indicates that the Tenor is to sing backwards, and, with all the intervals inverted. Not less oracular is Mouton's 'Duo adversi adverse in unum,' which means that two singers are to stand opposite each other, with the Canon between them, each reading it upside down from the other's point of view—an arrangement which is also dictated by 'Respice me, ostende mihi faciem tuam.' More mysterious still is 'Justitia et Pax osculatæ sunt'—indicating that the two performers are to begin at opposite ends, and meet in the middle.

When black notes are to be sung in the time of white ones, we sometimes find 'Nigra sum, sed formosa'; or, 'Noctem in diem vertere'; or, 'Dum habetis lucem credite in lucem.' By 'Crescit in duplum' (or 'triplum') we understand that the notes are to be sung in Double (or Triple) Augmentation. 'Tres dent sex voces' means, that each of the three written parts is to be doubled, in Canon, so as to form a composition for six Voices.

The list of these hard sayings is interminable; and the hardness of many of them is increased by the Signs of Mode, Time, and Prolation, with which they are sometimes accompanied. For instance, a Semicircle, a Semicircle with a Bar drawn through it, and a Circle with a Point in the centre, would, if placed one above the other, at the beginning of a Stave, serve to indicate that one Voice was to sing four Crotchets in a Bar, another, four Minims, and the third, three Semibreves. In the last Agnus Dei of Pierre de la Rue's 'Missa L'homme armé,' we find a combination of no less than four such Signs.

Following the example of Palestrina, the great Composers of the 'Golden Age' cast, all these pedantries aside, and wrote their really beautiful

Canons in notation which any singer could readily understand. Palestrina himself delights in making two Voices sing in Canon, while three or four others carry on the Subject in close Imitation, or complicated Free Fugue; as in the lovely second Agnus Dei of his 'Missa Brevis,' and many others, equally beautiful. In all these cases, the Voices to which the Canon is committed are expected to sing from a single part; but, the Inscription prefixed to that part is so plain, that they find no difficulty whatever in doing so. Thus, 'Symphonizabis' (Missa Brevis as above) indicates a Canon in the Unison. 'Canon in Diapason' or 'Epidiapason,' a Canon in the Octave above, and so on. The sign, 𝄋, or some similar figure—called the *Presa*—indicates the place at which the second Voice is to begin; and a pause, 𝄐, is placed over the note on which it ends. The two Voices can, therefore, sing just as easily from a single part, as from two separate copies.

In modern editions, the matter is still farther simplified, by writing out the Canon in full; though, in the best copies, the Inscription is still carefully retained. [W.S.R.]

INSTITUT, PRIX DE L', a prize of 20,000 francs founded by Napoleon III. in 1859, in place of the 'Prix triennal' instituted by the decree of April 1855. By a second decree, of Dec. 22, 1860, it was enacted that from and after 1861 the prize should be biennial, and should be awarded to such work or discovery, of the ten years previous to the award, as should be deemed most honourable or useful to the nation, in the department of each of the five Academies of the Institute successively—l'Académie Française, l'Académie des Inscriptions et Belles lettres, des Sciences, des Beaux-Arts, des Sciences morales et politiques. The first prize was adjudged to M. Thiers, as the representative of the Académie Française, in 1861. In 1867 the turn of the Académie des Beaux Arts arrived, and the prize was then awarded to Félicien David, the only musician who has obtained it, the award on the second occasion, 1877, having been made to a sculptor—M. Chapu. [G.C.]

INSTRUMENT (Lat. *Instrumentum*, Ital. *Stromento*). In general language, a tool, that by means of which work is done; hence, in music, an apparatus for producing musical sounds. Numerous as are the various kinds of instruments in practical use at the present day, they form but a small proportion of the immense number which have been invented and used from time to time. Out of nearly 340 different kinds mentioned in a list in Koch's *Musikalisches Lexicon* (art. 'Instrument') only 67 are given as being in use at present, and some even of these are merely varieties of the same genus. Various causes have contributed to the survival of certain instruments and the extinction of others. Quality of tone would of course be a powerfully operating cause, and practicableness in a mechanical sense would be scarcely less so; but besides this, the various ways of combining instruments in performance which prevailed at different periods, had the effect of proving certain of them to be unnecessary, and so indirectly tended to abolish them. Thus before the time of Lully it was customary for the most part to combine instruments of the same class only, and we read of a 'Concert of Violins,' 'Concert of Flutes,' etc.; this fact rendered necessary flutes of deeper compass than are now used, and accordingly we find tenor and bass flutes, extending downwards to F on the fourth line of the bass stave.[1] So soon however as the combination of wind and stringed instruments was found to be preferable, the feeble bass of the flute would be insufficient and unnecessary, and the larger kinds of flutes naturally enough fell into disuse.

All musical sounds are the result of atmospheric vibrations; and such vibrations are excited either directly, by blowing with suitable force and direction into a tube, or indirectly, by agitating an elastic body, such as a stretched string, whereby it is thrown into a state of vibration, and communicates its own vibrations to the surrounding air. One or other of these two is the acting principle of every musical instrument. On tracing the history of the two it does not appear that either is of earlier date than the other; indeed tradition with respect to both carries us back from history into myth and fable, the invention of the earliest form of stringed instrument, the Lyre, being attributed to the god Mercury, who finding the shell of a tortoise cast upon the bank of the Nile, discovered that the filaments of dried skin which were stretched across it produced musical sounds; while the invention of the *tibia* or pipe—the earliest form of which is said to have been made (as its name implies) from the shank-bone of a crane—is variously ascribed to Pan, Apollo, Orpheus and others.

To attempt to describe, however briefly, all the various kinds of instruments which have been in use from the earliest ages to the present day, would extend this article far beyond its due limits. It will only be possible to mention those which are still of practical importance, referring the reader for a fuller description to the articles under the headings of their various names, and for the earlier and now obsolete kinds to Hawkins's History[2] of Music, which contains copious extracts from the works of Blanchinus, Kircher, Luscinius, and others, illustrated by wood-cuts.

In all essential respects, instruments may be divided into three classes; namely, wind instruments, the descendants of the pipe; stringed instruments, descended from the lyre; and instruments of percussion. This classification, which is of considerable[3] antiquity, is not entirely satisfactory, as there are certain modern instruments which can scarcely be classed under any one of its heads without confusion—for instance the Harmonium, which although played by wind, is not strictly a wind-instrument, since

[1] In Lully's ballet 'Le triomphe de l'amour,' Paris, 1681, there is a quartet of flutes, the lowest part of which is only possible on a bass flute.

[2] Reprinted by Novello and Co. in 2 vols. 8vo. 1853.

[3] Cassiodorus, writing in the 6th century, gives the same three divisions, under the names *inflatilia*, *tensibilia*, and *percussionalia*.

its sounds are produced not from pipes but from elastic reeds. Nevertheless the old arrangement is sufficiently comprehensive, and appears more practical than any other.

1. Wind instruments (Ger. *Blasinstrumente*; Ital. *Stromenti da vento*; Fr. *Instruments à vent*). These are of two kinds; namely, those in which a separate pipe or reed is provided for each note, and those in which the various notes are produced from a single tube, either by varying its length, or by the action of the lip in blowing. In the first kind the wind is provided by means of bellows, and is admitted to each individual pipe or reed by the action of a key. The instruments of this kind are the Organ, Harmonium, Concertina, and Accordion. The only members of this class which differ from the others are the Syrinx or Pan's-pipes (which although it possesses a pipe for each sound has neither keys nor bellows, but is blown directly with the breath) and the Northumbrian and Irish Bag-pipes, which are provided with bellows, but have their pipes pierced with holes, as in the flute. Wind-instruments which have but a single tube are made of either wood or metal (generally brass), and the various sounds of which they are capable are produced, in the case of two of the metal instruments—the Horn and Trumpet,—by simply altering the tension of the lips in blowing, while in the others and in the wood instruments this alteration is supplemented and assisted by varying the length of the tube. In brass instruments the length of the tube is altered in three different ways; first, by means of a slide, one part of the tube being made to slip inside the other, after the manner of a telescope; secondly, by valves, which when pressed have the effect of adding a small piece of tube to the length of the circuit through which the wind passes; and thirdly, by keys, which uncover holes in the tube, and so shorten the amount of tube which is available for the vibrating column of air. The brass instruments with slide are the Trombone[1] and Slide Trumpet; those with valves are the Cornet à pistons, Valve Horn, Valve Trumpet, Flügelhorn or Valve Bugle, Saxhorn, Valve Trombone, Euphonium, Bombardon, Bass Tuba, and Contrabass Tuba; while those with keys are the Key-bugle or Kent Bugle and the Ophicleide. All these are played with a cup-shaped mouthpiece. Wood wind-instruments have the tube pierced with holes, which are covered by the fingers or by keys, and the uncovering of the holes shortens the amount of tube available for vibration and so gives notes of higher pitch. Some of them receive the breath directly through a suitably shaped opening; these are the Flute, Piccolo (i.e. *flauto piccolo*, a small flute), Fife, and the Flageolet and the toy 'tin whistle,' which two last are survivors of the now obsolete family of *flutes à bec*. In others the sound is produced from the vibrations of a split reed, which is either single and fixed in a frame or mouthpiece, as in the Clarinet and Bassethorn [see CLARINET], or double, consisting of two reeds bound together so as to form a tube with the upper end flattened out, as in the Oboe, Cor Anglais or Oboe di Caccia, Bassoon, and Contrafagotto or Double Bassoon. One wind-instrument of wood remains to be mentioned, the use of which is becoming rare, though it is still occasionally met with in military bands. This is the Serpent, which differs from all other wood instruments in having a cup-shaped mouthpiece, similar to that of the trumpet. It is the only remaining member of a now extinct family of German wood instruments called Zinken (Ital. *Cornetti*), which were formerly much used in the Church service, and were in use as late as 1715 for playing chorales at the top of church towers.[2]

2. Stringed Instruments (Ger. *Saiten-instrumente*; Ital. *Stromenti da corde*; Fr. *Instruments à cordes*). In all these the sound is produced from stretched strings of either catgut, wire, or occasionally silk, the naturally feeble resonance of which is in all cases strengthened by a sound-board. As with the wind-instruments, some of these are provided with a separate string for each note, while in others the various sounds are obtained by shortening the strings, of which there are now never fewer than three, by pressure with the fingers. Stretched strings are thrown into vibration in three different ways—friction, plucking, and percussion.

The mode of friction usually employed is that of a bow of horse-hair, strewn with powdered rosin (see BOW), and instruments so played are called 'bowed instruments' (Ger. *Streichinstrumente*). They are the Violin, Viola or Tenor, Violoncello, and Contrabasso or Double Bass; and an humble though ancient member of the same family is occasionally met with in the Hurdy-gurdy, in which the friction is produced by the edge of a wooden wheel strewn with rosin and revolving underneath the strings. In this instrument the stopping or shortening of the strings is effected by means of a series of keys, which are pressed by the fingers of the left hand, while the right hand turns the wheel. [See HURDY-GURDY.]

The instruments played by plucking are the Harp, in which each note has a separate string, and the Guitar, Mandoline, and Banjo, in which the strings are 'stopped' by pressure with the fingers upon a finger-board, provided with slightly-raised transverse bars, called frets. In the Cither or Zither, an instrument much used in Switzerland and the Tyrol, 4 of the 29 strings are capable of being stopped with the fingers, while the remaining 25 are played 'open,' giving but one sound each. In most of these instruments the plucking takes place with the tips of the fingers (*pizzicato*), but in the Zither the thumb of the right hand is armed with a ring bearing a kind of metal claw. In the now obsolete Harpsichord and Spinet the strings were also played by plucking, each key being provided with a small piece of quill or stiff leather. [JACK.] Only two stringed instruments

[1] Mr. Ford's Slide-Horn is highly spoken of (see p. 794 a), but it has not yet come into actual use.

[2] In 1636 was published in Paris a 'Phantasie à cinq parties, pour les Cornets, par H. Lejeune.' J. S. Bach occasionally uses them in his Church Cantatas.

are played by percussion—the Pianoforte and the Dulcimer; in the former the strings are struck by hammers attached to the keys, and in the latter by two hammers held in the hands.

3. Instruments of Percussion (Ger. *Schlag-instrumente*; Ital. *Stromenti per la percussione*; Fr. *Instruments à percussion*). These are of two kinds, those whose chief use is to mark the rhythm, and which therefore need not, and in many cases do not, give a note of any definite pitch, and those which consist of a series of vibrating bodies, each giving a definite note, so that the whole instrument possesses a scale of greater or less extent. Of the instruments of indefinite pitch, some are struck with drumsticks or other suitable implements; these are the Bass Drum, Side Drum, Tambour de Provence, Gong or Tam-tam, and Triangle; others, such as Cymbals and Castagnettes, are used in pairs, and are played by striking them together; and one, the Tambourine, or Tambour de Basque, is struck with the open hand. The instruments of percussion which give definite notes, and which are therefore musical rather than rhythmical, are the Kettle Drums (used in pairs, or more), Glockenspiel (bells used in military bands and occasionally with orchestra), and the Harmonica, consisting of bars of either glass, steel, or wood, resting on two cords and struck with a hammer.

4. There are still one or two instruments to be mentioned which are not easily classed in any of the three categories just described. In the Harmonium, which we have accepted as a wind-instrument, the sound is really produced by the vibrations of metal springs, called reeds, though these vibrations are certainly excited and maintained by the force of wind; so also stretched strings may be acted upon by wind, and of this the Æolian Harp is an illustration. [See ÆOLIAN HARP.] The instrument or organ of Mr. Baillie Hamilton, which is said to be a combination of tongue and string, is not sufficiently perfected to be described here.

Metal tongues or reeds may also be played by plucking, and this method is employed in the so-called Musical Box, in which a series of metal tongues are plucked by pins or studs fixed in a revolving barrel.—Another instrument played by plucking, but possessing only a single reed or tongue, is the Jews-harp. In respect to the production of its various notes this instrument differs from all others. It is played by pressing the iron frame in which the reed is fixed against the teeth, and while the reed is in a state of vibration altering the form of the cavity of the mouth, by which means certain sounds of higher pitch than the fundamental note may be produced, and simple melodies played. These higher sounds appear to be upper 'partial-tones' of the fundamental note of the reed, which are so strongly reinforced by the vibrations of the volume of air in the mouth as to overpower the fundamental tone, and leave it just audible as a drone bass.—In the Harmonica proper, another mode of sound-production is employed, the edges of glass bowls being rubbed by a wetted finger. [See HARMONICA.]

INSTRUMENTATION, see ORCHESTRATION.

INTERLUDE (Germ. *Zwischenspiel*). A short Voluntary, played, by English Organists of the older School, between the verses of a Hymn, or Metrical Psalm.

Fifty, or even thirty years ago, a good extempore Interlude was regarded as no unfair test of an Organist's ability. The late Mr. Thomas Adams had a peculiar talent for Voluntaries of this kind: and, at S. Peter's, Walworth, John Purkis charmed his hearers, at about the same period, with delightful little effusions which were frequently far more interesting than the Hymns between the verses of which they were interpolated. Of late years, however, the Interlude has fallen so much into disuse that it is doubtful whether a good one is now to be heard in any Church in England.

In French Cathedrals, a long and elaborate Interlude is usually played, at Vespers, between the verses of the Magnificat, as well as those of the Hymn: and, at Notre Dame de Paris, S. Sulpice, and other Churches built on the same grand scale, where the Organ in the Choir is supplemented by a larger one at the western end of the Nave, a fine effect is sometimes produced by the alternate use of the two instruments; the smaller one being employed for the accompaniment of the voices, while the larger is reserved for the Interludes alone.

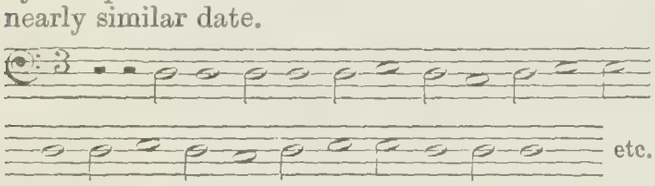
Interludes are played, in Germany, not between the verses of the Choral, but between the separate lines of each verse—an arrangement, which, however effective it may be in the hands of an accomplished Organist, is generally very much the reverse in those of a tyro. (Good examples are to be found in Ch. H. Rink's 'XXIV Choräle,' op. 64, 1804.) The delicious orchestral Interludes which embellish the Choral, 'Cast thy burthen upon the Lord,' in Mendelssohn's 'Elijah,' and those on a more extended scale in 'Nun danket' in the 'Lobgesang,' were evidently suggested by this old German custom; while the grand crash of brass instruments, introduced between the lines of 'Sleepers, wake!' in the same composer's 'S. Paul,' illustrates, perhaps, the most striking effect which it has yet been made to produce. [See CHORALE.]

For an explanation of the word Interlude, in its dramatic sense, see INTERMEZZO. [W.S.R.]

INTERMEZZO (Fr. *Intermède. Entr' Acte.* Old. Eng. *Enterlude*). I. A dramatic entertainment, of light and pleasing character, introduced between the Acts of a Tragedy, Comedy, or Grand Opera; either for the purpose of affording an interval of rest to the performers of the principal piece; of allowing time for the preparation of a grand scenic effect; or, of relieving the attention of the audience from the excessive strain demanded by a long serious performance.

The history of the Intermezzo bears a very important relation to that of the Opera; more

especially to that of the Opera Buffa, with the gradual development of which it is very intimately connected. The origin of both may be traced back to a period of very remote antiquity. It is, indeed, difficult to point out any epoch, in the chronicles of Dramatic Art, in which the presence of the Intermezzo may not be detected, now in one form, and now in another. Its exact analogue is to be found in the *Satiræ* of the old Roman Comedy. In the Mysteries and Miracle Plays of the Middle Ages—those strange connecting-links between old things and new—it assumed the form of a Hymn, or Carol, sung, either in chorus, or by the *Angelo nunzio*, to a sort of Chaunt which seems to have been traditional. In a rare old work, by Macropedias, entitled, 'Bassarus. Fabula festivissima' (Utrecht, 1553), some verses, adapted to a melody by no means remarkable for its festive character, are given at the close of every scene. And the popularity of the Tune is sufficiently proved by its persistent reiteration in other works of nearly similar date.



These rude beginnings contrast strangely enough with the highly finished Intermezzi decennially presented in the course of the Passion-Play at Ober-Ammergau. But, the Passion-Play is known to have undergone many important improvements, within a comparatively recent period; and its case is, in every way, so exceptional, that it is no easy task to determine its true position as a historical landmark.

Almost all the earlier Italian plays were relieved by Intermezzi. Many of these were simply Madrigals, sung by a greater or less number of voices, as occasion served. Sometimes they were given in the form of a Chorus, with instrumental accompaniment. The most favourite style, perhaps, was that of a Song, or Canzonetta, sung, by a single performer, in the character of Orpheus. In no case was the subject of these performances connected, in any way, with that of the pieces between the Acts of which they were interpolated. Their construction was extremely simple, and their importance relatively small. We first find them assuming grander proportions, at Florence, in the year 1589, on the occasion of the Marriage of the Grand Duke Ferdinand, with Christine de Lorraine. To grace this ceremony, Giovanni Bardi, Conte di Vernio, produced a new Comedy, entitled *L'Amico fido*, with Intermezzi, *à grand spectacle*, prepared expressly for the festival, and presented with a degree of splendour hitherto unknown. For the first of these, called 'The Harmony of the Spheres,' the poetry was written by Ottavio Rinuccini, and the music composed by Emilio del Cavaliere, and Cristofano Malvezzi. The second, also written by Rinuccini, and called 'The Judgment of the Hamadryads,' was set to music by Luca Marenzio. For the third, called 'The Triumph of Apollo,' invented by Bardi, and written by Rinuccini, the music was composed, partly by Luca Marenzio, and partly, it is said, by the Conte di Vernio himself. The fourth, entitled 'The Infernal Regions,' was written by Pietro Strozzi, and accompanied by sombre music, composed, by Giulio Caccini, for Violins, Viole, Lutes, Lyres of all forms, Double Harps, Trombones, and 'Organs of [1] Wood.' The fifth—'The Fable of Arion'—was written by Rinuccini, and set to music, by Cavaliere and Malvezzi.

This grand performance naturally gave an extraordinary impulse to the progress of dramatic music. Within less than ten years, it was followed, in the same city, by the production of the first Opera Seria, at the Palazzo Corsi. Meanwhile, the Intermezzo steadily continued to advance in interest and importance. Guarini (1537–1612) wrote Intermezzi to his own *Pastor Fido*, in the form of simple Madrigals. In 1623, *L'Amorosa Innocenza* was produced, at Bologna, accompanied by *Intermezzi della Coronazione di Apollo, per Dafne convertita in Lauro*, set to music by Ottavio Vernizzi. This work introduces us to a new and extremely important epoch in the history of the branch of Dramatic Art we are now considering. By degrees, the Intermezzi were made to embody a little continuous drama of their own. Their story—always quite unconnected with that of the principal piece—was more carefully elaborated than heretofore. Gradually increasing in coherence and interest, their disjointed members rapidly united themselves into a consistent and connected whole. And thus, in process of time, two distinct dramas were presented to the audience, in alternate Acts; the character of the Intermezzi being always a little lighter than that of the piece between the divisions of which they were played, and on that very account, perhaps, better fitted to win their way to public favour. The merry wit inseparable from the Neapolitan School undoubtedly did much for them; and, before long, they began to enter into formidable rivalry with the more serious pieces they were at first only intended to relieve. Their popularity spread so widely, that, in 1723, a collection of them was printed, in two volumes, at Amsterdam; and so lasting was it, that, to this day, a light Italian Operetta is frequently called an *Intermezzo in Musica*.

The next great change in the form of the Intermezzo, though really no more than the natural consequence of those we have already described, was sufficiently important, not only to mark the culminating point in its career, but to translate it, at once, to a sphere of Art little contemplated by those who first called it into existence. Already complete in itself, all it now needed was independence: an existence of its own, apart from that of the graver piece to which it owed its original *raison d'être*. Such an existence was obtained for it, by the simple process of leaving the graver piece—

[1] *Organi di legno.*

whether Tragedy, Comedy, or Serious Opera—to depend upon its own resources, while the Intermezzo, with its once disconnected links united in unbroken sequence, was performed as a separate work, in one Act. This revolution was effected chiefly by the genius of a young composer, whose untimely death, considered in relation to its influence upon the Lyric Drama, can never be sufficiently deplored. From beginning to end, the narrative of Pergolesi's Art-life is identified with the ultimate fate of the Intermezzo. His first important composition—a Sacred Drama, called *San Guglielmo d'Aquitania*—was diversified by Intermezzi, of a playful character, introduced between its principal divisions. His greatest triumph—*La Serva Padrona*—was, itself, an Intermezzo, *pur et simple*. This delightful work—the whole interest of which is centred in two characters, whose voices are accompanied only by a stringed band—was first produced, in Italy, between the Acts of another piece, in the year 1734. Its success was unbounded. It soon found its way to every Capital in Europe; and, everywhere but in France, was received with acclamation. The French, however, were slow to appreciate it at its true value. Its first performance in Paris, Oct. 4, 1746, was little short of a failure: but when, Aug. 1, 1752, it was played between the Acts of Lulli's *Acis et Galathée*, it originated a feud between the 'Lullistes' and the 'Bouffonnistes,' scarcely less bitter than that which raged, at a later period, between the rival followers of Gluck and Piccinni. National vanity forbade the recognition of the Italian style: national good taste forbade its rejection. Rousseau, with characteristic impetuosity, threw himself into the thick of the fray; fought desperately on the Italian side; declared French Opera impossible; and stultified his own arguments by the immediate production of a French *Intermède*—the well-known *Devin du Village*. Long after this, the controversy raged, with unabated fury: but, in spite of the worst its enemies could do, *La Serva Padrona* exercised a salutary and lasting effect upon French dramatic music—indeed, upon dramatic music everywhere. In 1750 it met with an enthusiastic reception in England. Its success was as lasting as it was brilliant: and, almost to our own day, it has kept its place upon the stage, not between the Acts of a Serious Opera, but as an independent piece; marking the critical period at which the history of the Intermezzo merges, permanently, into that of the Opera Buffa, its legitimate heir. [See OPERA BUFFA.]

The anomalous character of this sweeping change became at once apparent. It was as necessary as ever, that, on certain occasions, some sort of entertainment should be given between the Acts of serious pieces. The Intermezzo having so far outgrown its original intention as to be utterly useless for this purpose, something else must needs be found to supply its place. The Dance was unanimously accepted as a substitute; and soon became exceedingly popular. And thus arose a new species of Interlude, which at no time, perhaps, attained a greater degree of perfection, than under the 'Lumley Management' at Her Majesty's Theatre, where, night after night, a *Ballet Divertissement*, with Cerito, or Carlotta Grisi, for its principal attraction, was given between the Acts of a Grand Opera, sung by Grisi, Persiani, Rubini, Tamburini, and Lablache; the long line of successes culminating in that memorable *Pas de Quatre*, which, danced by Taglioni, Fanny Elsler, Carlotta Grisi, and Cerito, is still regarded as one of the greatest triumphs of Terpsichorean Art on record.

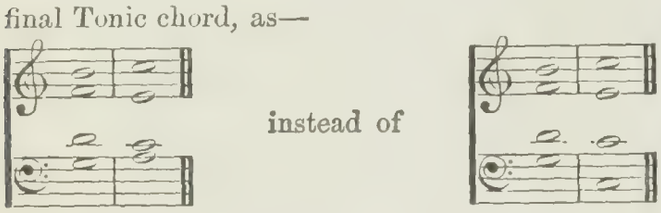
Instrumental music is frequently played, in Germany, after the manner of an Intermezzo. The noble *Entr'actes* composed by Beethoven, for Schiller's 'Egmont,' by Schubert for 'Rosamunde,' and by Mendelssohn, for Shakspeare's 'Midsummer Night's Dream,' are familiar to every one. These, of course, can only be presented in association with the great works they were originally designed to illustrate. But, less appropriate music, good enough of its kind, though intended for other purposes, was, at one time, by no means uncommon. We once heard Vieuxtemps play a Violin Concerto between the Acts of an Opera, at Leipzig, in the days when the Orchestra was under the masterly direction of Ferdinand David: and, in the year 1845, Alboni (then unknown in England) sang several of her favourite Songs, in the same pretty little Theatre, between the Acts of a play. Such performances as these may, naturally enough, be repeated, at any time. But, with our present ideas of Art, anything like a revival of the Intermezzo, in its older form, would manifestly be impossible. We may learn much from its history, which is both instructive, and entertaining: but, for all practical purposes, we must be content to leave it in the obscurity to which, since the production of *La Serva Padrona*, it has been not unprofitably consigned.

II. The word is also used for a short movement, serving as a connecting-link between the larger divisions of a Sonata, Symphony, or other great work, whether instrumental, or vocal; as in No. 4 of Schumann's 'Faschingsschwank aus Wien' (op. 26). The beautiful Intermezzo which, under the name of 'Introduzione,' lends so charming a grace to Beethoven's 'Waldstein Sonata' (op. 53) is said to be an after-thought, inserted in place of the well-known 'Andante in F' (op. 35), which, after due consideration, the great Composer rejected, as too long for the position he originally intended it to occupy. The term is however used for larger movements:—as by Mendelssohn for the 3rd movement in his F minor Quartet (op. 2), or for the 'grand adagio' which, under the name of 'Nachruf,' he specially composed in memory of his friend Ritz, and inserted in his Quintet, op. 18, in lieu of the previous Minuet (Letter, Feb. 21, 1832); or for the Entracte expressive of Hermia's search for Lysander in the Midsummer Night's Dream music. The 2nd movement of Goetz's Symphony, virtually a Scherzo, is entitled Intermezzo.

Schumann and Brahms, again, have both used the word to denote independent pieces of small dimensions, the former in his 'Opera 4'—six pieces usually consisting of a main theme and an Alternativo; and the latter in his latest publication (op. 76), eight pieces for the P.F., of which 4 are Capriccios and 4 Intermezzi. [W.S.R.]

INTERRUPTED CADENCE is a progression which seems to tend towards the final Tonic chord of a perfect cadence through the usual Dominant harmony, but is abruptly deflected; so that the promised conclusion is deferred by the substitution of other harmony than that of the Tonic, after the Dominant chord which seemed to lead immediately to it.

The form which is frequently quoted as typical is that in which the chord of the submediant or third below the Tonic is substituted for the final Tonic chord, as—



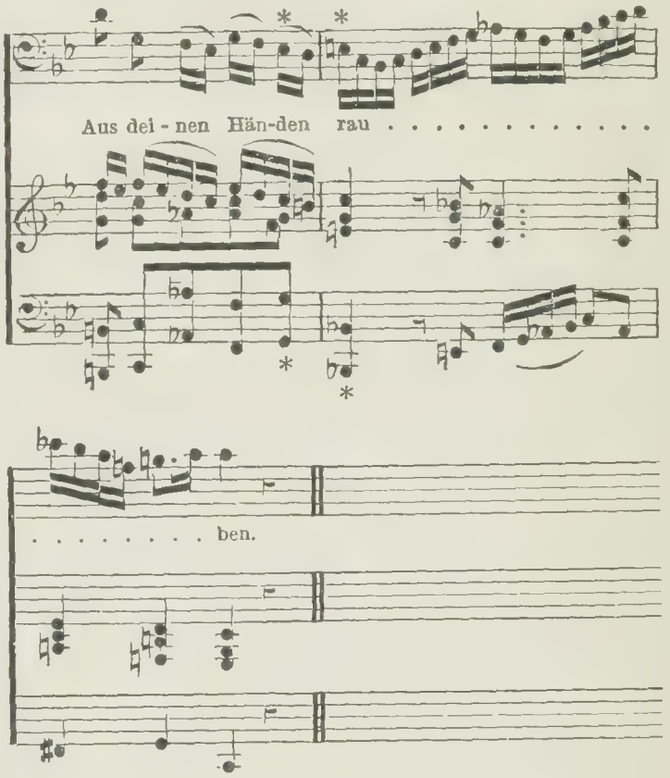
from which the principle will be readily grasped.

In reality the number of different forms is only limited by the number of chords which can possibly succeed the Dominant chord, and it is not even necessary that the chord which follows it and makes the interruption shall be in the same key.

Handel frequently used the Interrupted Cadence to make the final cadence of a movement stand out individually and prominently. The following example, which is made to serve this purpose, is from his Fugue in B minor from the set of Six for the Organ, and is very characteristic of him:—

It is interesting to compare this with the conclusion of the last movement of Schumann's Sonata for Pianoforte in G minor, where a very definite Interrupted Cadence is used for the same purpose of enforcing the final cadence of the work by isolation, and the process is carried out in a thoroughly modern spirit and on an extended scale. The Interrupted Cadence itself is as follows:—

Bach frequently used Interrupted Cadences to prolong the conclusion of a work, and a form which seems to have been a great favourite with him is that in which the Tonic minor seventh succeeds the Dominant chord, thereby leading to a continuance and enforcement of the Tonic in the succession of chords at the conclusion. There are very remarkable and beautiful examples of this in the Prelude in Eb minor, No. 8, in the Wohltemperirte Clavier, the last—four bars from the end—being in the form above mentioned. The effect of this form of the Interrupted Cadence is most powerful when the seventh is in the bass, and of this there is a very striking instance in his Cantata 'Jesu, der du meine Seele,' which is as follows:—



Mozart uses the Interrupted Cadence in a similar manner to extend the movement or the section in which it occurs. As an example from him, which presents yet another form, the following from his Quartet in A, No. 5, may be taken:—

Beethoven also uses Interrupted Cadences for similar purposes to the instances quoted above; but latterly he employed them in a manner which it is important to take note of as highly characteristic and conspicuous in modern music. This is the use of them actually in place of a perfect cadence, taking them as a fresh starting point, by which means greater continuity is obtained. A well-known example is that at the end of the slow movement of the Appassionata

Sonata, by means of which the two last movements are made continuous. Two very remarkable and unmistakeable instances occur also in the first movement of the Sonata in E (op. 109), one of which has already been quoted in the article CADENCE. Another instance occurs in the Quartet in A (op. 132), where the 'working out' commences; the cadence of F major is interrupted at *, and the 'working out' commences in the next bar, proceeding immediately with modulation, as follows:—

Wagner has made great use of this device, and by it secures at once the effect of a conclusion and an uninterrupted flow of the music; the voice or voices having a form which has all the appearance of a full cadence, and the instruments supplying a forcible Interrupted Cadence which leads on immediately and without break to the succeeding action. An example which will probably be familiar is that at the conclusion of the chorus at the beginning of the 4th scene of the 2nd act of Lohengrin, where Ortruda suddenly steps forward and claims the right to precede Elsa into the cathedral. Another instance which illustrates the principle very clearly is the following from the 3rd scene of the 1st act of Tristan und Isolde:—

Beethoven also made occasional use of this device in Fidelio. One specially clear instance is in the Finale of the last act, at the end of Don Fernando's sentence to Leonora—'Euch, edle Frau, allein, euch ziemt es, ganz ihn zu befrei'n.' By such means as this, one scene is welded on to another, and the action is relieved of that constant breach of continuity which resulted from the old manner of coming to a full close and beginning again. [C.H.H.P.]

INTERVAL. The possible gradations of the pitch of musical sounds are infinite, but for the purposes of the art certain relative distances of height and lowness have to be definitely determined and maintained. The sounds so chosen are the notes of the system, and the distances between them are the Intervals. With different objects in view, different intervals between the sounds have been determined on, and various national scales present great diversities in this respect—for instance the ancient Gaelic and Chinese scales were constructed so as to avoid any intervals as small as a semitone; while some nations have made use of quarter-tones, as we have good authority for believing the Muezzins do in calling the faithful to prayer, and the Dervishes in reciting their litanies. The intervals of the ancient Greek scales were calculated for the development of the resources of melody without harmony; the intervals of modern scales on the other hand are calculated for the development of the resources of harmony, to which melody is so far subordinate that many characteristic intervals of modern melody, and not unfrequently whole passages of melody (such as the whole first melodic phrase of Weber's Sonata in Ab), are based upon the use of consecutive notes of a single chord; and they are often hardly imaginable on any other basis, or in a scale which has not been expressly modified for the purposes of harmony. Of the qualities of the different intervals which the various notes form with one another, different opinions have been entertained at different times; the more important classifications which have been proposed by theorists in mediæval and modern times are given in the article HARMONY.

The modern scale-system is, as Helmholtz has remarked, a product of artistic invention, and the determination of the intervals which separate the various notes took many centuries to arrive at. By the time of Bach it was clearly settled though not in general use, and Bach himself gave his most emphatic protest in favour of the equal temperament upon which it is based in his Wohltemperirte Clavier, and his judgment has had great influence on the development of modern music. According to this system, which is specially calculated for unlimited interchange of keys, the semitones are nominally of equal dimensions, and each octave contains twelve of them. As a consequence the larger intervals contained in the tempered octave are all to a certain extent out of tune. The fifth is a little less than the true fifth, and the fourth a little larger than the true fourth. The major thirds and sixths are considerably more than the true major thirds and sixths, and the minor thirds and sixths a good deal less than the true minor thirds and sixths. The minor seventh is a little larger than the minor seventh of the true scale, which is represented by the ratio 9 : 16, and is a mild dissonance; and this again is larger than the harmonic sub-minor seventh which is represented by the ratio 4 : 7; and this is so slight a dissonance that Helmholtz says it is often more harmonious than the minor sixth.

The nomenclature of intervals is unfortunately in a somewhat confused state. The commonest system is to describe intervals which have two forms both alike consonant or dissonant as 'major' and 'minor' in those two forms. Thus major and minor thirds and sixths are consonant, and major and minor sevenths and ninths are dissonant; and

where they are capable of further reduction they are called 'diminished,' as diminished thirds and sevenths; and when of further enlargement as 'augmented,' as augmented sixths. With intervals which have only one normal form the terms 'major' and 'minor' are not used; thus fifths and fourths lose their consonant character on being either enlarged or reduced by a semitone, and in these forms they are called respectively 'augmented' and 'diminished' fifths and fourths. The interval of the augmented sixth is indifferently called 'superfluous' or 'extreme sharp' sixth; and the same terms are applied to the fifth; the term 'false' is also used for diminished in relation to the fifth and for augmented in relation to the fourth.

The term 'Imperfect' is used in two senses in relation to Intervals. In the classification of Consonances it was common to divide them into perfect and imperfect, or perfect, middle and imperfect; but as the classification varied at different times reference must be made for details to the article HARMONY (vol. i. pp. 669–685). On the other hand, when an interval is commonly known in its normal condition as perfect, such as a fourth or a fifth, it is natural per contra to speak of the interval which goes by the same name, but is less by a semitone, as 'imperfect.'

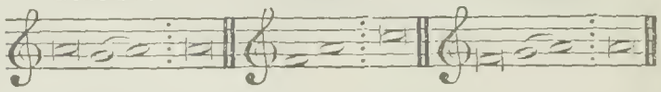
For further details on the subject see TEMPERAMENT. [C.H.H.P.]

INTONATION (Lat. *Intonatio*). I. The initial phrase of a Plain Chaunt melody: usually sung, either by the Officiating Priest, alone, or, by one, two, or four leading Choristers. Some of the most important Intonations in general use are those proper to the Gregorian Tones. Though differing widely in character and expression, these venerable Chaunts are all constructed upon the same general principle, and all exhibit the same well-marked combination of four distinct elements—the Intonation, the Reciting-Note, the Mediation, and the Cadence. The first of these, with which alone we are now concerned, consists of a few simple notes, leading upwards—except in one peculiar and somewhat abnormal case—to the Dominant of the Psalm about to be sung, and thus connecting it with its proper Antiphon. [See ANTIPHON.] Now, as each Mode has a fixed Dominant upon which the greater part of every Psalm is recited, it follows, that each Tone must also have a fixed Intonation, to lead up to that note: and this principle is so far carried out that two Tones, having a common Reciting-Note, have generally, though not always, a common Intonation—as in the case of Tones I and VI, III and VIII. This rule, however, is broken, in the case of Tone IV; which, though its Reciting Note is identical with that of Tone I, has a peculiar Intonation of its own.[1] Almost all the Tones have one form of Intonation for the Psalms, and another for the Canticles; while some few add to these a third variation, which is used only for the second part of the Introit. [See INTROIT.] The subjoined forms are taken from the editions of the Roman Vesperal, and Gradual, lately published at Ratisbon; in the former of which, the Intonation assigned to the Magnificat, in the Sixth Tone, varies widely from the more usual reading given in the Mechlin edition. The forms used for the Introit so nearly resemble those for the Canticles, that we have thought it necessary to give those of the Fourth and Sixth Tones only.

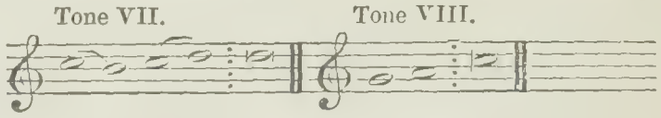
For the Psalms.

Tone I. Tone II. Tone III.

Tone IV. Tone V. Tone VI.



Tone VII. Tone VIII.

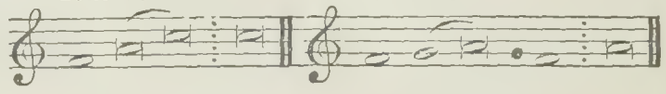


For the 'Magnificat.'

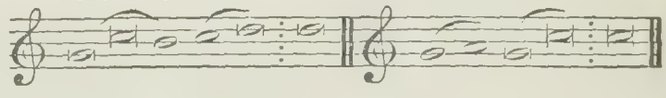
Tone I. Tone II.

Tone III. Tone IV.

Tone V. Tone VI.

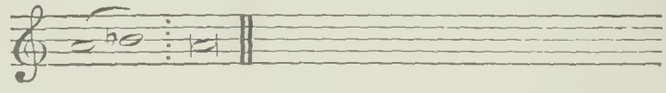


Tone VII. Tone VIII.



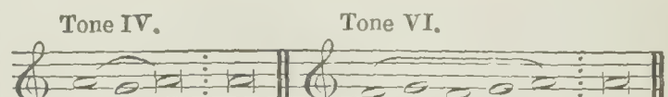
For the Psalm 'In Exitu Israel.'

Irregular or Peregrine Tone.



For the Introit.

Tone IV. Tone VI.



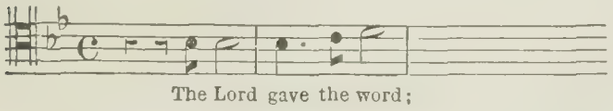
The Intonation is usually sung to the first verse, only, of each Psalm, but, to every verse of the Magnificat and Benedictus. When sung before the first verse only, whether of Psalm or Canticle, it is assigned either to the Officiating Priest, or to the two leading Choristers. Before the remaining verses of the Magnificat, and Benedictus, it is sung by the whole Choir.

The opening phrases of the Antiphon, the antiphonal portion of the Introit, the Gradual, and many other Plain Chaunt Anthems and Hymns, are also sung, as Intonations, either by a single Priest, or by one, two, or four leading Choristers.

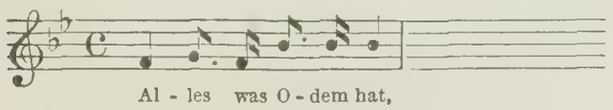
[1] Though constructed of similar intervals, the Intonations of Tones II and III are not identical. By no permissible form of transposition, could the G, A, C of the latter be substituted for the C, D, F of the former.

The *Gloria in excelsis*, and *Credo*, have fixed Intonations of their own, which may be found in their proper places, in the Missal.

It is always interesting to observe the use made, by modern composers, of antient materials: and we shall find that some of the Intonations given, in our examples, have been turned, by the greatest Masters of the modern School, to very profitable uses indeed. For instance, Handel, in 'The Lord gave the word,' from 'The Messiah,' uses the Intonation of the First Tone, transposed a fourth higher, with wonderful effect—



while that of the Eighth (as sung to the Magnificat) has been employed, in a very striking manner, by Mendelssohn, in the 'Lobgesang'—



We have selected these instances from innumerable others, not only because the chief interest of the works mentioned is centred in these few simple notes; but because, in both cases, the phrases in question are really used as Intonations—i.e. as initial phrases, given out in unison, to be continued in harmonious chorus. Whether the composers were conscious of the source of the ideas they treated with such masterly power, is a question open to argument: but, there can be no doubt that John Sebastian Bach, when writing his great Mass in B minor, chose the opening subject of his magnificent *Credo*, simply because it was the Intonation assigned to the *Credo* in the Plain Chaunt Mass—

That the effect with which Bach introduces this grand old subject was not lost upon Mendelssohn, is evident, from a passage in a letter written from Rome, by the last-named composer, to his friends in Germany (April 4, 1831).

II. The art of singing, or playing, correctly in tune. Thus, we say that the intonation of such and such a performer is either true, or false, as the case may be. For a detailed account of the conditions upon which perfect tune depends, see TEMPERAMENT. [W.S.R.]

INTONING. The practice of singing the opening phrase of a Psalm, Canticle, or other piece of Ecclesiastical Music, not in full chorus, but, as a solo, or semi-chorus, assigned either to a single Priest, or to one, two, or four leading Choristers. The term is sometimes strangely misapplied. For instance, we are constantly told that the Litany, or even a whole Service, was 'intoned' by some particular person; when the word used should have been, in the one case, 'sung,' and, in the other, 'monotoned.' [W.S.R.]

INTRADA or ENTRATA. A term used for an opening movement, as by Beethoven for the introductory piece of the 'Battle-Symphony' of his Battle of Vittoria, or for the first movement of the Serenade, op. 25. 'Intrade' is used by Mozart for the overture of his 'Bastien' (K. 50); and 'Intrada o Concerto' by Bach for an independent movement (Cat. No. 117). [See ENTREE 2.] [G.]

INTRODUCTION. The main purpose of an Introduction in music is either to summon the attention of the audience, or to lead their minds into the earnest and sober mood which is fittest for the appreciation of great things. The manner in which these purposes are accomplished varies greatly with the matter which is to follow. If that be light and gay any noise will answer the purpose, such as brilliant passages or loud chords; but if it be serious it is manifest that the Introduction should either have proportionate inherent interest or such dignity of simplicity as cannot be mistaken for triviality. It is interesting to note the manner in which this has been carried out by great masters, and the more important relations which seem to subsist between a movement and its Introduction in their works.

In the first place there are many examples of simple signals to attention; such as the single independent chord which opens Haydn's Quartet in E♭ (Trautwein No. 33); the simple cadence which introduces his Quartet in C, op. 72 (Trautwein No. 16), and the group of chords with cadence which precedes the Quartet in B♭, op. 72 (Trautwein No. 12). These have no other relation to the movement than that of giving notice that it is about to commence, and are appropriate enough to the clear and simple form of the Haydn Quartet. Similar examples are to be remarked in very different kinds of music; as for instance at the commencement of the Eroica Symphony, where the quiet soberness of the beginning of the movement seems to call for some signal to attention, while its supreme interest from the very first seems to indicate that introductory elaboration would be out of place. In Chopin's Nocturne in B major, again, it is not difficult to see the reason for the adoption of the two simple *forte* chords with which it is introduced; since the commencement of the Nocturne proper is so quiet and delicate that without some such signal the opening notes might be lost upon the audience; whilst a more developed Introduction would clearly be disproportionate to the dimensions of the piece.

In great orchestral works, such as symphonies, Haydn usually commences with a set and formal Introduction in a slow tempo, which marks the importance of the work, and by remaining so close to the principal key of the movement as

hardly ever to pass the limits of the Tonic and Dominant keys, assists the audience to realise the tonality. Mozart did not follow the example of Haydn in this respect, as many of his symphonies are without Introductions,—especially the well-known ones in C (Jupiter) and G minor. In quintets, quartets, sonatas, and such forms of chamber-music he is also sparing of Introductions, but there is an example of some extent in the quintet for pianoforte and wind in Eb (Köchel, 452), in which the harmonic successions are simple, and there is a more celebrated one to the string quartet in C, in which the harmonic bases vary more freely than in other examples of that period which can be adduced.

Beethoven began from the first to follow up this point, and it is said that some pedants never forgave him for opening the Introduction to his Symphony in C (No. 1) with chords which appear not to belong to that key. The Symphony in D again (No. 2) has a very important Introduction, in which there is free modulation, such as to Bb and F, and many passages and figures of great beauty and interest. In the Symphony in Bb the introductory Adagio is in the highest degree beautiful and impressive, and contains modulation even to the degree of an enharmonic change. In the Symphony in A the idea of the independent Introduction culminates. It has a decidedly appreciable form and two definite subjects. It opens with great dignity and decision in A major, and passes thence to C, the key of the minor third above, in which a clear and beautiful second subject is given; after this the figures of the opening are resumed and a short transition is made back to the original key, passing on from thence to F major, the key of the third below, in which the second subject again appears. From this key the transition to E, the Dominant of the original key, is at the same time easy and natural and sufficiently interesting; and considerable stress being laid upon this note both by its continuance in the harmonies and its reiteration individually, it thoroughly prepares the definite commence- of the Vivace.

In the above instances the Introduction is practically an independent movement, both as regards the substance and the clear division which is made between it and the succeeding movement by a full or half close. In many of his later works Beethoven made an important change in respect of the connection between the Introduction and the movement introduced; by abolishing the marked break of continuity, by the use of figures which are closely related in both, and by carrying the subject matter of the Introduction into the movement which follows.

One of the clearest and most interesting examples of his later treatment of the Introduction is in the first movement of the Sonata in Eb, op. 81 a, in which the introductory Adagio opens with the text of the movement, which is constantly reiterated in the 'working out' of the Allegro, and yet more constantly and persistently and with many transformations in the long and beautiful coda. Rubinstein has adopted the same device in his Dramatic Symphony in D minor; in which also the first subject of the first movement proper is a transformed version of the opening subject of the Introduction.

In several of his later Quartets Beethoven makes the most important material of the Introduction appear in the movement which follows it, in different ways—as in the Quartet in Eb, op. 127, and that in Bb, op. 130, and A, op. 132, in the last two of which the subjects of the Introduction and the first movement are very closely intermixed. In the Eb Concerto also the Introduction reappears with certain variations of detail in the latter part of the movement previous to the 'recapitulation' of the subject. In its intimate connection with the movement which follows it, the Introduction to the first movement of the 9th Symphony is most remarkable. It commences mysteriously with the open fifth of the Dominant, into which the first rhythms of the first subject begin to drop, at first sparsely, like hints of what is to come, then closer and closer, and louder and louder, till the complete subject bursts in in full grandeur with the Tonic chord. In this case the introductory form reappears in the course of the movement, and also briefly in the discussion of the previous themes which immediately precedes the commencement of the vocal portion of the work.

After Beethoven no composer has grasped the idea of intimately connecting the Introduction with the work which it introduces more successfully than Schumann, and many of the examples in his works are highly interesting and beautiful. In the Symphony in C, for instance, a striking figure of the opening reappears in the first movement, in the scherzo, and in the last movement. In the Symphony in D, in which all the movements are closely connected, the introductory phrases are imported into the Romanze, where they occupy no unimportant position. In his Sonata in D minor, for violin and pianoforte, op. 121, the Introduction proposes in broad and clear outlines the first subject of the succeeding allegro, in which it is stated with greater elaboration. The Overture to Manfred affords another very interesting specimen of Schumann's treatment of the Introduction. It opens with three abrupt chords in quick tempo, after which a slow tempo is assumed, and out of a sad and mysterious commencement the chief subject of the Overture proper is made by degrees to emerge. An earlier analogue to this is the Introduction to Beethoven's Egmont Overture, in which one of the chief figures of the first subject of the overture seems to grow out of the latter part of the introduction.

Of all forms of musical composition none are more frequently preceded by an Introduction than overtures; the two above mentioned, and such superb examples as those in the Overtures to Leonora Nos. 2 and 3, and to Coriolan, and such well-known ones as those to Weber's Der Freischütz and Oberon, Schumann's Genoveva, and Mendelssohn's Ruy Blas, will serve to illustrate this fact.

Introductions are not unfrequently found in the place of overtures before choral works, as in Handel's Joshua, Haydn's Creation, Beethoven's Mount of Olives, and Rossini's Stabat Mater. In this sense also the 'Vorspiel,' which Wagner so often adopts in place of an overture before his operas is an Introduction; as in Lohengrin and Rheingold, and the three operas of the Trilogy. In these the figures are generally very intimately connected with the music of the opera, and in all but the first they are part of the first scene, into which they pass without a break. In 'Tristan und Isolde' Wagner gives the name 'Einleitung' to the Orchestral prelude both of the first and second acts, and this term is yet more literally translateable as 'Introduction' than Vorspiel. In earlier operas the term Introduction is frequently applied to the whole first scene, as in Don Giovanni, Zauberflöte, Figaro, Freischütz, Il Barbiere, Norma, and so on. In Fidelio, Beethoven gives the name to the opening of the second act, which comprises more of an orchestral prelude, like Wagner's 'Einleitung.'

In relation to instrumental music again Introductions are occasionally found in other positions than at the beginning of an entire work; as for instance the preparatory adagio before the last movement of Beethoven's Septet and of his Symphony in C, the more important one in the same position in Brahms's C minor Symphony, the short passage before the slow movement of the 9th Sypmhony, the two notes which introduce the slow movement of the B♭ Sonata (op. 106), and the Introduction to the last movement of Brahms's Quintet in F minor. [C.H.H.P.]

INTROIT (Lat. *Introitus, Antiphona ad Introitum, Ingressa*). An Anthem, sung, by the Choir, at the beginning of High Mass, while the Celebrant, assisted by the Deacon, and Subdeacon, is engaged in saying the *Judica me, Deus*, and *Confiteor* at the foot of the Altar step.

The Introit is so called, not, as some have supposed, because the Cantors begin to intone it at the moment of the Celebrant's approach to the Altar, but, because it was antiently sung while the Faithful were entering the Church.[1] Its form has undergone many important changes. At present it consists of two distinct members: an Antiphon, and a Psalm. The words of the Antiphon, or Introit proper, are generally, but not always, selected from Holy Scripture. Of the Psalm, one verse only is sung, followed by the *Gloria Patri*, at the conclusion of which the Antiphon is repeated in full. Proper Introits are appointed for every day in the Ecclesiastical Year: and, from the first words of these, many Sundays derive the names by which they are familiarly known — as '*Lætare* Sunday,' the Fourth Sunday in Lent; '*Quasimodo* Sunday,' the First Sunday after Easter, (*Dominica in Albis*— the 'Low Sunday' of the old English Kalendar). The music to which the Introit is sung is exclusively Plain Chaunt, and is given, complete, in the Roman Gradual. The antiphonal portion of every Introit has a special melody of its own. The Psalm is sung to a peculiar version of the Gregorian Tones, based upon, but considerably more elaborate than, that used for the Vesper Psalms. The Introit for the First Mass on Christmas day—which we would have transcribed, had space permitted— is a remarkably fine specimen of the style.

The manner of singing the Introit is as follows. The first clause is intoned when the Celebrant approaches the Altar, by one, two, or four Choristers, according to the solemnity of the Festival: which done, the strain is taken up by the full Choir, and continued as far as the end of the Antiphon. The first clause of the Psalm, and Gloria Patri, is then intoned, by the leading Choristers, and continued, in like manner, by the Choir; after which the Antiphon is repeated, as before. During Advent, Septuagesima, and Lent, it is sung, like the rest of the Mass, without any accompaniment whatever. At other Seasons, it is usually sung with the organ—but, always, so far as the voices are concerned, in unison.

No trace of the Introit is retained in the last revision of the Book of Common Prayer: though the first Prayer-Book of King Edward VI (1549) directs its use, in the form of an entire Psalm, followed by the Gloria Patri, but sung without an Antiphon. At first sight, the Rubric, 'Then shall he say a Psalm appointed for the Introit,' would lead to the supposition that the Psalm in question was not intended to be sung by the Choir: this idea, however, is disproved by the fact that the music for it is supplied in Merbecke's 'Booke of Common Praier Noted,' printed in 1550, and adapted, throughout, to King Edward's First Book.

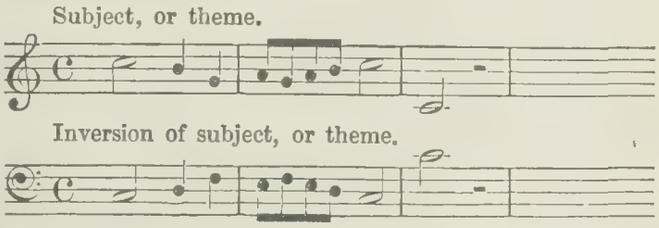
N.B. Handel uses the word as a synonym for Intrada or Introduction. The autograph of 'Israel in Egypt' is headed 'Moses' Song. Exodus, Chap. 15. Introitus.' [W.S.R.]

INVENTION. A term used by J. S. Bach, and probably by him only, for small pianoforte pieces—15 in 2 parts and 15 in 3 parts—each developing a single idea, and in some measure answering to the IMPROMPTU of a later day. [G.]

INVERSION. (Germ. *Umkehrung.*)

The word Inversion bears, in musical terminology, five different significations.

I. In Counterpoint it is used to signify the repetition of a phrase or passage with reversed intervals, or, as it is sometimes called, by contrary motion, e. g.—



This is a device very frequently adopted in the construction of fugues in order to secure variety. In J. S. Bach's fugues are many magnificent

[1] Martene, *De Antiq. Eccl. Rit.* i. 131.

instances of the effective use of this contrivance —as in the 'Well-tempered Clavier' Nos. 6 and 8 of Part 1. Mendelssohn also uses it in his Pianoforte fugues in E minor and B minor, Op. 35, Nos. 1 and 3. Sometimes the answer to the subject of a fugue is introduced by inversion —as in Nos. 6 and 7 of Bach's 'Art of Fugue' —and then the whole fugue is called 'a fugue by inversion.' Canons and Imitations are often constructed in this way. As examples see the Gloria Patri in the Deus Misereatur of Purcell's Service in B♭, and the Chorus 'To our great God' in Judas Maccabæus. [See CANON, FUGUE, INSCRIPTION.] [F. A. G. O.]

II. Double Counterpoint is said to be inverted, when the upper part is placed beneath the lower, or *vice versa*: thus (from Cherubini)—

(*a*) Double Counterpoint for 2 Voices.

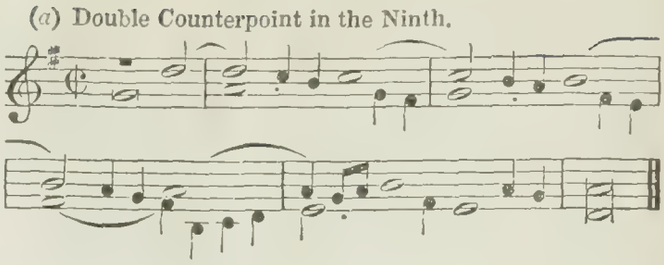
(*b*) Inversion.

We have, here, an example of what is called Double Counterpoint in the Octave, in which the Inversion is produced by simply transposing the upper part an octave lower, or the lower part an octave higher. But, the Inversion may take place in any other Interval; thus giving rise to fourteen different species of Double Counterpoint —those, namely, invertible in the Second, Third, Fourth, Fifth, Sixth, Seventh, Eighth, Ninth, Tenth, Eleventh, Twelfth, Thirteenth, Fourteenth, and Fifteenth, either above, or below. In order to ascertain what Intervals are to be avoided, in these several methods of Inversion, Contrapuntists use a table, constructed of two rows of figures, one placed over the other; the upper row beginning with the unit, and the lower one, (in which the numbers are reckoned backwards,) with the figure representing the particular kind of Counterpoint contemplated. Thus, for Inversion in the Ninth, the upper row will begin with one, and the lower, with nine; as in the following example—

1 2 3 4 5 6 7 8 9
9 8 7 6 5 4 3 2 1

By this table, we learn, that, when the relative position of two parts is reversed, the Unison will be represented by a Ninth; the Second, by an Eighth; the Third, by a Seventh; and so on, to the end: and we are thus enabled to see, at a glance, how every particular Interval must be treated, in order that it may conform strictly to rule, both in its normal and its inverted condition. In this particular case, the Fifth being the only Consonance which is answered by a Consonance, is, of course, the most important Interval in the series, and the only one with which it is possible to begin, or end: as in the following example from Marpurg—

(*a*) Double Counterpoint in the Ninth.



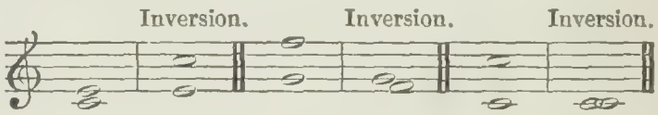
(*b*) Inversion—the upper part transposed a Ninth lower.

Each of the different kinds of Inversion we have mentioned is beset by its own peculiar difficulty. For each, a separate [1]table must be constructed; and, after carefully studying this, the Student will be able to distinguish, for himself, between the Intervals upon which he must depend for help, and those most likely to lead him into danger. Without the table, he will be unable to move a step: with its aid, the process is reduced to a certainty.

A detailed account of every possible kind of Inversion will be found in the works of Fux, Marpurg, Azzopardi, Cherubini, and other great writers on Counterpoint, to whom we must refer the reader for further information on the subject.

III. Intervals are said to be inverted, when their lowest notes are raised an octave higher, and thus placed above the highest ones, or *vice versa*; thus—

Inversion. Inversion. Inversion.



In order to ascertain the Inversion of a given Interval, add to it as many units as are necessary to make up the number nine. The sum of these units will represent the Inverted Interval. Thus, since six and three make nine, the inversion of a Sixth will be a Third: as eight and one make nine, the Inversion of an Octave will be an Unison. The following Table shews the Inversions of all Intervals lying within the compass of the Octave—

1 2 3 4 5 6 7 8
8 7 6 5 4 3 2 1

9 9 9 9 9 9 9 9

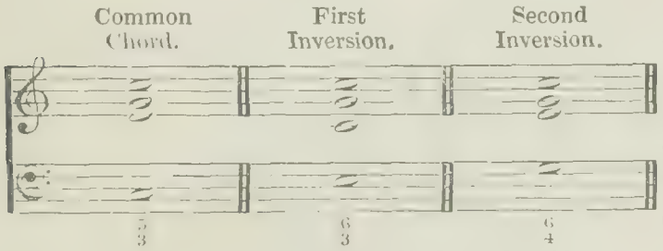
The process of Inversion not only changes the name of an Interval, but, in certain cases, and to a certain extent, influences its nature. Major Intervals, for instance, become Minor, by Inversion; and Minor Intervals, Major. Augmented Intervals become Diminished, and Diminished ones, Augmented. But, the essential character

[1] One and the same table will, however, serve for Inversion in the Ninth, and the Second; the Tenth, and the Third; the Eleventh, and the Fourth, etc., etc.

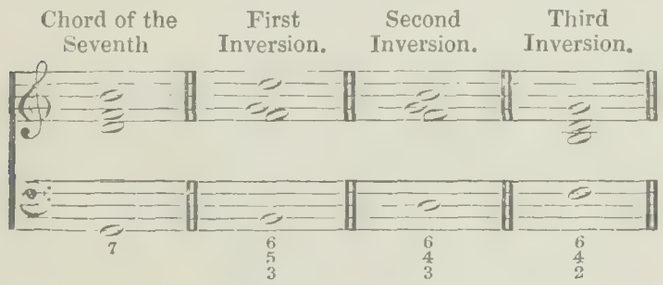
of the Interval survives the operation, unchanged, and asserts itself, with equal force, in the Inversion. In whatever position they may be taken, Consonant Intervals remain always [1] consonant; Dissonant Intervals, dissonant; and Perfect Intervals, perfect. [See INTERVAL.]

IV. A Chord is said to be Inverted, when any note, other than its Root, is taken in the lowest part.

Thus, if the Root of a Common Chord be transposed from the lowest part, to one of the upper parts, and the Third placed in the Bass, the change will produce the Chord of the 6-3. If the Fifth be similarly treated, the result of the transference will be the Chord of the 6-4. Hence, the Chord of the 6-3 is called the First Inversion of the Common Chord; and the Chord of the 6-4, the Second.



If the same process be applied to the Chord of the Seventh, we shall, by successively taking the Third, Fifth, and Seventh, in the Bass, obtain its three Inversions, the 6-5-3, the 6-4-3, and the 6-4-2.



Chords, in their normal form, with the Root in the Bass, are called Fundamental Harmonies: those in which any other note occupies this position are called Derivative, or Inverted Chords. [See HARMONY.]

V. A Pedal Point (*Point d'orgue*) is described as Inverted, when the sustained note, instead of being placed in the Bass, is transferred to an upper part, as in Mozart's Pianoforte Fantasia in C minor (op. 11):—

—or, to a middle one, as in the following passage from *Deh vieni, non tardar*, (*Nozze di Figaro.*) where the Inverted Pedal is sustained by the Second Violins:—

[1] Although the Perfect Fourth—the Inversion of the Perfect Fifth—is classed, by Contrapuntists, among Discords, it only forms an apparent exception to the general rule; since it is admitted to be a Consonance, when it appears between the upper parts of a Chord.

In these, and similar cases, the characteristic note (whether sustained, or reiterated), forms no part of the Harmony, which remains wholly unaffected, either by its presence, or removal. [See HARMONY.] [W. S. R.]

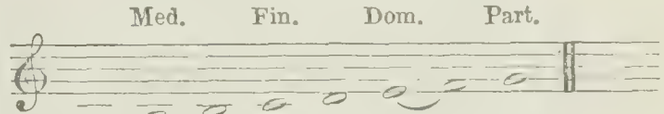
IONIAN MODE (Lat. *Modus Ionicus, Modus Iastius*). The Thirteenth—or, according to some writers, the Eleventh—of the Ecclesiastical Modes. [See MODES, THE ECCLESIASTICAL.]

The Final of the Ionian Mode is C. Its compass, in the Authentic form, extends upwards, from that note to its octave; and, as its semitones occur between the third and fourth, and the seventh and eighth degrees, its tonality corresponds exactly with that of the major diatonic scale as used in modern music—a circumstance which invests it with extraordinary interest, when considered in connexion with the history of musical science. Its Dominant is G—another point of coincidence with the modern scale. Its Mediant is E, and its Participant, D. Its Conceded Modulations are F, A, and B; and its Absolute Initials C, E, G, and frequently, in polyphonic music, D. Its chief characteristics, therefore, may be illustrated thus—

Mode XIII (or XI).

The compass of the Plagal, or Hypo-ionian Mode, lies a fourth lower than that of the Authentic form, ranging from G to G. The Dominant of this Mode is E, its Mediant, A, and its Participant, G. Its Conceded Modulations are D, F, and the F below the initial G; and its Absolute Initials C, G, A, and, in polyphonic music, very frequently D.

Mode XIV (or XII).



It will be seen, that the semitones here fall between the third and fourth, and sixth and seventh degrees—exactly the position they occupy in the Authentic Mixolydian Mode: and, as the compass of these Modes is also identical, the one is often mistaken for the other, though they are as clearly distinguished, by their respective Finals, as the modern keys of E♭, and F♯ minor.

Though not included in the system set forth by St. Gregory, the Ionian and Hypo-ionian Modes are certainly as old as the 8th or 9th century: for, when the question of the number of Modes to be retained in use was submitted to the Emperor Charlemagne, he at first said that eight seemed to be enough, but afterwards authorised the employment of twelve, thus extending his indulgence to all except the notoriously impure Locrian and Hypolocrian. Eight Modes have, indeed, been always considered enough for the chaunting of the Psalms: hence, we find no Psalm Tones in either the Ionian or Hypo-ionian Modes; though

other pieces of Ecclesiastical Music exist, in both. For instance, the fine Plain Chaunt 'Missa in Festis Solemnibus'—better known, perhaps, in a less pure form, as the 'Missa de Angelis'—is in the Authentic Ionian Mode, throughout: and a particularly captivating Hypo-ionian melody has been preserved to us, in the Paschal form of the Responsory 'In manus tuas, Domine,' as given in the Mechlin Vesperal.[1]

A strong prejudice existed against the Ionian Mode, in mediæval times, when the softness of its intervals gave so great offence, that it was commonly called *Modus lascivus*. The early contrapuntists seem also to have regarded it with grave suspicion. It was only as Art advanced, that the inexhaustible extent of its capabilities became gradually apparent. When first employed in polyphonic music, the Authentic scale was usually transposed (for the greater convenience of ordinary combinations of voices) with the customary B♭ at the signature; in which condition it is often mistaken for the modern key of F. Palestrina delighted in using it, with this transposition, as the exponent of a certain tender grace, in the expression of which he has never been approached; as in the 'Missa Brevis,' the Missa 'Æterna Christi munera,' the delightful Motets, 'Sicut cervus desiderat,' and 'Pueri Hebræorum,' and innumerable other instances. Giovanni Croce has also employed it in the Motet 'Virtute magna'—known in England as 'Behold, I bring you glad tidings': while in our own School, we find instances of its use in the imperishable little Anthem, 'Lord, for Thy tender mercy's sake,' and Gibbons's fine Service in F.

The Hypo-ionian Mode is less frequently transposed, in writing, than the Authentic scale, though it is sometimes found desirable to depress it a whole tone, in performance. This is the Mode selected, by Palestrina, for the *Missa Papæ Marcelli*; and by Orlando di Lasso, for his Motet, *Confirma hoc, Deus*—both which compositions are erroneously described, in the latest German reprints, as in the Mixolydian Mode.

The melody of the Old Hundredth Psalm, in its original form, is strictly Hypo-ionian; and is given in its true Mode, transposed, in the masterly setting, by John Dowland, printed in Ravenscroft's 'Book of Psalms' (Lond. 1621). [See HYMN; OLD HUNDREDTH PSALM.] [W. S. R.]

IPERMESTRA. An opera of Metastasio's which has proved very attractive to a long list of composers. The Dictionnaire Lyrique of Clement gives no less than 18 settings of it by Galuppi, Sarti, Jommelli, Hasse, Gluck, and other eminent musicians. [G.]

IPHIGÉNIE EN AULIDE, 'tragédie-opéra' in 3 acts; words by the Bailli du Rollet, after Racine; music by Gluck. Produced at the Académie, Thursday, April 19, 1774. The nightly receipts at first were 5000 livres, a sum then unheard of. The sum taken on April 5, 1796, amounted, owing to the depreciation of the assignats, to 274,900 livres. Up to Dec. 22, 1824, it was played 428 times. [G.]

IPHIGÉNIE EN TAURIDE, 'tragédie lyrique' in 4 acts; words by Guillard, music by Gluck. Produced at the Académie, Thursday, May 18, 1779. On June 6, 1796, the assignat of 100 livres being equal to only 10 centimes, the receipts were 1,071,350 livres = 1,071 livres 7 sous. Up to June 5, 1829, it was played 408 times. On Jan. 23, 1781, the tragedy of the same name by Piccinni, words by Dubreuil, was produced at the Académie and survived in all 34 representations. On the first night, one of the actresses being obviously intoxicated, a spectator cried out 'Iphigénie en Tauride! allons donc, c'est Iphigénie en Champagne!' [G.]

IRENE. An English version (or rather transformation) of Gounod's 'Reine de Saba,' by H. Farnie; produced, as a concert, at the Crystal Palace, Aug. 12, 1865. [G.]

IRISH MUSIC. Although it is not long since the opinion was generally entertained that Ireland had been sunk in barbarism until the English invasion, historical and antiquarian researches have established the fact that the island was in early times the seat of Christianized learning and a remarkable artistic civilization. Her music, however, and in particular her ancient school of Harp-playing, have from early times been in high repute, having been lauded in the writings of Brompton, Giraldus Cambrensis, and John of Salisbury (12th cent.). The latter writes thus: 'The attention of this people to musical instruments I find worthy of commendation, in which their skill is beyond comparison superior to that of any nation I have seen.' Fuller's words are equally strong: 'Yea, we might well think that all the concert of Christendom in this war [the Crusade conducted by Godfrey of Boulogne] would have made no music, if the Irish Harp had been wanting.' Fordun (13th cent.), Clynn (14th cent.), Polidore Virgil and Major (15th cent.), Vincenzo Galilei, Bacon, Spenser, Stanihurst, and Camden (16th cent.), speak with equal warmth. Written music being however comparatively modern, no remains are existing, like the beautiful Irish illuminated MSS. and examples of ornamental Celtic metal-work, which would substantiate the praises of the above writers.

Three Irish airs, extracted from Queen Elizabeth's Virginal Book, are given in vol. ii. p. 793 of Mr. Chappell's 'Popular Music of the Olden Time'—(1) 'The Ho-hoane' (Ochone), (2) an 'Irish Dumpe,' and (3) 'Callino Casturame.' They are all in 6-8 measure, and seem deficient in the characteristic features of Irish melody. To the latter air there is an allusion in Shakespeare, Henry V, act iv. sc. 4, where Pistol addresses a French soldier thus:—'Quality! Calen o custure me!'—an expression which has greatly puzzled the critics. It is evidently an attempt to spell as pronounced the Irish phrase 'Colleen, oge astore!'—young girl, my treasure!

The earliest published collections of Irish music are by Burke Thumoth (1720); by Neill

[1] In the Ratisbon Vesperal, this melody is reduced, from the Fourteenth, to the Sixth Mode; and a similar reduction, from Mode XIII, to Mode V, is by no means uncommon, in Plain Chaunt Office-Books.

of Christ Church Yard, in the vicinity of the cathedral of that name in Dublin, a few years later; and by the son of Carolan in 1747. But these being for flute or violin, supply no idea of the polyphonic style of the music for the Irish Harp, an instrument with many strings of brass or some other metal: the Harp preserved in Trinity College, Dublin (commonly but erroneously called the Harp of Brian Boru), having 30 strings; that of Robin Adair (an Irish chieftain), preserved at Hollybrooke in co. Wicklow, 37 strings; and the Dallway Harp (1621), 52 strings. [See HARP, vol. i. p. 686*a*.] During the incessant wars which devastated the island in the 16th, 17th, and 18th centuries, the art of music languished and decayed: there had indeed been many famous performers upon the Harp, the national instrument had appeared on the coinage of Henry VIII, and had also been appended to some State papers A.D. 1567; but the powers of the law had been brought to bear upon the minstrels who sympathized with the natives, struggling at this time against the English power. When the wars of Elizabeth, Cromwell, and William III ceased, the distracted country had peace for a while. Soon afterwards the Hanoverian Succession was settled, and foreign musicians visited Ireland, and remaining there, introduced the music of other countries; the nobility and gentry too, abandoning their clannish customs, began to conform to the English model: and the Irish melodies went out of fashion.

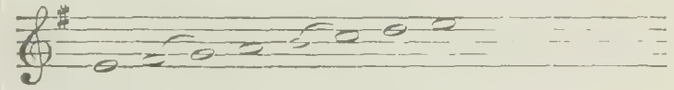
Some of the celebrated harpers of the 16th and 17th centuries were Rory Dall O'Cahan (whom Sir W. Scott makes the teacher of Annot Lyle); John and Harry Scott; Gerald O'Daly (the composer of *Aileen-a-Roon*); Miles Reilly (born 1635); Thomas and William O'Conallon (1640); Cornelius Lyons; Carolan (1670); Denis Hempson (1695), who in 1745, when 50 years old, went to Scotland and played before Charles Edward; Charles Byrne (1712); Dominic Mungan (1715); Daniel Black (1715); Echlin Kane (1720), a pupil of Lyons, before named—Kane, who travelled abroad, also played for the Pretender, and was much caressed by the expatriated Irish in Spain and France; Thaddeus Elliot (1725); Owen Keenan (1725); Arthur O'Neill (1734); Charles Fanning (1736); and James Duncan, who having adopted the profession of a harper in order to obtain funds to carry on a law-suit in defence of his patrimony, was successful, and died in 1800, in the enjoyment of a handsome competence.

Among efforts to arrest the decay of the Irish Harp School may be mentioned the 'Contentions of Bards' held at Bruree, co. Limerick, 1730–50, under the presidency of the Rev. Charles Bunworth, himself a performer of merit; a meeting of harpers at Granard, co. Longford, organized by an Irish gentleman, James Dungan of Copenhagen, in 1781; and the assemblage of harpers at Belfast, 1792, when the promoters engaged the subsequently well-known collector, Edw. Bunting, to write down the music as performed. From this arose Bunting's three volumes of Irish Music, dating 1796, 1809, and 1840: accurate drawings, biographical notices, and some hundred airs have been left on record by Bunting, to whom indeed the subject owes whatever elucidation it has received. Ten performers from different parts of Ireland attended the meeting of 1792, and their instruments, tuning, and use of a copious Irish musical vocabulary agreed in a remarkable manner. The compass of the Harps was from C below the bass stave to D above the treble one. Their scale was sometimes C, but mostly that of G. Each string, each grace, each feature had a name peculiar to it. It was proved that the old harpers had played with their nails, not the fleshy tip of the fingers. They used other scales beside those above, but agreed that G major was the most ancient: in this lies 'The Coolin' (temp. Henry VIII):—

One of the most striking of the Irish airs is that called *Colleen dhas*, etc., to which Moore's lines, 'The valley lay smiling,' are adapted: it lies on a scale from A to A, but with semitones between 2-3 and 6-7, as follows:—

It was of course to be expected, that singers, pipers, whistlers, or violinists, would not always adhere to the fixed semitones of a harp scale; hence this air is sometimes corrupted, and its pathetic beauty impaired by the introduction of G♯. This scale, it may be remarked, is that used for the Scottish pipes, where the upper G♮ is however frequently false; such Scotch airs as 'Johnnie Cope' are suitable to it.

An example of the scale



E to E, semitones between 2-3 and 5-6, is found

in the fine Irish air, 'Remember the glories of Brian the Brave!'

Here again, in careless performance, D♯ may have been used instead of D♮, once or twice.

Very plaintive airs are found in the 4th scale

D to D, semitones between 3-4 and 6-7. In this scale lies the air 'Weep on!'

Moore seems to have noticed the peculiar wail, thrice repeated, of the second strain, but to have been unaware of the true cause, when he says, 'We find some melancholy note intrude—some minor third or flat seventh, which throws its shade as it passes and makes even mirth interesting.'

The bagpipe of Ireland is distinguished from the Scottish pipes by being blown with bellows instead of the mouth[1]: from this cause, and the delicacy of its reeds, the tone is softer. Dr. Burney remarked upon the perfection of the intervals of the Irish chanter (or melody-pipe), which he had never met with in the pipes of North Britain. The scale of the Irish bagpipe is from C below the treble stave to C above it, with all the semitones. The Irish instrument is also furnished with a sort of tenor harmony of chords:—

The pipe of Scotland has nothing of this sort, and, as previously noticed, its scale is only nine

[1] This is the distinction between the Musette and the Cornemuse, the former answering to the Scotch and the latter to the Irish Pipe.

notes and is not very true in general. There generally are two drones in the Scottish pipe, A and its octave; and three in the Irish instrument, generally middle C, tenor C, and violoncello C. The ancient Irish bagpipe, like that of Scotland, was an instrument of shrill and warlike tone, by which, as Stanihurst tells us, the natives were animated—as other people are by trumpets. The bagpipe, perhaps the oldest and most widely known instrument in the world, still subsists in Ireland; the harp however is almost extinct: both have been in a great degree superseded by the violin and flute, which are cheaper, more readily repaired, and above all more portable: most of the ancient minstrels of Ireland found it necessary to maintain attendants to carry their harps. Of late years, during the Temperance movement and the various semi-military organizations which have sprung up in Ireland, brass and reed bands have become popular, and play through the streets of the towns; the music produced by them is however for the most part execrable. Choral classes are not popular throughout the country: they meet with no favour among the peasantry of the South and West. In the Eastern coast towns, like Dublin, Kingstown, Wicklow, and Wexford, choral music is not popular, and in the Northern town of Belfast, the only manufacturing community in the island, we seek in vain for choral associations like those of Leeds, Bradford, etc., among the artizans, although oratorios are fairly supported by the middle class.

Dismissing the bagpipe, ancient or improved, we find among ancient Irish wind-instruments the following:—(1) the *Ben-Buabhill* (pronounced Ben-Buffal), a real horn, generally that of a wild ox or buffalo; (2) the *Buinne*, a metal trumpet —the horn and trumpet players were assigned regular places in the famous banqueting hall of Tara; (3) the *Corn*, a large curved tube, producing sounds of great power; (4) the *Stoc*, a smaller trumpet; (5) the *Sturgan*, another small trumpet. It is singular that all these pipes were curved: no straight pipe, like an oboe or clarinet, having been found in Ireland. (6) Some large horns were discovered, of which the embouchure, like that of the Ashantee trumpet, was at the side. Singular to say, the Irish possessed an instrument very similar to the Turkish crescent or 'Jingling Johnny' once used in the British army: it was called the 'Musical Branch,' and was adorned with numerous bells. There were single bells called *clothra*: the so-called *crotals* are merely sheep-bells of the 17th and 18th centuries. It should be remarked that the *tympan* was not a drum, as was formerly supposed, but a stringed instrument, and by the researches of the antiquary O'Curry it is proved to have been played with a bow. Some other allusions to music are found in Irish MSS., viz. the *aidsbi*, an union of all voices, a vocal *tutti* as it were: this was called *cepoc* in Scotland. The *certan* was some sort of chirping sound by female singers: the *dordfiansa*, a warlike song accompanied by the clashing of spears after the Greek manner. An interesting example

was the Irish *Cronan* or drone bass, after the manner of the 'Ground' of Purcell's day, or of the Canon, 'Summer is icumen in.' The *Cronan* was softly sung by a [1]Chorus, while the principal voice sustained the solo. The following song (the air called 'Ballinderry') refers to various rustic localities on the banks of the Bann and Lagan rivers :—

'Tis pretty to be in Ballinderry,
'Tis pretty to be at Magheralin,
'Tis pretty to be at the Castle of Toome,
'Tis pretty to be at Aghalee,' etc.

To all of which the Cronan softly furnished the bass, 'Och-hone! och-hone!'

Not only have Irish airs been often claimed as Scottish, as in the case of 'Limerick's lamentation' or 'Lochaber,' but the close resemblance between some Irish and Scottish airs has led to confusion, and an attempt to generalize. Thus it has been quoted, as an unfailing characteristic of Irish as of Chinese melody, to omit the fourth and seventh of the scale; this is quite erroneous. In many Irish airs, like 'I'd mourn the hopes that leave me,' these intervals are wanting; in others they both exist: in some Irish airs the 4th and 7th are omitted in the first strain, and present in the second part of the air. Many canons have been laid down: Bunting, an excellent authority, thought the emphatic presence of the submediant, or sixth of the scale, a never-failing test of an Irish air; but this note is emphatic in the Scottish air 'Auld lang syne,' and in many others which might be cited. An anonymous writer in a Dublin periodical, 'The Examiner,' Aug. 1816, seems to have remarked an interesting point of agreement in the structure of Irish melodies: 'They are formed,' says the writer, 'of 4 strains of equal length: the first soft, pathetic, and subdued; the second ascending in the scale, becomes more bold, energetic, and impassioned; the third, a repetition of the second, is sometimes a little varied and more florid, and leads, generally by a graceful or melancholy passage, to the fourth, which is always a repetition of the first.' To this model may be referred the pathetic 'Gramachree' in Moore's lines 'The Harp that once through Tara's Halls.'

So also the fine marching tune, 'Byrne of Ballymanus':—

It has been noticed that many Irish tunes end upon the fifth of the key, such as that adapted to Moore's song, 'Come, send round the wine!' Again, to commence as in the next example, and reiterate the ending note of the strain, has been described as the 'narrative form' of Irish melody, e.g. 'St. Senanus,' to Moore's lines, 'O haste and leave this sacred isle':—

and it has not failed to be remarked that Moore's fourth line, 'A female form I see,' in obliterating this peculiarity, does injustice to the melody by rendering the repetition impossible.

A few words about the dances of Ireland will not be out of place. These are (1) the Planxty, or Pleraca, 6-8 time, with strains of unequal number of bars. (2) The Jig, or Rinnce, with an equal number of bars. The Jig was, as its name implies, an imitation of the *giga* of Corelli and Geminiani, both very popular in Ireland during the 18th century: of these there were (*a*) the Double Jig, (*b*) Single Jig, (*c*) Hop Jig, and (*d*) *Moneen*, or Green-sod Jig. (3) The Reel, similar to that of Scotland, of which it is the national dance. (4) The Hornpipe. (5) Set dances, chiefly by one dancer, and (6) The Country dance. Many of the dances in 6-8 measure were originally march tunes; for it is remarkable that the 'slow march,' as used by other nations, never prevailed among the Irish, whose battle music was frequently in the 6-8 measure, with two accents in the bar.

Every civil occupation in Ireland had also its appropriate music; thus milking the cows (an occupation in which the ancient Irish took peculiar delight), spinning, and ploughing, had each its tune.

[1] This explains the passage about the wild cats in the Story of Conall (Campbell's Tales and Legends of the W. Highlands, i. 107).

Such are a few of the characteristics of a native minstrelsy second to none in the annals of aboriginal art. But the lines of demarcation by which national peculiarities were preserved are being daily obliterated: steam has worked many wonders, of which this is not the least remarkable. Ireland at the present day differs but little from England, Wales, or Scotland. The tunes whistled in the Irish streets are not the melodies to which Moore in 1808 supplied words, but 'The March of the Men of Harlech,' 'Mandolinata,' and 'Stride la vampa' from Verdi's 'Trovatore.' The terrible famine of 1847, followed as it was by fever and a gigantic emigration that laid whole districts waste, could not fail to produce sweeping artistic as well as social changes. Much of the antient music must have perished with the population. Petrie's volume probably represents the last comprehensive effort to collect the aboriginal strains of Irish music: although given to the world in 1855, it embraced the labours of many previous years.

It remains but to notice the various collections of Irish music. These are—

1. Burke Thumoth, cir. 1720.
2. Neal of Christ-church Yard, 1721.
3. Bunting's, first 1796, second 1809, third 1840.
4. Francis Holden (cited by Geo. Petrie), 1806.
5. Moore, with Stevenson, and subsequently Sir H. Bishop; ten numbers and supplement, 1808-1834.
6. John Mulholland of Belfast, 1810.
7. G. Thomson (Beethoven's accompaniments), 1814.
8. Fitzsimons and John Smith, 1816.
9. Hon. Geo. O'Callaghan with Stevenson, 1821-2.
10. 'The Citizen' magazine, 1840.
11. Horncastle, London, 1844.
12. O'Daly, 'Poets and Poetry of Munster,' 1853.
13. G. Petrie, in connection with the 'Society for the Preservation of Irish Music,' 1855. Of this valuable work but 1 vol. and part of a second appeared.
14. Molloy, 1874.
15. Joyce, 1875.
16. Hoffmann, 1877.

Dance tunes only.

17. R. M. Levey, 1858-78.
18. P. Hughes, 1860.

Of these, few are reliable as authorities, save those of Petrie and Bunting, both honoured names in the annals of Irish music. It is to a Mr. Geo. Thomson, of the Trustees' Office, Edinburgh, who was much interested in national airs from 1792–1820, especially those of Scotland, and engaged Pleyel, Kozeluch, Haydn, Beethoven, Hummel, and Weber, as arrangers of them, that we owe the Irish music arranged by Beethoven between the years 1810 and 1819. Among 16 national airs, with variations, as duets for violin (or flute) and piano (op. 105, 107), are 3 Irish melodies—'The last rose' (a very incorrect version of the air), 'While History's Muse,' and 'O had we some bright little isle.' Although interesting in their way, these little works of Beethoven are very inferior to his Vocal Collections. Of these '12 Irish airs with accompaniments of piano, violin, and cello' (obbligato), were published in 1855 by Artaria & Co. of Vienna, as proprietors of Beethoven's MS. It is likely that Messrs. Power, owners of Moore's copyright lines, refused Mr. Thomson permission to publish them along with Beethoven's arrangements, for in the new edition of Breitkopf & Härtel, of which they form No. 258, the melodies are adapted to verses (some comic, and of extreme vulgarity) by Joanna Baillie and others; three are arranged as vocal duets; two have a choral refrain. Another collection of 25 Irish airs forms No. 261 of Breitkopf & Härtel's edition; they are arranged in similar form and are equal in excellence; some are found in Moore, others are of doubtful authenticity: of the air called 'Garryone,' Beethoven has different arrangements in each. That whoever furnished the great musician with the text of the airs must have been careless or incompetent, will be evident by a comparison of the air 'Colleen dhas,' as found in No. 9 of Artaria's edition, with that already given in this article: not only is the scale destroyed and the air deprived of its pathetic peculiarity, but whole strains are omitted altogether. (The air is here transposed for the sake of comparison.)

Some Irish airs among others arranged by Beethoven appear in No. 259 of Breitkopf & Härtel's edition, and No. 262 consists of 20 of them alone. [R.P.S.]

IRON CHEST, THE. An English play with music; the words by G. Colman, jun., the music by Storace. Produced at Drury Lane March 12, 1796. A quintet from it, 'Five times by the taper's light,' was a favourite until comparatively lately, and will be found in the 'Musical Library.' The piece is based on Caleb Williams; and the Advertisement to the reader contains the author's announcement that he was 'G. Colman the younger.' [G.]

ISAAC, Heinrich. The time and place of the birth of so great a man becomes of more than usual interest when upon its decision depends his claim to be called Germany's first great composer. If he was really a German, which all historians and the evidence of his works lead us to believe, it is certain that the beginning of the 16th century found him the central figure of the few musicians his country could then number. Neither Paul Hoffhaimer, the organist and composer, who, after a life of nearly ninety years (1449-1537) found his last resting-place at Salzburg, nor Thomas Stoltzer, who, in his short time of thirty-six years made his name still more famous, nor even Heinrich Finck with his lovely lieder and hymns,[1]—none of these were so great as Isaac. They had much in common with him, and their names may be found side by side with

[1] Which, nevertheless, failed to move the heart of his royal master the king of Poland, who laughingly replied to the composer's request for an increase of salary—

'A little Finch (Fink) within its cage
Sings all the year, nor asks for wage.'

his in many books of German lieder, but whatever their genius may have been, they have not handed down such monuments of greatness as exist in the works of Isaac. In the higher forms of church composition they scarcely competed with him at all.

According to one tradition he was born at Prague, and Ambros[1] devotes a charming page of his history to showing the Bohemian character of some of the subjects used by the composer in his masses. He appears to have spent much of his time in Florence, and here he was sometimes called by the grand title 'Arrhigo Tedesco' in strange contrast to the modest, quaint 'h. yzac,' another variation of his name. His position in Florence, and one date in his life, is shown by a MS. said by Dr. Rimbault to have been in the library of Christ Church, Oxford, but of which we can find no trace there at present. In 'The Musical World' (Aug. 29, 1844) Dr. Rimbault describes this MS. as containing the music composed in 1488 by Henry Isaac for the religious drama, 'San Giovanni e San Paolo,' written by Lorenzo de' Medici for performance in his own family. He also states that Isaac was the teacher of Lorenzo's children, which fact we presume he learnt from the same MS. M. Fétis shows (1) that he was still, or again in Florence many years after 1488, for Aaron speaks of being intimate with Josquin, Obrecht and Isaac in that city, and Aaron could not have been twenty years old (i.e. old enough for such friendship) until the year 1509; (2) that he was also at one time in the service of the Emperor Maximilian I, who reigned from 1486–1519; and (3) that he must have died some years before 1531, according to a note made upon a MS. of that date in the Munich Library, containing a work begun by him and finished by his pupil Senfl.

Of Isaac's works, first in importance come 23 masses, 10 printed, and 13 in MS. (1) The Library of the Lyceum at Bologna has a copy of the 'Misse Heinrici Izac,' printed by Petrucci in 1506, containing 5 masses, 'Charge de deul,' 'Misericordias Domini,' 'Quant jay au cour,' 'La Spagna,' 'Comme femme.' (2) Rhaw's 'Opus decem missarum 4 vocum' (Wittenberg, 1541) contains the 2 masses 'Carminum' and 'Une Musque de Biscay.' (3) 'Liber quindecim missarum,' etc. (Nuremberg, Petreius, 1539) contains the mass, 'O præclara,' one of the most remarkable of the composer's works. It is composed on a subject of 4 notes reiterated without cessation throughout the mass. Some of the numbers, such as the 'Et in terra pax' and the 'Qui tollis,' have the character of slow movements by the lengthening of the four notes over several bars, the simple accompaniments of the other parts being very beautiful. The subject is kept in the treble nearly throughout the mass, which is one of Isaac's peculiarities. It is presented in various forms in the earlier movements, first announced in triple time, then in long notes with accompaniments in triple time, till in the Credo it bursts out Alla Breve, forming a majestic climax. The Mass exists in score in the Berlin Library amongst the MS. materials collected by Sonnleithner for a history of music. A copy is also in the Fétis Library at Brussels (No. 1807). (4) Ott's collection, 'Missæ 13, vocum' (Nuremberg, 1539), contains two masses, 'Salve nos,' and 'Fröhlich Wesen.' One movement, 'Pleni sunt,' from the latter, is scored in Sonnleithner's MS.

The 13 MS. masses are mentioned by Ambros in his History of Music (iii. 386)—in the Royal Library at Vienna, eight—'Missa Solennis,' Magne Deus, Paschalis, De Confessoribus, Dominicalis, De B. Virgine, and two De Martyribus, all in 4 parts; and in the Munich Library, four 6-part ones,—Virgo prudentissima, Solennis, De Apostolis, and one without name, and a 4-part one, 'De Apostolis.' A MS. volume of Masses in the Burgundy Library at Brussels (No. 6428) contains the 'Virgo prudentissima' under the title 'Missa de Assumptione B. V. M., hẽric ysac.'

Eitner's Bibliographie der Musik-Sammelwerke (Berlin, 1877) mentions upwards of forty collections between the years 1501 and 1564, which contain motets and psalms by Isaac. The Dodecachordon of Glarean contains five, three of which Burney (ii. 521–4), Hawkins (ch. 70) and Forkel, have printed in their Histories, Burney having copied them all in his note-books at the British Museum. Wyrsung's 'Liber selectarum cantionum,' etc. (Augsburg, 1520), contains five of the most important of Isaac's works of this class, amongst them two 6-part motets, 'Optime pastor' and 'Virgo prudentissima,' dedicated respectively to the Pope Leo X and the Emperor Maximilian I. An excellent MS. copy of this work exists in the Fétis Library at Brussels (No. 1679). Of Isaac's lieder, Ott's collection of '115 guter newer Liedlein' (Nuremberg, 1544) contains 10. One of them, 'Es het ein bawer ein töchterlein,' is given in score by Forkel in his History. This collection has lately been reprinted by the Gesellschaft für Musikforschung (Liepmanssohn, Berlin). Förster's collection, 'Ein auszug guter Teutscher liedlein' (Nuremberg, Petreius, 1539) contains four, and amongst them 'Isbruck [Innsbruck] ich muss dich lassen,' the words said to have been written by the Emperor Maximilian. The melody was afterwards sung to the hymns, 'O Welt ich muss dich lassen,' and 'Nun ruhen alle Wälder,' and is one of the most beautiful of German chorales. It is introduced by Bach in the Passions-Musik (St. Matthew), in the scene of the Last Supper. (See 'Innsbruck' in Hymns Ancient and Modern.) Whether Isaac actually composed the melody, or only wrote the other parts to it, is doubtful, but it is remarkable that here, as in others of his works, the melody appears in the upper part, which was quite unusual in such compositions. It is in these Lieder that he shows his nationality. In them we have the music which the composer brought with him from his home, the trace of which is not lost in his greater compositions, but blending itself with the new influences of an adopted country, and of Netherland companions, gives to his music a

[1] Geschichte der Musik, iii. 380-389.

threefold character, 'a cosmopolitan trait' not to be found in the works of any other composer of the time (Ambros, iii. 382). [J.R.S.-B.]

ISABELLA. [See GIRARDEAU.]

ISHAM, JOHN, Mus. Bac., was for some years deputy organist for Dr. Croft. On Jan 22, 1711, he was elected organist of St. Anne's, Soho, on Croft's resignation. On July 17, 1713, he graduated as Bachelor of Music at Oxford, and on April 3, 1718, was elected organist of St. Andrew's, Holborn, with a stipend of £50 per annum, upon which he resigned his place at St. Anne's, the vestry objecting to his holding both appointments. Shortly afterwards he was chosen organist of St. Margaret's, Westminster. He composed some anthems, and joined with William Morley in publishing a joint-collection of songs, Isham's two-part song in which, 'Bury delights my roving eye,' was very popular in its day, and is reprinted by Hawkins in his History (ch. 168). He died in June 1726, and was buried on the 12th of that month in St. Margaret's church. [W.H.H.]

ISOUARD, or ISOARD, NICOLO, usually known as NICOLO, born Dec. 6, 1775, at Malta, where his father was a merchant and secretary of the 'Massa Frumentaria,' or government storehouses. He was taken to Paris as a boy, and educated at the Institution Berthaud, a preparatory school for the engineers and artillery. Much of his time was taken up with the study of the pianoforte under Pin, but he passed a good examination for the navy. He was however recalled before receiving his commission, and on his return to Malta in 1790 was placed in a merchant's office. His pianoforte-playing made him welcome in society; and encouraged by this he went through a course of harmony with Vella and Azopardi, and with Amendola of Palermo—where he passed several years as clerk to a merchant—and completed his studies under Sala and Guglielmi at Naples, where he was employed by a German banking firm. He now determined to become a composer, and abandoning commerce, much against his father's wish, produced his first opera, 'L'avviso ai Maritati,' at Florence in 1795. After this date he called himself simply Nicolo, in order not to compromise his family, and it was under this name that he made his reputation. From Florence he went to Leghorn, and composed 'Artaserse,' an opera seria, which procured him the cross of San Donato of Malta. He succeeded Vincenzo Anfossi as organist of St. John of Jerusalem at Malta, and on the death of San Martino became maître de chapelle to the Order, retaining both posts until the occupation of the island by the French (June 10–13, 1798). During these early years he acquired that facility which was afterwards one of his most marked characteristics. There was not a branch of composition which he did not attempt, as a list of his works at this date will show:—9 Cantatas; masses, psalms, and motets; vocal pieces for concerts; and 8 or 9 operas which it is not necessary to enumerate.

At this time he was strongly urged to go to Paris.[1] On his arrival he found a useful friend in Rodolphe Kreutzer, and the two composed conjointly 'Le petit Page' (Feb. 14, 1800), and 'Flaminius à Corinthe' (Feb. 28, 1801). At the same time Delrieu re-wrote the librettos of two of his Italian operas, which were performed under their original titles, 'L'Impromptu de Campagne' (June 30, 1800), and 'Le Tonnelier' (May 17, 1801). Isouard also made considerable mark in society as a pianist. To his friendship with Hoffmann and Etienne he owed not only sound advice, but a series of librettos upon which he was able to work with a certainty of success. Thus favoured by circumstances, he produced in 16 years no less than 33 operas. The following list is in exact chronological order, which Fétis has not been careful to observe:—

'La Statue, ou la femme avare' (April 29); 'Michel Ange' (Dec. 11, 1802); 'Les Confidences' (March 30); 'Le Baiser et la Quittance' (June 17, with Méhul, Kreutzer, and Boieldieu); 'Le Médecin Turc' (Feb. 24); 'Le Déjeuner de Garçons' (April 24); 'La Ruse inutile' (May 30); 'Léonce' (Nov. 19, 1803); 'L'Intrigue aux fenêtres

In his own way he continued Grétry's work, but being no originator was eclipsed by Boieldieu and afterwards by Auber. The successes of his rival provoked him beyond control, and when Boieldieu was elected by the Institut in 1817 to succeed Méhul in preference to himself, his mortification was extreme. It was, perhaps, to drown the remembrance of this defeat, and of the triumphs of his opponent, that, although a married man, he plunged into a course of dissipation which ruined his health and brought on consumption, from which he died in Paris, March 23, 1818.

There is no biography of Isouard, nor indeed any sketch at all adequate. Several portraits have been published, but are of no artistic merit. From one of them was executed in 1853 the marble bust now in the foyer of the Opéra Comique.

Isouard is little known in England. The only two of his pieces which appear to have been brought out on the London stage are 'Les Rendezvous bourgeois' (St. James's, May 14, 1849), and 'Joconde,' English version by Mr. Santley (Lyceum, Oct. 25, 1876). [G.C.]

ISRAEL IN EGYPT, the fifth of Handel's 19 English oratorios. The present second part was composed first. The autograph of it is headed 'Moses song. Exodus Chap. 15. Introitus. Angefangen Oct. 1, 1738,' and at the end 'Fine Octobr. 11, 1738, den 1 Novembr. völlig geendigt.' The present first part is headed '15 Octobr. 1738. Act ye 2da.' Three pages were written and erased; and on the fourth page begins the present opening recitative, headed 'Part ye 2 of Exodus.' At the end of the Chorus 'And believed' stands 'Fine della Parte 2da d'Exodus. {Octobr. 20 / October 28} 1738.' The autograph is in Buckingham Palace, and the two parts are bound in their present order, not in that of composition.

The title 'Israel in Egypt' appears in the announcements of the first performance, which was on April 4, 1739. On April 11 it was performed again 'with alterations and additions.' Elsewhere it is announced that 'the Oratorio will be shortened and intermixed with songs'—four in number. It was given a third time April 1, 1740, with the Funeral Anthem as a first part, under the name of the 'Lamentation of the Israelites for the Death of Joseph.'

Dr. Chrysander suggests that the adaptation of the Funeral Anthem as an introduction followed immediately on the completion of Moses' Song, and that 'Act ye 2da' followed on that adaptation; and it is difficult to resist the conconclusion that he is right, though beyond the words 'Act ye 2da' and the addition of a short overture to the Funeral Anthem there is no positive evidence. The use of the word 'Act' prevents our taking 'Act the 2da' as 'second' in relation to 'Moses Song'; it was second in order of composition, but not in historic order, nor in order of performance—and 'Moses Song' contains the musical climax to the whole work.

The first subsequent performance in England of the work as composed, without additions or omissions, was given by the Sacred Harmonic Society, Feb. 23, 1849. In Germany it was first performed in any shape by the Sing-Akademie of Berlin, Dec. 8, 1831.

This oratorio is distinguished among those of Handel as much for its sustained grandeur as for the great number of allusions to previous compositions, both of Handel's own and of other musicians, that it contains. Those which have at present been recognised are as follow:—

'They loathed.' Shortened from Fugue in A minor in his own Six organ fugues.
'He spake the word.' The voice parts from a Symphony for double orchestra in Stradella's Serenata.[1]
Hailstone Chorus. From Stradella's Serenata.
'He smote all the firstborn.' From Fugue in A minor in his own Six organ fugues.
'But as for his people.' From Stradella's Serenata.
'Egypt was glad.' Almost note for note from an Organ canzona in D by Kerl.[2]
'And believed the Lord.' From Stradella's Serenata.
'He is my God,' almost note for note from the opening of Erba's Magnificat.
'The Lord is my strength.' From 'Et exultavit' in the Magnificat.
'The Lord is a man of war.' From 'Te eternum Patrem' in Urio's Te Deum, and 'Quia fecit' in Magnificat.
'The depths have covered them.' From Magnificat.
'Thy right hand.' From ditto, 'Quia respexit.'
'Thou sentest forth.' Almost note for note from ditto, 'Fecit potentiam.'
'And with the blast.' From ditto, 'Deposuit.'
'The earth swallow'd them.' Almost note for note from 'Sicut erat' in ditto.
'Thou in Thy mercy.' From ditto, 'Esurientes.'
'I will sing unto the Lord.' Repeated from beginning of Part II.

Notwithstanding this astonishing number of adaptations great and small, so vast is the fusing power of Handel's genius, and also perhaps so full of faith the attitude in which a great work of established reputation is contemplated, that few hearers suspect the want of unity, and even Mendelssohn, keen as was his critical sense, while editing the 'Israel' for the Handel Society, never drops a hint of any anomaly or inconsistency in the style of any of the pieces. Mendelssohn wrote organ accompaniments to the songs and duets, though, strange to say, they have seldom been used in public in this country.

As to the compiler of the words of 'Israel' there is neither evidence nor tradition. It is therefore possible that they may have been selected by Handel himself. In the first part some of the words are taken from the Prayer-book version of the Psalms. In other cases the ordinary Authorised version has been adopted, but not exactly followed. [G.]

ISTESSO TEMPO, L', 'the same time,' a caution in cases of change of rhythm or time-signature. It may mean that the measure remains as before while the value of the note changes—as in the change from 9–16 to 6–16 in Beethoven's Op. 111, or from 2–4 to 6–8 in 'Bagatelle,' Op. 119, No. 6; or that the measure changes while the note remains—as in Op. 126, No. 1; or that neither note nor measure change—as in Op. 111, 6–16 to 12–32, and Op. 120, Var. 3. Or that a former tempo is resumed, as in his Sonata, op. 110—'L'istesso tempo di Arioso,' 'L'istesso tempo della fuga.' [G.]

ITALIANA IN ALGIERI, L'. An Italian comic opera in 2 acts; words by Anelli, music by Rossini. Produced at San Benedetto, Venice, in 1813; at Paris, Feb. 1, 1817; and in London, Jan. 27, 1819; in English, Dec. 30, 1844. [G.]

ITALIAN SIXTH, THE, is the augmented sixth accompanied by the major third, as

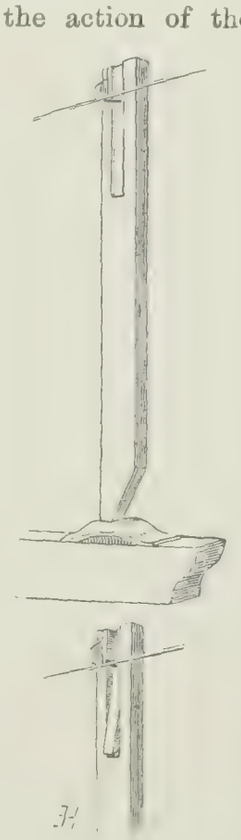
[C.H.H.P.]

IVANOFF, or IVANHOFF, NICHOLAS, born in 1809, an Italianized Russian, appeared in England in the season of 1834. A pupil of E. Bianchi, he had a very beautiful tenor voice, 'a chaste and simple style of singing, but little execution' (Lord Mount-Edgcumbe). On the other hand, Mr. Chorley wrote,—'Nothing could be more delicious as to tone—more neat as to execution. No such good *Rodrigo* in Otello has been heard since I have known the opera:' and Moscheles, in his Diary, says, 'he attracted the public by his great flexibility of voice, but he displeased my German ear by using his head-voice too frequently, particularly when singing Schubert's Serenade. His sickly, sentimental style became so wearisome that some wag circulated a joke about him declaring that his real name was "I've enough."' Sweet as were his voice and method of vocalisation, his acting and appearance on the stage were utterly null and insignificant; 'In England, he was never seen to attempt to act; subsequently, he essayed to do so in Italy, I have heard; but, by that time, the voice had begun to perish' (Chorley). He reappeared in London in 1835 and 37, but he never fulfilled the promise of his first season, and soon retired. With others of the Italian troupe he had taken part, but without effect, in the Festival at Westminster Abbey in 1834. Ivanhoff is still living in retirement at Bologna. [J.M.]

IVES, SIMON, was a vicar choral of St. Paul's cathedral. In 1633 he was engaged, together with Henry and William Lawes, to compose the music for Shirley's masque, 'The Triumph of Peace,' performed at Court by the gentlemen of the four Inns of Court on Candlemas day, 1633-4, for his share in which he received £100. On the suppression of choral service he became a singing master. His elegy on the death of William Lawes, 'Lament and mourn,' appeared in separate parts at the end of H. and W. Lawes's 'Choice Psalmes,' 1648. It is given in score in J. S. Smith's 'Musica Antiqua.' Many catches and rounds by Ives are printed in Hilton's 'Catch that Catch can,' 1652, and Playford's 'Musical Companion,' 1672; 'Si Deus nobiscum,' 3 in 1, is given in Hullah's 'Vocal Scores.' Songs by him are to be found in various collections. He died in the parish of Christ Church, Newgate Street, in 1662. [W.H.H.]

J.

JACK (Fr. *Sautereau*; Ital. *Saltarello*; Ger. *Docke, Springer*). In the action of the harpsichord tribe of instruments the jack represents the Plectrum. It is usually made of pear-tree, rests on the back end of the key-lever, and has a moveable tongue of holly working on a centre, and kept in its place by a bristle spring. A thorn or spike of crowquill projects at right angles from the tongue. On the key being depressed the jack is forced upwards, and the quill is brought to the string, which it twangs in passing. The string is damped by the piece of cloth above the tongue. When the key returns to its level, the jack follows it and descends; and the quill then passes the string without resistance or noise. In some instruments a piece of hard leather is used instead of the quill. In cutting the quill or leather great attention is paid to the gradation of elasticity which secures equality of tone. A row of jacks is maintained in perpendicular position by a rack; and in harpsichords or clavecins which have more than one register, the racks are moved to or away from the strings by means of stops adjusted by the hand; a second rack then enclosing the lower part of the jack to secure its position upon the key. We have in the jack a very different means of producing tone to the tangent of the clavichord or the hammer of the pianoforte. The jack, in principle, is the plectrum of the psaltery, adjusted to a key, as the tangent represents the bridge of the monochord and the pianoforte hammer the hammer of the dulcimer. We do not exactly know when jack or tangent were introduced, but have no reason to think that the invention of either was earlier in date than the 14th century. By the middle of the 16th century the use of the clavecin instruments with jacks had become general in England, the Netherlands and France; and in Italy from whence they would seem to have travelled. They were used also in Germany, but the clavichord with its tangents asserted at least equal rights, and endured there until Beethoven. The first years of the 18th century had witnessed in Florence the invention of the hammer-clavier, the pianoforte; before the century was quite out the jack had everywhere ceded to the



hammer. Although leather for the tongue of the jack has been claimed to have been the invention of Pascal Taskin of Paris in the 18th century (his much-talked-of 'peau de buffle'), it has been found in instruments of the 16th and 17th; and it may be that leather preceded the quill, the introduction of which Scaliger (1484–1550) enables us to nearly date. He says (Poetices, lib. i. cap. lxiii) that when he was a boy the names clavicymbal and harpsichord had been appellations of the instrument vulgarly known as monochord, but that subsequently points of crowquill had been added, from which points the same instrument had become known as spinet—possibly from the Latin 'spina,' a thorn, though another and no less probable derivation of the name will be found under SPINET.

Shakspeare's reference to the jack in one of his Sonnets is well-known and often quoted—

> 'Do I envy those jacks that nimble leap
> To kiss the tender inward of thy hand';

but appears to mean the keys, which as the 'sweet fingers' touch them make 'dead wood more blest than living lips.' A nearer reference has been preserved by Rimbault (The Pianoforte, London, 1860, p. 57) in a MS. note by Isaac Reed to a volume of old plays. Lord Oxford said to Queen Elizabeth, in covert allusion to Raleigh's favour and the execution of Essex, 'When jacks start up, heads go down.' [A.J.H.]

JACKSON, JOHN. One Jackson, who in 1669 held the office of 'Instructor in Musick' at Ely Cathedral for three months, has been conjectured to be identical with the John Jackson who early in 1676 was appointed nominally a vicar choral but in fact organist of Wells Cathedral.[1] His name is not found in the Chapter books after 1688, so that it is presumed that he died or resigned in that year. He composed some church music now almost wholly lost. An anthem, 'The Lord said unto my Lord,' included in the Tudway Collection (Harl. MS. 7338); a Service in C, in the choir books of Wells, and four chants in a contemporary MS. organ part in the library of the Sacred Harmonic Society are all his compositions that are to be found complete. The last-named MS. contains the organ parts of the Service in C and 8 anthems, and in the choir books at Wells are some odd parts of an anthem and a single part of a Burial Service. [W.H.H.]

JACKSON, WILLIAM, known as Jackson of Exeter, son of a grocer in that city, was born in May 1730. He received a liberal education, and having displayed a strong partiality for music, was placed under John Silvester, organist of Exeter Cathedral, for instruction. In 1748 he removed to London and became a pupil of John Travers. On his return to Exeter he established himself as a teacher. In 1755 he published a set of 'Twelve Songs,' 'which were so simple, elegant, and original, that they immediately became popular throughout the kingdom.' He afterwards produced 'Six Sonatas for the Harpsichord,' 'Elegies for three voices,' and a second set of 'Twelve Songs.' These were followed by 'Six Epigrams,' a third set of 'Twelve Songs,' and a setting of Warton's 'Ode to Fancy.' In 1767 he composed the music for a dramatic piece called 'Lycidas,' altered from Milton's poem, on the occasion of the death of Edward, Duke of York, brother of George III, and produced at Covent Garden on Nov. 4, but never repeated. He next published 'Twelve Canzonets for two voices,' which were highly successful, and one of which, 'Time has not thinned my flowing hair,' enjoyed a long career of popularity. To these succeeded 'Eight Sonatas for the Harpsichord,' and 'Six Vocal Quartetts.' In 1777 Jackson received the appointments of subchanter, organist, lay vicar, and master of the choristers of Exeter Cathedral. In 1780 he composed the music for General Burgoyne's opera, 'The Lord of the Manor,' which was produced at Drury Lane, Dec 27, with great success, and kept possession of the stage for more than half a century, mainly owing to Jackson's music. The beautiful song, 'Encompassed in an angel's frame,' is one of those gems which time can never affect. In 1782 Jackson published 'Thirty Letters on various subjects,'—three of them relating to music, which were well received and in 1795 reached a third edition. 'The Metamorphosis,' a comic opera, of which Jackson was believed to be the author as well as, avowedly, the composer, was produced at Drury Lane, Dec. 5, 1783, but performed only two or three times. In 1791 Jackson published a pamphlet entitled 'Observations on the present State of Music in London.' In 1798 he published 'Four Ages, together with Essays on various subjects,' intended as additions to the 'Thirty Letters.' His other musical publications comprised a second set of 'Twelve Canzonets for two voices,' 'Twelve Pastorals,' a fourth set of 'Twelve Songs,' 'Hymns in three parts,' and 'Six Madrigals.' His cathedral music was collected and published many years after his death by James Paddon, organist of Exeter Cathedral. He died of dropsy, July 12, 1803. Jackson employed much of his leisure time in painting landscapes in the style of his friend Gainsborough, in which he attained considerable skill. Whilst much of his music charms by its simplicity, melodiousness, refinement and grace, there is also much that sinks into tameness and insipidity; his church music especially is exceedingly feeble. Notwithstanding this, 'Jackson in F' is even now popular in some quarters. [W.H.H.]

JACKSON, WILLIAM, known as Jackson of Masham, born Jan. 9, 1816, was son of a miller, and furnishes a good instance of the power of perseverance and devotion to an end. His passion for music developed itself at an early age, and his struggles in the pursuit of his beloved art read almost like a romance in humble life. He built organs, learned to play almost every instrument,

[1] In some cathedrals the statutes do not specify an organist as an officer of the church. In such the custom is to assign to one of the vicars choral the performance of the duty of organist.

wind and string, taught himself harmony and counterpoint from books, until at length, in 1832, when he had reached the mature age of 16, the lord of the manor of Masham having presented a finger organ to the church, Jackson was appointed organist with a stipend of £30. Through the circulating library in Leeds, he was able to study the scores of Haydn, Mozart, Spohr and Mendelssohn. In 1839 he went into business at Masham as a tallow-chandler, and in the same year published an anthem, 'For joy let fertile valleys ring.' In 1840 the Huddersfield Glee Club awarded him their first prize for his glee, 'The sisters of the sea'; and in 1841 he composed for the Huddersfield Choral Society the 103rd Psalm for solo voices, chorus and orchestra. In 1845 he wrote an oratorio, 'The Deliverance of Israel from Babylon,' and soon afterwards another entitled 'Isaiah.' In 1852 he made music his profession and settled in Bradford, where, in partnership with William Winn, the bass singer, he entered into business as a musicseller, and became organist, first, of St. John's Church, and afterwards (in 1856) of Horton Lane Chapel. On Winn's quitting Bradford, Jackson succeeded him as conductor of the Choral Union (male voices only). He was chorus-master at the Bradford festivals in 1853, 56 and 59, and became conductor of the Festival Choral Society on its establishment in 56. For the festival of 56 he again set the 103rd Psalm, and for that of 59 composed 'The Year,' a cantata, the words selected by himself from various poets. He compiled and partly composed a set of psalm tunes, and harmonised 'The Bradford Tune Book,' compiled by Samuel Smith. Besides the works already mentioned, he composed a mass, a church service, anthems, glees, part-songs and songs, and wrote a Manual of Singing, which passed through many editions. His last work was a cantata entitled 'The Praise of Music.' He died April 15th, 1866. His son, WILLIAM, born 1853, was bred to the profession of music, became organist of Morningside Church, Edinburgh, and died at Ripon, Sept. 10, 1877. [W.H.H.]

JACOB, BENJAMIN, born in London in 1778, was at a very early age taught the rudiments of music by his father, an amateur violinist. When 7 years old he received lessons in singing from Robert Willoughby, a well-known chorus-singer, and became a chorister at Portland Chapel. At 8 years of age he learned to play on the harpsichord, and afterwards studied that instrument and the organ under William Shrubsole, organist of Spa Fields Chapel, and Matthew Cooke, organist of St. George, Bloomsbury. At 10 years of age he became organist of Salem Chapel, Soho, and little more than a year afterwards was appointed organist of Carlisle Chapel, Kennington Lane. Towards the latter end of 1790 he removed to Bentinck Chapel, Lisson Green, where he remained until Dec. 1794, when the Rev. Rowland Hill invited him to assume the place of organist at Surrey Chapel. In 1796 he studied harmony under Dr. Arnold. In 1800 he conducted a series of oratorios, given under the direction of Bartleman in Cross Street, Hatton Garden. As he advanced in years he became more and more distinguished as one of the best organists of his time, and in 1808 began a series of performances at Surrey Chapel, of airs, choruses, and fugues played upon the organ alone, without any interspersion of vocal pieces. In that and the following year Samuel Wesley addressed to him, as to a kindred spirit, a remarkable series of letters on the works and genius of John Sebastian Bach. These letters were published in 1875 by Miss Eliza Wesley, the writer's daughter; the originals are now in the library of the Sacred Harmonic Society. In 1809 Jacob gave an organ performance at Surrey Chapel in conjunction with Wesley, the two playing alternately the fugues of Bach and Handel and other pieces. In 1811, 1812 and 1814 Jacob repeated the performances in conjunction with Dr. Crotch. As a consequence of his high reputation he was frequently engaged to open new organs and to act as judge on trials for vacant organists' seats.

In Nov. 1823 he quitted Surrey Chapel for the newly-erected church of St. John, Waterloo Road. This led to a dispute between him and the Rev. Rowland Hill, resulting in a paper war, in which the musician triumphed over the divine. The excitement of the controversy, however, proved too much for Jacob; he was attacked by disease, which developed into pulmonary consumption, and terminated his existence Aug. 24, 1829. His compositions were not numerous, consisting principally of psalm tunes and a few glees. The collection of tunes, with appropriate symphonies, set to a course of psalms, and published under the title of 'National Psalmody,' which he edited, is well known. [W.H.H.]

JACQUARD, LÉON JEAN, eminent violoncellist, born at Paris Nov. 3, 1826; studied at the Conservatoire, where he obtained the 2nd prize for cello in 1842, and the 1st prize in 1844. In 1876 he married Mlle. Laure Bedel, a pianist of distinction, and at the end of 1877 succeeded Chevillard as professor of his instrument at the Conservatoire. Jacquard is eminently a classical player—a pure and noble style, good intonation, and great correctness: if he has a fault it is that he is somewhat cold, but his taste is always irreproachable, and his *séances* of chamber music are well attended by the best class of amateurs. He has composed some Fantasias for the cello, but it is as a virtuoso and a professor that he will be remembered. [G.C.]

JACQUIN, VON. A Viennese family with which Mozart was on the most intimate and affectionate terms. The father, Johann Franz Freiherr von Jacquin, was a celebrated botanist, whose house in the botanical garden was the great resort of the most intellectual and artistic society of Vienna; the son Gottfried, an accomplished amateur with a fine bass voice, was a very intimate friend of Mozart's, and the recipient of some of his cleverest letters; and the daughter Franziska was one of his best pupils (Letter, Jan. 14, 1787). For Gottfried he wrote the air

'Mentre ti lascio' (Köchel 513), and for the family more than one charming little Canzonet for 2 sopranos and a bass, such as 'Ecco quel fiero' or 'Due pupille amabili' (K. 436, 439). An air of Gottfried's, 'Io ti lascio' is to this day often sung in concert rooms as Mozart's. He took part in the funny scene which gave rise to Mozart's comic 'Bandl Terzett'—'Liebes Mandl, wo ists Bandl.' The lines which Gottfried wrote in Mozart's Album—'True genius is impossible without heart; for no amount of intellect alone or of imagination, no, nor of both together, can make genius. Love, love, love is the soul of genius'—characterise him as faithfully as those of his father, written in the same book, do the old man of tact and science :—

'Tibi, qui possis
Blandus auritas fidibus canoris
Ducere quercus,
In amicitiæ tesseram.' [G.]

JADASSOHN, Salomon, born at Breslau Sept. 15, 1831. His years of study were passed partly at home under Hesse, Lüstner and Brosig, partly at the Leipzig Conservatorium (1848), partly at Weimar under Liszt, and again in 1853, at Leipzig under Hauptmann. Since that time he has resided in Leipzig, first as a teacher, then as the conductor of the Euterpe concerts, and lastly in the Conservatorium as teacher of Harmony, Counterpoint, Composition, and the Pianoforte. His compositions are varied and numerous (58, to May 1879). Among the most remarkable are Symphony No. 3, in D (op. 50); 3 Serenades for Orchestra (ops. 42, 46, 47); 2 pieces for Chorus and Orchestra (ops. 54, 55); Serenade (op. 35) and Ballet-music (op. 58), each for P.F. and each a series of canons; songs, duets, etc. His facility in counterpoint is great, and his canons are both ingenious and effective. As a private teacher Jadassohn is highly esteemed. [G.]

JADIN, Louis Emmanuel, son, nephew, and brother of musicians, born Sept. 21, 1768, at Versailles, where his father Jean, a violinist and composer, settled at the instigation of his brother Georges, a performer on the bassoon attached to the chapelle of Louis XV. As a child Louis showed great talent for music; his father taught him the violin, and Hüllmandel the piano. After being 'page de la musique' to Louis XVI, he was in 1789 appointed 2nd accompanyist, and in 1791 chief maestro al cembalo at the Théâtre de Monsieur, then in the Rue Feydeau. This post gave him the opportunity of producing 'Joconde' (Sept. 14, 1790), a comic opera in 3 acts. Jadin's industry was extraordinary. Though fully engaged as composer, conductor, and teacher, he lost no opportunity of appearing before the public. He composed marches and concerted pieces for the Garde Nationale; patriotic songs and *pièces de circonstance* such as 'Le Congrès des Rois,' in conjunction with others, 'L'Apothéose du jeune Barra,' 'Le Siége de Thionville' (1793), 'Agricol Viola ou le jeune héros de la Durance,' for the various fêtes of the Revolution; and 38 operas for the Italiens, the Théâtres Molière and Louvois, the Variétés, the Académie, and chiefly the Feydeau. Of this mass of music, however, nothing survives but the titles of 'Joconde' and 'Mahomet II' (1803) familiar to us from the operas of Isouard and Rossini. This does not necessarily imply that Jadin was without talent, but like many others his librettos were bad, and his music, though well written, was wanting in dramatic spirit, and in the style, life, passion and originality necessary for success. In fact his one quality was facility.

In 1802 he succeeded his brother as professor of the pianoforte at the Conservatoire, and was 'Gouverneur des pages' of the royal chapel from the Restoration to the Revolution of 1830. He received the Legion of Honour in 1824. To the close of his life he continued to produce romances, nocturnes, trios and quartets, string quintets, and other chamber-music. Of his orchestral works, 'La Bataille d'Austerlitz' is the best known. He was one of the first to compose for two pianos, and was noted as the best accompanyist of his day. In private life he was a good talker, and fond of a joke. He died in Paris, April 11, 1853.

His brother Hyacinthe, born at Versailles 1769, a pupil of Hüllmandel's, and a brilliant and charming pianist, played at the Concerts Feydeau in 1796–97, and was a favourite with the public up to his early death in 1802. On the foundation of the Conservatoire he was appointed professor of the pianoforte, but had barely time to form pupils, and both Louis Adam and Boieldieu excelled him as teachers. He composed much both for his instrument and the chamber; 4 concertos and sonatas for 2 and 4 hands for P. F.; sonatas for P. F. and violin; string trios and quartets, etc.; all now old-fashioned and forgotten. [G.C.]

JÄHNS, Friedrich Wilhelm, born at Berlin Jan. 2, 1809. His talent for music showed itself early, and strongly; but the first important event in his musical life was the first performance of Freischütz (June 18, 1821), which not only aroused his enthusiasm for music, but made him an adherent of Weber for ever. After some hesitation between the theatre and the concert-room, he finally chose the latter, and became a singer and teacher of singing, in which capacity he was much sought for. In 1845 he founded a singing society, which he led for 25 years. In 1849 he was made 'Königliche Musikdirector'; in 1871 'Professor'; and has since been decorated with the orders of Baden, Saxony, Bavaria, and Hanover. He has composed and arranged much for the piano, but the work by which he will live for posterity is his Thematic Catalogue of Weber's works ('C. M. von W. in seinen Werken,' 1871), founded on Köchel's Catalogue of Mozart, but much extended in limits beyond that excellent work. It is in fact a repertory of all that concerns the material part of those compositions, including elaborate information on the MSS., editions, performances, Weber's handwriting, etc. etc.—a large vol. of 500 pages. The library which he formed in the course of this work, is one of the sights of Berlin. [G.]

JAELL, ALFRED, pianoforte player, born March 5, 1832, at Trieste. Began his career at 11 years old as a prodigy, and seems to have acquired his great skill by constant performance in public. In 1844 he was brought to Moscheles at Vienna, who calls him a Wunderknabe. In 1845 and 6 he resided in Brussels, next in Paris, and then, after the Revolution of 1848, went to America for some years. In 1854 he returned to Europe. In 1862 he played at the Musical Union, and on June 25, 1866, at the Philharmonic Society; and since that date has divided his time between the Continent and England.

In 1866 Mr. Jaell married Miss Trautmann, a pianist of ability. His published works consist of transcriptions, potpourris, and other salon pieces. He has always shown himself anxious to bring forward new compositions; and played the concertos of Brahms and of Raff at the Philharmonic, at a time when they were unknown to that audience. [G.]

JAHN, OTTO, the biographer of Mozart, a distinguished philologist, archæologist, and writer on art and music, born June 16, 1813, at Kiel; studied at Kiel, Leipzig, and Berlin, took his degree in 1831, visited Copenhagen, Paris, Switzerland and Italy, in 39 settled in Kiel, in 42 became professor of archæology and philology at Greifswalde, and in 47 director of the archæological Museum at Leipzig, was dismissed for political reasons during the troubles of 1848–49, and in 55 settled at Bonn as professor of classical philology and archæology, and director of the university art-museum. Here he remained till 1869, when he retired during his last illness to Göttingen, and died on Sept. 9. Jahn wrote important books on all the subjects of which he was master, but his musical works alone concern us. Foremost among these is his 'W. A. Mozart' (Leipzig, Breitkopf & Härtel, 4 vols, 1856–59, 2nd ed. 2 vols, 1867, with portraits and facsimiles). His picture of the great composer is scarcely less interesting and valuable than his description of the state of music during the period immediately preceding Mozart, while the new facts produced, the new light thrown on old ones, and the thorough knowledge of the subject evinced throughout, all combine to place the work at the head of musical biographies.[1]

Jahn intended to treat Haydn and Beethoven on the same scale, and had begun to collect materials, but these projects were stopped by his death[2]. Jahn also published an essay on Mendelssohn's 'Paulus' (Kiel 1842); and an accurate comparative edition, with preface, of Beethoven's 'Leonore' (Fidelio) for P.F. (B. & H. Leipzig 1851). For the 'Grenzboten' he wrote two spirited reports of the Lower Rhine Musical Festivals of 1855–56; an article on the complete edition of Beethoven's works, full of sound criticism and biographical information; and two controversial articles on Berlioz and Wagner. These and other contributions of the same kind were published as 'Gesammelte Aufsätze über Musik' (Leipzig 1868). His four collections of original songs (3 and 4 from Groth's 'Quickborn,' Breitkopf & Hartel), also evince the possession of that remarkable combination of a highly cultivated sense of beauty with scientific attainments, which places him in the first rank among writers on music. Köchel's Catalogue of Mozart is with great appropriateness dedicated to Jahn. [C.F.P.]

JAHRBÜCHER FUR MUSIKALISCHE WISSENCHAFT — 'Year-books of musical science.' A publication due to the remarkable energy and interest of Dr. Chrysander, by whom it is edited and published, through Breitkopf & Härtel. Two volumes have appeared. For pains and ability the papers leave nothing to be desired, but the severe polemic spirit which is occasionally manifested is much to be regretted.

I. 1863. 1. Sound, and 2. Temperament, both by Hauptmann (17-54). 3. Tinctor's 'Diffinitorium,' by H. Bellermann (55-114). 4. The Limburg Chronicle, and German Volksgesang in 14th cent. (115-146). 5. The Brunswick-Wolfenbüttel Band and Opera, 16th-18th cent. (147-286). 6. Henry Carey and God save the King (287-407). 7. Handel's Organ-part to Saul (408-428). 8. Beethoven's connection with Birchall and Stumpf (429-452).

II. 1867. 9. 'Das Lochelmer Liederbuch, nebst der Ars Organisandi, von Conrad Paumann'—a description and complete analysis of a German MS. collection of songs of the 15th cent., and a MS. book of organ pieces of the same date, with facsimiles, woodcuts, and very numerous examples—in all 234 pages, by F. W. Arnold and H. Bellermann. 10. J. S. Bach and Friedemann Bach in Halle (235-248). 11. Mendelssohn's Organ-part to Israel in Egypt (249-267). 12. Reviews:—Reissmann's General History of Music (268-300); Westphal's Rhythm and History of Greek Music (300-310); Coussemaker's 'Scriptorum de Musica . . . novam seriem' and 'L'art harmonique' (310-314); Wackernagel on the German 'Kirchenlied' (314-323); Hommel's 'Geistliche Volkslieder' (323-324); Riegel's Liturgical Music (324-327; Liliencron's Historical Volkslieder (327-329); Thayer's Chronological List of Beethoven's Works (329-330); Bitter's Life of J. S. Bach (330-333); Rudhart's History of the Opera at Munich (333-335); Koch's Musical Lexicon, edited by Dommer (335-); Krüger's System of Music (336). 13. List of the Choral Societies and Concert Institutions of Germany and Switzerland (337-374). [G.]

JAMES, JOHN, an organist in the first half of the 18th century, noted for his skill in extemporaneous performance. After officiating for several years as a deputy he obtained the post of organist of St. Olave, Southwark, which he resigned in 1738 for that of St. George in the East, Middlesex. He died in 1745. His published compositions consist of a few songs and organ pieces only. [W.H.H.]

JAMES, W. N., a flautist, pupil of Charles Nicholson, was author of a work entitled 'A Word or two on the Flute,' published in 1826, in which he treats of the various kinds of flutes, ancient and modern, their particular qualities, etc., and gives critical notices of the style of playing of the most eminent English and foreign performers on the instrument. [W.H.H.]

JANIEWICZ,[1] FELIX, violinist, a Polish gentleman, born at Wilna 1762. He went to Vienna in 1784 or 5 to see Haydn and Mozart, and hear their works conducted by themselves.

[1] For the English reader this admirable book suffers from the frequent interpolation of long digressions on the rise and progress of various sections of music, which, though most valuable in themselves, interrupt the narrative and would be more conveniently placed in an Appendix. Its Index also leaves much to be desired. [G.]

[2] The materials collected for Haydn went to Herr C. F. Pohl, and those for Beethoven to Mr. Thayer, and are being employed by those writers in their biographies of the two composers. Mr. Pohl was designated by Jahn as his successor in the biography of Haydn. [G.]

[1] As the letter J in Polish has the sound of I or Y, he altered the spelling of his name to Yaniewicz, in order that in England it might be pronounced correctly.

He had nearly made arrangements to study composition under Haydn, when a Polish princess offered to take him to Italy; and he availed himself of her protection in order to hear the best violinists of the period, such as Nardini, Pugnani and others, as well as the best singers. After 3 years in Italy he went to Paris, and appeared at the Concerts Spirituels and Olympiens. Madame de Genlis procured him a pension from the Duc d'Orléans as a musician on the establishment of Mademoiselle d'Orléans, but on the reduction of the expenses of the Duke's court in 1790 he left Paris. In 1792 he came to London, and made his débût in February at Salomon's Concerts. He also appeared at Rauzzini's Bath concerts, visited Ireland several times, and for many years conducted the subscription concerts at Liverpool and Manchester. In 1800 he married Miss Breeze, a Liverpool lady. He was one of the 30 members who originally formed the London Philharmonic Society, and was one of the leaders of the orchestra in its first season. In 1815 he settled in Edinburgh, took leave of the public at a farewell concert in 1829, and died in that city in 1848.

His style was pure, warm, and full of feeling, with that great execution in octaves which La Motte first introduced into England. Besides this, he was an excellent conductor. Parke in his Musical Memoirs, and G. F. Graham in his account of the Edinburgh Musical Festival in 1815, speak of the elegant and finished execution of his Concertos. Some of these were published in Paris; but he considered his best work to be a set of 3 Trios for 2 Violins and Bass, published in London. [V. de P.]

JANITSCHAREN, *i. e.* Janissaries. A term used by the Germans for what they also call Turkish music—the triangle, cymbals, and big drum (see Nos. 3 and 7 of the Finale of the Choral Symphony). The Janissaries were abolished in 1825. Their band is said to have contained 2 large and 3 small oboes and 1 piccolo flute, all of very shrill character; 1 large and 2 small kettle-drums, 1 big and 3 small long drums, 3 cymbals, and 2 triangles. [G.]

JANNACONI or JANACCONI, Giuseppe, born, probably in Rome, 1741, learnt music and singing from Rinaldini, G. Carpani and Pisari, under whom, and through the special study of Palestrina, he perfected himself in the methods and traditions of the Roman school. In 1811, on the retirement of Zingarelli, he became Maestro di Capella at S. Peter's, a post which he held during the rest of his life. He died from the effects of an apoplectic stroke, March 16, 1816, and was buried in the church of S. Simone e Giuda. A Requiem by his scholar Basili was sung for him on the 23rd. Baini was his pupil from 1802, and the friendship thus begun lasted till the day of his death. Baini closed his eyes, and all that we know of Janacconi is from his affectionate remembrance as embodied in his great work on Palestrina.—It is strange that one who is said to have been so highly esteemed at home should be so little known abroad. His name does not appear in the Catalogue of the Sacred Harmonic Society, or the Euing Library, Glasgow, and the only published piece of music by him which the writer has been able to find is a motet in the 2nd part of Mr. Hullah's Part Music, 'The voice of joy and health,' adapted from a 'Lætamini in Domino,' the autograph of which, with that of a Kyrie for 2 choirs, formed part of the excellent Library founded by Mr. Hullah for the use of his classes at St. Martin's Hall. This motet may not be more original than the words to which it is set, but it is full of spirit, and vocal to the last degree. Janacconi was a voluminous writer; especially was he noted for his works for 2, 3 and 4 choirs. The catalogue of the Landsberg Library at Rome does not exhibit his name, but Santini's collection of MSS. contained a mass and 4 other pieces, for 4 voices; 14 masses, varying from 8 to 2 voices, some with instruments; 42 psalms, and a quantity of motets and other pieces for service, some with accompaniment, some without, and for various numbers of voices. A MS. volume of 6 masses and a psalm forms No. 1811 in the Fétis library at Brussels; the other pieces named at the foot of Fétis's article in the Biographie seem to have disappeared. [G.]

JANNEQUIN, Clement, composer of the 16th century, by tradition a Frenchman, and one of the most distinguished followers, if not actually a pupil, of Josquin Després. There is no musician of the time of whose life we know less. No mention is made of his holding any court appointment or of his being connected with any church. We may perhaps guess that, like many other artists, he went in early life to Rome, and was attached to the Papal Chapel; for some of his MS. masses are said to be still preserved there, while they are unknown elsewhere. But he must soon have abandoned writing for the church, for among his published works two masses, 'L'aveugle Dieu' and 'La Bataille,' and a single motet 'Congregati sunt,' seem almost nothing by the side of more than 200 secular compositions. Later in life, it is true, he writes again with sacred words, but in a far different style, setting to music 82 psalms of David, and 'The Proverbs of Solomon' (*selon la verité Hébraique*), leading us to conjecture that he may have become, like Goudimel, a convert to the reformed church, as Fétis thinks, or that he had never been a Christian at all, but was of Jewish origin and had only written a few masses as the inevitable trials of his contrapuntal skill. But apart from these vague speculations, it is certain that Jannequin trod a very different path from his contemporaries. Practically confining himself to secular music, he exhibited great originality in the choice and treatment of his subjects. He was the follower of Gombert in the art of writing descriptive music, and made it his speciality. Among his works of this class are 'La Bataille,' written to commemorate and describe the battle of Marignan, fought between the French and Swiss in 1515, to which composition Burney has directed particular attention in his History, and which he

has copied in his Musical Extracts (Brit. Mus. Add. MSS. 11,588), 'Le chant des Oyseaux,' 'Le caquet des Femmes,' 'La chasse de liévre, Le chant du Rossignol,' and one containing imitations of the street cries of Paris—'Voulez ouyr les cris de Paris.' To those who would know how far it may be possible to reproduce these compositions at the present day, it will be a fact of interest that the first three of them were sung in Paris in 1828 under the direction of M. Choron and 'produced a surprising effect.' The Bataille was sung by pupils of the Conservatoire in a course of historical lectures by M. Bourgault Ducoudray, Dec. 26, 1878.

A second edition of some of Jannequin's works was published in Paris (according to Fétis) in the year 1559, and the composer must have been living at that time, for they were 'reveuz et corrigez par lui meme.'

In the same year, according to the same authority, Jannequin published his music to 82 psalms, with a dedication to the Queen of France, in which he speaks of his poverty and age. Old indeed he must have been, for the year after, 1560, Ronsard the poet, an amateur of music and intimately connected with the musicians of his time, in writing a preface for a book of chansons published by Le Roy & Ballard at Paris, speaks of Jannequin with reverence enough as one of Josquin's celebrated disciples, but evidently regards him as a composer of a bygone age. [J.R.S.-B.]

JANOTHA, Nathalie, pianoforte player, born at Warsaw, June 8, 1856; taught music by her father, professor at the Conservatorium there; first appeared in public, in her native town, in the latter part of 1867; studied under Professor Rudorff, at the Imperial Hochschule of Berlin, and under Madame Schumann. She made her first appearance at the Gewandhaus, Leipzig, Jan. 1, 1874. In England she was first heard at the Saturday Popular Concert, April 13, 1878. At the Crystal Palace Saturday Concerts she appeared Dec. 7 of the same year, and at the Philharmonic Mar. 20, 1879. [G.]

JANSA, Leopold, violinist and composer, was born in 1797 at Wildenschwert in Bohemia. Although showing great fondness for music, and playing the violin from his earliest childhood, he entered the University of Vienna in 1817 to study law according to the wish of his father. He very soon however gave up the law and devoted himself entirely to music. After a few years he appeared successfully as a violinist in public; in 1824 became member of the Imperial Band, and in 1834 Conductor of Music at the University of Vienna. Jansa, though a good player and sound musician was not a great virtuoso. In 1849 he lost his appointment in Vienna for having assisted at a concert in London for the benefit of the Hungarian Political Refugees. Henceforth he remained in London, and soon gained a good position as a teacher of the violin. After about 20 years he returned to Vienna, received a pension from the Emperor, and died in 1875.

The most eminent of his pupils is Madame Norman-Neruda. Jansa published a considerable number of works for the violin:—4 concertos; a concertante for 2 violins; Violin Duets; 8 string-Quartets, etc.—all written in a fluent musicianlike style, but with no claim to originality. His duets are much valued by all violin-teachers. [P.D.]

JARNOWICK—whose real name, as he wrote it in Clement's Album, was Giovanni Marie Giornovichj, though commonly given as above—was one of the eminent violin-players of the last century; born at Palermo 1745, and a scholar of the famous Lolli. He made his *début* in Paris in 1770 at one of the Concerts Spirituels, and for some years was all the rage in that capital. Owing to some misbehaviour he left Paris in 1779 and entered the band of the King of Prussia, but his disputes with Duport drove him thence in 1783. He then visited Austria, Poland, Russia, and Sweden, and in 1791 arrived in London, where he gave his first concert on May 4. He had great success here, both as player and conductor. His insolence and conceit seem to have been unbounded, and to have brought him into disastrous collision with Viotti, a far greater artist than himself, and with J. B. Cramer—who went the length of calling him out, a challenge which Jarnowick would not accept—and even led him to some gross misconduct in the presence of the King and Duke of York. He died in Petersburg in 1804—it is said during a game of billiards. From the testimony of Kelly, Dittersdorf, and other musicians, it is not difficult to gather the characteristics of Jarnowick's playing. His tone was fine, though not strong; he played with accuracy and finish, and always well in tune. His bow-hand was light, and there was a grace and spirit about the whole performance, and an absence of effort, which put the hearer quite at ease. These qualities are not the highest, but they are highly desirable, and they seem to have been possessed in large measure by Jarnowick. In mind and morals he was a true pupil of Lolli. [G.]

JAY, John, Mus. Doc., born in Essex, Nov. 27, 1770, after receiving rudimentary instruction from John Hindmarsh, violinist, and Francis Phillips, violoncellist, was sent to the continent to complete his education. He became an excellent violinist. He returned to England in 1800, settled in London, and established himself as a teacher. He graduated as Mus. Bac. at Oxford in 1809, and Mus. Doc. at Cambridge in 1811, and was an honorary member of the Royal Academy of Music. He published several compositions for the pianoforte. His eldest daughter was a harpist and his second a pianist. His son, John, is a good violinist. Dr. Jay died in London, Sept. 17, 1849. [W.H.H.]

JEAN DE PARIS. Opera-comique in 2 acts; music by Boieldieu. Produced at the Théatre Feydeau April 4, 1812. [G.]

JEBB, Rev. John, D.D., formerly Prebendary in Limerick Cathedral, now Canon of Here-

ford and Rector of Peterstow, Herefordshire, an able writer on choral service. His works include 'Three Lectures on the Cathedral Service of the United Church of England and Ireland,' delivered at Leeds in 1841 and published in that year; 'The Choral Service of the United Church of England and Ireland, being an Inquiry into the Liturgical System of the Cathedral and Collegiate foundations of the Anglican Communion,' 8vo. 1843; 'The Choral Responses and Litanies of the United Church of England and Ireland,' 2 vols. fol. 1847–57 (an interesting and valuable collection); and 'Catalogue of Ancient Choir Books at St. Peter's College, Cambridge.' He edited Thos. Caustun's 'Venite exultemus and Communion Service.' [W.H.H.]

JEFFRIES, GEORGE, steward to Lord Hatton, of Kirby, Northamptonshire (where he had lands of his own), and organist to Charles I. at Oxford in 1643, composed many anthems and motets, both English and Latin, still extant in MS. Several are in the Aldrich collection at Christ Church, Oxford, and nearly one hundred—eighty of them in the composer's autograph—are in the library of the Sacred Harmonic Society. His son CHRISTOPHER, student of Christ Church, was a good organist. [W.H.H.]

JEFFRIES, STEPHEN, born 1660, was a chorister of Salisbury Cathedral under Michael Wise. In 1680 he was appointed organist of Gloucester Cathedral. He composed a peculiar melody for the cathedral chimes, printed in Hawkins' History, chap. 160. He died in 1712. [W.H.H.]

JEITTELES, ALOIS. [See LIEDERKREIS.]

JENKINS, JOHN, born at Maidstone in 1592, became a musician in early life. He was patronised by two Norfolk gentlemen, Dering and Hamon L'Estrange, and resided in the family of the latter for a great portion of his life. He was a performer on the lute and lyra-viol and other bowed instruments, and one of the musicians to Charles I and Charles II. He was a voluminous composer of Fancies, some for viols and others for the organ; he also produced some light pieces which he called 'Rants.' Of these 'The Mitter Rant,' an especial favourite, was printed in Playford's 'Musick's Handmaid,' 1678, and other publications of the period. Two others by him, 'The Fleece Tavern Rant,' and 'The Peterborough Rant,' are in Playford's 'Apollo's Banquet,' 1690. Another popular piece by him was 'The Lady Katherine Audley's Bells, or, The Five Bell Consort,' first printed in Playford's 'Courtly Masquing Ayres,' 1662. His vocal compositions comprise an Elegy on the death of William Lawes, printed at the end of H. and W. Lawes' 'Choice Psalms,' 1648; 'Theophila, or, Love's Sacrifice; a Divine Poem by E[dward] B[enlowe] Esq., several parts thereof set to fit aires by Mr. J. Jenkins,' 1652; two rounds, 'A boat, a boat,' and 'Come, pretty maidens,' in Hilton's 'Catch that catch can,' 1652; some songs etc. in 'Select Ayres and Dialogues,' 1659; and 'The Musical Companion,' 1672; and some anthems. He published in 1660 'Twelve Sonatas for two Violins and a Base with a Thorough Base for the Organ or Theorbo' (reprinted at Amsterdam, 1664), the first of the kind produced by an Englishman. His numerous 'Fancies' were never printed. Many MS. copies of them however exist, a large number being at Christ Church, Oxford. J. S. Smith included many of Jenkins's compositions (amongst them 'The Mitter Rant' and 'Lady Audley's Bells') in his 'Musica Antiqua.' Jenkins resided during the latter years of his life in the family of Sir Philip Wodehouse, Bart., at Kimberley, Norfolk, where he died Oct. 27, 1678. He was buried Oct. 29 in Kimberley Church. [W.H.H.]

JENNY BELL, an opéra comique in 3 acts; words by Scribe, music by Auber. Produced at the Opéra Comique June 2, 1855. The scene is laid in England and the characters are English, and the airs of God save the King and Rule Britannia are introduced. [G.]

JENSEN, ADOLPH, composer, born Jan. 12, 1837, at Königsberg, was a pupil of Ehlert and F. Marpurg. In 1856 he visited Russia, but returned the next year to Germany, and was for a short time Capellmeister at Posen. He then paid a two years visit to Copenhagen, where he became intimate with Gade. 1860 to 66 were spent in his native place, and to this time a large proportion of his works (op. 6–33) are due. From 1866 to 68 he was attached to Tausig's school as teacher of the piano, and since that time resided on account of his health at Gratz and other places in South Germany. He died at Baden Baden, Jan. 24, 1879.

Jensen was an enthusiast for Schumann, and for some months before Schumann's death was in close correspondence with him. He has published various pieces, 62 opp. in all—'The Journey to Emmaus,' for Orchestra; 'Nonnengesang,' for Women's Chorus, Horn, Harp, and Piano; two Liedercyclus, 'Dolorosa' and 'Erotikon'; and many other songs; Sonatas and smaller pieces for Piano, which take high rank in his own country, and are much beloved by those who know them here. His genius is essentially that of a song-writer—full of delicate tender feeling, but with no great heights or depths. [G.]

JEPHTHAH. 1. Handel's last oratorio. His blindness came on during its composition and delayed it. It was begun Jan. 21, and finished Aug. 30, 1751. The words were by Dr. Morell. Produced at Covent Garden Feb. 26, 1752. It was revived by the Sacred Harmonic Society April 7, 1841. 2. 'Jefte in Masfa' (Jephthah at Mizpeh) was the title of a short oratorio by Semplice, set by Barthelemon at Florence in 1776; performed there, in Rome—where a chorus from it even penetrated to the Pope's chapel, and procured the composer two gold medals—and in London in 1779 and 82. A copy of it is in the Sacred Harmonic Society's Library. 3. Jephtha and his Daughter. An oratorio in 2 parts; the words adapted from the Bible, the music by C. Reinthaler. Produced in England by Mr. Hullah at St. Martin's Hall April 16, 1856. [G.]

JERUSALEM 1. Grand opera in 4 acts; music by Verdi, the words by Royer and Waez; being a French adaptation of I Lombardi. Produced at the Academie Nov. 26, 1847. 2. A Sacred Oratorio in 3 parts; the words selected from the Bible by W. Sancroft Holmes, the music by H. H. Pierson. Produced at Norwich Festival Sept. 23, 1852. [G.]

JESSONDA. A grand German opera in 3 acts; the plot from 'La Veuve de [1] Malabar.' Words by Edouard Gehe, music by Spohr. Produced at Cassel July 28, 1823; in London, at St. James's theatre (German company), June 18, 1840; in Italian, at Covent Garden, Aug. 6, 1853. [G.]

JEUNE HENRI, LE. Opéra-comique in 2 acts; libretto by Bouilly, music by Méhul. Produced at the Théatre Favart May 1, 1797. The overture has always been a favourite in France. The piece was damned, but the overture was redemanded on the fall of the curtain, having been already encored at the commencement. [G.]

JEUX D'ANCHES. The French name for the Reed Stops of an Organ. [W. S. R.]

JEW'S-HARP, possibly a corruption of Jaw's-harp. In French it is called *Guimbarde*, and in German *Maul-trommel*, *Mund-harmonica*, or *Brummeisen* (i.e. buzzing-iron). In the Highlands, where it is much used, it is called *Tromp*. This simple instrument consists of an elastic steel tongue, rivetted at one end to a frame of brass or iron, similar in form to certain pocket corkscrews, of which the screw turns up on a hinge. The free end of the tongue is bent outwards, at a right angle, so as to allow the finger to strike it when the instrument is placed to the mouth, and firmly supported by the pressure of the frame against the teeth.

A column of air may vibrate by reciprocation with a body whose vibrations are isochronous with its own, or when the number of its vibrations are any multiple of those of the original sounding body. On this law depends the explanation of the production of sounds by the jew's-harp. The vibration of the tongue itself corresponds with a very low sound; but the cavity of the mouth is capable of various alterations; and when the number of vibrations of the contained volume of air is any multiple of the original vibrations of the tongue, a sound is produced corresponding to the modification of the oral cavity. Thus, if the primitive sound of the tongue is C, the series of reciprocated sounds would be C, E, G, B♭, C, D, E, F, G, etc., and by using two or more instruments in different keys, a complete scale may be obtained, and extremely original and beautiful effects produced.

The elucidation of this subject is due to the ingenious researches of Professor Wheatstone, which may be found in the 'Quarterly Journal of Science, Literature, and Art,' for the year 1828, 1st part, of which the above is a condensed account.

A soldier of Frederick the Great of Prussia, so charmed the king by his performance on two jew's-harps that he gave him his discharge, together with a present of money, and he subsequently amassed a fortune by playing at concerts.

In 1827 and 1828 Charles Eulenstein appeared in London [EULENSTEIN] and by using 16 jew's-harps produced extraordinary effects. [V. de P.]

JOACHIM, JOSEPH, the greatest of living violin-players, was born at Kittsee, a village near Pressburg, June 28, 1831. He began to play the violin at five years of age, and showing great ability he was soon placed under Szervacsinsky, then leader of the opera-band at Pesth. When only seven years old, he played a duet in public with his master with great success. In 1841 he became a pupil of Boehm in Vienna, and in 1843 went to Leipzig, then, under Mendelssohn's guidance, at the zenith of its musical reputation. On his arrival at Leipzig as a boy of twelve, he proved himself already an accomplished violinist, and very soon made his first public appearance in a Concert of Madame Viardot's, Aug. 19, 1843, when he played a Rondo of de Bériot's; Mendelssohn, who at once recognised and warmly welcomed the boy's exceptional talent, himself accompanying at the piano. On the 16th of the following November he appeared at the Gewandhaus Concert in Ernst's fantasia on Otello; and a year later (Nov. 25, 1844) took part in a performance at the Gewandhaus of Maurer's Concertante for four violins with Ernst, Bazzini and David, all very much his seniors. The wish of his parents, and his own earnest disposition, prevented his entering at once on the career of a virtuoso. For several years Joachim remained at Leipzig, continuing his musical studies under Mendelssohn's powerful influence, and studying with David most of those classical works for the violin—the Concertos of Mendelssohn, Beethoven and Spohr, Bach's Solos, etc.—which still constitute the staple of his *répertoire*. At the same time his general education was carefully attended to, and it may truly be said, that Joachim's character both as a musician and as a man was developed and directed for life during the years which he spent at Leipzig. He already evinced that thorough uprightness, that firmness of character and earnestness of purpose, and that intense dislike of all that is superficial or untrue in art, which have made him not only an artist of the first rank, but, in a sense, a great moral power in the musical life of our days.

Joachim remained at Leipzig till October 1850, for some time side by side with David as leader of the Gewandhaus orchestra, but also from time to time travelling and playing with ever-increasing success in Germany and England. On the strong recommendation of Mendelssohn he visited London for the first time as early as 1844, and at the 5th Philharmonic Concert (May 27) played Beethoven's Concerto (for the 4th time only at those concerts) with great success. His first actual public appearance in this country was at a benefit concert of Mr. Bunn's at Drury Lane on March 28. After this he

[1] See Spohr's Selbstbiographie, ii. 149.

repeated his visits to England in 1847, 49, 52, 58, 59, 62, and ever since. His annual appearance at the Monday Popular, the Crystal Palace, and other concerts in London and the principal provincial towns has become a regular feature of the musical life in England. His continued success as a solo- and quartet-player, extending now over a period of more than thirty years, is probably without parallel. Since the foundation of the Monday Popular Concerts he has been the principal violinist of those excellent concerts, which have perhaps done more than any other musical institution in England towards popularising that highest branch of the art—classical chamber-music.

In 1849 Joachim accepted the post of Leader of the Grand-Duke's band at Weimar, where Liszt, who had already abandoned his career as a virtuoso, had settled and was conducting operas and concerts. His stay in Weimar was not however of long duration. To one who had grown up under the influence of Mendelssohn, and in his feeling for music and art in general was much in sympathy with Schumann, the revolutionary tendencies of the Weimar school could have but a passing attraction. In 1854 he accepted the post of Conductor of Concerts and Solo-Violinist to the King of Hanover, which he retained till 1866. During his stay at Hanover (June 10, 1863) he married Amalia Weiss, the celebrated contralto singer. [See Weiss.] In 1868 he went to Berlin as head of a newly established department of the Royal Academy of Arts—the 'Hochschule für ausübende Tonkunst' (High School for Musical Execution,—as distinct from composition, for which there was already a department in existence). Joachim entered heart and soul into the arduous task of organising and starting this new institution, which under his energy and devotion not only soon exhibited its vitality, but in a very few years rivalled, and in some respects even excelled, similar older institutions. Up to this period Joachim had been a teacher mainly by his example, henceforth he is to be surrounded by a host of actual pupils, to whom, with a disinterestedness beyond praise, he imparts the results of his experience, and into whom he instils that spirit of manly and unselfish devotion to art which, in conjunction with his great natural gifts, really contains the secret of his long-continued success. In his present sphere of action Joachim's beneficent influence, encouraging what is true and earnest, and disregarding, and, if necessary, opposing what is empty, mean, and superficial in music, can hardly be too highly estimated. It will readily be believed that in addition to the universal admiration of the musical world numerous marks of distinction, orders of knighthood from German and other sovereign princes, and honorary degrees have been conferred on Joachim. From the University of Cambridge he received the honorary degree of Doctor of Music on the 8th March, 1877. No artist ever sought less after such things, no artist better deserved them.

As to his style of playing, perhaps nothing more to the point can be said, than that his interpretations of Beethoven's Concerto and great Quartets and of Bach's Solo Sonatas are universally recognised as models, and that his style of playing appears especially adapted to render compositions of the purest and most elevated style. A master of technique, surpassed by no one, he now uses his powers of execution exclusively for the interpretation of the best music. If in latter years his strict adherence to this practice and consequent exclusion of all virtuoso-pieces has resulted in a certain limitation of *répertoire*, it must still be granted that that *répertoire* is after all richer than that of almost any other eminent violinist, comprising as it does the Concertos of Bach, Beethoven, Mendelssohn, four or five of Spohr's, Viotti's 22nd, his own Hungarian, Bach's Solos, the 2 romances of Beethoven, and in addition the whole range of classical chamber-music, to which we may now add the Concerto of Brahms, played for the first time in England at the Crystal Palace Feb. 22, 1879, and given by him at the Philharmonic on March 6 and 20.

Purity of style, without pedantry; fidelity of interpretation combined with a powerful individuality—such are the main characteristics of Joachim the violinist and the musician.

As a composer Joachim is essentially a follower of Schumann. Most of his works are of a grave, melancholic character, — all of them, it need hardly be said, are earnest in purpose and aim at the ideal. Undoubtedly his most important and most successful work is the Hungarian Concerto (op. 11), a creation of real grandeur, built up in noble symphonic proportions, which will hold its place in the first rank of masterpieces for the violin. The following is a list of his published compositions :—

Op. 1. Andantino and Allegro Scherzoso (Violin and Orchestra).
2, 3 'Stücke (Romanze, Fantasiestück, Frühlingsfantasie)' for Violin and Piano.
3. Concerto (G minor) 'in einem Satze' for Violin and Orchestra.
4. Overture to 'Hamlet,' for Orchestra.
5. 3 Stücke (Lindenrauschen, Abendglocken, Ballade) for Violin and Piano.
9. Hebrew Melodies, for Viola and Piano.
10. Variations on an original Theme for Viola and Piano.
Op. 11. Hungarian Concerto for Violin and Orchestra.
12. Notturno in A. for Violin and small Orchestra.
13. Overture, in commemoration of Kleist the poet—for Orchestra,
14. Scena der Marfa (from Schiller's unfinished play of Demetrius), for Contralto Solo and Orchestra.
Two Marches, in C and D, with Trios.

N.B. Op. 6, 7, 8, Overtures to Demetrius, Henry the IVth, and a Play of Gozzi's respectively, are still in MS.

[P.D.]

JOAN OF ARC. A grand historical opera in 3 acts; the words by Mr. Bunn, the music by Balfe. Produced at Drury Lane Nov. 30, 1837. [G.]

JOANNA MARIA. [See Gallia.]

JOCONDE, ou Les Coureurs d'Aventure. Opéra-comique in 3 acts; libretto by Etienne, music by Isouard. Produced at the Théatre Feydeau Feb. 28, 1814; in English, by Carl Rose (Santley's translation), Lyceum, Oct. 25, 1876. [G.]

JOHN THE BAPTIST, ST. An oratorio in 2 parts; the text selected from the Bible by Dr. E. G. Monk; the music by G. A. Macfarren. Produced at Bristol Festival Oct. 23, 1873. [G.]

JOHNSON, Edward, Mus. Bac., graduated at Cambridge 1594, and was one of the ten composers who harmonised the tunes for Este's 'Whole Booke of Psalms,' 1592. He contributed the madrigal, 'Come, blessed bird!' to 'The Triumphes of Oriana,' 1601. Another madrigal by him, 'Ah, silly John,' is preserved in MS. in the library of the Sacred Harmonic Society. Nothing is known of his biography. [W.H.H.]

JOHNSON, Robert, an ecclesiastic who flourished in the middle of the 16th century, was composer of motets, part-songs and virginal pieces. Burney says 'He was one of the first of our church composers who disposed their parts with intelligence and design. In writing upon a plainsong (moving in slow notes of equal length), which was so much practised in those times, he discovers considerable art and ingenuity, as also in the manner of treating subjects of fugue and imitation.' His part-song 'Defiled is my name' is printed in the Appendix to Hawkins's History; and his motet, 'Sabbatum Maria,' and an Almain from Queen Elizabeth's Virginal Book in Burney's History. Two of his motets are contained in Add. MSS. 5059 and 11,586, British Museum. He was the composer of the part-song 'Tye the mare, Tom boy,' the words of which are printed in Ritson's 'Ancient Songs, 1790, p. 130.

Another Robert Johnson, a lutenist and composer, possibly a relative of the above-named, was in January 1573–4 a retainer in the household of Sir Thomas Kytson, of Hengrave Hall, Suffolk. In April 1575, being still in Sir Thomas's service, he assisted at the grand entertainment given by the Earl of Leicester to Queen Elizabeth at Kenilworth. He subsequently came to London, but at what precise date cannot be ascertained, and became a composer for the theatres. In 1610 he composed the music for Middleton's tragi-comedy, 'The Witch,' printed in Rimbault's 'Ancient Vocal Music of England.' In 1611 he was in the service of Prince Henry, at an annual salary of £40. In 1612 he composed music for Shakspere's 'Tempest,' and in 1617 songs for Beaumont and Fletcher's 'Valentinian' and 'The Mad Lover.' (See Add. MS. 11,608, Brit. Mus.) In 1621 he wrote music for Ben Jonson's 'Masque of the Gipsies,' some of the songs of which are contained in a MS. volume in the Music School, Oxford. He was one of the contributors to Leighton's 'Teares or Lamentacions,' 1614. A beautiful ballad by him, 'As I walked forth one summer's day,' is also printed in Rimbault's 'Ancient Vocal Music of England.' His name occurs Dec. 20, 1625, in a privy seal exempting the King's musicians from payment of subsidies. [W.H.H.]

JOMMELLI, Niccolò, is the most conspicuous name in the long list of eminent composers who during the first half of the 18th century were the outcome and ornament of that Neapolitan school which had become famous under Alessandro Scarlatti. It was a period of transition in musical art all over Italy. It witnessed the abandonment of the old Gregorian modes in favour of modern tonality. Counterpoint itself, while pursued as ardently as ever, and still recognised as the orthodox form of expression for musical thought, was assuming to that thought a new and different relation. Ideas were subjected to its conditions, but it no longer constituted their very essence. The distinctive tendency of all modern Art towards individualisation was everywhere making itself felt, and each successive composer strove more and more after dramatic truthfulness as a primary object, while at the same time there was educated in the schools of Italy a race of great singers to whom individual expression was a very condition of existence. Pure contrapuntal Art—strictly impersonal in its nature, in that, while each part is in itself complete, all are equally subordinate to the whole, was being supplanted by a new order of things. In the music destined to convey and to arouse personal emotions one melodious idea predominates, to which all the rest, however important, is more or less subservient and accessory. Nor is harmony, then, the final result of the superimposition of layer on layer of independent parts, but the counterpoint is contrived by the subdivision and varied time-apportionment of the harmony, and partakes of the nature of a decoration rather than a texture—the work is in fresco and not in mosaic.

To the greatest minds alone it belongs to unite with intuition that consummate art which makes scholastic device serve the ends of fancy, and, while imparting form to the inspirations of genius, receives from them the stamp of originality. In the long chain connecting Palestrina, in whose works contrapuntal art found its purest development, with Mozart, who blended imagination with science as no one had done before him, one of the last links was Jommelli. Gifted with a vein of melody tender and elegiac in its character, with great sensibility, fastidious taste, and a sense of effect in advance of any of his Italian contemporaries, he started in the new path of dramatic composition opened up by Scarlatti, Pergolesi, and Leo, at the point where those masters left off, and carried the art of expression to the highest pitch that, in Italy, it attained up to the time of Mozart.

Born at Aversa, near Naples, Sept. 11, 1714, his first musical teaching was given him by a canon named Mozzillo. At sixteen he entered the Conservatorio of San Onofrio as the pupil of Durante, but was transferred to that of La Pietà de' Turchini, where he learned vocal music from Prato and Mancini, and composition from Feo and Leo. It was the boast of these schools that young musicians on leaving them were adepts in all the processes of counterpoint and every kind of scholastic exercise, but it seems that a special training at Rome was judged necessary to fit Jommelli for writing

church music, the chief object he is said at that time to have had in view. However this may have been, his first works were ballets, in which no indication of genius was discernible. He next tried his hand on cantatas, a style of composition far better suited to his especial gifts, and with so much success that Leo, on hearing one of these pieces performed by a lady, a pupil of Jommelli's, exclaimed in rapture, 'A short time, madam, and this young man will be the wonder and the admiration of Europe!' The young composer himself had less faith in his own powers. According to the notice of his life by Piccinni, he so much dreaded the verdict of the public that his first opera, 'L'Errore Amoroso,' was represented (at Naples, in 1737) under the name of an obscure musician called Valentino; the work, however, met with so encouraging a reception that he ventured to give the next, 'Odoardo,' under his own name.

In 1740 he was summoned to Rome, where he was protected by the Cardinal Duke of York, and where his two operas 'Il Ricimero' and 'L'Astianatte' were produced. Thence he proceeded to Bologna, where he wrote 'Ezio.' During his sojourn there he visited that celebrity of musical learning, the Padre Martini, presenting himself as a pupil desirous of instruction. To test his acquirements, a fugue subject was presented to him, and on his proceeding to treat it with the greatest facility, 'Who are you, then?' asked the Padre; 'are you making game of me? It is I, methinks, who should learn of you.' 'My name is Jommelli,' returned the composer, 'and I am the *maestro* who is to write the next opera for the theatre of this town.' In later years Jommelli was wont to affirm that he had profited not a little by his subsequent intercourse with Martini.

After superintending the production of some important works at Bologna and Rome, Jommelli returned to Naples, where his opera 'Eumene' was given at the San Carlo with immense success. A like triumph awaited him at Venice, where his 'Merope' aroused such enthusiasm that the Council of Ten appointed him director of the Scuola degl' Incurabili, a circumstance which led to his beginning at last to write that sacred music which had been the object of his early ambition, and was to become one chief source of his fame. Among his compositions of the kind at this time was a 'Laudate' for double choir of eight voices, which, though once celebrated, appears never to have been printed. In 1745 we find him at Vienna, where he wrote successively 'Achille in Sciro' and 'Didone.' Here he formed with the poet Metastasio an intimate acquaintance. Metastasio entertained the highest opinion of his genius, and was also able to give him much useful advice on matters of dramatic expression and effect. Sometimes the accomplished friends amused themselves by exchanging *rôles*; Jommelli, who wrote his native language with fluency and elegance, becoming the poet, and his verses being set to music by Metastasio.

From Vienna, in 1748, he went again to Rome, where he produced 'Artaserse.' He found an influential admirer and patron in Cardinal Albani, thanks to whose good offices he was, in 1749, appointed coadjutor of Bencini, chapel-master of St. Peter's. He quitted this post in 1754 to become chapel-master to the Duke of Wurtemberg at Stuttgart, where he remained in the enjoyment of uninterrupted prosperity for more than fifteen years. Through the munificence of his duke he lived in easy circumstances, with all the surroundings most congenial to his cultivated and refined taste, and with every facility for hearing his music performed. Here he produced a number of operas, an oratorio of the Passion, and a requiem for the Duchess of Wurtemberg. In these works German influence becomes apparent in a distinct modification of his style. The harmony is more fully developed, the use of modulation freer and more frequent, while the orchestral part assumes a greater importance, and the instrumentation is weightier and more varied than in his former works. There is no doubt that this union of styles gave strength to his music, which, though never lacking sweetness and refinement, was characterised by dignity rather than force. It added to the estimation in which he was held among the Germans, but was not equally acceptable to Italians when, his fame and fortune being consolidated, he returned to pass his remaining years among his own countrymen. The fickle Neapolitans had forgotten their former favourite, nor did the specimens of his later style reconquer their suffrages. 'The opera here is by Jommelli,' wrote Mozart from Naples in 1770. 'It is beautiful, but the style is too elevated, as well as too antique, for the theatre.' The rapid spread of the taste for light opera had accustomed the public to seek for gratification in mere melody and vocal display, while richness of harmony or orchestral colouring were looked on rather as a blemish by hearers impatient of the slightest thing calculated to divert their attention from the 'tune.' 'Armida,' written for the San Carlo Theatre in 1771, and one of Jommelli's best operas, was condemned as heavy, ineffective, and deficient in melody. 'Il Demofoonte' (1772) and 'L'Ifigenia in Aulide' (1773) were ill executed, and were failures.

The composer had retired, with his family, to Aversa, where he lived in an opulent semi-retirement, seldom quitting his home except to go in spring to l'Infrascata di Napoli, or in autumn to Pietra bianca, pleasant country resorts near Naples. He received at this time a commission from the King of Portugal to compose two operas and a cantata. But his old susceptibility to public opinion asserted itself now, and the failure of his later works so plunged him in melancholy as to bring on an attack of apoplexy. On his recovery he wrote a cantata to celebrate the birth of an heir to the crown of Naples, and shortly after, the Miserere for two voices (to the Italian version by Mattei) which is, perhaps, his most famous work. This was his 'swan's song'; it was hardly concluded

when he died at Naples, aged 60, Aug. 28, 1774.

Jommelli was of amiable disposition, and had the polished manners of a man of the world. Good looking in his youth, he became corpulent in middle age. Burney, who saw him at Naples in 1770, says he was not unlike Handel, a likeness which cannot be traced in any portraits of him that are extant. The catalogue of his works contains compositions of all kinds, comprising nearly fifty operas and four oratorios, besides masses, cantatas, and a great quantity of church music. As a contrapuntist he was accomplished rather than profound, and his unaccompanied choral music will not bear comparison with the works of some of his predecessors more nearly allied to the Roman school. His Miserere for five voices, in G minor (included in Rochlitz's collection), contains great beauties, the long *diminuendo* at the close, especially, being a charming effect. But the work is unequal, and the scholarship, though elegant and ingenious, occasionally makes itself too much felt.

His ideas have, for the most part, a tinge of mild gravity, and it is not surprising that he failed in ballets and other works of a light nature. Yet he has left an *opera buffa*, 'Don Jastullo,' which shows that he was not devoid of a certain sedate humour. This opera is remarkable (as are others of his) for the free employment of accompanied recitative. Jommelli was one of the earliest composers who perceived the great dramatic capabilities of this mode of expression, which has, in recent times, received such wide development. He saw the absurdity, too, of the conventional *Da Capo* in airs consisting of two strains or movements, by which the sympathy of the hearer, worked up to a pitch during the second (usually Allegro) movement, is speedily cooled by the necessity for recommencing the Andante and going all through it again. He would not comply with this custom except where it happened to suit his purpose, but aimed at sustaining and heightening the interest from the outset of a piece till its close,—anticipating by this innovation one of Gluck's greatest reforms.

His invention seems to have required the stimulus of *words*, for his purely instrumental compositions, such as overtures, are singularly dry and unsuggestive. Yet he had a more keen appreciation of the orchestra than any contemporary Italian writer, as is evinced in his scores by varied combinations of instruments, by *obbligato* accompaniments to several airs, and by occasional attempts at such tone-painting as the part written for horns *con sordini* in the air 'Teneri affetti miei' in 'Attilio Regolo.' In his Stuttgart compositions the orchestra becomes still more prominent, and is dialogued with the vocal parts in a beautiful manner. The Requiem contains much pathetic and exquisite music; but intensity is wanting where words of sublime or terrible import have to be conveyed. In this work and the 'Passion' is to be found a great deal that is closely allied to composition of a similar kind by Mozart, and to the earlier master is due the credit of much which often passes as the sole invention of Mozart, because it is known only through the medium of his works. A comparison between the two is most interesting, showing, as it does, how much of Mozart's musical phraseology was, so to speak, current coin at the time when he lived.—The Miserere which was Jommelli's last production seems in some respects a concession to Italian taste, which possibly accounts for the comparatively great degree of subsequent popularity it enjoyed, and suggests the thought that, had its composer been spared a few more years, his style might once more have been insensibly modified by his surroundings. It possesses, indeed, much of the sympathetic charm that attaches to his other works, but the vocal parts are so florid as to be sometimes unsuitable to the character of the words.

He cannot, however, be said to have courted popularity by writing for the vulgar taste. Among contemporary composers of his own school and country, he is pre-eminent for purity and nobility of thought, and for simple, pathetic expression. His genius was refined and noble, but limited. He expressed himself truthfully while he had anything to express, but where his nature fell short there his art fell short also, and, failing spontaneity, its place had to be supplied by introspection and analysis. His sacred music depicts personal sentiment as much as do his operas, and whereas a mass by Palestrina is a solemn act of public worship, a mass by Jommelli is the expression of the devotion, the repentance or the aspiration of an individual.

The following works of Jommelli's have been republished in modern times, and are now accessible:—

Salmo (Miserere). 4 voices and orchestra (Breitkopf & Härtel).

Victimae paschali. 5 voices, score (Schott).

Lux eterna. 4 voices (Berlin, Schlesinger).

Hosanna filio, and In Monte Olivete. 4 voices (Berlin, Schlesinger).

Requiem, for S.A.T.B. Accompaniment arranged for P.F. by Clasing (Cranz).

Many other pieces of his are, however, included, wholly or in part, in miscellaneous collections, such as Latrobe's Sacred Music, the Fitzwilliam Music, Choron's 'Journal de Chant,' Rochlitz's 'Collection de Morceaux de Chant,' and Gevaert's 'Les Gloires de l'Italie,' etc. [F.A.M.]

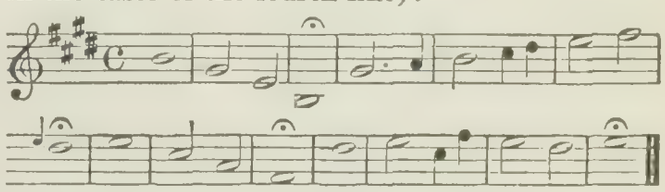
JONAS, Émile, one of the younger rivals of Offenbach in opera-bouffe, born of Jewish parents March 5, 1827, entered the Conservatoire Oct. 28, 41, took second prize for harmony 1846, and first ditto 47, and obtained the second 'grand prix' for his 'Antonio' in 49. His début at the theatre was in Oct. 55 with 'Le Duel de Benjamin' in one act. This was followed by 'La Parade' (Aug. 2, 56); 'Le Roi boit' (Apr. 57); 'Les petits Prodiges' (Nov. 19, 57); 'Job et son chien' (Feb. 6, 63); 'Le Manoir des Larenardière' (Sept. 29, 64); and 'Avant la noce' (March 24, 65)—all at the Bouffes Parisiens. Then, at other theatres, came 'Les deux Arle-

quins' (Dec. 29, 65); 'Le Canard à trois becs' (Feb. 6, 69). Many of his pieces have been given in London, such as 'Terrible Hymen' at Covent Garden, Dec. 26, 66; 'The Two Harlequins' (by A'Beckett) at the Gaiety, Dec. 21, 68; and 'Le Canard,' also at the Gaiety, July 28, 71. This led to his composing an operetta in 3 acts to an English libretto by Mr. A. Thompson, called 'Cinderella the younger,' produced at the Gaiety Sept. 25, 71, and reproduced in Paris as 'Javotte' at the Théatre Lyrique, Dec. 22 following.

M. Jonas was professor of Solfeggio at the Conservatoire from 1847 to 66, and professor of Harmony for military bands from 1859 to 70. He is also director of the music at the Portuguese synagogue, in connection with which he published in 1854 a collection of Hebrew tunes. He has also been bandmaster of one of the legions of the Garde Nationale, and since the Exposition of 67 has organised the competitions of military bands at the Palais de l'industrie, whereby he has obtained many foreign decorations. Since 'Javotte,' M. Jonas has brought out no piece of importance. [G.]

JONES, Edward, was born at a farm house called Henblas,—i. e. Old Mansion,—Llanderfel, Merionethshire, on Easter Sunday, 1752. His father taught him and another son to play on the Welsh harp, and other sons on bowed instruments, so that the family formed a complete string band. Edward soon attained to great proficiency on his instrument. About 1775 he came to London, and in 1783 was appointed bard to the Prince of Wales. In 1786 he published 'Musical and Poetical Relicks of the Welsh Bards, with a General History of the Bards and Druids, and a Dissertation on the Musical Instruments of the Aboriginal Britons'; a work of learning and research. Another edition appeared in 1794, and in 1802 a second volume of the work was issued under the title of 'The Bardic Museum.' Jones had prepared a third volume, a portion only of which was published at his death, the remainder being issued subsequently. The three volumes together contain 225 Welsh airs. Besides this, he compiled and edited 'Lyric Airs; consisting of Specimens of Greek, Albanian, Walachian, Turkish, Arabian, Persian, Chinese, and Moorish National Songs and Melodies; with . . . a few Explanatory Notes on the Figures and Movements of the Modern Greek Dances, and a short Dissertation on the Origin of the Ancient Greek Music,' 1804; 'The Minstrel's Serenades'; 'Terpsichore's Banquet, a Selection of Spanish, Maltese, Russian, Armenian, Hindostan, English, German, French and Swiss Airs'; 'The Musical Miscellany, chiefly selected from eminent composers'; 'Musical Remains of Handel, Bach, Abel, etc.'; 'Choice Collection of Italian Songs'; 'The Musical Portfolio, consisting of English, Scotch, Irish, and other favourite Airs'; 'Popular Cheshire Melodies'; 'Musical Trifles calculated for Beginners on the Harp'; and 'The Musical Bouquet, or Popular Songs and Ballads.' Besides his professional pursuits Jones filled a situation in the Office of Robes at St. James's Palace. He collected an extensive library of scarce and curious books, part of which, to the value of about £300, he sold in the latter part of his life, and the remainder was dispersed by auction after his death, realising about £800. He died, as he was born, on Easter Day, April 18, 1824. [W. H. H.]

JONES, John, organist of the Middle Temple Nov. 24, 1749; of the Charterhouse (following Dr. Pepusch) July 2, 1753; and of St. Paul's Cathedral Dec. 25, 1755. He died, in possession of these three seats, Feb. 17, 1796. He published 'Sixty Chants Single and Double' (1785) in the vulgar florid taste of that time. One of these was sung at George III.'s state visit to S. Paul's April 23, 1789, and at many of the annual meetings of the Charity Children. At that of 1791 Haydn heard it, and noted it in his diary as follows (with a material improvement in the taste of the fourth line):—



'No music has for a long time affected me so much as this innocent and reverential strain.' [G.]

JONES, Rev. William, known as 'Jones of Nayland,' born at Lowick, Northamptonshire, July 30, 1726, and educated at th Charter House and at University College, Oxford. He included music in his studies and became very proficient in it. In 1764 he was presented to the vicarage of Bethersden, Kent, and subsequently became Rector of Pluckley in the same county, which he exchanged for the Rectory of Paston, Northamptonshire. He is said to have been presented to the Perpetual Curacy of Nayland, Suffolk, in 1776, but his name does not occur in the registers until 1784. In Jan. 1784 he published 'A Treatise on the Art of Music,' which gained him considerable reputation. In March, 1789, he published by subscription his Op. ii, 'Ten Church Pieces for the Organ, with Four Anthems in score [a psalm tune[1] and a double chant], composed for the use of the Church of Nayland in Suffolk, and published for its benefit.' In 1798 he became Rector of Hollingbourne, Kent. He was the author of many theological, philosophical, and miscellaneous works. He died at Nayland, Jan. 6, 1800, and was buried in the vestry of the church on Jan. 14. A second edition of his Treatise on Music was published at Sudbury in 1827. [W. H. H.]

JONES, Robert, Mus. Bac., a celebrated lutenist, published in 1601 'The First Booke of Ayres,'—one of the pieces in which, 'Farewell deere love' (alluded to by Shakspere in 'Twelfth Night'), is printed in score in J. S. Smith's 'Musica Antiqua,'—and 'The Second Booke of

[1] Now known as S. Stephen's.

Songs and Ayres, set out to the Lute, the Base Violl the playne way, or the Base by tableture after the leero fashion'; a song from which—'My love bound me with a kisse,' is likewise given in 'Musica Antiqua.' He contributed the madrigal, 'Faire Oriana, seeming to wink at folly,' to 'The Triumphes of Oriana,' published in the same year. In 1607 he published 'The First Set of Madrigals of 3, 4, 5, 6, 7, 8 parts, for Viols and Voices, or for Voices alone, or as you please,' and in 1608 'Ultimum Vale, or the Third Book of Ayres of 1, 2, and 4 Voyces.' In 1609 appeared 'A Musicall Dreame, or the Fourth Booke of Ayres; The first part is for the Lute, two voyces and the Viole de Gambo: The second part is for the Lute, the Viole and four voices to sing: The third part is for one voyce alone, or to the Lute, the Base Viole, or to both if you please, whereof two are Italian Ayres.' In 1611 he published 'The Muse's Gardin for delight, or the Fift Booke of Ayres only for the Lute, the basse Violl and the Voyce.' He contributed three pieces to Leighton's 'Teares or Lamentacions' published in 1614. In 1616 Jones, in conjunction with Philip Rossetor, Philip Kingman and Ralph Reeve, obtained a privy seal for a patent authorising them to erect a theatre, for the use of the Children of the Revels to the Queen, within the precinct of Blackfriars, near Puddle Wharf, on the site of a house oocupied by Jones. But the Lord Mayor and Aldermen were opposed to the scheme, and procured from the Privy Council an order prohibiting the building being so applied, and by their influence Jones and his fellows were compelled to dismantle their house and surrender their patent. [W. H. H.]

JOSEPH. 1. 'Joseph and his Brethren.' The 8th of Handel's English oratorios; the words by James Miller, the music composed in August 1743. Produced at Covent Garden March 2, 1744. 2. Opéra-comique in 3 acts; libretto by Duval, music by Méhul. Produced at the Théatre Feydeau Feb. 17, 1807. Chiefly known by the romance of Joseph, 'A peine au sortir de l'enfance' ('Ere infancy's bud') and a prayer for male voices, 'Dieu d'Israel.' The romance of Benjamin, 'Ah lorsque la Mort,' is given in the Musical Library, ii. 142. 3. An oratorio in 2 parts; the words selected from the Bible by Dr. E. G. Monk; the music by G. A. Macfarren. Produced at the Leeds Festival Sept. 21, 1877. [G.]

JOSHUA. The 14th of Handel's English oratorios; words by Dr. Morell. The music was begun on July 19 and finished Aug. 19, 1747, and the work was produced at Covent Garden theatre March 9, 1748. The chorus, 'The nations tremble,' is said to have affected Haydn extremely when he heard it at the Antient Concerts.[1] 'See, the conquering hero comes' is originally in Joshua, and was transferred to Judas. The oratorio was revived by the Sacred Harmonic Society June 19, 1839. [G.]

[1] Appendix to Shield's 'Introduction to Harmony.'

JOSQUIN, or more strictly JOSSE, DESPRÉS, —latinised into JODOCUS A PRATIS, and italianised into GIUSQUINO—one of the greatest masters of the Netherland school, the successor of Ockenheim as its representative, and the immediate predecessor in musical history of Lassus and Palestrina, was born about the middle of the 15th century, probably at or near St. Quentin in Hainault. In the collegiate church of that town, according to Claude Hémeré, the 'arte canendi clarissimus infantulus' began his promising career. Here, perhaps, the little chorister would get his pet name Jossekin, which clung to him through life, and in its Latin form Josquinus gives us the title by which as a composer he always has and always will be known. His real name, however, appears in his epitaph and in a legal document discovered by M. Delzaut at Condé.

Of the rest of Josquin's early life we know that he was for some time chapel-master at St. Quentin, and also that he was received as a pupil by Ockenheim, who, himself the greatest living composer, was gathering round him such disciples as he thought worthy the trust of carrying on his labours after him. We can scarcely be wrong in assuming that Josquin stayed with Ockenheim for some years. Long and patient labour could alone make him familiar with all the subtleties of that master's art, and that he had thoroughly learnt all that Ockenheim could teach him before he came to Rome is apparent from his earlier compositions. Had he written nothing else these works by themselves would have entitled him to a name as great as his master's.

Exactly 400 years ago we find Josquin at the Papal court of Sixtus IV (1471–1484) already regarded as the most rising musician of the day, rapidly gaining the proud position of being the greatest composer which the modern world had yet produced, and making that position so secure, that for upwards of sixty years his title remained undisputed. Agricola, Brumel, Gombert, Clemens non Papa, Genet, Isaac, Goudimel, Morales, these are only a few of the names of the great musicians who flourished in this period, and yet where are they, when Baini thus describes the state of music in Europe before the advent of Palestrina? 'Jusquino des Pres . . . . . l'idolo dell' Europa . . . . . Si canta il solo Jusquino in Italia, il solo Jusquino in Francia, il solo Jusquino in Germania, nelle Flandre, in Ungheria, in Boemia, nelle Spagne, il solo Jusquino.'

Though Josquin's stay at Rome was not a long one, the fruits of his labours there, in the form of several MS. masses, are still preserved and jealously guarded from curious eyes in the library of the Sistine chapel.

It is almost impossible to decide at what times of his life Josquin paid visits to, or received appointments at the respective courts of Hercules of Ferrara, Lorenzo of Florence, Louis XII of France or the emperor Maximilian I. It is certain that all these princes were in their turn his patrons. For the first he wrote his mass

'Hercules dux [1]Ferrariæ,' and his Miserere. Aaron tells us how Josquin, Obrecht, Isaac, and Agricola were his intimate friends in Florence. Various anecdotes are told of his stay at the French court. How he was anxious to obtain promotion from the king, but when the courtier to whom he applied for help always put him off with the answer 'Lascia fare mi,' weary of waiting Josquin composed a mass on the subject La, sol, fa, re, mi, repeated over and over again in mimicry of the oft-repeated answer, and how the idea pleased the king's fancy so much that he at once promised Josquin a church benefice. How Louis nevertheless forgot his promise and Josquin ventured to refresh the royal memory with the motets 'Portio mea non est in terra viventium' and 'Memor esto verbi tui.' Lastly, how Louis XII, admiring music from the respectful distance of complete ignorance, desired the great composer to write something expressly for him, and how Josquin wrote a canon, in accompaniment to which the 'Vox regis' sustained throughout a single note.[2] Whether Louis ever did give the promised benefice to Josquin is uncertain, though the motet 'Bonitatem fecisti cum servo tuo' is generally supposed to have been a thank-offering for such an appointment. But we have proof that the last years of the composer's life were spent in the enjoyment of church preferment at Condé. He had probably passed from the service of Louis to that of Maximilian, who became possessed of the Netherlands in 1515, and may have presented Josquin with this position of retirement. Of his death at this place, a MS. at Lille gives the evidence in a copy of his epitaph, in the choir at Condé, as follows :—

Chy gist sire Josse Despres
Prevost de Cheens fut jadis
Priez Dieu pour les Trepassez qui leur doñe son paradis
Trepassa l'an 1521 le 27 d'Aoust
Spes mea semper fuisti

Josquin's printed compositions consist of 19 masses, about 50 secular pieces, and upwards of 150 motets with sacred words, a complete list of them being given in Eitner's 'Bibliographie der Musik-Sammelwerke' (Berlin, 1877). Several composers of the same period have left more published works, but Glarean tells us that Josquin was very critical about his own compositions, and sometimes kept them back for years before he allowed their performance. Some evidence of the spread of his music is afforded by the fact mentioned by Burney (Hist. ii. 489) that Henry the VIII.'s music book at Cambridge contains some of it, and that Anne Boleyn had collected and learned many of his pieces during her residence in France.

Of the 19 masses, 17 were printed in 3 books by Petrucci. The most beautiful of them are the 'La sol fa re mi,' the 'Ad fugam' and the 'De Beata Virgine.' The first of these, if we credit the story of its origin, would be composed after the year 1498, when Louis XII ascended the throne. Two other masses, 'Pange Lingua' and 'Da pacem,' not included in the above books are probably of a still later date. These 5 masses are those in which Josquin shows the greatest advance on the school of his master.

Among the finest of the motets we may mention the settings of the genealogies in the first chapters of St. Matthew and St. Luke, a 5-part 'Miserere,' and the 4-part psalms 'Planxit autem David' (the lament for Saul and Jonathan) and 'Absolon fili mi.' Some of the masses and many of the motets exist in MS. score, with modern notation, in the Fétis library at Brussels. In their original form they can be found in all the great libraries of Europe.

Of the secular works, the most important collection is in the 7th book of Susato's songs published in 1545, which contains 24 pieces by Josquin. Here we find the beautiful dirge written on the death of Ockenheim, which is also printed in score by Burney in his History.

It must however be borne in mind, that in distinguishing works of these old composers, we are often more attracted by some historical interest, some quaintness in the choice of the text, or some peculiarity in the musical notation, than by the features of the music itself, and when we do try to separate one piece of music from the other we are naturally led at first to admire most whatever comes nearest to our modern ideas (those pieces for instance written in the modes most like our own keys), and to be disappointed when a mass or motet, which we know by tradition to be a masterpiece, fails to move us, and to lay it aside with the explanation that it is only a dry contrapuntal work. But it is not fair to study the music of this period simply to find out how much our modern schools owe to it. When Burney calls Josquin 'The father of modern harmony' he does not perhaps give the title of which the composer would himself be proudest, 'for there are musicians alive now,' says Doni in his Musical Dialogues, 'who, if Josquin were to return to this world would make him cross himself.' We must regard these Netherland masters, not only in their relationship to succeeding generations, but as the chief lights of a school of religious music which had at that time reached so complete a form that any further progress without an entire revolution seemed impossible ; a school of church music which, were we to consider alone the enormous demands it made on the industry and intellect of its followers, would excite our reverence, but which, when we consider the wonderful hold it had on popular feeling throughout Europe for nearly a century, kindles in us the hope that we may not be too far separated by our modern ideas from the possibility of once again being moved by the fire of its genius. If the absence of a satisfactory modern school of church music

[1] In this mass the tenor sings the subject,
Re ut re ut re fa mi re,
the vowels in these syllables corresponding with those in the words 'Hercules dux Ferrarie.'

[2] Whether the king was able to master this simple achievement, or whether, like Hensel—for whom Mendelssohn wrote a similar part in the 'Son and Stranger'—he proved 'quite unable to catch the note, though blown and whispered to him from every side,' we are not told. The canon itself is given by Hawkins, chap. 70.

has already been acknowledged by many, and a widespread movement exists in Germany to recall the old music to the service of the Catholic church, then we may indeed hope to gain a more intimate knowledge of Josquin and his followers, than by groping about libraries, copying MSS. or reading theoretical treatises. Fortunately the study of counterpoint is hardly a more necessary condition of appreciating the music of Josquin, than it is in the case of Bach. But the ear will have to accustom itself to many extraordinary combinations of sounds, meagre harmonies, unsatisfactory cadences, final chords which seem to have lost all character, before any of these works can be thoroughly enjoyed. In the meantime, and till we may possibly hear them performed again in the churches for which they are written, there is much pleasure to be derived from the private study of them; and a real love for them, even with an imperfect understanding, grows up in us very quickly.

The reasons which the council of the church gave for suddenly abandoning the works of Josquin's school were not founded on any want of admiration for their musical effect. One objection was the fact of the melodies which the composers took for their canto fermo being secular, and the voice to which it was assigned singing the secular words, while the other voices sang the words of the mass. The other objection was that the excessively florid style in which the parts were often written made the words of so little importance that it was often impossible to trace their existence. The first objection was not a strong one, for the church had sanctioned the use of the secular melodies as the foundation of masses for more than a century, and some of the melodies had become almost hallowed to their purpose. The singing of the secular words might have been easily given up without forsaking the music.

But the second objection was stronger; for though Josquin began, and his followers, Gombert especially, tried still more, to give expression to the general sense of the text, still we find often a few syllables scattered over a page to do service for a host of notes, as if the notes were everything and the words nothing. Still as the first objection applies entirely to the masses, so the second also applies to them much more than to the motets, and it is by these latter works, we venture to think, that their composers will be known, if their music is destined to live again.

Apart however from all considerations of the vitality of the school which he represents, of the reason of its downfall or the chances of its revival, 'Josquin deserves to be classed as one of the greatest musical geniuses of any period.' (Kiesewetter's History of Music.) Fortune favoured him in appointing the time of his birth. He was the first composer who came into the world with the materials of his work thoroughly prepared for him. Masses written with counterpoint had been taken to Rome from the Netherlands towards the end of the 14th century, and Dufay, who was a singer in the Papal chapel in 1380 (or exactly 100 years before Josquin held the same position), was a contrapuntist of sufficient importance to be quoted as an authority by theoretical writers of a much later date, and whose art though simple was sufficiently perfect to suggest that he too must have had predecessors to prepare his way. But we cannot regard musicians from the time of Dufay to that of Ockenheim as composers in the sense that Josquin was one. Their genius was expended on the invention of counterpoint, which Josquin was the first to employ as a means to a higher end. They were but pilgrims to a promised land, which they may have seen from afar; but Josquin was the first who was to be allowed to enter it. 'In Josquin,' says Ambros (whose knowledge of and admiration for the old music surpasses that of any modern historian), 'we have the first musician who creates a genial impression.'

In another sense, a very practical one, Josquin stands first on the list of composers. He is the oldest writer whose works are preserved to us, if not entire, at least in such quantities as adequately to represent his powers. The invention of printing music by moveable types, which gave such a wonderful impetus to publication, dates from 1498, the very time when Josquin was at the height of his power; and it is a testimony to the superiority of his music over that of his predecessors, that though Ockenheim is supposed to have been still living at the beginning of the 16th century, and perhaps as late as 1512, the publishers thought fit to print very few of his compositions, whilst few collections were issued to which Josquin did not largely contribute.

Commer, in his 'Collectio Operum Musicorum Batavorum' (Berlin, Trautwein), has printed 12 motets and two chansons.

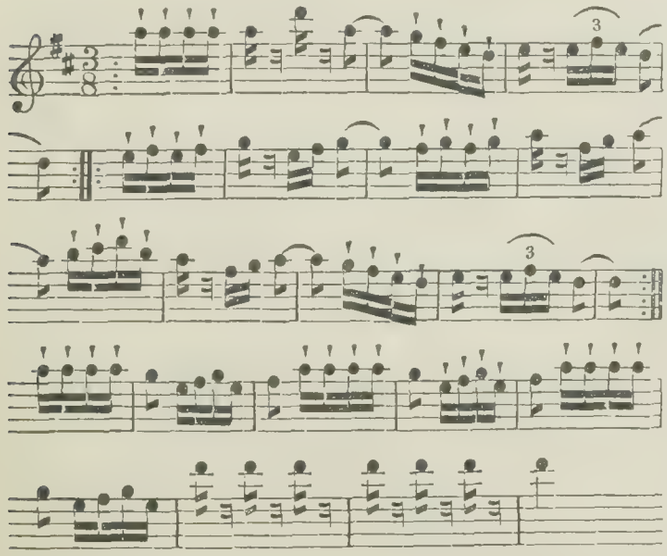
Rochlitz in his 'Sammlung' (Schotts) gives a hymn, 'Tu pauperum refugium'; portions of a mass; and a motet, 'Misericordias Domini,' all for 4 voices. Choron, in his 'Collection générale,' gives his Stabat Mater à 5; and Hawkins (chap. 72) a motet, à 4, 'O Jesu fili.' The 11 large volumes of Burney's Musical Extracts (Add. MSS. 11,581–91) contain many and valuable compositions of Josquin's.

In Van der Straeten's 'La Musique aux Pays-Bas' (Brussels, 1867) a portrait of Josquin is reproduced from a book published by Peter Opmeere at Antwerp in 1591. It seems to have been copied from a picture originally existing in the Brussels cathedral, and thence probably came the tradition that Josquin was buried there. Opmeere accompanies the portrait with the following words: 'Conspicitur Josquinus depictus Bruxellis in D. Gudulæ [ecclesiâ], in tabula aræ dextræ ante chorum honestâ sane facie ac blandis oculis.' [J.R.S.-B.]

JOTA (pronounced Hota, with a strong guttural aspirate). One of the most characteristic of the North Spanish national dances. It is a kind of waltz, always in three-time, but with much more freedom in the dancing than is customary

in waltzes. 'It is danced,' says a [1]traveller, 'in couples, each pair being quite independent of the rest. The respective partners face each other; the guitar twangs, the spectators accompany, with a whining, nasal drawling refrain, and [2]clapping of hands. You put your arm round your partner's waist for a few bars, take a waltz round, stop, and give her a fling round under your raised arm. Then the two of you dance, backward and forward, across and back, whirl round and chassez, and do some nautch-wallah-ing, accompanying yourselves with castanets or snapping of fingers and thumbs. The steps are a matter of your own particular invention, the more *outrés* the better; and you repeat and go on till one of you tires out.' Every province in the North has its own Jota, the tune and style of which have existed from time immemorial. Thus there is a Jota Aragonesa and a Jota Navarra, quite different in melody and accompaniment, but always in three-time. Of the former, a better example could hardly be given than that which forms the chief subject of Glinka's orchestral overture or piece 'Jota Aragonese.'

Of the Jota Navarra, an equally good and simple specimen is to be found in the second part of Sarasate's Spanish Dances (op. 22).



The Jota is much played in the North of Spain, and wherever it is heard a dance is sure to be the instant result. [G.]

[2] This is quite Oriental.

JOULE, Benjamin St. John Baptist, born at Salford, Nov. 8, 1817, studied the violin under Richard Cudmore, and the organ, singing, and theory, under Joseph John Harris. From May 8, 1846, to March 20, 1853, he was organist and choir-master at Holy Trinity Church, Hulme, and from April 28, 1849, to Oct. 3, 1852, also held a similar position at St. Margaret's, Whalley Range, Manchester. Since March 27, 1853, he has been honorary organist of St. Peter's Church, Manchester. He is also President of the Manchester Vocal Society, and author or compiler of 'The Hymns and Canticles pointed for Chanting,' 1847; 'Directorium Chori Anglicanum,' 1849; a very comprehensive 'Collection of Words of Anthems,' 1859; a pointed Psalter; and other works connected with choral service, several of which have reached many editions. He has also lectured on Church Music, and been a contributor to various periodicals. He was music critic to 'The Manchester Courier' from 1850 to 1870. [W. H. H.]

JUBILATE—the first word of the Vulgate version—is the Psalm (100th) which is given as an alternative to the Benedictus, to follow the second lesson in the morning service of the Anglican Church. The ancient custom of the church was to read lessons and psalms alternately, and psalms so used were called responsories. The Jubilate was specially used in this manner in the offices of Salisbury and York, so its adoption in the reformed service was only a perpetuation of ancient custom in the churches of England. Amalarius also (A.D. 820) speaks of it as used in Lauds apart from its ordinary occurrence in the order of the Psalms. Nevertheless it did not appear in Cranmer's Prayer-book of 1549, but was added in the revised edition which was made in the reign of Edward VI, 1552. Consequently there is no chant given for it in Marbeck's first adaptation of ancient chants to the English service called 'The Book of Common Praier Noted,' which was published in 1550.

It is curious that the Jubilate is much oftener used than the Benedictus, which is looked upon quite as the exception. One of the most distinguished clerical writers on the choral service of the church, Mr. Jebb, has observed that the Benedictus is so infinitely preferable in every respect that it is impossible to attribute the preference which is given to the Jubilate to any other motive than its being shorter. In confirmation of this view it is interesting to note that while the enthusiasm of the Reformation was still hot, the great musicians of that time, Tallis, Byrd, and Farrant, chose the incomparably more beautiful and more appropriate, but longer, Benedictus; but when that enthusiasm was worn away hardly anything but the shorter Jubilate is to be met with. If we take for instance the most famous collections of the ancient services of the church in their order, we find three settings of the Jubilate in Barnard's collection, eight in Boyce's, and no less than fifteen in Arnold's.

Handel set the Jubilate for the thanksgiving service which was held after the Peace of

Utrecht, which was concluded March 31, 1713. Mendelssohn also set the Psalm, but not for liturgical use. [C. H. H. P.]

JUBILEE OVERTURE, THE (in E), by C. M. von Weber; composed for the festival held at Dresden in commemoration of the 50th anniversary of the accession of Frederick Augustus I. of Saxony; op. 59. The autograph is dated Dresden, Sept. 11, 1818, and the first performance was at the Court Theatre on Sept. 20. The overture winds up with 'God save the King.' Weber had written a Jubel cantata for the occasion, but it was put aside, and the overture—an entirely independent work—performed instead. [G.]

JUDAS MACCABÆUS. The 12th of Handel's English oratorios, written by command of the Prince of Wales. Handel himself is said to have suggested the subject (à propos to the Duke of Cumberland's victories in Scotland) to Dr. Morell, who made the libretto. The music was begun July 9, and completed Aug. 11, 1746, and it was produced at Covent Garden April 1, 1747. It has always been a favourite. 'See, the conquering hero comes' was transferred to Judas from Joshua. The air 'Wise men flattering,' and the chorus 'Sion now'—were introduced several years after the production of the oratorio, and the latter is said to have been one of the last pieces composed by Handel. [G.]

JUDITH. 1. An oratorio; words by W. Huggins, music by Defesch. Produced in London 1733. 2. An oratorio by Dr. Arne (his 2nd); the words selected and adapted by Isaac Bickerstaff. Produced at the Lock Hospital Chapel Feb. 29, 1764. 3. A 'biblical cantata' in 3 scenes; words selected from the Bible by Chorley, music by H. Leslie. Composed for Birmingham Festival, and first performed Sept. 1858; also at St. Martin's Hall March 8, 59. [G.]

JUIVE, LA. Opera in 5 acts; words by Scribe, music by Halévy. Produced at the Académie Feb. 23, 1835. In England by the Brussels troupe at Drury Lane in French July 29, 1846; in Italian, 'La Ebrea,' at Covent Garden July 25, 1850. [G.]

JULLIEN (originally JULIEN), Louis Antoine, was born at Sisteron, Basses Alpes, April 23, 1812. His father was a bandmaster, and the boy was thus familiar with instruments and music from his cradle. At 21 he went to Paris and entered the counterpoint class of Le Carpentier at the Conservatoire, Oct. 26, 1833. Composition, however, and not counterpoint was his object, and after a year's trial he quitted Le Carpentier for Halévy, Dec. 16, 1834, but with no greater success; he refused to do the exercises, and insisted on presenting the Professor with dances as specimens of 'composition'—not perhaps quite to Halévy's annoyance if it be true, as it used to be said, that the waltz 'Rosita,' which became the rage in Paris as Jullien's, was written by his master. He did not obtain a single mention at the Conservatoire, and at the beginning of 1836 finally left it, and soon after appeared before the public as the conductor of concerts of dance music at the Jardin Turc. The 'Huguenots' was just then in all the flush of its great success, and one of Jullien's first quadrilles was made upon the *motifs* of that opera, the announcement of which, as quoted by M. Fétis, is exactly in the style with which Londoners afterwards became familiar. To this enterprise he joined the establishment of a musical paper. No wonder that he was unsuccessful. In June 1838 he became insolvent, and had to leave Paris. His first appearance in London seems to have been as conductor, jointly with Eliason, of shilling 'Concerts d'Été' at Drury Lane theatre, which opened June 8, 1840, with an orchestra of 98, and chorus of 26. On the 18th of the following January he conducted 'Concerts d'hiver' at the same theatre, with a band of 90 and chorus of 80. These were followed by 'Concerts de Société' at the English Opera House, Lyceum, Feb. 7 to Mar. 18, 1842, comprising Rossini's Stabat for the first time in England. On Dec. 2, 42, began his 'annual series of concerts' at the English Opera House, and he thenceforward continued them season after season, at the close of the year, now at one theatre, and now at another, till the Farewell series in 1859. 'His aim,' in his own words, 'was always to popularise music,' and the means he adopted for so doing were—the largest band; the very best performers, both solo and orchestral; and the most attractive pieces. His programmes contained a certain amount of classical music—though at the beginning hardly so much as that given by some of his predecessors, who announced a whole symphony on each evening. This was probably too much for a shilling audience in the then state of musical taste, and Jullien's single movements and weaker doses just hit the mark. Later on in his career he gave whole symphonies, and even two on one evening. No doubt this judicious moderation did good, and should always be remembered to his credit, or that of his advisers. But the characteristic features of Jullien's concerts were, first, his Monster Quadrille, and secondly himself. He provided a fresh quadrille for each season, and it was usually in close connexion with the event of the day. The 'Allied Armies Quadrille' during the Crimean war, 1854; the 'Indian Quadrille, and Havelock's March,' during the Mutiny, 1857; the 'English Quadrille'; the 'French ditto'; and so on. These were written by himself, and though then considered noisy were always rhythmical, melodious, and effective. In some of them as many as six military bands were added to the immense permanent orchestra. In front of this 'mass of executive ability,' 'the Mons'—to adopt the name bestowed on him by Punch, whose cartoons have preserved his image with the greatest exactness—with coat thrown widely open, white waistcoat, elaborately embroidered shirtfront, wristbands of extravagant length turned back over his cuffs, a wealth of black hair, and a black moustache—itself a startling novelty—wielded his baton, encouraged his forces, repressed the turbulence of his audience with indescribable gravity and magnificence, went

through all the pantomime of the British Army or Navy Quadrille, seized a violin or piccolo at the moment of climax, and at last sank exhausted into his gorgeous velvet chair. All pieces of Beethoven's were conducted with a jewelled baton, and in a pair of clean kid gloves, handed him at the moment on a silver salver.

Not only did he obtain the best players for his band, but his solo artistes were all of the highest class. Ernst, Sivori, Bottesini, Wieniawski, Sainton; Arabella Goddard, Marie Pleyel, Charles Hallé, Vivier; Sims Reeves, Pischek, and many others, have all played or sung, some of them for the first time in England, under Jullien's baton. In fact he acted on the belief that if you give the public what is good, and give it with judgment, the public will be attracted and will pay. And there is no doubt that for many years his income from his Promenade Concerts was very large. His harvest was not confined to London, but after his month at Drury Lane, Covent Garden, or Her Majesty's, he carried off his whole company of players and singers through the provinces, including Scotland and even Ireland, and moved about there for several weeks—a task at that time beset with impediments to locomotion which it is now difficult to realise. If he had but confined himself to the one enterprise, and exercised a proper economy and control over that! But this was impossible. He had started a shop soon after his arrival, first in Maddox Street and then in Regent Street, for the sale of his music. In 1847 he took Drury Lane theatre on lease, with the view of playing English operas. Mr. Gye was engaged as manager, and M. Berlioz as [1]conductor, with a host of other officials, including Sir Henry Bishop as 'inspector-superintendent at rehearsals,' and a splendid band and chorus. The house opened on Dec. 6, with a version of 'Lucia,' in which Sims Reeves made his début, and which was followed by Balfe's 'Maid of Honour,' 'Linda,' and 'Figaro.' 'All departments,' says a contemporary [2]article by one who knew him well, 'were managed on the most lavish scale; orchestra, chorus, principal singers, officers before and behind the curtain, vying with each other in efficiency and also in expensiveness. The result might have been anticipated. The speculation was a failure, and though his shop was sold for £8000 to meet the emergency, M. Jullien was bankrupt' (April 21, 1848). He left the court however with honour, and, nothing daunted, soon afterwards essayed another and still more hazardous enterprise. In May 1849 he announced a 'Concert monstre and Congrès musical,' 'six grand musical fêtes,' with '400 instrumentalists, 3 distinct choruses, and 3 distinct military bands.' The first two took place at Exeter Hall on June 1 and 15, and a third at the Surrey Zoological Gardens on July 20. The programme of the first deserves quotation. It was in 3 parts:—1. David's ode-sinfonie 'Le Desert'—Sims Reeves solo tenor. 2. Mendelssohn's Scotch Symphony. 3. A miscellaneous concert, with Anna Thillon, Jetty Treffz, Miss Dolby, Braham, Pischek, Dreyschœck, Molique, etc., etc. This project too, if we may judge from its sudden abandonment, ended disastrously. In 1852 he wrote the opera of 'Pietro il Grande,' and brought it out on the most magnificent scale at the Royal Italian Opera, Covent Garden, on Aug. 17, at his own cost. The piece was an entire failure, and after five performances was withdrawn, leaving Jullien a loser of some thousands of pounds. Shortly after this he visited America and remained there till June 28, 1854. On his return he resumed the regular routine of his metropolitan and provincial concerts. But misfortunes pursued him. On March 5, 1856, Covent Garden theatre was burnt to the ground, and the whole of his music—in other words, his entire stock in trade—was destroyed; an irreparable loss, since his quadrilles and other original pieces were in MS. In 1857 he became involved in the Royal Surrey Gardens Company, and lost between £5000 and £6000. This enabled him to add to his achievements by conducting oratorios, but the loss, the protracted worry and excitement attending the winding up of the Company, and the involved state of his own affairs, which had been notoriously in disorder for some years and were approaching a crisis, must have told severely on him. The next season was his last in this country. He gave a series of Farewell Concerts at the usual date—this time at the Lyceum, with a band reduced to 60—made a Farewell provincial tour, and then, probably forced thither by pecuniary reasons, went to Paris. There on the 2nd of May, 1859, he was arrested for debt and put in prison at Clichy, but on the 22nd of the following month was brought up before the court, heard, and liberated with temporary protection. Early in March following an advertisement appeared in the papers headed 'Jullien Fund,' stating that he was in a lunatic asylum near Paris, and appealing to the public on his behalf. Scarcely however was the advertisement in type when the news arrived of his death on March 14, 1860.

No one at all in the same category with Jullien, at least in our time, has occupied anything like the same high position in public favour. 'His name was a household word and his face and figure household shapes, during a period of nearly 20 years.' Whatever the changes in his fortune his popularity never waned or varied. 'Your house,' says Lord Beaconsfield in [3]Tancred, describing the most favourable conditions for ball-giving conceivable in 1846,—'your house might be decorated like a Russian palace, you might have Jullien presiding over your orchestra, and a banquet worthy of the Romans.' And similar allusions were made every day in the periodicals. And why so? Because, with much obvious charlatanism, what Jullien aimed at was good, and what he aimed at he did thoroughly well. He was a public amuser, but he was also a public reformer. 'By his frequent performances of the music of Mozart, Beethoven, Mendelssohn, and other great masters, and by the

[1] An amusing account of Berlioz's early enthusiasm, and its gradual evaporation, will be found in his 'Correspondance inedite' (1879), letters xxxv to xliv.

[2] 'Musical World,' March 24, 1860.

[3] Book I, chap 7.

constant engagement of the most eminent performers, he elicited at first the unconscious attention, and then the enthusiastic appreciation, of the vast multitudes that besieged his concerts, and that not merely in London but all over the provinces of Great Britain and Ireland. This will probably tend to preserve his memory among us even more than his unrivalled energy and talent, or his unprecedented zeal and liberality as a public entertainer. To Jullien moreover is attributable in a large measure the immense improvement which our orchestras have made during the last 20 years, he having been the means not only of bringing over some of the greatest foreign instrumentalists, but of discovering and nurturing the promise of many English performers, who through the publicity he placed at their disposal, no less than through their own industry and ability, have since attained acknowledged [1] eminence.' [G.]

JULLIEN'S MILITARY JOURNAL, a periodical répertoire of music arranged for a military band, consisting of dances, marches, selections from operas, oratorios, symphonies, etc. It was started by Jullien in the year 1847, but in 1857 came into the hands of Messrs. Boosey & Co., by whom it is published every alternate month as 'Boosé's Supplementary Journal,' to distinguish it from 'Boosé's Military Journal,' a monthly répertoire of a similar kind started by Charles Boosé the eminent bandmaster in 1846, and published by Messrs. Boosey since 1850. [See Military Journals.] [G.]

JÜNGSTE GERICHT DAS, *i.e.* the Last Judgment. Spohr's first oratorio. Written for and produced at the Festival at Erfurt Aug. 15, 1812, in honour of Napoleon I. It was not successful; but Spohr's *naïf* account of the performance, and of his own predilection for it,[3] is highly amusing. It is an entirely different work from 'Die letzten Dinge,' known in England as The Last Judgment. [G.]

JUPITER. A sobriquet bestowed—whether by J. B. Cramer or not is uncertain—on Mozart's 49th and last Symphony in C major (Köchel, 551), and now to some extent classical, since even the conservative Mendelssohn uses it in his letter of March 7, 1845. The symphony is quoted in Mozart's autograph catalogue, with the date Aug. 10, 1788. The autograph is on oblong paper, 91 pages of 12 staves each, and belongs to Julius André, Frankfort. Mendelssohn was the first to notice the fact that a favourite passage near the close of the *Andante* was an afterthought. (See the letter above quoted.) The symphony was published as a P. F. duet by Breitkopf & Härtel, with the Finale of the Quintet in C (composed 1787) substituted for its own last movement. [G.]

K.

KALKBRENNER, Friedrich Wilhelm Michael, pianist and prolific composer for his instrument, was born 1788 near Berlin. His father, Christian Kalkbrenner, of Hebrew extraction and a [2] musician of great ability, began his training early. In 1798 he entered the Conservatoire at Paris, and left it, after four years of assiduous study, with a prize for pianoforte playing and composition. In 1813 he played in public at Berlin and Vienna, heard Clementi, made Hummel's acquaintance, and was introduced by Haydn to Albrechtsberger, from whom he had lessons in counterpoint. From 1814 to 1823 he resided in London, much sought after as a player and fashionable teacher. In 1824 he settled in Paris as a member of the pianoforte-making firm of Pleyel & Co. In Paris too his success as a performer and teacher was very great; he was a shrewd man of business and managed to amass quite a fortune. Madame Camille Pleyel was his best pupil. When Chopin came to Paris in 1831, Kalkbrenner's reputation was at its height: his compositions, mostly written for the market and now forgotten, were upon the desks of all dilletanti, and his playing was upheld as a model. Chopin, who was then only twenty-two years of age but had already written his two Concertos, the Etudes, op. 10, the first Scherzo and Ballade, etc., called on him and played his Concerto in E minor, whereupon Kalkbrenner came forward with the astounding proposal that Chopin should bind himself to be his pupil for three years and thus under his guidance become a good artist! Chopin took no lessons, but soothed Kalkbrenner by dedicating the Concerto to him. In a letter dated Dec. 16, 1831, Chopin speaks in high terms of Kalkbrenner's technique, praises his charming equable touch and quiet self-possession, and says that Herz was a zero compared with him. Still Chopin seems from the first to have been of Mendelssohn's opinion, who said to him soon after, 'You had nothing to learn from Kalkbrenner; you play better than he does.'

Kalkbrenner was a man of great vanity, and far from scrupulous as to the means by which he strove to enhance his reputation. The late Professor Marx used to tell a story how Kalkbrenner called on him in 1834 at Berlin, anxious to make a good impression, as the Professor was then editor of the new 'Berliner Musikzeitung' and an influential personage. The visitor in moving terms deplored the decay of the good old art of improvisation, saying that since Hummel

[1] 'The Musical World,' March 24, 1860.

[2] Beethoven includes 'Kalkbrenner (Vater)' with Sterkel and others of the 'old, dead composers of the Empire' in his denunciation of Gottfried Weber's mistakes in regard to Mozart's Requiem. 'Requiescat in pace,' says he (Letter, Feb. 6, 1826). He would hardly have been content with so mild a sneer if he had known that Kalkbrenner had 'arranged' Don Giovanni (that is, had altered the music and interpolated fresh pieces) for its appearance on the Paris stage, Sept. 17, 1805 (see Lajarte, ii. 38). [See Lachnith.]

[3] Selbstbiographie, i. 169.

had retired he was the only one who still cultivated it in the true classical spirit. He opens the piano and improvises for a quarter of an hour with fluent fancy and great neatness, interweaving all manner of themes, even a little fugue, much to the Professor's edification. Next day a parcel of music just printed at Paris arrives for review. The Professor, greatly interested, opens the topmost piece—'Effusio Musica, par Fred. Kalkbrenner': when lo and behold! he has yesterday's improvisation before him, fugue and all, note for note!

An instruction-book with études belonging to it is the best thing Kalkbrenner left. His attainments as a musician are shown in four pianoforte concertos, one for two pianos, a septet, sextet and quintet, and various sonatas; all correctly and well written for the instrument, but dull and trite, spite of the glitter of what was called a 'brilliant' style.

Kalkbrenner died of cholera at Enghien near Paris on June 10, 1849. [E.D.]

KALLIWODA, Johann Wenzeslaus, a violin player and popular composer, was born at Prague March 21, 1800. From 1811 to 1817 he was a pupil of the Conservatorium, and from 1817 to 1823 a member of the orchestra of that town. During a visit to Munich he was introduced to Prince Fürstenberg, who took a lively interest in his talent and appointed him conductor of his private band at Donaueschingen, which post Kalliwoda retained, in spite of various offers from more important places, for the rest of his professional life, till he retired on a pension in 1853. He died at Carlsruhe Dec. 3, 1866.

Kalliwoda, as a violinist, is regarded as one of the best representatives of the Prague school under F. W. Pixis. Without possessing very startling qualities of execution or style, his performances showed a well-finished technique, a sympathetic but not large tone, and were altogether more remarkable for elegance and a certain pleasantness than for vigour or depth of feeling.

As he travelled but little, his reputation mainly rests on his compositions. They consist of seven Symphonies—F minor (1826); E♭; D minor; C; B minor (op. 106); G minor; and F—Overtures, Concertinos and other Solo-pieces for the violin and other orchestral instruments, especially the Clarinet, Quartets for stringed instruments, Violin-Duets, Pianoforte-pieces, and a number of songs. Many of his works have enjoyed for some time, and chiefly in amateur-circles, a considerable popularity, and the Index of the Leipzig Allg. Mus. Zeitung shows a long list of performances. The works are certainly not of much importance in an artistic sense, and show little originality; but on the other hand, they are free from laboured efforts and ambitious striving after startling effects, are written in a thoroughly musicianly, unpretentious, and unaffected style, easy to understand, pleasing and effective. Their day is now over, but Schumann (in his 'Gesamm. Schriften,' iii. 278) speaks of Kalliwoda's 5th Symphony with enthusiasm, and mentions the interesting fact that only a few years previously Kalliwoda had put himself under Tomaschek of Prague for improvement in some branches of counterpoint in which he felt himself weak. Schumann further testified his esteem by dedicating his Intermezzi (op. 4) 'al Sign. Kalliwoda.' In the history of the music of the last 50 years, Kalliwoda occupies as an orchestral composer a position somewhat analogous to Onslow's as a composer of chamber-music.

His son Wilhelm, born at Donaueschingen July 19, 1827, was thoroughly well brought up by his father, and was for a short time a pupil of Mendelssohn's at Leipzig in 1847, and of Hauptmann's in 1848. He held various posts at Carlsruhe with credit to himself, but was compelled by ill health to forsake work. [P.D.]

KANDLER, Franz Sales, a musical historian, to whom we owe an admirable condensation of Baini's Palestrina; born Aug. 23, 1792, at Kloster-Neuburg in Lower Austria. He belonged to the War Office, and went as interpreter with the army to Venice and Naples in 1817 and 1821. He died of cholera at Baden (Beethoven's Baden) Sept. 26, 1831. His two works are 'Cenni storico-critici alla vita ed opere del . . . G. Ad. Hasse' (Venice, 1820; 2nd ed., Naples, 1820), and that above mentioned, 'Ueber das Leben und die Werke des . . . Palestrina,' etc. This was published after Kandler's death by Kiesewetter (Leipzig, B. & H. 1834). [G.]

KANKA, Johann von, Dr. juris, born at Prague Nov. 10, 1772, is named here not for his music, though he published a Pianoforte Concerto, a Cantata, and compositions to Collin's War Songs, but for his warm attachment to Beethoven and for the eminent service he rendered him, since it was chiefly through his means that the dispute with the Kinsky family was abandoned and an advantageous compromise effected. Kanka's father was, like himself, at once an eminent lawyer and a thorough musician, and his grandfather had been equally eminent as an architect. The family lived in Prague, and Beethoven was intimate with them in the early days of his residence in Austria. Kanka the younger wrote and edited books on Austrian and Bohemian law, which were much esteemed by his profession (Thayer, ii. 9; iii. 299). He was Dean (1815) and Rector (1829) of the University, and died full of years and honours, April 15, 1865. [G.]

KAPELLE, a musical establishment, usually orchestral. The word was formerly applied to the private band of a prince or other magnifico, but is now used to denote any band. Thus at Berlin, the Kaiserliche königliche Kapelle (97 musicians, called Kammermusiker) forms the regular orchestra of the Grand Opera, with two Kapellmeisters (Conductors), a Concertmeister (Leader or 1st Violin), and a Balletdirigent (Balletmaster). The orchestra of the Crystal Palace would in Germany be called the Kapelle, and Mr. Manns the Kapellmeister.

The smallest Kapelle existing is probably that of the Duke of Sigmaringen, which consists of a pianoforte player and a sextet of strings. [G.]

KARAJAN, Theodor Georg, Ritter von, Dr. juris, philologist and historian, born at Vienna Jan. 22, 1810; clerk (1841) and custos (1854) in the court library, appointed vice-president (1851) and president (1859) of the Akademie der Wissenschaften; received the order of Leopold in 1870, and died April 28, 1873. His philological works are numerous and important; but his title to admission here is his pamphlet, 'J. Haydn in London, 1791 and 1792' (Vienna, Gerold, 1861). In addition to matter from the well-known pamphlets of Dies and Griesinger, it contains a number of Haydn's letters, chiefly from London and Estoras, to his friend Maria Anna von Genzinger, the wife of Leopold Peter, Edler von Genzinger, an esteemed physician, with four from the lady herself. She played the piano well, and even composed. Haydn wrote several sonatas for her, and whenever he was in Vienna spent much of his time at her house, where a pleasant musical society was generally to be found. Karajan also furnished his friend Otto Jahn with valuable material for his book on Mozart. [C. F. P.]

KEEBLE, John, was born at Chichester in 1711 and was brought up as a chorister in the cathedral under Thomas Kelway. He afterwards became a pupil of Dr. Pepusch, and was in 1737 appointed successor to Thomas Roseingrave as organist of St. George's, Hanover Square, allowing Roseingrave one half of the salary until his death in 1750. Keeble was also organist at Ranelagh Gardens. In 1784 he published 'The Theory of Harmonics, or, an Illustration of the Grecian Harmonica,' a work which attracted attention. He published five books of organ pieces, and, jointly with Kirkman, '40 Interludes to be played between the verses of the Psalms.' He was an excellent organist and able teacher. He died Dec. 24, 1786. [W. H. H.]

KEISER, Reinhard, an eminent German opera-composer, born 1673 near Weissenfels, Leipzig. He was grounded in music by his father, a sound church composer, and afterwards attended the Thomas-schule and the University of Leipzig, at the same time coming frequently before the public at the many concerts renowned even then for their excellence. In 1692 he was commissioned to set a pastoral, 'Ismene,' for the court of Brunswick, and its success procured him the libretto of 'Basilius.' In 1694 he removed to Hamburg, and there remained for 40 years a favourite with the public. 'Irene' (1697) was the first of a series of 116 operas composed for the Hamburg theatre, each containing from 40 to 50 airs, besides operas in collaboration with others, and sacred music. Keiser was luxurious and self-indulgent, and led an adventurous life, but without sacrificing his love of art or his taste for intellectual enjoyments. In 1700 he opened a series of winter-concerts, which formed a remarkable combination of intellectual and sensual gratification; the most accomplished virtuosi, the finest and best-looking singers, a good orchestra, and carefully selected programmes, furnishing the former, and a banquet of choice viands and wines the latter. In 1703 he assumed the direction of the opera in conjunction with Drüsicke, but his partner absconded, and the whole burden fell upon the shoulders of Keiser. He proved equal to the emergency, for in one year (1709) he composed 8 operas, married the daughter of a Hamburg patrician, and musician to the municipality 'Oldenburg,' and having completely reinstated his affairs, plunged into all his former extravagant indulgence. In 1716 he resumed his concerts; in 1722 visited Copenhagen and was appointed Capellmeister to the King of Denmark; in 1728 was made Cantor and Canon of the cathedral, and again turned his attention to sacred music. He composed his last opera, 'Circe,' in 1734, and died in 1739. His wife and daughter are said to have been accomplished singers.

Keiser exercised an important though not a permanent influence on German opera. The perfection to which at first he raised the opera at Hamburg, speedily degenerated into mere outward show and trivial if not vulgar farce, but the sensation he produced at first is described by his contemporaries as extraordinary. Mattheson, who was not likely to exaggerate the successes of a rival, in his life-like picture of the musical condition of Hamburg, calls Keiser the first dramatic composer in the world, and says that no other music than that of 'dieser galante Componist' was either sung or listened to. His melodies were smooth and graceful, and fell upon the ear 'like charmed accents after the dull pedantries of the contrapuntists of the day.' That his melody was spontaneous his facility itself proves, and he was the first who endeavoured to convey the sentiment of the character in the music. This was the secret of his success, and it was by this that he enabled German opera to hold its own against the declamation of the French, and the melody and fine singing of the Italians. In sacred music he shines chiefly in oratorio, which he treated dramatically, but with an earnestness and dignity surprising in a man of his character. In judging Keiser in this department we must not forget that Bach's Passions, and Handel's Oratorios were then not known, scarcely even composed; yet notwithstanding his want of models, his works compare favourably with the insipid sacred music of the latter half of the 18th century, produced under far greater advantages than were open to him. His sacred compositions include 'Der für die Sünde der Welt gemarterte und sterbende Jesus'; 'Der verurtheilte und gekreuzigte Jesus' (poem by Brockes of Hamburg); a Passion according to St. Mark, said to be fine; and other historical oratorios, motets, cantatas, and psalms. He published extracts from the two first named works, viz. 'Auserlesene Soliloquia' (1714), and 'Selige Erlösungs-Gedanken' (1715); airs from various operas, cantatas for a single voice, and several vocal collections with various titles, such as 'Divertimenti serenissimi,' 'Kaiserliche Friedenspost,' 'Musikalische Landlust,' etc. Important portions of his operas and sacred works have been published by Lindner, in his

'Erste stehende Deutsche Oper,' ii. 3–15; Reissmann, in his 'Allg. Geschichte der Musik,' iii. 54–73 and App. Nos. 7 and 8; and von Winterfeld in his 'Evangelische Kirchengesang,' vol. iii. Adam Hiller included an unaccompanied motet —'Kindlich gross'—in his 'Vierstimmige Motetten,' etc. vol. ii, and there is a fugue for 4 voices, 'Gott ist offenbaret,' in the 'Auswahl vorzüglicher musikwerke.' [A. M.]

KÉLER BÉLA, whose real name is ALBERT VON KÉLER, was born at Bartfeld in Hungary, Feb. 13, 1820. After attempting both the law and farming he settled himself to music, and in 1845 began regular study at Vienna under Schlesinger and Sechter, playing the fiddle in the band of the Theater-an-der-Wien at the same time. May 7, 1854 he took the command of Gung'l's band in Berlin, and began his career as conductor, solo-player, and composer. After a few months in Berlin he returned to Vienna, and succeeded to Lanner's position at the head of that celebrated band. This again he left before long for an infantry regiment. As bandmaster to the latter he was called to Wiesbaden in 1863, and in 70 became Kapellmeister of the Kur orchestra there, a post which he resigned from ill health in 1872. He still resides in Wiesbaden, and celebrated his silver anniversary on May 7, 79. His works, which have reached op. 130, consist of overtures, dance music, and pieces for solo violin, all distinguished for showy brilliant style and clever orchestration. Among the most popular are his Hofnungssterne waltz, Hurrah-Sturm galop, and Friedrich-Karl march. [G.]

KELLOGG, CLARA LOUISE, though born in Sumterville, South Carolina, in July 1842, is of northern extraction. Her mother had considerable talent as a musician, and Clara was her only child. In 1856 they removed to New York, where she received the whole of her musical education. She made her first appearance there, at the Academy of Music (Opera), as Gilda in Rigoletto, in 1861, and sang that season 10 or 12 times. In 1867 (Nov. 2) she made her début in London at Her Majesty's as Margherita, sang constantly, and was re-engaged for the next year. From 1868 to 1872 she was touring in the United States. On May 11, 1872, she re-appeared in London at Drury Lane, Her Majesty's Opera, as Linda, and sang during that season also as Gilda. On her return to the United States she continued to sing in Italian opera till 1874, when she organised an English troupe, herself superintending the translation of the words, the mise en scéne, the training of the singers, and the rehearsals of the chorus. Such was her devotion to the project, that in the winter of 74–75 she sang no fewer than 125 nights. It is satisfactory to hear that the scheme was successful. Miss Kellogg's musical gifts are great. She is said to be familiar with thirty-five operas. She has great conscientiousness as an artist, ardent enthusiasm, and a voice of great compass and purity. In addition to which she has a remarkable talent for business and is never so happy as when she is doing a good or benevolent action. [G.]

KELLY, MICHAEL, was born in Dublin about 1764, was taught singing by Passerini, Peretti, and St. Giorgio, and ultimately by Rauzzini, on whose advice his father sent him to Naples to study. Before quitting Dublin, however, a fortuitous circumstance led to his appearance on the stage as the Count in Piccinni's 'Buona Figliuola,' and that again to his performing the hero in Michael Arne's 'Cymon,' and Lionel in 'Lionel and Clarissa.' On May 1, 1779, he quitted Dublin, and arrived in Naples May 30. He placed himself under the tuition of Finaroli, head of the Conservatorio of La Madonna di Loreto. He subsequently studied under Aprile, with whom he visited Palermo, and then went successively to Leghorn, Florence, Bologna, and Venice, ultimately reaching Vienna, where he was engaged at the Court theatre. There he remained four years, enjoying the intimate friendship of Mozart, who on the production of his 'Nozze di Figaro' allotted to Kelly (whose name he spells 'Occhely' in his MS. catalogue) the parts of Basilio and Don Curzio. Being anxious to visit England Kelly obtained leave of absence from the Emperor, and in Feb. 1787 quitted Vienna in company with Stephen Storace, his mother and sister—Signora Storace—and Attwood. He appeared at Drury Lane on April 20, in his old part of Lionel, and continued there as first tenor until he quitted the stage. He also sang at the Concert of Ancient Music, the Handel performances in Westminster Abbey, and in the provinces. In 1789 he made his first appearance as a composer by the production of the music to two pieces called 'False Appearances' and 'Fashionable Friends,' and from that date till 1820 furnished the music for 62 dramatic pieces, besides writing a considerable number of English, Italian and French single songs, etc. In 1793 he was engaged at the King's Theatre, of which he was for many years acting manager. On Jan. 1, 1802, he opened a music shop in Pall Mall adjoining the Opera House, but this promising speculation failed owing to his inattention, and in 1811 he was made a bankrupt. He also engaged in the wine trade, and this circumstance, combined with the suspicion that some of Kelly's compositions were derived from foreign sources, led Sheridan to propose that he should inscribe over his shop, 'Michael Kelly, Composer of Wines and Importer of Music.' On Sept. 5, 1811, at Dublin, Kelly made his last appearance on the stage. In 1826 he published his 'Reminiscences' in 2 vols. 8vo. This entertaining work, which reached a second edition in the same year, was written by Theodore Hook from materials furnished by Kelly. Its personal notices of Mozart are both interesting and important, and have been done justice to by Otto Jahn (2nd ed. ii. 242, etc.) Kelly died at Margate, Oct. 9, 1826. The following is a list of the pieces for which he composed the music:—

'False Appearances' and 'Fashionable Friends,' 1789; 'A Friend in need,' 'The Last of the Family,' 'The Chimney Corner,' and 'The Castle Spectre,' 1797; 'Blue Beard,' 'The Outlaws' 'The Captive of Spielberg' (with Dussek), and 'Aurelio and Miranda,' 1798; 'Feudal

Times' and 'Pizarro,' 1799; 'Of age to-morrow,' 'De Montfort,' and 'The Indians,' 1800; 'Deaf and Dumb,' 'Adelmorn the Outlaw,' and 'The Gipsy Prince,' 1801; 'Urania,' 'Alzonah,' and 'A House to be sold,' 1802; 'The Hero of the North,' 'The Marriage Promise,' and 'Love laughs at locksmiths,' 1803; 'Cinderella,' 'The Counterfeit,' 'The Hunter of the Alps,' 'The Gay Deceivers,' 'The Blind Bargain,' and 'The land we live in,' 1804; 'The Honey Moon,' 'A Prior Claim,' and 'Youth, Love, and Folly,' 1805; 'We fly by night,' 'The Forty Thieves,' and 'Adrian and Orilla,' 1806; 'The Young Hussar,' 'Town and Country,' 'The Wood Demon (with M. P. King), 'The House of Morville,' 'Adelgitha,' and 'Time's a telltale,' 1807; 'The Jew of Mogadore,' 'The Africans,' and 'Venomi,' 1808; 'The Foundling of the Forest' and 'The Jubilee,' 1809; 'Gustavus Vasa' and a Ballet, 1810; 'The Peasant Boy,' 'The Royal Oak,' and 'One o'clock,' 1811; 'The Absent Apothecary,' 'The Russians,' 'Polly,' 'The Illusion,' and 'Harlequin Harper,' 1813; 'The Remorse,' 1814; 'The Unknown Guest,' 1815; 'The Fall of Taranto,' 1817; 'The Bride of Abydos,' 1818; 'Abudah,' 1819; and 'The Lady and the Devil,' 1820. [W.H.H.]

KELWAY, Joseph, a pupil of Geminiani, was organist of St. Michael's, Cornhill, which he resigned in 1736 on being appointed organist of St. Martin's-in-the-Fields *vice* Weldon deceased. Upon the arrival of Queen Charlotte in England Kelway was appointed her instructor on the harpsichord. As a harpsichord player he was remarkable for neatness of touch and rapidity of execution, and for his ability in performing Scarlatti's pieces. As an organist he excelled in extemporaneous performance, of which he was such a master as to attract the most eminent musicians in London (amongst them Handel) to the church in order to hear him. Burney (iv. 665) characterises his playing as full of a 'masterly wildness . . . bold, rapid, and fanciful.' His published harpsichord sonatas are very inferior to his extemporaneous effusions. He died in 1782.

His elder brother, Thomas, was educated as a chorister in Chichester Cathedral, and succeeded John Reading as organist there in 1720. Seven services and nine anthems by him are contained in a MS. volume in the library of Chichester Cathedral. His Evening Service in B minor is printed in Rimbault's 'Cathedral Music,' and two others in A minor and G minor are published by Novello. He died May 21, 1749. [W.H.H.]

KEMBLE, Adelaide, younger daughter of Charles Kemble, the eminent actor, was born in 1814 and educated for a concert singer. She appeared first in London and afterwards at the York Festival in 1835, but with little success. She then went to Paris for improvement, and from thence in 1836 to Germany, and early in 1839 to Italy. In that year she made her appearance at La Fenice, Venice, as Norma with decided success. In 1840 she sang at Trieste, Milan, Padua, Bologna, and Mantua with increasing reputation. In 1841 she returned to England and appeared in an English version of 'Norma' with marked success. In 1842 she sang in English versions of 'Le Nozze di Figaro,' 'La Sonnambula,' 'Semiramide,' and 'Il Matrimonio Segreto.' In 1843 she was married to Mr. Frederick U. Sartoris and retired from the profession. In 1867 she published 'A Week in a French Country House.' [W.H.H.]

KEMP, Joseph, Mus. Doc., was born in Exeter in 1778, and was placed as a chorister in the cathedral under William Jackson, with whom he continued as a pupil after quitting the choir. In 1802 he removed to Bristol on being appointed organist of the cathedral. In 1809 he resigned his appointment and settled in London. In 1808 he took the degree of Mus. Bac. at Cambridge, his exercise being a 'War Anthem, A sound of battle is in the land.' In 1809 he was by special dispensation permitted to proceed Doctor of Music; his exercise being an anthem entitled 'The Crucifixion.' On Oct. 25, 1809, 'The Jubilee,' an occasional piece by him, was produced at the Haymarket Theatre. In 1810 a melodrama called 'The Siege of Isca [Exeter], or, The Battles in the West,' written by Dr. Kemp, with music by himself and Domenico Corri, was produced at the theatre in Tottenham Street. In the same year he lectured on his 'New System of Musical Education,' probably the first method propounded in England for teaching music to numbers simultaneously. In 1814 he returned to Exeter, resided there till 1818, then went to France, remained until 1821, and again returned to Exeter. He died in London, May 22, 1824. Dr. Kemp published an anthem, 'I am Alpha and Omega'; 'Twelve Psalmodical Melodies'; 'Twelve Songs'; 'Twenty Double Chants'; 'Musical Illustrations of the Beauties of Shakspeare'; 'Musical Illustrations of The Lady of the Lake'; 'The Vocal Magazine'; 'The New System of Musical Education, Part I.'; and numerous single glees, songs, duets, and trios. [W.H.H.]

KENDALL, John, organist of the church of St. Marylebone, published in 1780 a book of organ pieces. [W.H.H.]

KENT, James, born at Winchester, March 13, 1700, became a chorister of the cathedral there under Vaughan Richardson, but was shortly afterwards removed to London and entered as a chorister of the Chapel Royal under Dr. Croft. There he attracted the attention of the sub-dean, Rev. John Dolben, through whose influence he obtained, on leaving the choir, the post of organist of the parish church of Finedon, Northamptonshire, the seat of the Dolbens. He resigned his office at Finedon on obtaining the organistship of Trinity College, Cambridge, which he held till 1737, when he succeeded John Bishop as organist of the Cathedral and College of Winchester. He married Elizabeth, daughter of John Freeman, a singer at the theatre in the time of Purcell, afterwards a member of the choirs of the Chapel Royal, St. Paul's and Westminster, and who died Dec. 10, 1736. It was not until the decline of life that Kent could be induced to publish; he then printed a volume containing 12 anthems. In 1774 he resigned his appointments in favour of Peter Fussell, and died at Winchester, May 6, 1776. After his death a volume containing a Morning and Evening Service and 8 Anthems by him was published under the editorship of Joseph Corfe. Kent assisted Dr. Boyce in the compilation of his 'Cathedral Music.' His anthems have been extravagantly extolled by some, and decried by others; in both cases unjustly. They are smooth and even productions, generally pleas-

ing, but rarely rising above mediocrity. His 'Hear my Prayer' was at one time a great favourite, but it is a poor composition. He borrowed freely from Italian composers, without acknowledgment, as is shown by a volume full of his notes in the possession of Sir F. A. G. Ouseley. [See BASSANI.] [W.H.H.]

KENT BUGLE, or Royal Kent bugle, an improvement of the Key bugle, said to have been named in consequence of a performance upon it before H.R.H. the Duke of Kent by Halliday in Dublin, shortly after its invention. It had a complete chromatic scale from B♭ below the treble stave to C above,—but is now superseded by valve instruments. [G.]

KEOLANTHE, OR, THE UNEARTHLY BRIDE. Grand opera in 2 acts; words by Fitzball, music by Balfe. Produced at English Opera House March 9, 1841. [G.]

KEPER, JOHN, of Hart Hall, Oxford, who graduated as M.A. Feb. 11, 1569, produced in 1574 'Select Psalms in four parts.' [W.H.H.]

KERAULOPHON (from *κεραύλης*, a horn-blower, and *φωνή*, a voice). An 8-feet Organ Manual Stop, of a reedy and pleasant quality of tone. It was invented by Messrs. Gray & Davison, and used by them for the first time in 1843 in the organ they made for St. Paul's Church, Wilton Place. An example was introduced by the French firm of Ducroquet into their organ at St. Eustache, Paris, erected in 1854. [E.J.H.]

KERL, JOHANN CASPAR[1], celebrated organist, born in 1628, as is to be concluded from the Mortuarium of the old Augustine church of Munich. Mattheson's 'Ehrenpforte' contains the only details known of his life. He came early to Vienna, and learnt the organ from Valentini, then organist, afterwards Capellmeister to the Court, on whose recommendation Ferdinand III. sent him to Rome to study under Carissimi. In all probability he also learnt from Frescobaldi, possibly at the same time as his countryman Froberger. Having returned to Germany he entered the service of the Bavarian Elector on Feb. 22, 1656, and in that capacity was present at the coronation of Leopold I. at Frankfurt (July 22, 1658), where he is said to have been presented by Schmelzer vice-Court-Capellmeister to the Emperor, and invited to improvise on a given theme in presence of the court. Some doubt is thrown on this by the fact that Schmelzer did not become vice-Capellmeister till the 1st of Jan. 1671; but he may well have been in attendance on the Emperor at Frankfort, and at any rate Kerl's reputation as an organist dates from the coronation. Kerl remained at Munich for 15 years. For the Italian singers there he composed a 'Missa nigra' entirely written in black notes, and a duet for two castrati 'O bone Jesu,' the only accompaniment of which is a ground bass passing through all the keys. Besides other church works, sonatas for 2 violins and a viol di gamba, and a 'Modulatio organica super Magnificat' (Munich, 1686), Mattheson mentions toccatas, canzonas, ricercars, and batailles of his composition for the organ. In 1673 he threw up his post and went to Vienna, where he subsisted by giving lessons at what was then a high scale of remuneration. When he returned to Munich is not known, but he died there on the 13th of Feb. 1693. His tomb, showing this date, was formerly in the Augustine church, but that is now the custom-house, and the tomb is no longer discoverable. His style is remarkable for the frequent introduction of discords resolved in a new and unexpected manner, in which respect he is deservedly considered a predecessor of Sebastian Bach. He wrote the music of the operas 'Oronte,' 1657; 'Erinto,' 1661; and of the serenata in honour of the birthday of the wife of the Elector (Nov. 6, 1661), 'Il pretensione del Sole.' One of his canzonas has been preserved to the world in a singular but most efficient way—owing to its insertion by Handel in 'Israel in Egypt' to the words 'Egypt was glad when they departed.' The only change made is that of the key, from D minor to E minor. Hawkins gives the canzona in its original form in his History, chap. 124. A toccata in C is given in Pauer's 'Alte Clavier musik' vol. 3. [F.G.]

KETTLE-DRUMS are copper or brass basins, with a skin or head that can be tuned to a true musical note. Used by cavalry and in orchestras. [DRUM, 2, vol. i. p. 463 *b*.] [V. de P.]

KEY. A word of manifold signification. It means the scale or system in which modern music is written; the front ends of the levers by which the piano, organ or harmonium are played; the levers which cover or uncover the holes in such instruments as the flute and oboe; lastly, an instruction book or 'Tutor.' English is the only language in which the one term has all these meanings.

I. The systems of music which preceded the modern system, and were developed by degrees into it, were characterised by scales which not only differed from one another in pitch but also in the order of succession of the various intervals of which they were composed. In modern music the number of notes from which a scale can commence is increased by the more minute subdivision of each octave; but each of these notes is capable of being taken as the starting point of the same scale, that is to say of either the major or minor mode, which are the only two distinct scales recognised in modern music. This forms a strong point of contrast between the ancient and modern styles. The old was a system of scales, which differed intrinsically, and thereby afforded facilities for varying qualities of melodic expression; the modern is essentially a system of keys, or relative transposition of identical scales, by which a totally distinct order of effects from the old style is obtained.

The standard scale called the major mode is a series in which semitones occur between the third and fourth and between the seventh and eighth degrees counting from the lowest note, all the other intervals being tones. It is obvious from

[1] Not von Kerl, as all dictionaries say.

the irregularity of this distribution that it is not possible for more than one key to be constructed of the same set of notes. In order to distinguish practically between one and another, one series is taken as the normal key and all the others are severally indicated by expressing the amount of difference between them and it. The normal key, which happens more by accident than design to begin on C, is constructed of what are called Naturals, and all such notes in the entire system as do not occur in this series are called Accidentals. In order to assimilate a series which starts from some other note to the series starting from C, it is necessary to indicate the notes alien to the scale of C, which will have to be substituted for such notes in that scale as could not occur in the new series—in other words, to indicate the accidentals which will serve that purpose ; and from their number the musician at once recognises the note from which his series must start. This note therefore is called the Key-note, and the artificial series of notes resulting from the arrangement is called the Key. Thus to make a series of notes starting from G relatively the same as those starting from C, the F immediately below G will have to be supplemented by an accidental which will give the necessary semitone between the seventh and eighth degrees of the scale. Similarly, D being relatively the same distance from G that G is from C, the same process will have to be gone through again to assimilate the scale starting from D to that starting from C. So that each time a fifth higher is chosen for a key-note a fresh accidental or sharp has to be added immediately below that note, and the number of sharps can always be told by counting the number of fifths which it is necessary to go through to arrive at that note, beginning from the normal C. Thus C—G, G—D, D—A, A—E is the series of four fifths necessary to be gone through in passing from C to E, and the number of sharps in the key of E is therefore four.

Conversely, if notes be chosen in a descending series of fifths, to present new key-notes it will be necessary to flatten the fourth note of the new key to bring the semitone between the third and fourth degrees ; and by adopting a similar process to that given above, the number of flats necessary to assimilate the series for any new key-note can be told by the number of fifths passed through in a descending series from the normal C.

In the Minor Mode the most important and universal characteristic is the occurrence of the semitone between the second and third instead of between the third and fourth degrees of the scale, thereby making the interval between the key-note and the third a minor third instead of a major one, from which peculiarity the term 'minor' arises. In former days it was customary to distinguish the modes from one another by speaking of the key-note as having a greater or lesser third, as in Boyce's Collection of Cathedral Music, where the Services are described as in 'the key of B♭ with the greater third' or in 'the key of D with the lesser third,' and so forth. The modifications of the upper part of the scale which accompany this are so variable that no rule for the distribution of the intervals can be given. The opposite requirements of harmony and melody in relation to voices and instruments will not admit of any definite form being taken as the absolute standard of the minor mode ; hence the Signatures, or representative groups of accidentals, which are given for the minor modes are really of the nature of a compromise, and are in each case the same as that of the major scale of the note a minor third above the key-note of the minor scale. Such scales are called relatives—relative major and relative minor—because they contain the greatest number of notes in common. Thus A, the minor third below C, is taken as the normal key of the minor mode, and has no signature ; and similarly to the distribution of the major mode into keys, each new key-note which is taken a fifth higher will require a new sharp, and each new key-note a fifth lower will require a new flat. Thus E, the fifth above A, will have the signature of one sharp, corresponding to the key of the major scale of G ; and D, the fifth below A, will have one flat, corresponding to the key of the major scale of F, and so on. The new sharp in the former case falls on the supertonic of the new key so as to bring the semitone between the second and third degrees of the scale, and the new flat in the latter case falls on the submediant of the new key so as to bring a semitone between the fifth and sixth degrees. The fact that these signatures for the minor mode are only approximations is however rendered obvious by their failing to provide for the leading note, which is a necessity in modern music, and requires to be expressly marked wherever it occurs, in contradiction to the signature.

There is a very common opinion that the tone and effect of different keys is characteristic, and Beethoven himself has given some confirmation to it by several utterances to the point. Thus in one [1] place he writes 'H moll schwarze Tonart,' *i.e.* B minor, a black key ; and, in speaking about [2] Klopstock, says that he is 'always Maestoso! D♭ major!' In a letter to Thomson[3] of Edinburgh (Feb. 19, 1813), speaking of two national songs sent him to arrange, he says, 'You have written them in  , but as that key seemed to me unnatural, and so little consistent with the direction *Amoroso* that on the contrary it would change it into *Barbaresco* (qu'au contraire il le changerait en Barbaresco), I have set the song in the suitable key.' This is singular, considering his own compositions in the key of four flats, neither of which can justly be entitled *barbaresco*. Composers certainly seem to have had predilections for particular keys, and to have cast movements in particular styles in special keys. If the system of equal temperament were perfectly carried out, the difference would be less apparent than

[1] In a sketch for Cello Sonata, op. 102, No. 2, quoted by Nottebohm.
[2] In a conversation with Rochlitz (Für Freunde der Tonkunst, iv. 356).
[3] Given by Thayer, iii. 45.

it is; but with unequal temperament, or when the tuner does not distribute the tempering of the fifths with absolute equality in instruments of fixed intonation, there is necessarily a considerable difference between one key and another. With stringed instruments the sonority of the key is considerably affected by the number of open strings which occur in it, and their position as important notes of the scale. Berlioz has given a complete scheme of his views of the qualities of the keys for violins in his Traité d'Instrumentation. With keyed instruments a good deal of the difference results from the position of the hands and technical considerations resulting therefrom. A real difference also is obvious in keys which are a good deal removed from one another in pitch, though inasmuch as pitch is not constant this cannot apply to keys which are near.[1] [C.H.H.P.]

II. KEY (Fr. *Touche*; Ital. *Tasto*; Ger. *Taste*) and KEYBOARD of keyed stringed instruments (Fr. *Clavier*; Ital. *Tastatura*; Ger. *Claviatur, Tastatur*.) A 'key' of a pianoforte or other musical instrument with a keyboard, is a lever, balanced see-saw fashion near its centre, upon a metal pin. It is usually of lime-tree, because that wood is little liable to warp. Besides the metal pin upon the balance rail of the keyframe, modern instruments have another metal pin for each key upon the front rail, to prevent too much lateral motion. A key is long or short according to its employment as a 'natural' or 'sharp,' and will be referred to here accordingly, although in practice a sharp is also a flat, and the written sharp or flat occasionally occurs upon a long key. Each natural is covered as far as it is visible with ivory: and each sharp or raised key bears a block of ebony or other hard black wood. In old instruments the practice in this respect varied, as we shall show presently. In English alone[2] the name 'key' refers to the Latin *Clavis*, and possibly to the idea of unlocking sound transferred to the lever from the early use of the word to express the written note. The Romance and German names are derived from 'touch.'

A frame or, technically, a 'set' of keys is a keyboard, or *clavier* according to the French appellation. In German *Klavier* usually means the keyed stringed instrument itself, of any kind. The influence of the keyboard upon the development of modern music is as conspicuous as it has been important. To this day C major is 'natural' on the keys, as it is in the corresponding notation. Other scales are formed by substituting accidental sharps or flats for naturals both in notation and on the keyed instrument, a fact which is evidence of the common origin and early growth together of the two. But the notation soon outgrew the keyboard. It has been remarked by Professor Huxley that the ingenuity of human inventions has been paralleled by the tenacity with which original forms have been preserved. Although the number of keys within an octave of the keyboard are quite inadequate to render the written notation of the four and twenty major and minor modes, or even of the semitones allied to the one that it was first mainly contrived for, no attempts to augment the number of keys in the octave or to change their familiar disposition have yet succeeded. The permanence of the width of the octave again has been determined by the average span of the hand, and a Ruckers harpsichord of 1614 measures but a small fraction of an inch less in the eight keys, than a Broadwood or Erard concert-grand piano of 1879. We have stated under CLAVICHORD that we are without definite information as to the origin of the keyboard. We do not exactly know where it was introduced or when. What evidence we possess would place the date in the 14th century, and the locality—though much more doubtfully—in or near Venice. The date nearly synchronises with the invention of the clavichord and clavicembalo, and it is possible that it was introduced nearly simultaneously into the organ, although which was first we cannot discover. There is reason to believe that the little portable organ or regal may at first have had a keyboard derived from the T-shaped keys of the HURDY GURDY. The first keyboard would be Diatonic, with fluctuating or simultaneous use of the B♭ and B♮ in the doubtful territory between the A and C of the natural scale. But when the row of sharps was introduced, and whether at once or by degrees, we do not know. They are doubtless due to the frequent necessity for transposition, and we find them complete in trustworthy pictorial representations of the 15th century. There is a painting by Memling in the Hospital of St. John at Bruges, from whence it has never been removed, dated 1479, wherein the keyboard of a regal is depicted exactly as we have it in the arrangement of the upper keys in twos and threes, though the upper keys are of the same light colour as the lower, and are placed farther back.

The oldest keyed instrument we have seen with an undoubtedly original keyboard is a Spinet[3] in the museum of the Conservatoire at Paris, bearing the inscription '*Francisci de Portalupis Veronen. opus*, MDXXIII.' The compass is 4 octaves and a half tone (from E to F) and the natural notes are black with the sharps white. The oldest known in England is a similar instrument of the same compass in South Kensington Museum, the work of Annibale Rosso of Milan, dated 1555. As usual in Italy, the naturals are white and the sharps black. The Flemings, especially the Ruckers, oscillated between black and ivory naturals. (We here correct the statement as to their practice in CLAVICHORD, 367*a*.) The clavichords of Germany and the clavecins of France which we have seen have had black naturals, as, according to Dr. Burney, had those of Spain. Loosemore and the Haywards, in England, in the time of Charles II, used boxwood for naturals; a clavichord of

[1] See a paper by Schumann, 'Charakteristik der Tonarten,' in his 'Gesammelte Schriften,' i. 180.

[2] In French, however, the keys of a flute or other wood wind instrument are called *clefs*.

[3] No. 215 of Chouquet's Catalogue (1875).

$4\frac{1}{2}$ octaves existing near Hanover in 1875 had the same—a clue perhaps to its date. Keen and Slade in the time of Queen Anne, used ebony. Dr. Burney writes that the Hitchcocks also had ivory naturals in their spinets, and two of Thomas Hitchcock's still existing have them. But one of John Hitchcock's, dated 1630, said to have belonged to the Princess Amelia, and now owned by Mr. W. Dale, has ebony naturals. All three have a strip of the colour of the naturals inserted in the ivory sharps, and have 5 octaves compass—from G to G, 61 keys! This wide compass for that time—undoubtedly authentic—may be compared with the widest Ruckers to be mentioned further on.

Under CLAVICHORD we have collected what information is trustworthy of the earliest compass of the keyboards of that instrument. The Italian spinets of the 16th century were nearly always of 4 octaves and a semitone, but divided into F and C instruments with the semitone E or B♭ as the lowest note. But this apparent E or B may from analogy with 'short octave' organs—at that time frequently made—have been tuned C or G, the fourth below the next lowest note.[1] Another question arises whether the F or C thus obtained were not actually of the same absolute pitch (as near as pitch can be practically said to be absolute). We know from Arnold Schlick ('Spiegel der Orgelmacher,' 1511; reprinted in 'Monatshifte für Musik-Geschichte,' Berlin, 1869, p. 103) that F and C organs were made on one measurement or pitch *for the lowest pipe*, and this may have been carried on in spinets, which would account for the old tradition of their being tuned 'in the fifth or the octave,' meaning that difference in the pitch which would arise from such a system.

The Antwerp (Ruckers) harpsichords appear to have varied arbitrarily in the compass of their keyboards. We have observed E—C 45 notes, C—C 49, B—D 52, C—E 53, C—F 54, G—D or A—E 56, G—E or G—F (without the lowest G♯) 58, F—F 61, and in two of Hans Ruckers (the eldest) F—G 63 notes. In some instances however these keyboards have been extended, even, as has been proved, by the makers themselves.

The English seem to have early preferred a wide compass, as with the Hitchcocks, already referred to. Kirkman and Shudi in the next century, however, in their large harpsichords never went higher than F (*q*), although the latter, towards the end of his career, about 1770, increased his scale downwards to the C (*q*). Here Kirkman did not follow him. Zumpe began making square pianos in London, about 1766, with the G—F compass (omitting the lowest G♯)—nearly 5 octaves—but soon adopted the 5 octaves, F—F (*r*), in which John Broadwood, who reconstructed the square piano, followed him. The advances in compass of Messrs. Broadwood and Sons' pianofortes are as follows. In 1793, to $5\frac{1}{2}$ octaves, F to C (*s*). In 1796, 6 octaves, C to C (*t*): this was the compass of Beethoven's Broadwood Grand, 1817. In 1804, 6 octaves F to F (*u*). In 1811, $6\frac{1}{2}$ octaves, C to F (*v*). In 1844 the treble G was attained, and in 1852 the treble A. But before this the A—A 7-octave compass had been introduced by other makers, and soon after became general. Even C appears in recent concert grands, and composers have written up to it; also the deepest G, which was, by the way, in Broadwoods' Exhibition grands of 1851. (See *w*, *x*, *y*, *z*). Many however find a difficulty in distinguishing the highest notes, and at least as many in distinguishing the lowest, so that this extreme compass is beyond accurate perception except to a very few.

The invention of a 'symmetrical' keyboard, by which a uniform fingering for all scales, and a more perfect tuning, may be attained, is due to Mr. Bosanquet, of St. John's College, Oxford, who has had constructed an enharmonic harmonium with one. In 'An Elementary Treatise on Musical Intervals and Temperament' (Macmillan, 1876), he has described this instrument—with passing reference to other new keyboards independently invented by Mr. Poole, and more recently by Mr. Colin Brown. The fingering required for Mr. Bosanquet's keyboard agrees with that usual for the A major scale, and (Ib. p. 20) 'any passage, chord, or combination of any kind, has exactly the same form under the fingers, in whatever key it is played.' Here we have the simplicity of the Double Action harp and undoubtedly a great saving in study. In Mr. Bosanquet's harmonium the number of keys in an octave available for a system proceeding by perfect fifths is 53. But in the seven tiers of his keyboard he has 84, for the purpose of facilitating the playing of a 'round' of keys. It is however pretty well agreed, even by acousticians, that the piano had best remain with thirteen keys in the octave, and with tuning according to 'equal temperament.'

In Germany a recent theory of the keyboard has sought not to disturb either the number of keys or the equal temperament. But an arrangement is proposed, almost identical with the 'sequential keyboard' invented and practically tried in England by Mr. William A. B. Lunn under the name of Arthur Wallbridge in 1843, in which six lower and six upper keys are grouped instead of the historical and customary seven and five in the octave. This gives all the major scales

[1] Yet Praetorius distinctly describes the Halberstadt organ, built 1359, re-constructed 1494, as having the lowest note B♮—the scale proceeding by semitones upwards, and we know the sentiment for the leading note had not then been evolved.

in two fingerings, according as a lower or upper key may be the keynote. The note C becomes a black key, and the thumb is more frequently used on the black keys than has been usually permitted with the old keyboard. The latest school of pianists, however, regard the black and white keys as on a level (see Preface to Dr. Hans von Bülow's Selection from Cramer's Studies, 1868) and this has tended to modify opinions on the point. In 1876–7 the partisans of the new German keyboard formed themselves into a society, with the view of settling the still more difficult and vexed question of the reconstruction of musical notation. Thus, discarding all signs for sharps and flats, the five lines of the stave and one ledger line below, correspond to six black finger-keys for C, D, E, F♯, G♯, A♯, and the four spaces, including the two blanks one above and one below the stave, correspond to six white finger-keys, C♯, D♯, F, G, A, B. Each octave requires a repetition of the stave, and the particular octave is indicated by a number. The keyboard and the stave consequently correspond exactly, black for black and white for white, while the one ledger line shews the break of the octave. And further the pitch for each note, and the exact interval between two notes, for equal temperament, is shewn by the notation as well as on the keyboard. The name of the association is 'Chroma-Verein des gleichstüfigen Tonsystems.' It has published a journal, 'Die Tonkunst' (Berlin, Stilke), edited by Albert Hahn, whose pamphlet, 'Zur neuen Klaviatur' (Königsberg, 1875), with those of Vincent, 'Die Neuklaviatur' (Malchin, 1875) and of Otto Quanz, 'Zur Geschichte der neuen chromatischen Klaviatur' (Berlin, 1877), are important contributions to the literature of the subject. The inventor appears to have been K. B. Schumann, a physician at Rhinow in Brandenburg, who died in 1865, after great personal sacrifices for the promotion of his idea. The pianoforte maker of the society is Preuss of Berlin, who constructs the keyboard with C on a black key; width of octave 14 centimétres,[1] ($5\frac{5}{8}$ inches nearly), and with radiating keys by which a tenth becomes as easy to span as an octave is at present. About sixteen other pianoforte makers are named, and public demonstrations have been given all over Germany. In this system much stress is laid upon C being no longer the privileged key. It will henceforth be no more 'natural' than its neighbours. Whether our old keyboard be destined to yield to such a successor or not, there is very much beautiful piano music of our own time, naturally contrived to fit the form of the hand to it, which it might be very difficult to graft upon another system even if it were more logically simple.

The fact that the fingering of the right hand upwards is frequently that of the left hand downwards has led to the construction of a 'Piano à double claviers renversés,' shown in the Paris Exhibition of 1878 by MM. Mangeot frères of that city. It is in fact two grand pianos, one placed upon the other, with keyboards reversed, as the name indicates, the lower commencing as usual with the lowest bass note at the left hand; the higher having the highest treble note in the same position, so that an ascending scale played upon it proceeds from *right to left*; the notes running the contrary way to what has always been the normal one. By this somewhat cumbersome contrivance an analogous fingering of similar passages in each hand is secured, with other advantages, in playing extensions and avoiding the crossing of the hands, etc. [A.J.H.]

[1] The width of 6 of the present keys.

III. KEYS (Fr. *Clefs*; Ger. *Klappe*; Ital. *Chiave*). The name given to the levers on wind-instruments which serve the purpose of opening and closing certain of the sound-holes. They are divided into Open and Closed keys, according to the function which they perform. In the former case they stand normally above their respective holes, and are closed by the pressure of the finger; whereas in the latter they close the hole until lifted by muscular action. The closed keys are levers of the first, the open keys usually of the third mechanical order. They serve the purpose of bringing distant orifices within the reach of the hand, and of covering apertures which are too large for the last phalanx of the finger. They are inferior to the finger in lacking the delicate sense of touch to which musical expression is in a great measure due. In the Bassoon therefore the sound-holes are bored obliquely in the substance of the wood so as to diminish the divergence of the fingers. Keys are applied to instruments of the Flute family, to Reeds, such as the Oboe and Clarinet, and to instruments with cupped mouthpieces, such as the Key Bugle and the Ophicleide, the name of which is a compound of the Greek words for Snake and Key. [Ophicleide.] In the original Serpent the holes themselves were closed by the pad of the finger, the tube being so curved as to bring them within reach. [Serpent.]

The artistic arrangement of Keys on all classes of wind instruments is a recent development. Flutes, Oboes, Bassoons, and Clarinets, up to the beginning of the present century or even later, were almost devoid of them. The Bassoon however early possessed several in its bass joint for the production of the six lowest notes on its register, which far exceed the reach of the hand. In some earlier specimens, as stated in the article referred to, this mechanism was rudely *preceded* by plugs, requiring to be drawn out before performance and not easily replaced with the necessary rapidity. [See Bassoon.]

The older Flutes, Clarinets, and Oboes only possess three or four keys at most, cut out of sheet metal, and closely resembling mustard-spoons. The intermediate tones, in this deficiency of keys, were produced by what are termed 'cross-fingerings,' which consist essentially in closing one or two lower holes with the fingers, while leaving one intermediate open. A rude approximation to a semitone was thus attained, but the note is usually of a dull and muffled character. Boehm, in the flute named after him, entirely

discarded the use of these 'cross-fingered' notes. [See FLUTE.]

Keys are now fashioned in a far more artistic and convenient form, a distinction in shape being made between those which are open, and those normally closed; so that the player may be assisted in performance by his instinctive sense of touch. [See CONTRAFAGOTTO.] Besides the Bassoon, the Corno di Bassetto affords a good example of this contrivance, the scale being carried down through four semitones by interlocking keys, worked by the thumb of the right hand alone. [W.H.S.]

KEY-BUGLE. An improvement of the original bugle, which had no keys, and therefore could only yield certain restricted notes [see p. 280] by the addition of keys. It is said to have been made by Logier. The KENT BUGLE is either a further improvement, or only another name for the same thing. [G.]

KEY-NOTE. The note by which the key is named, and from which the scale commences: the Tonic. [See KEY; TONIC.]

KIEL, FRIEDRICH, born Oct. 7, 1821, at Puderbach on the Lahn; son of a schoolmaster, who taught him the pianoforte. At 14 he began the violin under Schulz, Concertmeister to Prince Carl von Wittgenstein-Berleberg, and soon entered the band of the reigning Prince, who sent him first to Kummer at Coburg, and in 1843 to Dehn at Berlin. While there he received a salary from King Frederic William IV. His first compositions were for the pianoforte, 'Canons und Fugen' op. 1 and 2; variations and fugue, op. 17; and several pieces for P.F. and cello, of which the 'Reisebilder' are specially interesting. In 62 his Requiem (op. 20), a very remarkable work, was performed by Stern's Choral Society—also by the University Musical Society of Cambridge, May 21, 1878. In 66 he composed a 'Missa Solemnis,' and in 74 an oratorio 'Christus.' He has been a member of the council of the Berlin Academie der Künste since 1869, and is professor of composition in the Hochschule für Musik, in which capacity he is much esteemed. Kiel is one of the most distinguished living masters of counterpoint and fugue, and as such forms one of the race of musicians of whom the late Moritz Hauptmann may be considered the chief. His compositions are of the sound classical school, tempered with a due regard for the best modern tendencies. [F.G.]

KIESEWETTER, RAPHAEL GEORG, EDLER VON WIESENBRUNN (uncle to Ambros the historian of music), Imperial councillor, and learned author on musical subjects, born at Holleschau in Moravia, Aug. 29, 1773; settled in Vienna in 1794. In 1816 he began to form a collection of scores of the old masters, and made his house a rendezvous for the first musicians of Vienna. There also during Advent, Lent, and Holy Week, a first-rate amateur choir performed the principal works of the old Italian composers, and of Bach, Handel, etc. He died Jan. 1, 1850, at Baden (Beethoven's Baden) near Vienna, but was buried in the cemetery at Vienna, 'vor der Währinger Linie.' He was ennobled for his services as an official in the Kriegsrath, taking his title from his estate. Innumerable societies elected him a member in acknowledgement of his services as a musician. He left his musical MSS. and his correspondence with musical men of letters to Alois Fuchs, and to the court library his invaluable collection of scores, with the condition that they should be kept together as the 'Fond Kiesewetter.'

That he was a most prolific writer the following list of his printed works will show.

1. 'Die Verdienste der Niederländer um die Tonkunst' (received the gold prize-medal, Amsterdam 1828). 2. 'Geschichte der europaisch-abendländischen, das ist: unserer heutigen Musik' (Breitkopf & Härtel, 1834, 2nd ed. 1846). 3. 'Ueber die Musik der Neugriechen,' with remarks on ancient Egyptian and ancient Greek music; 3 treatises (ibid. 1828). 4. 'Guido von Arezzo,' life and works (ibid. 1840). 5. 'Schicksale und Beschaffenheit des Weltlichen Gesanges,' from the early Middle Ages down to the discovery of the dramatic style and rise of opera (ibid. 1841). 6. 'Die Musik der Araber,' from original sources (ibid. 1842). 7. 'Ueber das Leben, und die Werke Palestrina's,' a condensation of Baini's work left unpublished by Kandler; edited with preface and remarks (ibid. 1834). 8. 'Der neuen Aristoxenes zerstreute Aufsätze' (ibid. 1846). 9. 'Ueber die Octave des Pythagoras,' supplement to the preceding (Vienna 1848). 10. 'Catalog ueber die Sammlung der Partituren alter Musik,' etc.[1] (Vienna 1847), with preface and appendix 'Gallerie der alten Contrapunctisten,' a selection from their works, chronologically arranged. Also about 50 scattered articles in different periodicals, reviews, etc.

[C.F.P.]

KIND, JOHANN FRIEDRICH, author of the words of Der Freischütz; born at Leipsic March 4, 1768; brought up to the law, but frequented the Thomas School of his own accord. He began to practise literature as early as 1800, and after much success with novels and tales, settled in 1814 at Dresden, became a Hofrath, and definitely renounced the law for a literary life. Here Weber met him, at the house of von Nordstern. About Feb. 15, 1817, Kind read to him his 'Vandyck's Landleben,' which so pleased the composer that he at once consulted him as to an opera-book. The choice of a source fell on Apel's 'Gespensterbuch' (Ghost Stories). Weber had several years before been attached to the story of the Freischütz, and so entirely did his enthusiasm communicate itself to Kind, that by the evening of Feb. 23, he had completed the first act of the opera. Freischütz was the only important joint composition of the two, but Jähns's catalogue contains 11 other pieces the words of which were supplied by Kind. The chief of these is the 'Jubel Cantata,' another cantata called 'Natur und Liebe,' 5 songs, 2 part-songs, and a chorus. Some of these were taken from operas of Kind's—'Der Weinberg an der Elbe,' 'Der Abend am Waldbrunnen,' and 'Das Nachtlager in Granada.' The last of these was set to music by Conradin Kreutzer. Kind seems to have supplied Spanish materials for Preciosa, and Weber had two librettos by him—Alcindor, 1819, and Der Cid, 1821—under consideration, but Freischütz is the one which Weber adopted in full. Kind's 'Holzdieb' (Wood-thief) was composed by Marschner in 1824. He died at Dresden June 25, 1843, having for many years quite forsaken literature. He is described by Weber's son as

[1] The scores left to the court library.

a small person, with a great opinion of himself and a harsh voice. 2 vols of his works were published, Leipzig, 1821. [G.]

KING, CHARLES, Mus. Bac., born at Bury St. Edmunds in 1687, became a chorister of St. Paul's under Dr. Blow and Jeremiah Clark. He was next a supernumerary singer in the choir at the small annual stipend of £14. On July 12, 1707, he graduated as Mus. Bac. at Oxford. On the death of Clark, whose sister he had married, he was appointed almoner and master of the choristers of St. Paul's. In 1708 he became also organist of St. Benet Fink, Royal Exchange. On Oct. 31, 1730, he was admitted a vicar choral of St. Paul's. King composed several services and anthems, some of which are printed in Arnold's 'Cathedral Music,' and others in Page's 'Harmonia Sacra'; and there are some in the Tudway Collection (Harl. MSS. 7341 and 7342). Although his compositions evince no originality they are vocal and not without spirit, they long continued in frequent use in choirs, and some of them, particularly his services in F and C, are still performed. They have justified the joke of Dr. Greene, that King was a *serviceable* man. Six of them in all are published by Novello, besides five anthems. Hawkins intimates that his inferiority was the result rather of indolence than want of ability. He died March 17, 1748. [W.H.H.]

KING, MATTHEW PETER, born in 1773, studied composition under Charles Frederick Horn. His first productions were 'Three Sonatas for the Pianoforte,' 'Eight Songs and a Cantata,' and other Pianoforte Sonatas. In 1796 he published 'Thorough Bass made easy to every capacity,' and in 1800 'A General Treatise on Music,' etc., a work of repute, with 2nd edition 1809. Between 1804 and 1819 he composed several dramatic pieces, chiefly for the English Opera House, Lyceum. In 1817 his oratorio, 'The Intercession,' was produced at Covent Garden. One of the songs in it 'Must I leave thee, Paradise?' (known as 'Eve's Lamentation') became very popular, and long found a frequent place in programmes of sacred music. King was also the composer of several glees and of numerous pianoforte pieces. His dramatic pieces were 'Matrimony,' 1804; 'The Invisible Girl,' 1806; 'False Alarms' (with Braham); 'One o'clock, or The Wood Demon' (with Kelly); and 'Ella Rosenberg,' 1807; 'Up all night,' 1809; 'Plots' and 'Oh this Love,' 1810; 'The Americans' (with Braham), and 'Timour the Tartar,' 1811; and 'The Fisherman's Hut' (with Davy), 1819. He died in Jan. 1823.

His son, C. M. KING, published in 1826 some songs which were favourably received. [W.H.H.]

KING, ROBERT, Mus. Bac., was one of the band of music to William and Mary and Queen Anne. He graduated at Cambridge in 1696. He was the composer of many songs published in 'Choice Ayres, Songs and Dialogues,' 1684; 'Comes Amoris,' 1687-93; 'The Banquet of Musick,' 1688-92; 'The Gentleman's Journal,' 1692-94; and 'Thesaurus Musicus,' 1695-96. He composed the songs in Crowne's comedy, 'Sir Courtly Nice,' which were printed in 'The Theater of Music,' Book ii, 1685. In 1690 he set Shadwell's Ode on St. Cecilia's day, 'O Sacred Harmony.' In 1693 he set an Ode 'on the Rt. Hon. John Cecil, Earl of Exeter, his birthday, being the 21 of Sept.' commencing 'Once more 'tis born, the happy day,' the words by Peter Motteux. A collection of 24 songs by him entitled 'Songs for One, Two, and Three voices, composed to a Thorough Basse for y^e^ Organ or Harpsicord,' engraven on copper, was published by the elder Walsh. The date of his death has not been ascertained. He was living in 1711. [W.H.H.]

KING, WILLIAM, born 1624, son of George King, organist of Winchester Cathedral, was admitted a clerk of Magdalen College, Oxford, Oct. 18, 1648. He graduated as B.A. June 5, 1649, and in 1650 was promoted to a chaplaincy at Magdalen College, which he held until Aug. 25, 1654, when he became a probationer-fellow of All Souls' College. On Dec. 10, 1664, he was appointed successor to Pickover as organist of New College. He composed a service in B♭ and some anthems, and in 1668 published at Oxford 'Poems of Mr. Cowley [The Mistress] and others, composed into Songs and Ayres, with a Thorough Basse to the Theorbo, Harpsicon, or Basse Violl.' He died Nov. 17, 1680. [W.H.H.]

KING CHARLES THE SECOND, a comic opera in 2 acts; words adapted by Desmond Ryan from a comedy of Howard Payne's; music by G. A. Macfarren. Produced at the Princess's Theatre, Oct. 27, 1849. Payne's comedy had before been turned into a ballet-pantomime, 'Betty,' music by Ambroise Thomas, and produced at the Grand Opéra, Paris, July 10, 1846. [G.]

KING'S BAND OF MUSIC, THE. The custom of the kings of England to retain as part of their household a band of musicians, more or less numerous, is very ancient. We learn that Edward IV. had 13 minstrels, 'whereof some be trompets, some with shalmes and smalle pypes.' Henry VIII.'s band in 1526 consisted of 15 trumpets, 3 lutes, 3 rebecks, 3 taborets, a harp, 2 viols, 10 sackbuts, a fife, and 4 drumslades. In 1530 his band was composed of 16 trumpets, 4 lutes, 3 rebecks, 3 taborets, a harp, 2 viols, 9 sackbuts, 2 drumslades, 3 minstrels, and a player on the virginals. Edward VI. in 1548 retained 8 minstrels, a player on the virginals, 2 lutes, a harper, a bagpiper, a drumslade, a rebeck, 7 viols, 4 sackbuts, a Welsh minstrel, and a flute player. Elizabeth's band in 1581 included trumpets, violins, flutes, and sackbuts, besides musicians whose instruments are not specified; and 6 years later it consisted of 16 trumpets, lutes, harps, a bagpipe, 9 minstrels, 2 rebecks, 6 sackbuts, 8 viols, and 3 players on the virginals. Charles I. in 1625 had in his pay 8 performers on the hautboys and sackbuts, 6 flutes, 6 recorders, 11

violins, 6 lutes, 4 viols, 1 harp, and 15 'musicians for the lute and voice,' exclusive of trumpeters, drummers, and fifers, Nicholas Laniere being master of the band; and in 1641 his band included 14 violins, 19 wind instruments, and 25 'musicians for the waytes,' besides a serjeant trumpeter and 18 trumpeters. Charles II. in 1660 established, in imitation of Louis XIV. a band of 24 performers on violins, tenors and basses, popularly known as the 'four and twenty fiddlers.' This band not only played while the king was at meals, but was even introduced into the royal chapel, anthems being composed with symphonies and ritornels between the vocal movements expressly for them. After the death of Charles the band was kept up, but somewhat changed in its composition; it no longer consisted exclusively of stringed instruments, but some of its members performed on wind instruments. It is now constituted so as to meet the requirements of modern music, and consists of thirty members. Formerly, besides its ordinary duties it was employed, together with the gentlemen and children of the Chapel Royal, in the performance of the odes annually composed for the king's birth-day and New Year's day; but since the discontinuance of the production of such odes, its duties have been reduced to attendance on royal weddings and baptisms, and other state occasions. The following is the succession of the 'Masters of the Musick':—Davis Mell and George Hudson, 1660; Thomas Baltzar, 1661 (?); John Banister, 1663; Thomas Purcell, 1672; Dr. Nicholas Staggins, 1682; John Eccles, 1705; Dr. Maurice Greene, 1735 (?); Dr. William Boyce, 1755; John Stanley, 1779; Sir William Parsons, 1786; William Shield, 1817; Christian Kramer, 1829; François Cramer, 1834; George Frederick Anderson, 1848; William George Cusins, 1870. Robert Cambert and Louis Grabut are sometimes said to have held the office of Master of the Musick, but this is doubtful. [W.H.H.]

KING'S THEATRE, THE. In the early part of the 18th century, Sir John Vanbrugh, the architect and dramatist, proposed to the performers at Lincoln's Inn Fields Theatre to build them a new and splendid theatre in the Haymarket, and, his offer being accepted, he raised a subscription of £30,000 in sums of £100 each, in return for which every subscriber was to have a free admission for life. The undertaking was greatly promoted by the Kit-Cat Club, and the first stone of the building, which was wholly from the designs of Vanbrugh, was laid in 1704 with great solemnity by the beautiful Countess of Sunderland (daughter of the great Duke of Marlborough), known as 'The little Whig.' Congreve, the dramatist, was associated with Vanbrugh in the management, and the theatre was opened on April 9, 1705, under the name of 'The Queen's Theatre,' which name was changed on the accession of George I. in 1714 to 'King's Theatre,' by which it continued to be called until the death of William IV. in 1837, since which it has been styled 'Her Majesty's Theatre,' the reason for not resuming the name 'Queen's Theatre' being that the theatre in Tottenham Street at the time bore that appellation. Vanbrugh's erection, although internally a splendid and imposing structure, was totally unfitted for its purpose, owing to the reverberations being so great as to make the spoken dialogue almost unintelligible, and to necessitate extensive alterations in order to prevent them. In the course of a few years the house became the established home of Italian opera. In it the greater part of Handel's operas and nearly all his early oratorios were first performed. On the evening of June 17, 1789, the building was burned to the ground. It was rebuilt in 1790 from designs by Michael Novosielski, the lyre-shaped plan being then first adopted in England. When completed it was refused a licence for dramatic representations, but a magistrates' licence being obtained it was opened with a concert and ballet on March 26, 1791. [See p. 710 *a*.] A regular licence was however soon afterwards granted. The interior of the theatre was the largest in England; there were five tiers of boxes, exclusive of slips, and it was capable of containing nearly 3300 persons. It was admirably adapted for conveying sound. On the east side was a large and handsome concert-room, 95 feet long, 46 feet broad, and 35 feet high, on a level with the principal tier of boxes. About 1817 an important alteration was made in the exterior of the theatre by the erection of the colonnades on the north, south, and east sides, and the formation of the western arcade. The northern colonnade has since been removed. (There is a good description of the pit, including the famous 'Fops' alley' in Lumley's 'Reminiscences,' chap. vii.) The theatre was again destroyed by fire on Friday night, Dec. 6, 1867. It was rebuilt by April 1869, but not opened until 1875, and then not for operatic performances, but for the exhibition of the preaching and singing of Messrs. Moody and Sankey, who occupied it for about three months, after which it remained closed until April 28, 1877, when it was re-opened as an opera house. No theatre, perhaps, has been under the management of so many different persons—Swiney, Collier, Aaron Hill, Heidegger, Handel, the Earl of Middlesex, Signora Venisci, Crawford, Yates, Gordon, Hon. J. Hobart, Brookes, O'Reilly, Le Texier, Sir John Gallini, Tranchard, Taylor, Goold, Waters, Ebers, Benelli, Laporte, Monck Mason, Lumley, E. T. Smith, and Mapleson, have by turns directed its affairs. To attempt only to name the compositions produced there, and the eminent artists who have been their exponents, would extend this notice to an unreasonable length; it would be, in fact, almost to write a history of the Italian opera in England. [W.H.H.]

KINSKY, Prince Ferdinand Johann Nepomuk Joseph, of Wchinitz and Tettau in Bohemia, was born in the palace belonging to the family at Vienna, December 4, 1781, and was a boy of eleven when Beethoven came thither. His father, Prince Joseph, was one

of the great nobles who at that date gave musical entertainments in their palaces with full orchestra, at which the greatest singers and instrumental performers, as well as rising composers, displayed their powers. Young Kinsky had therefore the best possible opportunity to cultivate his musical taste, and a few years later formed one in the circle of young nobles who admired and appreciated Beethoven's music. By the death of his father, August 11, 1798, he succeeded to the estates, and, June 8, 1801, married Caroline Maria, Baroness von Kerpen.

His claim to a place in this Dictionary is that he was the principal subscriber to Beethoven's annuity (see *ante*, p. 189 *b*). This matter was hardly settled when he was called to his estates to prepare for the second invasion of Bonaparte. He raised a battalion of soldiers, officered it from his own officials and dependents, and led it—under the title of the 'Archduke Charles Legion'—in the battles of Ratisbon, Aspern, and Wagram. One of the first checks which Bonaparte ever received was at Aspern. Kinsky and his legion held a very critical position there, and, by their steadiness and disregard of danger, contributed materially to the success of the day. Archduke Charles happened to be witness of Kinsky's conduct on that occasion, and gave him on the battle-field the Maria Theresa Cross. In the spring of 1811 Kinsky accompanied the Emperor Francis to Dresden, on a visit to his daughter Marie Louise and her husband Napoleon. The Saxon General von Vieth related, that on the presentation of Francis's suite Napoleon stepped up to Kinsky, took hold of the cross on the breast of his coat, and asked insultingly: 'Est-ce au Prince Kinsky ça?' 'Non, Sire, c'est à la bataille d'Aspern,' was the reply. Napoleon moved on without a word. On November 2, 1812, Prince Ferdinand, while riding at Wetrus near Prague, by the bursting of his saddle girths was thrown to the ground, and died on the 3rd,[1] not having quite completed his 31st year.

The paragraph in p. 189 *a* of this work, on the effect of the Austrian finance-patent of 1811 upon Beethoven's annuity, and his suit against the Kinsky estate, accords perfectly with all the authorities known at the time it was written. But these authorities, from Schindler down, are in error. It is true that from and after March 1811, the bank notes (Bancozettel) then in circulation were reduced in value to the rate of five for one in silver; and notes of redemption (Einlösungsscheine), equal to silver, were issued in their place at that rate; but the payment of contracts previously made, Beethoven's annuity included, was regulated by the depreciation at the date of the contract. The date of the document conferring the annuity is March 1, 1809, when the depreciation (decimally) was 2·48 for one, and it follows that his income under the finance patent was reduced—not to one fifth, or 800 florins, as Schindler and his copyists unanimously state, but to 1612·90 florins. That is to say

Kinsky,	instead of	1800,	paid	725·80	fl.
Rudolph,	,,	,, 1500,	,,	604·84	
Lobkowitz,	,,	,, 700,	,,	282·26	
				1612·90	

The subscribers however continued to pay the annuity in full, regardless of the patent, and Rudolph gave the necessary instruction to his agents in writing. Kinsky unfortunately neglected to do this, and thus, upon his untimely death, unwittingly deprived Beethoven of all *legal* claim to more than the above-named 725·80 florins; for the trustees of the estates had no power to add to that sum, being responsible to the Landrecht or high tribunal at Prague for their action. Beethoven, trusting to the equity of his claim, seems to have been so foolish as to instruct his advocate in Prague, Dr. Wolf, to enter a suit—which could have had no favourable issue. It was fortunate for him that the legal agent of the Kinsky estates (Verlassenschaftscurator), Dr. Johann Kanka, was a musician of considerable attainments, a great admirer of his music and on intimate terms with him during his first years in Vienna. On a visit to the capital, Kanka discussed the matter with him; the suit was abandoned, and a compromise at last effected—confirmed by the Landrecht, January 18, 1815—by which 1200 florins a year were secured to him, and arrears to the amount of 2479 florins, paid in cash, on March 26th, to his representative, Baron Joseph von Pasqualati.

Beethoven's letters to Kanka (Life of Beethoven, iii. App. viii) and his dedication of op. 94, 'An die Hoffnung,' to the widowed Princess Kinsky, prove how well satisfied he was with the result. [A. W. T.]

KIRBYE, GEORGE, was one of the ten composers who harmonised the tunes for 'The Whole Booke of Psalmes,' published by Thomas Este in 1592. In 1597 he put forth 'The First Set of Madrigals to 4, 5, and 6 Voyces,' dedicated to the two daughters of Sir Robert Jermin, Knt., whom the composer terms his 'very good maister,' and containing 24 madrigals. Several other madrigals by Kirbye are extant in a nearly contemporary MS. collection, formed by a William Firmage, and now in the library of the Sacred Harmonic Society, but unfortunately wanting the quintus and sextus parts. He contributed to 'The Triumphes of Oriana,' 1601, the six-part madrigal 'Bright Phœbus greetes most cleerely.' [W. H. H.]

KIRCHEN CANTATEN. The Kirchen Cantaten of the German Lutheran Church corresponded to a great extent with the Anglican anthems, but they were for the most part on a larger scale and had a band accompaniment as well as the organ, which is rarely the case with anthems. They were used on the great festivals of the Church and on festal occasions, such as weddings of great people. They flourished especially in the time immediately before and with Sebastian Bach, and it is with his name that they are chiefly associated, both for the prodigious number and

[1] Not the 13th, as given in vol. i. p. 189 *b*.

the great beauty of many of the examples of this form of composition which he produced.

Among his predecessors, his uncles Michael and Johann Christoph, and the great organist Buxtehude, were composers of Cantatas of this kind, and Bach certainly adopted the form of his own from them at first, both as regards the distribution of the numbers and the words. With them as with him the words were sometimes complete religious songs, but they were also frequently taken from promiscuous sources, passages from the Bible and verses from hymns and religious songs being strung together, with an underlying fixed idea to keep them bound into a complete whole. In some cases they are mystical, in others they are of a prayerful character, and of course many are hymns of praise. In many there is a clear dramatic element, and in this form the dialogue between Christ and the soul is not uncommon, as in the well-known 'Ich hatte viel Bekümmerniss,' and in 'Gottes Zeit' and 'Selig ist der Mann,' of J. S. Bach. The treatment of the subject is often very beautiful apart from the diction, and expresses a tender touching kind of poetry of religion which is of the purest and most affecting character, and found in Bach's hands the most perfect possible expression in music.

The dramatic element points to the relationship of the Kirchencantaten to the Italian Cantate di Camera, which formed an important section of the operatic department of music which had begun to be cultivated in Italy from the beginning of the 17th century. In composing the earlier Cantatas, Buxtehude and Bach's uncles do not seem to have had this connection very clearly in view, neither does it appear obviously in the earlier examples of John Sebastian. But from the year 1712 Bach began writing music to Cantatas by a theologian and poet named Neumeister, a man of some importance in relation to church music; who wrote poems which he called Cantatas for all the great Festivals and Sundays of the year, following avowedly the dramatic manner of the Italians. Of Bach's contemporaries, Telemann preceded him slightly in setting these Cantatas, as a collection with his music was published in Gotha in 1711. This part of the history of Cantatas, which divides them into two periods in matter of form, is too elaborate to be treated here, but a very full account will be found in Spitta's Life of Bach, Part i, chap. iv, and Part iii, chap. iv.

As regards the music, the form was extremely variable. In a great number of cases the work opened with a chorus, which in Bach's hands assumed gigantic proportions. This was followed by a series of recitatives, airs, ariosos, duets or other kinds of solo music, and in the greatest number of instances ended with a simple chorale. In some cases the work opens with an aria or duet, and at others there are several choruses interspersed in the work, and occasionally they form the bulk of the whole. In one somewhat singular instance (viz. 'Ich will den Kreuzstab gerne tragen') the Cantata consists of two long arias, and two recitatives, and an adagio, all for a bass voice, and ends with a chorale. It is evident that the works were constructed with reference to the particular resources at the disposal of the composer for performance; and in this respect the band varied as much as the musical form of the work. Sometimes the organ was accompanied by strings alone, at others by a considerable orchestra of strings, wood and brass. With developed resources the Cantata occasionally began both in the older and the later forms with an instrumental introduction which was called irrespectively a symphony or a sonata or sonatina, and evidently had some relationship to the instrumental Sonate di Chiesa which were common in Italy in the Roman Catholic Churches. This practice appears to have been more universal before Bach's time than appears from his works, as instrumental introductions to Cantatas with him are the exception. In such an astonishing number of examples as Bach produced it is inevitable that there should be some disparity in value. A considerable number are of the highest possible beauty and grandeur, and a few may not be in his happiest vein. But assuredly the wealth stored up in them which has yet to become known to the musical public is incalculable. Their uncompromising loftiness, and generally austere purity of style has hindered their universal popularity hitherto; but as people learn to feel, as they ultimately must, how deeply expressive and healthily true that style is, the greater will be the earnest delight they will find in music, and the greater will be the fame of these imperishable monuments of Bach's genius. [C.H.H.P.]

We take the opportunity to add the contents of the two volumes of Kirchencantaten published by the Bachgesellschaft since the issue of p. 120 of this work.

1873. Twenty-third year. (Issued Aug. 1876.)	1874. Twenty-fourth year. (Issued Dec. 1876.)
101. Nimm von uns Herr.	111. Was mein Gott will.
102. Herr, deine Augen sehen.	112. Der Herr ist mein getreuer Hirt.
103. Ihr werdet weinen und heulen.	113. Herr Jesu Christ, du höchster Gut.
104. Du Hirte Israel.	114. Ach, lieben Christen.
105. Herr, gehe nicht ins Gericht.	115. Mache dich mein Geist bereit.
106. Gottes Zeit ist die allerbeste Zeit.	116. Du Friedefürst Herr Jesu Christ.
107. Was willst du dich betrüben.	117. Sei Lob und Ehr.
108. Es ist euch gut.	118. O Jesu Christ mein's Leben's Licht.
109. Ich glaube lieber Herr.	119. Preise Jerusalem, dem Herrn.
110. Unser Mund sei voll Lachens.	120. Gott, man lobet dich.

KIRCHER, Athanasius, learned Jesuit, born May 2, 1602 (Mendel, with less probability, gives 1601), at Geisa near Fulda; early became a Jesuit, and taught mathematics and natural philosophy in the Jesuit College at Würzburg. About 1635 he was driven from Germany by the Thirty Years' War, and went first to the house of his Order at Avignon, and thence to Rome, where he remained till his death Nov. 28, 1680. He acquired a mass of information in all departments of knowledge, and wrote books on every conceivable subject. His great work 'Musurgia universalis sive ars magna consoni et dissoni,' 2 vols. (Rome, 1650), translated into German by Andreas Hirsch (Hall in Swabia, 1662) contains among much rubbish valuable

matter on the nature of sound and the theory of composition, with interesting examples from the instrumental music of Frescobaldi, Froberger, and other composers of the 17th century. The second vol., on the music of the Greeks, is far from trustworthy; indeed Meibomius ('Musici antiqui') accuses Kircher of having written it without consulting a single ancient Greek authority. His 'Phonurgia' (Kempten 1673), translated into German by Agathon Cario (apparently a *nom de plume*) with the title 'Neue Hall- und Thon-kunst' (Nördlingen 1684), is an amplification of part of the 'Musurgia,' and deals chiefly with acoustical instruments. In his 'Ars magnetica' (Rome 1641) he gives all the songs and airs then in use to cure the bite of the tarantula. His 'Œdipus ægyptiacus' (Rome 1652–54) treats of the music contained in Egyptian hieroglyphics. [F.G.]

KIRCHGESSNER, Marianna, performer on the glass harmonica, born 1770 at Waghäusel near Rastatt, Baden. An illness in her fourth year left her blind for life, but this misfortune was compensated by a delicate organisation for music. She learned the harmonica from Schmittbauer of Carlsruhe, and made numerous successful concert-tours. Mozart heard her in Vienna (1791), and composed a quintet for her (Köchel 617). In London Fröschel made her a new instrument, which in future she always used. Here also she recovered a glimmering of sight under medical treatment. Much as they admired her playing, musicians regretted that she failed to bring out the true qualities of the harmonica through a wrong method of execution. After living in retirement at Gohlis near Leipzig, she undertook another concert-tour, but fell ill and died at Schaffhausen, Dec. 9, 1808. [C.F.P.]

KIRCHNER, Theodor, one of the most gifted of the living disciples of Schumann, a composer of 'genre pieces' for the pianoforte, was born 1824 at Neukirchen near Chemnitz in Saxony, and got his musical training at the Conservatorium of Leipsic. Having completed his schooling he took the post of organist at Winterthur in Switzerland, which town in 1862 he left for Zürich, where he acted as conductor and teacher. In 1875 he became director of the 'Musikschule' at Würzburg, but after a few months' experience he threw up that appointment and settled at Leipsic.

Kirchner's works extend to op. 42. Except a string quartet, op. 20, a 'Gedenkblatt,' a 'Serenade' for piano, violin and violoncello, and a number of Lieder, they are all written for pianoforte solo or à 4 mains, are mostly of small dimensions, and put forth under suggestive titles such as Schumann was wont to give to his lesser pieces. The stamp of Schumann's original mind has marked Kirchner's work from the first; yet though sheltered under Schumann's cloak, many minor points of style and diction are Kirchner's own, and decidedly clever. At best, his pieces are delicate and tender, frequently vigorous, now and then humorous and fantastic; at worst, they droop under a taint of lachrymose sentimentality. They are always carefully finished and well shapen, never redundant, rarely commonplace. Among his early publications, 'Albumblätter,' op. 9, became popular as played by Madame Schumann; and among his later, 'Still und bewegt,' op. 24, and particularly 'Nachtstücke,' op. 25, deserve attention. [E.D.]

KIRKMAN. The name borne by a family of eminent harpsichord, and subsequently pianoforte makers. Jacob Kirchmann (afterwards Kirkman) a German, came to England early in the last century, and worked for Tabel, a Flemish harpsichord maker, who had brought to London the traditions of the Ruckers of Antwerp. [See Ruckers.] Another apprentice of Tabel's was Shudi, properly Tschudi, who became Kirkman's rival, and founded the house of Broadwood. Tabel would have been quite forgotten, but for these distinguished pupils, and for the droll anecdote narrated by Dr. Burney, of Kirkman's rapid courtship of Tabel's widow and securing with her the business and stock in trade. He proposed at breakfast-time, and married her (the marriage act being not then passed) before twelve o'clock, the same day, just one month after Tabel's demise. Jacob Kirkman carried on business at the sign of the King's Arms in Broad Street, Carnaby Market, now No. 19 Broad Street, Soho; still owned by the present Kirkman firm. Dr. Burney places the arrival of Jacob Kirkman in England in 1740, but that is manifestly too late, Shudi being then already established in business in Great Pulteney Street. There is no reason, however, to doubt the same generally excellent authority that his death took place about 1778, and that he left nearly £200,000.

Burney, in Rees's Cyclopædia, gives Jacob Kirkman's harpsichords high praise, regarding them as more full in tone and durable than those of Shudi. These instruments retained certain features of the Antwerp model, as late as 1768, preserving André Ruckers's keyboard of G–F (nearly 5 octaves) with lowest G♯ wanting. This, as well as the retention of the rosette in the soundboard may be seen in Mr. Salaman's Kirkman harpsichord of that year, in which we find King David playing upon the harp, between the letters I and K. Dr. Burney met with no harpsichords on the continent that could at all compare with those made in England by Jacob Kirkman, and his almost life-long competitor, Shudi.

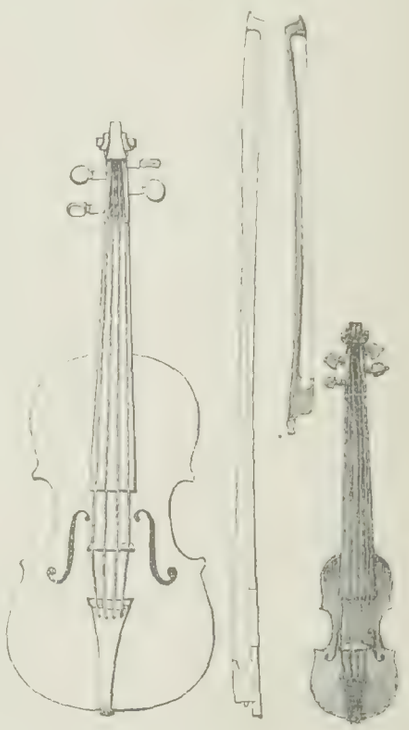
Jacob Kirkman having no children by his marriage, was succeeded by his nephew Abraham, whose son Joseph, the first Joseph Kirkman, followed him, and introduced the manufacture of the pianoforte into his workshop. His son, the second Joseph, died at the advanced age of 87 in 1877, his second son Henry, to whom the business owes its present extension, having died some years before. The ware-rooms have long been in Soho Square. The business is carried on (1879) in trust for the present Mr. Joseph Kirkman, the third in order of succession so named. A recent invention of this house is noticed under the head of Melopiano. [A.J.H.]

KIRNBERGER, JOHANN PHILIPP, composer and writer on the theory of music, born April 24, 1721, at Saalfeld in Thuringia; learnt the rudiments of music at home, the organ from Kellner of Gräfenrode, and the violin from Meil of Sondershausen. Gerber, court-organist there, taught him to play Bach's fugues, and recommended him to Bach, who received him as his pupil. Several years were passed at Leipsic, in Poland, and at Lemberg. On his return to Germany he resumed the study of the violin under Zickler of Dresden, and in 1751 entered the capelle of Frederic the Great at Berlin as violinist. In 1758 he became Capellmeister to Princess Amalie, and remained with her till his death after a long and painful illness July 27, 1783. During these 25 years he formed such pupils as Schulz, Fasch, and Zelter, and devoted his leisure to researches on the theory of music. Of his many books on the subject 'Die Kunst des reinen Satzes,' 2 vols. (Berlin 1774–76) alone is of permanent value. He also wrote all the articles on music in Sulzer's 'Theorie der schönen Künste' in which he warmly criticises Marpurg's 'Kritische Briefe.' He prided himself on the discovery that all music could be reduced to two fundamental chords, the triad and the chord of the seventh—which is obviously wrong; and invented a new interval bearing the relation of 4 : 7 to the key-note and which he called 1 :—but neither of these have stood the test of time. Indeed in his own day the theory of the even temperament steadily gained ground. As a composer he had more fluency than genius; his most interesting works are his fugues, remarkable for their correctness. In 1773–74 he edited a large collection of vocal compositions by Graun, who was a kind friend to him, and 'Psalmen und Gesänge' by Leo (Leonhard) Hassler. The autograph scores of several motets and cantatas, and a quantity of fugues, clavier-sonatas, and similar works, are preserved in the Imperial library at Berlin. Kirnberger was of a quarrelsome temper, and fond of laying down the law, which made him no favourite with his fellow musicians. [F.G.]

KISTNER. One of the great music publishing firms of Leipzig. The business was founded in 1823 by PROBST, who was succeeded in 1831 by Karl Friedrich Kistner, a man of some gifts for music and great business powers. The new name was not assumed till 1836. Kistner greatly improved the business and secured important works of Mendelssohn, Schumann, Chopin, Moscheles, Sterndale Bennett, etc. He died greatly esteemed, in 1844, and was succeeded by his son Julius, who followed in his father's steps with equal success. He added the names of Hiller, Taubert, and Rubinstein to the catalogue of the house, and will long be remembered by those who had to do with him for his kindness and liberality. He withdrew from the business in 1866 in favour of Karl Friedrich Ludwig Gurckhaus—by whom the establishment is still carried on in its old style—and died May 13, 1868.

Among the principal publications of the firm are found—Mendelssohn, Psalms 95 and 98; the Walpurgisnight; Antigone; Overture Ruy Blas; 2 Sonatas P. F. and Cello, and 8 other numbers. Schumann, Overture, Scherzo, and Finale; Rose Pilgerfahrt; Myrthen; Sonata for P. F. in F♯; Bilder aus Osten; Spanisches Liederspiel and 11 more, including op. 1 and 2. Chopin, P. F. Concerto E minor; Trio G minor; 12 Grandes Etudes and others. Gade's Erlkings daughter. Kretschmer's Operas 'Die Folkunger' and 'Henry the Lion.' Goetz's Symphony, 'Francesca di Rimini,' 'Taming of the Shrew,' and 137th Psalm. [G.]

KIT, a tiny violin, which, before the general introduction of pianofortes, was carried by dancing masters in their pockets. Hence the French and German names for it were 'pochette' and 'Taschengeige,' though pochette is also applied to an instrument of long and narrow form resembling a sourdine. It was usually about 16 inches long over all: the woodcut shows its size relatively to that of the violin. Sometimes, however, as in Nos. 61*h* and 66 of the Special Exhibition of Ancient Musical Instruments, S. K. Mus. 1872, the neck was longer and broader, for convenience of fingering, which gave the Kit a disproportioned look. The instrument is now practically obsolete.



The origin of the name has not yet been discovered.[1] In Florio (1598 and 1611), Beaumont and Fletcher, Ben Jonson, and Drayton, it seems evident that it is used without reference to size, as a synonym for Crowd, Rebeck, or Pandora. Cotgrave (1611) defines it as 'a small Gitterne.' Grew, in 1681, speaks of 'a dancing master's Kit,' and as dancing-master's Kits would naturally be smaller than other Kits, the name gradually adhered to them, as that of viol or violin did to the larger sizes. [G.]

KITCHENER, WILLIAM, M.D., the son of a coal merchant, from whom he inherited an ample fortune, was an accomplished amateur musician. He composed an operetta entitled 'Love among the Roses, or, The Master Key,' and was author of 'Observations on Vocal Music,' 1821, and editor of 'The Loyal and National Songs of England,' 1823; 'The Sea Songs of England,' 1823;

[1] If *Pochette* were an Italian word the origin of *Kit* would not be far to seek.

and 'A Collection of the Vocal Music in Shakspere's Plays.' He was also author of some eccentrically written but useful books, including 'The Cook's Oracle,' 'The Traveller's Oracle,' 'The Art of Invigorating and Prolonging Life,' 'The Housekeeper's Ledger,' and 'The Economy of the Eyes.' Though an epicure, he was regular and even abstemious in his habits; but while practising the precepts he gave to others, he was unable to prolong his own life beyond the age of 50, and died suddenly Feb. 26, 1827. [W.H.H.]

KITTEL, JOHANN CHRISTIAN, born at Erfurt, Feb. 18, 1732, one of the last pupils of J. S. Bach, who himself died July 28, 1750. His first post was that of organist at Langelsalza, which he left in 1756 for that of the Predigerkirche at his native place. His pay was wretched, and had to be eked out by incessant and laborious giving of lessons. Even when nearly 70 he was forced to make a tour to Göttingen, Hanover, Hamburg, and Altona. In the latter place he staid for some time, to the delight of the musicians there, and published a book of tunes for the Schleswig-Holstein Church (Neues Choralbuch, Altona 1803). Thence he crept home to Erfurt, where he died, May 9, 1809, in great poverty, but saved from actual starvation by a small pension allowed him by Prince Primas of Dalberg. The fame of his playing was very great, but is hardly maintained by his works, which are not very important. The best are grand preludes for the organ in 2 books (Peters); six sonatas and a fantasia for the clavecin (Breitkopfs); and an organ school (Der angehende praktische Organist, in 3 books, 1801–8 (Erfurt, Beyer; 3rd edition 1831). His papers were inherited by his great pupil, C. H. Rinck, one of many famous organists who perfected themselves under him. Fétis tells us—and we may accept the story as true, since he was intimate with Rinck—that Kittel had inherited a full-sized portrait of Bach, and that when satisfied with his pupils he drew the curtain, and allowed them a sight of the picture, as the best reward he could afford them. It is a story quite in accordance with the devotion which Bach is known to have inspired in those who had to do with him. [G.]

KLAVIER-MUSIK, ALTE. The name of two collections of P. F. music. I. Edited by E. Pauer, and published by Senff, Leipzig:—

1st Series.

Pt. 1. Frescobaldi and Corrente, Canzona.
Lully, Sonata in E minor.
Porpora, 2 Fugues.
2. Galuppi, Sonata in D.
Padre Martini, Gavotte and Ballet.
Paradies, Sonata in A.
3. Kerl, Toccata in C.
Frohberger, Toccata in A minor.
Kuhnau, Suite in E minor.
4. Mattheson, Suite in A.
Muffat, Courante and 2 Minuets.
Hasse, Sonata in D.
5. J. L. Krebs, Fugue in F.
Marpurg, Preludium and Capriccio.
Kirnberger, Gigue, Gavotte, Courante, and Allegro for a musical clock.
Pt. 6. Dumont, Allemande in D minor.
Chambonniéres, Allemande, Courante, Sarabande, and La Loureuse.
Couperin, La Favorite, La tendre Nanette, La Tenebreuse.

2nd Series.

Pt. 1. A. Scarlatti, Fugue in F minor.
D. Scarlatti, 3 Studies.
Durante, Study in A.
2. Murschhauser, Aria pastoralis variata.
W. Fr. Bach, Capriccio in D minor.
Eberlin, Prelude and Fugue in A minor.
3. Nichelmann, La Gaillarde et La Tendre (Sarabande and Gigue) in G.
Benda, Sonata in G minor.
J. E. Bach, Fantasia and Fugue in F.
Pt. 4. J. C. F. Bach, Rondeau in C.
J. Ch. Bach, Sonata in B♭.
5. Rameau, Deux Gigues en Rondeau, Le Rappel des Oiseaux, Les tendres Plaintes, Deux Menuets, L'Egyptienne, La Poule.
Pt. 6. Byrd, Præludium and Carman's Whistle.
Bull, The King's Hunting Jigg.
O. Gibbons, Præludium and Galliard.
Arne, Sonata No. 3, in G.

II. Edited by F. Roitzsch, published by Peters:—

J. Ernst Bach, Fantaisie and Fugue in F.
Kirnberger, Prelude and Fugue in C♯ minor.
C. P. E. Bach, Solfeggio in C min.
Do., Sonata in F minor.
Couperin, March in A♭.
Do., Le Réveille-Matin in F.
Rameau, Tambourin in E minor.
D. Scarlatti, Allegro in G minor.
D. Scarlatti, Sonata in A.
Do., The Cat's Fugue, in G minor.
Clementi, Toccata in B♭.
Field, Rondo in E.
Cherubini, Fugue in C.
W. F. Bach, Sonata in D.
Eberlin, Prelude and Fugue in E minor.
Hässler, Fantasie in C minor.
J. B. Cramer, Toccatina in A♭.

[G.]

KLEIN, BERNHARD, a German composer, born at Cologne, where his father was a bass player, March 6, 1793. His early life was passed in the disturbances of the French occupation of the Rhine, but in 1812 he found means to get to Paris, where Cherubini's advice, the hearing of fine performers, and the study of the library of the Conservatoire, advanced him greatly. On his return to the Rhine he conducted the performances in Cologne Cathedral, and profited by an acquaintance with Thibaut and his fine library at Heidelberg. His first important works were a Mass (1816) and a Cantata on Schiller's 'Worte des Glaubens' (1817). In 1819 he was sent officially to Berlin to make acquaintance with Zelter's system of teaching and to apply it in Cologne Cathedral. He however found it more profitable to remain in Berlin, where he became connected with the recently established School for Organists, and was made director of music in the University, and teacher of singing in the Hochschule. These occupations in no wise checked his productivity. He composed a mass of sonatas and songs, an oratorio 'Job' (Leipzig, 1820), and a grand opera, 'Dido,' to Rellstab's text (1823). In 1823 he married, and went to Rome, where he passed a fine time in intercourse with Baini, and in copying from the ancient treasures of music there. On his return to Berlin he composed an oratorio, 'Jephthah,' for the Cologne Festival, 1828, and another, 'David,' for Halle, 1830.[1] In 1832, Sept. 9, he suddenly died. Besides the compositions already mentioned he left a Mass in D, a Paternoster for 8 voices, a Magnificat and Responsoria for 6 do., an opera and an oratorio, both nearly finished, 8 books of psalms, hymns, and motets for men's voices, and other pieces both sacred and secular. His vocal music was much used by singing societies after his death. Mr. Hullah has reprinted one of the 4-part psalms, 'Like as the hart,' in his excellent collection called 'Vocal Scores.' It is sweet, dignified, religious, music, very vocal in its phrases. [G.]

KLEMM. This well-known Leipzig music-publishing firm, and circulating library, was founded in 1821 by Carl August Klemm in the

[1] These two oratorios are in the Library of the Sacred Harmonic Society.

house which it now occupies, known as the 'Hohe Lilie,' 14 in the Neumarkt. Klemm succeeded Wieck, the father of Madame Schumann, who had for some time carried on a musical lending library on the premises. In 1847 the house opened a branch at Chemnitz, and in 56 at Dresden. The present proprietor is Christian Bernhard Klemm. Among the original publications of the house are to be found the names of J. S. Bach, Dotzauer, F. Abt, Dreyschock, Mendelssohn, Schumann (op. 34, 35), Lachner, F. Schneider, Julius Rietz, Marschner, etc. etc. [G.]

KLENGEL, August Alexander, born Jan. 29, 1784 at Dresden, son of a well-known portrait and landscape painter, first studied music with Milchmeyer, inventor of a piano which could produce 50 different qualities of tone (see Cramer's 'Magazin der Musik,' i. 10). In 1803 Clementi visited Dresden, and on his departure Klengel went with him as his pupil. The two separated on Clementi's marriage in Berlin, but the young wife dying shortly after, they went together to Russia, where Klengel remained till 1811. He then spent two years studying in Paris, returned to Dresden in 1814, went to London in 1815, and in the following year was appointed Court-organist at Dresden, which remained his home till his death on Nov. 22, 1852. During a visit to Paris in 1828 he formed a close friendship with Fétis, who with other musicians was much interested in his pianoforte canons. Of these he published only 'Les Avant-coureurs' (Paul, Dresden, 1841). After his death Hauptmann edited the 'Canons und Fugen' (Breitkopf & Härtel, 1854), with a preface, in which he says, 'Klengel was brought up on Sebastian Bach, and knew his works thoroughly. It must not be supposed however that he was a mere imitator of Bach's manner; it is truer to say that he expressed his own thoughts in the way in which Bach would have done it had he lived at the present day.' He left several concertos, and many other works. His visit to London was commemorated by the composition of a Quintet for Piano and Strings for the Philharmonic Society, which was performed Feb. 26, 1816, he himself taking the pianoforte. There is a pleasant little sketch of him in a letter of Mendelssohn's to Eckert, Jan. 26, 1842. [F.G.]

KLINDWORTH, Karl, one of the best of living musicians and pianists, whose reputation is sure to last though it was slow to rise, was born at Hanover on Sept. 25, 1830. In early youth he was an accomplished performer on the violin. From his 17th to his 19th year he acted as conductor to a travelling opera troupe; then he settled in Hanover and took to playing the piano and composing. In 1850 he went to Weimar to study pianoforte-playing under Liszt, and had Hans von Bülow, W. Mason, and Dyonis Pruckner as his fellow pupils. In 1854 he came to London, where he remained fourteen years, appearing in public at intervals as a pianist and conductor of orchestral concerts, but in the main living the quiet life of a student and teacher. He organised two series of three chamber concerts in the spring of 1861 and 62, and a series of three orchestral and vocal concerts in the summer of 1861. The most remarkable compositions brought forward at the latter were Rubinstein's 'Ocean' Symphony; Gade's 'Erl King's Daughter'; Cherubini's Requiem, No. 1; Schumann's P. F. Concerto. They were well carried out, but met with the usual fate of such enterprises in London, and were discontinued for want of capital. Since 1868 Klindworth has occupied the post of professor of the pianoforte at the Conservatorium of Moscow.

Foremost among the mass of good work done by Klindworth stand his pianoforte scores of Wagner's 'Der Ring des Nibelungen,' and his critical edition of Chopin; the latter beyond all praise for rare insight into the text and minute care bestowed on the presentation of it; the former quite wonderful for the fidelity with which the transcript is contrived to reflect Wagner's complicated orchestration. His arrangement of Schubert's Symphony in C major for two pianofortes, and the four-hand arrangement of Tschaïkowsky's 'Poème symphonique Francesca da Rimini,' as also, amongst his original compositions, a very difficult and effective Polonaise-fantaisie for pianoforte, should be particularly mentioned. The manuscripts of a masterly rescoring of Chopin's Concerto in F minor, and a condensation and orchestration of C. V. Alkan's Concerto in G♯ minor (Etudes, op. 39), are well known to his friends. [E.D.]

KLINGEMANN, Carl, born at Limmer, Hanover, Dec. 2, 1798, was Secretary to the Hanoverian Legation in Berlin till 1828, when he was transferred to a similar position in London. He married, Aug. 10, 1845, the sister of Dr. Rosen the eminent Sanscrit scholar and Professor at University College, and was a man of great cultivation, considerable literary power, and a very rare judgment in music. Klingemann had been intimate with the Mendelssohns during his residence in Berlin, and when Felix came to London the friendship was warmly renewed. The famous tour in Scotland—the origin of the Hebrides Overture, the Scotch Symphony, and so much else—was taken in company with Klingemann, and the journals, letters, and sketches were joint productions. (See Die Familie Mendelssohn, i. 214–294). Klingemann wrote the words for the Singspiel or Operetta so well known in England as 'The Son and Stranger,' excepting in the case of the song no. 12, 'Die Blumenglocken,' of which Mendelssohn wrote the words and Klingemann the music. The title 'Symphonie-Cantate' for the Lobgesang was his. The Three Caprices (op. 33) are dedicated to him.

The following of Mendelssohn's songs are set to Klingemann's words—op. 9, no. 5; op. 34, nos. 3 and 5; op. 47, nos. 5 and 6; op. 63, no. 4; op. 71, no. 2; op. 84, no. 2; op. 86, no. 1. He also supplied a translation of Handel's Solomon for the occasion of the performance at Düsseldorf in 1835, when Mendelssohn wrote an organ part to the Oratorio. Six of his songs were published by Breitkopfs. Klingemann's house was at

4, Hobart Place, Eaton Square. Mendelssohn often staid there, and it was for long the resort of the German artists and literary men. He died in London, Sept. 25, 1862. For an affectionate notice of him see Hiller's 'Tonleben,' ii. 95. [G.]

KLOTZ, the name of a numerous family of violin-makers, who lived at the little town of Mittenwald, in the Bavarian Alps, and founded a manufacture of stringed instruments which makes Mittenwald to this day only less famous than Markneukirchen in Saxony, and Mirecourt in the Vosges. A variety of the pine, locally known as the 'Hasel-fichte' (Bechstein calls it the 'harte oder späte Roth-tanne'), of delicate but strong and highly resonant fibre, flourishes in the Bavarian Alps. The abundance of this material, which the ingenious peasants of the neighbouring Ammer-thal use for wood-carving, led to the rise of the Mittenwald violin manufacture. For about two centuries there was held in the town a famous fair, greatly frequented by Venetian and other traders. In 1679 this fair was removed to Botzen, and the Mittenwalders attribute the rise of the violin industry to the distress which thereupon ensued. One Egidius Klotz had already made violins at Mittenwald. Tradition says that he learned the craft from Stainer at Absam. He is more likely to have learned it from seeing Stainer's violins, which he imitated with success. His son, Matthias or Matthew Klotz, followed in the same path. He travelled, however, into Italy, sojourning both at Florence and Cremona. Tradition reports him to have returned to Mittenwald about 1683, and to have at once begun to instruct many of the impoverished Mittenwalders in the mystery of fiddle-making. The instruments found a ready sale. They were hawked about by the makers at the churches, castles, and monasteries of South Germany; and Mittenwald began to recover its prosperity. Most of the instruments of Matthias Klotz date from 1670 to 1696. They are well built, on the model of Stainer, but poorly varnished. His son, Sebastian, surpassed him as a maker. His instruments, though Stainer-like in appearance, are larger in size, of flatter model, and better designed: and his varnish is often of a good Italian quality. Another son of Matthias, named Joseph, still has a good reputation among the connoisseurs of German violins.

Until about the middle of the last century, a distinctive German style prevailed in violins, of which the above-mentioned makers are the best exponents. In several towns of Italy there were Germans working in their own style side by side with Italian makers. Tecchler worked thus in Rome, Mann in Naples, and the three Gofrillers (Gottfriedl) in Venice. Odd as it seems, it is certain that there was a demand for German violins in Cremona itself. Two Germans, named Pfretschner and Fricker, who made violins of their own ugly pattern, gained a subsistence there in the golden days of Stradivarius: and the famous Veracini always used a German violin. But this competition could not long endure. The superiority of the Italian violin was established in the earlier half of the century: and wherever stringed instruments were made, a conscious imitation of the Italian models began. It penetrated to Mittenwald, as it did to London and Paris. This stage of the art is represented by Georg Klotz, whose fiddles date from 1750 to 1770. They have lost their distinctive Tyrolese cut, without gaining the true Italian style, and are covered with a thin brittle spirit varnish, laid upon a coat of size, which keeps the varnish from penetrating the wood, and renders it opaque and perishable. Besides George, we hear of Michael, Charles, and a second Egidius. Nine-tenths of the violins which pass in the world as 'Stainers' were made by the Klotz family and their followers. Dealers soon destroyed their tickets, and substituted spurious ones bearing the name of Stainer: a process which the makers at length adopted on their own account.

The Klotz violins are not without merit as regards sonority. Spohr recommends them, and an extraordinary story is told in Parke's 'Musical Memoirs' of the value set upon one belonging to Mr. Hay, the leader of the King's band. M. Miremont, of the Rue du Faubourg Poissonnière, one of the best living violin-makers, scandalised the Parisian connoisseurs a few years ago by exhibiting several instruments built by him on the Klotz model. Strange to relate, their tone was of undeniable excellence. [E. J. P.]

KNAPP, William, deserves mention as the author of a L.M. psalm tune called 'Wareham,' which was long a favourite in churches. He was born 1698, was parish clerk of Poole, and died 1768. He published 'New Church Melody' and 'A Set of New Psalms and Anthems.' 'Wareham' is in both—in the former called 'Blandford,' and in common time, in the latter in triple time. Another tune by him is given by Parr, 'Church of England Psalmody,' from whom and the present clerk of Poole the above facts are derived. [G.]

KNAPTON, Philip, was born at York in 1788, and received his musical education at Cambridge from Dr. Hague. He then returned to York and followed his profession. He composed several overtures, pianoforte concertos, and other orchestral works, besides arranging numerous pieces for the pianoforte and harp. His song, 'There be none of Beauty's daughters,' was long in favour. He acted as one of the assistant conductors at the York Festivals of 1823, 1825, and 1828. He died June 20, 1833. [W. H. H.]

KNECHT, Justin Heinrich, a musician of the last century, who, though now forgotten, was a considerable person in his day. He was born Sept. 30, 1752, at Biberach in Suabia, received a good education, both musical and general (Boeckh was one of his masters), and filled for some time the post of professor of literature in his native town. By degrees he gravitated to music, and in 1807 became director of the opera and of the court concerts at Stuttgart; but ambition or ability failed him, and in a couple of

years he resigned the post and returned to Biberach, where he died Dec. 11, 1817, with a great reputation as organist, composer, and theoretician. In the last-named department he was an adherent of Vogler. The list of his productions as given by Fétis embraces 27 numbers of compositions, and 19 theoretical and didactic works. Two of these only have any interest for us, and that from an accidental cause. The first (Bossler, Spire) is a 'Musical [1] portrait of Nature, a grand symphony for 2 violins, viola, and bass, 2 flutes, 2 oboes, bassoons, horns, trumpets, and drums ad lib., in which is expressed:—1. A beautiful country, the sun shining, gentle airs, and murmuring brooks; birds twitter, a waterfall tumbles from the mountain, the shepherd plays his pipe, the shepherdess sings, and the lambs gambol around. 2. Suddenly the sky darkens, an oppressive closeness pervades the air, black clouds gather, the wind rises, distant thunder is heard, and the storm approaches. 3. The tempest bursts in all its fury, the wind howls and the rain beats, the trees groan, and the streams rush furiously. 4. The storm gradually goes off, the clouds disperse, and the sky clears. 5. Nature raises its joyful voice to heaven in songs of gratitude to the Creator' (a hymn with variations). The second (if it be not an arrangement of a portion of the preceding) is another attempt of the same kind—'The Shepherds' pleasure interrupted by the storm, a musical picture for the organ.' These are precisely the subjects which Beethoven has treated, and Fétis would have us believe that Knecht actually anticipated not only the general scheme of the Pastoral Symphony but some of its figures and passages. But this is not the case. The writer purchased the score and parts of Knecht's work at Otto Jahn's sale, and is able to say that beyond the titles the resemblances between the two works are obviously casual. Knecht's being in addition commonplace, entirely wanting in that 'expression of emotions' which Beethoven enforces, and endeavouring to depict the actual sights and sounds, which he deprecates. [See PASTORAL SYMPHONY.] [G.]

KNELL, the Passing Bell (Fr. *La Cloche des Agonisants*; Germ. *Die Todtenglocke*). A solemn cadence, tolled on the great Bell of a Parish Church, to announce the death of a parishioner; or, in accordance with old custom, to give warning of his approaching dissolution. To indicate the decease of a Man, or Boy, the Knell begins with three triple tolls, followed by a number of moderately quick single strokes corresponding to the age of the Departed. The Bell is then tolled, very slowly, for the accustomed time: and the Knell concludes, as it began, with three triple tolls, sometimes, but not always, preceded by a repetition of the single strokes denoting the age of the deceased person.

For a Woman, the Knell begins, and ends, with three double, instead of three triple tolls. In other respects, the formula is the same as that used for a Man.

Minute tolls denote the death of the Sovereign, or Heir Apparent to the Crown. [W.S.R.]

KNELLER HALL, near Hounslow, Middlesex, the 'Military School of Music,' for the education of bandsmen and bandmasters for the regiments of the British army. Until recently bandmasters in the British army were mostly civilians, with no guarantee for their competence for the post, and bandsmen were instructed and practised in a casual and often imperfect manner by each regiment for itself. A bandmaster formed no integral part of the corps, and could not be compelled to accompany it in case of war or foreign service; and the *status* of bandsmen is even now so far anomalous that in action their duty is to rescue the wounded under fire and take charge of them in hospital. Each band was formed on its own model, and played what kind of instruments, and at what pitch, it liked. In the Crimean war the evils of this state of things and the want of united systematic action were painfully apparent, and shortly afterwards, by command of H.R.H. the Duke of Cambridge, Commander-in-Chief, a plan was drawn up and submitted to the officers of the army, to which they readily gave their assent and subscription. In pursuance of this plan Kneller Hall, a building on the site of the house of Sir Godfrey Kneller, the painter (formerly the Government establishment for training schoolmasters), was taken, and opened as a school on March 3, 1857, and a systematic course of instruction, with a staff of professors, begun, under the modest title of the 'Military Music Class,' Major (now Colonel) F. L. Whitmore, long known for a philanthropic interest and zeal in matters of music, being appointed Commandant, and reporting annually to the Adjutant General of the Forces. The advantages of the plan proved so great that in 1875 the institution was adopted by Government. Bandmasters are now first-class staff-sergeants of the regiments to which they belong, and the musical department in each regiment consists of a bandmaster, a sergeant, a corporal, and 19 men (cavalry 14), besides boys as drummers and fifers.

The educational staff at Kneller Hall now (1879) comprises professors of the following subjects—Theory, [2] Clarinet (3), Oboe, Flute, Bassoon, Tenor Brass (2), Bass [3] ditto, French Horn—and a schoolmaster from the Government Normal School for general education. The first-class students act as assistants to the professors. The length of term is 2 years, the hours of musical instruction are 7 in summer, and 6 in winter daily. The number of pupils of all ages varies with circumstances. The average strength is about 50 non-commissioned officers, training for bandmasters, and forming the first class; and 110 privates, boys and adults, training for

[1] Fétis gives the title incorrectly. It is 'Le Portrait musical de la Nature,' etc., not 'Tableau musical.' He also gives its date as 'Leipzig, 1784.' It is really published at Spire by Bossler, with no year; but the date may very well be 1784, since the list on the back contains the three early sonatas of Beethoven, which were published by Bossler in 1783. But the coincidence is curious. Beethoven must have been familiar with Bossler's advertisement page, on which his own first sonatas were announced, and which contains all the above particulars.

[2] Mr. Lazarus is one of these three.

[3] This post was formerly held by Mr. Sullivan, father of the composer.

bandsmen, the second class—160 in all. Lads are admitted at 15. Adults are either outsiders or former pupils, who, after having been bandsmen, develope qualities fitting them for farther education as bandmasters. Both lads and men are taken into the school as vacancies occur, on the recommendation of the commanding officers of the regiments. A supply of the former is obtained from the Chelsea Hospital, the Royal Hibernian Military School, Dublin, the Metropolitan Poor Law Schools, etc. General instruction is given by the Normal schoolmaster, and there is a noble chapel in which service is regularly performed.

England is as yet the only country which has adopted a systematic method of educating bandsmen and bandmasters, and the great improvement both in the moral conduct and the efficiency of the men which has taken place since the foundation of Kneller Hall cannot be too warmly welcomed. By Colonel Whitmore's efforts, and the enlightened sanction of H.R.H. the Commander-in-Chief, uniformity in instruments and in [1]pitch has been obtained, and a general consolidation of the military music of the country brought about which is highly desirable. A bandmaster has now a recognised position in the army, and a fixed salary of £100 a year in addition to his regimental pay. The cost of this salary is still borne by the private purses of the officers, which is the only important anomaly remaining to be rectified. [G.]

KNIGHT, Joseph Philip, youngest son of the Rev. Francis Knight, D.D., was born at the Vicarage, Bradford-on-Avon, July 26, 1812. His love for music began early, and at 16 he studied harmony and thorough bass under Mr. Corfe, then organist of Bristol Cathedral. When about 20 Mr. Knight composed his first six songs, under the name of 'Philip Mortimer.' Among these were 'Old Times,' sung by Henry Phillips, and 'Go, forget me,' which was much sung both here and in Germany. After this he used his own name, and in company with Haynes Bayly produced a number of highly popular songs, among which the most famous were 'Of what is the old man thinking?' 'The Veteran,' 'The Grecian Daughter,' and 'She wore a wreath of roses.' He subsequently composed a song and a duet to words written for him by Thomas Moore—'The parting,' and 'Let's take this world as some wide scene.' In 1839 Mr. Knight visited the United States, where he remained two years. To this time are due among other popular songs the once well-known 'Rocked in the cradle of the deep,' sung with immense success by Braham, and 'Why chime the bells so merrily.' On his return to England he produced 'Beautiful Venice,' 'Say what shall my song be to-night,' and 'The Dream,' words by the Hon. Mrs. Norton—all more or less the rage in their day. Some years afterwards Mr. Knight was ordained by the late Bp. of Exeter to the charge of St. Agnes in the Scilly Isles, where he resided two years. He then married and lived for some time abroad, doing very little in the way of composition, but on his return to England he again took up his pen, and wrote among others 'Peace, it is I!' 'The lost Rose,' 'The Watchman,' 'The Anchor,' and 'Queen of the silver bow,' all of which have enjoyed great popularity. His songs, duets, and trios, number in all not less than two hundred. He is a good organist, with an unusual gift for extemporising. [G.]

[1] A=453 vibrations per second.

KNYVETT, Charles, descended from an ancient Norfolk family, was one of the principal alto singers at the Commemoration of Handel in 1784; he was also engaged at the Concert of Ancient Music. He was appointed a gentleman of the Chapel Royal, Nov. 6, 1786. In 1791 he, in conjunction with Samuel Harrison, established the Vocal Concerts, which they carried on until 1794. On July 25, 1796, he was appointed an organist of the Chapel Royal, and a few years later resigned his former post. He died in 1822.

His elder son, Charles, was born 1773. He was placed for singing under Mr. (afterwards Sir) William Parsons, and for the organ and piano under Samuel Webbe. In 1801 he joined his younger brother William, Greatorex, and Bartleman, in reviving the Vocal Concerts. In 1802 he was chosen organist of St. George's, Hanover Square. Besides this he taught the pianoforte and thorough bass, and published a Selection of Psalm Tunes, 1823. He died, after many years of retirement, Nov. 2, 1852.

William, the younger son of Charles the elder, was born April 21, 1779. In 1788 he sang in the treble chorus at the Concert of Ancient Music, and in 1795 appeared there as principal alto. In 1797 he was appointed gentleman of the Chapel Royal, and soon afterwards a lay-vicar of Westminster. In 1802 he succeeded Dr. Arnold as one of the composers of the Chapel Royal. For upwards of 40 years he was principal alto at the best London concerts and all the provincial festivals, being greatly admired for the beauty of his voice and his finished style of singing, particularly in part music. Callcott's glee 'With sighs, sweet rose,' was composed expressly for him. In 1832 he became conductor of the Concert of Ancient Music, which office he resigned in 1840. He conducted the Birmingham Festivals from 1834 to 1843, and the York Festival of 1835. He was the composer of several pleasing glees—one of which, 'When the fair rose,' gained a prize at the Harmonic Society in 1800—and some songs, and wrote anthems for the coronations of George IV. and Queen Victoria. He died Nov. 17, 1856.

Deborah, second wife of William Knyvett, and niece of Mrs. Travis, one of the Lancashire chorus singers engaged at the Concert of Ancient Music, was born at Shaw, near Oldham, Lancashire. In 1813 she was placed in the chorus of the Concert of Ancient Music, the directors of which, finding her possessed of superior abilities, soon withdrew her from that position, took her as an articled pupil, and placed her under Greatorex. In 1815 she appeared at the concerts as a principal singer with success. In 1816 she sang at the Derby Festival, in 1818 at Worcester, and in 1820 at Birmingham. From

that time she was constantly in request, particularly as an oratorio singer, until 1843, when she retired. She died in Feb. 1876. [W.H.H.]

KÖCHEL, Dr. Ludwig, Ritter von, learned musician and naturalist, born Jan. 14, 1800, at Stein, near Krems on the Danube; tutor to the sons of the Archduke Karl (1828–42). From 1850 to 1863 he lived at Salzburg, and from that time to his death, on June 3, 1877, at Vienna. His work as a botanist and mineralogist does not concern us: as a musician he has immortalised his name by his 'Chronologisch-thematisches Verzeichniss' of all W. A. Mozart's works, with an appendix of lost, doubtful, and spurious compositions (Breitkopf & Härtel, Leipzig 1862). As a precursor of that precious work a small pamphlet should be named, 'Über den Umfang der musikalischen Productivität W. A. Mozarts' (Salzburg 1862). The complete edition of Mozart's works which Breitkopf & Härtel are now publishing could scarcely have been made without his generous cooperation. In 1832 von Köchel was made an Imperial Councillor, and in 42 he received the order of Leopold. Among his intimate friends was Otto Jahn, in whose work on Mozart he took an active interest. See Jahn's Mozart, 2nd ed., p. xxxi. His private character was most estimable. [C.F.P.]

KÖHLER. The name of an eminent family of military wind-instrument makers, at present established at 35, Henrietta Street, Covent Garden. The founder of the family was John Köhler, a native of Volkenrode, a hamlet near Cassel. He came to England, acted as bandmaster to the Lancashire Volunteers, and in 1780 established himself as a musical instrument maker at 87, St. James's Street. Having no children, he sent for his nephew, John Köhler, from Germany, who succeeded to his business in 1801. The latter was appointed musical instrument maker to the Duke of York, then commander-in-chief, and the Prince of Wales successively. He was succeeded by his only son, John Augustus, who removed the business to Henrietta Street, and died in 1878. His inventions in brass instruments were many and successful. He first introduced the cornet-à-piston or cornopean into this country, and, with Macfarlane, added the third valve to that instrument. His improved mute to the cornopean, with extra bell (1858), enabling the instrument to be played in a very low tone and perfectly in tune, is well known. His triple slide trombones and patent levers were very remarkable improvements in their day. He obtained prize medals at the Exhibitions of 1851 and 62, and was favourably mentioned in the Report of the latter. The business is now carried on by his eldest son, Augustus Charles, who entered the firm in 1863. [G.]

KÖMPEL, August, a distinguished violinist, born in 1831 at Brückenau. He is one of the best pupils of Spohr, and the quiet elegiac style of his master suits his talent precisely. His tone is not large but very pure and sympathetic, his execution faultless. He was for a time member of the bands at Cassel and Hanover, and has been since 1867 leader of that at Weimar. [P.D.]

KOLLMANN, August Friedrich Karl, one of a musical family, his father an organist and schoolmaster, his brother, George Christoph, an organist of great renown at Hamburg; was born at Engelbostel, Hannover, in 1756, and thoroughly educated in music. He was selected to be chapel-keeper and schoolmaster at the German Chapel, St. James's, London, and entered on his duties about 1782. In 1792 George III. presented a chamber organ to the chapel, which was played by Kollmann under the title of 'clerk' till his death in Nov. 1824. He was a person of much energy, and in 1809 during a large fire in the palace is said to have saved the chapel by standing in the doorway and preventing the firemen from entering it to destroy it. His works are numerous:—Essay on Practical Harmony, 1796; do. on Practical Musical Composition, 1799; Practical Guide to Thorough Bass, 1801; Vindication of a passage in ditto, 1802; New Theory of Musical Harmony, 1806; Second Practical Guide to Thorough Bass, 1807; Quarterly Musical Register, 1812—two numbers only; Remarks on Logier, 1824—(some of these went through two editions); Analyzed Symphony, op. 3; First beginning on the P. F. op. 5, 1796; Concerto for P. F. and Orchestra, op. 8; Melody of the 100th Psalm, with 100 harmonies, op. 9; Twelve analyzed Fugues, op. 10; Introduction to Modulation, op. 11; Rondo on the Chord of the Dim. 7th. He is also said to have published an orchestral symphony 'The Shipwreck, or the Loss of the East Indiaman Halsewell,' a piece of programme-music quite in the taste of the time; songs, sonatas, and an edition of Bach's Well-tempered Clavier. His son George August was a good organ-player, and on his father's death succeeded to his post as organist. On his death, March 19, 1845, his sister Johanna Sophia succeeded him; and on her death, in May 1849, the post was bestowed on Mr. F. Weber the present organist. [G.]

KONTSKI, DE, a family of virtuosi, of which Charles, the eldest, born at Warsaw in 1815, appeared as a pianist in public at the age of seven, but, like the majority of prodigies, did not fulfil the promises of childhood. He made his first studies in Warsaw and continued them at Paris, where he settled as teacher, and died 1867.

Antoine, the second, born at Cracow Oct. 27, 1817, a clever pianist, with great delicacy of touch and brilliancy of execution, but a superficial musician, and composer of many 'pièces de salon,' of which the 'Reveil du Lion' (op. 115) is universally known. He has travelled a great deal and is now living in London.

Stanislas, the third brother, born in 1820, pianist and pupil of Antoine, living at Petersburg.

Apollinaire, a violinist, the youngest of the four brothers, was born Oct. 23, 1826, at Warsaw. His first master was his elder brother Charles, himself a clever violinist and pupil of the Warsaw Conservatoire. He showed the same precocity of talent as the rest of his family, performing in public concerts at an age of not much over four years.

Later on he travelled a great deal, chiefly in Russia, but also in France and Germany, and made a certain sensation by his really exceptional technical proficiency, not unaccompanied by a certain amount of charlatanism. In 1837 he is said (see Mendel) to have attracted the attention of Paganini, then in Paris on his road back from England, and to have formed a friendship with the great virtuoso which resulted in his receiving some lessons[1] from him (an honour which he shared with Sivori) and ultimately becoming heir to his violins and violin compositions. This however requires confirmation. In 1853 he was appointed solo-violinist to the Emperor of Russia, and in 1861 Director of the Warsaw Conservatoire, which post he still retains. He played a solo at one of the Russian concerts given in connection with the Exhibition at Paris in 1878. His compositions (fantasias and the like) are musically unimportant. [P. D.]

KOTZWARA, Franz, born at Prague, was in Ireland in 1790, when he was engaged as tenor player in Gallini's orchestra at the King's Theatre. On Sept. 2, 1791 he hanged himself, not in jest but in the greatest earnest, in a house of ill-fame in Vine Street, St. Martin's. He had been one of the band at the Handel Commemoration in the preceding May. Kotzwara was the author of the Battle of Prague, a piece for P. F. with violin and cello ad libitum, long a favourite in London. Also of sonatas, serenades, and other pieces, some of them bearing as high an opus number as 36, if Fétis may be believed. He was a clever, vagabond, dissipated creature. [G.]

KOŽELUCH (German Kotzeluch), Johann Anton, Bohemian musician, born Dec. 13, 1738, at Wellwarn ; was Choirmaster first at Rakonitz and then at Wellwarn. Desirous of further instruction he went to Prague and Vienna, where he was kindly received by Gluck and Gassmann, was appointed Choirmaster of the Kreuzherrn church, Prague ; and on March 13, 1784, Capellmeister to the Cathedral, which he retained till his death on March 3, 1814. He composed church-music, operas, and oratorios, none of which have been published. Of much greater importance is his cousin and pupil,

Leopold, born also in Wellwarn in 1754, or according to some 1748. In 1765 he went to Prague for his education, and there composed a ballet, performed at the national theatre in 1771, with so much success that it was followed in the course of the next six years by 24 ballets and 3 pantomimes. In 1778 he went to Vienna, and became the pianoforte master of the Archduchess Elizabeth and favourite teacher of the aristocracy. When Mozart resigned his post at Salzburg (1781) the Archbishop at once offered it with a rise of salary to Kozeluch, who declined it on the ground that he was doing better in Vienna. To his friends however he held different language—'The Archbishop's conduct towards Mozart deterred me more than anything, for if he could let such a man as that leave him, what treatment should I have been likely to meet with?' The respect here expressed was sadly at variance with his subsequent spiteful behaviour towards Mozart, the original cause of which is said to have been Mozart's reply to his remark on a passage in a new quartet of Haydn's—'I should not have written that so.' 'Neither should I: but do you know why? because the idea would never have occurred to either of us.' This reproof Kozeluch never forgot. He used to say that the overture to 'Don Giovanni' was no doubt fine, but that it was full of faults; and of that to 'Die Zauberflöte,' 'Well! for once our good Mozart has tried to write like a learned man.' At the coronation of the Emperor Leopold II. at Prague (1791) even his own countrymen the Bohemians were disgusted with his behaviour to Mozart, who was in attendance as court composer. He nevertheless succeeded him in his office (1792) with a salary of 1500 gulden, and retained the post till his death on May 7, 1811 (not 1814). His numerous compositions include 2 grand operas, 'Judith' and 'Debora und Sisara'; an oratorio, 'Moses in Ægypten'; many ballets, cantatas, about 30 symphonies, and much pianoforte music, at one time well known in England, but all now forgotten. His chief interest for us lies in his association with Mozart and Haydn. [F. G.]

KRAFT, Anton, distinguished cellist, born Dec. 30, 1752,[2] at Rokitzan near Pilsen in Bohemia, son of a brewer and amateur, who had his son early taught music, especially the cello. He studied law at Prague, where he had finishing lessons from Werner, and Vienna, where Haydn secured him for the chapel of Prince Esterhazy, which he entered on Jan. 1, 1778. On the Prince's death in 1790 he became chamber-musician to Prince Grassalkowitsch, and in 1795 to Prince Lobkowitz, in whose service he died Aug. 28, 1820. On one of his concert-tours he was at Dresden in 1789, and with his son played before Duke Karl, and before the Elector the night after the court had been enchanted by Mozart. Both musicians were staying at the same hotel, so they arranged a quartet, the fourth part being taken by Teyber the organist.[3] Haydn valued Kraft for his power of expression, and for the purity of his intonation, and in all probability composed (1781) his cello concerto (André) for him. According to Schindler[4] the cello part in Beethoven's triple concerto was also intended for Kraft. As he showed a talent for composition, Haydn offered to instruct him, but Kraft taking up the new subject with such ardour as to neglect his instrument, Haydn would teach him no more, saying he already knew enough for his purpose. He published 3 sonatas with accompaniment, op. 1 (Amsterdam, Hummel); 3 sonatas, op. 2 (André); 3 grand duos concertantes for violin and cello, op. 3, and 1st concerto

[1] This is corroborated by Hanslick, Aus dem Concert-saal, p. 429.

[2] This is the date in the baptismal register, but 1751, or 49, are usually given.

[3] Mozart also played with the Krafts his Trio in E (Köchel 542); see Nohl's 'Mozart-Briefe,' No. 251. N.B. No. 246 is wrong.

[4] Vol. i. p. 147; see also Thayer's 'Beethoven,' vol. ii. p. 299.

in C, op. 4 (Breitkopf & Härtel); grand duos for 2 cellos, op. 5 and 6 (Vienna, Steiner); and divertissement for cello with double-bass (Peters). Kraft also played the baritone in Prince Esterhazy's chamber music,[1] and composed several trios for 2 baritones and cello. His son and pupil NICOLAUS, born Dec. 14, 1778, at Esterhaz, early became proficient on the cello, accompanied his father on his concert-tours (see above), and settled with him in Vienna in 1790. He played a concerto of his father's at a concert of the Tonkünstler-Societät in 1792, and was one of Prince Karl Lichnowsky's famous quartet party, who executed so many of Beethoven's works for the first time. The others were Schuppanzigh, Sina, and Franz Weiss, all young men.[2] In 1796 he became chamber-musician to Prince Lobkowitz, who sent him in 1801 to Berlin, for further study with Louis Duport. There he gave concerts, as well as at Leipzig, Dresden, Prague, and Vienna on his return journey. In 1809 he entered the orchestra of the court-opera, and the King of Wirtemberg hearing him in 1814, at once engaged him for his chapel at Stuttgart. He undertook several more concert-tours (Hummel accompanied him in 1818), but an accident to his hand obliged him to give up playing. He retired on a pension in 1834, and died on May 18, 1853. Among his pupils were Count Wilhorsky, Merk, Birnbach, Wranitzky's sons, and his own son FRIEDRICH, born in Vienna Feb. 12, 1807, entered the chapel at Stuttgart 1824. Among Nicolaus's excellent cello compositions may be specified—a fantasia with quartet, op. 1 (André); concertos, op. 3, 4 (Breitkopfs), and 5 (Peters); scène pastorale with orchestra, dedicated to the King of Wirtemberg, op. 9 (Peters); 8 divertissements progressives with 2nd cello, op. 14 (André); 3 easy duos for 2 cellos, op. 15, and 3 grand duos for ditto, op. 17 (André). [C.F.P.]

KRAKOVIAK, CRACOVIAK, or CRACOVIENNE. A Polish dance, belonging to the district of Cracow. 'There are usually,' says an eye-witness, 'a great many couples—as many as in an English country dance. They shout while dancing, and occasionally the smart man of the party sings an impromptu couplet suited for the occasion—on birthdays, weddings, etc. The men also strike their heels together while dancing, which produces a metallic sound, as the heels are covered with iron.' The songs, which also share the name, are innumerable and, as is natural, deeply tinged with melancholy. Under the name of Cracovienne the dance was brought into the theatre about the year 1840, and was made famous by Fanny Elssler's performance. The following is the tune to which she danced it; but whether that is a real Krakoviak, or a mere imitation, the writer is unable to say:—

[1] For an anecdote on this point see 'Josef Haydn,' by C. F. Pohl, vol. i. p. 252.

[2] See Thayer's 'Beethoven,' vol. ii. p. 278.

It has been varied by Chopin (op. 14), Herz, Wallace, and others. [G.]

KREBS. A musical family of our own time. KARL AUGUST, the head, was the son of A. and Charlotte Miedcke, belonging to the company of the theatre at Nuremberg, where he was born Jan. 16, 1804. The name of Krebs he obtained from the singer of that name at Stuttgart, who adopted him. His early studies were made under Schelble, and in 1825 under Seyfried at Vienna. In March 1827 he settled in Hamburg as head of the theatre, and there passed 23 active and useful years, till called to Dresden in 1850 as Kapellmeister to the court, a post which he filled with honour and advantage till 1871. Since that date he has conducted the orchestra in the Catholic chapel. His compositions are numerous and varied in kind—masses, operas ('Silva,' 'Agnes'), a Te Deum, orchestral pieces, songs and pianoforte works, many of them much esteemed in Germany. In England, however, his name is known almost exclusively as the father of Miss MARY KREBS, the pianist, born Dec. 5, 1851, at Dresden. On the side of both father and mother (ALOYSIA MICHAELSI, an operatic singer of eminence, who married Krebs July 20, 1850, and is still living) she inherited music, and like Mme. Schumann was happy in having a father who directed her studies with great judgment. Miss Krebs appeared in public at the early age of 11 (Meissen, 1862), and has since that date been almost continually before the world. Her tours have embraced not only the whole of Germany and England, but Italy, France, Holland, and America. She played at the Gewandhaus first, Nov. 30, 1865. To this country she came in the previous year, and made an engagement with Mr. Gye for four seasons, and her first appearance was at the Crystal Palace, April 30, 1864; at the Philharmonic April 20, 1874; and at the Monday Popular Concerts Jan. 13, 1875. At all these concerts Miss Krebs is often heard, though the 'Populars' enjoy more of her presence than any other. Her repertoire is large, and embraces all the acknowledged classical, orchestral, chamber, and solo pieces, and others of such exceptional difficulty as Schumann's Toccata (op. 7), of which she has more than once given a very fine rendering. She is liked by all who know her, and we trust that she may long continue her visits to this country. [G.]

KREBS, JOHANN LUDWIG, distinguished organist, born at Buttelstädt in Thuringia Oct. 10, 1713. His father, JOHANN TOBIAS, himself an excellent organist, for seven years walked every

week from Buttelstädt to Weimar, in order to take lessons from Walther, author of the Lexicon, who was organist there, and from Sebastian Bach, at that time concertmeister at Weimar. He was afterwards appointed organist at Buttelstädt, where he died. He so thoroughly grounded his son in music, that when in 1726 he went to the Thomas-Schule in Leipzig, he was already sufficiently advanced to be at once admitted by Bach into the number of his special pupils. He enjoyed Bach's instruction for nine years (to 1735), and rose to so high a place in his esteem, that he was appointed to play the clavier at the weekly practices to which Bach gave the name of 'collegium musicum.' Punning upon his pupil's name and his own, the old Cantor was accustomed to say that 'he was the best crab (Krebs) in all the brook (Bach).' At the close of his philosophical studies at Leipzig he was appointed organist successively at Zwickau, Zeitz, and Altenburg, where he remained from 1756 till his death in 1780. He was equally esteemed on the clavier and the organ, and in the latter capacity especially deserves to be considered one of Bach's best pupils. His published compositions include 'Klavier-Uebungen' (4 parts), containing chorales with variations, fugues, and suites; sonatas for clavier, and for flute and clavier; and trios for flute. Several of these have been reprinted in the collections of Körner and others. Among his unpublished works a Magnificat and 2 Sanctuses with orchestral accompaniments are highly spoken of. He left two sons, both sound musicians and composers, though not of the eminence of their father. The eldest, EHRENFRIED CHRISTIAN TRAUGOTT, succeeded his father as Court-organist and Musik-director at Altenburg, and on his death was succeeded by his younger brother, JOHANN GOTTFRIED. [A.M.]

KREISLERIANA, a set of 8 pieces for piano solo, dedicated to Chopin and forming op. 16 of Schumann's works. Kreisler was the Kapellmeister in Hoffmann's musical papers so much admired by Schumann. The pieces were written in 1838, after the Phantasie stücke (op. 12) and Novelletten (op. 21), and before the Arasbeske (op. 18).[1] They are full of energy, variety and character, and like the Novelletten are cast in the so-called Lied and Rondo forms. Schumann has added to the title 'Phantasien für das P.F.' The Kreisleriana were published by Haslinger of Vienna shortly after Schumann's visit (1838–9). [G.]

KREISSLE VON HELLBORN, HEINRICH, Dr. juris, Imperial-finance-Secretary at Vienna, and Member of the Direction of the Gesellschaft der Musikfreunde, finds a place here for his Lives of Schubert, viz. 'F. Schubert, eine biografische Skizze, von Heinrich von Kreissle' (small 8vo. Vienna, 1861), a preliminary sketch; and 'Franz Schubert' (8vo. Vienna, Gerold, 1865), a complete and exhaustive biography, with a portrait. The latter has been translated in full by Mr. Arthur Duke Coleridge, 'The Life of Franz Schubert . . . with an Appendix by George Grove' (giving a thematic catalogue of the nine symphonies, and mentioning other works still in MS.), 2 vols., 8vo., London, Longmans, 1869. It has also been condensed by Mr. E. Wilberforce, 8vo., London, Allen, 1866.

Kreissle died April 6, 1869, aged 66, much beloved for his amiability and modesty, and for his devotion to the subject of his biography. [C.F.P.]

KRENN, MICHAEL. Beethoven's body-servant while he lived at his brother Johann's at Gneixendorf in the autumn of 1826. Krenn was one of the three sons of the vine-dresser on the farm. The old man died in 1861, but the son survived him, and his story—to all appearance a natural and credible account—was drawn from him by Dr. Lorenz, who communicated it to the 'Deutsche Musik-Zeitung' of Vienna for March 8, 1862. It is a very curious and interesting account of the great master's habits and disposition a few months before his death (see vol. i. p. 198*b* of this Dictionary). It has been made the subject of a lecture to the Schillerverein at Trieste by Mr. Thayer, 'Ein kritischer Beitrag,' etc. (Berlin, W. Weber, 1877). [G.]

KRETSCHMER, EDMUND, organist and dramatic composer, born Aug. 31, 1830, at Ostritz in Saxony, where his father the Rector of the school, gave him his early musical education; studied composition under Julius Otto, and the organ under Johann Schneider at Dresden, where he became organist of the Catholic church in 1854 and to the court in 63. He founded several 'Gesangvereine,' and in 65 his composition, 'Die Geisterschlacht,' gained the prize at the first German 'Sängerfest' in Dresden. Three years later he took another prize in Brussels for a mass. His opera 'Die Folkunger,' in 5 acts, libretto by Mosenthal, was produced at Dresden June 1875. It was well received and had a considerable run, but has since disappeared; nor does 'Heinrich der Loewe,' to his own libretto, appear likely to meet with more permanent success. The music is correct and shows both taste and talent, but no invention or dramatic power. His vocal part-writing has little life; and his duets, terzets, finales, etc., are too much like part-songs. [F.G.]

KREUTZER, CONRADIN, German composer, son of a miller, born Nov. 22, 1782, at Mösskirch in Baden; chorister first in his native town, then at the Abbey of Zwiefalten, and afterwards at Scheussenried. In 1799 he went to Freiburg in Breisgau to study medicine, which he soon abandoned for music. The next 5 years he passed chiefly in Switzerland, as pianist, singer, and composer; and in 1804 arrived in Vienna. And there he took lessons from Albrechtsberger, and worked hard at composition, especially operas. His first opera was 'Conradin von Schwaben' (Stuttgart 1812), and its success gained him the post of Capellmeister to the King of Würtemburg; thence he went to Prince von Fürstenberg at Donaueschingen; but in 1822 returned to Vienna and produced 'Libussa.' At the Kärthnerthor theatre he was Capellmeister in 1825, 1829–32, and 1837–40. From 1833 to 40 he was conductor

[1] Wassielewsky, 181.

at the Josephstadt theatre, where he produced his two best works, 'Das Nachtlager in Granada' (1834) and a fairy opera 'Der Verschwender,' which have both kept the boards. At a later date he was appointed Capellmeister at Cologne, and in 1843 conducted the 43rd Festival of the Lower Rhine. Thence he went to Paris, and in 1846 back to Vienna. He accompanied his daughter, whom he had trained as a singer, to Riga, and there died, Dec. 14, 1849.

Kreutzer composed numerous operas; incidental music to several plays and melodramas; an oratorio, 'Die Sendung Mosis,' and other church-works; chamber and pianoforte music; Lieder, and part-songs for men's voices. Of all these, a list is given by Fétis, who speaks of a one-act drama 'Cordelia' as the most original of his works. The two operas already mentioned, and the part-songs alone have survived. In the latter, Kreutzer displays a flow of melody and good construction; they are still standard works with all the German Liedertafeln, and have taken the place of much weak sentimental rubbish. 'Der Tag des Herrn,' 'Die Kapelle,' 'Märznacht' and others are universal favourites, and models of that style of piece. Some of them are given in 'Orpheus.' As a dramatic composer, his airs are better than his ensemble pieces, graceful but wanting in passion and force. His Lieder for a single voice, though vocal and full of melody, have disappeared before the more lyrical and expressive songs of Schubert and Schumann. [A. M.]

KREUTZER,[1] Rodolphe, violinist and composer, born at Versailles, Nov. 16, 1766. He studied first under his father, a musician, and according to Fétis had lessons on the violin from Stamitz, but he owed more to natural gifts than to instruction. He began to compose before he had learnt harmony, and was so good a player at 16, when his father died, that through the intervention of Marie Antoinette, he was appointed first violin in the Chapelle du Roi. Here he had opportunities of hearing Mestrino and Viotti, and his execution improved rapidly. The further appointment of solo-violinist at the Théâtre Italien gave him the opportunity of producing an opera. 'Jeanne d'Arc,' 3 acts (May 10, 1790), was successful, and paved the way for 'Paul et Virginie' (Jan. 15, 1791), which was still more so.

The melodies were simple and fresh, and the musical world went into raptures over the new effects of local colour, poor as they seem to us. The music of 'Lodoïska,' 3 acts (Aug. 1, 1791), is not sufficiently interesting to counterbalance its tedious libretto, but the overture and the Tartar's March were for long favourites. During the Revolution Kreutzer was often suddenly called upon to compose *opéras de circonstance*, a task he executed with great facility. In 1796 he produced 'Imogène, ou la Gageure indiscrète,' a 3-act comedy founded on a story of Boccaccio little fitted for music. At the same time he was composing the concertos for the violin, on which his fame now rests. After the peace of Campo Formio (Oct, 17, 1797) he started on a concert-tour through Italy, Germany, and the Netherlands; the fire and individuality of his playing, especially in his own compositions, exciting everywhere the greatest enthusiasm.

In 1798 Kreutzer was in Vienna in the suite of Bernadotte (Thayer's 'Beethoven,' ii. 21), and we must presume that it was at this time that he acquired that friendship with Beethoven which resulted, 8 years later, in the dedication to him of the Sonata (op. 47) which will now be always known by his name—though he is[2] said never to have played it—and that he became 'first violin of the Academy of Arts and of the Imperial chamber-music'—titles which are attributed to him in the same dedication. He had been professor of the violin at the Conservatoire from its foundation, and on his return to Paris he and Baillot drew up the famous 'Méthode de Violon' for the use of the students. He frequently played at concerts, his *duos concertantes* with Rode being a special attraction. On Rode's departure to Russia in 1801, Kreutzer succeeded him as first violin solo at the Opéra, a post which again opened to him the career of a dramatic composer. 'Astyanax,' 3 acts (April 12, 1801); 'Aristippe' (May 24, 1808), the success of which was mainly due to Lays; and 'La Mort d'Abel' (March 23, 1810), in 3 poor acts, reduced to two on its revival in 1823, were the best of a series of operas now forgotten. He also composed many highly successful ballets, such as 'Paul et Virginie' (June 24, 1806), revived in 1826; 'Le Carnaval de Venise' (Feb. 22, 1816), with Persuis; and 'Clari' (June 19, 1820), the principal part in which was sustained by Bigottini. He was appointed 1st violin in the chapelle of the First Consul in 1802, violin-solo to the Emperor in 1806, maître de la chapelle to Louis XVIII. in 1815, and Chevalier of the Legion of Honour in 1824. He became vice-conductor of the Académie in 1816, and conductor in chief from 1817 to 1824. A broken arm compelled him to give up playing, and he retired from the Conservatoire with the year 1825. His last years were embittered by the decline of his influence and the impossibility of gaining a hearing for his last opera, 'Mathilde.' An apoplectic seizure affected his mind, but he lingered till June 6, 1831, when he died at Geneva.

Besides his 39 operas and ballets, all produced in Paris, he published 19 violin-concertos; duos, and 2 symphonies concertantes, for 2 violins; études and caprices for violin solo; sonatas for violin and cello; 15 trios, and a symphonie concertante for 2 violins and cello; 15 string quartets; and several airs with variations.

Kreutzer's brother Auguste, born at Versailles 1781, was a member of the Chapelle de l'Empereur, and of the Chapelle du Roi (1804–30); and succeeded his brother at the Conservatoire, Jan. 1, 1826, retaining the post till his death, at Paris Aug. 31, 1832. His son Leon, born in Paris 1817,

[1] His name has been often transmuted into Kretsche by Frenchmen who thought they were pronouncing like Germans.

[2] See Berlioz, 'Voyage,' i. 264, for this and for an amusing account of Kreutzer's difficulties over Beethoven's Second Symphony.

died at Vichy Oct. 6, 1868, was musical critic to 'La Quotidienne,' *feuilletoniste* to the 'Union,' and contributed a number of interesting articles to the 'Revue contemporaine,' the 'Revue et Gazette musicale,' and other periodicals. [G.C.]

Rodolphe Kreutzer is the third, in order of development, of the four great representative masters of the classical Violin-School of Paris; the other three being VIOTTI, RODE, and BAILLOT. His style, such as we know it from his concertos, is on the whole more brilliant than Rode's, but less modern than Baillot's. Kreutzer did not require Beethoven's dedication to make his name immortal. His fame will always rest on his unsurpassed work of studies—'40 Etudes ou Caprices pour le Violon'; a work which has an almost unique position in the literature of violin-studies. It has been recognised and adopted as the basis of all solid execution on the violin by the masters of all schools—French, German, or any other nationality—and has been published in numberless editions. In point of difficulty it ranks just below Rode's 24 Caprices, and is generally considered as leading up to this second standard work of studies. Kreutzer's concertos afford excellent material for the student, but are less interesting than those of Viotti and Rode, and, with the exception of the 19th, in D minor, are now hardly ever played in public. [P.D.]

KREUTZER SONATA. The popular title in England of Beethoven's Sonata for piano and violin in A, op. 47, dedicated to 'his friend R. Kreutzer.' The work was first played by Beethoven and Bridgetower at the Augarten at 8 A.M. May 17 or 24, 1803. The finale had originally belonged to op. 30, no. 1, but the first movement and the variations were only finished just in time, and the latter had to be played from the autograph without rehearsal. In the opening Presto, at the pause in the 9th bar, Bridgetower introduced a Cadenza in imitation of that for the Piano in the 18th bar, fortunately to Beethoven's satisfaction (see Thayer, ii. 230). He gives it as follows:—

The sonata was published in 1805, by Simrock and Traeg, before May 18. Bridgetower averred (Thayer, ii. 231) that it was originally dedicated to him, and that the change was the result of a quarrel. Why Kreutzer was chosen is as yet a mystery. He was in Vienna with Bernadotte in 1798, but no trace of his relations with Beethoven remains, though we may assume them to have been good, for Beethoven to designate him as his 'friend.' It has been alleged as a reason that the second theme of the Presto is a phrase of Kreutzer's; but this has not been substantiated. Certainly no such passage appears in Kreutzer's violin works. The dedication on the 1st ed. stands 'Sonata per il Pianoforte ed un Violino obligato, scritta in uno stilo molto concertante, quasi come d'un Concerto. Composta e dedicata al suo amico R. Kreutzer, Membro del Conservatorio di Musica in Parigi, Primo Violino dell' Academia delle [1] Arti, e della Camera Imperiale, per L. van Beethoven. Opera 47. A Bonn chez K. Simrock. 422.' In a notebook of Beethoven's in the Imperial Library at Berlin, the second sentence appears 'in uno stilo molto *brillante*.'

Some idea of its popularity in England may be formed from the fact that it was played 44 times at the Monday Popular Concerts between 1854 and 1878, the next place being held by the Septet (33 times) and the B♭ Trio (24 times). [G.]

KROLL, FRANZ, born in 1820 at Bromberg; began with medicine, but finally devoted himself to music under the guidance of Liszt, whom he accompanied on some of his tours. He settled in Berlin, and was for some years a successful teacher. He edited the 'Wohltemperirte Clavier' for the Bachgesellschaft (14th year, 1864)—with a Preface containing a list of MSS. and Editions, and an Appendix of Variations, a highly creditable work as regards care and accuracy in collation, which Spitta has selected for honourable mention (J. S. Bach, i. 773, note). He has also published editions of Bach's chromatic fantasia, Mozart's pianoforte fantasias, and other important compositions. He was a thorough musician, and his style as a pianist was clear and eminently suggestive. He was a great sufferer for some years before his death, which took place May 28, 1877. [F.G.]

KROMMER, FRANZ, violinist and composer, born 1759 at Kamenitz in Moravia; learned music from an uncle, then Choirmaster at Turas. From 17 to 25 he acted as organist, and composed much church music, still unpublished. He next entered the band of Count Styrum [2] at Simonthurn in Hungary as violinist, and in two years was promoted to the Capellmeistership. Here he became acquainted with the works of Haydn and Mozart; and composed his pieces for wind-instruments, which are of lasting importance, and perceptibly influenced modern military music. After one or two more changes he at length became Capellmeister to Prince Grassalkowitz, after whose death he lived comfortably in

[1] The fact of Kreutzer holding these two posts in Vienna seems to imply that he remained there some time.

[2] Fétis and Mendel call him Ayrum by mistake.

Vienna, enjoying a considerable reputation as a teacher and composer. The sinecure post of doorkeeper to the Emperor was conferred upon him, and in 1818 he succeeded Kozeluch as Court Capellmeister and Composer, in which capacity he accompanied the Emperor Francis to France and Italy. He died suddenly Jan. 8, 1831, while composing a pastoral mass. As a composer he was remarkable for productiveness, and for a clear and agreeable style, most observable perhaps in his string-quartets and quintets, published at Vienna, Offenbach, and Paris. This made him a great favourite in Vienna at the close of the century. Schubert however, who as a boy of eleven had to play his Symphonies in the band of the 'Convict,' used to laugh at them, and preferred those of Kozeluch. Both are alike forgotten. Krommer also composed a number of quartets and quintets for flutes, besides the pieces for wind-instruments already mentioned. The only one of his church works printed is a mass in 4 parts with orchestra and organ (André, Offenbach). Had he not been the contemporary of Haydn and Mozart he might have enjoyed more enduring popularity. [F. G.]

KRUMMHORN (*i. e.* crooked-horn), Cromorne, Cremona, Clarionet, Corno-di-Bassetto. The various names given to an Organ Reed Stop of 8 feet size of tone. Modern English specimens, which are found under all the foregoing names except the first, are estimated in proportion as their sound resembles that of the orchestral Clarinet. The Cremonas in the organs built by Father Smith (1660) for the 'Whitehall Banqueting House,' etc., and those by Harris in his instruments at St. Sepulchre's, Snow Hill (1670), etc., were doubtless 'voiced' to imitate the first-named and now obsolete crooked-horn. They were never intended to represent the violin, into the name of which its own had nevertheless been corrupted. The pipes are of metal, cylindrical in shape, short, and of narrow measure, the CC pipe being only about 4 ft. 6 in. in length, and $1\frac{3}{4}$ in. in diameter. [E. J. H.]

KRUMPHOLZ, Johann Baptist, celebrated harpist and composer, born about 1745 at Zlonitz near Prague; son of a bandmaster in a French regiment, lived in Paris from his childhood, learning music from his father. The first public mention of him is in the 'Wiener Diarium' for 1772; he had played at a concert in the Burgtheater, and advertised for pupils on the pedal-harp. From Oct. 1773 to March 1776 he was a member of Prince Esterhazy's chapel at Esterhaz, taking lessons from Haydn in composition, and already seeking after improvements in his instrument. He next started on a concert-tour, playing at Leipzig on an 'organisirten Harfe.' He then settled in Paris, where he was highly esteemed as a teacher and virtuoso. Nadermann built a harp from his specifications, to which attention was drawn by an article in the 'Journal de Paris' (Feb. 8, 1786), and which Krumpholz described in a preface to his sonata, op. 14. His wife played some pieces on it before the Académie, Krumpholz accompanying her on the violin, and on the 'Pianoforte contrebasse' or 'Clavichord à marteau,' another instrument made by Erard from his specifications. The Académie expressed their approval of the new harp in a letter to Krumpholz (Nov. 21, 1787). He drowned himself in the Seine in 1790 from grief at the infidelity and ingratitude of his wife.

Gerber gives a list of his compositions, which are still of value. They comprise 6 grand concertos, 32 sonatas with violin accompaniment, preludes, variations, duets for 2 harps, a quartet for harp and strings, and symphonies for harp and small orchestra, published in Paris and London.

His wife, née Meyer, from [1] Metz, eloped with a young man to London. She was even a finer player than her husband, making the instrument sound almost like an Eolian harp. In London she gave her first concert at Hanover Square Rooms, June 2, 1788,[2] and for many years appeared with great success at her own and Salomon's concerts, at the oratorios in Drury Lane, and at Haydn's benefit. She frequently played Dussek's duos concertantes for harp and pianoforte with the composer. She is mentioned in 1802, but after that appears to have retired into private life.

Wenzel Krumpholz, brother of the former, born in 1750, became one of the first violins at the court-opera in Vienna in 1796. His name is immortalised by his intimacy with Beethoven, who was very fond of him, though he used to call him in joke 'mein Narr,' my fool. According to Ries[3] he gave Beethoven some instruction on the violin in Vienna. Krumpholz was one of the first to recognise Beethoven's genius, and he inspired others with his own enthusiasm. Czerny mentions this in his Autobiography,[4] and also that he introduced him to Beethoven, who offered of his own accord to give him lessons. Krumpholz also played the mandoline, and Beethoven seems to have intended writing a sonata for P.F. and mandoline for him.[5] He died May 2, 1817, aged 67, and Beethoven must have felt his death deeply, since he composed on the following day the 'Gesang der Mönche' (from Schiller's 'Wilhelm Tell'), for 3 men's voices, 'in commemoration of the sudden and unexpected death of our [6] Krumpholz.' Only two of his compositions have been printed — an 'Abendunterhaltung' for a single violin[7] (dances, variations, a short andante, etc.; Vienna and Pesth, Kunst & Industrie-Comptoir); and 'Ein Viertelstunde für eine Violine,' dedicated to Schuppanzigh (Joh. Traeg). [C. F. P.]

KÜCKEN, Friedrich Wilhelm, born at Bleckede, Hanover, Nov. 16, 1810. His father, a country gentleman, was averse to the musical proclivities of his son, and the boy had to thank his brother-in-law, Lürss, music-director and or-

[1] Or Liège, according to Gerber and Reichardt.
[2] Not 1790, as commonly stated.
[3] 'Biographische Notizen,' p. 119.
[4] He calls Krumpholz 'an old man.' He was then about 50.
[5] 'Autographische Skizze,' by Artaria. On Wenzel Krumpholz see also Thayer's 'Beethoven,' vol. ii. p. 48; the confusion between the two brothers is rectified vol. iii. p. 510.
[6] Compare Nottebohm's Thematic Catalogue, p. 161.
[7] Czerny took No. 1, a contredanse, as the theme of his XX concert variations for P. F. and violin. This, his op. 1 (Steiner, 2nd edit.), is dedicated to Krumpholz—a fine trait of gratitude.

ganist of Schwerin, for being allowed to follow his bent, which he did under Lürss and Aron in Schwerin, and as flute, viola, and violin player in the Duke's orchestra there. His early compositions, 'Ach wie wärs möglich dann' and others, became so popular that he was taken into the palace as teacher and player. But this did not satisfy him, and he made his way to Berlin, where, while studying hard at counterpoint under Birnbach, he gradually composed the songs which rendered him so famous, and have made his name a household word in his own and other countries. His opera, 'Die Flucht nach den Schweiz' (the Flight to Switzerland) was produced at Berlin in 1839, and proved very successful throughout Germany. In 1841 he went to Vienna to study under Sechter. In 1843 he conducted the great festival of male singers at St. Gall and Appenzel. Thence he went to Paris, where, with characteristic zeal and desire to learn, he studied orchestration with Halévy, and writing for the voice with Bordogni. His stay in Paris lasted for $3\frac{1}{2}$ years; thence he went to Stuttgart, and brought out (April 21, 1847) a new opera, 'Der Prätendent' (the Pretender), with the greatest success, which followed it to Hamburg and elsewhere in Germany. In 1851 he received a call to Stuttgart as joint Kapellmeister with Lindpaintner, filling the place alone after Lindpaintner's death (Aug. 21, 1856) till 1861, when he resigned. In 1863 he joined Abt and Berlioz as judges of a competition in Strassburg, and had an extraordinary reception. He composed sonatas for pianoforte and violin, pianoforte and cello, etc., but his immense popularity sprang from his songs and duets, some of which, such as 'Das Sternelein' and 'O weine nicht,' were extraordinarily beloved in their time. Almost exclusively however by amateurs and the masses; among musicians they found no favour, and are already almost forgotten. They were also very popular in England ('Trab, trab,' 'The Maid of Judah,' 'The Swallows,' duet, etc., etc.), and Kücken had an arrangement with Messrs. Wessel & Co. for the exclusive publication of them. [G.]

KÜHMSTEDT, Friedrich, born at Oldisleben, Saxe-Weimar, Dec. 20, 1809. His gift for music appeared very early and asserted itself against the resistance of his parents, so frequent in these cases. At length, when 19, he left the university of Weimar and walked to Darmstadt (a distance of full 150 miles) to ask the advice of C. H. Rinck. The visit resulted in a course of three years instruction in theoretical and practical music under that great organist. At the end of that time he returned to his family and began to write. His career however was threatened by a paralysis of his right hand, from which he never recovered, and which but for his perseverance and energy would have wrecked him. During several years he remained almost without the means of subsistence, till in 1836 he obtained the post of music-director and professor of the Seminar at Eisenach, with a pittance of £30 per annum. This however was wealth to him: he married, and the day of his wedding his wife was snatched from him by a sudden stroke as they left the church. After a period of deep distress music came to his relief and he began to compose. As he grew older and published his excellent treatises and his good music, he became famed as a teacher, and before his death was in easier circumstances. He died in harness at Eisenach, Jan. 10, 1858. His works extend to op. 49. His oratorios, operas and symphonies are forgotten, but his fame rests on his organ works—his art of preluding, op. 6 (Schotts); his Gradus ad Parnassum or introduction to the works of J. S. Bach, op. 4 (ibid); his Fantasia eroica, op. 29 (Erfurt, Körner); and many preludes, fugues, and other pieces for the organ, which are solid and effective compositions. He also published a treatise on harmony and modulation (Eisenach, Börnker, 1838). [G.]

KUFFERATH, Hubert Ferdinand, one of six brothers, all musicians, born June 10, 1808, at Mülheim, studied under Hartmann of Cologne, and Schneider of Dessau. He played a solo for the violin at the Düsseldorf Festival of 1839 so much to the satisfaction of Mendelssohn, who was conducting, that he invited him to Leipzig. There he formed one of the brilliant class for composition which included Eckert, Verhulst, and C. E. Horsley. At Mendelssohn's suggestion he studied the pianoforte, and he also took lessons on the violin from David. In 1841 he became conductor of the Männergesangverein of Cologne, which has more than once visited England. In 1844 he settled in Brussels, and in 1872 became professor of composition at the Conservatoire, a post he still retains. He has published a symphony for full orchestra; several concertos and other compositions for the Piano, and some expressive Lieder. His daughter Antonie, a pupil of Stockhausen's, was much applauded at the Düsseldorf Festival of 1878, for her fine soprano voice, and artistic singing. [F.G.]

KUHLAU, Friedrich, a musician of some distinction in his day. He was born of poor parents at Uelzen in Hanover, March 13, 1786, and had the misfortune to lose an eye at an early age. The loss did not however quench his ardour for music. During a wandering life he contrived to learn the piano and the flute, and to acquire a solid foundation of harmony and composition. Germany was at that time under French rule, and to avoid the conscription he escaped to Copenhagen, where he became the first flute in the king's band. He then settled in Denmark, acquired a house in Lyngbye, near Copenhagen, to which he fetched his parents, composed half-a-dozen operas, was made professor of music and court composer, and enjoyed a very great popularity. In the autumn of 1825 he was at Vienna, and Seyfried[1] has preserved a capital story of his expedition to Beethoven at Baden with a circle of choice friends, of the way in which the great composer dragged them at once into the open air, and of the jovial close of the day's proceedings. Kuhlau,

[1] Beethovens Studien, Anhang, p. 25. See also Beethoven's Letters (Nohl), No. 365.

inspired by champagne and the presence of Beethoven, extemporised a canon, to which Beethoven responded on the spot, but thought it wise to replace his first attempt next morning by another, which is one reiterated joke on the name of his guest—

and was accompanied by the following note :—

BADEN, 3 *September*, 1825.

I must confess that the champagne got too much into my head last night, and has once more shewn me that it rather confuses my wits than assists them; for though it is usually easy enough for me to give an answer on the spot, I declare I do not in the least recollect what I wrote last night. Think sometimes of your most faithful

BEETHOVEN.

In 1830 Kuhlau suffered two irreparable losses —the destruction of the greater part of his manuscripts by fire, and the death of his parents. This double calamity affected his health, and he died at Lyngbye March 18, 1832, leaving a mass of compositions, of which a few for flute and a few for piano are still much esteemed. [G.]

KUHNAU, JOHANN, a very remarkable old musician, Cantor of Leipzig, and one of the pillars of the German school of the clavier, born at Geysing on the borders of Bohemia in April 1667. As a boy he had a lovely voice and a strong turn for music. He was put to the Kreuzschule at Dresden, where he became a chorister under the quaint title of 'Rathsdiscantist,' and obtained regular instruction in music. On the breaking of his voice he worked the harder, and in addition to his music learned Italian. The plague in 1680 drove him home, but Geysing was no field for his talent, and he went to Zittau and worked in the school, till the excellence of a motet which he wrote for the Rathswahl, or election of the town council, procured him the post of Cantor, with a salary on which he could study at leisure. He began by lecturing on French. His next move was to Leipzig, in 1682, whither his fame had preceded him, and in that city of music he cast anchor for the rest of his life. In 1684 he succeeded Kühnel as organist at St. Thomas's. At the same time he was studying law, and qualified himself for the rank of advocate. In 1700 he was made musical director of the University and of the two principal churches, and then Cantor. After this no further rise was possible, and he died June 25, 1722, admired and honoured as one of the greatest musicians and most learned men of his time. He left translations from Hebrew, Greek, Latin, Italian, and French, and wrote satirical poetry of no common order. Of his musical works the following are named :—'Jura circa musicos ecclesiasticos' (Leipzig, 1688); 'Der musickalische Quacksalber . . . in einer kurtzweiligen und angenehmen Historie . . . beschrieben' (Dresden, 1700); 'Tractatus de tetrachordo'; 'Introductio ad compositionem'; and 'Disputatio de triade'—the three last in MS. He wrote motets on chorales, and other sacred pieces; but his clavier music is his glory, and he is the greatest figure among German composers for the clavier before Bach, who obliterated all his predecessors. He was the inventor of the sonata as a piece in several movements, not dance-tunes—the first of which, 'Eine Sonata aus dem B,' in three movements, is found in his 'Sieben Partien' (Leipzig, 1695). He followed this with 13 others—'Frische Clavier-Früchte, oder sieben Sonaten' (Dresden and Leipzig, 1696); 'Biblische Historien nebst Auslegung in sechs Sonaten'—the last a curious offspring of the musician and the divine, and a very early instance of Programme music. In addition to these he published 'Clavier-übung aus 14 Partien . . . bestehend' (Leipzig, 1689)—a collection of Suites, that is of dance-tunes. Becker has republished two of Kuhnau's pieces in his 'Ausgewählte Tonstücke'; and Pauer, who introduced several of them to the English public in his chronological performances in 1862 and 63, has printed a Suite in his 'Alte Clavier musik' (Senff) and a Sonata in his 'Alte meister' (Breitkopf). [G.]

KULLAK, THEODOR, born Sept. 12, 1818 (not 1820, as Fétis supposes), at Krotoschin in the province of Posen, where his father held the post of 'Landgerichts-sekretär.' He was first intended for the law, but preferred to devote himself to music. He was a pupil of Hauck's from his 11th year, having previously been under the tuition of Albert Agthe. In 1842 he became a pupil of Czerny, and in 1846 was made Hofpianist to the King of Prussia. He founded, in conjunction with Stern and Marx, a Conservatorium at Berlin in 1851; and in 1855, in consequence of some disagreement with his fellow-workers, he started a new institution under the name of 'Neue Akademie der Tonkunst' in the same city, where he himself continues to reside. He has devoted his attention principally to the 'drawing-room' style of composition, and has published many transcriptions and arrangements for the piano, which are very popular. Of his original works the following are the most remarkable :—Grand concerto in C minor for piano and orchestra (op. 55); Trio for piano and strings (op. 77); Duos for piano and violin; Ballades, Boleros, etc., for piano solo; 'Les Étincelles,' 'Les Danaïdes,' 'La Gazelle,' etc.; also collections of small pieces, such as 'Deux Portefeuilles de Musique,' 'Kinderleben,' 2 sets of pieces (op. 81), 'Les Fleurs animées.' Among his later works may be mentioned 'Ondine' (op. 112), 'Concert-étude' (op. 121). In 1877 he published a second edition of his 'Octave-school,' which is very valuable as an instruction book.

His brother, ADOLF KULLAK, born 1823, was a distinguished musical critic in Berlin, and wrote 'Das Musikalisch-Schöne' (Leipzig, 1858), and 'Aesthetik des Clavierspiels' (Berlin, 1861). He died in 1862 at Berlin. [J.A.F.M.]

KUMMER, Friedrich August, a great violoncellist, born at Meiningen Aug. 5 1797. His father (an oboist) migrated to Dresden, where the lad learnt the cello under Dotzauer. It was his ambition to enter the King's band, but as there was then no vacancy for a cellist, he took up the oboe, and soon attained such proficiency as to obtain the desired appointment, in Nov. 1814. In 1817 he again took up his original instrument, and in time became known as the most accomplished virtuoso in Germany. With the exception of occasional musical tours, principally in Germany and Italy, his career has been confined to Dresden. In 1864 he celebrated the 50th anniversary of his appointment as a member of the Dresden orchestra, after which he retired on a pension, and was succeeded by F. Grützmacher. He died at Dresden, May 22, 1879. Kummer's tone was at once sweet and powerful, and his command over difficulties very great. His playing however was characterised in a remarkable degree by repose, and he is described as never having been excited even when playing the most passionate or difficult passages. Kummer has been a voluminous writer for his instrument. 163 of his works have appeared in print, among which are Concertos, Fantasias, a good Violoncello School, etc. He has also composed some 200 entractes for the Dresden Theatre. Among his many distinguished pupils, Goltermann of Stuttgart, and Cossmann of Wiesbaden may be named. [T. P. H.]

KUNST DER FUGE, DIE. This work of J. S. Bach's has been already mentioned under the head Art of Fugue. It only remains to add that since that time a good analysis of it was read by Mr. James Higgs to the Musical Association, Feb. 5, 1877, and is published in their Proceedings for 1876–77. [G.]

KUNTZSCH, Johann Gottfried, one of those earnest, old-fashioned, somewhat pedantic, musicians, to whom Germany owes so much; who are born in the poorest ranks, raise themselves by unheard-of efforts and self-denial, and die without leaving any permanent mark except the pupils whom they help to form. The 'Baccalaureus Kuntzsch' was teacher of the organ and clavier at the Lyceum of Zwickau when Schumann was a small boy, and it was by him that the great composer was grounded in pianoforte playing. Kuntzsch celebrated his jubilee at Zwickau in July 1852, when Schumann wrote him a charming letter,[1] which his biographer assures us was but one of many. Schumann's studies for the pedal piano—6 pieces in canon-form (op. 56), composed in 1845 and published in 1846—are dedicated to his old master, whose name is thus happily preserved from oblivion. Kuntzsch died at a great age in 1854. [G.]

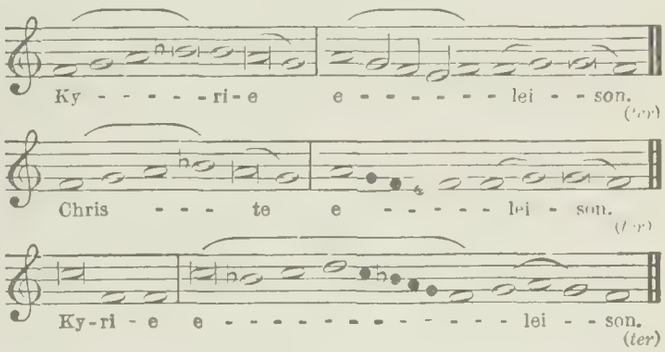
KUPSCH, Karl Gustav, demands a few lines as having been for a short time Schumann's instructor in the theory of music[2]—apparently in the latter part of 1830, after his accident to his finger. Kupsch was an average German Kapellmeister, born in Berlin, lived and worked there and in Leipzig and Dresden as teacher composer and conductor, till 1838, when he settled in Rotterdam as Director of the Singing Academy, and one of the committee of the 'Eruditio musica' Society. In 1845 he returned to Germany, became Director of the Theatre at Freiburg im Breisgau, and at Naumburg, where he died July 30, 1846. [G.]

KYRIE (Gr. Κύριε ἐλέησον; *Kyrie eleison*; 'Lord, have mercy').

I. That portion of the Ordinary of the Mass which immediately follows the Introit, and precedes the *Gloria in excelsis*: and which, at High Mass, is sung by the Choir, while the Celebrant, supported by the Deacon and Subdeacon, is occupied in incensing the Altar.

The Kyrie, in common with all other choral portions of the Mass, was originally sung exclusively to Plain Chaunt melodies, such as those which are still preserved in the Roman Gradual, and still sung, with great effect, in many Continental Cathedrals. One of these, the *Kyrie* of the *Missa pro Defunctis*, exhibited in the subjoined example, is peculiarly interesting, not only from its own inherent beauty, but, as will be presently shewn, from the use to which it was turned by Palestrina, in the Sixteenth Century.

Ton. VI.

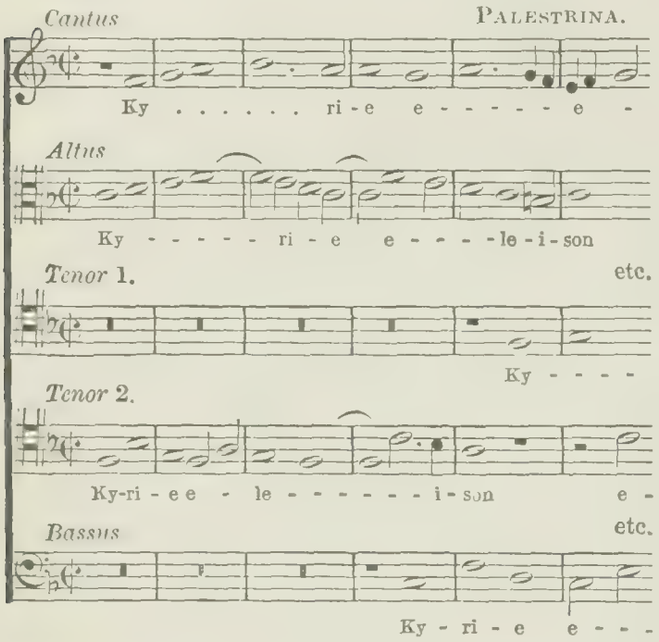


When, after the invention of Figured Music, these venerable melodies were selected as themes for the exercise of contrapuntal skill, the Kyrie naturally assumed a prominent position in the polyphonic Mass; and at once took a definite form, the broad outlines of which passed, unaltered, through the vicissitudes of many changing Schools. The construction of the words led, almost of necessity, to their separation into three distinct movements. Some of the earlier contrapuntists delighted in moulding these into Canons, of maddening complexity. The great Masters of the Sixteenth Century preferred rather to treat them as short, but well-developed Real Fugues, on three distinct subjects, the last of which was usually of a somewhat more animated character than the other two. Whether from a pious appreciation of the spirit of the words, or a desire to render the opening movement of the Mass as impressive as possible, these earnest writers never failed to treat the *Kyrie* with peculiar solemnity. In the hands of Palestrina, it frequently expresses itself in a wailing cry for mercy, the tender pathos of which transcends all power of description.

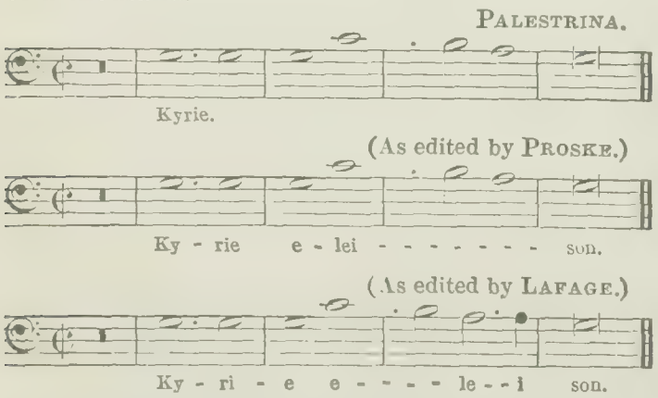
[1] Wassielewsky gives it, p. 10.

[2] Wassielewsky, p. 97.

This is pre-eminently the case, in the *Kyrie* of his *Missa brevis*, a few bars of which have already been given, as an example, under the heading HEXACHORD [vol. i. p. 735]. The same feeling is distinctly perceptible throughout the *Kyrie* of the *Missa Papæ Marcelli*; but associated, there, with a spirit of hopeful confidence which at once stamps it as the nearest approach to a perfect ideal that has ever yet been reached. More simple in construction, yet, scarcely less beautiful, is the opening movement of the same composer's *Missa pro Defunctis*, in which the Plain Chaunt *Canto fermo* given above is invested with a plaintive tenderness which entirely conceals the consummate Art displayed in its contrapuntal treatment—



The effect of these pure vocal harmonies, when sung, as they are intended to be sung, in immediate contrast to the stern unisonous Plain Chaunt of the Introit, is one which, once heard, can never be forgotten. The manner of singing them, however, requires careful consideration. One great difficulty arises from the fact, that, in the old part-books, no indication whatever is given as to the way in which the words and music are to be fitted together: and modern editors differ so much in their ideas on the subject, that no two editions are found to correspond. The following phrase from the *Kyrie* of the *Missa Papæ Marcelli* only exhibits one instance of divergence out of a thousand.



In this case, Lafage is undoubtedly right in allotting a distinct note to each syllable of the word, *Ky-ri-e*: but, nothing can justify his division of the penultimate semibreve into a dotted minim and crotchet. The second and third syllables of *e-le-i-son* can be perfectly enunciated, after the Italian manner, to a single note. In all such cases, the conductor must use his own judgment as to the best mode of procedure.

Without pausing to trace the progress of the polyphonic *Kyrie* through the decadence of the School to which it owed its existence, or the rise of that which followed—a School in which instrumental accompaniment first seriously asserted its claim to notice—we pass on to a period at which an entirely new phase of Art had already attained its highest degree of perfection. The *Kyrie* of Bach's great Mass in B minor differs, *toto cœlo*, from its polyphonic predecessors. Though moulded in the old tripartite form, its two stupendous Fugues, and the melodious and elaborately developed Duet which separates them, have nothing but that division in common with the grave slow movements of the older Masters, and are such, indeed, as Bach alone could ever have conceived. Too long for practical use, as a part of the Church Service, they unite in forming a monument of artistic excellence, representing a School, which, while it scorned to imitate anything which had gone before it, was able to defy the imitation of later composers.

The Kyries of Haydn, and Mozart—legitimate descendants of those of Pergolesi, and Jomelli—abound with beauties of a wholly different order. The well-known opening of Haydn's grand *Missa Imperialis* (in D minor) is a fiery Allegro, in which bright passages of semiquavers, and short but telling points of fugal imitation, are contrasted together with striking effect, but with very little trace of the expression which we should naturally expect in a petition for mercy. That of the favourite Mass commonly called 'Mozart's Twelfth' is too well known to need more than a passing allusion. Neither Beethoven, in his Missa Solemnis, nor Cherubini, in his great Mass in D minor, can be said to have struck out a new ideal; though both infused into the *Kyrie* an amount of dramatic power previously unknown in Church Music. In the Kyries of Rossini, and Gounod, free use is made of the same forcible means of expression, notwithstanding the feigned return to an older style, in the *Christe* of the first-named composer's *Messe Solennelle*.

In tracing the history of the *Kyrie*, from its first appearance as a polyphonic composition, to the latest development of modern times, we find, that, apart from the idiosyncratic peculiarities of varying Schools, and individual composers, it has clothed itself in no more than three distinct ideal forms; of which the first depends, for its effect, upon the expression of devotional feeling, while the second appeals more strongly to the intellect, and the third, to the power of human emotion. Each of these types may fairly lay claim to its own peculiar merits: but, if it be conceded that devotional feeling is the most necessary attribute of true Church Music, it is certain, that, whatever may be in store for the future, that particular

attribute has never hitherto been reached, in its highest perfection, in the presence of instrumental accompaniment.

II. The Response, 'Lord have mercy upon us, and incline our hearts to keep this law'; sung, in the Service of the Church of England, after the recitation of the Ten Commandments.

As the custom of reciting the Commandments during the Communion Service is of later date than the First Prayer Book of King Edward the Sixth, this Response is not found in Merbecke's 'Booke of Common Praier Noted,' which was first published in 1550: in Plain Song Services, therefore, it is usually sung to the simple melody given, by Merbecke, to the older form of *Kyrie* used in the Mass. The manner of its treatment by the earlier composers of the polyphonic School was extremely simple, and dignified: indeed, some of these Responses, as set by Tallis, (in the Dorian Mode,) Bird, Farrant, Gibbons, and other old English writers, are perfect little gems of artistic beauty. With such examples—and many excellent ones, of later date—within their reach, it is strange that Cathedral Organists should ever have countenanced the pernicious custom of 'adapting' the words of the *Kyrie* to music which—however good in itself—was never intended to be sung to them. Not very long ago, the opening bars of a Chaconne, by Jomelli, were heard in almost every Church in which the Responses were chaunted: while, within the last few years, no *Kyrie* has been so popular as one 'adapted' to a passage occurring in 'Elijah,' and generally associated with a distribution of the voice parts which Mendelssohn would have condemned as utterly barbarous. [W. S. R.]

L.

LA, the syllable used in solmisation for the sixth note in the scale, possibly derived by Guido from the sixth line of the well-known hymn to S. John—'*La*bii reatum.' It is used by the French and Italians as a synonym for A (the sixth note of the scale of C)—'Sinfonie en la de Beethoven,' and they speak of the second string of the violin as 'corde en la.' 'La bémol' is A flat.

The number of vibrations per second for the A in the treble stave is—Paris diapason 435, London Philharmonic pitch 454. The A proposed by the Society of Arts, and actually in use (1879) at H.M. Opera, 444 (eq. temp.) [G.]

LABITZKY, Josef, a well-known dance composer, born July 4, 1802, at Schönfeld, Eger, was grounded in music by Veit of Petschau; in 1820 began the world as first violin in the band at Marienbad, and in 1821 removed to a similar position at Carlsbad. He then formed an orchestra of his own, and made *tournées* in South Germany. Feeling his deficiencies, he took a course of composition under Winter, in Munich, and in 1827 published his first dances there. In 1835 he settled at Carlsbad as director of the band, making journeys from Petersburg on the one hand, to London on the other, and becoming every day more famous. He resides at Carlsbad, and has associated his son August with him as director. His second son, Wilhelm, an excellent violin player, is settled at Toronto, Canada, and his daughter is a favourite singer at Frankfort. Labitzky's dances are full of rhythm and spirit. Among his waltzes, the 'Sirenen,' 'Grenzböten,' 'Aurora,' 'Carlsbader,' and 'Lichtensteiner,' are good. In galops he fairly rivals Lanner and Strauss, though he has not the poetry of those two composers. [F. G.]

LABLACHE, Luigi, was born at Naples, Dec. 6, 1794. His mother was Irish, and his father, Nicolas Lablache, a merchant of Marseilles, had quitted that place in 1791 in consequence of the Revolution. But another Revolution, in 1799, overwhelmed him with ruin in his new country, and he died of chagrin. His family was, however, protected by Joseph Buonaparte, and the young Luigi was placed in the *Conservatorio della Pietà de' Turchini*, afterwards called *San Sebastiano*. He was now twelve years old. Gentilli taught him the elements of music, and Valesi instructed him in singing; while, at the same time, he studied the violin and violoncello under other masters. His progress was not at first remarkable, for he was wanting in application and regularity; but his aptitude was soon discovered by a singular incident. One day a contrebassist was wanted for the orchestra of S. Onofrio. Marcello-Perrino, who taught young Lablache the cello, said to him, 'You play the cello very well: you can easily learn the double bass!' The boy had a dislike for that instrument, in spite of which he got the gamut of the double bass written out for him on a Tuesday, and on the following Friday executed his part with perfect accuracy. There is no doubt, in fact, that, had he not been so splendidly endowed as a singer, he might have been equally brilliant as a virtuoso on any other instrument that he chose (Escudier). At this period his boy's voice was a beautiful contralto, the last thing that he did with which was to sing, as it was just breaking, the solos in the Requiem of Mozart on the death of Haydn in 1809. He was then 15, and his efforts to sing to the end of the work left him at last without power to produce a sound. Before many months were passed, however, he became possessed of a magnificent bass, which gradually increased in volume until, at the age of 20, it was the finest of the kind which can be remembered, with a compass of two octaves, from E♭ below to E♭ above the bass stave.

Continually dominated by the desire to appear

on the stage, the young Lablache made his escape from the Conservatorio no less than five times, and was as often brought back in disgrace. He engaged himself to sing at Salerno at 15 *ducats* a month (40 *sous* a day), and received a month's salary in advance; but, remaining two days longer at Naples, he spent the money. As he could not, however, appear decently without luggage, he filled a portmanteau with sand, and set out. Two days later he was found at Salerno by the vice-president of the Conservatorio, while the Impresario seized the effects of the young truant in order to recoup himself the salary he had advanced, but found, to his horror, nothing in the portmanteau . . . . but what Lablache had put there! (Escudier). To these escapades was due, however, the institution of a little theatre within the Conservatorio; and Lablache was satisfied for a time. A royal edict, meanwhile, forbade the Impresario of any theatre, under severe penalties, to engage a student of the Conservatorio without special permission.

Having at length completed his musical education, Lablache was engaged at the *San Carlino* Theatre at Naples, as *buffo Napolitano*, in 1812, though then only 18. He made his *début* in 'La Molinara' of Fioravanti. A few months later, he married Teresa Pinotti, the daughter of an actor engaged at the theatre and one of the best in Italy. This happy union exercised a powerful and beneficial influence over the life of Lablache. Quickly seeing his genius and capacity for development far beyond the narrow sphere in which she found him, his young wife persuaded Lablache, not without difficulty, to quit the *San Carlino*, a theatre in which two performances a day were given, ruining completely within a year every voice but that of her robust husband; to re-commence serious study of singing, and to give up the *patois* in which he had hitherto sung and spoken. Accordingly, a year later, after a short engagement at Messina, he went as *primo basso cantante* to the Opera at Palermo. His first appearance was in the 'Ser Marc-Antonio' of Pavesi, and his success was so great as to decide him to stay at Palermo for nearly five years. But it was impossible that he should remain there unknown; and the administration of *La Scala* at Milan engaged him in 1817, where he made his *début* as *Dandini* in 'Cenerentola,' with great success, due to his splendid acting and singing, and in spite of the provincial accent which still marred his pronunciation. Over the latter defect he soon triumphed, as he had over his want of application a few years before. In fact, perhaps the most remarkable things about Lablache were the extent to which he succeeded in cultivating himself, and the stores of general knowledge which he accumulated by his own unaided efforts. It is said that at Naples he had enjoyed the great advantage of the society and counsels of Madame Mericoffre, a banker's wife, known in Italy before her marriage as La Coltellini, but then quite unknown in England, though described as one of the finest artists belonging to the golden age of Italian singing. To such influence as this, and to that of his intelligent wife, Lablache perhaps owed some of the impulse which prompted him to continue to study when most singers cease to learn and content themselves with reaping the harvest; but much must have been due to his own desire for improvement.

The opera 'Elisa e Claudio' was now (1821) written for him by Mercadante; his position was made, and his reputation spread throughout Europe. From Milan he went to Turin; returned to Milan in 1822, then appeared at Venice, and in 1824 at Vienna, and always with the same success. At the last city he received from the enthusiastic inhabitants a gold medal bearing a most flattering inscription. After twelve years absence he returned to Naples, with the title of singer in the chapel of Ferdinand I., and with an engagement at the San Carlo. Here he created a great sensation as *Assur* in 'Semiramide.' Two years later we find him at Parma, singing in Bellini's 'Zaira.' Although Ebers had endeavoured, as early as 1822, to secure him for London, on the strength of his reputation as 'perhaps even excelling Zucchini,' Lablache did not tread the English boards till the season of 1830, when he made his *début* on the 30th March in the 'Matrimonio segreto.' Here, as elsewhere, his success was assured from the moment when he sang his first note, almost from the first step he took upon the stage. It is indeed doubtful whether he was greater as a singer or as an actor. His head was noble, his figure very tall, and so atoning for his bulk, which became immense in later years: yet he never looked too tall on the stage. One of the boots of Lablache would have made a small portmanteau; 'one could have clad a child in one of his gloves' (Chorley). His strength was enormous. As *Leporello*, he sometimes carried off under his arm, apparently without effort, the troublesome *Masetto*, represented by Giubilei, a man of the full height and weight of ordinary men! Again, in an interval of tedious rehearsing, he was once seen on the stage to pick up with one hand a double bass that was standing in the orchestra, examine it at arm's length, and gently replace it where he had found it! The force of his voice exceeded, when he chose, the tone of the instruments that accompanied it and the noise and clamour of the stage; nothing drowned his portentous notes, which rang through the house like the booming of a great bell. On one occasion, indeed, his wife is said to have been woke up by a sound, in the middle of the night, which she took for the tocsin announcing a fire, but which turned out to be nothing more than Lablache producing in his sleep these bell-like sounds. It was during the great popularity of 'I Puritani,' when Grisi, accompanied by Lablache, was in the habit of singing the polacca thrice a week at the Opera, and frequently also at concerts. After performing his *staccato* part in the duet thrice within nine hours, Lablache was haunted by it even in his sleep. This power was wisely used by the great artist on the right occasions, and only then—as

the deaf and angry *Geronimo*, or as *Oroveso* in 'Norma'; but at other times his voice could 'roar as sweetly as any sucking dove,' and he could use its accents for comic, humorous, tender, or sorrowful effects, with equal ease and mastery.

Like Garrick, and other great artists, Lablache shone as much in comic as in tragic parts. Nothing could exceed his *Leporello*; of that character he was doubtless the greatest known exponent. But he had, at an earlier date, played *Don Giovanni*. As *Geronimo*, the *Podestà* in 'La Gazza Ladra,' again, in 'La Prova d'un' Opera Seria,' as *Dandini* and the *Barone di Montefiascone*, he was equally unapproachable; while his *Henry VIII.* in 'Anna Bolena,' his *Doge* in 'Marino Faliero,' and *Oroveso* in 'Norma,' were splendid examples of dignity and dramatic force. He appeared for the first time in Paris, Nov. 4, 1830, as *Geronimo* in the 'Matrimonio Segreto,' and was there also recognised immediately as the first *basso cantante* of the day. He continued to sing in Paris and London for several years; and, it may be mentioned that his terms were in 1828, for four months, 40,000 frs. (£1,600), with lodging and one benefit-night clear of all expenses, the opera and his part in it to be chosen by himself on that occasion, as also at his *début*. The modest sum named above, in no degree corresponding with the value of Lablache in an operatic company, was a few years later (1839) the price paid by Laporte to Robert, to whom Lablache was then engaged at Paris, for the mere cession of his services to the London Opera.

In 1833 Lablache sang again at Naples, renewing his triumphs in the 'Elisire d'amore' and 'Don Pasquale.' He returned to Paris in 1834, after which he continued to appear annually there and in London, singing in our provincial festivals as well as at the Opera, for many years. In 1852 he sang at St. Petersburg with no less éclat than elsewhere. In London, near the close of his career, at a time when most artists are liable to become dull and mechanical, he broke out into the personification of two beings as different from each other and from the types hitherto represented by him as Shakspere's *Caliban* and Scribe's Calmuck *Gritzonko*, in 'L'Étoile du Nord,' with a vivacity, a profound stage-knowledge, and a versatility, which were as rare as they were strongly marked (Chorley). But he had qualities as sterling as others which were fascinating. Whether in comic opera, in the chromatic music of Spohr, or in that of Palestrina, he seemed equally at home. Let it be never forgotten that he sang (April 3, 1827) the bass solo part in Mozart's Requiem after the death of Beethoven, as he had, when a child, sung the contralto part at the funeral of Haydn; and let the former fact be a sufficient answer to those who say he had no notes lower than A or G. Be it recorded, at the same time, that he paid Barbaja 200 guldens for the operatic singers engaged on that occasion. He was also one of the 32 torch-bearers who surrounded the coffin of Beethoven at its interment. To him, again, Schubert dedicated his three Italian songs (op. 83), written to Metastasio's words and composed in 1827, showing thus his appreciation of the powers of the great Italian.

In 1856, however, his health began to fail, and he was obliged in the following spring to drink the waters of Kissingen, where he was met and treated with honour by Alexander II. of Russia. Lablache received the medal and order given by the Emperor with the prophetic words, 'These will do to ornament my coffin.' After this he returned for a few days in August to his house at Maisons-Laffitte, near Paris; but left it on the 18th, to try the effect of his native climate at his villa at Posilipo. But the bright, brisk air was too keen for him, and he had to take refuge in Naples. The relief, however, served only to prolong his life a short while, and he died Jan. 23, 1858. His remains were brought to Paris, and buried at Maisons-Lafitte.

Lablache had two sisters, the elder of whom became Marchesa de Braida, and the younger Abbess of Sessa. He had many children, among whom Frederick, the eldest son, followed his father's steps, but not with the same success. The youngest is an officer in the French army. Of his daughters, one married the great pianist, Thalberg. A *Méthode de chant*, written by Lablache, was published chez Mme. Vve Canaux, at Paris; but it rather disappointed expectation.

Lablache died, as he had lived, respected by every one who knew him for his honourable, upright probity, as he was admired for his marvellous and cultivated talents. [J.M.]

He was the Queen's singing master, and the esteem and even affection which that intercourse engendered are expressed more than once in warm terms in her Majesty's published Diaries and Letters.

LAC DES FÉES, LE. Opera in 5 acts; words by Scribe and Mélesville, music by Auber. Produced at the Grand Opera April 1, 1839. The overture alone has survived. [G.]

LACHNER, a prominent musical family of this century. The father was an organist at Rain, on the Lech, in Bavaria, very poor and with a very large family, but not the less a man of worth and character. He was twice married. One of the first family, THEODOR, born 1798, was a sound musician, but unambitious, who ended his career as organist at Munich, and chorus-master at the Court theatre. The second family were more remarkable. Of the daughters, THEKLA, born 1803, was recently organist of S. George's church, Augsburg, and CHRISTIANE, born 1805, held the same post in her native place. Of the brothers, FRANZ was born April 2, 1804. He was solidly educated in other things beside music, but music was his desire, and in 1822 he prevailed on his parents to let him go to Vienna. He put himself under Stadler and Sechter, and was constantly in Schubert's company, with whom he became very intimate. In 1826 he was made Vice-Kapellmeister of the Kärnthnerthor theatre, and the next year, on the death of Weigl, principal Kapellmeister. He retained this post till 1834, and it was a time of great productivity. In

34 he went to Mannheim to conduct the opera there, and in 36 advanced to the top of the ladder as Hofkapellmeister—in 1852 general music director—at Munich, and there remained till 1865, when he retired on a pension. Lachner's writings are of prodigious number and extent. An oratorio, and a sacred cantata; 4 operas; requiems; 3 grand masses; various cantatas, entr'actes, and other pieces; many large compositions for male voices; 8 symphonies—among them those in D minor (No. 3), in C minor (op. 52)—which won the prize offered by the Gesellschaft der Musikfreunde—and in D (No. 6), which Schumann finds twice as good as the prize one—suites, overtures and serenades for orchestra, the orchestration of Schubert's 'Song of Miriam'; 3 quartets; concertos for harp and bassoon; trios, duos, pianoforte pieces of all dimensions; and a large number of vocal pieces for solo and several voices. All that industry, knowledge, tact, and musicianship can give is here—if there were but a little more of the sacred fire! No one can deny to Lachner the praise of conscientiousness and artistic character; he is deservedly esteemed by his countrymen almost as if he were an old classic, and holds a similar position in the South to that of Hiller in the North. The next brother, Ignaz, was born in 1807, was brought up to music, and at 12 years old was sent to the Gymnasium at Augsburg, where he is said to have had no less a person than Napoleon III. (then Count St. Leu) as a schoolfellow. In 1824 he joined his brother at Vienna, in 1825 was made Vice-Kapellmeister of the opera; in 1831 a Court music-director at Stuttgart, and in 1842 rejoined his brother in a similar position at Munich. In 53 he took the conduct of the theatre at Hamburg, in 58 was made Court Kapellmeister at Stockholm; and in 61 settled down for good at Frankfort, where he fills many musical positions, and celebrated his 50th anniversary on Oct. 18, 1875. He also has produced a long list of works—3 operas; several ballets, melodramas, etc., etc.; with masses, symphonies, quartets, pianoforte works, and many songs, one of which—'Überall Du'—was very popular in its day. The third brother, Vincenz, was born July 19, 1811, and also brought up at the Augsburg Gymnasium. He began by taking Ignaz's place as organist in Vienna, and rose by the same course of goodness and indefatigable assiduity as his brothers, to be Court Kapellmeister at Mannheim from 1836 till 73, when he retired on a pension. He was in London in 42, conducting the German Company. His music to Turandot, his Prize song 'In der Ferne,' and other pieces, are favourites with his countrymen. [G.]

LACHNITH, Ludwig Wenzel, born July 7, 1746, at Prague, migrated to the service of the Duke at Zweibrücken, and thence to Paris, where he made his début at the Concert Spirituel as a horn player. He was a clever handy creature, who wrote not only quantities of all kinds of instrumental music, but at least four operas, and several pasticcios and other pieces. His most notable achievements however, were his adaptations of great operas, by way of making them pleasant to the public, such as 'Les mystères d'Isis,' for which both libretto and music of the Magic Flute were 'arranged' into what M. Fétis calls 'a monstrous [1]compilation' (Grand Opera, Aug. 20, 1801). No wonder that the piece was called 'Les misères d'ici,' and that Lachnith was styled 'le dérangeur.' He was clever also at working up the music of several composers into one piece, and torturing it to the expression of different words and sentiments from those to which it had originally been set—as 'Le Laboureur Chinois,' in which the music of 'several celebrated composers' was 'arrangée par M. Lachnitch' (Feb. 5, 1813). In these crimes he had an accomplice in the elder Kalkbrenner, who assisted him to concoct two 'Oratorios in action'—Saul (April 6, 1803) and 'The taking of Jericho' (April 11, 1805). We were as bad in England several years later, and many fine operas of Rossini, Auber, and quasi-Weber were first made known to Londoners by much the same expedients as those of Lachnith, in the hands of T. P. Cooke, Lacy, and others. [G.]

LACY, John, bass singer, born in the last quarter of last century, was a pupil of Rauzzini at Bath. After singing in London he went to Italy, where he became complete master of the Italian language and style of singing. On his return he sang at concerts and the Lenten oratorios, but although he possessed an exceptionally fine voice and sang admirably in various styles, circumstances prevented him from taking any prominent position. In 1818 he accepted an engagement at Calcutta, and, accompanied by his wife, left England, to which he never returned. Had he remained here he would most probably have been appointed successor to Bartleman.

Mrs. Lacy, his wife, was originally Miss Jackson, and appeared as a soprano singer at the Concert of Ancient Music, April 25, 1798. In 1800 she became the wife of Francesco Bianchi, the composer, and in 1810 his widow. In 1812 she was married to Lacy, and sang as Mrs. Bianchi Lacy in 1812, 13, and 14. She 'was the best representative of the great and simple style as delivered down by Mrs. Bates and Madame Mara, whilst her articulate delivery and pure pronunciation of Italian, rendered her no less generally valuable in other departments of the art.' [W. H. H.]

LACY, Michael Rophino, son of an English merchant, born at Bilbao, July 19, 1795; learned music from an early age, and made rapid progress on the violin; was at college at Bourdeaux for 18 months, and in 1803 was sent to Paris to finish his education, and attained to considerable skill as a linguist. Kreutzer was his principal instructor in music. About the end of 1804 he performed before Napoleon at the Tuileries. He was then known as 'Le petit Espagnol.' He played in the principal Dutch

[1] See the account by O. Jahn (Mozart, 2nd ed., ii. 537). The magic flute and all the comic music were omitted; Papageno was turned into a shepherd sage; while many pieces were left out, others were put in—as for instance 'Fin ch'an dal vino,' *arranged as a duet!* The opera opened with Mozart's finale, and the disorder must have been complete. And yet it ran 49 nights!

towns on his way to London, which he reached in Oct. 1805. He soon gave concerts at Hanover Square Rooms, under the sobriquet of 'The Young Spaniard,' his name not being announced until May, 1807, when an engraved portrait of him was published. He next performed at Catalani's first concert in Dublin, and was afterwards engaged for Corri's concerts at Edinburgh at 20 guineas per night. A few years later he quitted the musical for the theatrical profession, and performed the principal genteel comedy parts at the theatres of Dublin, Edinburgh, Glasgow, etc. In 1818 he was appointed leader of the Liverpool concerts *vice* Yaniewicz, and at the end of 1820 returned to London and was engaged as leader of the ballet at the King's Theatre. Lacy adapted to the English stage both words and music of several popular operas; and his adaptations display great skill, although gross liberties were frequently taken with the original pieces, which can only be excused by the taste of the time. Among them are 'The Maid of Judah' from 'Ivanhoe,' the music from 'Semiramide,' 1829; 'Cinderella,' the music from Rossini's 'Cenerentola,' 'Armida,' 'Maometto Secondo,' and 'Guillaume Tell,' 1830; 'Fra Diavolo,' 1831; and 'Robert le Diable,' under the title of 'The Fiend Father,' 1832. In 1833 he produced an oratorio entitled 'The Israelites in Egypt,' a *pasticcio* from Rossini's 'Mosè in Egitto,' and Handel's 'Israel in Egypt,' which was performed with scenery, dresses, and personation. In 1839 he brought forward a readaptation of Weber's 'Der Freischütz,' introducing the whole of the music for the first time. He rendered great assistance to Mr. Schœlcher in collecting the material for his 'Life of Handel.' He died at Pentonville, Sept. 20, 1867. [W.H.H.]

LADY HENRIETTE, OU LA SERVANTE DE GREENWICH. A ballet pantomine in 3 acts; music by Flotow, Burgmüller, and Deldevez. Produced at the Grand Opera Feb. 1, 1844. Saint Georges, by whom the libretto was written, afterwards extended it into an opera, which was set by Flotow as MARTHA. [G.]

LADY OF THE LAKE, THE. A cantata in 2 parts; the text founded on Scott's poem by Natalia Macfarren, the music by Professor G. A. Macfarren. Written for and produced at Glasgow New Public Hall Nov. 15, 1877. [G.]

LÄNDLER, LÄNDERER, or LÄNDLERISCHE TANZ, a national dance popular in Austria, Bavaria, Bohemia, and Styria. It probably derives its name from the Landel, a district in the valley of the Ens, where the dance is said to have had its origin; but according to some authorities the word simply means 'country dance,' *i.e.* a waltz danced in a country fashion. In fact the Ländler is a homely waltz, and only differs from the waltz in being danced more slowly. It is in 3–4 or 3–8 time, and consists of two parts of eight bars, each part being repeated two or more times. Like most early dances, it occasionally has a vocal accompaniment. Both Mozart (Köchel, No. 606) and Beethoven (Nottebohm's Cat. p. 150, 151) have written genuine Ländler, but the compositions under this name of Jensen, Raff, Reinecke, and other modern musicians, have little in common with the original dance. The following example is the first part of a Styrian Ländler (Köhler, Volkstänze; Brunswick, 1854).

The little waltz so well known as 'Le Désir,' usually attributed to Beethoven, though really composed by Schubert, is a Ländler. To know what grace and beauty can be infused into this simple form one must hear Schubert's 'Wiener Damen-Ländler' or 'Belles Viennoises' in their unsophisticated form, before they were treated by Liszt. [W.B.S.]

LA FAGE, JUSTE ADRIEN LENOIR DE, born in Paris, March 28, 1801, grandson of the celebrated architect Lenoir. After trying education for the church and the army, he settled to music as a pupil of Perne's for harmony and counterpoint, devoting himself especially to the study of plain-chant. Perne recommended him to Choron, who took him first as pupil, and then as répétiteur, or assistant-master. In 1828 he was sent by the government to Rome and studied for a year under Baini. While in Italy he produced a comic opera 'I Creditori,' but comic opera was not to be his road to distinction. On his return to Paris, in Dec. 1829, he was appointed maitre de chapelle of St. Etienne du Mont, where he substituted an organ (built by John Abbey) for the harsh out-of-tune serpent hitherto used to accompany the voices—an excellent innovation! 1833 to 36 he spent in Italy, and lost his wife and son. He returned to Paris, and there published the 'Manuel complet de Musique' (1836-38), the first chapters of which had been prepared by Choron; 'Séméiologie musicale'; 'Miscellanées musicales'; 'Histoire générale de la musique,' and many biographical and critical articles collected from periodicals. He again visited Italy after the Revolution of 1848, and during this trip took copies of MSS. never before consulted. He also visited Germany and Spain, and during the Exhibition of 1851 made a short excursion to England. He then settled finally in Paris, and published the works which have placed him in the first rank of 'musicists'—to use a favourite word of his own. Over-work as an author, and as editor in chief of 'Le Plain-Chant,' a periodical which he founded in 1859, brought on a nervous affection, which ultimately led to his removal to the asylum for the insane at Charenton, where he died March 8, 1862.

La Fage composed much music of many kinds,

both vocal and instrumental, sacred and secular, but it is as a historian and didactic writer that his name will live. His 'Cours complet de Plain-Chant' (Paris 1855–56, 2 vols 8vo.) is a book of the first order, and fully justifies its title. It was succeeded by the 'Nouveau Traité de Plain-Chant romain,' with questions, an indispensable supplement to the former. His 'Histoire générale de la musique' (Paris 1844, 2 vols. 8vo., with an album of plates) is incomplete, treating only of Chinese, Indian, Egyptian, and Hebrew music, but it is a careful and conscientious work, and has been largely used by Fétis. His learning and method appear conspicuously in his 'Extraits du Catalogue critique et raisonné d'une petite bibliothèque musicale' (Rennes, undated, 120 pp. 8vo., 100 copies only), and in his 'Essais de Diphthérographie musicale' (Paris, 1864, 2 vols. 8vo., one containing very curious musical examples). A perusal of these two books will amply corroborate every word we have said in praise of this erudite musician. He left a valuable library (the catalogue was published, Paris 1862, 8vo.), afterwards dispersed by auction; but his unpublished works and materials are in the Bibliothèque nationale, to which he bequeathed all his papers, with the MSS. of Choron and Baini in his possession. [G. C.]

LAFONT, Charles Philippe, an eminent violinist, was born at Paris in 1781. Fétis relates that he got his first instruction on the violin from his mother, a sister of Bertheaume, a well-known violinist of that period, whom he also accompanied on his travels through Germany, performing successfully, when only eleven years of age, at Hamburg, Oldenburg and other towns. On his return to Paris he continued his studies under Kreutzer; and soon appeared at the Théâtre Feydeau, though not as a violinist, but as a singer of French ballads. After some time he again took up the violin, this time under the tuition of Rode, and soon proved himself a player of exceptional merit. Fétis credits him with a perfect intonation, a pure and mellow, though somewhat feeble tone, great powers of execution, and a remarkable charm of expression. From 1801 to 1808 he travelled and played with great success in France, Belgium, Holland, Germany and Russia. In 1808 he was appointed Rode's successor as solo-violinist to the Emperor of Russia, a position in which he remained for six years. In 1812 he had a public contest with Paganini at Milan. In 1815 he returned to Paris, and was appointed solo-violinist to Louis XVIII. In 1831 he made a long tour with Henri Herz, the pianist, which occupied him till 1839, when his career was suddenly ended by a carriage accident in the south of France, through which he lost his life.

Spohr in his Autobiography praises his fine tone, perfect intonation, energy and gracefulness, but deplores the absence of deep feeling, and accuses him of mannerism in phrasing. He also relates that Lafont's repertoire was confined to a very few pieces, and that he would practise a concerto for years before venturing on it in public,—a method which, although leading to absolute mechanical perfection, appears absurd from an artistic or even musical point of view. Lafont's compositions for the violin are of no musical value; they comprise seven Concertos, a number of Fantasias, Rondos, etc. He wrote a number of Duos concertants in conjunction with Kalkbrenner, Herz, etc.; more than 200 ballads (romances), which for a time were very popular; and two operas. [P. D.]

LAGARDE, a French basso, who sang the part of *Farasmane* in Handel's 'Radamisto,' on the revival of that opera in Dec. 1720, with Senesino. It is not known who played *Farasmane* at the former performances; perhaps Lagarde. He does not appear again in the casts. [J. M.]

LAGUERRE, Jean, commonly called Jack, was the son of Louis Laguerre, the artist who painted the greater part of Verrio's large picture in St. Bartholomew's Hospital, the 'Labours of Hercules' in chiar'oscuro at Hampton Court, the staircase at Wilton, etc., and is immortalized by Pope in the line

'Where sprawl the saints of Verrio and Laguerre.'

This painter came to England in 1683, and died in 1721, his son Jean having, as it is supposed, been born about 1700. The lad was instructed by his father for his own profession, and had already shown some ability; but, having a talent for music, he took to the stage, where he met with fair success. It must be he whom we find, under the name of *Mr. Legar*, playing the part of *Metius* in Camilla (revived), 1726, which had formerly (1706 and 8) been sung by Ramondon, a low tenor. Again, he is advertized (*Daily Journal*, March 13, 1731) as sustaining the added rôle of *Corydon* in 'Acis and Galatea,' 'for the benefit of *M. Rochetti*, at Lincoln's Inn Theatre Royal, on Friday, 26th,' his name being spelled as in the cast of 'Camilla.' He died in London in 1748.

Laguerre has been described as 'a high fellow, a great humourist, wit, singer, player, caricaturist, mimic, and a good scene-painter; and, according to the notions of that merry age, known to everybody worth knowing.' He engraved a set of prints of 'Hob in the Well,' which had a great sale, though indifferently executed; but we also owe to his point an exceedingly clever etching, 'The Stage Mutiny' (Br. Mus. Cat. 1929), in which we have caricature-portraits of Colley and Theo. Cibber (as Pistol), Highmore, Mrs. Wilks, Ellis, Griffin, Johnson, and others. Hogarth did not disdain to copy this interesting print, having used it on the show-cloth in 'Southwark Fair' (Br. Mus. Cat. 1960).

As a painter, Laguerre was the author of the portrait of Mary Tofts, not the singer but the pretended rabbit-breeder, engraved by J. Faber in mezzotint. He also painted the portrait of Spiller for the *Spiller's Head* tavern, as we learn from that actor's epitaph, which begins thus:—

'The butchers' wives fall in hysteric fits;
For, sure as they're alive, poor Spiller's dead;
But, thanks to Jack Laguerre, we've got his head.'

[J. M.]

LAIDLAW, Anna Robena, a lady whom Schumann distinguished by dedicating to her his Fantasiestücke (op. 12), was a Yorkshirewoman, born at Bretton April 30, 1819, educated in Edinburgh at the school of her aunt, and in music by Robert Müller, a pianoforte teacher there. Her family went to Königsberg in 1830, and there her vocation was decided, she improved in playing rapidly, and in three or four years appeared in public at Berlin with great applause. In 34 she was in London studying under Herz, and played at Paganini s farewell concert. In 36 she returned to Berlin, and after a lengthened tour through Prussia, Russia and Austria, returned in 1840 to London. It was during this last stay in Germany that the Fantasiestücke were written. [G.]

LAJARTE, Théodore de, one of the librarians of the Grand Opera, Paris (Académie de Musique), author of a book for which every student of musical history must be grateful to him, viz. a Catalogue, historical, chronological and anecdotic, of the Musical Library of the Opera, etc., 2 vols. with 7 portraits—beautifully etched by Le Rat—and a view. It contains an Introduction, describing the library; a list, in order of production, of the 594 pieces which have been produced at the Opera between 'Pomone,' March 19, 1671, and 'Sylvia,' June 14, 1876, with the names of the singers, remarks on the piece, its success or non-success, and often extracts from the libretto; biographical notices of composers and librettists; a supplementary list of 'œuvres diverses,' comprising 49 operas, received but not produced, and of which the MSS. are preserved—and of other music engraved and MS.; and to complete, two indexes of titles and names. The work is admirably done, apparently with great accuracy, and is not only a boon to the reader but a striking evidence of the superior system under which these things are managed in Paris. [G.]

LAJEUNESSE, the family name of Madlle. Marie Emma Albani, who was born in 1851 of French Canadian parents, at Chambly, near Montreal, and is therefore an English subject. Her father was a professor of the harp, and she began life in a musical atmosphere. At the age of five the family removed to Montreal, and Madlle. Lajeunesse entered the school of the Convent of the Sacre Cœur. Here she remained several years, with such instruction in singing as the convent could afford, and she is said to have abandoned the idea of adopting a religious life on the representation of the Superior of the convent, who discovered the great qualities of her pupil.

In the year 1864 the family again removed, this time to Albany, the capital of the State of New York; and while pursuing her studies there Madlle. Lajeunesse sang in the choir of the Catholic cathedral, and thus attracted the notice not only of the public but of the Catholic bishop, who strongly urged M. Lajeunesse to take his daughter to Europe and place her under proper masters for the development of so remarkable a talent. A concert was given in Albany to raise the necessary funds, after which Madlle. Lajeunesse proceeded to Paris with her father. From Paris, after studying with Duprez for eight months, she went to Lamperti at Milan, with whom she remained for a considerable time. The relation between the master and his gifted pupil may be gathered by the fact that his treatise on the Shake is dedicated to her. In 1870 she made her début at Messina in the Sonnambula, under the name of Albani, in memory of the city in which her resolution to become a singer was carried into effect. She then sang for a time at the Pergola, Florence. Her first appearance in London was at the Royal Italian Opera, Covent Garden, on April 2, 1872. The beautiful qualities of her voice and the charm of her appearance were at once appreciated, and she grew in favour during the whole of the season. Later in the year she made a very successful appearance at the Italian Opera of Paris. She then returned to Milan, and passed several months in hard study under her former master. 1873 saw her again at Covent Garden. In the autumn she sang at St. Petersburg, and between that and her next London season, re-visited America and sang once more in the cathedral at Albany. Since then Madlle. Albani has appeared regularly at Covent Garden, and is now one of the permanent ornaments of that theatre. On Aug. 6, 1878, she married Mr. Ernest Gye, who, since his father's death (Dec. 4, 1878), has been lessee of the theatre. It is sufficient to name her principal parts—Amina (Sonnambula), Margherita (Faust), Mignon, Ophelia, Elsa (Lohengrin), Lucia, Linda, Gilda (Rigoletto), Elisabetta (Tannhäuser), to indicate the wide range of her vocal talent. Since 1872 she has sung every autumn at one or more of our great provincial festivals. Her voice is a light soprano of great beauty and very sympathetic quality, especially telling in the higher registers. She is in addition a fine pianoforte player. [H. S. E.]

LALANDE, Henriette-Clémentine Méric, the daughter of Lamiraux-Lalande, the chief of a provincial operatic company, was born at Dunkerque in 1798. Having been taught music by her father, she soon developed a fresh and ringing voice, and was endowed with excellent memory and intelligence; but the only teaching she really had was in the music of the parts entrusted to her. She made her *début* with success in 1814 at Naples: Fétis heard her, and admired her as an actress of opéra comique, at Douai in the following year. She continued to sing till 1822, with equal success, in the principal towns of France, and was then engaged at the *Gymnase Dramatique* at Paris, Ebers having made an unsuccessful attempt to engage her for London. Clever enough to perceive, however, after hearing the singers at the Italian Opera, how utterly she was without the knowledge of the proper manner of producing her voice, she took lessons of Garcia, and made her first appearance, April 3, 1823, in 'Les Folies amoureuses,' a pasticcio arranged by Castil-Blaze. About this time she became the wife of M. Méric,

a horn-player at the Opéra Comique. Rejecting the offer of an engagement at the latter theatre, on Garcia's advice, she went to Italy, and received additional teaching from Bonfichi and Banderali at Milan. After singing with increased éclat at Venice, Munich, Brescia, Cremona, Venice (again), and other Italian cities, she at length appeared in London during the season of 1830. 'She had been for six years reported to be one of the best singers of Italy—much had been expected of her . . . She had been compared with the best of the best; but she arrived in England too late, and her place, moreover, had been filled by women of greater genius. She was a good musician, and sang with taste; but her voice, a soprano, ere she came had contracted a habit of trembling, in those days a novelty (would it had always remained so!), to which English ears were then averse. She gave little satisfaction' (Chorley). Mme. Méric sang, however, again in London in 1831. In Paris she pleased no better in these latter years, and at length retired, in 1833, as it is said, to Spain; since then no more has been heard of her. A biography, with a portrait, of Mme. Méric-Lalande was published in the musical journal, *Teatro della Fenice*, Venice, 1826, 18mo. [J.M.]

LALLA ROOKH. Moore's poem has been the parent of several musical compositions.

1. An opera, by C. E. Horn; produced in Dublin in or about 1820. 2. A ditto by Felicien David. [See LALLA ROUKH.] 3. A ditto in 2 acts; words by Rodenberg, music by Rubinstein; produced at Dresden in March, 1863. The name of the piece has since been changed to Feramors. 4. Das Paradies und die Peri, by Schumann; and 5. Paradise and the Peri, a Fantasie-Overture by Sterndale Bennett. For these two last see their own headings. [G.]

LALLA ROUKH. Opera in 2 acts, founded on Moore's poem; words by Lucas and Carré, music by Felicien David. Produced at the Opéra Comique May 12, 1862. [G.]

LAMB, BENJAMIN, organist of Eton College in the first quarter of the 18th century, and also verger of St. George's Chapel, Windsor, was the composer of some church music. An evening 'Cantate' service and four anthems by him are in the Tudway collection (Harl. MSS. 7341–42). He was also a composer of songs. [W.H.H.]

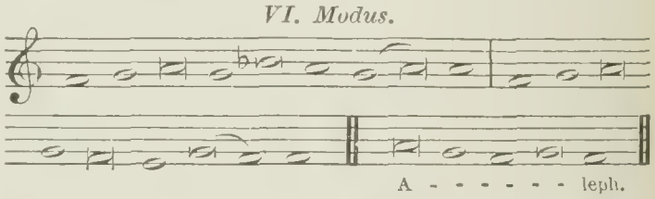
LAMBERT, GEORGE JACKSON, son of George Lambert, organist of Beverley Minster, was born at Beverley in 1795. He studied under his father until he was sixteen, then in London under Samuel Thomas Lyon, and finally became a pupil of Dr. Crotch. In 1818 he succeeded his father at Beverley. His compositions include overtures, instrumental chamber music, organ fugues, pianoforte pieces, etc. In 1874 ill health and deafness compelled him to relinquish his post and retire from active life.

The two Lamberts successively held the office of organist of Beverley Minster for the long period of 96 years, the father for 40 and the son for 56 years, and but for the latter's deafness would have held it for a century, a circumstance probably unparalleled. [W.H.H.]

LAMENTATIONS (Lat. *Lamentationes Hieremiæ*). On the Thursday, Friday, and Saturday, in Holy Week, the three First Lessons appointed, in the Roman Breviary, for the Office called *Tenebræ*, are taken from the Lamentations of Jeremiah; and the extraordinary beauty of the music to which they are sung, in the Sistine Chapel, and other large Churches, contributes not a little to the impressive character of the Service. [See TENEBRÆ.]

It is impossible to trace to its origin the Plain Chaunt melody to which the Lamentations were anciently adapted. The most celebrated version—though not, perhaps, the purest—is that printed by Guidetti, in his 'Directorium Chori,' in 1582. The best modern editions are those contained in the Mechlin 'Graduale,' and the Mechlin, and Ratisbon, 'Officium Hebdomadæ Sanctæ'; in which the Lessons are given, at full length, in Gregorian notation, although the music is really no more than a simple Chaunt, in the Sixth Mode, repeated, almost *notatim*, not only to each separate verse of the Sacred Text, but even to the prefatory 'Incipit Lamentatio Jeremiæ Prophetæ,' and the names of the Hebrew letters with which the several paragraphs are introduced.

VI. Modus.

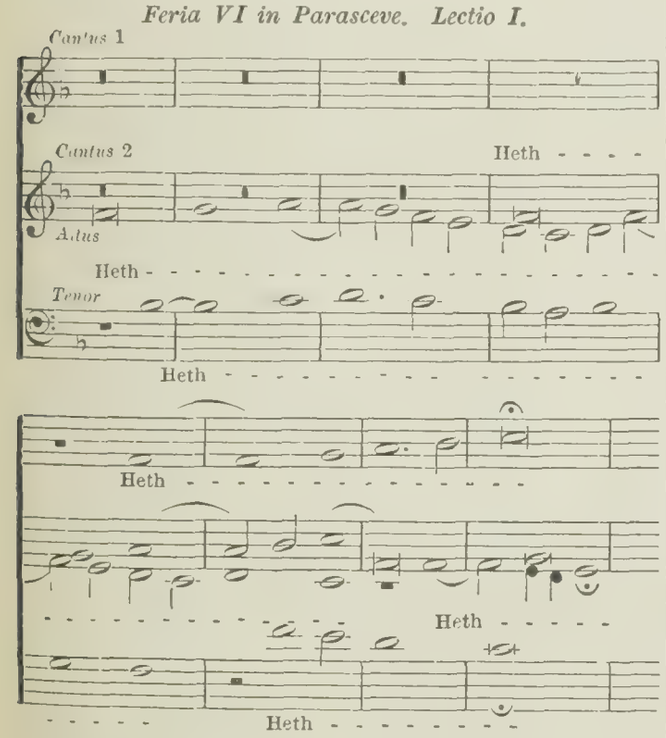


Early in the 16th century, the use of the Plain Chaunt Lamentations was discontinued, in the Pontifical Chapel, to make room for a polyphonic setting, by Elziario Genet—more commonly known by his Italian cognomen, Carpentrasso—who held the appointment of Maestro di Capella, from 1515 to 1526. These compositions remained in constant use, till the year 1587, when Pope Sixtus V. ordained, that the First Lamentation for each day should be adapted to some kind of polyphonic music better fitted to express the mournful character of the words than that of Carpentrasso; and, that the Second and Third Lessons should be sung, by a single Soprano, to the old Plain Chaunt melody as revised by Guidetti. The disuse of Carpentrasso's time-honoured harmonies gave great offence to the Choir: but, the Pope's command being absolute, Palestrina composed some music to the First Lamentation for Good Friday, in a manner so impressive, that all opposition was at once silenced; and the Pope, himself, on leaving the Chapel, said, that he hoped, in the following year, to hear the other two First Lessons sung in exactly the same style. The expression of this wish was, of course, a command: and, so understanding it, Palestrina produced, in January 1588, a volume, containing a complete set of the nine Lamentations—three, for each of the three days—which were printed, the same year, by Alexander Gardanus, under the title of *Lamenta-*

tionum liber primus. The work was prefaced by a formal dedication to the Supreme Pontiff, who, though he still adhered to his resolution of having the Second and Third Lessons sung always in Plain Chaunt, expressed great pleasure in accepting it: and, in 1589, it was reprinted, at Venice, in 8vo., by Girolamo Scoto.

More complex in construction than the great Composer's 'Improperia,' though infinitely less so than his Masses and Motets, these matchless 'Lamentations' are written, throughout, in the devout and impressive style which produces so profound an effect in the first-named work, and always with marked attention to the mournful spirit of the words. They do not, like the Plain Chaunt rendering, embrace the entire text: but, after a certain number of verses, pause on the final chord of a prolonged cadence, and then pass on to the Strophe, *Jerusalem, Jerusalem*, with which each of the nine Lessons concludes. In the single Lesson for Good Friday—which, though not included in the original printed copy, is, undoubtedly, the most beautiful of all—the opening verses are sung by two Soprani, an Alto, and a Tenor; a Bass being added, in the concluding Strophe, with wonderful effect. A similar arrangement is followed in the third Lamentation for the same day: but the others are for four voices only, and most of them with a Tenor in the lowest place; while in all, without exception, the introductory sentences, 'Incipit Lamentatio,' or, 'De Lamentatione,' as well as the names of the Hebrew initial letters, are set to harmonies of infinite richness and beauty—

Feria VI in Parasceve. Lectio I.

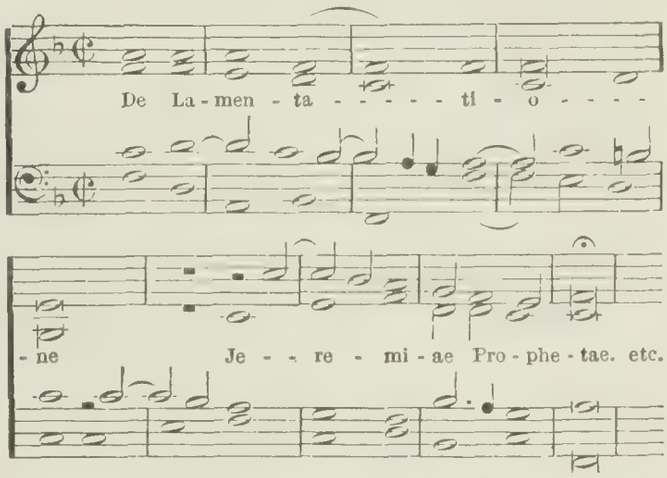


Since the death of Palestrina, the manner of singing the Lamentations in the Pontifical Chapel has undergone no very serious change. In accordance with the injunction of Pope Sixtus V, the Second and Third Lessons for each day have always been sung[1] in Plain Chaunt: generally, by a single Soprano; but, sometimes, by two,

[1] Of course, without any accompaniment.

the perfection of whose unisonous performance has constantly caused it to be mistaken for that of a single Voice. Until the year 1640, the First Lesson for each day was sung from Palestrina's printed volume. In that year, the single unpublished Lesson for Good Friday, composed in 1587, was restored to its place, and the use of the published one discontinued: while a new composition, by Gregorio Allegri, was substituted for Palestrina's Lesson for Holy Saturday. The restoration of the MS. work can only be regarded as an inestimable gain. Allegri's work will not bear comparison with that which it displaced; though it is a composition of the highest order of merit, abounding in beautiful combinations, and written with a true appreciation of the spirit of the text. It opens as follows:—

Sabbato Sancto. Lectio I.



It will be seen that Allegri has here not only adopted the tonality in which nearly all Palestrina's Lamentations are written—the Thirteenth Mode, transposed—but has also insensibly fallen very much into the Great Master's method of treatment. Unhappily, the same praise cannot be awarded to another work, which he produced in 1651, a few months only before his death, and which, though it bears but too plain traces of his failing discernment, was accepted by the College, as a mark of respect to the dying Composer, and retained in use until the Pontificate of Benedict XIII. This Pontiff inaugurated a radical change, by decreeing that the First Lessons should no longer be sung in this shortened form, but, with the entire text set to music. To meet his desire, three Lamentations, by modern writers, were submitted for approval, but unanimously rejected by the College, who commissioned Giovanni Biordi to add to the compositions of Palestrina and Allegri whatever was necessary to complete the text. Biordi was, perhaps, as well fitted as any man then living to undertake this difficult task: but it is to be regretted that he did not more carefully abstain from the use of certain forbidden intervals, and unlicensed chords. At the word, *lacrymis*, in the Lesson for Good Friday, he has made the first Soprano move a chromatic semitone, thereby producing, with the other parts, the chord of the Augmented Sixth. No doubt, his object in doing this was to intensify the expression of the word: but, neither the semitone, nor the chord, would have been tolerated by

Palestrina.[1] Again, in the Lesson for Holy Saturday, he has used the diminished fourth in disjunct motion, and broken many other time-honoured rules. Nevertheless, his work—which is, in many respects, extremely good—was unhesitatingly accepted, and retained in use till the year 1731, when Pope Clement XII. restored the Lamentations to their original shortened form. In this form they were suffered to remain, till 1815, when the indefatigable Baini restored Palestrina's printed Lamentation for the first day, retaining the MS. of 1587 for the second, and Allegri's really beautiful composition for the third; while the last-named composer's inferior work was suffered to fall into disuse—an arrangement which left little to be desired, and which has not, we believe, been followed by any farther change.

Besides the printed volume already mentioned, Palestrina composed two other entire sets of Lamentations, which, though written in his best and purest style, remained, for two centuries and a half, unpublished. One of them was prepared, as early as the year 1560, for the use of the Lateran Basilica, where the original MS. is still preserved. The other reaches us only through the medium of a MS. in the Altaemps Otthoboni collection, now in the Vatican Library. In the year 1842, Alfieri printed the three sets, entire, in the 4th volume of his *Raccolta di Musica Sacra*, together with the single Lamentation for Good Friday, to which he appended Biordi's additional verses, without, however, pointing out the place where Palestrina's work ends, and Biordi's begins. The three single Lamentations, sung in the Pontifical Chapel, are given, with Biordi's now useless additions, in a volume of the same editor's *Excerpta*, published in 1840; and, without Biordi's verses, in Choron's *Collection des Pièces de Musique Religieuse*. Both these editions are now out of print, and difficult to obtain: but a fine reprint of the nine pieces contained in the original *Lamentationum liber primus* will be found in Proske's *Musica Divina*, vol. iv. Mr. Capes, in his Selection from the works of Palestrina (Novello), has given the 1st Lamentation in Cœnâ Domini, and the 1st in Sabb. Sancto, from the 1st book (1588), and has introduced between them the single Lesson for Good Friday (1587) already mentioned.

Though the Lamentations of Carpentrasso, Palestrina, and Allegri, are the only ones that have ever been actually used in the Pontifical Chapel, many others have been produced by Composers of no small reputation. As early as the year 1506, Ottaviano dei Petrucci published, at Venice, two volumes, containing settings by Johannes Tinctoris, Ycaert, De Orto, Francesco (d'Ana) da Venezia, Johannes de Quadris, Agricola, Bartolomeo Tromboncino, and Gaspar and Erasmus Lapicida. All these works were given to the world before that of Carpentrasso, which, with many more of his compositions, was first printed, at Avignon, by Johannes Channay, in 1532. But the richest collection extant is that entitled *Piissimæ ac sacratissimæ Lamentationes Jeremiæ Prophetæ*, printed, in Paris, by A. le Roy and Robert Ballard, in 1557, and containing, besides Carpentrasso's *capo d'opera*, some extremely fine examples by De la Rue, Fevin, Archadelt, Festa, and Claudin le Jeune.

'Lamentations' by English Composers are exceedingly rare: hence, quite an exceptional interest is attached to a set of six, for five Voices, by R. Whyte, discovered by Dean Aldrich, and preserved, in MS., in the Library of Christ Church, Oxford. [See WHYTE, ROBERT.] [W. S. R.]

LAMPE, JOHN FREDERICK, a native of Saxony, born 1703, came to England about 1725, and was engaged as a bassoon-player at the Opera. In 1732 he composed the music for Carey's 'Amelia.' In 1737 he published 'A Plain and Compendious Method of teaching Thorough-Bass,' etc., and also furnished the music for Carey's burlesque opera 'The Dragon of Wantley,' which met with remarkable success. It is an admirable example of the true burlesque, and is said to have been an especial favourite of Handel's. In 1738 he composed music for the sequel, 'Margery; or, A Worse Plague than the Dragon.' In 1740 he published 'The Art of Musick,' and in 1741 composed music for the masque of 'The Sham Conjuror.' In 1745 he composed 'Pyramus and Thisbe, a mock opera, the words taken from Shakspeare.' Lampe was the composer of many single songs, several of which appeared in collections, as 'Wit musically embellish'd, a Collection of Forty-two new English Ballads'; 'The Ladies' Amusement' and 'Lyra Britannica.' Many songs by him were included in 'The Vocal Musical Mask,' 'The Musical Miscellany,' etc. Lampe married Isabella, daughter of Charles Young, and sister of Mrs. Arne; she was a favourite singer, both on the stage and in the concert-room. In 1748 he went to Dublin, and in 1750 to Edinburgh, where he died, July 25, 1751, leaving behind him the reputation of an accomplished musician and excellent man. Charles Wesley often mentions him with great affection, and wrote a hymn on his death—'Tis done! the Sovereign Will 's obeyed!'

CHARLES JOHN FREDERICK, his son, succeeded his grandfather, Charles Young, as organist of Allhallows, Barking, in 1758, and held the appointment until 1769. [W. H. H.]

LAMPERTI, FRANCESCO, teacher of singing. Born at Savona 1813. His father was an advocate, and his mother a prima-donna of considerable repute. As a child he showed great talent for music, and was placed under Pietra Rizzi of Lodi. In 1820 he entered the Conservatorio at Milan, and there studied the pianoforte and harmony under Sommaruga d'Appiano and Pietro Ray. Devoting himself afterwards to the teaching of singing, he became associated with Masini in the direction of the Teatro Filodrammatico at Lodi. Selecting many of the

[1] Alfieri has published two editions of this work; and, in both, he has inserted Biordi's additional verses, without vouchsafing any sign—beyond that afforded by internal evidence—to indicate that they are not the genuine work of Palestrina himself. We mention this circumstance, in order to show the danger of trusting, in doubtful cases, to the authority of any modern edition whatever. Alfieri's volumes may, some day, lead to the belief that Palestrina permitted the use of the chromatic semitone in his Ecclesiastical music!

members of his company from the natives of the surrounding country, he educated and brought out at his theatre many famous singers, such as La Tiberini, whose reputation otherwise would never have extended beyond their native village.

Attracted by their success pupils flocked to him from Bergamo, Milan, and other parts of Europe, and he there trained many of the most distinguished operatic vocalists; amongst whom may be named Jeanne-Sophie Löwe, Cruvelli, Grua, Brambilla, Hayes, Artôt, Tiberini, La Grange, and others equally distinguished. Appointed in 1850 by the Austrian government professor of singing to the Conservatorio at Milan, he brought out amongst others Angelica Moro, Paganini, Galli, Risarelli, Angeleri, Peralta; and as private pupils, Albani, Stoltz, Waldmann, Aldighieri, Campanini, Vialletti, Derevis, Mariani, Palermi, Everardi, and Shakespeare. After twenty-five years service he retired from the Conservatorio upon a pension in 1875, and now devotes himself entirely to private pupils.

A friend of Rubini and Pasta, and associated with the great singers of the past, Lamperti follows the method of the old Italian school of singing, instituted by Farinelli and taught by Crescentini, Velluti, Marchesi, and Romani. Basing his teaching upon the study of respiration, the taking and retention of the breath by means of the abdominal muscles alone, and the just emission of the voice, he thoroughly grounds his pupils in the production of pure tone. His memory and his intuition are alike remarkable, and enable him to adapt to each of his pupils such readings of the music and cadenzas as are warranted by the traditions of the greatest singers and are best adapted to their powers. Mme. Albani, writing in 1875 of his published treatise on singing, says: 'To say that I appreciate the work, it is sufficient for me to state that I am a pupil of the Maestro Lamperti, and that I owe to him and to his method the true art of singing, so little known in these days.'

He is Commendatore and Cavaliere of the order of the Crown of Italy, and a member of many academies and foreign orders. He is the author of several series of vocal studies and of a treatise on the art of singing (Ricordi & Co.), which has been translated into English by one of his pupils. [J.C.G.]

LANCERS' QUADRILLE, THE, a square dance, for 8 or 16 couples. It would appear to have been the invention of Joseph Hart in 1819, according to the title-page of his original edition, published in 1820. 'Les Lanciers, a second set of Quadrilles for the Piano Forte, with entirely new figures, as danced by the Nobility and Gentry at Tenby in the summer of 1819. Composed and most respectfully dedicated to Lady and the Misses Beechy by Joseph Hart. London, for the Author, Whitaker & Co., 75 St. Paul's Churchyard.' The dance consisted of 5 figures—La Rose. La Lodoiska, La Dorset, Les Lanciers, and L'Etoile, danced to Airs by Spagnoletti, by Kreutzer, from the Beggar's Opera ('If the heart of a man'), by Janiewicz, and by Horn ('Pretty Maiden,' from the Haunted Tower) respectively. Another version was published by Duval of Dublin about the same time. In this the names of the figures and the music remain substantially the same, though in the figures themselves there is considerable alteration. Hart's figures, with a slight difference or two, are still danced, L'Etoile being now called Les Visites, and Les Lanciers danced last. Whether Hart or Duval was the real inventor is uncertain. [W.B.S.]

LANDOLFI, Carlo Ferdinando (Landulphus), a reputable violin-maker of Milan, where he lived in the Street of St. Margaret, 1750-1760. He lived in an age when it had become expedient to copy rather than to invent. He occasionally copied Joseph Guarnerius so cleverly as to deceive experienced judges: and many of his works consequently cut a figure in the world even above their high intrinsic merits. Landolfi's patterns, in the midst of much excellence, exhibit that occasional faltering which too surely betrays the copyist; and his varnish is less solid, and possesses more of the quality known as 'sugariness,' than the makers of the golden age. Often it is thin and hard, especially when yellow in colour. Many red instruments however exist, which are covered with a highly transparent varnish: and these are the favourites. The Landolfi violoncellos are especially striking in quality and appearance, and are in greater demand than the violins. Good specimens realise from £30 to £50: common and undersized ones may be bought cheaper. [E.J.P.]

LANDSBERG, Ludwig, a German musician, native of Breslau, who went to Rome and remained there for 24 years, teaching the piano and amassing a wonderful collection of music, both printed and MS. On his death, at Rome May 6, 1858, his library was taken, part to Berlin and part to Breslau, and a catalogue of the ancient portion was printed (Berlin, 1859, imprimé chez Ernest Kühn)—whether the whole or a part, does not appear. It contains compositions by more than 150 musicians of the old Italian and Flemish schools, down to Casali. M. Fétis, however, who had received a MS. catalogue of the collection from Landsberg during his life, insists upon the fact that many of the most important works have disappeared. The catalogue itself does not appear to be any longer in the Fétis Library, which is now at Brussels. [G.]

LANG. A family of German musicians originally from Mannheim, but settling at Munich, and mentioned here for the sake of Josephine Lang (the second of that name), born Mar. 14, 1815, a young lady of very remarkable musical gifts and personality, who attracted the notice of Mendelssohn when he passed through Munich in 1830 and 31. There is an enthusiastic account of 'die kleine Lang' in his letter of Oct. 6, 31; in writing to Bärmann (July 7 and Sept. 27, 1834) he enquires for her, and in a letter seven years later (Dec. 15, 41) to Professor Köstlin of Tübingen, who had just married her, he shows how

deeply her image had impressed itself on his susceptible heart. She has published several books of songs (up to op. 38), which from the reviews in the Allg. mus. Zeitung, appear to be full of imagination, and well worthy of the warm praise bestowed on them by Mendelssohn in the letters just mentioned. Hiller tells the story of her life at length in his Tonleben (ii. 116), and selects her songs, op. 12 and 14, as the best. Connected with the same family at an earlier date was REGINA LANG, a singer whose name was originally Hitzelberg, born at Würzburg 1786, educated at Munich by Winter, Cannabich, and Vogel, and became chamber singer at the Bavarian Court. When Napoleon I. was at Munich in 1806 she sang before him in Winter's 'Interrupted Sacrifice' and Mozart's 'Don Giovanni,' and so pleased him that he is said to have urged her to come to Paris (Mendel). She however remained in Munich, and married Theobald Lang, a violinist in the Court band. In 1812 or 13 she was at Vienna, and Beethoven wrote in her album a song 'An die Geliebte,' to Stoll's words, 'O dass ich dir vom stille Auge,' which was published about 1840 in a collection called 'Das singende Deutschland.' It is his second version of the song—the former one being dated by himself December 1811, and having been published in 1814. See Nottebohm's Thematic Cat. of Beethoven, p. 183. [G.]

LANGDON, RICHARD, Mus. Bac., son of Rev. Tobias Langdon, priest-vicar of Exeter Cathedral, graduated as Mus. Bac. at Oxford in 1761. About 1770 he received the appointments of organist and sub-chanter of Exeter Cathedral, but resigned them in 1777 upon being chosen organist of Bristol Cathedral. He quitted Bristol in 1782 to become organist of Armagh Cathedral, which he resigned in 1794. In 1774 he published 'Divine Harmony, a Collection, in score, of Psalms and Anthems.' His published compositions include 'Twelve Glees,' two books of songs, and some canzonets. Two glees and a catch by him are contained in Warren's 'Vocal Harmony.' He died Sept. 1803. Langdon in F is still a favourite double chant. [W.H.H.]

LANGE, a family intimately connected with Mozart, inasmuch as his wife's sister, Aloysia Weber, in 1780 married the famous Joseph Lange, an actor, who held the same rank in Germany that Garrick did in England and Lekain in France. Mozart's marriage to her younger sister, Constanz, took place Aug. 4, 1782. Lange was born at Würzburg, 1751, and died at Vienna in 1827. Aloysia was a very great singer; her voice wanted power, but was said to be 'the sweetest ever heard' (Jahn, ii. 18). Its compass was extraordinary, from B below the stave to A on the sixth space above it; as may be seen from the songs which Mozart wrote for her—the part of 'the Queen of Night' in the Zauberflöte, and several detached bravura airs. She died in 1830. Mozart was for a time violently in love with her. [WEBER.] [G.]

LANGSAM, *i.e.* slow, the German equivalent for *Adagio*. 'Langsam und sehnsuchtsvoll' is Beethoven's direction to the third movement of the Sonata op. 101, equivalent to *Adagio con molto di sentimento*. See also the opening song of the Liederkreis, op. 98. Schumann employs it habitually; see the first movement of his Symphony in E♭. [G.]

LANGSHAW, JOHN, was employed about 1761, under the direction of John Christopher Smith, in setting music upon the barrels of an organ, of much larger size than had been theretofore used for barrels, then being constructed for the Earl of Bute, which he did 'in so masterly a manner that the effect was equal to that produced by the most finished player.' In 1772 he became organist of the parish church of Lancaster, and died in 1798.

His son, JOHN, was born in London in 1763, in 1779 became a pupil of Charles Wesley, and in 1798 succeeded his father as organist at Lancaster. He composed many hymns, chants, organ voluntaries, pianoforte concertos, songs and duets, and made numerous arrangements for the pianoforte. [W.H.H.]

LANIERE, NICHOLAS, was the son of Jerome Laniere, an Italian musician, who, together with Nicholas Laniere, probably his brother, settled in England, and in 1571 were musicians to Queen Elizabeth. The date of his birth is not known, but it was probably about 1590. His name first appears as singer and composer in the masque performed at court on the marriage of Carr, Earl of Somerset, and Lady Frances Howard in 1614, the first song in which, 'Bring away the sacred tree' (reprinted in Smith's 'Musica Antiqua'), was composed by him. His skill as a singer is alluded to in some lines addressed by Herrick to Henry Lawes. He composed the music for Ben Jonson's masque presented at the house of Lord Hay for the entertainment of Baron de Tour, the French Ambassador, on Saturday, Feb. 22, 1617, 'in stylo recitativo,' being the first introduction of recitative into an English composition. He also sang in the piece and painted the scenery for it. He next composed the music for Jonson's masque, 'The Vision of Delight,' performed at court at Christmas, 1617. Laniere cultivated the arts of painting and engraving as well as that of music, and his judgment was so much esteemed, that he was sent by Charles I. to Italy to purchase pictures in 1625, and again in 1627 to negociate for the purchase of the Duke of Mantua's collection. One of those pictures was 'Mercury instructing Cupid,' by Correggio, now in the National Gallery. He was appointed 'Master of the King's Musick,' at an annual salary of £200, by patent dated July 11, 1626. In 1636 Charles I. granted to Laniere and others a charter, based upon one of Edward IV., incorporating them under the style of 'The Marshal, Wardens, and Cominality of the Arte and Science of Musick in Westminster,' and giving them power to control and regulate all matters connected with music, and of this body Laniere was appointed the first Marshal. At the fall of Charles, Laniere lost his court appointments, but was reinstated in them on

the accession of Charles II., and the Corporation of Musicians was revived. The date of his death is unknown; he was living in 1665, but dead in Jan. 1670, when Capt. Cooke's name appears as Marshal of the Corporation. He composed a funeral hymn on Charles I., a pastoral upon the birth of Prince Charles, and New Year's Songs for 1663 and 1665. Songs and other pieces by him are contained in 'Select Musicall Ayres and Dialogues,' 1653 and 1659; 'The Musical Companion,' 1667; 'The Treasury of Musick,' 1669; and 'Choice Ayres and Songs,' book iv, 1685. Several songs and dialogues by him are in the British Museum, Add. MSS. 11,608. Vandyck painted Laniere's portrait for Charles I. Another portrait is in the Music School at Oxford, to which it was presented by Laniere himself. The Laniere family was very numerous, and several of its members were court musicians in the 17th century. [W.H.H.]

LANNER, Joseph, born at Vienna, April 12, 1801; son of a glove-maker; early showed a talent for music, taught himself the violin, and by means of theoretical books learned to compose. Next came the desire to conduct an orchestra; and in the meantime he got together a quartet party, in which the viola was taken by Strauss, his subsequent rival. They played potpourris from favourite operas, marches, etc., arranged by Lanner. He next composed waltzes and Ländler, first for a small, then for a full orchestra, and performed them in public. His popularity increased rapidly, and important places of amusement eagerly competed for his services. He also appeared in most of the provincial capitals, but declined all invitations abroad. He conducted the dance music in the large and small Redoutensaal, and also that at the court balls, alternately with Strauss. As a mark of distinction he was appointed Capellmeister of the 2nd Bürger-regiment. When thus at the height of prosperity he died, April 14, 1843; and was buried in the churchyard of Döbling, near Vienna. A memorial tablet was placed on the house in which he was born, May 15, 1879.[1]

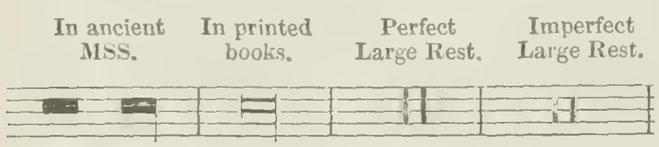
Lanner may be considered the founder of our present dance-music. His galops, quadrilles, polkas, and marches, but especially his waltzes and Ländler, bear traces of the frank, genial disposition which made him so beloved. All his works, from op. 1. ('Neue Wiener Ländler') to his swan-song ('Die Schönbrunner') are penetrated with the warm national life of Vienna. The titles often contain allusions to contemporaneous events and customs, and thus have an historical interest. His printed works amount to 208, and he left others unpublished. The following numbers are dedicated to crowned heads, and distinguished persons—op. 74, 81, 85, 91, 101, 110–12, 115–16, 120, 128, 131–32, 138 ('Victoria-Walzer' dedicated to Queen Victoria), 143, 146, 155, 161–62. The 'Troubadour-Walzer,' op. 197, are dedicated to Donizetti, and the 'Norwegische Arabesken,' op. 145, to Ole Bull. Diabelli published op. 1–15; Haslinger 16–32, and 170–208; Mechetti 33–169.

Of Lanner's three children, August, born 1834 in Vienna, a young man of great promise, followed his father's profession, but died Sept. 27, 1855. Katharina, born in Vienna 1831, is a well-known dancer, who since her début at the court opera in Vienna in 1845, has appeared at all the important theatres in Europe. She has also written several admired ballets, and in 1858 formed a children's ballet in Hamburg, which gave 46 performances in Paris with great success. At a later date she was engaged also at the Italian Opera in England. [C.F.P.]

LAPORTE, Pierre François, an eminent French comedian, came to London as a member and joint manager of a company who, in January 1824, commenced performing French plays at the theatre in Tottenham Street. On Nov. 18, 1826, he appeared on the English stage, as a member of the Drury Lane company, as Sosia in Dryden's 'Amphitryon,' and afterwards played a variety of parts, mostly original, and amongst them Wormwood in 'The Lottery Ticket.' He next joined the Haymarket company, in which he first appeared June 15, 1827. In 1828 he became manager of the King's Theatre, and continued such until 1831. In 1832 he was lessee of Covent Garden Theatre, and actor as well as manager, but was compelled to retire, with heavy loss, before the end of the season. In 1833 he resumed the management of the King's Theatre, and retained it until his death, which occurred at his chateau near Paris, Sept. 25, 1841. A notable feature of his last season was the 'Tamburini Row,' a disturbance of the performance occasioned by the admirers of Tamburini, who resented his non-engagement for that season, and by their tumultuous proceedings for two or three evenings forced the manager to yield to their wishes. Another curious feature of this year was the re-appearance of Laporte in his original capacity as an actor, with Rachel, on three nights of her first London season. Laporte first introduced to the English public, amongst other operas, Rossini's 'Comte Ory' and 'Assedio di Corinto'; Bellini's 'Pirata,' 'Sonnambula,' 'Norma' and 'Puritani'; Donizetti's 'Anna Bolena,' and Costa's 'Malek Adel': and amongst singers, Sontag, Meric Lalande, Persiani, Assandri, Albertazzi, Pisaroni, Donzelli, David jun., Ivanoff, Mario; and, above all, the famous quartet who so long held supremacy on the opera stage, Grisi, Rubini, Tamburini, and Lablache. Though his dilatory and unbusinesslike habits ruined his management, Laporte was not without good qualities. Amongst others his tact and coolness were great, and many of his *bons mots* were current at the time. When Cerito returned the ticket of a box on the upper tier with the remark that she was much too young to be exalted to the skies before her time, Laporte—having already given a box on the same tier to Taglioni—replied that he 'had done his best, but that perhaps he had been wrong in placing her on the same level with Mdlle. Taglioni.' [W.H.H.]

[1] Owing to a curious error in the entry of his baptism, his name was for long overlooked in the register.

LARGE (Lat. *Maxima*, Old Eng. *Maxim*). The longest note used in measured music. In ancient MSS., the Large appears as an oblong black note, corresponding with the Double-Long described in the *Ars Cantus Mensurabilis* of Franco of Cologne. Franchinus Gafforius, writing in 1496, figures it as an oblong white note, with a tail descending on the right hand side; which form it has retained, unchanged, to the present day.[1]



In the Great Mode Perfect, the Large is equal to three Longs: in the Great Mode Imperfect, to two. [See MODE.] The Rest for the Perfect Large stretches, in a double line, across three spaces; that for the Imperfect Large, across two.

In Polyphonic Music, the final note is always written as a Large: and, in that position, its length is sometimes indefinitely prolonged, in the *Canto fermo*, while the other voices are elaborating a florid cadence. In Plain Chaunt, the Large —or, rather, in that case, the Double-Long—is sometimes, but not very frequently, used, to indicate the Reciting-Note. [W. S. R.]

LARGHETTO, partaking of the broad style of Largo, but about the same pace with Andante. Well-known instances of its use are the slow movements in Beethoven's 2nd Symphony and Violin Concerto. [G.]

LARGO, *i.e.* broad, an Italian term meaning a slow, broad, dignified style. Handel employs it often, as in the Messiah in 'Behold the Lamb of God,' 'He was despised,' and 'Surely.' Haydn uses it for the Introduction and first Chorus in the 'Creation,' as well as in the Introduction to the 3rd Part. Beethoven employs it only in P. F. works, and it is enough to mention some of the instances to show what grandeur and deep feeling he conveyed by this term,—op. 7; op. 10, no. 3; op. 37; op. 70, no. 1; op. 106. He often accompanies it with *passionato*, or some other term denoting intense expression. Mendelssohn uses it for 'broad' in the Andante of his op. 12.

The term *Largamente* has recently come into use to denote breadth of style without change of *tempo*. Largo implies a slow pace, but the very varying metronome marks applied to it show conclusively that style and not pace is its principal intention. [G.]

LARIGOT (from an old French word, *l'arigot*, for a small flute or flageolet, now obsolete), the old name for a rank of small open metal pipes, the longest of which is only $1\frac{1}{3}$ ft. speaking-length. Its pitch is a fifth above that of the fifteenth, an octave above the twelfth, and a nineteenth above the unison. It is first met with, in English organs, in those made by Harris, who passed many years in France, and who placed one in his instrument in St. Sepulchre's, Snow Hill, erected in 1670. [E.J.H.]

LAROCHE, JAMES, better known as Jemmy Laroch, or Laroche, was a popular singer in London, though probably French by origin or birth, at the end of the 17th and beginning of the 18th centuries. He played, as a boy, the part of *Cupid* in Motteux's 'Loves of Mars and Venus,' set to music by Eccles and Finger, in which the part of Venus was played by Mrs. Bracegirdle, in 1696. He was, therefore, born probably about 1680–2. His portrait appears on a very rare print, called 'The Raree Show. Sung by Jemmy Laroch in the Musical Interlude for the Peace, with the Tune Set to Musick for the Violin. Ingraved Printed Culred and Sold by Sutton Nicholls next door to the Jack, etc. London,' fol. It was afterwards published by Samuel Lyne. There are 33 verses beginning 'O Raree Show, O Brave Show' below the engraving, which represents Laroche with the show on a stool, exhibiting it to a group of children; and at foot is the music. The Peace of Utrecht was signed in April, 1713, and this interlude was played in celebration of it, at the Theatre in Little Lincoln's Inn Fields, the music being written by John Eccles. The portrait of Laroche was also engraved by M. Laroon in his 'Cries of London.' [J.M.]

LAROON, J., a foreigner who sang in opera in the first years of the last century in London, and was, perhaps, the son of M. Laroon, the artist (born at the Hague 1653, died 1705), who engraved the 'Cries of London,' etc. J. Laroon played, among other parts, that of *Sylvander* (tenor) in 'The Temple of Love,' by G. F. Saggione (1706), not (as Burney incorrectly says) by Greber. [See GALLIA.] [J.M.]

LASSEN, EDUARD, though a native of Copenhagen, where he was born April 13, 1830, is virtually a Belgian musician, since he was taken to Brussels when only 2, entered the Conservatoire there at 12, in 1844 took the first prize as P. F. player, in 47 the same for harmony, and soon afterward the second prize for composition. His successes, which were many, were crowned by the great Government prize, which was adjudged to him in 1851, after which he started on a lengthened tour through Germany and Italy. Disappointed in his hopes of getting his 5-act opera, 'Le Roi Edgard' performed at Brussels, he betook himself to Weimar, where in 57 it was produced under the care of Liszt, with great success. A second, 'Frauenlob,' and a third, 'Der Gefangene,' were equally fortunate. When Liszt retired from Weimar, Lassen took his place, and had the satisfaction to produce 'Tristan and Isolde' in 1874, at a time when no other theatre but Munich had dared to do so. He there published a Symphony in D, a Beethoven overture, and a Festival ditto, music to Sophocles' Œdipus, to Hebbel's Nibelungen, and Goethe's Faust, Parts 1 and 2, a Fest-Cantate, a Te Deum, a large number of songs, and other pieces. His latest work is a set of 6 songs (op. 67). [G.]

[1] In modern reprints, the tail is sometimes made to ascend; but it is indispensable that it should be on the right hand side. See innumerable examples in Proske's *Musica Divina*.

LASSERRE, JULES, eminent violoncellist, was born at Tarbes July 29, 1838, entered the Paris Conservatoire in 1852, where he gained the second prize in 1853 and the first prize in 1855. When the popular concerts of Pasdeloup were first started, he was appointed solo violoncellist; he has also played with great success in the principal towns of France. During 1859 he was solo cellist at the Court of Madrid, and travelled through Spain. In 1869 he came to reside permanently in England, since which time he has played principal violoncello under Sir Michael Costa and at the Musical Union. Lasserre has written various compositions both for his own instrument and for the violin—Etudes, Fantasies, Romances, Tarantelles, Transcriptions, a violoncello 'Method,' etc., etc. [T.P.H.]

LASSUS, ORLANDO DI, born at Mons in the first half of the 16th century. His real name was probably Delattre, but the form de Lassus seems to have been constantly used in Mons at the time, and was not his own invention. He had no fixed mode of writing his name, and in the prefaces to the first four volumes of the 'Patrocinium Musices,' signs himself differently each time,—Orlandus de Lasso, Orlandus di Lasso, Orlandus di Lassus, and Orlandus Lassus; and again in the 'Lectiones Hiob,' 1582, Orlando de Lasso. In the French editions we usually find the name Orlande de Lassus, and so it appears on the statue in his native town. Adrian Le Roy, however, in some of the Paris editions, by way perhaps of Latinizing the *de*, calls him Orlandus Lassusius.

The two works usually referred to for his early life are Vinchant's 'Annals of [1]Hainault'; and a notice by Van Quickelberg in 1565, in the 'Heroum Prosopographia,' a biographical dictionary compiled by Pantaleon. Vinchant, under the year 1520, writes as follows:—

'*Orland dit Lassus* was born in the town of Mons, in the same year that Charles V was proclaimed Emperor at Aix-la-Chapelle [1520] .... He was born in the Rue de Guirlande near the passage leading from the Black Head.[2] He was chorister in the church of S. Nicolas[3] in the Rue de Havrecq. After his father was condemned for coining false money etc. the said Orland, who was called Roland de Lattre, changed his name to Orland de Lassus, left the country, and went to Italy with Ferdinand de Gonzague.'

Van Quickelberg[4] dates his birth ten years later:—

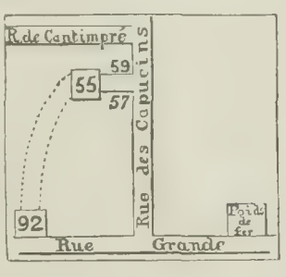
'Orlandus was born at Mons in Hainault in the year 1530. At 7 years old he began his education, and a year and a half later took to music, which he soon understood. The beauty of his voice attracted so much attention, that he was thrice stolen from the school where he lived with the other choristers. Twice his good parents sought and found him, but the third time he consented to remain with Ferdinand Gonzague viceroy of Sicily, at that time commander of the emperor's forces at St. Dizier. The war over, he went with that prince first to Sicily, and then to Milan. After 6 years his voice broke, and at the age of 18 Constantin Castriotto took him to Naples, where he lived for 3 years with the Marquis of Terza. Thence to Rome, where he was the guest of the archbishop of Florence for 6 months, at the end of which time he was appointed director of the choir in the church of S. Giovanni in Laterano, by far the most celebrated in Rome .... Two years afterwards he visited England and France with Julius Cæsar Brancaccio, a nobleman and an amateur musician. Returning to his native land, he resided in Antwerp for two years, whence he was called to Munich by Albert of Bavaria in 1557.

It is difficult to decide between the two birth-dates 1520 and 1530. Baini places the Roman appointment in 1541, Van Quickelberg in 1551. That Lassus left Rome about 1553, as Van Quickelberg says, is also to be inferred from the preface to his first Antwerp publication (May 13, 1555), where he speaks of his removal from the one city to the other as if recent. Assuming that his life in Rome lasted either 2 years or 12, we may ask whether it is likely that one of the most industrious and prolific composers in the whole history of music, should obtain so high a position as early as 1541, without being known to us as a composer till [5]1555; or is it, on the contrary, more likely that a reputation which seems to have been European by the time he went to Munich (1557), could have been gained, without some early and long career as a composer of works which may yet be lying undiscovered in some Italian church or library.

Vinchant alludes to Lassus' father having been condemned as a coiner of false money. Matthieu[6] has worked hard to refute this, and his examination of the criminal records of Mons casts great improbability on the story. At the same time, and from the same sources, he has brought to light other namesakes of the composer, who if

[1] The original MS. is now in the Mons library. The author lived between 1580 and 1635.

[2] 'A l'issue de la maison portant l'enseigne de la noire teste.' Delmotte (in his Life of Lassus, Valenciennes, 1836) thinks 'the Black Head' was situated in the Rue Grande, No. 92. Counting the number of houses between the 'Poids de fer' (town weighing-house) and the 'Maison de la noire tête' in the old records of the town, he found it to correspond with the distance from the former building. Moreover No. 92 bore, in Delmotte's time, the sign of a helmet, which he thinks might, in olden time, have been painted black to imitate iron, and thus have been called the 'noire tête.' He goes on to say, but without stating his authority, that this house, No. 92, had formerly a passage leading into the Rue de grande Guirlande (afterwards and now Rue des Capucins) between the houses Nos. 57 and 59. If so, it must have been a house of importance, with back premises stretching behind the whole length of the Rue des Capucins. Nos. 57 and 59 are at present (1878) large new houses, with a passage between them leading to No. 55, a private house behind the street. If this passage marks the site of the original 'issue' spoken of by Vinchant, then the house in which Lassus was born may have been situated on one side of it, at the corner of the Rue de Cantimpré. Curiously enough, Matthieu, in his Life of Lassus, says that an Isabeau de Lassus lived in the Rue de Cantimpré, Quartier Guirlande, which adds to the probability that a house situated at the corner of the two streets may have been occupied by the composer.



[3] The church of St. Nicolas was burnt down in the 17th century, and replaced by the present building.

[4] Van Quickelberg, whose own biography appears in Pantaleon's book, was born at Antwerp in 1529, and practised as a physician at the court of Munich, while Lassus was chief musician there. We must give great weight to an account written by a contemporary and compatriot, and under the eyes of the composer himself. The date 1530 is no printer's error, as Delmotte suggests, for the account speaks of Lassus as a child at the siege of S. Dizier, which took place in the year 1544. Therefore Van Quickelberg must have meant to say 1530, just as certainly as Vinchant emphasises his date 1520 by a reference to the coronation of the emperor. Judging simply by the authority of the statements, we should certainly give the preference to Van Quickelberg; but Vinchant's date is supported by so many other considerations that we think Delmotte, Fétis, and Ambros are right in preferring it, though it is premature to adopt it absolutely. These dates may be more important than at first sight appears, if some one undertakes a comparison of the influence of Lassus and Palestrina on the history of music.

[5] According to Dehn, an edition of motets, dated 1545, is in the library at Bologna. This statement requires some confirmation. The MSS. catalogues of the Italian libraries, in Dehn's possession, some of which are in the Fétis library at Brussels, are not likely to be entirely free from error.

[6] Roland de Lattre par Adolphe Matthieu. Gand (no date).

they belonged to his family, did little credit to it, and need not be mentioned here. It would be more interesting to find some tie between Orlando and two other contemporary composers, Olivier Delatre, and Claude Petit Jean Delattre, the second a man of considerable eminence.

Of Lassus' education, after he left Mons, we know nothing, but his first compositions show him following the steps of his countrymen, Willaert, Verdelot, Arcadelt, and Rore, in the Venetian school of madrigal writing; his first book of madrigals (à 5) being published in Venice soon after he had himself left Italy and settled in Antwerp. This book in its time went through many editions, but copies of it are scarce now, and none of its 22 pieces have been published in modern notation.

The visit to England must have taken place about 1554. We have been unable to find any account of the nobleman whom Orlando accompanied, but many of his family had been dignitaries of the church of Rome, and by him Orlando was probably introduced to Cardinal Pole, in whose honour he wrote music to the words

'Te spectant Reginalde poli, tibi sidera rident,
Exultant montes, personat Oceanus,
Anglia dum plaudit quod faustos excutis ignes
Elicis et lachrimas ex adamante suo.'

This was published in 1556, and the incidents to which it refers could not have taken place before 1554, so it gives an additional clue to the time of the composer's visit to this country, corroborating the statement of Van Quickelberg. It is curious that in the year 1554, a Don Pedro di Lasso attended the marriage of Philip and Mary in England as ambassador from Ferdinand, King of the Romans.

By the end of 1554, Orlando is probably settled at Antwerp, for in 'the Italian preface to a book of madrigals and motets printed in that city (May 13, 1555),' he speaks of their having been composed there since his return from Rome. 'There,' says Van Quickelberg, 'he remained two years, in the society of men of rank and culture, rousing in them a taste for music, and in return gaining their love and respect.' The book referred to contains 18 Italian canzones, 6 French chansons, and 6 motets 'à la nouvelle composition d'aucuns d'Italie.' Of the Italian ones 5 are published by Van Maldeghem.[1] This is our first introduction to the great composer, and we get over it with little formality. If Orlando ever wrote any masses for his composer's diploma; if the old tune 'l'omme armé,' was tortured by any fresh contrapuntal devices of his pen, it is plain that he left such tasks behind him when he gave up school, and 'roused the musical taste' of his Antwerp friends by music which errs, if at all, on the side of simplicity. We pass with regret from the graceful 'Madonna ma pietà' and the almost melodious 'La cortesia,' to the Latin motets—3 sacred, 2 secular—in the same volume. One of the latter is the 'Alma nemes' which Burney gives in his History (iii. 317), pointing out the modulation on the words 'novumque melos,' as a striking example of the chromatic passages of the school in which Lassus and Rore were educated. Burney couples the two together, and regards Lassus chiefly as a secular composer. He seems to know but little of the great sacred works of his later life, and likens him to a 'dwarf upon stilts' by the side of Palestrina. But though this unfortunate comparison has brought the great English historian into disgrace with Fétis and Ambros, still Burney's remarks on Lassus' early works are very interesting and certainly not unfair. It is only strange that, knowing and thinking so little of Lassus, he should have compared him to Palestrina at all.

The other work belonging to this period (Antwerp 1556) is the first book of motets—12 nos. à 5, and 5 nos. à 6. Here the composer recognises the importance of his first publication of serious music, by opening it with an ode to the Muses, 'Delitiæ Phoebi,' à 5, in which the setting of the words 'Sustine Lassum,' is the principal feature. Other interesting numbers are the 'Gustate, videte,' which will be referred to again when we follow Lassus to Munich, the motet 'Te spectant Reginalde poli,' and 'Heroum soboles,' in honour of Charles V, the second being in the strict imitative style, the last in simpler and more massive harmony (à 6), as if designed for a large chorus at some public ceremonial.

The sacred numbers, such as the 'Mirabile mysterium'—an anthem, we suppose for Christmas day—show no signs of any secular tendency or Venetian influence. They are as hard to our ears as any music of the Josquin period. They give us our first insight into Orlando's church work, and it is interesting to find him drawing so distinct a line between compositions for the church and the world, and not, as Burney implies, too much petted in society and at court, to be grave and earnest in his religious music. We have a good example here that the contrary is the case. The Muses and Cardinal Pole are much too serious subjects to be in the slightest degree trifled with, and the Ode to Charles V. alone exhibits any originality of treatment.

On the strength of a reputation as a composer both for the chamber and the church, and of a popularity amongst men of rank and talent, gained as much by his character and disposition and liberal education, as by his musical powers, he was invited by Albert V., Duke of Bavaria, in 1556 or 1557, to come to Munich as director of his chamber music. Albert was not only the kind patron of Lassus, but seems to have exercised considerable influence on the direction of his genius. He was born in 1527, was a great patron of the arts, founded the royal library at Munich, acquired considerable fame as an athlete, and was a man of the strictest religious principles, the effect of which was not confined to his family, but extended to his people by severe laws against immorality of every kind. Of the exact state of music at Munich when Lassus first reached it, we cannot speak precisely. The head of the chapel, Ludovico d'Asero, or Ludwig

[1] Trésor Musical. 10me Année. Bruxelles 1874.

Daser, was a distinguished composer in his time, but a single 'Fuga' is all that has been left to us.[1] Being an old man, he would probably have retired in favour of Lassus, as he did a few years later, but it was thought better for the new comer to acquire the language of the country before undertaking so responsible a post, and he was therefore appointed a chamber musician. He seems to have settled at once into his new position, for the next year (1558) he married Regina Weckinger, a maid of honour at the court. The marriage proved a very happy one, and Van Quickelberg speaks of the children, whom he must have known at a very early age (1565), as 'elegantissimi.' At any rate they did very well afterwards. The four sons, Ferdinand, Ernest, Rudolph and Jean, all became musicians, and the two daughters were married—one of them, Regina, to the Seigneur d'Ach, one of the court painters.

In his subordinate position Lassus did not publish much, though, as the next paragraph shows, he wrote continually. The next two or three years produced a second book of 21 madrigals (à 5), and a book of chansons (à 4, 5, 6), the latter containing the 5-part chanson 'Susanne un jour,' to which Burney refers in his History (iii. 262), as well as a 6-part setting of the 'Tityre, tu patulæ,' which is quite simple in effect, and has a very beautiful last movement. We observe at once the great care which Orlando takes of the quantities of the Latin words.

In the year 1562 Daser is allowed to retire on his full salary, and

'The Duke seeing that Master Orlando had by this time learnt the language, and gained the good will and love of all, by the propriety and gentleness of his behaviour, and that his compositions (in number infinite) were universally liked, without loss of time elected him master of the chapel, to the evident pleasure of all. And, indeed, with all his distinguished colleagues, he lived so quietly and peacefully, that all were forced to love him, to respect him in his presence, and to praise him in his absence.'

From this time Lassus appears principally as a composer for the church, and it is worth remarking that in this same year the subject of music was discussed by the Council of Trent, and a resolution passed to reform some of the glaring defects in the style of church composition. Lassus' great works, being of a subsequent date, are as entirely free from the vagaries of his predecessors as are the later works of Palestrina. [See JOSQUIN.]

The new chapel-master, in the June of the same year, prints his first book of entirely sacred music—'Sacræ cantiones, à 5' (25 nos.), of which 'Veni in hortum' has been published by [2] Commer, 'Angelus ad pastores' by [3] Rochlitz, and 'Benedicam Dominum' by [4] Proske.

But it was not alone as a church composer that Lassus was anxious at once to assert his new position. He soon showed special qualifications as conductor of the choir. 'One great quality,' says Massimo Trojano,[5] 'was the firmness and genius he evinced when the choir were singing, giving the time with such steadiness and force, that, like warriors taking courage at the sound of the trumpet, the expert singers needed no other orders than the expression of that powerful and vigorous countenance to animate their sweetly-sounding voices.' The portrait which we here give, and which is now engraved for the first time, has been photographed [6] from the magnificent manuscript copy of Lassus's music to the Penitential Psalms, which forms one of the ornaments of the Royal State Library at Munich. The inscription round the outside of the oval is 'In [7] corde prudentis requiescit sapientia et indoctos quosque erudiet. Pro. xiiii.,' showing in how favourable and honourable a light a great musician was regarded in the 16th century.

In the autumn Lassus must have gone to Venice, taking his new 'Cantiones' with him; for though Gardane does not print them till 1565, the preface to his edition is signed by the composer, and dated 'Venetiis 1562 die 1. Nov.' He also left behind him a third set of 13 madrigals, published there in the following year. Van Quickelberg also speaks of a visit to Antwerp about this time; and the publications for the year 1564—two books of chansons, one printed in that city, the other at Louvain—corroborate

[6] The Editor desires to express his special thanks to Professor Halm, the Director of the Royal State Library, for the prompt kindness with which he granted permission and gave every facility for the photographing of the portrait. Another portrait from the same MS., on a smaller scale, full length and in a long gown, is lithographed and given in Delmotte's Life of Lassus.
[7] Thus rendered in the Douay Version—'In the heart of the prudent resteth wisdom, and it shall instruct all the ignorant.' The artist has incorrectly written 'in doctos.'

the statement. The 1st book (à 4) contains 27 short pieces of a humorous character, many of which are given by Van Maldeghem in his 'Trésor Musical.' The music is admirably adapted to the words, notwithstanding the fact that in later times it was considered equally well suited to sacred words, or at least published with them, an ordeal to which many of his earlier secular compositions were subjected. The reason and result of these journeys are thus given by Massimo Trojano:—

'The Duke seeing that his predecessor's chapel was far beneath his own ideal, sent messages and letters, with gifts and promises through all Europe, to select learned musical artists, and singers with fine voices and experience. And it came to pass in a short time, that he had collected as great a company of virtuosi as he could possibly obtain, chosen from all the musicians in Germany and other countries by his composer, the excellent Orlando di Lasso.'

Of these musicians, upwards of 90 in number, the same author mentions more than 30 by name. Among them Antonio Morari, the head of the orchestra, Gioseppe da Lucca and Ivo da Vento, organists, Francesco da Lucca and Simone Gallo, both instrumentalists, Giovanne da Lochenburg, a great favourite and companion of the Duke's, and Antonio Gosuino, were all composers, some of whose works still exist.[1] The singing of the choir was of the highest order, balanced with the greatest nicety, and able to keep in tune through the longest compositions. The Duke treated them so kindly, and their life was made so pleasant, that, as Massimo Trojano says, 'had the heavenly choir been suddenly dismissed, they would straightway have made for the court of Munich, there to find peace and retirement.'

For general purposes the wind and brass instruments seem to have been kept separate from the strings. The former accompanied the mass on Sundays and festivals. In the chamber music all took part in turn. At a banquet, the wind instruments would play during the earlier courses, then till dinner was finished the strings, with Antonio Morari as their conductor, and at dessert Orlando would direct the choir, sometimes singing quartets and trios with picked voices, a kind of music of which the Duke was so fond, that he would leave the table to listen more attentively to 'the much-loved strains.' He and all his family were intensely fond of music, and made a point of attending the musical mass every day. They took a keen interest in Lassus' work, and the Duke and his son William were continually sending him materials and suggestions for new compositions. The manuscript of the music to the 'Penitential Psalms,' already noticed, remains to this day a witness of the reverence with which the Duke treated the composer's work.

These 7 psalms were composed, at the Duke's suggestion, before the year 1565, the date of the first volume of the MS., but were not published till some years after. The music is in 5 parts, one, and sometimes two separate movements for each verse. The last movement, 'Sicut erat,' always in 6 parts. Duets, Trios, and Quartets appear for various combinations of voices. The length of the Psalms is considerable, and though no reliance can be placed on modern ideas of their *tempi*, the longer ones would probably occupy nearly an hour in performance.

'When we think,' says Ambros, 'of the principal works of the 16th century, these Psalms and Palestrina's Missa Papæ Marcelli always come first to our [2] minds.' One reason for this is, perhaps, that these works have each a little story attached to them which has made them easy to remember and talk about. It is not true that Lassus composed the 'Penitential Psalms' to soothe the remorse of Charles IX, after the massacre of St. Bartholomew, but it is more than probable, that they were sung before that unhappy monarch, and his musical sense must indeed have been dull, if he found no consolation and hope expressed in them. This is no everyday music, which may charm at all seasons or in all moods; but there are times when we find ourselves forgetting the antique forms of expression, passing the strange combinations of sounds, almost losing ourselves, in a new-found grave delight, till the last few movements of the Psalm—always of a more vigorous character—gradually recall us as from a beautiful dream which 'waking we can scarce remember.' Is this indefinite impression created by the music due to our imperfect appreciation of a style and composition so remote, or is it caused by the actual nature of the music itself, which thus proves its inherent fitness for the service of religion? So unobtrusive is its character, that we can fancy the worshippers hearing it by the hour, passive rather than active listeners, with no thought of the human mind that fashioned its form. Yet the art is there, for there is no monotony in the sequence of the movements. Every variety that can be naturally obtained by changes of key, contrasted effects of repose and activity, or distribution of voices, are here; but these changes are so quietly and naturally introduced, and the startling contrasts, now called 'dramatic,' so entirely avoided, that the composer's part seems only to have been, to deliver faithfully a divine message, without attracting notice to himself.

The production of such a masterpiece at an early date in his Munich life, seems to point clearly, through all the contested dates of birth, positions or appointments, to some earlier career of the composer. To obtain a style at once great and solemn, natural and easy, it seems almost indispensable that Lassus had occupied for several years the post to which Baini says he was first appointed in 1541, had spent these years in writing the great cumbrous works which had been the fashion of his predecessors, and then, like Palestrina—whom, if he really lived at Rome all this time, he must have known—gradually acquired the less artificial style, by which his later works are characterised.

In the years 1565–66 Lassus adds 3 more volumes of 'Sacræ Cantiones' (several numbers

[1] See these names in Eitner's Bibliographie.

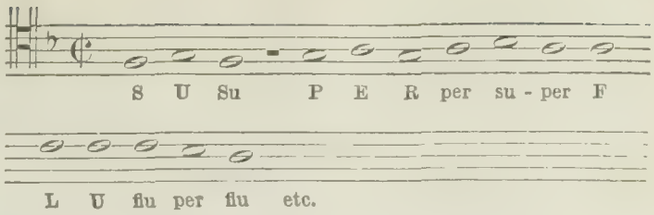
[2] Geschichte, iii. 353.

of which are scored by Commer), and the first set of 'Sacræ lectiones, 9 ex prophetâ Job.' The first editions of these all hail from Venice, perhaps because Jean de Berg of Nuremberg, who had published the 1st volume, had died in the meanwhile. His successor Gerlach, however, publishes an edition of them in 1567, as well as a collection of 24 Magnificats. In the latter the alternate verses only are composed—a contrapuntal treatment of the appointed church melodies—the other verses being probably sung or intoned to the same melodies in their simple form.

The year 1568 is full of interest. In February the Duke William marries the Princess Renata of Lorraine; there is a large gathering of distinguished guests at Munich, and music has a prominent place in the fortnight's festivities. Among the works composed specially for the occasion was a 'Te Deum' (à 6), and three masses (à 6, 7, and 8 respectively), also two motets 'Gratia sola Dei' and 'Quid trepidas, quid musa times?' But here we must stop, for though it has a real interest to read how 'their Highnesses and Excellencies and the Duchess Anna attended by Madame Dorothea returned home greatly pleased with the sweet and delightful mass they had heard,' and to follow all the occurrences of 14 consecutive days of Orlando's life, still we must refer the curious reader to the pages of Massimo Trojano, and can only stop to mention that, towards the end of the time, he was the life and soul of an impromptu play suggested by the Duke, in which he not only acted one of the principal parts, but introduced various pieces of music on the stage with the aid of a band of picked singers.

In the same year we have two most important publications: (1) 'Selectissimæ Cantiones à 6 et pluribus' and (2) the same à 5 et 4. The first book opens with a massive work in 4 movements, 'Jesu nostra redemptio,' in the grand gloomy style of the old masters, followed by shorter and simpler pieces, such as the prayer in the garden of Gethsemane, with a melodious prelude on the words 'In monte Oliveti oravit ad patrem,' followed by a simple strain of devotional music carrying the hearer quietly and expressively, but not dramatically, through the Saviour's agony and resignation. The volume is not confined to religious music. There are some pieces with secular words, such as an ode to Albert 'Quo properas facunde nepos Atlantis,' but there are also some capital drinking songs, and the 'Jam lucis orto sidere,' with its 2nd part 'Qui ponit aquam in Falerno,' is a fine specimen of a part-song for two choirs singing alternately, a kind of music much in vogue at the time, the introduction of which is said to be due to Adrian Willaert.

The other volume is confined to music à 5 and à 4, and is proportionately simple. Commer has printed 8 or 9 of the sacred numbers in score, and they are not difficult either to understand or to appreciate. Among the secular pieces there is a comic setting of the psalm 'Super flumina Babylonis,' each letter and syllable being sung separately as in a spelling lesson:—



at which rate it takes two long movements to get through the first verse. This might well be a parody on the absurd way in which the older masters mutilated their words. But there are beautiful as well as curious numbers among the secular part-songs in this book, and the 'Forte soporifera ad Baias dormivit in umbra, blandus Amor etc.' is one of the quaintest and prettiest songs that we have come across in the old music world. In this book is also a very characteristic, though rather complicated and vocally difficult setting of the well-known song of Walter Mapes—if [1] 'Walter Mapes' it be—'Si bene perpendi, causæ sunt quinque bibendi.' Dean Aldrich may have taken the words from this very book (for he had a library of Lassus' works) when he made his well-known translation:

> 'If all be true that I do think,
> There are five reasons we should drink:
> Good wine, a friend, or being dry,
> Or lest you should be by and by,
> Or any other reason why.'

In a subsequent edition of the same 'Cantiones' appears another portion of the same work, 'Fertur in conviviis,' à 4, in five movements set to music full of character and effective contrasts.[2] The music was so much liked that other words were twice set to it, once in a French edition which aimed at rendering the chansons 'honnestes et chrestiennes' to the words 'Tristis ut Euridicen Orpheus ab orco'—though how the adapter succeeded in his object by the change is not very apparent; and again a second time after his death in the edition of his works by his son, to the stupid words 'Volo nunquam,' which aimed at turning it into a temperance song by the insertion of a negative in each sentiment of the original. The old edition has fortunately survived, and the words of the last two verses, beginning 'Mihi est propositum,' are still used for their original purpose. These spirited words, of which Orlando was evidently so fond, and to the quantities of which he paid such careful regard, seem to have inspired him with a marked rhythm and sense of accent, which is very exceptional in works of the time.

In the year 1569, Adam Berg, the court publisher at Munich, brings out 'Cantiones aliquot à 5,' containing 14 numbers, and 2 books of 'Sacræ Cantiones,' partly new, are issued at Louvain. The year 1570 is more productive, 23 new Cantiones à 6; 2 books of chansons containing 18 new ones; and a book of 29 madrigals, published in Munich, Louvain and Venice respectively; while France is represented by an important edition of chansons—'Mellange

[1] Some doubt has lately been thrown on the authorship of these words.

[2] In what collection this song made its *first* appearance is not known.

d'Orlande de Lassus'—often quoted but containing little new matter. At the close of the year, at the diet of Spires, the Emperor grants letters of nobility to Lassus.[1] At the time this honour was conferred upon him, Lassus was probably on his way to the court of France, where we find him during the greater part of the year 1571. Some circumstances of his stay there may be gathered from the 'Primus liber modulorum à 5,' published by Adrian Le Roy, in whose house he lodged during the visit (Paris, August 1571). The publisher's dedication to Charles IX. states that—

'When Orlando di Lassus lately entered your presence, to kiss your hand, and modestly and deferentially greet your majesty, I saw, plainly as eyes can see, the honour you were conferring on music and musicians. For to say nothing of the right royal gifts which you have bestowed on Orlando—the look, the countenance, the words with which you greeted him on his arrival (and this I was not the only one to notice) were such, that he may truly boast of your having shown to few strangers presented to you this year, the same honour, courtesy and kindness you showed him. And even I, Adrian, your subject and royal printer, did not fail to share with him some of that courtesy and consideration on your part. For inasmuch as I accompanied him into your presence, (because he was my guest,) You, seeing me constantly by his side all the time we were in your court, asked me more than once about music,' etc., etc.

Ronsard, the French poet, also speaks of the special welcome with which the King received the composer. Delmotte suggests that the visit to Paris may have had to do with a new Academy of music, for the erection of which Charles had issued letters-patent in November 1570. Several editions of Orlando's former works were issued at Paris during his stay there with Le Roy, but the only new work of the year he does not design for his newly made French friends. He sends it home to his kind master Duke Albert, and thus addresses him (May 1871):—'When I reached Paris, the city which I had so long, and so ardently wished to see, I determined to do nothing, until I had first sent to you from this, the capital of France, some proof of my gratitude.'

This book was the 'Moduli quinis vocibus,' which however was written at Munich before his departure, and only published at Paris. His travels naturally interrupted his composition, and there is nothing ready to print in the next year (1572) but another set of 15 German songs.

Once again settled in Munich, Lassus is soon at work, Adam Berg is busy providing 'specially large and entirely new type,' the Dukes are full of grand ideas to bring honour on themselves, and make the most of their renowned Chapelmaster, and July 1573 sees the result in the issue of the 1st volume of the 'Patrocinium Musices.' [See Berg, Adam.] The work was undertaken on the responsibility of Duke William, and a portrait of that handsome prince, afterwards known as 'William the Pious,' appears as a frontispiece.

The originators of this publication appear to have intended to continue the series until it became a selection of all the best music necessary for the services of the church. Orlando, in the preface to the 1st volume, hints at the work being undertaken in emulation of the service lately rendered to the church by Philip of Spain in bringing out a new [2]edition of the Scriptures, and speaks half apologetically of the 1st volume (which contains only motets), as if it scarcely came up to the object of the publication. The books might almost be called 'scores,' the separate parts appearing together on the two opposite pages. Few publications of this kind had as yet appeared. The music takes up a great deal more space than it would if printed in separate part-books, and on this account, as well as by reason of the magnificent type, the volumes hold less than many a smaller and less pretentious edition. The series stops short in 1576, and of the second series (1589–1590) Orlando contributes only the 1st volume. With the exception of the 'Vigiliæ Mortuorum' in the 4th volume—which had already appeared in 1565 under the title 'Lectiones ex propheta Job,'—and some of the Magnificats in vol. 5, all the contents of the volumes appear for the first time.

The 2nd volume[3] is dedicated (Jan. 1, 1574) to Gregory XIII; and it is no doubt in return for this mark of respect that Orlando receives from the Pope on April 7 the knighthood of the Golden Spur. The 4th volume contains an interesting setting of the 'Passion' according to St. Matthew, in 41 very short movements, part of the narrative being recited by the priest, and the character parts sung as trios or duets.

In the year 1574 Lassus started on another journey to Paris. Whether the French King had invited him for a time to his court, or whether Lassus actually accepted a permanent position there, we do not know, but whatever the object of the journey, it was frustrated by the death of Charles (May 30), and Lassus hearing of this when he had reached Frankfort, returned at once to Munich.

The year 1576, besides finishing the 1st series of the 'Patrocinium Musices,' sees the publication of the 3rd part of the 'Teutsche lieder,' containing 22 nos., and the 'Thresor de musique,' a collection of 103 chansons, most of which had been printed in the Mellange (1570), but appear here with new words to satisfy the growing taste for psalm-singing in France. 1577 brings a small work of interest, a set of 24 cantiones (à 2), 12 being vocal duets, and the other 12 for instruments. The style of music is precisely the same in both cases, the absence of words in the latter 12 alone making any difference; and this proves, if there be any doubt on other grounds, that the notice frequent on title pages of this

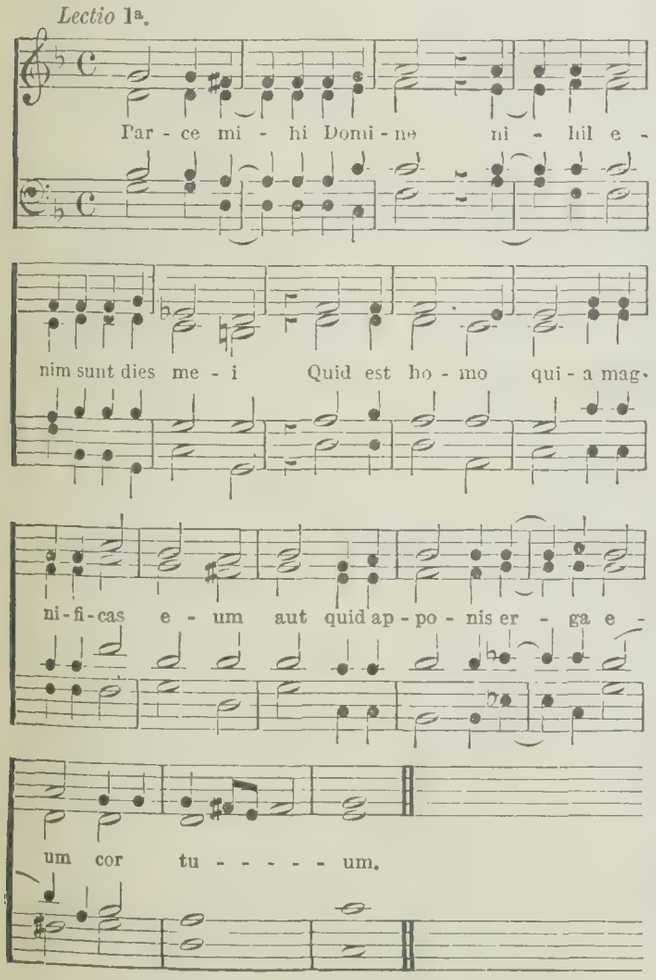
[1] A facsimile copy of this grant is kept in the Brussels library (Bibl. de Bourgogne, 14,405). The part referring to the coat of arms is worth quoting:—'Linea autem illa candida seu argentea, quæ medium scutiq. aream constituit, ordine recto contineat tria signa musica, aureo colore tincta, quorum primum Diesis vulgo nuncupatum, quod emolliendæ vocis inditium est, dextram, alterum vero, ♭ durum scilicet sinistram illius partem, tertiam autem videlicet b molle centrum clypei occupet.' Delmotte, in copying this in his book, has substituted the word 'becarre' for the sign ♮, which is curious, because the interest of the quotation centres round a symbol which appears in the composer's coat of arms, but seldom appears in his music. He generally contradicted his flats with sharps, and *vice versa*.

[2] The so-called 'Antwerp Polyglot Bible,' published in 1569-72 at the expense of Philip.

[3] In the original edition the second mass in vol. ii. is printed with its wrong title. It should be Missa super 'Scarco di doglia,' as it appears in subsequent editions.

period, 'apt for viols and voyces,' did not mean that the voices and instruments were to perform them together, though this they undoubtedly did at times, but that the music of the chansons and motets formed the principal repertoire of the instrumentalists, and that they converted them into 'songs without words' with the concurrence of the composer. What other kinds of music the instrumentalists at Munich performed, it does not come within our province to discuss, since Lassus took no part in the direction of it. The duets having apparently found favour, Orlando goes on to publish a set of trios for voices *or* instruments, and as if this was a new and special idea, the first one is set to the words 'Hæc quæ ter triplici,' and the book dedicated to the three Dukes, William, Ferdinand and Ernest. The most important publication of the year is 'Missæ variis concentibus ornatæ,' a set of 18 masses, of which 13 are new, printed at Paris by Le Roy, in score.

During the years 1578–80 we know of no important publications. The illness of Duke Albert, and his death (Oct. 1579), are probably sufficient to account for this. He had done a last act of kindness to Lassus in the previous April by guaranteeing his salary (400 florins) for life. We like to think that the new set of 'Vigiliæ Mortuorum'—to the words of Job as before—were Lassus' tribute to the memory of his master. They were published a year or two after the Duke's death as having been recently composed. They are more beautiful than the earlier set, in proportion as they are simpler; and so simple are they, that in them human skill seems to have been thrust aside, as out of



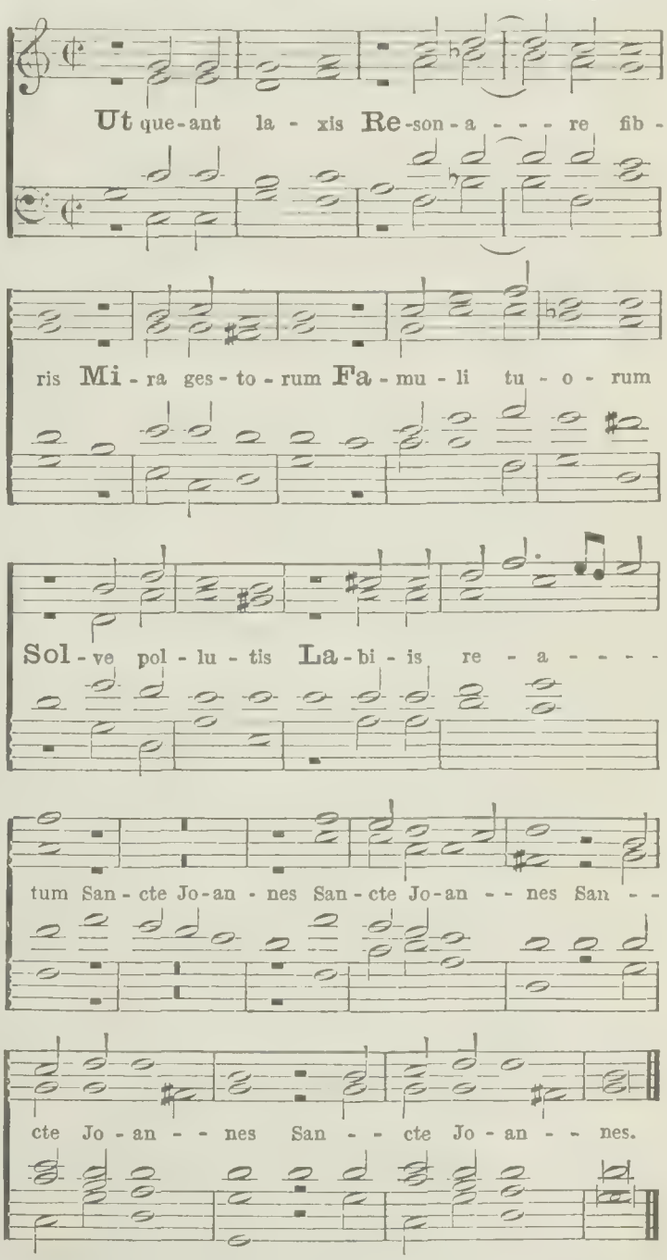
place for their purpose. Such music as this might Handel have had in his mind, when he wrote to the words 'Since by man came death.'

Passing on to the year 1581 we find a 'Liber Missarum,' printed by Gerlach, containing 4 new masses. Of these Commer has printed one on the tune 'La, la, Maistre Pierre.' To the same date belongs a 'Libro De Villanelle, Moresche, et altre Canzoni' (à 4, 5, 8), from Paris, containing 23 numbers.

There is much new music ready for 1582, and on the 1st of January Orlando dedicates a book to the bishop of Würtzburg, containing the 2nd set of 'Lectiones ex libris Hiob,' already referred to, and 11 new [1] motets. At the end of the book, and without connexion with its other contents, a short tuneful setting of the curious words

> 'Quid facies, facies Veneris cum veneris ante,
> Ne sedeas sed eas, ne pereas per eas.'

Then again, on Feb. 1, 'jampridem summâ diligentiâ compositum,' 26 Sacræ cantiones à 5; of which however we only know the last; a beautiful setting of the hymn to John the Baptist, 'Ut queant laxis,' the tenor singing the



[1] These are all lying in modern score and ready for publication in the Fétis library at Brussels.

notes of the scale with their names, and the other parts taking up the remaining words of each line, the music very interesting as a specimen of an old treatment of the scale, though scarcely so old-fashioned as might be expected. The next month, March, brings a set of Motets (à 6), 'singulari authoris industriâ,' for voices or instruments. These books which follow so closely on each other are not collections of old work, but, as we learn from the title-pages, had all been recently composed. The last set exists also in modern notation in the Brussels library among many such scores, prepared by the 'singular industry' of another native of Mons, M. Fétis, who was appointed by the Belgian government to bring out a complete edition of his fellow-townsman's works, but was stopped by death from carrying out one more of the many great tasks he had accomplished and was intending to accomplish.

The successful adaptation of German words to some of Orlando's earlier French chansons leads him in the following year, 1583, to write 33 original ones to sacred and secular German words 'Neue teutsche Lieder, geistlich und weltlich'—short pieces of great beauty in 4-part counterpoint. Several of them have been printed by Commer. The most important publication of 1584 is the 'Penitential Psalms.' This is the work we have already spoken of under the year 1565.

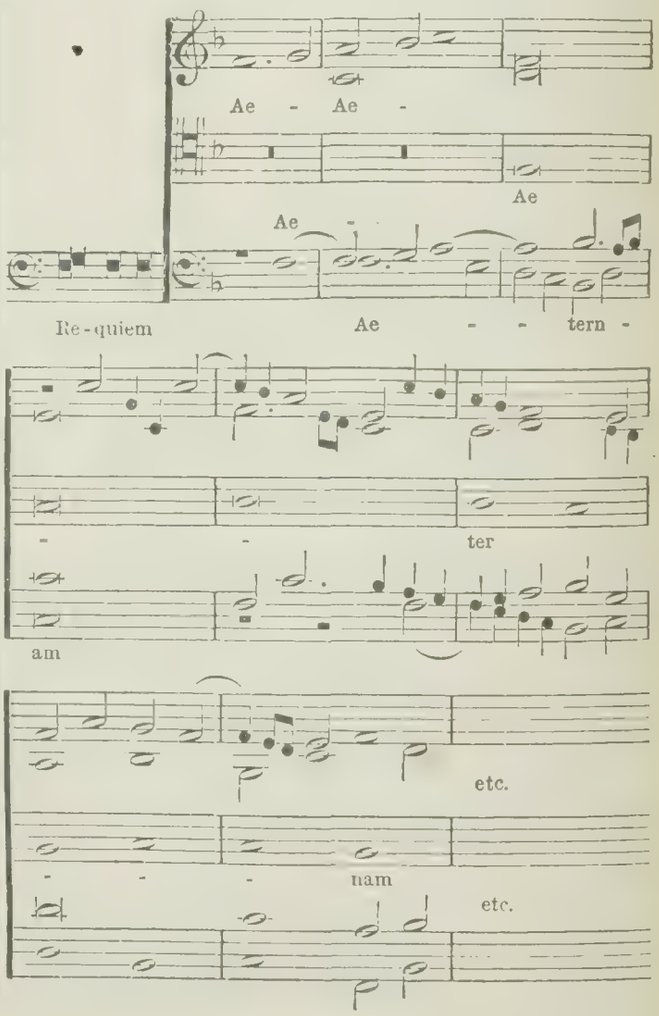
A violent storm occurred at Munich on the Thursday of the Fête-Dieu in this year, and the Duke gave orders that the customary procession round the town from the church of St. Peter should be confined to the interior of the building. But no sooner had the head of the procession reached the porch of the church, and the choir was heard singing the first notes of Lassus' motet 'Gustate, videte,' than a sudden lull occurred in the storm, and the ceremony was performed as usual. This was looked upon as a miracle, and the people of Munich 'in their pious enthusiasm looked upon Lassus as a divine being.' Afterwards, whenever fine weather was an object, this motet was chosen. 1585 brings a new set of madrigals à 5, and a book containing besides motets the 'Hieremiæ prophetæ Lamentationes.' Besides these we have a volume of 'Cantica sacra' (24 nos.), and another of 'Sacræ cantiones' (32 nos.), both, according to the title-pages, recently composed. The first contains a setting of the 'Pater noster,' à 6, and an ode to Duke Ernest, Archbishop of Cologne, and the latter a 'Stabat mater' for two 4-part choirs singing alternate verses.

For some years back, all the editions bear on the frontispiece some testimony to the wonderful industry of the composer. 1586 seems to bring the first warning of declining strength. It is a blank as far as publications are concerned, and the opening of 1587 brings with it the gift from Duke William of a country house at Geising on the Ammer, probably as a place of occasional retirement. Then he comes back to work, and in gratitude, no doubt, for better health, on April 15 dedicates 23 new madrigals to the court physician, Dr. Mermann. In August a new volume of the 'Patrocinium Musices' appears, containing 13 magnificats. Two masses, a 'Locutus Sum' and 'Beatus qui intelligit,' bear the same date. Towards the close of the year Orlando is begging for rest from his arduous duties as chapel-master. Portions of the Duke's decree in answer to this request are interesting.

'The good and loyal services of our well-beloved and faithful servant Orland de Lassus, ... lead us to show our favour and gratitude to him, by allowing his honourable retirement from his duties as master of our chapel, seeing that such duties are too onerous for him, and we permit him to pass some portion of each year at Geising with his family . . . . In consideration of this his appointments will be reduced 200 florins annually . . . . . But, on the other hand, we appoint his son Ferdinand as a member of our chapel at a salary of 200 florins, and at the same time to his other son, Rudolph, who has recently humbly asked our permission to marry, we grant his request and confer upon him the place of organist with a salary of 200 florins, on condition that he undertake the education in singing and composition of the young gentlemen of the choir.'

The composer does not seem to have been satisfied with this arrangement, and again returns to his post. In 1588, in conjunction with his son Rudolph, he brings out 50 'Teutsche Psalmen.' Commer prints the 25 nos. contributed by Orlando—and very beautiful and interesting they are—3 part hymns, the melody occuring, according to his fancy, in either of the 3 parts.

The volume of the 'Patrocinium Musices' for 1598 contains 6 masses, the last number being the 'Missa pro defunctis,' which we may consider the last important publication of his life. Its lovely opening is an inspiration which finds no parallel in any other of his compositions that we have seen. As his end approaches, he has here



one of those glimpses into the coming world of music which Ambros (Geschichte, iii. 356) traces in others of his works. It is however only in the first page or two that we find the music so astonishingly near our own idea of the opening of a Requiem.

And here his life's work seems to end; in the next volume of the 'Patrocinium Musices' we find other names, and nothing bears Orlando's but 12 German part-songs. Then an utter blank. The fresh effort to work had completely prostrated him, but death did not come at once to his relief. His wife Regina finds him one day so ill that he fails to recognise her. The Princess Maxmiliana sends Dr. Mermann, at once, and there is a temporary recovery, but the mind is still at fault. 'Cheerful and happy no longer,' says Regina, 'he has become gloomy and speaks only of death.' Promises of the Duke's further bounty have no effect upon his spirits. He even writes to his patron, complaining that he has never carried out his father Albert's intentions towards him, and it needs all that Regina and the Princess Maxmiliana can do to soften the effect of this act. He died at Munich in June 1594. This date is taken from a letter written afterwards by his wife. The two publications 'Lagrime di S. Pietro,' signed May 24, 1594, and 'Cantiones Sacræ' (Feast of S. Michael, 1594), may imply that his death did not take place till 1595, and that he had so far temporarily recovered as to take an interest in the publication of some old works, or perhaps even to write new ones; but it is natural to prefer the date given by his wife, in which case we must suppose these works to have been edited by other hands. He was buried in the cemetery of the Franciscans at Munich. When the monastery was destroyed, the monument which had been erected over his grave was removed, and kept in the possession of a private family. It was set up in the present century in the garden of the 'Academie des Beaux Arts,' at Munich. Many more details of all these things are given by Delmotte, to whom we refer the reader.

After Orlando's death his sons edited many of his works. Thus Rudolph the organist edited 'Prophetæ Sibyllarum (à 4) chromatico more' in 1600, and Ferdinand the chapel-master printed 4 of his own Magnificats with 5 of his father's in 1602. In 1604 they together issued 'Magnum opus musicum O. de Lasso,' by which work they have immortalised themselves, preserving in 6 volumes of a moderate size, most clearly and beautifully printed, no less than 516 sacred and secular motets. The addition of bars is all that is required to give the work a completely modern form. Dehn is said to have transcribed the whole of it. Ferdinand, the elder brother, died in 1609 at about 50 years of age, leaving several children, one of whom, also called Ferdinand, was sent to Italy for his musical education, and was afterwards Chapel-master to duke Maximilian I. Rudolph, after his brother's death, edited '6 Missæ posthumæ O. di Lasso' (1610) and 100 Magnificats (1619), most of them hitherto unpublished. The two Ferdinands and Rudolph were all eminent composers, and it is said that when the King of Sweden, Gustavus Adolphus, entered Munich in 1632, he visited Rudolph at his house and ordered compositions from him.

We have mentioned the principal works published by Lassus in his lifetime or edited afterwards by his sons. Counted in separate numbers Eitner[1] brings their total to over 1300. This does not include many detached pieces published in collections of music by various composers. Again, the unpublished MSS. are very numerous. When all these are counted, the sacred and secular works are said to amount to about 1600 and 800 respectively, the chief items being 51 masses, about 1200 sacred motets and cantiones, 370 chansons, and over 230 madrigals. Of such works as have appeared in modern notation by the labours of Commer, Proske, Dehn, Van Maldeghem, etc., we may say roughly that they represent about an eighth part of the composer's complete works.

Lassus was the last great Netherland master. His native land for 200 years had been as prominent in music as Germany has been in later times. Italy, a second home to every great Belgian musician since the time of Dufay, was at length to receive the reward for her hospitality, and to produce a composer to compete with the proudest of them. Josquin and Orlando were to find their equal in the Italian pupil of their countryman Goudimel.

Palestrina is often said to have overturned the whole fabric of existing church music in a few days by writing some simple masses for Pope Marcellus. For the truth of this story we refer the reader to the article on PALESTRINA. It serves well enough as a legend to illustrate the reformation which music had been undergoing since Josquin's time. The simpler church music did not indeed take the place of the older and more elaborate forms of the Josquin period at a few strokes of Palestrina's pen. Even in the writings of Josquin himself the art can be seen gradually clearing itself from meaningless and grotesque difficulties; and there were plenty of good composers, two very great ones, Gombert and Clement, coming between Josquin and Lassus or Palestrina. The simplicity of Lassus' church music as early as 1565 shows that the story of the causes of Palestrina's revolution must not be accepted too literally. The Belgian brought up in Italy, and the Italian pupil of a Belgian, were by no means so widely separated as their too eager friends sometimes try to prove them. Side by side in art, they laboured alike to carry on the work of the great Josquin, and make the mighty contrapuntal means at their disposal more and more subservient to expressional beauty. It seems that the simple forms of expression which Lassus and Palestrina were so often content to use, owed something to the influence of secular music, even though the composers may not have been conscious of drawing directly from such a source.

[1] Verzeichniss der gedruckten Werke von O. de Lassus (Trautwein, 1874).

But a stronger influence acting on the two musicians is to be found, we think, in the history of the religious movements of the time. Palestrina lived in Rome at a time when zealous Catholics were engaged in vigorous internal reforms as a defence against the march of Protestantism. Lassus too was at a court the first in Europe to throw in its lot with this counter-reformation. The music of the two composers breathes a reality of conviction and an earnestness which is made necessary by the soul-stirring spirit of the time. To Lassus, it is said, strong offers were made by the court of Saxony to induce him to come over to the work of the Protestant Church. Fortunately for the art he remained true to his convictions, and was spared from being spoilt, as many of his fellow-countrymen were, by devoting themselves to those slender forms of composition which were thought suitable to the reformed religion.

Lassus himself saw no violent break separating his music from that of his predecessors, as we may infer from the list of composers whose works were performed in the Munich chapel. In that list the name of Josquin appears in capital letters, for it meant then what the name of Bach means now; and Lassus, with his softer and more modern grace, looked up with reverence and imitated, as well as his own individuality would allow him, the unbending beauty of the glorious old contrapuntist in the same way as Mendelssohn in later times looked up to and longed to imitate the Cantor of the Thomas-schule.

Orlando spent his life in Germany, then by no means the most musical country or the one most likely to keep his memory alive. Palestrina, whose life of suffering and poverty contrasts strongly with Orlando's affluence and position, had at least the good fortune to plant his works in the very spot where, if they took root at all, time would make the least ravages on them. The name and works of Palestrina have never ceased to live in the Eternal City; and while the name of Lassus is little known among musical amateurs, every one is acquainted with the works of his contemporary. How much is really known of Palestrina's music we do not venture to question, but the more the better for Lassus. As soon as the world really becomes familiar with the music of the Italian, the next step will lead to the equally interesting and beautiful works of the Netherlander. Then by degrees we may hope for glimpses into that still more remote period when the art of counterpoint, in the hands of Josquin, first began to have a living influence on the souls of men. [J.R.S.-B.]

LAST JUDGMENT, THE. The English version, by Prof. Taylor, of Spohr's oratorio 'Die letzten Dinge.' Produced at Norwich Festival Sept. 24, 1830. Given by the Sacred Harmonic Society, July 11, 1838, also July 23, 1847, Spohr conducting. [G.]

LATROBE, Rev. Christian Ignatius, eldest son of Rev. Benjamin Latrobe, superintendent of the congregations of the United (Moravian) Brethren in England, was born at Fulnec, Leeds, Yorkshire, Feb. 12, 1758. In 1771 he went to the college of the United Brethren at Niesky, Upper Lusatia, returned to England in 1784, took orders in the same church, became secretary to the Society for the Furtherance of the Gospel, and in 1795 was appointed secretary to the Unity of the Brethren in England. Although Latrobe never followed music as a profession he cultivated it assiduously from an early age. His earlier compositions were chiefly instrumental; three of his sonatas, having met with the approval of Haydn, were published and dedicated to him. His other published compositions include Lord Roscommon's translation of the 'Dies Iræ,' 1799; 'The Dawn of Glory,' 1803; Anthem for the Jubilee of George III., 1809; Anthems, by various composers, 1811; Original Anthems, 1823; 'Te Deum, performed in York Cathedral'; 'Miserere, Ps. 51'; and 'Six Airs on serious subjects, words by Cowper and Hannah More.' He edited the first English edition of the Moravian Hymn Tunes. But his most important publication was his 'Selection of Sacred Music from the works of the most eminent composers of Germany and Italy,' 6 vols. 1806–25, through the medium of which many fine modern compositions were first introduced to the notice of the British public. He died at Fairfield, near Liverpool, May 6, 1836.

Rev. John Antes Latrobe, M.A., his son, born in London in 1792, became organist at Liverpool, and was composer of several anthems. He took orders in the Church of England, and was incumbent of St. Thomas's, Kendal, and honorary canon of Carlisle. He was author of 'The Music of the Church considered in its various branches, Congregational and Choral,' London, 1831. He died at Gloucester Nov. 19, 1878.

The following are the contents of Latrobe's valuable Selection, arranged alphabetically. The pieces are all in vocal score, with compressed accompaniments; some to the original text, some to translated words.

Abos. Stabat Mater, [1]T. from Stabat.
Alberti, D. Salve Redemptor, C.—Salve.
Do. O God, be not far, A.—Do.
Do. O Jesu, Salvator! C.—Do.
Astorga. O quam tristis, T.—Stabat.

[W. H. H.]

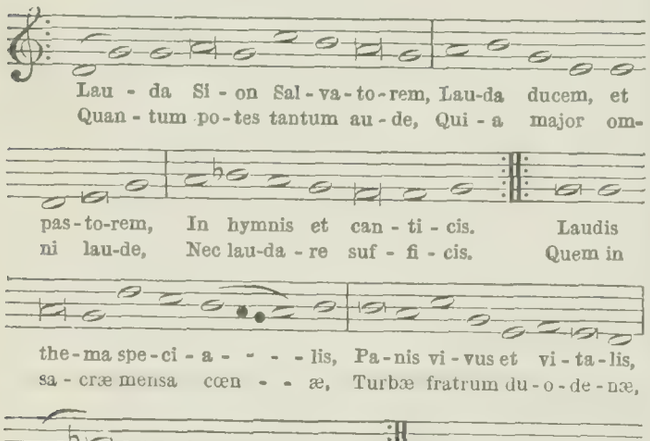
LAUB, FERDINAND, one of the most remarkable violin-players of our day, was born Jan. 19, 1832, at Prague, where his father was a musician. His talent shewed itself very early; at six he mastered Variations by De Beriot, and at nine performed regularly in public. At eleven he attracted the notice of Berlioz and Ernst, and shortly after was taken up by the Grand Duke Stephen, and by him sent to Vienna in 1847. After this he visited Paris, and, in 1851, London, where he played at the Musical Union, and, in 1853 succeeded Joachim at Weimar. Two years later we find him at Berlin as Kammervirtuos and Concertmeister of the Court band, and leader of quartet-concerts of his own. At length, after considerable wandering, he settled at Moscow in 1866 as head Professor of the Violin in the Conservatorium, and first violin at the Musikgesellschaft, with great liberty of action. But Russia did not agree with him, and the state of his health compelled him in 1874 to take the baths at Karlsbad. The benefit however was but temporary, and on March 17, 1875, he died of a disordered liver, at Gries, near Botzen, in the Tyrol. Laub was certainly one of the greatest violin-virtuosos of recent times. He had a fine and very powerful tone and a brilliant technique, and played with much feeling and passion. His répertoire was very large, comprising all the important classical works and a great many modern compositions. His frequent performances of Joachim's Hungarian Concerto deserve special mention. He had also much success as a quartet-player, but his style, especially in latter years, has not unjustly been reproached with mannerism and a tendency to exaggeration. [P. D.]

LAUDA SION. The name of a Sequence, sung, at High Mass, on the Feast of Corpus Christi, between the Gradual—*Oculi omnium*—and the Gospel for the Day. [See SEQUENTIA.]

The text of the *Lauda Sion*, written, about the year 1261, by S. Thomas Aquinas, has always been regarded as a masterpiece of mediæval scholarship; and differs, in at least one very important point, from the four other Sequences still retained in use by the Roman Church. Not only does the rhythmic swing of its rhymed

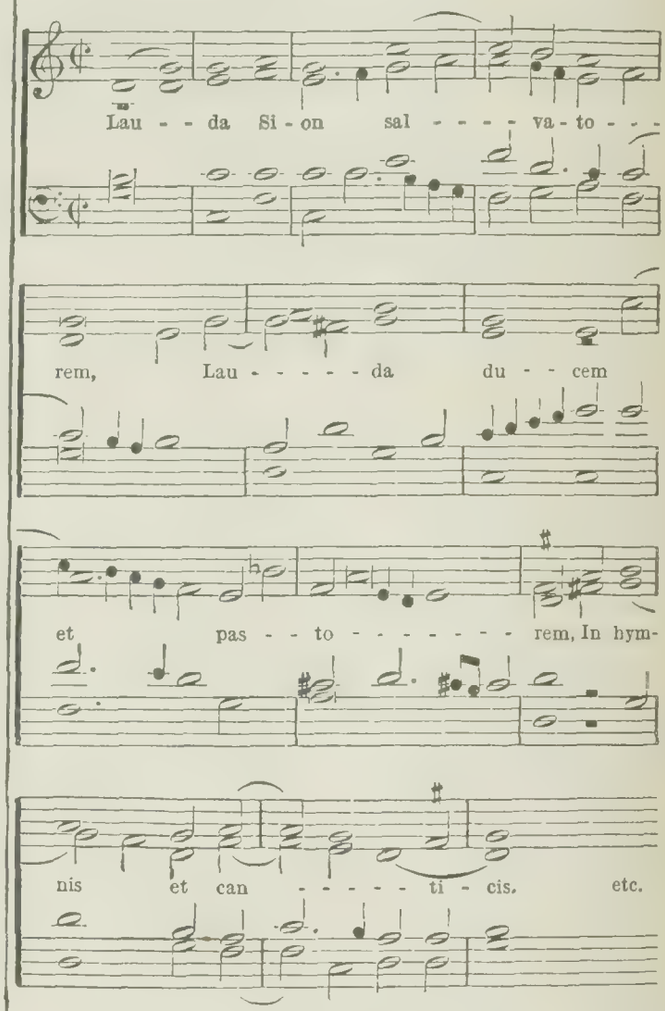
Trochaic Dimeters—strengthened by the introduction of a large proportion of Spondees—stamp it, at once, with the character of a glorious Hymn of Praise; but it serves, also, as a vehicle for the exposition of some of the most abstruse problems of dogmatic Theology, which are everywhere defined with an exactness as close as that shown in the statements of the 'Athanasian Creed.' And, strange to say, some of the verses which exhibit this lucidity of definition in the most marked degree, are precisely those in which the swing of the metre seems least encumbered by extraneous trammels. [See METRE; PROSE.]

This jubilant swing is finely brought out by the Plain Chaunt to which the Sequence is adapted—a fiery Melody, in Modes VII and VIII combined, exhibiting considerable variety of treatment and expression, and, in all probability, coæval with the text of the Sequence itself. Several readings of this Melody are extant, all agreeing in general contour, though differing in a few unimportant details. The purest version is probably that revised by the editors of the new Ratisbon Gradual; though the Mechlin form contains some passages which are, at least, entitled to careful consideration, more especially those in which the necessity for the introduction of a B♭ is avoided by a ligature extending to C.



The entire Melody is divided, like the portion we have selected as our example, into short strains, consisting of three, or more lines, according to the requirements of the metre: and the whole concludes with an *Amen. Alleluia,* of unusual beauty.

The poetry of the *Lauda Sion* has been many times subjected to polyphonic treatment of a very high order. Palestrina has left us two settings of the Sequence for eight voices, arranged in a double Choir, and a shorter one for four. The first, and best known, was printed, in 1575, by Alex. Gardanus, in the Third Book of Motets for 5, 6, and 8 Voices; and is one of the earliest examples of that peculiar combination of two Choirs, consisting of unequally balanced Voices, which Palestrina has made so justly famous—the Voices selected being, in this case, Cantus I and II, Altus, and Bassus, in the first Choir, and Altus, Tenor I and II, and Bassus, in the second. Its style is, in many respects, analogous to that of the celebrated *Stabat Mater.* As in that great work, several of the verses—from *Bone Pastor,* to *In terra viventium,* inclusive—are written in Triple Measure. But—as may be seen from the following example—the *Lauda Sion* is also remarkable for its close adherence, as a general rule, to the Plain Chaunt Melody.



A reprint of this beautiful composition will be found in vol. iii. of the complete edition of Palestrina's works now in course of publication by Messrs. Breitkopf & Härtel of Leipzig. The other 8-part setting, in Triple Measure throughout, hitherto known only through the medium of a MS. in the Library of the Collegio Romano, at Rome, has been recently published in vol. vii. of the same series.

Mendelssohn has also chosen the text of the *Lauda Sion* as the framework of a delightful Cantata, for four Solo Voices, Chorus, and Orchestra, composed in 1846, and first performed, in that year, at Liege, on the Feast of Corpus Christi (June 11). Though less elaborate in form than the 'Lobgesang' and some of its fellow cantatas, this fine production is strikingly characteristic of its author's best style. It would be difficult to find a happier example of his treatment of the Arioso than that exhibited in *Caro cibus.* In *Sit laus plena* every phrase dictated by the Soprano solo is immediately repeated in chorus, in a way which forcibly

reminds us of the well-known movement, 'The enemy shouteth,' from 'Hear my prayer.' In *Docti sacris*, a fragment of the Plain Chaunt is treated after the manner of a Chorale,—but changed from the Eighth into the Tenth Mode, and, therefore, invested with a totally new character. In *Sumit unus* the dramatic element is introduced, with almost startling effect: and the whole concludes with a noble Chorus, adapted to the words *Bone Pastor*, and the concluding verses of the Hymn. The student will find it interesting to compare this essentially modern adaptation of the text with the purely ecclesiastical treatment adopted by Palestrina. [W.S.R.]

LAUDI SPIRITUALI. A name given to certain collections of Devotional Music, compiled for the use of the 'Laudisti'—a Religious Confraternity, instituted, at Florence, in the year 1310, and afterwards held in great estimation by S. Charles Borromeo, and S. Philip Neri.

The poetry of the 'Laudi'—some ancient specimens of which are attributed, by Crescentini, to S. Francis of Assisi—was originally written entirely in Italian, and bears no trace of classical derivation. The music to which it is adapted—inclining rather to the character of the Sacred Canzonet, than to that of the regular Hymn—was, at first, unisonous, and extremely simple; though, after a time, the *Laudisti* cultivated part-singing with extraordinary success.

A highly interesting MS. volume, once belonging to a company of 'Laudisti,' enrolled, in the year 1336, at the Chiesa d'Ogni Santi, at Florence, is now preserved in the Magliabecchi Library: and, from this, Dr. Burney (Hist. ii. 328) quotes a very beautiful example—'Alla Trinità beata'—which, of late years, has become popular in this country, though, in all the English editions we have seen, the melody is sadly mutilated, and strikingly inferior in character to the original reading. The earliest printed collection is dated 1485. This, however, would seem to have been either unknown to, or unrecognised by, the disciples of S. Philip Neri: for, in 1565, Giovanni Animuccia, who acted as his Maestro di Capella, published a volume entitled 'Il primo libro delle Laudi,' followed by a 'Secondo libro,' of more advanced character, in 1570. These Sacred Songs, which formed the germ of the performances afterwards called Oratorios, became so popular among the youths who flocked to S. Philip for instruction, that, in 1588—seventeen years after the death of the saintly Animuccia—P. Soto thought it desirable to edit a third volume, containing unacknowledged works, for three and four Voices, by some of the greatest Composers of the age. In 1589, the same zealous editor published an amended reprint of the three volumes, consolidated into one; succeeded, in 1591, by a fourth volume, dedicated to the Duchessa d'Aquasparta. Serafino Razzi published a large collection, in 1608, and many others followed—for, at this period, almost every large town, and even many an important parish, had its own Company of Laudisti, who sang the poetry of Lorenzo de' Medici, Poliziano, Pulci, Bembo, Ludovico Martelli, Giambellari, Filicaia, and other celebrated writers, with undiminished interest, though, as time progressed, the character of the music sensibly deteriorated.

In the year 1770, Dr. Burney heard the Company of Laudisti attached to the Church of S. Maria Maddalena de' Pazzi, in Florence, sing, with excellent effect, in some street Processions, as well as in some of the Churches, from a book then just published for their use: and, however true it may be that part-singing in Italy is not what it was some centuries ago, representatives of the Confraternity are said to be still in existence, striving to do their best in a more modern style. [W.S.R.]

LAUDS (Lat. *Laudes*). The name given to that division of the Canonical Hours which immediately follows Matins.

The Office of Lauds opens, according to the Ritual of the Western Church, with the series of Versicles and Responses beginning, 'Deus in adjutorium meum intende,' followed by seven Psalms and a Canticle, sung, in five divisions, with five proper Antiphons. These are succeeded by the 'Capitulum' (or 'Little Chapter'); the Hymn for the Day, with its proper Versicle and Response; and the 'Benedictus,' which, with its Antiphon, is sung while the Officiating Priest and his Ministers are engaged in incensing the Altar. The Service then concludes with the Collect, or Collects, for the Day; the Commemorations (as at Vespers); and the 'Antiphon of the Blessed Virgin' proper for the Season.

On certain Festivals, the Antiphons, at Lauds, are doubled, as at Matins: and, like Matins, the Office is usually sung 'by anticipation.' The Plain Chaunt Music adapted to it will be found in the 'Antiphonarium Romanum,' and the 'Directorium Chori.' [See MATINS; ANTIPHON.]

In the First Prayer-Book of King Edward VI, the name of 'Mattins' is given to the combined Offices of Matins, and Lauds. [W.S.R.]

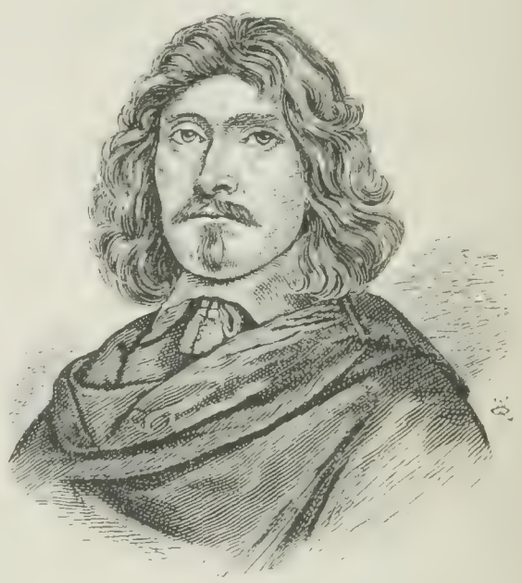
LAUTERBACH, JOHANN CHRISTOPH, distinguished violinist, was born July 24, 1832, at Culmbach in Bavaria. His education he received at the school and gymnasium of Würzburg, where he also learnt music from Bratsch and Prof. Fröhlich. In 1850 he entered the Conservatoire at Brussels as pupil of De Beriot and Fétis, in 1851 received the gold medal, and during Léonard's absence took his place as Professor of the Violin. In 1853 he became Concertmeister and Professor of the Violin at the Conservatorium of Munich; in 1860, on the death of Lipinski, was appointed second Concertmeister of the royal band at Dresden, and in 1873 succeeded to the first place. Since 1861 he has also held the post of principal teacher of the violin in the Conservatorium of Dresden, with great and increasing renown. He has travelled much and always with success. He spent the seasons of 1864 and 65 in England, appearing at the Philharmonic on May 2 of the former, and May 15 of the latter year, and playing also at the Musical Union. In Paris he played at the last concert at the Tuileries

before the war; and received from the Emperor Napoleon a gold snuff-box set with diamonds. He is decorated with many orders both of North and South Germany. In the summer of 1876 he met with a serious mountain accident in Switzerland, by which several of his companions were killed and he himself severely wounded. He has however completely recovered. Lauterbach's style unites the best peculiarities of the Belgian school, great polish and elegance, with the breadth of tone and earnestness of the Germans. [P.D.]

LAVENU, Louis Henry, son of a flautist and music-seller, born in London in 1818. He was a pupil of the Royal Academy of Music, where he studied composition under Bochsa and Potter. Before leaving the Academy he was engaged as a violoncellist at the Opera and the Westminster Abbey Festival of 1834. He was also in business as a music-seller in partnership with his stepfather, Nicholas Mori, the eminent violinist, after whose death, in 1839, he continued the business alone for a few years. During this time he published a few songs and short pianoforte pieces composed by himself. His opera 'Loretta, a Tale of Seville,' words by Bunn, was produced at Drury Lane Nov. 9, 1846, with success. Dissatisfied with his position, Lavenu emigrated to Australia, obtained the post of director of the music at the Sydney Theatre, and died at Sydney, Aug. 1, 1859. [W.H.H.]

LAVIGNE, Antoine Joseph, born at Besançon March 23, 1816, received his early musical education from his father, a musician in an infantry regiment. On Jan. 24, 1830, he was admitted a pupil of the Conservatoire at Paris, where he studied the oboe under Vogt, but was obliged to leave on May 3, 1835, on account of his father's regiment being ordered from Paris. He resumed his position on Oct. 17, 1836, and obtained the first prize in 1837. He was for several years principal oboe at the Theatre Italien at Paris. In 1841 he came to England, and appeared as oboe soloist at the Promenade Concerts at Drury Lane, and has now for some years been a member of Mr. Charles Halle's orchestra at Manchester. He addressed himself with great earnestness to applying to the oboe the system of keys which Boehm had contrived for the flute, and devoted several years to perfecting the instrument. This admirable player has great execution and feeling; but what he is most remarkable for is his power and length of breath, which by some secret known to himself enables him to give the longest phrases without breaking them. [W.H.H.]

LAWES, Henry, son of William Lawes, was born at Dinton, Wiltshire, probably in Dec. 1595, as he was baptized Jan. 1, 1595-6. He received his musical education from Giovanni Coperario. On Jan. 1, 1625-6 he was sworn in as epistler of the Chapel Royal, and on Nov. 3 following, one of the gentlemen, and afterwards became clerk of the cheque. In 1633 he joined his brother William and Simon Ives in composing the music for Shirley's masque, 'The Triumphs of Peace,' and in the same year furnished music for Thomas Carew's masque, 'Cœlum Britannicum,' performed at Court, Feb. 18, 1633-4. In 1634 he composed the songs for Milton's masque, 'Comus,' produced at Ludlow Castle on Michaelmas night, in that year, Lawes performing the part of the Attendant Spirit. (Both Hawkins and Burney have printed 'Sweet Echo,' one of the songs in 'Comus.' The whole of the songs are in the British Museum, Add. MS. 11,518.) It is probable that the friendship between Milton and Lawes had its origin in Comus.



Henry Lawes taught music to Lady Alice Egerton—'The Lady' of the masque. In 1637 appeared 'A Paraphrase vpon the Psalmes of David. By G[eorge] S[andys]. Set to new Tunes for private Devotion. And a thorow Base, for Voice or Instrument. By Henry Lawes'; and in 1648 'Choice Psalmes put into Musick for Three Voices . . . . Composed by Henry and William Lawes, Brothers and Servants to His Majestie. With divers Elegies set in Musick by several friends, upon the death of William Lawes. And at the end of the Thorough Base[1] are added nine[2] Canons of Three and Four Voices made by William Lawes.' A copper-plate portrait of Charles I, believed to be the last published in his life time, accompanies each part, and amongst the commendatory verses prefixed to the work is the sonnet, addressed by Milton to Henry Lawes in Feb. 1645-6, commencing 'Harry, whose tuneful and well measured song.' Lawes composed the songs in the plays and poems of William Cartwright, and the Christmas songs in Herrick's 'Hesperides.' In 1653 he published 'Ayres and Dialogues for One, Two and Three Voyces,' with his portrait, from which the above is taken, finely engraved by Faithorne, on the title. This was received with such favour as to induce him to issue two other books with the

[1] The work is in separate parts. [2] Really ten.

same title in 1655 and 1658. In 1656 he was engaged with Capt. Henry Cooke, Dr. Charles Colman and George Hudson in providing the music for Davenant's 'First Day's Entertainment of Musick at Rutland House.' On the Restoration in 1660 Lawes was reinstated in his Court appointments. He composed the anthem 'Zadok the Priest,' for the coronation of Charles II. He died Oct. 21, 1662, and was buried Oct. 25 in the cloisters of Westminster Abbey. Many of his songs are to be found in 'Select Musicall Ayres and Dialogues,' 1652, 1653 and 1659, and 'The Treasury of Musick,' 1669.

Henry Lawes was highly esteemed by his contemporaries, both as a composer and performer. Milton praises him in both capacities, and Herrick in an epigram places him on a level with some of the most renowned singers and players of his time; but later writers have formed a lower estimate of his abilities as a composer. Burney declares his productions to be 'languid and insipid, and equally devoid of learning and genius'; and Hawkins speaks of his music as deficient in melody and 'neither recitative nor air, but in so precise a medium between both that a name is wanting for it.' But both appear to judge from a false point of view. It was not Lawes's object to produce melody in the popular sense of the word, but to set 'words with just note and accent,' to make the prosody of his text his principal care; and it was doubtless that quality which induced all the best poetical writers of his day, from Milton and Waller downwards, to desire that their verses should be set by him. To effect his object he employed a kind of 'aria parlante,' a style of composition which, if expressively sung, would cause as much gratification to the cultivated hearer as the most ear-catching melody would to the untrained listener. Lawes was careful in the choice of words, and the words of his songs would form a very pleasing volume of lyric poetry. Hawkins says that notwithstanding Lawes 'was a servant of the church, he contributed nothing to the increase of its stores'; but, besides the coronation anthem before mentioned, there are (or were) in an old choir book of the Chapel Royal fragments of 8 or 10 anthems by him, and the words of several of his anthems are given in Clifford's 'Divine Services and Anthems,' 1664. A portrait of Henry Lawes is in the Music School, Oxford.

John Lawes, a brother of Henry, was a lay vicar of Westminster Abbey. He died in Jan. 1654–5, and was buried in the Abbey cloisters.

Rev. Thomas Lawes, commonly but erroneously stated to be the father, but probably the uncle, of William and Henry Lawes, was a vicar choral of Salisbury Cathedral. He died Nov. 7, 1640, and was buried in the north transept of the cathedral.

William Lawes, elder brother of Henry, received musical instruction from Coperario at the expense of the Earl of Hertford. He became a member of the choir of Chichester Cathedral, which he quitted in 1602, on being appointed a gentleman of the Chapel Royal. He was sworn in Jan. 1, 1602–3. In 1611 he resigned his place in favour of Ezekiel Waad, a lay vicar of Westminster Abbey, but on Oct. 1 following was re-admitted 'without paie.' He was also one of the musicians in ordinary to Charles I. In 1633 he composed part of the music for Shirley's 'Triumphs of Peace.' An anthem by him is printed in Boyce's Cathedral Music; songs and other vocal compositions in 'Select Musicall Ayres and Dialogues,' 1653 and 1659, 'Catch that catch can,' 1652, 'The Treasury of Musick,' 1669, and 'Choice Psalms,' 1648; and some of his instrumental music in 'Courtly Masquing Ayres,' 1662. The autograph MSS. of his music for several Court masques are preserved in the Music School, Oxford. 'The Royal Consort' for viols and some 'Airs' for violin and bass are in the British Museum, Add. MS. 10,445, and some of his vocal music is in Add. MS. 11,608. On the breaking out of the Civil War he joined the Royalist army and was made a commissary by Lord Gerrard, to exempt him from danger, but his active spirit disdaining that security, he was killed by a stray shot during the siege of Chester, 1645. [W.H.H.]

LAY. A Provençal word, originally probably Celtic, meaning at first a sound or noise, and then a song, especially the tune, as the quotations from Spenser, Milton and Dryden in Johnson's Dictionary prove. Beyond this general sense the term has no application to music. The German 'Lied' is another form of the word. [G.]

LAY VICAR or LAY CLERK, a singer in Cathedral Choirs. [See Vicar Choral.]

LAYS, François, a famous French singer, whose real name was Lay, born Feb. 14, 1758, at La Barthe de Nestés in Gascony. He learned music in the monastery of Guaraison, but before he was 20 his fame as a singer had spread, and in April 1779 he found himself at Paris to be tried for the Grand Opera. His name first appears in Lajarte's catalogue of first representations, as Pétrarque, in a 'pastoral héroïque' by Candeille, called 'Laure et Pétrarque,' July 2, 1780, and is spelt Laïs. His next [1] mention is in the 'Iphigénie en Tauride' of Piccinni, Jan. 23, 1781, where he has the rôle of a coryphée. After that he appears frequently in company with Madlle. Saint-Huberti, a famous soprano of that day. He was also attached to the concerts of Marie Antoinette, and to the Concert Spirituel. He was a poor actor, unless in parts specially written for him; but the splendour of his voice made up for everything, and he preserved it so well as to remain in the company of the Grand Opera till October 1822. Lays was a violent politician on the popular side, which did not please his colleagues, and some quarrels arose in consequence, but with no further result than to cause him to write a

[1] The rôle of the 'Seigneur bienfaisant' is said by Fétis to have been written for him, but his name does not appear in the company at the first performance of that piece.

pamphlet, and to force him, after the 9th Thermidor, to appear in parts distasteful to him, and to sing before the Bourbons after the Restoration. He was professor of singing at the Conservatoire from 1795 to 1799, when he retired from the post; and from 1819 to 1826 held the same office in the 'École royale de chant et de déclamation.' He had been principal singer in the chapel of Napoleon from 1801 till the fall of the Emperor, but was cashiered by Louis XVIII. After leaving the École he retired to Ingrande near Angers, where he died March 30, 1831. We have said that he was not a good actor, but Fétis pronounces him not even a good singer, saying that his taste was poor, and that he had several bad tricks; but he had warmth and animation, and the beauty of his voice so far atoned for all, that for a long time no opera could be successful in which he had not a part. [G.]

LAZARUS, Henry, a native of London, commenced the study of the clarinet when a boy under Blizard, bandmaster of the Royal Military Asylum, Chelsea, and continued it under Charles Godfrey, sen., bandmaster of the Coldstream Guards. After fulfilling engagements in various theatrical and other orchestras he was, in 1838, appointed as second to Willman at the Sacred Harmonic Society. On the death of Willman in 1840 Lazarus succeeded him as principal clarinet at the Opera and all the principal concerts, festivals, etc. in London and the provinces, a position he has since retained with great and ever-increasing reputation. In both orchestral and solo playing the beauty and richness of his tone, his excellent phrasing, and his neat and expressive execution, are alike admired. He attributes his present high reputation mainly to the excellent advice he has during his career received from Sir Michael Costa. He has been a professor of his instrument at the Royal Academy of Music since 1854, and at the Military School of Music, Kneller Hall, near Hounslow, since 1858. [W.H.H.]

LAZZARINI, Gustavo, was born (as some biographers say) at Padua, or (according to others) at Verona, about 1765. His *début* was made at Lucca in 1789, in Zingarelli's 'Ifigenia in Aulide,' with great éclat. In the two following years he appeared in London, singing both in serious and comic operas, such as Bertoni's 'Quinto Fabio' and the 'Locanda' of Paisiello, in the former with Pacchierotti, but taking the principal rôle in the latter. Lord Mount-Edgcumbe thought him 'a very pleasing singer with a sweet tenor voice.' During the Carnival of 1794 he sang at Milan, with Grassini and Marchesi, in Zingarelli's 'Artaserse' and the 'Demofoonte' of Portogallo, and bore the comparison inevitably made between him and those great singers. He sang there again in 1795, and once more in 1798, appearing on the latter occasion in Cimarosa's 'Orazzi' and Zingarelli's 'Meleagro,' with Riccardi and Crescentini. In 1801 he was one of the *Opera Buffa* troupe at Paris, where he was again heard to advantage by Lord Mount-Edgcumbe (1802), singing in company with La Strinasacchi and Georgi Belloc. But his voice had now lost much of its freshness, though the great style remained. Lazzarini published two volumes of Italian airs, and a Pastoral, both at Paris (Carli). His portrait was engraved there by Nitôt Dufrêne, an operatic singer. [J.M.]

LEACH, James, born at Rochdale, Yorkshire, in 1762, was a tenor singer and hymn-tune writer. He published a 'New Sett of Hymns and Psalm Tunes etc.' (Preston, London 1789); and a 'Second Sett' of the same, probably about 1794. His tunes are found in several of the American collections, as the Easy Instructor (Albany, New York 1798), the Bridgewater Collection (Boston 1802). The David Companion or Methodist Standard (Baltimore, 1810) contains 48 of his pieces. For more details see a letter signed G. A. C. in the Musical Times for April 1878, p. 226. In the Rev. H. Parr's 'Church of England Psalmody' will be found Mount Pleasant, Oldham, and Smyrna, by him, which used to be favourites in certain congregations. Leach died in 1797. [G.]

LEAD, TO, in fugues or imitative music is to go off first with a point or subject, which is afterwards taken up by the other parts successively. Thus in the Amen Chorus in the Messiah the bass 'leads,' the tenor taking up the subject at the 6th bar, the alto at the 10th, and so on. In the separate voice parts the fact is often stated ('Tenors lead,' etc.), that the singers may be on their guard, and the part is then said 'to have the lead.' [G.]

LEADER. The chief of the first violins is the leader of the orchestra, the *Concertmeister* of the Germans, and *Chef d'attaque* of the French. He is close to the conductor's left hand. The position is a most important one, as the animation and 'attack' of the band depend in great measure on the leader. The great precision and force of the Gewandhaus orchestra, for instance, is said to have been mainly due to David being for so long at the head of them. [G.]

LEADING NOTE (Fr. *Note sensible*; Germ. *Leitton*). In modern music it is absolutely indispensable for all harmonic progressions to have an appreciable connection with a tonic or keynote, and various lines converge to indicate that note with clearness; among these an important place is occupied by the Leading Note, which is the note immediately below the keynote, and separated from it by the smallest interval in the system, namely a semitone. Helmholtz has pointed out that in actual relationship to the tonic it is the most remote of all the notes in the scale, since the supertonic, which also appears to be very remote, at least comes nearer in being the fifth to the dominant, while the leading note is only the third. For this reason, and also from its not being capable of standing as a root note to any essential diatonic chord in the key, it seems to have no status of its own, but to exist mainly as preparatory to the tonic note, for which, by reason of its close proximity, it seems to prepare the mind when it is heard; and the melodic

tendency to lead up to the most important note in the scale is the origin of its name.

In many scales, both of civilised and barbarous peoples, it has found no place. In most of the mediæval ecclesiastical scales, as in the Greek scales from which they were derived, the note immediately below the tonic was separated from it by the interval of a whole tone, and therefore had none of the character of a leading note; but as the feeling for tonality gained ground in the middle ages hand in hand with the appreciation of harmonic combinations, the use of the leading note, which is so vital to its comprehension, became more common. Ecclesiastics looked upon this tampering with the august scales of antiquity with disfavour, and Pope John XXII passed an edict against it in 1322; consequently the accidental which indicated it was omitted in the written music: but the feeling of musicians was in many cases too strong to be suppressed, and it seems that the performers habitually sang it wherever the sense of the context demanded it, nor do we learn that the ecclesiastics interfered with the practice as long as the musicians did not let the world see as well as hear what they were doing. Notwithstanding this common practice of performers, the scales maintained their integrity in many respects, and there resulted a curious ambiguity, which is very characteristic of mediæval music, in the frequent interchange of the notes a tone and a semitone below the tonic. Musicians were long beguiled by the feeling that the true scales should have the note below the tonic removed from it by the interval of a tone, and that it was taking a liberty and pandering to human weakness to sharpen it; and the clear realisation of those principles of tonality upon which modern music is based was considerably retarded thereby, so that works both vocal and instrumental are characterised by a vagueness of key-relationship, which the use of the leading note alone can remove, till far on into the seventeenth century; by the time of Bach and Handel however the ancient scales had been fused into the major and minor modes of the modern system, and the leading note assumed the office it has ever since occupied. The gradual realisation of the importance of the leading note and the influence it had upon the development of modern music is traced in the article HARMONY, and reference may also be made to chap. xiv of the Third Part of Helmholtz's great work on 'The Sensations of Tone,' etc. [C. H. H. P.]

LEBHAFT, *i. e.* lively, the German equivalent for *Vivace*. Beethoven uses it, during his temporary preference for German terms, in Sonata op. 101, where we find the two directions 'Etwas lebhaft' etc. and 'Lebhaft, marschmässig,' which is exactly equivalent to 'Vivace à la marcia.' Schumann uses it constantly; 'Äusserst lebhaft' is *Vivacissimo*. [G.]

LEBRUN, FRANCESCA, the daughter of Danzi the violoncellist, was born at Mannheim in 1756. Endowed by nature with a voice remarkable alike for its purity and extent, ranging as high as F in alt without difficulty, she improved her natural advantages by careful study, and became one of the best singers that Germany has produced. She made her first appearance (1771) when scarcely 16 years old, and charmed the court: in the next year she was engaged at the Mannheim Opera. Fétis says that in 1775 she became the wife of Lebrun the oboist, whom she accompanied to Italy, singing first at Milan (1778) in Salieri's 'Europa riconosciuta.' The Milanese were delighted with her clear and beautiful voice and easy vocalisation, in spite of the intrigues of La Balducci, the *prima donna* of La Scala, who endeavoured to set them against her young rival. This account must, however, be corrected; for, whereas Fétis says that she only came to England in 1781, there is no doubt that she was here five years earlier, then unmarried, arriving with Roncaglia, with whom she sang in Sacchini's 'Creso.' 'Though her name was Italian [called in the cast, *Francesca Danzi*, Virtuosa di Camera di S. A. S. l'Elettore Palatino], she was a German, and had never been in Italy. She was young, well-looking, had a voice of uncommon clearness and compass, capable of the most astonishing execution, and was an excellent musician. Yet her performance was considered unsatisfactory, being too much *alla Tedescha*, and more like that of an instrument than of a human voice. She *soon after* married M. Lebrun, an eminent player on the hautbois, which confirmed her in the bravura style, as she was in the habit of singing songs with an obbligato accompaniment for that instrument, in which the difficulties performed by both were quite astonishing, each seeming to vie with the other which could go highest and execute the most rapid divisions. After performing in 'Erifile,' also by Sacchini, and other operas, she left England after one season, but was re-engaged for the next but one' (Lord Mount-Edgcumbe). It is therefore clear that she did not marry Lebrun until after 1777. She reappeared in London as Mme. Lebrun in 1779, being again the *prima donna* for serious opera, and continued with Pacchierotti to sing in London for two or three seasons; she then went away, 'nor was her place ever well filled during the remainder of Pacchierotti's stay' (Idem.).

She sang in 1785 at Munich, after which she returned to Italy, achieving the same brilliant success at Venice and Naples as elsewhere. In 1788 and 1789 she appeared at Munich in Mozart's 'Idomeneo,' Prati's 'Armida,' and the 'Castor and Pollux' of Vogler. She started for Berlin in Dec. 1790 to fulfil an engagement, but on her arrival lost her husband, and herself died May 14, 1791.

Mme. Lebrun, beside being a great singer, was an accomplished pianiste, and composed well for that instrument. She published at Offenbach (1783) some sonatas with violin accompaniment, and some trios for piano, violin, and cello, which contain pretty melodies and are written with facility.

Of her two daughters, the elder, SOPHIE, better known as Mme. [1]Dulcken, was born in London

[1] Not to be confounded with the later artiste of that name.

June 20, 1781, and became celebrated as a pianiste. She was remarkable for quick and true feeling, as well as a good style of execution, and made successful concert tours through France, Italy, and Germany. On April 18, 1799, she married Dulcken, a famous maker of pianos at Munich. She composed, but never published, some sonatas and other pieces for the piano.

ROSINE, her younger sister, was born at Munich, April 13, 1785. She was at first taught by Streicher for the piano, but afterwards studied singing under her uncle, Danzi, the Kapellmeister. She made a successful *début*; but, having married Stenzsch, an actor of the Court Theatre, Nov. 30, 1801, gave up the opera to play in comedy, in which she displayed a fair amount of talent. [J.M.]

LÉCLAIR, JEAN-MARIE, l'aîné (so called to distinguish him from his brother Antoine-Remi), an eminent violin-player, and composer for his instrument, was born at Lyons in 1697. Although his father was a member of the royal band, he began his public life not as a musician but as a dancer at the Rouen theatre. Later on he went to Turin, as ballet master, where SOMIS was so much pleased with some ballet-music of his, that he induced him to take up the violin, which up to this time he had cultivated as a secondary pursuit only, and to place himself under his tuition for two years. At the end of that period Somis declared that he had nothing more to teach him. Nevertheless Léclair appears to have continued his studies for a considerable time before going to Paris in 1729. In Paris his success was never great; whether from want of ambition and a retiring disposition, or, as has been suggested, owing to the jealousy of the violinists of the French school, we have no means of deciding. As a fact we know that Léclair, although he can hardly have had a worthy rival among the players of that time, got nothing better than the insignificant post of ripieno-violinist at the Opera. During this period he studied composition under Chéron. In 1731 he became a member of the royal band, but owing to a dispute with Guignon as to the leadership of the 2nd violins, gave up his post again, and soon also retired from the Opera. For the rest of his life he appears to have been exclusively occupied with the composition and publication of his works and with teaching. He was already an old man when he made a journey to Holland, for the sole purpose of hearing and meeting Locatelli, of whose powers as a violinist he, led by the extraordinary and novel difficulties presented in the caprices of that artist, had probably formed a great idea. On Oct. 22, 1764, soon after his return from Holland, he was assassinated late at night close to the door of his own house. Neither motive nor author of the crime have ever been discovered.

Owing to the merit of his compositions for the violin, Léclair occupies a prominent place among the great classical masters of that instrument. As to his powers as a performer we have but the indirect evidence of the difficulties presented in his compositions. These are very considerable; and, barring Locatelli's eccentricities, greater than any that we find in the works of his predecessors or contemporaries. He very freely employs—in fact not seldom writes whole movements in—double-stops; and altogether, even according to the modern standard of technique, his music is exacting both for the left hand and the bow. As a composer, judging him after his best works, Léclair must be accorded the first place among French writers for the violin. It has been justly remarked, that a great deal of what he wrote is antiquated; but much remains that is truly charming. He is no mere imitator of the Italians, but there is a distinct individuality in many of his movements; and also a definite national French element. On the whole, gracefulness and vivacity are more prominent than depth of feeling; his frequent employment of double-stops, already mentioned, giving much richness and brilliancy of sound.

The two Sonatas of his, edited by Ferd. David (Hohe Schule des Violinspiels), are good examples of his higher powers, especially the pathetic one, surnamed 'Le tombeau.' On the other hand a Saraband and Tambourin, often played with great success by Joachim and others, are good specimens of his lively style. This is a list of his works, as appended to his op. 12 :—

Op. 1. Sonatas for violin with a bass. (1st book.)	Op. 8. Trios. Continuation of op. 6.
2. Sonatas. (2nd book.)	9. Sonatas. (4th book.)
3. Sonatas for 2 violins.	10. Concerti grossi.
4. Sonatas en trio.	11. Glaucus et Scylla. Opera.
5. Sonatas for violin with bass. (3rd book.)	12. Sonatas for 2 violins. (2nd book.)
6. Trios (faciles), 2 violins and bass.	13. Overtures and sonatas en trios.
7. Concerti grossi.	14. Sonate posthume.

As a rule his works were engraved by his wife, who, up to 1750, was a singer at the Opéra. [P.D.]

LECOCQ, ALEXANDRE CHARLES, born in Paris June 3, 1832; entered the Conservatoire in 49, and in 50 obtained the first prize for harmony and accompaniment. He took the second prize for fugue in Halévy's class in 1852, and at the same time greatly distinguished himself in the organ class. After this however he obtained no further scholastic distinctions, and either because he tired of Halévy's want of method, or because he was anxious to come before the public, left the Conservatoire towards the close of 1854. He found the usual difficulty in obtaining access to the stage, and would probably have had to wait a long time, but for a competition for an operetta opened by Offenbach in 1856. He was bracketed with Bizet, and 'Le Docteur Miracle' was produced at the Bouffes Parisiens April 8, 1857. The operetta was evidently the work of a clever musician, who understood how to write for the voice. Notwithstanding this good beginning the small theatres still closed their doors to him, and Lecocq was driven to teaching for a livelihood. He then tried a different line, publishing in conjunction with Besozzi a collection of sacred songs for women's voices called 'La Chapelle au Couvent' (1865)—less incongruous when we remember that he was a good

organist; but the stage was irresistible, and a little one-act piece 'Le Baiser à la Porte' (1864) was followed by 'Les Ondines au Champagne' (1865), 'Le Myosotis' (1866), 'Le Cabaret de Ramponneau' (1867), and 'Fleur de Thé,' 3 acts (1868). This last piece was a brilliant success. Lecocq at last found himself established with the public, and produced in rapid succession 'L'Amour et son carquois,' 2 acts (1868); 'Gandolfo' and 'Le Rajah de Mysore,' both in one act (1869); 'Le beau Dunois,' 1 act (1870); 'Le Barbier de Trouville' and 'Le Testament de M. de Crac,' both in 1 act (1871); 'Sauvons la caisse,' 1 act, and 'Les Cent [1] Vierges,' 3 acts (1872); 'La Fille de Mme. Angot,' 3 acts (1873) [2] which ran for 500 nights consecutively; 'Les [3] Prés St. Gervais' and 'Giroflé-[4] Girofla' both in 3 acts (1874); 'Les Jumeaux de Bergame,' 1 act, and 'Le Pompon,' 3 acts (1875); 'La petite Mariée,' 3 acts (1876); 'Kosiki' and 'La Marjolaine,' both in 3 acts (1877); 'Le petit Duc' and 'Camargo,' both in 3 acts (1878); and finally 'La petite Mademoiselle,' 3 acts (1879). To this long list must be added detached songs and other trifles thrown off by his rapid and untiring pen. Lecocq has profited by the false system momentarily in the ascendant among French musicians. Our learned composers, encouraged by some of the managers, overload their operas with orchestral writing and substitute the lyric for the dramatic element—to the ruin of French opéra comique. But Lecocq realizes that what the public really like are light, gay, sparkling melodies. His aim has been to dethrone Offenbach, and as he has the advantage of writing correctly, he has had little trouble in attaining a popularity even greater than that formerly possessed by the composer of 'Orphée aux Enfers.' His style is not a very elevated one, and makes no demand on the poetry or the intellect of the composer; but it requires tact, ease, freedom, and above all, animation. These qualities are conspicuous in Lecocq's operettas, which have become universally popular, owing to the life, *brio*, and easy gaiety which pervade them. [G. C.]

LEDGER LINES are the short lines drawn above and below the staff for those notes which exceed its limits. The origin of the term is not known. It is proposed to derive it from the French *léger*, light, or from the Latin *legere*, to read, or as if it were equivalent to *layer*—additional lines laid on above or below; but neither of these is quite satisfactory. The term came into use about the year 1700 (see Mr. C. J. Evans in the Musical Times for June 1879). In French they are called 'lignes postiches,' or 'supplémentaires'; and in German 'hilfslinien,' or 'nebenlinien,' A, C. etc. being said to be 'durch den Kopf,' and B, D, etc. 'durch den Hals'—'ein, zwei, drei, gestrichene,' etc. [G.]

[1] In London, at St. James's Theatre (French), June 21, 73.
[2] Ditto, at St. James's Theatre (French), May 17, 73; at Royal Philharmonic Theatre (English, Byron), Oct. 4, 73.
[3] Ditto, at Criterion Theatre (English, Reece), Nov. 28, 74.
[4] Ditto, at Opera Comique (French), June 6, 74; at Royal Philharmonic Theatre (English), Oct. 3, 74.

LEE, George Alexander, son of Harry Lee, a pugilist and landlord of the Anti-Gallican tavern, Shire Lane, Temple Bar, was born in 1802. When a boy he entered the service of Lord Barrymore as 'tiger,' being the first of the class of servants known by that name; but on the discovery that he had a fine voice and a natural taste for music, he was withdrawn from that position and placed under a master for instruction. In 1825 he appeared as a tenor singer at the Dublin theatre, and in 1826 in London at the Haymarket theatre, and soon afterwards commenced business as a music-seller in the Quadrant. In 1829, with Melrose, the tenor singer, and John Kemble Chapman, he entered upon the management of the Tottenham Street Theatre, and gave performances of popular English operas. Lee seceded in 1830 and became lessee of Drury Lane Theatre. He was soon afterwards joined by Capt. Polhill, but at the end of the season he withdrew, leaving Polhill sole manager. In 1831 he undertook the management of the Lenten oratorios at both Drury Lane and Covent Garden. In 1832 he was composer and music director at the Strand Theatre, and in 1845 the same at the Olympic. Lee composed the music for several dramatic pieces, amongst which were 'The Sublime and Beautiful,' and 'The Invincibles,' 1828; 'The Nymph of the Grotto' and 'The Witness,' 1829; 'The Devil's Brother' (principally from Auber's 'Fra Diavolo') and 'The Legion of Honour,' 1831; 'Waverley' (with G. Stansbury), 1832; 'Love in a Cottage,' 'Good Husbands make good Wives,' 'Sold for a Song,' and 'Auld Robin Gray,' the last composed about 1838 but not performed until 1858. He was also composer of many songs and ballads, highly popular in their day ('Away, away to the mountain's brow,' 'Come where the aspens quiver,' 'The Macgregors' Gathering,' etc.) and author of a 'Vocal Tutor.' Lee married Mrs. Waylett, the popular singer and actress, whose death (April 19, 1851) so seriously affected him that he died the 8th of the following October. [W. H. H.]

LEEDS MUSICAL FESTIVAL. The first of these meetings took place in 1858, Sept. 7–10, in the new Town Hall, after the opening of that building by the Queen—conductor, Sir (then Professor) Sterndale Bennett, whose May Queen was performed (Sept. 8) for the first time. They are now triennial. The second was held in 1874, Oct. 14–17; and the third in 1877, Sept. 19–22, Macfarren's 'Joseph,' first performed on the 21st; conductor, on both occasions, Sir Michael Costa. The proceeds of the festivals go to the hospitals of the Town. [G.]

LEEVES, Rev. William, born 1748, became in 1779 rector of Wrington, Somerset, the birthplace of John Locke, the philosopher. He composed much sacred music, but will be remembered only as the author of the air of 'Auld Robin Gray' (words by Lady Anne Barnard, born Lindsay of Balcarres) written in 1770, but not known as his before 1812. He died at Wrington, May 25, 1828. [W. H. H.]

LEFÉBURE-WÉLY, Louis James Alfred, born in Paris Nov. 13, 1817, son of Antoine Lefébvre, organist and composer, who took the name of Lefébure-Wély, and died 1831. He learned his notes before the alphabet, and as soon as he could speak showed a marvellous aptitude for music. At eight he was his father's deputy at the organ, accompanying the plain-song and playing short pieces. Though only 15 when his father died, he was appointed his successor at St. Roch through the influence of Queen Marie Amélie. Feeling the need of solid study, he entered the Conservatoire in 1832, and obtained the second prizes for pianoforte and organ in 1834, and the first for both in the following year. He then took lessons in counterpoint from Halévy, and in composition from Berton, but, not satisfied with these professors, studied privately with Adolphe Adam, and with Séjan, the organist, who initiated him in the art of improvising and in the management of the stops. He told the author of this article that he owed much to both these men, widely different as they were, and he often sought their advice after he had left the Conservatoire in order to marry. To support his young family he took to teaching, and composed a quantity of pianoforte pieces, some of which were popular at the time. But it is as an organist that he will be remembered. His improvisations were marvellous, and from the piquancy of his harmonies, the unexpectedness of his combinations, the fertility of his imagination, and the charm which pervaded all he did, he might justly be called the Auber of the organ. The great popularity in France of the free-reed instruments of Debain and Mustel is largely owing to him; indeed, the effects he produced on the instruments of the harmonium class were really astonishing. Endowed with immense powers of work, Lefébure-Wély attempted all branches of composition—chamber music; symphonies for full orchestra; masses; an opéra-comique in 3 acts, 'Les Recruteurs' (Dec. 13, 1861); etc. Among his best works are his 'Cantiques,' a remarkable 'O Salutaris,' his 'Offertoires,' many of his fantasias for harmonium, and his organ-pieces. He received the Legion of Honour in 1850, being at the time organist of the Madeleine, where he was from 1847 to 1858. After this he had for some time no regular post, but in 1863 accepted the organ of St. Sulpice, so long held with success by his friend and master Séjan. Here he remained till his death, which took place, of consumption, in Paris on Dec. 31, 1869. [G. C.]

LEFFLER, Adam, born in 1808, son of James Henry Leffler, bassoon player and organist of St. Katherine's Hospital by the Tower, the German Lutheran Church in the Savoy, and Streatham Chapel, who died suddenly in the street in 1819—was soon after his father's death admitted a chorister of Westminster Abbey. On attaining manhood he was endowed with a bass voice of exceptionally fine quality and extensive compass, from E below the stave to G above it,—and a natural gift for singing. He first attracted notice in October 1829 at a Festival at Exeter, when the casual absence of another performer gave him the opportunity of appearing as a principal singer. He acquitted himself so satisfactorily that he was immediately appointed a deputy at Westminster Abbey, and shortly afterwards took and maintained a good position on the English operatic stage and in the concert room. But for a constitutional carelessness and neglect of close study he might, with his natural and acquired qualifications, have occupied the highest place in his profession. He died of apoplexy, March 28, 1857. [W. H. H.]

LEGATO (Ital., sometimes written *ligato*; Ger. *gebunden*; Fr. *lié*), 'connected'; the sound of each note of a phrase being sustained until the next is heard. In singing, a legato passage is vocalised upon a single vowel, on stringed instruments it is played by a single stroke of the bow, and on the pianoforte or organ by keeping each finger upon its key until the exact moment of striking the next. On wind instruments with holes or keys, a legato passage is played in one breath, the notes being produced by opening or stopping the holes; but a wind instrument on which the different sounds are produced by the action of the lips alone, as the horn, trumpet, etc., is incapable of making a true legato, except in the rare cases in which one of the notes of the phrase is produced by stopping the bell of the instrument with the hand, as in the following example from the Scherzo of Beethoven's 7th Symphony—

The sign of legato is a curved line drawn above or beneath the notes. In music for wind or stringed instruments the curve covers as many notes as are to be played with a single breath, or a single stroke of the bow; thus—

Beethoven. Symphony No. 5.

Beethoven. Symphony No. 9.

In vocal music the same sign is often used, as in Handel's chorus, 'And he shall purify,' but it is not necessary, since the composer can always ensure a legato by giving a single syllable to the whole passage, and it is in fact frequently omitted, as in the air 'Every valley.'

In pianoforte music, all passages which are without any mark are played legato, inasmuch as the notes are not detached; the curved line is therefore used more for the sake of giving a finished appearance to the passage than from any practical necessity. Nevertheless, passages are

sometimes met with in which it appears to have a special significance, and to indicate a particularly smooth manner of playing, the keys being struck less sharply than usual, and with slightly increased pressure. Such a passage occurs in the Allegro of Beethoven's Sonata in A♭, op. 26, in which the quavers alone are marked legato, the semiquavers being left without any mark, thus—

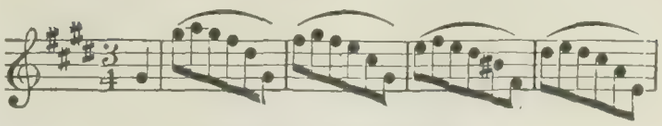
The same plan is followed on each recurrence of the phrase throughout the movement, and since this regularity can scarcely have been accidental, it appears to indicate a corresponding variety of touch.

Instead of the sign, the word *legato* is sometimes written under the passage, as in Beethoven's Bagatelle, Op. 119, No. 8, or Variation No. 30 of Op. 120. When the word is employed it generally refers to the character of the whole movement rather than to a single passage.

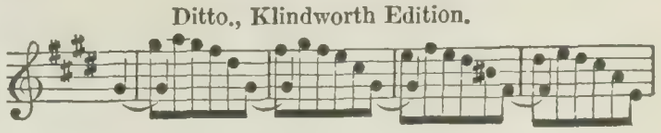
In playing legato passages wholly or partly founded upon broken chords, some masters have taught that the principal notes of the harmony should be sustained a little longer than their written length. Thus Hummel, in his Pianoforte School, gives the following passages (and many others) with the intimation that the notes marked with an asterisk are to be sustained somewhat longer than written, 'on account of the better connexion'—

This method of playing passages, which is sometimes called *legatissimo*, would doubtless add to the richness of the effect, especially upon the light-toned pianofortes of Hummel's day, but it is not necessary on modern instruments, the tone of which is so much fuller. Nevertheless it is sometimes of service, particularly in certain passages by Chopin, which without it are apt to sound thin. In Klindworth's new edition of Chopin the editor has added a second stem, indicating a greater value, to such notes as require sustaining, and a comparison of his version with the original edition will at once show the intended effect; for example—

Chopin, Valse, Op. 64, No. 2, Original Edition.



Ditto., Klindworth Edition.



An example of legatissimo touch, in which the notes are written of their full value, may be found in No. 5, Bk. ii. of Cramer's Studies.

The opposite of legato is *staccato*—detached [see STACCATO], but there is an intermediate touch between legato and staccato, in which the notes, though not connected, are separated by a barely perceptible break. When this effect is intended the passage is marked *non legato*. An example occurs in the first movement of Beethoven's Sonata in C minor, Op. 111, in the passage immediately following the first appearance of the short *Adagio* phrase. [F. T.]

LEGGIERO (Ital., also *Leggieramente*), lightly. The word is usually applied to a rapid passage, and in pianoforte playing indicates an absence of pressure, the keys being struck with only sufficient force to produce the sound. Leggiero passages are usually, though not invariably, *piano*, and they may be either legato or staccato; if the former the fingers must move very freely and strike the keys with a considerable amount of percussion to ensure distinctness, but with the slightest possible amount of force. Examples of legato passages marked *leggieramente* are found in the 25th variation of Beethoven's Op. 120, and in the finale of Mendelssohn's Concerto in G minor (which also contains the unusual combination of *forte* with *leggiero*); and of staccato single notes and chords in the finale of Mendelssohn's Concerto in D minor.

On stringed instruments leggiero passages are as a rule played by diminishing the pressure of the bow upon the strings, but the word generally refers rather to the character of the movement than to any particular manner of bowing. The Scherzo of Beethoven's Quartet in E♭, Op. 74, is marked *leggiermente*, although it begins *forte*, and the same indication is given for the 2nd variation of the Andante in the Kreutzer Sonata, which is *piano* throughout. [F. T.]

LEGRENZI, GIOVANNI, composer and conductor, born about 1625 at Clusone near Bergamo; in which town he learned music, and received his first appointment, that of organist to the church of St. Maria Maggiore. He next became maestro di capella of the church of the Spirito Santo at Ferrara, where he still was in 1664. When Krieger, Capellmeister to the Duke of Weissenfels, visited Venice in 1672, he found Legrenzi settled there as director of the Conservatorio dei Mendicanti. In 1685 he also became maestro di capella of St. Mark's, and exercised both functions till his death in July 1690. He entirely reorganised the orchestra of

St. Mark's, augmenting it to 34 performers, thus disposed—8 violins, 11 violette, 2 viole da braccio, 2 viole da gamba, 1 violone, 4 theorbos, 2 cornets, 1 bassoon, and 3 trombones. He composed industriously, and left specimens of his skill in most departments of music—motets, masses, psalms, instrumental music of various kinds, and 17 operas, of which the most remarkable are 'Achille in Scyro,' his first (1664); 'La Divisione del Mondo' (1675); 'I due Cesari' (1683) mentioned in the Paris 'Mercure Galant' (March 1683); and 'Pertinace' (1684), his last. They were nearly all produced in Venice. Like Scarlatti, and other composers of his time, he did not attempt to banish the comic element from his serious operas. One of his orchestral compositions is in 7 real parts, and all are important. His best pupils were Lotti and Gasparini.

Legrenzi's name will be handed down to posterity by Bach and Handel, both of whom have treated subjects from his works, the former in an organ fugue in C minor on a 'Thema Legrenzianum elaboratum cum subjecto pedaliter' (Griepenkerl & Roitsch,[1] iv. No. 6); and the latter in the phrase 'To thy dark servant light and life afford,' in the Chorus 'O first-created beam' from Samson. This is taken from a motet of Legrenzi, 'Del Intret in conspectu,' of which a copy in Handel's handwriting is to be found among the MSS. at Buckingham Palace (Chrysander, 'Händel' i. 179). [F.G.]

LEIDESDORF, Max Josef, a musician and music-seller of Vienna, who appears to have lived there from about 1804 to 1827, and then to have left it for Florence, where he died Sept. 26, 1840. He will go down to posterity embalmed in a little note[2] of Beethoven's, apparently written at the earlier of the two dates just given above, sending Ries for some easy 4-hand pieces—'and better still let him have them for nothing'—beginning with a pun on his name, 'Dorf des Leides!' and ending 'Beethoven minimus.' Leidesdorf was one of those who signed the address to Beethoven in 1824, praying him to produce the Ninth Symphony and the Mass in D, and to write a second opera. [See p. 196*b*.] He was one of Schubert's publishers. [G.]

LEIGHTON, Sir William, Knight, one of the band of Gentlemen Pensioners of Elizabeth and James I, published in 1614 'The Teares or Lamentacions of a Sorrowfvll Soule; Composed with Musicall Ayres and Songs both for Voyces and Divers Instruments.' The work consists of 54 metrical psalms and hymns, 17 of which are for 4 voices, with accompaniments, in tableture, for the lute, bandora and cittern; and 13 for 4 voices and 24 for 5 voices without accompaniment. The first 8 pieces are of Leighton's own composition, and the rest were contributed by the following composers:—Dr. John Bull, William Byrde, John Coperario, John Dowland, Alfonso Ferrabosco, Thomas Ford, Orlando Gibbons, Nathaniel Giles, Edmond Hooper, Robert Johnson, Robert Jones, Robert Kindersley, Thomas Lupo, John Milton, Martin Pearson, Francis Pilkington, Timolphus Thopul (a pseudonym), John Ward, Thomas Weelkes and John Wilbye. From the dedication to Prince Charles we learn that the collection was compiled while the worthy knight was—unjustly, as he alleges—incarcerated for debt. He had in the preceding year published the poetry alone in a duodecimo volume. [W.H.H.]

LEIPZIG (*i.e.* the place of Lime-trees), in Saxony, on the junction of the Pleisse and the Elster, 135,000 inhabitants, has for a long time been the most musical place in North Germany. When Rochlitz visited Beethoven[3] at Vienna in 1822, the first thing which the great composer did was to praise Leipzig and its music—'If I had nothing to read but the mere dry lists of what they do, I should read them with pleasure. Such intelligence! such liberality!' The main ostensible causes of this pre-eminence have been (1) the long existence of the St. Thomas school as a musical institution with a first-class musician as its Cantor; (2) the Gewandhaus concerts; (3) the presence of the great music-publishing house of Breitkopfs, almost equal in importance to a public institution; (4) the existence for fifty years of the principal musical periodical of the country—the 'Allgemeine musikalische Zeitung'; (5) in our own times, the long residence there of Mendelssohn, and the foundation by him of the Conservatorium, with its solid and brilliant staff of professors—a centre, for many years, of the musical life not only of Germany, but of other countries; and lastly (6) several very remarkable private musical institutions.

1. The *Thomas-schule*, or School of St. Thomas, is an ancient public school of the same nature as our cathedral and foundation grammar-schools, but with the special feature that about 60 of the boys are taught music, who are called *Alumni*, and are under the charge of a Cantor, forming the 'Thomaner-Chor.' This body is divided into 4 choirs, with a Prefect at the head of each, and serve the Churches of St. Thomas, St. Nicholas, St. Peter, and the Neukirche or New-Church. On Sundays the first choir joins the town orchestra for the morning service at St. Thomas or St. Nicholas; and on Saturday afternoons at 1.30 the whole four choirs unite in a performance under the direction of the Cantor. The boys are remarkable for the readiness and correctness with which they sing the most difficult music at sight.

The Cantor, in German towns and villages, corresponds to the Precentor or leader of the choir in English cathedrals and churches, and the Cantor of the St. Thomas School at Leipzig has for long been acknowledged as the head and representative of them all. For more than two centuries the office has been filled by very distinguished musicians, as will be seen

[1] This is the fugue about the autograph of which Mendelssohn writes, June 18, 1839. No. 8 of the same vol. is a fugue on a subject by Corelli.

[2] Nohl, Briefe Beethoven's, No. 35.

[3] 'Für Freunde der Tonkunst,' iv. 354.

from the following list, taken from Mendel's Conversations-Lexicon der Tonkunst :—

Johann Urban . . .	1439	Sebastian Knüpfer . .	1657—76
Martin Klotsch . . .	1470	Johann Schelle . . .	1676—1701
Ludwig Götze		Johann Kuhnau . . .	1701—22
George Rhaw	1519—20	Joh. Sebastian Bach .	1723—50
Johannes Herrmann .	1531—36	Gottlob Hasser . . .	1750—55
Wolfgang Jünger . .	1536—40	Joh. Friedrich Doles .	1755—89
Ulrich Lange	1540—49	Joh. Adam Hiller . .	1789—1800
Wolfgang Figulus . .	1549—51	A. Eberhard Müller .	1800—10
Melchior Hager . . .	1551—64	Joh. Gottfried Schicht	1810—23
Valenten Otto . . .	1564—94	Christoph Theodor Weinlig	1823—42
Sethus Calvisius . . .	1594—1615	Moritz Hauptmann . .	1842—68
Joh. Herrmann Schein	1615—30	Ernst Friedrich Richter	1868—79
Tobias Michael } Joh. Rosenmüller }	1630—57.		

2. The GEWANDHAUS CONCERTS have been already described under their own head. [See vol. i. p. 592*b*.] Mendelssohn conducted them from Oct. 4, 1835, till the end of the series 1842–43, when he was compelled to leave Leipzig for Berlin, and they were then transferred to Ferdinand Hiller.

3. For the great publishing establishment of BREITKOPF & HÄRTEL, we refer the reader to the former volume of this work [p. 272], merely adding here, that since that article was written the edition of Mendelssohn has been completed; that of Mozart (a truly immense undertaking) is progressing satisfactorily; a complete edition of Chopin (in 14 vols.) is nearly finished; and that an entire edition of the works of Palestrina, both printed and MS., in continuation of that begun by Witt, Rauch, and Espagne, extending in all to 29 folio volumes, was announced by these indefatigable publishers on January 27, 1879. In addition to these they began in 1878 a cheap edition of classical music, a collection of Libretti, and a publication of music paper and music MS. books.

4. The 'ALLGEMEINE MUSIKALISCHE ZEITUNG,' or 'General Musical Times,' was begun by the firm just mentioned in 1798, on October 3 of which year the first number was published. It was in 4to; 8 pages weekly, numbered in 16 columns, to which were added occasionally pieces of music in type (and admirable type too), copper-plates, and advertisement sheets. Each volume had a portrait as frontispiece. With 1810 the volumes began with the beginning of the year. The Zeitung contained articles on musical subjects of all kinds, biographical notices, reviews of new pieces, reports from foreign towns, etc. etc., and though seriously defective in many points, was an honest and good attempt at a musical periodical. Among the editors were Rochlitz (1798–1818), Fink (1827–41), Hauptmann (1843), Lobe (1846–48). With the 50th vol. (for 1848) the first series came to an end. There is an excellent Index in 3 parts. Since that date the Zeitung has been continued by Rieter-Biedermann under various editors, of whom the most considerable is Dr. Chrysander.

5. The idea and the foundation of the CONSERVATORIUM were entirely due to Mendelssohn, by whom the King of Saxony was induced to allow a sum of 20,000 thalers, bequeathed by a certain Hofkriegsrath Blümner 'for the purposes of art and science,' to be devoted to the establishment of a 'solid musical academy at Leipzig.' The permission was obtained in Nov. 1842, the necessary accommodation was granted by the corporation of the town in the Gewandhaus—a large block of buildings containing two Halls, a Library, and many other rooms—and the Conservatorium was opened on April 1, 1843. Mendelssohn was the first chief, and the teachers were :—harmony and counterpoint, Hauptmann; composition and pianoforte, Mendelssohn and Schumann; violin, Ferdinand David; singing, Pohlenz; organ, Becker. There were ten scholarships, and the fees for the ordinary pupils were 75 thalers per annum. In 1846, at Mendelssohn's urgent entreaty, Moscheles left his London practice, and became professor of the pianoforte at the modest salary of £120; and at that date the staff also embraced Gade, Plaidy, Brendel, Richter (afterwards Cantor), and others whose names have become inseparably attached to the Conservatorium. The management of the institution is in the hands of a board of directors chosen from the principal inhabitants of the town, and not professional musicians. The first name inscribed in the list of pupils is Theodor Kirchner, and it is followed by those of Otto Goldschmidt, Bargiel, Grimm, Norman, etc. Amongst Englishmen are found J. F. Barnett, Sullivan, Walter Bache, Franklin Taylor, etc., and the American names include Dannreuther, Willis, Mills, Paine, and others.

6. Of the private institutions we may mention :—(1) the 'Riedelsche Verein,' a choral society founded in 1854 by Carl Riedel, its conductor, and renowned throughout Germany for its performances of sacred music of all periods, from Palestrina and Schütz down to Brahms and Liszt. (2) The 'Euterpe,' an orchestral concert society, which, though its performances cannot come into competition with those of the Gewandhaus, is yet of importance as representing a more progressive element in music than prevails in the exclusively classical programmes of the older institution. The names of Berlioz, Liszt, Raff, Rubinstein and others, appear prominently in the concerts of the Euterpe. Verhulst, Bronsart, and other eminent musicians, have been its conductors. (3) The 'Paulus,' an academical choral society of male voices, deserves mention as one of the best of its kind in Germany. [G.]

LEIT-MOTIF, *i. e.* 'guiding theme.' The principle of 'Leit-motive' is so simple and obvious that it would seem strange that they have so lately found recognition in music, were it not remembered that music in general has progressed but slowly towards a sufficiently logical condition to admit of their employment. They consist of figures or short passages of melody of marked character which illustrate, or as it were label, certain personages, situations, or abstract ideas which occur prominently in the course of a story or drama of which the music is the counterpart; and when these situations recur, or the personages come forward in the course of the action, or even when the personage or idea is implied or referred to, the figure which constitutes the leit-motif is heard.

Their employment obviously presupposes unity and continuity in the works in which they occur. For as long as it is necessary to condescend to the indolence or low standard of artistic perception of audiences by cutting up large musical works into short incongruous sections of tunes, songs, rondos, and so forth, figures illustrating inherent peculiarities of situation and character which play a part throughout the continuous action of the piece are hardly available. Musical dramatic works of the old order are indeed for the most part of the nature of an 'entertainment,' and do not admit of analysis as complete and logical works of art in which music and action are co-ordinate. But when it becomes apparent that music can express most perfectly the emotional condition resulting from the action of impressive outward circumstances on the mind, the true basis of dramatic music is reached; and by restricting it purely to the representation of that inward sense which belongs to the highest realisation of the dramatic situations, the principle of continuity becomes as inevitable in the music as in the action itself, and by the very same law of artistic congruity the 'leit-motive' spring into prominence. For it stands to reason that where the music really expresses and illustrates the action as it progresses, the salient features of the story must have salient points of music, more marked in melody and rhythm than those portions which accompany subordinate passages in the play; and moreover when these salient points are connected with ideas which have a common origin, as in the same personage or the same situation or idea, these salient points of music will probably acquire a recognisable similarity of melody and rhythm, and thus become 'leit-motive.'

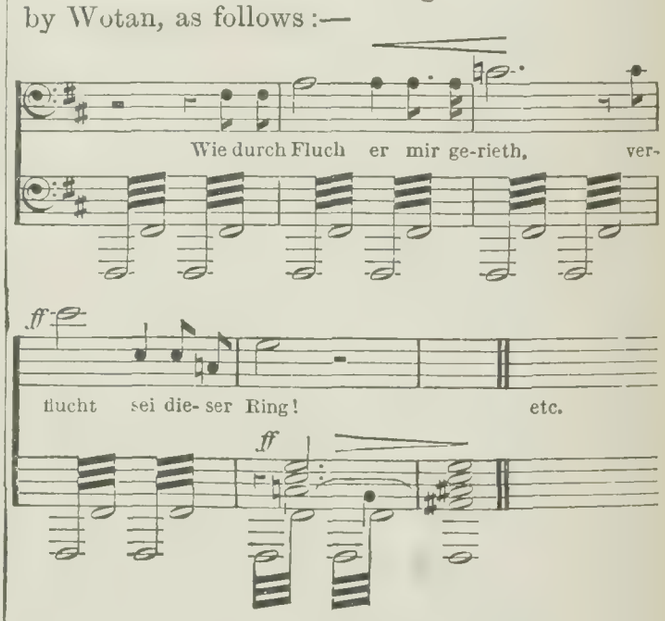
Thus, judging from a purely theoretical point of view, they seem to be inevitable wherever there is perfect adaptation of music to dramatic action. But there is another important consideration on the practical side, which is the powerful assistance which they give to the attention of the audience, by drawing them on from point to point where they might otherwise lose their way. Moreover they act in some ways as a musical commentary and index to situations in the story, and sometimes enable a far greater depth of pregnant meaning to be conveyed, by suggesting associations with other points of the story which might otherwise slip the notice of the audience. And lastly, judged from the purely musical point of view, they occupy the position in the dramatic forms of music which 'subjects' do in pure instrumental forms of composition, and their recurrence helps greatly towards that unity of impression which it is most necessary to attain in works of high art.

As a matter of fact 'leit-motive' are not always identical in statement and restatement; but as the characters and situations to which they are appropriate vary in their surrounding circumstances in the progress of the action, so will the 'leit-motive' themselves be analogously modified. From this springs the application of variation and 'transformation of themes' to dramatic music; but it is necessary that the treatment of the figures and melodies should be generally more easily recognisable than they need to be in abstract instrumental music.

Leit-motive are perfectly adapted to instrumental music in the form known as 'programme music,' which implies a story, or some definite series of ideas; and it is probable that the earliest distinct recognition of the principle in question is in the Symphonie Fantastique of Berlioz (written before 1830), where what he calls an 'idée fixe' is used in the manner of a leit-motif. The 'idée fixe' itself is as follows:—

It seems hardly necessary to point to Wagner's works as containing the most remarkable examples of 'leit-motive,' as it is with his name that they are chiefly associated. In his earlier works there are but suggestions of the principle, but in the later works, as in Tristan and the Niblung series, they are worked up into a most elaborate and consistent system. The following examples will serve to illustrate some of the most characteristic of his 'leit-motive' and his use of them.

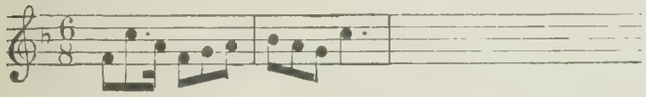
The curse which is attached to the Rheingold ring is a very important feature in the development of the story of the Trilogy, and its 'leit-motif,' which consequently is of frequent occurrence, is terribly gloomy and impressive. Its first appearance is singularly apt, as it is the form in which Alberich the Niblung first declaims the curse when the ring is reft from him by Wotan, as follows:—



Among the frequent reappearances of this motif, two may be taken as highly characteristic. One is towards the end of the Rheingold, where Fafner kills his brother giant Fasolt for the possession of the ring, and the leit-motif

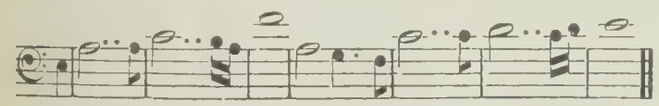
being heard, reminds the hearers of the doom pronounced on the possessors of the ring by Alberich.

A yet more pregnant instance is in the Götterdämmerung, the last of the series. When Siegfried comes to the Hall of the Gibichungs on the Rhine, with the ring in his possession, having obtained it by slaying Fafner, who had taken the form of a dragon to preserve it, the first person to greet him is Hagen, the son of Alberich, who looks to compass Siegfried's death, and regain the ring for the Niblungs by that means. As Hagen says 'Heil Siegfried, theurer Held,' the greeting is belied by the ominous sound of the leit-motif of the curse, which thus foretells the catastrophe in the sequel of which Hagen is the instrument and Siegfried the victim, and lends a deep and weird interest to the situation. Siegfried himself has 'motive' assigned to him in different circumstances and relations. For instance, the following figure, which he blows on the silver horn made for him by Mime, is the one which most frequently announces his coming. It implies his youthful and light-hearted state before he had developed into the mature and experienced hero.



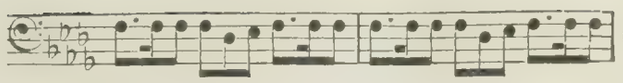
This figure is frequently subjected to considerable development, and to one important transformation, which appears, for instance, in the death march as follows :—

In his character as mature hero he is notified by the following noble figure,



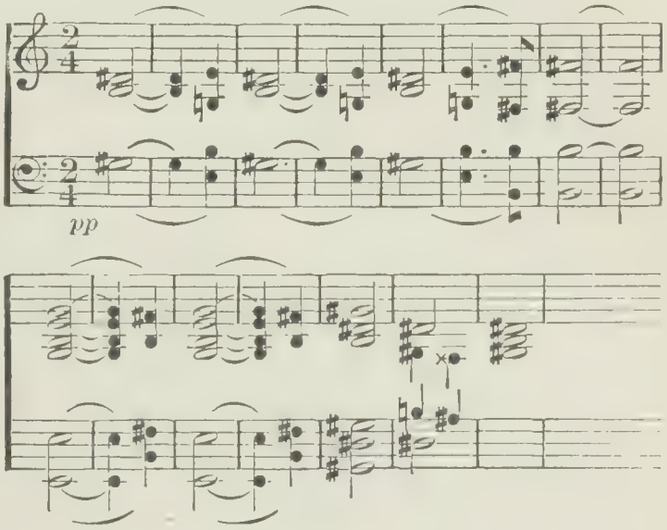
which occurs as above in the last act of the Walküre, when Wotan has laid Brünnhilde to sleep on the 'Felsenhöhe,' with a wall of fire around her; and the sounding of the motif implies that Siegfried is the hero who shall pass through the fire and waken Brünnhilde to be his bride. A happy instance of its recurrence is when, in the first act of Siegfried, the youthful hero tells how he had looked into the brook and saw his own image reflected there.

In the above examples the marked character of the figure lies chiefly in their melody. There are others which are marked chiefly by rhythm, as the persistent motif of Mime imitating the rhythmic succession of blows on an anvil—



which points to his occupation as a smith. This motif occurs in connection with the rattling blows of the hammers of the Niblung smiths underground, at the end of the second scene of the Rheingold, and thus shows its derivation.

Other 'motive' again are chiefly conspicuous by reason of impressive and original progressions of harmony. Of this kind that of the Tarnhelm is a good example. It occurs as follows, where Alberich first tests the power of the helm at the beginning of the third scene of the Rheingold :—



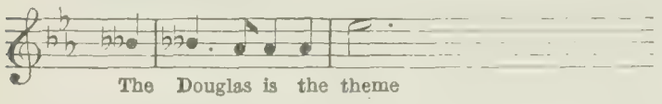
Another instance where a strongly marked melodic figure is conjoined with an equally striking progression of harmony, is the 'death motif' in Tristan and Isolde, which first appears in the second scene, where Isolde sings as follows :—

A figure which it is difficult to characterise, but which has a marvellous fascination, is the motif of the love-potion in Tristan and Isolde.

The love-potion is the key to the whole story, and therefore the musical portion of the work appropriately commences with its leit-motif. Among the numerous examples of its recurrence one is particularly interesting. When King Marke has discovered the passionate love which existed between Tristan and Isolde he is smitten with bitter sorrow that Tristan, whom he had so

loved and trusted, should have so betrayed him, and appeals to Tristan himself. Then as Tristan slowly answers him the motif is heard, and, without its being so expressed (for Tristan does not excuse himself), conveys the impression that Tristan and Isolde are not to blame, but are the victims of the love-potion they had unwittingly shared.

Among more important contemporary composers, Professor Macfarren has made use of the device in his cantata 'The Lady of the Lake,' and to a certain extent in his oratorio 'Joseph.' The following characteristic examples from the cantata will illustrate his mode of employing the device. In a soliloquy in the earlier part of the work Fitz-James refers to Douglas, and sings the following figure :—

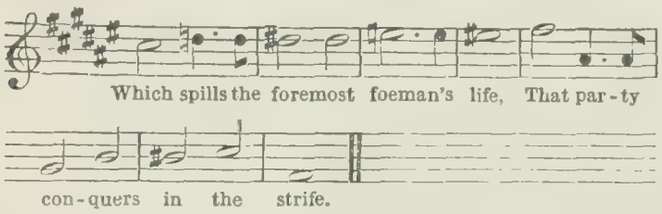


This recurs appropriately when Douglas refers to himself and his daughter as all that remained of his clan, under the type of the Bleeding Heart, which was their badge.

Roderick Dhu's motif is as follows :—

This is happily used in the accompaniment to the vocal phrase in which he appeals to Douglas to grant him Ellen for his wife, as follows :—

The prophecy of Brian the Seer is enunciated as follows :—



and this is reintroduced when the Chorus describes how Red Murdoch is slain by Fitz-James, and clearly implies that he is the first foeman whose life is taken, and that the victory in the strife between Roderick and Fitz-James will rest with the latter in fulfilment of the prophecy. It also recurs when Fitz-James warns Roderick that Murdoch is dead and that therefore the prophecy is against him.

Prior to contemporary composers, though subsequent to the *idée fixe* of Berlioz, a few hints of the spirit of leit-motive may be found in various quarters: for instance, in Meyerbeer's 'Prophète,' when the prophet in the early part of the work speaks of the dream of future splendour in store for him, the first strain of the processional march is heard. Again, the system of giving a particular instrumental tone to the accompaniment of particular characters which is clearly analogous, is notable in the string accompaniment of Christ's words in Bach's 'Passion,' and in the sounding of the trombones when the Commendatore appears in 'Don Giovanni,' and the adoption of a similar quality of tone or definite phrase as the accompaniment to special utterances of Elijah in Mendelssohn's oratorio, and to the appearance of Don Quixote in his opera of Camacho's Hochzeit (1825). [C.H.H.P.]

LE JEUNE, Claude, or Claudin, born at Valenciennes probably about 1530, for we first find his name as a composer in 1554. The only part of his life of which we have any record was spent in Paris. Thus in 1581 he attended the marriage of Henry III's favourite the Duc de Joyeuse, and noted the magical effect of his own music.[1] About this time also, Leroy printed 5 vols.[2] of chansons (à 4), 39 of them by Le Jeune, and the publisher, himself a first-rate musician, seems to have valued them highly, placing the author by the side of Lassus, and filling the last 2 vols. with their works alone. Still the Huguenot composer met with slender encouragement for many years, and there is a pathetic story of his attempted flight at the siege of Paris in 1588, when bowed down by the weight of his unpublished MSS., he was caught by the Catholic soldiers, and would have seen his treasures committed to the flames, but for the timely aid of Mauduit, a Catholic musician, who saved the books and aided the escape of his brother artist.

Better times came late in life. In Henry IV's reign, Leroy printed 'Recueil de plusieurs chansons et airs nouveaux,' par Cl. le J. (Paris 1594), and in 1598 Haultin, at La Rochelle, the 'Dodecacorde,' 12 psalms written according to Glarean's 12 Church modes. On the title-page of the latter we see *for the first time* 'compositeur de la musique de la chambre du roy,' so perhaps the permission to print such a work, and the possibility of holding the appointment, was a result of the Edict of Nantes in the same year. In any case the appointment was quite a recent one, and Le Jeune did not long enjoy it, for the next publication, 'Le Printemps' (dedicated to our king James I[3]), was posthumous, and on the 4th page an ode appears 'Sur la musique du *defunct* Sieur Cl. le J.,' the second stanza of which begins thus,

> 'Le Jeune a faict en sa viellesse,
> Ce qu'un bien gaye jeunesse,
> N'auseroit avoir enterpris.'

The 6th page contains a general essay on music, claiming for Le Jeune the honour of uniting ancient rhythm to modern harmony. 'Le Printemps' contains 33 chansons with 'vers mesurez,'

[1] The story goes that an officer was so excited by an air of the composer's that he cried out, with oaths, that he must attack some one, and was only pacified when the character of the strain was altered. Whatever truth there may be in the story, the effect was more probably produced by some martial rhythm in the music than by any superior intelligence which Claude possessed in the use of the modes, to which it is attributed by the narrator.

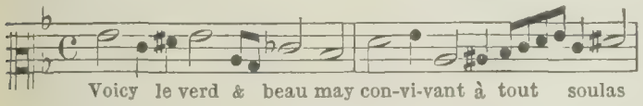
[2] The last 5 of 25 vols. of chansons published between the years 1569 and 1587.

[3] See Hawkins's History (Chap. 110). The copy we have seen had the first page torn out, on which this dedication probably appeared, and the words 'roy' and 'majesté' erased on the second.

followed by longer settings of 'vers rimez.' Amongst the latter is Jannequin's 'Chant de l'Alouette' (à 4) with a 5th part added by Le Jeune, 'Le chant du Rossignol in 6 nos.,' 'Ma mignonne in 8 nos.,' and a Sestine (à 5) 'Du trist Hyver.'

The prefaces give no full explanation of 'vers mesurez.' On p. 6 we read that 'the wonderful effects produced by ancient music, as described in the fables of Orpheus and Amphion, had been lost by the modern Masters of Harmony, that Le Jeune was the first to see that the absence of Rhythm accounted for this loss; that he had unearthed this poor Rhythm, and by uniting it to Harmony, had given the soul to the body; that 'Le Printemps' was to be an example of this new kind of music, but on account of its novelty, might fail to please at first.

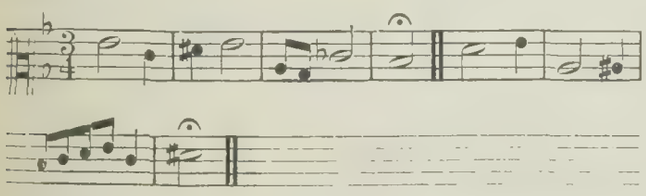
The editor next tells us (p. 7) that M. Baif[1] and M. Le Jeune had meant to print the words with suitable spelling and without superfluous letters, and to make the scanning as clear in the French poetry as it would be in Latin. But that he (the editor) had been advised to abandon this as too great a novelty. We are therefore left uncertain as to the method which the authors meant to employ, and have little to guide us as to the interpretation of such a passage as this (the bars drawn and quavers joined as in original):—



We have, however, above the ode 'Sur la musique mesurée de Cl. le J.' on p. 3 of this same book a scheme of the quantities of the 4 lines in each stanza. The first line of this scheme being –ᴗᴗ –ᴗᴗ– –ᴗᴗ –ᴗᴗ–; the corresponding line of the ode would then be accented

| Maĭnts mŭzĭ | ciēns dĕ cĕ | tēmps cī ‖ pār lĕs ă |-cōrs grăvĕ | doūs.

and any music set to this would take the same accents. And so we might suppose that by some suitable directions as to the scanning of the words he might intend the above passage to be sung thus—



using the bars in the original as a mere division of the lines in the poem, where there should always be a pause and the measure completed. In any case this is only an adaptation to French music of what had been already done by Lassus and others in using the metres of Latin verses, though their efforts at Rhythm may have been accidental, while Le Jeune had a set purpose. It is interesting, at least, to see the importance of Rhythm being recognised, and some attempt at a notation to express it. It also seems clear from what is said in the preface, of making the French lines like the Latin, that the authors saw the impetus which the Latin odes had given to music in this direction.

The music (à 3) to the Psalms (Paris 1607) was apparently not reprinted, being doubtless cast in the shade by the more important setting (à 4 and 5) of Marot and Beza's Psalms, printed at La Rochelle by Haultin, and dedicated by Cecile Le Jeune,[2] in pursuance of the composer's expressed wishes, to the Duke of Bouillon, a great Protestant champion. This work, on which Le Jeune's great reputation entirely rests, went through many editions in France, found its way into Germany with the translation of Lobwasser, and except in Switzerland, was soon used universally in all Calvinistic churches. 'It went through more editions, perhaps, than any musical work since the invention of[3] printing.' The melodies in the Tenor are the same as those used by Goudimel, and earlier still by Guillaume Franc.[4] The other parts are written in simple counterpoint, note against note. The simplicity of the style, and its consequent fitness for congregational use, was not the only cause of its supplanting earlier works of the kind. There is real beauty in the music, which modern critics do not cease to recognise. 'Claude Le Jeune,' says Burney, speaking specially of this work, 'was doubtless a great master of harmony.' Ambros finds 'the discant so melodious that it might be mistaken for the principal[5] part.' 'These psalms,' thinks Fétis, 'are better written than Goudimel's.'[6]

Other posthumous publications are the 'Airs à 3, 4, 5, 6 (Paris, Ballard, 1608), and a collection of 36 chansons, 3 on each of the 12 modes, under the title 'Octonaires de la vanité et inconstance du monde' (id. 1610).

Lastly, in 1612, Louis Mardo, Le Jeune's nephew, published a 2nd book of Meslanges, in which, judging from the miscellaneous contents, he must have collected all that he could still find of his uncle's works, French chansons à 4, 5, 8, canons, psalms, a magnificat, a fantaisie, Latin motets, and Italian madrigals.

In the higher branches of composition Le Jeune never met with great success. The Belgian and Italian masters would not look at his writings.[7] Burney regarded him as a man of study and labour, rather than of genius and facility, but this judgment was only passed on some of his very earliest works.[8] Fétis, on the other hand, considered him naturally gifted, but without the education of a great master; and this opinion seems to be borne out by the success of his simpler, and the failure of his more elaborate works.

[1] Poet and musician, 1532-1589.

[2] All doubt as to Le Jeune being a family name seems to be dispelled by the sister's signature as above.

[3] Burney's History, iii. 46.

[4] The belief which at one time existed in England that Le Jeune was the author of the melody of the 'Old 100th Psalm,' and which gains some support from the vague terms in which Burney (iii. 47) speaks of it, has no foundation in fact. It is now well known that that melody first appeared in Beza's Genevan Psalter of 1554. [See OLD HUNDREDTH.]

[5] Geschichte der Musik, iii. 344.

[6] Biographie, v. 261.

[7] Mersenne, Harm. Univ. iv. 197, and Burney iii. 273.

[8] Except a canon, the pieces of Le Jeune's in Dr. Burney's MS. notebooks are among the composer's first publications in 1554.

Le Jeune is generally regarded as a Frenchman, though his birthplace did not become part of France till 1677. It would however be no great honour to be called the chief musician of an ungrateful country, which suffered Jannequin in his old age to bewail his poverty, which had killed poor Goudimel, and could now only boast of a decaying and frivolous school. It is more to his honour to remember him as the composer of one little book which was destined, after his death, to carry God's music to the hearts of thousands in many lands. [J.R.S.-B.]

LEMMENS, Nicolas Jacques, was born Jan. 3, 1823, at Zoerle-Parwys, Westerloo, Belgium, where his father was echevin and organist. His career was attached to the organ from the first. At 11 years of age he was put under Van der Broeck, organist at Dieste. In 1839 he entered the Conservatoire at Brussels, but soon left it owing to the illness of his father, and was absent for a couple of years. In the interval he succeeded his former master at Dieste, but fortunately gave this up and returned to the Conservatoire at the end of 41. There he became the pupil of Fétis and was noted for the ardour and devotion with which he worked. He took the 2nd prize for composition in 44 and the first in 45, as well as the first for organ playing. In 46 he went at the government expense to Breslau, and remained there a year studying the organ under A. Hesse, who sent him back at the end of that time, with a testimonial to the effect that 'he played Bach as well as he himself did.' In 1849 he became professor of his instrument at the Conservatoire, and M. Fétis, as the head of the establishment, bears strong testimony to the vast improvement which followed this appointment, and the new spirit which it infused through the country; and gives a list of his pupils too long to be quoted here. Though distinguished as a pianist, it is with the organ that his name will remain connected. In 1857 M. Lemmens married Miss Sherrington, and since that time has resided much in England. His great work is his Ecole d'orgue, which has been adopted by the Conservatoires at Paris, Brussels, Madrid, etc. He has also published Sonatas, Offertoires etc. for the organ, and has been engaged for twenty years on a Method for accompanying Gregorian Chants, which is now on the eve of publication. On Jan. 1, 1879, he opened a college at Malines, under the patronage of the Belgian clergy, for training Catholic organists and choirmasters, which is already largely attended. Madame Lemmens, *née* Sherrington, was born at Preston, where her family had resided for several generations, Oct. 4, 1834. Her mother was a musician. In 1838 they migrated to Rotterdam, and there Miss Sherrington studied under Verhulst. In 52 she entered the Brussels Conservatoire, and took first prizes for singing and declamation. On April 7, 1856, she made her first appearance in London, and soon rose to the position of leading English soprano, both in sacred and secular music, a position which she has maintained ever since. In 1865 she appeared on the English and in 1867 on the Italian operatic stage, and her operas embrace Robin Hood, Amber Witch, Helvellyn, Africaine, Norma, Huguenots, Roberto, Don Giovanni, Domino Noir, Fra Diavolo, Marta, etc., etc. [See Sherrington.] [G.]

LENTO, *i.e.* 'slow,' implies a pace and style similar to a slow Andante. Beethoven rarely uses it. One example is in his last Quartet op. 135, Lento assai. Mendelssohn employs it for the introduction to his Ruy Blas overture, but he chiefly uses it, like 'con moto,' as a qualification for other tempos—as Andante lento (Elijah No. 1, and Op. 35, No. 5), Adagio non lento (Op. 31, No. 3), Adagio e lento (Op. 87, No. 3). [G.]

LENTON, John, one of the band of music of William and Mary and of Queen Anne, in 1693 published 'The Gentleman's Diversion, or the Violin explained,' with some airs composed by himself and others at the end. A second edition, with an appendix, and the airs omitted, appeared in 1702, under the title of 'The Useful Instructor on the Violin.' It is remarkable that in neither edition is there any mention of 'shifting,' and the scale given reaches but to C on the second ledger line above the stave. About 1694, in conjunction with Thomas Tollet, he published 'A Consort of Musick in three parts.' Lenton composed the overtures and act tunes to the following plays:—'Venice preserved,' 1685; 'The Ambitious Stepmother,' 1700; 'Tamburlain,' 1702; 'The Fair Penitent,' 1703; 'Liberty asserted' and 'Abra Muley,' 1704. Songs by him are in several of the collections of the period, and other vocal pieces in 'The Pleasant Musical Companion.' He contributed to D'Urfey's 'Third Collection of New Songs,' and revised the tunes for the earlier editions of his 'Pills to purge Melancholy.' The date of his death has not been ascertained. He was living in 1711. [W.H.H.]

LENZ, Wilhelm von, Russian councillor at St. Petersburg, and author of 'Beethoven et ses trois styles' (2 vols. Petersburg, 1852), in which the idea originally suggested by Fétis, that Beethoven's works may be divided into three separate epochs, has been carried out to its utmost limits. This was followed by 'Beethoven. Eine Kunststudie,' in 6 vols., i.—iii. Cassel 1855, 6; iv.—vi. Hamburg 1860. This is an entirely different work from the foregoing, and though often extravagant in expression, has a certain value from the enthusiasm of the writer and the unwearied manner in which he has collected facts of all kinds about Beethoven's works. It contains a Life, an Essay on Beethoven's style, a detailed analysis of every one of his works in order, with various Lists and Catalogues not without use to the student, though in regard to the chronology of Beethoven's works, the minute investigations of Thayer and Nottebohm have superseded many of Lenz's conclusions. He also published 'Die grossen Pianofortevirtuosen unserer Zeit' (Berlin, 1872), a collection of articles on Liszt, Chopin, Tausig, Henselt, and many other

great artists, from personal knowledge, well translated in the Monthly Musical Record for 1878. [F. G.]

LÉOCADIE. A lyrical drama in 3 acts, founded on a story of Cervantes; words by Scribe and Mélesville, music by Auber. Produced at the Opéra Comique Nov. 4, 1824. It is the subject of a curious invective by Mendelssohn in his boyish letters from Paris (see Goethe and Mendelssohn, pp. 44, 45). It had however a great popularity, and by Apr. 1825 had had 52 representations. [G.]

LEO, Leonardo, one of the most celebrated of Neapolitan composers, was born in 1694 at San Vito degli Schiavi, in the kingdom of Naples. His musical studies were pursued at the Conservatorio of la Pietà de' Turchini, in Naples, under Alessandro Scarlatti and Fago (Il Tarentino); besides which it is said (in a notice of his life by Girolamo Chigi, chapel-master of St. John Lateran) that he learned counterpoint of Pitoni, at Rome. After his return to Naples he was appointed second master in the Conservatorio of la Pietà; in 1716 was named organist of the royal chapel, and the following year was elected to the post of chapel-master in the church of Santa Maria della Solitaria. His first serious opera, 'Sofonisbe,' was produced in 1719, and met with great success. Not many years after this he quitted the Conservatorio of la Pietà for that of San Onofrio, to which he remained attached till the end of his life. He was perhaps the most eminent professor of his time, and the list of his pupils includes many distinguished composers, among whom may especially be named Jommelli and Piccinni. But he was not satisfied, as was Durante his contemporary, with the *rôle* of a pedagogue. 'Sofonisbe' was succeeded by nearly fifty other operas and dramatic cantatas, conspicuous among which is 'Demofoonte,' in which the great singer Caffarelli made his first appearance, and which contains an air, *Misero Pargoletto*, quoted by Piccinni, in a short biographical sketch of his master, as pre-eminent among all Leo's compositions for beauty and dramatic expression. Mention should also be made of 'L'Olimpiade,' two pieces in which acquired a lasting popularity—the duet 'Ne' giorni tuoi felici,' and the air 'Non so donde viene,' both remarkable for melodious charm.

His compositions for the church are very numerous, amounting to nearly a hundred. The chief of these are, the oratorio 'Santa Elena al Calvario'; the 'Ave maris stella,' for a soprano voice, two violins, viola, and organ; the Mass in D for five voices, written for the church of San Giacomo degli Spani at Rome; and the 'Miserere' for a double choir of eight voices. This celebrated Miserere was composed in 1743, and was the work of a few days. It was written for the Duke of Savoy, who on hearing it, was so delighted as to heap presents upon the composer, granting him at the same time a pension of a hundred ounces of silver. Leo was overpowered by this munificence, and regarded his acceptance of it as tantamount to a renunciation of all property in his own work, so that when, on his return to Naples from Turin, his pupils petitioned for a copy of the score, he thought himself bound in honour to refuse them. One of them however, having found out where the manuscript was kept, contrived to possess himself of it; he divided it among his companions, and, between them all, it was so speedily copied as to be restored to its place before Leo had had time to perceive its absence. It was rehearsed in secret, and in a few days the students invited the unsuspecting *maestro* to hear the performance of a new work, when to his astonishment his own 'Miserere' was executed in his presence. His first impulse was one of resentment, but this feeling quickly gave way to emotion aroused by the enthusiasm of the young students, and the end of it was that he caused them to repeat the entire piece, so that he might himself add the finishing touches to their performance.

He did not long enjoy his pension. The Marquis de Villarosa, to whose reminiscences of the Neapolitan composers subsequent biographers are indebted for many interesting details, says that he was engaged in writing the opera 'La finta Frascatana' when he was struck down by apoplexy. He was found with his head resting on his clavichord, the score before him open at the *buffo* air 'Voi par che gite.' He was apparently asleep, but he was dead. This was in 1746.

In the bright constellation of Neapolitan composers Leo shines as a brilliant star. To a complete command of science and of the art of vocal writing he united freshness and originality of thought, and perhaps in no composer are the germs of modern fancy so happily blent with the purity and dignity of the old Roman writers. His ideas, if not sublime, are noble; always sound and healthy; occasionally tender, but with no tinge of sentimentality. They did not transcend the limits of contemporary form; his art was therefore adequate to give them that perfect expression which is in itself beautiful. It is impossible not to feel in all his music the master's joy in his power over his materials; and the satisfaction afforded by a study of his works is mainly based on a perception of this even balance between thought and expression, showing as it does, the extent, while it defines the limits, of his sphere as a composer. He was not tormented, like his pupil Jommelli, by the unequal conflict between prophetic glimpses of new phases of art, far beyond the power of his own limited genius to grasp or realise, and a science too superficial to do justice to ancient forms. What Leo thought, he could express.

By his tonality he belongs essentially to the moderns. His harmonies are for the most part lucid and simple, yet there is a certain unconventionality in their treatment, while occasionally (as may be seen in the 'Miserere') chromatic progressions occur, quite startling in their effect. That his simplicity was the result of consummate art is shown by the purity of his part-writing. The Chorus of Pilgrims, 'Di quanta pena è frutta,' from

the oratorio of 'Santa Elena al Calvario' is a good instance of a pleasing idea absolutely inseparable from contrapuntal form; shapely and coherent as a whole, it must be unravelled before the closeness and complexity of its texture can be appreciated. His fugues are compact and massive, and full of contrivance which is always subordinated to unity of effect. It is only necessary to compare the contrapuntal movement which forms a Coda to the double-fugued 'Amen' chorus in Leo's 'Sicut erat,' from the 'Dixit' in D (see 'Fitzwilliam Music'), with the fugue on the 'Osanna' in Jommelli's Requiem, the subjects in which are very similar—to see how the science which to one man was an implement or a weapon, in the hand of the other was no more than a crutch.

Besides his larger works, Leo left a great number of instrumental compositions; concertos, fugues, toccatas; several isolated vocal airs with orchestral accompaniment; vocal duets and trios; finally, six books of *solfeggi* and two of *partimenti* or figured basses, for the use of the students of San Onofrio.

In person he was of middle height, with a bronzed complexion, keen eye and ardent temperament. His activity and industry were indefatigable; he was wont to pass great part of the night in work, and his energies never seemed to flag. Although uniformly genial and urbane, the prevailing tone of his mind was serious. He appreciated his own music, and loved it, but he was ever ready to perceive merit in others, and to do full justice to the compositions of his rivals. An enthusiast in every branch of his art, he was not only a great composer and a great teacher, but an excellent organist and a *virtuoso* on the violoncello, being indeed one of the first musicians to introduce this instrument into Italy. His powers of mind remained undiminished to the end, and he died in harness, universally regretted and long remembered.

The following compositions of Leo are published, and accessible.

110th Psalm (Dixit Dominus), for SS. A. T. B., with solos. Halle (Kümmel).

Do. for S., T., B., with Orchestra. Berlin (Trautwein & Co.).

50th Psalm (Miserere), SS., AA., TT., BB. Berlin (B. Bock). The same, edited by Choron (Paris, Leduc).

Others, and portions of others, are included in 'Cecilia,' a monthly periodical of church music, ancient and modern, by E. and R. van Maldeghem (Brussels, Heusner), in Latrobe's Sacred Music, and Rochlitz's 'Collection.' A Dixit Dominus for 8 voices and orchestra has been edited (1879) by Mr. C. V. Stanford from the autograph in the Fitzwilliam Library (Novello). Copious extracts from this and others are printed in Novello's 'Fitzwilliam Music' [see vol. i. pp. 530, 531]. [F.A.M.]

LEOLINE. The English name of 'L'Ame en Peine,' a ballet fantastique in 2 acts; words by Saint Georges, music by Flotow. Produced at the Grand Opera May 29, 1846. The English version was by Maddox and G. Linley, and the piece was produced at the Princess's theatre, Oxford Street, Oct. 16, 1848. [G.]

LÉONORE, OU L'AMOUR CONJUGAL, an opéra-comique in 2 acts; words by Bouilly, music by Gaveaux. Produced at the Opéra Comique Feb. 19, 1798. The book was translated into Italian, composed by Paer, and produced at Dresden Oct. 3, 1804. It was also translated into German by Jos. Sonnleithner (late in 1804), and composed by Beethoven. The story of the transformations and performances of the opera in its three shapes is given under FIDELIO (vol. i. p. 519*a*); and it only remains to add that it was proposed to bring it out at Prague in May 1807, and that Beethoven, with that view, wrote the overture known as 'Leonore No. 1' (op. 138). The proposal however was not carried out, and the overture remained, probably unperformed, till after his death.[1] It was Beethoven's wish from first to last that the opera should be called 'Leonore'; and his edition of the pianoforte score, published by Breitkopfs in Oct. 1810, is entitled 'Leonore, oper in zwey Aufzugen von L. van Beethoven.' On all other occasions he was overruled by the Management of the theatre, and the opera has always been announced as Fidelio, probably to avoid confusion with Paer's opera. For the whole evidence see 'Leonore oder Fidelio?' in Otto Jahn's Gesamm. Schriften, p. 236, and Thayer's Chron. Verzeichniss, p. 61.

It may be well here to give a list of the overtures to the opera in the order of their composition.

Title.	Date and Occasion.	Date of publication of Score.
Leonore No. 2, in C.	For production of opera, Nov. 20, 1805.	Breitkopf 1842 and 1854.
Leonore No. 3, in C.	For production of modified opera, Mar. 29, 1806.	Breitkopf 1828.
Leonore No. 1, in C (op. 138).	For a performance of the opera at Prague in May 1807, which never came off.	Haslinger 1832.
Fidelio, in E.	For the second and final revision of the opera; first played May 26, 1814.	Breitkopf 1864.

[G.]

LEONORE[2] PROHASKA, a romantic tragedy by Friedrich Duncker, for which Beethoven in the autumn of 1814 composed a soldiers' chorus for men's voices unaccompanied; a romance with harp accompaniment; and a melodram with harmonica, besides scoring the march in his Sonata op. 26. The melodram has been already printed in this Dictionary. [Vol. i. p. 663.] The opening bars of the two others are given by Thayer, Chron. Verzeichniss, No. 187. The march is transposed into B minor,[3] and scored for 2 flutes, 2 clarinets, 4 horns, and either strings or brass instruments—it seems uncertain which. (See the account in Thayer, iii. 317.) The autograph

[1] Nottebohm, 'Beethoveniana.'

[2] Mr. Nottebohm gives it 'Eleonore.'

[3] A 'black key' according to Beethoven. [See vol. i. p. 643 *a*.]

is in possession of Mr. Adolph Müller of Vienna. Dr. Sonnleithner—no mean authority—believed that Beethoven had also written an overture and entr'acte for the piece. For some reason or other the play was not performed. [G.]

LEROY, or LE ROY, ADRIEN, was a singer, lute player, and composer, but will be remembered as one of the most celebrated music printers of the 16th century, when printers were also publishers. Of the reasons of his taking to printing we have no account. He worked with the types of Le Bé (cut in 1540), as Attaignant had done before him with those of Hautin. Fétis states that he worked by himself for some time, but cites no evidence. In 1551 Le Roy married the sister of R. Ballard, who was already occupying himself with music printing, and was attached to the court; they joined partnership and obtained a patent, dated Feb. 16, 1552, as sole printers of music to Henri II. In 1571 he received Orlando Lasso as his guest, and published a volume of 'moduli' for him, with a dedication to Charles IX, which has already been quoted in this volume. [See p. 98*a*]. Leroy's name disappears from the publications of the firm in 1589, and it may thus far be inferred that he died then. His Instruction-book for the Lute, 1557, was translated into English in two different versions, one by Alford, London 1568, and one by 'F. K. Gentleman' (Ib. 1574). A second work of his was a short and easy instruction-book for the 'Guiterne,' or guitar (1578); and a third is a book of 'airs de cour' for the lute 1571, in the dedication of which he says that such airs were formerly known as 'voix[1] de ville.' Besides these the firm published, between 1551 and 1568, 20 books of 'Chansons' for 4 voices. [G.]

LESCHETITZKY, THEODOR, a distinguished pianist, born of Polish parents in 1831. He attracted notice in Vienna by his pianoforte playing in 1845. He was for some time a professor at the Conservatorium of St. Petersburg, from which appointment he has retired, and now lives in Vienna. His compositions chiefly consist of morceaux de salon for the piano. He made his début in England at the Musical Union concerts in 1864, playing in the Schumann Quintet, and solos of his own composition, and has frequently since then appeared at the same concerts. Madame Annette Essipoff was for some time his pupil. [J.A.F.M.]

LESLIE, HENRY DAVID, born in London, June 18, 1822, commenced his musical education under Charles Lucas in 1838. For several years he played the violoncello at the Sacred Harmonic Society and elsewhere. In 1847, on the formation of the Amateur Musical Society, he was appointed its honorary secretary, and continued so until 1855, when he became its conductor, which post he retained until the dissolution of the Society in 1861. In 1855 he formed the well-known Choir which bears his name, which numbers 200 voices, is noted for its refined performance of motets, madrigals, and other unaccompanied part music, and in 1878 gained the first prize in the International competition of choirs at Paris. In 1863 he was appointed conductor of the Herefordshire Philharmonic Society, an amateur body at Hereford. In 1864 he became principal of the National College of Music, an institution formed on the principle of the foreign *conservatoires*, which, however, not receiving adequate support, was dissolved in a few years. In 1874 he became the director and conductor of the Guild of Amateur Musicians. Henry Leslie's first published composition—a Te Deum and Jubilate in D—appeared in 1846. He has since produced a Symphony in F, 1847; a festival anthem, 'Let God arise,' for solo voices, chorus and orchestra, 1849; overture, 'The Templar,' 1852; 'Immanuel,' oratorio, 1853; 'Romance, or, Bold Dick Turpin,' operetta, 1857; 'Judith,' oratorio, produced at Birmingham Festival, 1858; 'Holyrood,' cantata, 1860; 'The Daughter of the Isles,' cantata, 1861; 'Ida,' opera, 1864; besides instrumental chamber music, anthems, songs, duets, trios, pianoforte pieces, and a large number of part songs and madrigals composed for his choir. In addition to a wide range of madrigals, motets, and unaccompanied music of all ages and countries, the following are among the larger works which have been performed by this excellent choir:—Bach's motets for 8 voices; Samuel Wesley's ditto for ditto; Mendelssohn's Psalms and motets, and his Antigone and Œdipus; Gounod's motets and Messe Solennelle; Carissimi's Jonah; Tallis's Forty-part song; Bourgault Ducoudray's Symphonie religieuse (unaccompanied). [W.H.H.]

LESSEL, FRANZ, one of Haydn's three favourite pupils, born about 1780, at Pulawy on the Vistula, in Poland; his father, a pupil of Adam Hiller and Dittersdorf, being Musikdirector at the neighbouring castle of Prince Czartoryski. In 1797 he came to Vienna to study medicine, but the love of music proved a great distraction. Haydn eventually took him as a pupil, a service he repaid by tending him till his death with the care and devotion of a son. In 1810 he returned to Poland, and lived with the Czartoryski family, occupied entirely with music. After the Revolution of 1830 had driven his patrons into exile, Lessel led a life of great vicissitude, but being a man of varied cultivation always managed to maintain himself, though often reduced to great straits. In 1837 he was superseded in his post as principal of the gymnasium at Petrikan on the borders of Silesia, and feeling a presentiment of approaching death, he composed his requiem, and shortly after (March 1839) expired of the disease commonly called a broken heart. He left songs, chamber music, and symphonies; also church music, specially indicating gifts of no common order. Among his effects were some autographs of Haydn presented by himself. Some of his works were published by Artaria, Weigl, and Breitkopf & Härtel, among them being, 3 sonatas for P.F. (op. 2) dedicated to Haydn; fantasia for P.F.

[1] May this not be the origin of *Vaudeville*, a piece made up of current airs?

(op. 8), dedicated to Clementi; another fantasia (op. 13) dedicated to Cecily Beidale, etc. Lessel's life was a romantic one. He was believed to be the love-child of a lady of rank. Mystery also enveloped the birth of his first love, Cecily Beidale, and he discovered that she was his sister only just in time to prevent his marrying her. One of his masses—'Zum Cäcilientag'—was composed in all the fervour of this first passion. [C.F.P.]

LESSON, or LEÇON, a name which was used from the beginning of the 17th century to the close of the 18th, to denote pieces for the harpsichord and other keyed instruments. It was applied to the separate pieces which in their collected form made up a Suite. The origin of the name seems to be that these pieces served an educational purpose, illustrating different styles of playing, and being often arranged in order of difficulty. This is borne out by the fact that Domenico Scarlatti's '42 Lessons for the Harpsichord, edited by Mr. Roseingrave' are in the original edition called 'Essercizi—xxx. Sonatas per Gravicembalo,' though they have little of the educational element in them, and by the following extract from Sir John Hawkins's History of Music (chap. 148; he uses the word 'lessons' for 'suites of lessons'): 'In lessons for the harpsichord and virginal the airs were made to follow in a certain order, that is to say, the slowest or most grave first, and the rest in succession, according as they deviated from that character, by which rule the Jig generally stood last. In general the Galliard followed the Pavan, the first being a grave, the other a sprightly air; but this rule was not without exception. In a manuscript collection of lessons composed by Bird, formerly belonging to a lady Neville, who it is supposed was a scholar of his, is a lesson of a very extraordinary kind, as it seems intended to give the history of a military engagement. The following are the names of the several airs in order as they occur: "The Marche before the battell, The Souldiers Sommons, The Marche of foote-men, The Marche of horse-men: Now folowethe the Trumpets, the Bagpipe and the Drone, the Flute and the Drome, the Marche to the Fighte, Here the battells be joyned, The Retreate, Now folowethe a Galliarde for the victory." There is also in the same collection a lesson called the Carman's Whistle.' Rameau's Lessons for the Harpsichord, op. 2 and 3, are not arranged in order of difficulty, but are connected by the relation of their keys. In the case of Handel's 3 Leçons, the first consists of a Prelude and air with variations in B♭, the second of a Minuet in G minor, and the third of a Chaconne in G major; so they may be presumed to be intended for consecutive performance. The 'Suites de Pièces pour le Clavecin,' in 2 Books, were called 'Lessons' in the first edition, but in the later editions this name was discarded for that which they now bear.

An analogous word to this is 'Etude,' which from originally meaning a special form of exercise, has in many cases come to be applied to pieces in which the educational purpose is completely lost sight of. [See ETUDES.] Although in general the name was applied to pieces for the harpsichord alone, yet it was sometimes used for concerted chamber music, as in the 'Firste Booke of consort lessons, made by divers exquisite authors, for six Instruments to play together, viz. the Treble Lute, the Pandora, the Citterne, the Base Violl, the Flute and the Treble-Violl, collected by Thomas Morley, and now newly corrected and enlarged' (London 1611), and in Mathias Vento's 'Lessons for the Harpsichord with accompaniment of Flute and Violin.' [J.A.F.M.]

LESTOCQ. Opera in 4 acts; words by Scribe, music by Auber. Produced at the Opéra Comique May 24, 1834. It was produced in English at Covent Garden Feb. 21, 1835, as 'Lestocq, or the Fete of the Hermitage.' [G.]

LESUEUR, JEAN FRANÇOIS, grandnephew of the celebrated painter Eustache Lesueur, born Jan. 15, 1763, in the village of Drucat-Plessiel, near Abbeville. He became a chorister at Abbeville at 7. At 14 he went to the college at Amiens, but two years later broke off his studies to become, first, maître de musique at the cathedral of Séez, and then sous-maître at the church of the Innocents in Paris. Here he obtained some instruction in harmony from the Abbé Roze, but it was not any systematic course of study, so much as his thorough knowledge of plain-song, and deep study, that made him the profound and original musician he afterwards became. His imagination was too active, and his desire of distinction too keen, to allow him to remain long in a subordinate position; he therefore accepted in 1781 the appointment of maître de musique at the cathedral of Dijon, whence after two years he removed to Le Mans, and then to Tours. In 1784 he came to Paris to superintend the performance of some of his motets at the Concert Spirituel, and was reappointed to the Holy Innocents as head-master of the choristers. He now mixed with the foremost musicians of the French school, and with Sacchini, who gave him good advice on the art of composition, and urged him to write for the stage. In 1786 he competed for the musical directorship of Notre Dame, which he obtained, and immediately entered upon his duties. He was allowed by the chapter to engage a full orchestra, and thus was able to give magnificent performances of motets and 'messes solennelles.' His idea was to excite the imagination and produce devotional feeling by means of dramatic effects and a picturesque and imitative style, and he even went so far as to precede one of his masses by a regular overture, exactly as if it had been an opera. Crowds were attracted by this novel kind of sacred music, and his masses were nicknamed the 'Beggars' Opera' ('L'Opéra des Gueux'). This success soon aroused opposition, and a violent anonymous attack was made upon him, under pretext of a reply to his pamphlet 'Essai de musique sacrée, ou musique motivée

et méthodique pour la fête de Noël' (1787). Lesueur's rejoinder was another pamphlet, 'Exposé d'une musique une, imitative et particulière à chaque solennité' (Paris, Hérissant, 1787), in which he gives a detailed sketch of an appropriate musical service for Christmas, and states expressly that his aim was to make sacred music 'dramatic and descriptive.' Meantime the chapter, finding that his projects had involved them in heavy expense, curtailed the orchestra, while at the same time strong pressure was put upon him by the Archbishop to take orders. He willingly assumed the title of Abbé, but declined the priesthood, especially as he was composing an opera, 'Télémaque,' which he was anxious to produce. Finding his reduced orchestra inadequate for his masses he resigned, upon which an infamous libel was issued, accusing him, the most upright of men, of having been dismissed for fraud. Completely worn out, he retired in the autumn of 1788 to the country house of a friend, and here he passed nearly four years of repose and happiness. On the death of his friend in 1792 he returned to Paris invigorated and refreshed in mind, and composed a series of 3-act operas—'La Caverne' (Feb. 15, 1793), 'Paul et Virginie' (Jan. 13, 1794), and 'Télémaque' (May 11, 1796), all produced at the Feydeau. The brilliant success of 'La Caverne' procured his appointment as professor in the 'École de la Garde Nationale' (Nov. 21, 1793), and he was also nominated one of the inspectors of instruction at the Conservatoire from its foundation in 1795. In this capacity he took part with Méhul, Gossec, Catel, and Langlé, in drawing up the 'Principes élémentaires de musique' and the 'Solféges du Conservatoire.' He was then looking forward to the production of two operas which had been accepted by the Académie; and when these were set aside in favour of Catel's 'Semiramis' his indignation knew no bounds, and he vehemently attacked not only his colleague, but the director of the Conservatoire, Catel's avowed patron. His pamphlet, 'Projet d'un plan général de l'instruction musicale en France' (Paris, an IX, anonymous), raised a storm, and Lesueur received his dismissal from the Conservatoire on Sept. 23, 1802. Having a family to support, the loss of his salary crippled him severely, and he was only saved from utter indigence by his appointment in March 1804 as maître de chapelle to the First Consul, on the recommendation of Paisiello, who retired on account of his health. As the occupant of the post most coveted by musicians in France, Lesueur had no difficulty in securing the representation of 'Ossian, ou les Bardes' (5 acts, July 10, 1804). The piece inaugurated the new title of the theatre as 'Académie Imperiale.' Its success was extraordinary, and the Emperor, an ardent admirer of Celtic poems, rewarded the composer with the Legion of Honour, and presented him with a gold snuff-box inscribed 'L'Empereur des Français à l'auteur des Bardes,' intended also as an acknowledgement for a Te Deum and a mass performed at Notre Dame on the occasion of his coronation (Dec. 2, 1804). During the next five years Lesueur undertook no work of greater importance than a share in Persuis's intermède 'L'Inauguration du Temple de la Victoire' (Jan. 2, 1807), and in the same composer's 3-act opera 'Le Triomphe de Trajan' (Oct. 23, 1807), containing the well-known 'marche solennelle'; but on March 21, 1809, he produced 'La Mort d'Adam et son Apothéose' in 3 acts—the original cause of his quarrel with the management of the Académie and the Conservatoire. The scenery and decorations of the new opera excited the greatest admiration; when complimented on his work, Degotti the scene-painter replied quite seriously, 'Yes, it certainly is the most beautiful paradise you ever saw in your life, or ever will see.'

In 1813 Lesueur succeeded Grétry at the Institut; and after the Restoration became, in spite of his long veneration for Napoleon, surintendant and composer of the chapel of Louis XVIII. On January 1, 1818, he was appointed professor of composition at the Conservatoire, a post which he retained till his death. His lectures were largely attended, and very interesting from the brilliant remarks with which he interspersed them. Of his pupils no less than 12 gained the 'prix de Rome'—namely, Bourgeois, Ermel, Paris, Guiraud, Hector Berlioz, Eugène Prévost, Ambroise Thomas (whom he called his 'note sensible,' or leading note, on account of his extreme nervousness), Elwart, Ernest Boulanger, Besozzi, Xavier Boisselot (who married one of his three daughters), and, last but not least, Gounod. Lesueur also wrote 'Notice sur la Mélopée, la Rhythmopée et les grands caractères de la musique ancienne,' published with Gail's French translation of Anacreon (Paris, 1793). Ancient Greek music was a favourite subject with him, and he would with perfect seriousness expound how one mode tended to licence, and another to virtue; unfortunately however some wag in the class would occasionally mislead his ear by inverting the order of succession in the chords, and thus betray him into taking the licentious for the virtuous mode, and vice versa.[1]

Lesueur died in Paris on Oct. 6, 1837, at a patriarchal age, and in universal respect; even Berlioz loved and honoured him to the last (see chapters vi. and xx. of his *Mémoires*). He left 3 operas which had never been performed, 'Tyrtée,' 3 acts, composed in 1794; 'Artaxerce,' 3 acts, accepted by the Opéra in 1801; and 'Alexandre à Babylone,' of which the score has been engraved, and considerable portions performed at the Conservatoire concerts. Of his numerous oratorios, masses, motets, etc., the following have been published:—'L'Oratorio ou Messe de Noël'; 3 messes solennelles; a low mass with 'Domine Salvum'; 3 'Oratorios pour le couronnement des princes souverains'; 3 Te Deums; 2 'Oratorios de la Passion'; 2 'Domine Salvum'; 1 Stabat; the oratorios 'Debora,'

[1] This is said to have been a favourite amusement with Gounod as a boy.

'Rachel,' 'Ruth et Noémi,' 'Ruth et Booz'; a cantata for the marriage of the Emperor Napoleon; a motet for the baptism of the King of Rome; a Prière for the Emperor on airs of Languedoc; an 'O Salutaris'; several psalms and motets, among which must be specified a 'Super flumina Babylonis.'

The 5 operas previously mentioned, and all this sacred music, furnish ample materials for forming an estimate of Lesueur's genius. His most marked characteristic is a grand simplicity. No musician ever contrived to extract more from common chords, or to impart greater solemnity to his choruses and ensembles; but in his boldest flights, and most original effects of colour, the ear is struck by antiquated passages which stamp the composer as belonging to a passé school. 'His biblical characters are set before us with traits and colours so natural as to make one forget the poverty of the conception, the antique Italian phrases, the childish simplicity of the [1] orchestration.' By another critic he was said to have taken the theatre into the church and the church into the theatre. Thus, looking at the matter from a purely musical point of view, it is impossible to consider Lesueur the equal of his contemporaries Méhul and Cherubini; though the novelties he introduced derive a special interest from the fact that he was the master of Hector Berlioz. [G.C.]

LETZTEN DINGE, DIE, *i.e.* 'the Last Things,' an oratorio in 2 parts; text by Rochlitz, music by Spohr. Composed in the autumn of 1825, and produced in the Lutheran church, Cassel, on [2] Good Friday 1826. In England it is known as The Last Judgment. This oratorio must not be confounded with 'Das jüngste Gericht,' an earlier and less successful work. [G.]

LEUTGEB, or LEITGEB, Josef, a horn player to whom Mozart was much attached. They became acquainted in Salzburg, where Leutgeb was one of the band, and on Mozart's arrival in Vienna he found him settled there, in the Altlerchenfeld no. 32, keeping a cheesemonger's shop and playing the horn. Mozart wrote 4 Concertos for him (Köchel 412, 417, 447, 495), a Quintet (407), which he calls 'das Leitgebische,' and probably a Rondo (371). This shows that he must have been a good player. There must also have been something attractive about him, for with no one does Mozart appear to have played so many tricks. When Leutgeb called to ask how his pieces were getting on Mozart would cover the floor with loose leaves of scores and parts of symphonies and concertos, which Leutgeb must pick up and arrange in exact order, while the composer was writing at his desk as fast as his pen could travel. On one occasion he was made to crouch down behind the stove till Mozart had finished. The margins of the Concertos are covered with droll remarks—'W. A. Mozart has taken pity on Leutgeb, ass, ox, and fool, at Vienna, Mar. 27, 1783, etc.' The horn part is full of jokes—'Go it, Signor Asino'—'take a little breath'—'wretched pig'—'thank God here 's the end'—and much more of the like. One of the pieces is written in coloured inks, black, red, green, and blue, alternately. Such were Mozart's boyish romping ways! Leutgeb throve on his cheese and his horn, and died richer than his great friend, Feb. 27, 1811.[3] [G.]

LEVERIDGE, Richard, a singer noted for his deep and powerful bass voice, was born in 1670. His name appears as one of the singers in Dr. Blow's Te Deum and Jubilate for St. Cecilia's day 1695. He sang in the Anglo-Italian operas, 'Arsinoe,' 'Camilla,' 'Rosamond,' and 'Thomyris,' at Drury Lane theatre from 1705 to 1707. In 1708 he was engaged at the Queen's Theatre and sang in 'The Temple of Love,' etc., and in Handel's 'Faithful Shepherd' ('Il Pastor Fido') on its production in 1712. He subsequently transferred his services to Rich, and sang in the masques and pantomimes at Lincoln's Inn Fields and Covent Garden for nearly 30 years. His voice remained unimpaired so long, that in 1730, when 60 years old, he offered, for a wager of 100 guineas, to sing a bass song with any man in England. About 1726 he opened a coffee-house in Tavistock Street, Covent Garden. In 1699 he composed part of the music for 'The Island Princess, or, The Generous Portuguese,' and in 1716 the music for 'Pyramus and Thisbe,' a comic masque, compiled by him from 'A Midsummer Night's Dream.' In 1727 he published his songs, with the music, in two small 8vo. vols. Many others were published singly. In his old age he was maintained by an annual subscription among his friends, promoted by a city physician. He died March 22, 1758. There is a good engraved portrait of him by Pether, from a painting by Fryer. [W.H.H.]

L'HOMME ARMÉ, Lome Armé, or Lomme Armé. I. The name of an old French *Chanson*, the melody of which was adopted, by some of the Great Masters of the 15th and 16th centuries, as the Canto fermo of a certain kind of Mass—called the 'Missa L'Homme armé'—which they embellished with the most learned and elaborate devices their ingenuity could suggest.

The origin of the song has given rise to much speculation. P. Martini calls it a 'Canzone Provenzale.' Burney (who, however, did not know the words) is inclined to believe it identical with the famous 'Cantilena Rolandi,' antiently sung, by an armed Champion, at the head of the French army, when it advanced to battle. Baini confesses his inability to decide the question: but points out, that the only relique of this poetry which remains to us—a fragment preserved in the 'Proportionale Musices' of Tinctor—makes no mention of Roland, and is not written in the Provençal dialect.[4]

'Lome, lome, lome armé.
Et Robinet tu m'as
La mort donnée,
Quand tu t'en vas.'

[1] Berlioz, 'Mémoires,' chap. vi.

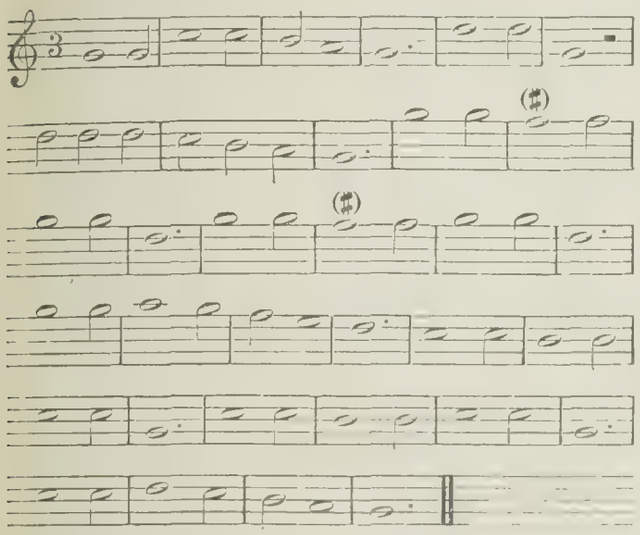
[3] See Jahn's Mozart, 2nd ed., ii. 26.
[4] No more information is given by Loquin, 'Melodies populaires,' Paris, 1879.

The Melody—an interesting example of the use of the Seventh Mode—usually appears, either in Perfect Time, or the Greater Prolation. Though simple, it lacks neither grace, nor spirit. As might have been predicted, slight differences are observed in the *Canti fermi* of the various Masses founded upon it; but, they so far correspond, that the reading adopted by Palestrina may be safely accepted as the normal form. We therefore subjoin its several clauses, reduced to modern notation, and transposed into the treble clef.



Upon this unpretending theme, or on fragments of it, Masses were written, by Guglielmo du Fay, Antonio Busnoys, Regis, François Caron, Joannes Tinctor, Philippon di Bruges, La Fage, (or Faugues,) De Orto, Vacqueras, Monsieur mon Compère, at least three anonymous composers who flourished between the years 1484 and 1513, Antonio Brumel, Josquin des Prés, Pierre de la Rue, (Petrus Platensis,) Pipelare, Mathurin Forestyn, Cristofano Morales, Palestrina, and even Carissimi—a host of talented Composers, who all seem to have considered it a point of honour to exceed, as far as in them lay, the fertility of invention displayed by their most learned predecessors, and whose works, therefore, not only embody greater marvels of contrapuntal skill than any other series preserved to us, but also serve as a most useful record of the gradual advancement of Art.

The Masses of Du Fay, and Busnoys, and their successors, Regis, and Caron, are written in the hard and laboured style peculiar to the earlier Polyphonic Schools, with no attempt at expression, but, with an amount of earnest sobriety which was not imitated by some of their followers, who launched into every extravagance that could possibly be substituted for the promptings of natural genius. Josquin, however, while infinitely surpassing his predecessors in ingenuity, brought true genius also into the field; and, in his two Masses on the favourite subject —one for four Voices, and the other for five— has shewn that freedom of style is not altogether inconsistent with science. The Fugues, Canons, Proportions, and other clever devices with which these works are filled, exceed in complexity any thing previously attempted; and many of them are strikingly effective and beautiful—none more so, perhaps, than the third Agnus Dei of the Mass in four parts; a very celebrated movement known as 'Clama ne cesses,' from the 'Inscription' appended to the Superius, (or upper part), for the purpose of indicating that the notes are to be sung continuously, without any rests between them. In this movement, the Superius sings the Canto fermo entirely in Longs and Breves, while the other three Voices are woven together, in Canon, and Close Fugue, with inexhaustible contrivance, and excellent effect. In the second movement of the Sanctus—the 'Pleni sunt'—for three voices, the subject is equally distributed between the several parts, and treated with a melodious freedom more characteristic of the Master than of the age in which he lived. It was printed by Burney in his History, ii. 495.

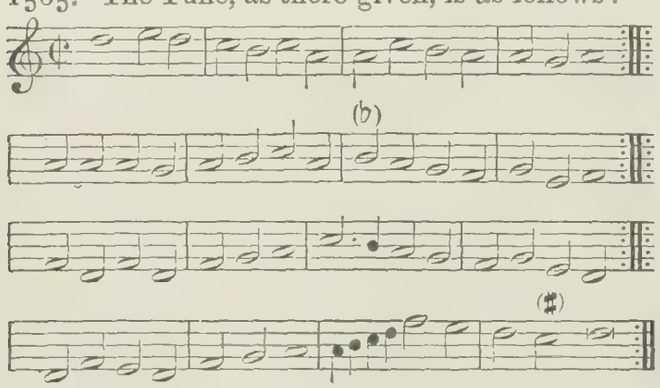
It might well have been supposed that these triumphs of ingenuity would have terrified the successors of Josquin into silence: but this was by no means the case. Even his contemporaries, Pierre de la Rue, Brumel, Pipelare, and Forestyn, ventured to enter the lists with him; and, at a later period, two very fine Masses, for four and five Voices, were founded on the old Tune by Morales, who laudably made ingenuity give place to euphony, whenever the interest of his composition seemed to demand the sacrifice. It was, however, reserved for Palestrina to prove the possibility, not of sacrificing the one quality for the sake of the other, but of using his immense learning solely as a means of producing the purest and most beautiful effects. His *Missa 'L'Homme Armé,'* for five voices, first printed in 1570, abounds in such abstruse combinations of Mode, Time, and Prolation, and other rhythmic and constructional complexities, that Zacconi—writing in 1592, two years before the great Composer's death—devotes many pages of his *Prattica di Musica* to an elaborate analysis of its most difficult 'Proportions,' accompanied by a reprint of the *Kyrie*, the *Christe*, the second *Kyrie*, the first movement of the *Gloria*, the *Osanna*, and the *Agnus Dei*, with minute directions for scoring these, and other movements, from the separate parts. The necessity for some such directions will be understood, when we explain, that, apart from its more easily intelligible complications, the Mass is so constructed that it may be sung either in triple or in common time; and, that the original edition of 1570 is actually printed in the former, and that published at Venice, in 1599, in the latter. Dr. Burney scored all the movements we have mentioned, in accordance with Zacconi's precepts; and his MS. copy (Brit. Mus. Add. MSS. 11,581) bears ample traces of the trouble the process cost him: for Zacconi's reprint is not free from clerical errors, which our learned historian has always carefully corrected. The first *Kyrie*, in which the opening clause of the *Canto fermo* is given to the Tenor in notes three times as long as those employed in the other parts, is a conception of infinite beauty, and shows traces of the Composer of the 'Missa Papae Marcelli' in every bar.

In the edition of 1570 it stands in triple time; and, in order to make it correspond with that of 1599, it is necessary to transcribe, and re-bar it, placing four minims in a measure, instead of six: when it will be found, not only that the number of bars comes right in the end, but, that every important cadence falls as exactly into the place demanded for it by the rhythm of the piece as it does in the original copy. It is said that Palestrina himself confided this curious secret to one of his disciples, who, five years after his death, superintended the publication of the Venetian edition. If it be asked, why, after having crushed the vain pedants of his day by the 'Missa Papae Marcelli,' the 'Princeps Musicae' should, himself, have condescended to invent conceits as quaint as theirs, we can only state our conviction, that he felt bound, in honour, not only to shew how easily he could beat them with their own weapons, but to compel those very weapons to minister to his own intense religious fervour, and passionate love of artistic beauty. For examples of the music our space compels us to refer the student to Dr. Burney's MS. already mentioned.

The last 'Missa L'Homme Armé' of any importance is that written, for twelve Voices, by Carissimi: this, however, can scarcely be considered as a fair example of the style; for, long before its production, the laws of Counterpoint had ceased to command either the obedience, or the respect, indispensable to success in the Polyphonic Schools of Art.

The original and excessively rare editions of Josquin's two Masses, and that by Pierre de la Rue, are preserved in the Library of the British Museum, together with Zacconi's excerpts from Palestrina, and Dr. Burney's MS. score, which will be found among his 'Musical Extracts.' None of these works, we believe, have ever been published in a modern form.

II. The title is also attached to another melody, quite distinct from the foregoing—a French Dance Tune, said to date from the 15th century, and printed, with sacred words, by Jan Fruytiers, in his '*Ecclesiasticus*,' published, at Antwerp, 1565. The Tune, as there given, is as follows:—



It will be seen, that, though strictly Dorian in its tonality, this interesting melody exceeds the compass of the First Mode by two degrees. The regularity of its phrasing savours rather of the 16th than the 15th century. Possibly Fruytiers may have modified it, to suit his own purposes. Instances, however, are not wanting, of very regular phrases, in very antient melodies: as, for instance, in the delightful little Romance, '*L'autrier par la matinée*,' by Thibaut, King of Navarre (ob. 1254), quoted by Dr. Burney, ii. p. 300, the rhythm of which is scarcely less distinctly marked than that of Fruytiers' adaptation. [W. S. R.]

LIBRETTO is the diminutive form of the Italian word *libro*, and therefore literally means 'little book.' But this original significance it has lost, and the term is used in Italian, as well as in other languages, in the technical sense of book of an opera. Its form and essential difference from spoken comedy or tragedy will best be explained by a short historic survey of its origin and development. In the most primitive form of opera, as it arose in Florence in the 16th century, that difference was comparatively trifling, the libretto in those days consisting mainly of spoken dialogue with a few interspersed songs and choral pieces. But the rapid rise of music and the simultaneous decline of poetry in Italy soon changed matters. Certain musical forms, such as the aria and the various species of concerted music, were bodily transferred to the opera, and the poet had to adapt his plot to the exigencies of the superior art. Thus he was obliged not only to provide primo uomo and prima donna with a befitting duet in a convenient place, but other characters had also to be introduced to complete the quartet or the sestet, as the case might be, and, in addition to this, the chorus had to come in at the end of the act to do duty in the inevitable finale. However legitimate these demands may appear to the musician, it is obvious that they are fatal to dramatic consistency, and thus the poet, and unfortunately the public also, had to submit to the inevitable, the former by penning and the latter by serenely accepting the specimens of operatic poetry with which we are all but too well acquainted. The most perfect indifference to the dramatic part of the entertainment can alone explain the favour with which such profoundly inane productions as 'Ernani,' or 'Un Ballo in Maschera' as transmogrified by the Italian censorship, are received by English audiences. That this condition of things should in its turn detrimentally react on music is not a matter for surprise; for singers naturally would take little trouble to pronounce words which nobody cared to listen to, and with the proper declamation of the words intelligent musical phrasing is inseparably connected. In the Italian school, where vocalisation was carried to the highest pitch of perfection, the libretto accordingly sank to the lowest level. In France, on the other hand, where the declamatory principle prevailed, and where dramatic instinct is part of the character of the nation, a certain regard for story and dialogue was never lost, and the libretti of Lully's and Rameau's, and after them of Gluck's operas, share the classic dignity, although not the genius, of Corneille and Racine. In the same sense the marvellous skill and *savoir faire* of the contemporary French stage is equally represented in the lyrical drama, in more than one instance supplied by the same

hands. The same cannot be said of Germany, where few dramatists of repute have condescended to co-operate with the musician, and where, till quite lately, even the finest dramatic subjects (*e.g.* Beethoven's Fidelio) were defaced by the execrable doggrel believed to be particularly suitable for operatic purposes. In all these respects a deep change has been wrought by Wagner's reform. In that great poet and greater musician the two faculties are inseparably blended, and in his work therefore the reciprocity between music and poetry may be studied in its most perfect form. His own words on the subject will be of interest. 'In *Rienzi*,' he says, 'my only purpose was to write an opera, and thinking only of this opera, I took my subject as I found it ready made in another man's finished production. . . . With the *Flying Dutchman*, I entered upon a new course, by becoming the artistic interpreter of a subject which was given to me only in the simple, crude form of a popular tale. From this time I became, with regard to all my dramatic works, first of all a *poet*; and only in the ultimate completion of the *poem* was my faculty as a *musician* restored to me. But as a poet I was again from the beginning conscious of my power of expressing musically the import of my subjects. This power I had exercised to such a degree, that I was perfectly certain of my ability of applying it to the realisation of my poetical purpose, and therefore was at much greater liberty to form my dramatic schemes according to their poetical necessities, than if I had conceived them from the beginning with a view to musical treatment.'

The result of this freedom of workmanship is easily discoverable in Wagner's later music-dramas, such as 'Tristan' or 'The Valkyrie.' They are to all intents and purposes dramatic poems full of beauty and interest, quite apart from the aid of musical composition. For the latter, indeed, they appear at first sight unadapted, and he must be a bold man who would think of resetting the 'Niblung' Trilogy, as Rossini reset the 'Barber of Seville' after Paisiello. The ordinary characteristics of the libretto, such as the aria, or the duet, as distinguished from the dialogue, have entirely disappeared, and along with these have gone those curious reiterations by various persons of the same sentence, with a corresponding change only of the personal pronoun. In this and other respects Wagner's music-dramas must be considered by themselves, and the strict imitation of their form in ordinary libretti, written for ordinary musicians, would be simply fatal. At the same time his work has been of great influence on the structure of the dramatic poem in modern opera. Musicians have become more critical in their choice of subjects, and the librettists accordingly more careful in providing them, especially as the natural sense of the public also seems to be awakening from its long slumber. It is indeed a significant fact that the three most successful operas of recent years, Gounod's 'Faust,' Bizet's 'Carmen,' and Goetz's 'The Taming of the Shrew,' are all founded on stories of intense human interest, more or less cleverly adapted to operatic purposes. It is true that in France and Germany the dramatic interest was never at so low an ebb as in Italy or in this country. Numerous operas might be named which owe their permanent success to a bright and sparkling libretto, and others in which the genius of the musician has been weighed down by the dulness of the operatic bard; 'Martha,' 'Fra Diavolo,' and 'Le Postillon de Longjumeau,' belong to the former class; 'Così fan Tutte,' 'La Clemenza di Tito,' and 'Euryanthe,' nicknamed 'Ennuyante' by the despairing [2]composer, to the latter. It is also a significant fact that by far the finest music Rossini ever wrote occurs in the 'Barber,' and in 'William Tell,' and that 'Faust' remains Gounod's unsurpassed masterpiece, the inspiration of the composers being in each case distinctly traceable to the dramatic basis of their music. Instances of a similar kind from the works even of the most 'absolute' musicians might be multiplied *ad libitum*. The lesson thus taught has indeed been fully recognised by the best composers. Beethoven was unable to fix upon a second subject after Fidelio; and Mendelssohn, in spite of incessant attempts, found only one to satisfy his demands; and that, alas! too late for completion. The libretto of his unfinished opera 'Loreley,' by Emanuel Geibel the well-known poet, was afterwards set by Max Bruch, and performed with considerable success. The importance of the libretto for the artistic as well as the popular success of an opera is therefore beyond dispute, and modern composers cannot be too careful in their choice. To assist them in that choice, or to lay down the law with regard to the construction of a model libretto, the present writer does not feel qualified. A few distinctive features may however be pointed out. In addition to the human interest and the truth of passion which a libretto must share with every dramatic poem, there ought to be a strong infusion of the lyrical element, not to be mistaken for the tendency towards 'singing a song' too rampant amongst tenors and soprani. The dramatic and the lyrical motives ought on the contrary to be perfectly blended, and even in ordinary dialogue a certain elevation of sentiment sufficient to account for the sung instead of the spoken word should be maintained. This again implies certain restrictions with regard to the choice of subject. One need not share Wagner's absolute preference for mythical subject-matter to perceive that the scene of an opera ought to be as far as possible removed from the platitudes of common life, barring, of course, the comic opera, in which the contrast between the idealism of music and the realities of every-day existence may be turned to excellent account. With regard to the observance of musical form opinions of course will differ widely; but that the poet ought to some extent to conform to the musician's demands no reasonable person will deny. The

[2] Weber's Life, by his son, ii. 519.

case of Wagner, as we have already said, is unique in history, and in ordinary circumstances music and poetry in the opera co-exist by means of a compromise; but this compromise ought to proceed from mutual love, not from mere toleration. In other words, the poet should undoubtedly supply opportunities for musical display, both of a vocal and an orchestral kind, but no finale, or march, or wedding chorus, ought to interfere with the economy of the drama. To state such a problem is of course easier than to solve it, but even the mere statement of the difficulty may not be entirely without use.

Before concluding this notice, it is desirable to mention the names of a few of the more celebrated librettists. The most famous amongst them is Metastasio (1698–1782), the author of 'La Semiramide reconnosciuta,' 'Il Re Pastore,' and 'Il Trionfo di Clelia,' amongst whose musical collaborators were the most celebrated masters of the 18th century. [METASTASIO.] Calzabigi deserves mention as the author of 'Orfeo,' and other works of Gluck's Viennese period, the French collaborator of the master being Le Bailli du Rollet. Amongst more modern Italian librettists it must suffice to name Felice Romano, the friend and artistic companion of Bellini. The father of French librettists was the Abbé Perrin, who broke the supreme rule of the hexameter by writing what he terms 'paroles de musique ou des vers à chanter,' and who in conjunction with Cambert produced the first French opera properly so called ('La Pastorale,' first performed in 1659). Quinault was the poetic assistant of Lully. In modern France the name of Scribe towers above his rivals; Barbier, Meilhac and Halévy supply the contemporary market. Sardou also has tried his hand at lyrical drama, but without much success. The failure of the English version of 'Piccolino' at Her Majesty's Theatre in 1879 was due at least as much to Sardou's libretto as to Guiraud's music. In Germany, Goethe and Wieland appear amongst aspirants to lyrical honours, but without success. Of the professional librettists in that country none deserves mention. In connection with so-called 'English opera' the names of Gay, the author of the 'Beggar's Opera,' and, in modern times, of Alfred Bunn and of Edward Fitzball, both fertile librettists, ought to be mentioned. To the latter belongs the merit of having by one of his pieces supplied Heine, and through him Wagner, with the idea of a dramatised 'Flying Dutchman.' Mr. Planché, the author of Weber's 'Oberon,' also must not be forgotten. Mr. W. S. Gilbert's witty comediettas, which Mr. Sullivan has fitted to such charming and graceful tunes, can be called libretti only in a modified sense.

A few words should be added with regard to the libretto of the Oratorio and the Cantata. Æsthetic philosophers have called the oratorio a musical epic, and, in spite of its dramatic form, there is a good deal of truth in this definition; for, not only does the narration take the place of the action on the stage, but the descriptive parts, generally assigned to the chorus, allow of greater breadth and variety of treatment than is possible in the opera. A reference to the choruses in 'Israel in Egypt' and other works by Handel will be sufficient to illustrate the point. In accordance with this principle, what has been urged above with regard to the operatic libretto will have to be somewhat modified. But here also terse diction and a rapid development of events should in all cases be insisted upon. The matter is considerably simplified where the words have been selected from Scripture, for here sublimity of subject and of diction is at once secured. Handel's 'Messiah' and 'Israel'—which also contain his finest music—Mendelssohn's 'St. Paul,' 'Elijah,' and 'Hymn of Praise,' owe their libretti to this source. Haydn's 'Creation' is based on the Bible and Milton, though the source is difficult to recognise under the double translation which it has undergone. Gay's 'Acis and Galatea,' Milton's 'Allegro' and 'Penseroso,' Dryden's 'Alexander's Feast,' and Pope's 'St. Cecilia's Ode' have a literary value of their own; but in other cases Handel has been less happy; and some terrible couplets might be quoted from the works of his collaborators Morell and Humphreys. The transition from the oratorio proper to the cantata, or 'Worldly Oratorio' as the Germans quaintly call it, is made by Liszt's 'St. Elizabeth.' The libretto by Otto Roquette, although not without good points, is upon the whole tedious, and cannot be recommended as a model. Better is Schumann's 'Paradise and the Peri,' which may stand as a specimen of the cantata proper. Its libretto is essentially founded on Moore's tale, the ensemble of Peris mocking the heavenly aspirations of their sister was inserted by the composer himself. The story has been skilfully arranged, but there is the drawback that the dramatic battle-scene occurs in the first part, while the quieter, though psychologically more elevated motives, are assigned to the later portions. The impression of an anti-climax is thus inevitable. [F.H.]

LICENSE. (It. *Licenzia*; Germ. *Licenz*; Fr. *Licence*). As long as any art has the capacity for development and expansion, true genius and dogmatism are constantly at war. The inherent disposition of the mind to stereotype into formulas conclusions drawn from the observation of an insufficient number of isolated instances, is probably the result of much bitter experience of the fruits of human carelessness and stupidity; against which the instincts of the race impel them to guard for the future by preparing temporary leading-strings for the unwise, to keep them from falling and dragging others with them into the mire of error. Up to a certain point even genius must have leading-strings, and these must needs be made of the best materials at hand till better be found. The laws cannot be made on principles whose bases are out of the ken of the wisest law-makers; and genius, like ordinary intellect, must needs be amenable at first to such laws as preceding masters have been able to formulate from the sum total of their experience. The trouble begins

when something is found which is beyond the range of the observation which served as the basis for a law, and seems therefore to contravene it; for many men so readily mistake their habits for absolute truth that when they are shown a novelty which passes their point of realisation and is out of the beaten track, they condemn it at once as heresy, and use the utmost of their power to prevent its dissemination; and where they find themselves unable to stem the tide through the acknowledged greatness of the genius who has originated it, or through the acceptance of its principle becoming general, they excuse themselves and stigmatize what they mistrust by calling it a license.

A license, then, is the breaking of a more or less arbitrary law in such respects as it is defective and its basis unsound and insufficient; and it is by such means that the greater part of expansion in musical art has been made. An irresistible impulse drives genius forth into the paths of speculation; and when a discovery is made it frequently happens that a law is broken, and the pedants proclaim a license. But the license, being an accurate generalisation, holds its place in the art, and the laws have to be modified to meet it, and ultimately men either forget that it was ever called a license or stand in amazement at the stupidity of their predecessors; while it must be confessed that they assuredly would not have been any wiser if they had been in their places.

The history of music is full from end to end with examples—from De Muris in the fourteenth century bewailing in bitter terms the experiments in new concords, to the purists of Monteverde's time condemning his use of the dominant seventh without preparation, on to the vexation of the contemporaries of Mozart at the extravagant opening of the C major Quartet, and the amazement of many at Beethoven's beginning his first Symphony (in C) with a chord ostensibly in F major. Even at the present day Bach's complicated use of accidentals is a stumblingblock to many, who fancy he breaks laws against false relations; while in reality this law, like that against consecutive fifths, is only the particular formula covering a deeper law which Bach had the power to fathom without waiting for its expression. So again with the resolution of discords; the old formulas were mere statements of the commonest practices of the older composers, and did not attempt to strike at the root of the matter: so we find even Haydn taking license in this direction in relation to the lights of his time; while Bach's resolutions are often inexplicable even at the present day as far as the accepted principles of resolution will go, because theorists have hardly got far enough yet to see clearly what he saw and expressed so long ago. At the present day, however, the increase of the accumulated results of observation and analysis, joined with a more philosophical spirit, tends to produce a more and more accurate determination of the real laws of art, and by the systematisation of these into a more congruous and connected theory, a nearer approach is made to what is universally true, and so less room is left for those speculative experiments of genius which the denseness of mere pedants has been content to brand as licenses.

This progress explains the fact that the term 'license' is not so frequently heard in relation to music as it formerly was: but there is still plenty of room for theorists to invent false hypotheses; and the apparently growing desire of many scientists to force upon artists as final the results of the most elementary discoveries in relation to the material of the art, will still afford genius the opportunity of asserting the strength of its convictions by taking so-called licenses, and will likewise afford dogmatists further opportunity of making themselves ridiculous to posterity by condemning the truths thus discovered.

There is just one last consideration. Libertines are unfortunately to be met with in the art world as well as elsewhere, and the licenses they take too frequently deserve the bitter language of the enraged pedant. There is no need to stay to consider their experiments, for they will not take long to die of inanition. It only remains to remind the too hasty enthusiast that to take licenses with safety for the art is not the part of every ready believer in himself; but only of those in whom the highest talents are conjoined with unflagging patience and earnest labour; who pass through the perfect realisation of the laws they find in force at first, and by learning to feel thoroughly the basis on which they rest, and the principles of their application by other great masters, finally arrive at that point where they can see the truths which lie beyond the formal expression of the law, and which the rest of humanity only call licenses for the nonce because their eyes are not clear enough nor their spirits bright enough to leap to the point which the inspiration of genius has achieved.

Beethoven appears to have used the term 'licenze' in relation to construction with reference to the fugue in B♭ in opus 106. It is difficult to indicate precisely in what particular the licenses consist. The case is similar to the sonatas which he called 'quasi Fantasia,' merely indicating that in them he had not restricted himself closely to the laws of form as accepted in his time, but had enlarged the bounds according to his own feelings. [C.H.H.P.]

LICHFILD, Henry, was the composer of 'The First Set of Madrigals of 5 parts, apt both for Viols and Voyces,' printed in 1613 and reprinted in 1614, and containing 20 madrigals. Nothing is known of his biography. [W.H.H.]

LICHNOWSKY, Carl, Fürst (Prince), by Russian patent issued January 30, 1773; born 1758, died April 15, 1814; was descended from an old Polish family whose estates were so situated that, after the partition of Poland, it owed allegiance to all three of the plunderers. The principal seat of Prince Carl was Schloss Grätz, near Troppau in Silesia; but Vienna was his usual place of residence. He claims

a place in this work as the pupil and friend of Mozart and the Mæcenas of Beethoven.

Readers of Burney's 'Musical Tour' will remember his eulogies of the Countess Thun-Klösterle, so celebrated for her beauty, intellect and culture, whose disregard for mere form gave her the reputation of eccentricity, but whose house and family had charms that attracted even the Emperor Joseph and his brothers thither on the footing of friendly visitors. Of her taste in music it is sufficient to say that she was a profound admirer of the compositions of both the young Mozart and the young Beethoven, at a time when such appreciation was by no means universal. Her daughters — Georg Forster's 'Three Graces'—were worthy of their mother. Elizabeth married Rasoumowsky; Christine, born July 26, 1765, married, November 21, 1788, Lichnowsky; and the third the English Lord Guilford. Schönfeld, a Viennese, writes in 1796, of Lady 'Gilfort' as a guitar player of very high rank and a singer of uncommon excellence ; and of Princess Lichnowsky as 'a *strong* musician who plays the pianoforte with feeling and expression.'

Lichnowsky, without pretending to rival the great magnates Esterhazy, Lobkowitz, and their peers, in maintaining a complete 'chapel' of vocal and instrumental music, had within five years after his marriage his regular Friday quartet of youthful virtuosos, Schuppanzigh, Sina, Weiss, and Kraft, all of whom became famous, and also gave musical entertainments on a scale requiring a full orchestra.

His relations to the Prussian court compelled him occasionally to appear there; and he thus found opportunity to give Mozart—only two years his senior—a practical and substantial proof of his affection, by inviting him, in those days of tedious and expensive travelling, to join him on one of these occasions free of expense. This was the journey in the spring of 1789, during which the King of Prussia offered Mozart the then noblest musical position in Germany, but which a kind word from the Emperor, after his return, led him to reject, without securing an equivalent. There seems to be no doubt that Lichnowsky, deeply moved by the distressing condition of his teacher and friend, had taken him to Berlin in the hope of improving his circumstances, and that the King's offer was partly due to his influence. Two and a half years later poor Mozart was dead, leaving a void in the Lichnowsky-Thun circle which there was no one to fill. Another two years and young Beethoven had come from Bonn.

The relations between him and the Lichnowskys are sufficiently indicated in the article BEETHOVEN; but a current error must be corrected ; namely, that the breach caused by the quarrel at Grätz in 1806 was final. Lichnowsky lived in a large house over the Schotten gate—both house and gate disappeared long since—and in the storey below him dwelt Beethoven's friends, the Erdödys. The Schotten and Mölker bastions were contiguous, and the Pasqualati house, on the latter, was in the same row with that of Lichnowsky, though a few doors away from it. This then was the reason why Beethoven was content to live in rooms in the fourth storey, looking to the cold north, and without a direct ray of the sun. He remained there from 1804 to 1807, and then removed into rooms provided him by the Countess Erdödy.

An outbreak with the Countess led him to remove to the other side of the city, where he passed the years 1809 and 1810. Meantime, so complete a reconciliation had taken place between him and both Lichnowsky and the Countess Erdödy, that in 1811 he went again to Grätz, and on his return once more took his old lodging in the Pasqualati house, where he remained until the death of Lichnowsky.[1] It was during these last years that Schindler records the frequent visits of the prince to the composer.

EDWARD MARIA, son and successor of Prince Carl (born Sept. 19, 1789, died Jan. 1, 1845, at Munich), distinguished himself as an agriculturist, but more as a man of letters. He stands high in Austrian literature as a national antiquarian, especially for his great 'History of the House of Habsburg.'

LICHNOWSKY, COUNT MORITZ, a younger brother of Prince Carl, was one of that small circle of most intimate friends of Beethoven, faithful to the last. He was probably that Count Lichnowsky who published (1798) 'VII Variations for P. F. on Nel cor più.' After the death of his first wife he became deeply attached to the opera-singer, Mlle. Stammer; but not until after the death of Prince Carl, when their daughter had already passed the stage of infancy, were they able to marry. It is in relation to this attachment that Beethoven is said to have written the Sonata in E minor, op. 90. [See vol. i. p. 206 *b*.] [A. W. T.]

LIEBLICH GEDACT (*i.e.* gedeckt), literally 'sweet-toned covered or closed' pipe. This class of organ stop is a variety of the old quite-stopped Diapason or Gedact. It was invented by the elder Schulze, of Paulinzelle near Erfurt, and was first brought under notice in England in his organ in the Great Exhibition of 1851. It is made either of 16-feet tone (Lieblich Bourdon), 8-feet (Lieblich Gedact), or 4-feet (Lieblich Flöte). The pipes are made 5 or 6 sizes narrower than the Gedact, but are more copiously winded, and the mouths cut up higher. The tone therefore is nearly or quite as strong as that of the Gedact, though not so full, yet

[1] Reichardt, under date Nov. 30, 1808, writes: 'Beethoven lodges with a Hungarian Countess Erdödy, who occupies the front part of the huge house, but he has broken completely with Prince Lichnowsky, who lives in the upper part of the house, and with whom he for some years resided. During the ten years 1804-14, then, Beethoven moved from the Pasqualati house once only, but then for three years; at the end of that period he departed finally. When therefore Ries (writing avowedly from hearsay) states 'he removed from it several times, and Pasqualati said "The lodging shall not be let, Beethoven will come again,"' he was evidently misinformed, at least in part; but his error has been adopted and made the most of in all biographies and biographical sketches of Beethoven since 1838. The new lodging in 1814 was in the lower storey of the Bartenstein house, on the same bastion. He retained it but one year; for, on the departure of the Erdödys from Vienna in 1815, there was no inducement to remain, and Beethoven moved away from the Mölker Bastei never to return.

brighter and sweeter. When the three stops, 16, 8, and 4 feet are grouped together on the same manual their effect is very beautiful. The late Edmund Schulze combined them in this manner in the choir organ at the Temple Church in 1860, also in his fine organ at Doncaster (1862). Lewis adopted the same plan at Ripon Cathedral, and it has been still more recently followed by Willis at Salisbury Cathedral. [E. J. H.]

LIED, a German poem intended for singing; by no means identical with the French *chanson*, or the Italian *canzone*. All three terms are in fact untranslateable, from the essentially national character of the ideas embodied in each form; the German *Lied* being perhaps the most faithful reflection of the national sentiment. A German looking at nature in her infinite variety of moods is almost irresistibly impelled to utter his thoughts in song. Certain aspects of nature appeal with peculiar force to the German mind—such, for instance, as the forest, the waste, the fall of rain, the murmur of the brook, the raging of the tempest; and connected with these certain other objective ideas, such as the hunter in the forest, the lonely bird, or the clouds stretching over the landscape, the house sheltering from wind and rain, the mill-wheels turned by the brook, etc. Such are the topics of the secular Lied, which have been embodied by Goethe, Schiller, Heine, and a hundred smaller poets, in imperishable lyrics, perfectly suited for music. Those of the sacred Lied are, trust in God, the hope of future blessedness and union, and other religious sentiments, etc. There are Volkslieder,[1] that is to say, Lieder whose origin is lost in obscurity, of both kinds. The development of instrumental music during the earlier half of the last century having provided other means of expression for such feelings besides song, the Volkslied has gradually disappeared, giving place to the Kunstlied, of which the accompaniment is an important feature. This new form, naturalised by Haydn, Mozart, Reichardt, Schultz, Himmel, Beethoven, Conradin Kreutzer, and C. M. von Weber, attained in the hands of Franz Schubert to that extension and perfection of expression which makes it so dear to the German nation. Since his time the accompaniment has constantly assumed greater prominence, so that the original form has nearly disappeared, the musical treatment being everything, and the poetry comparatively of less moment. Schumann may be considered the pioneer in this direction, and after him follow Brahms and Robert Franz. With the two last composers the accompaniment, as rich in melody as it is in harmony and modulation, more than divides attention with the words.

The best works on the subject are Dr. Schneider's 'Geschichte des Liedes,' 3 vols. (Leipzig, 1863–65), full of detail; Lindner's 'Geschichte des Deutschen Liedes im XVIII Jahrhundert' (Leipzig, 1871); and Schuré's 'Histoire du Lied.' [See Song.] [F. G.]

[1] The English have unfortunately no equivalent word for Volkslied. We have the thing, though of a very different kind from that of Germany, but have no term to express the whole kind. Mr. Chappell's great work on English Volkslieder is entitled 'The Ballad Literature and Popular Music of the Olden Time.' 'Popular,' however, has now acquired a distinct meaning of its own.

LIED-FORM. The term Lied-form has unfortunately been used by different writers with different significations; and the vagueness which results, conjoined with the fact that the term is not happily chosen, renders it doubtful whether it had not better be entirely abandoned.

Some people use it merely to define any slight piece which consists mainly of a simple melody simply accompanied, in which sense it would be perfectly adapted to many of Mendelssohn's Lieder ohne Worte, and innumerable other pieces of that class of small compositions for the pianoforte by various authors, as well as to songs. On the other hand, some writers have endeavoured to indicate by the term a form of construction, in the same sense as they would speak of the forms of the movements of Sonatas. For the diffusion of this view Herr Bernhard Marx appears to be responsible, and his definition will be best given in his own terms.

In the fourth section of the fifth division of his 'Allgemeine Musiklehre' he writes as follows: 'Under this name of Lied-form we group all such pieces of music as have one single main idea, which is presented either in one developed section, or as a period (with first and second phrase), or even as a period divided into first and second similar parts, or into first, second, and third parts (in which case the last is generally a repetition of the first). It is possible in Lied-form to have even two such complete forms aggregated into one piece; but then they occur without close connection or interweaving with one another, perhaps with the two parts twice or three times repeated; in which case the second group will be called a Trio, and the third the second Trio, and be treated as a second independent piece. For the sake of contrast, such Trios will often be in another key, or in other key relationship, such as minor corresponding to major, and major to minor, of the same key, etc., return being afterwards made to the first portion and the original key to make the piece complete. 'In this Lied-form are cast most of the Lieder which are intended to be sung, dances, marches, many études, introductions,' etc.

In the third section of the fourth division of his 'Lehre von des Musikalischen Komposition,' Marx further gives formulas, or types, of the harmonic distribution of this kind of composition; and in the earlier part of the second volume (Bk. 3) of the same work he discusses the details of the structure at length.

To this classification there appear to be two main objections. The first is the choice of the distinctive name 'Lied' for a form which comprises dances, marches, and other alien forms of music. Were there nothing else to say against it, it would certainly jar against our sense of fitness to have to speak of the funeral march in the Eroica Symphony, or the Scherzo of the 9th Symphony, or even of far less conspicuously alien examples, such as the Waltz in the Freyschütz, or a Minuet of Haydn or Mozart, as in 'Lied-form.'

The other objection to the classification is its vagueness when formulated in such an empirical way; but in order to understand fully both this objection and the former it will be necessary to go somewhat deeper into the matter.

In every artistic whole there must be balance and proportion. In musical works this is chiefly obtained by the grouping of harmonies. An artistic whole may be obtained in one key by throwing stress first upon one harmonic centre, passing from that to one which represents an opposite phase, and then passing back to the original again. In the article HARMONY it has been pointed out that the harmonies of the Tonic and the Dominant represent the most complete opposition of phase in the diatonic series of any key; the most perfect simple balance is therefore to be found in their alternation. For example, the first fifteen bars of the Trio in the Scherzo of Beethoven's Symphony in A form a complete artistic whole of themselves. There are six bars of Tonic harmony and one of Dominant forming the first group, and then six of Dominant harmony followed by one of Tonic harmony forming the second group. The balance is perfect, and the form the simplest in all music; and it might reasonably be called the 'simple primary form.' It is to be found in the most diverse quarters, such as single chants of the Anglican Church, sailor's hornpipes, German popular waltzes and Ländler, and the trivial snatches of tunes in a French opera-bouffe. The manner of obtaining the balance is however not necessarily restricted to the above order; for it is quite equally common to find each of the two groups containing a balance in themselves of Tonic and Dominant harmony. In that case the balance is obtained thus—C G C C G C, instead of C G G C as in the former instance; but the principle which underlies them is the same, and justifies their being classed together. The subsidiary harmonies which are associated with these main groups are independent, but are most effective when they converge so as to direct attention to them. When greater extension is required, the balance is found between key and key; each key being severally distinguished by an alternation of harmonic roots, so as to be severally complete when they are to be a prominent part of the form. Subsidiary transitions occur much as the subsidiary harmonies in the preceding class, and must be regarded in the same light. The identity of principle in these two classes is obvious, since in both alike it consists of taking a definite point to start from, and marking it clearly; then passing to another point, which will afford the needed contrast, and returning to the original to conclude. But as in the latter class the process is complicated by the changes of key, it may best be distinguished from the former as 'complex primary form.'

It is not necessary to enter into details on the subject of the extent, treatment, and distribution of the keys; neither is it possible, since the principle when put upon this broad basis admits of very great variety, as indeed it is desirable that it should. But to guard against misapprehension, it may be as well to point out a few of the broadest facts.

In the first place, the several sections which serve to mark the elements of form need not be distinct and independent pieces, though they most frequently are so in the older opera and oratorio songs, and in the minuets and trios, or marches and trios, of instrumental music. In many examples, especially such as are on a small scale, there is no marked break in the continuity of the whole, the division at most amounting to nothing more than a cadence or half-close and a double bar, and often to not even so much as that. With regard to the distribution of ideas, it may be said that the several sections are often characterised by totally independent subjects, especially when the piece is on a large scale; but there are many examples, especially in the form of themes for variations, when, notwithstanding a certain freedom of modulation, the predominance of one main idea is unbroken.

Professor Marx has called attention to the fact that this form is sometimes amplified by repetition; that is to say, when the return to the original key has been made to follow the contrasting section or Trio, a fresh departure is made, and another contrasting section or Trio is given, after which follows the final return to the original key and idea. Examples of this occur in the Symphonies of Beethoven and Schumann, as well as in less important works; and it is well to take note of the fact that in this case the form under consideration shows its close relationship to the Rondo form; for that form in the hands of early instrumental composers such as Rameau and Couperin was little else than the frequent repetition of a main idea in a principal key, interspersed with contrasting episodes, which in the present case answer to the Trios.

The occurrence of Codas with this form is very common, but for the discussion of that point reference must be made to the article under that head and to the article FORM.

Finally, it will be well to return shortly to the consideration of the distinctive name of 'Lied' which has been given to this form. In the choice of it, its author was probably guided by a well-grounded opinion of the superior antiquity of song to other kinds of music, which led him to infer that the instrumental forms which he put under the same category were imitated from the 'Lieder.' But this is not by any means inevitable. It will have been seen from the above discussion that in this form the simplest means of arriving at artistic balance and proportion are made use of; and these would have been chosen by the instinct of the earliest composers of instrumental music without any necessary knowledge that vocal music was cast in the same mould. And there is more than this. In songs and other vocal music the hearer is so far guided by the sense of the words that a total impression of

completeness may be obtained even with very vague structure in the music; whereas in instrumental music, unless the form is clear and appreciably defined, it is impossible for the most intelligent hearer to realise the work as a whole. So that, in point of fact, vocal music can do without a great deal of that which is vital to instrumental music; and therefore the Lied is just the member of the group which it is least satisfactory to take as the type: but as this form has been classified under that head, it has been necessary so to review it fully, in order that a just estimation may be formed of its nature, and the reason for taking exception to the title. The form itself is a very important one, but inasmuch as it admits of great latitude in treatment, it appears that the only satisfactory means of classifying it, or making it explicable, is by putting it on as broad a basis as possible, and giving it a distinctive title which shall have reference to its intrinsic constitution, and not to one of the many kinds of music which may, but need not necessarily, come within its scope. [C.H.H.P.]

LIED OHNE WORTE, *i.e.* Song without words (Fr. *Romance sans paroles*), Mendelssohn's title for the pianoforte pieces which are more closely associated with his name than any other of his compositions. The title exactly describes them. They are just songs. They have no words, but the meaning is none the less definite—'I wish I were with you,' says he to his sister Fanny in sending her from Munich[1] the earliest of these compositions which we possess—'but as that is impossible, I have written a song for you expressive of my wishes and thoughts' .... and then follows a little piece of 16 bars long, which is as true a Lied ohne Worte as any in the whole collection. We know from a letter of later [2]date than the above that he thought music much more definite than words, and there is no reason to doubt that these 'Lieder,' as he himself constantly calls them, have as exact and special an intention as those which were composed to poetry, and that it is almost impossible to draw a line between the two.[3] He had two kinds of songs, one with words, the other without. The pieces are not Nocturnes, or Transcripts, or Etudes. They contain no bravura; everything is subordinated to the 'wish' or the 'thought' which filled the heart of the composer at the moment.

The title first appears in a letter of Fanny Mendelssohn's, Dec. 8, 1828, which implies that Felix had but recently begun to write such pieces. But the English equivalent was not settled without difficulty. The day after his arrival in London, on April 24, 1832, he played the first six to Moscheles, and they are then [4]spoken of as 'Instrumental Lieder für Clavier.' On the autograph of the first book, in Mr. Felix Moscheles' possession, they are named 'Six songs for the Pianoforte alone,' and this again was afterwards changed to 'Original Melodies for the Pianoforte,' under which title the first book was published (for the author) by Mr. Novello (then in Dean Street), on Aug. 20, 1832, and registered at Stationers' Hall. No opus-number is given on the English copy, though there can be no doubt that Mendelssohn arranged it himself in every particular. The book appeared concurrently in Berlin, at Simrock's, as 'Sechs Lieder ohne Worte, etc. [5]Op. 19.' The German name afterwards became current in England, and was added to the English title-page.

The last of the six songs contained in the 1st book—'In a Gondola,' or 'Venetianisches Gondellied'—is said to be the earliest of the six in point of date. In Mendelssohn's MS. catalogue it is marked 'Venedig, 16th Oct., 1830, für Delphine Schauroth'—a distinguished musician of Munich, whom he had left only a few weeks before, and to whom he afterwards dedicated his first P.F. Concerto. An earlier one still is No. 2 of Book 2, which was sent from Munich to his sister Fanny in a letter dated June 26, 1830.

Strange as it may seem, the success of the Lieder ohne Worte was but slow in England. The books of Messrs. Novello & Co., for 1836, show that only 114 copies of Book 1 were sold in the first four years![6] Six books, each containing six songs, were published during Mendelssohn's lifetime, numbered as op. 19, 30, 38, 53, 62, and 67, respectively; and a 7th and 8th (op. 85 and 102) since his death. A few of them have titles, viz. the Gondola song already mentioned; another 'Venetianisches Gondellied,' op. 30, no. 6; 'Duett,' op. 38, no. 6; 'Volkslied,' op. 53, no. 5; a third 'Venetianisches Gondellied,' and a 'Frühlingslied,' op. 62, nos. 5 and 6. These titles are his own. Names have been given to some of the other songs. Thus op. 19, no. 2, is called 'Jägerlied' or Hunting song; op. 62, no. 3, 'Trauermarsch' or Funeral march; op. 67, no. 3, 'Spinnerlied' or Spinning song: but these, appropriate or not, are unauthorised. [G.]

LIEDERKREIS, LIEDERCYCLUS, or LIEDERREIHE. A circle or series of songs, relating to the same object and forming one piece of music. The first instance of the thing and the first use of the word appears to be in Beethoven's op. 98, 'An die ferne Geliebte. Ein Liederkreis von Al. Jeitteles.[7] Für Gesang und Pianoforte ... von L. van Beethoven.' This consists of six songs, was composed April 1816, and published in the following December. The word Liederkreis appears first on the printed copy. Beethoven's title on the autograph is 'An die entfernte Geliebte, Sechs Lieder van Aloys Jeitteles,' etc. It was followed by Schubert's 'Die schöne Müllerin, ein Cyclus von Liedern,' 20 songs, composed 1823, and published March 1824. Schubert's two other series, the 'Winter-

[1] Letters from Italy and Switzerland, June 14, 1830.
[2] To Souchay, Oct 15, 1841.
[3] The Herbstlied (op. 63) was originally a Lied ohne Worte (MS. Cat. No. 204).
[4] See the Translation of Moscheles' Life, i. 267, for this and the following fact.
[5] There are two opus 19, a set of six songs with words, and a set of six without them.
[6] For this fact I am indebted to the kindness of Mr. Henry Littleton, the present head of the firm.
[7] Of the poet of these charming verses little information can be gleaned. He was born at Brünn June 20, 1794, so that when he wrote the Liederkreis he was barely 21. Like many amateurs of music he practised medicine, and he died at his native place April 16, 1858.

reise' and the 'Schwanen-Gesang,' have not got the special title. Schumann has left several Liederkreis—by Heine (op. 24); by Eichendorff (op. 39); 'Dichterliebe, Liedercyklus' (op. 48); Liederreihe von J. Kerner (op. 35); 'Frauenliebe und Leben' (op. 42). Of all these Beethoven's most faithfully answers to the name. The songs change their tempo, but there is no break, and the motif of the first reappears in the last, and closes the circle. Thayer's conjecture (iii. 401) that in writing it Beethoven was inspired by Amalie von Sebald, whom he had met at Linz in 1811, is not improbably correct. He was then 45 years old, an age at which love is apt to be dangerously permanent. [G.]

LIEDERSPIEL, a play with songs introduced into it, such songs being either well-known and favourite airs—Lieder—or, if original, cast in that form. It is the German equivalent of the French Vaudeville, and of such English pieces as the 'Beggar's Opera,' the 'Waterman,' etc. The thing and the name are both due to J. F. Reichardt, whose 'Lieb' und Treue' was the first Liederspiel. It was an attempt to bring back the musical stage of Germany from artifice to natural sentiment. Reichardt's interesting account of his experiment and the reasons which led to it, will be found in the Allg. mus. Zeitung, 1801 (709–717). Strange and anomalous as such a thrusting of music into the midst of declamation may seem, the attempt was successful in Germany, as it had been in England fifty years before. The tunes could be recognised and enjoyed without effort, and the Liederspiel had a long popularity. After Reichardt, Himmel, Lortzing, Eberwein, and a number of other second-class writers composed Liederspiel which were very popular, and they even still are to be heard.—Mendelssohn often speaks of his 'Heimkehr' ('Son and Stranger') as a Liederspiel, but that can only be by an extension of the phrase beyond its original meaning. [G.]

LIEDERTAFEL, originally a society of men, who met together on fixed evenings for the practice of vocal music in four parts, drinking forming part of the entertainment. They arose during the political depression caused by Napoleon's rule in Germany; and the first, consisting of 24 members only, was founded by Zelter in Berlin, Dec. 28, 1808. Others soon followed at Frankfort and Leipzig, gradually relaxing the rules as to numbers. Bernhard Klein founded the 'Jüngeren Berliner Liedertafel,' which aimed at a higher standard of art. These societies gave an immense impetus to men's part-singing throughout Germany. Since the establishment of the Männergesangvereine proper (male singing societies), the word Liedertafel has come to mean a social gathering of the 'Verein,' *i. e.* a gathering of invited ladies and gentlemen, at which the members perform pieces previously learned. They are in fact informal concerts, where the guests move about, eat, drink, and talk as they please, provided they keep silence during the singing. The Liedertafeln of the large male singing societies of Vienna, Munich, and Cologne, are pleasant and refined entertainments, not without a musical significance of their own. [F. G.]

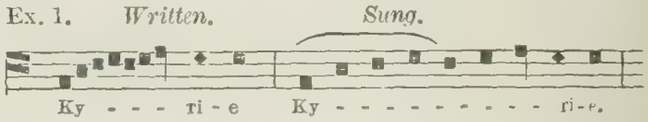
LIGATOSTIL (Ital. *Stile ligato*), also called *gebundener Stil*, is the German term for what is called the strict style, as distinguished from the free style of musical composition. Its chief characteristic lies not so much in the fact that the notes are seldom or never detached, as that all dissonances are strictly prepared by means of tied notes. [F. T.]

LIGATURE (Lat. *Ligatura*; Ital. *Legatura*; Fr. *Liaison*). A passage of two or more notes, sung to a single syllable. [See NOTATION.]

In antient music-books, Ligatures are not indicated, as now, by slurs: but the form of the notes themselves is changed—sometimes, in a very puzzling manner.

Three kinds of Ligatures are used in Plain Chaunt. In the first, and simplest, the notes are merely placed very close to each other, so as almost to touch, thus—

Ex. 1. *Written.* *Sung.*

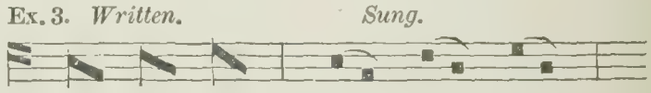


In the second, used only for two notes, ascending, they are 'bonded'—that is to say, written one over the other; the lowest being always sung first—

Ex. 2. *Written.* *Sung.*

In the third, used for two notes descending, they are joined together, so as to form an oblique figure, descending towards the right; the upper end resting on the line or space denoting the first and highest of the two notes, and the lower, on that denoting the second, and lowest, thus—

Ex. 3. *Written.* *Sung.*



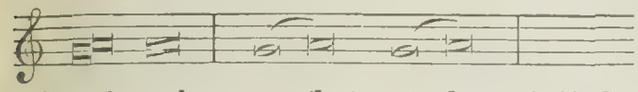
In early times, the notes of Plain Chaunt were all of equal length. When, after the invention of Measured Music (*Cantus mensurabilis*), the Large, Long, Breve, and Semibreve, were brought into general use, a considerable modification of the form and scope of the Ligature became necessary. Hence, we find Franco of Cologne, in the 11th century, calling Ligatures beginning with a Breve, *Ligaturæ cum proprietate*; those beginning with a Long, *sine proprietate*; those beginning with a Semibreve, *cum opposita proprietate*; those in which the last note is a Long, *Ligaturæ perfectæ*; those in which the last note is a Breve, *imperfectæ*.

In the Polyphonic Music of the 15th and 16th centuries, the form of the Ligatures varies greatly; and is, necessarily, very complex, since it concerns the relative duration of the notes, as well as their difference in pitch. A catalogue of the strange figures found in antient MSS. would be interesting only to the antiquary: but, as an intimate acquaintance with the more usual forms is absolutely indispensable

to all who would learn how to score the great compositions of the 16th century from the original Part-books, we subjoin a few examples of those which the student is likely to find most generally useful.

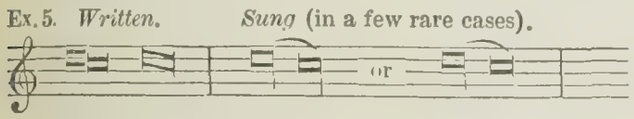
Two square white notes, in ligature, without tails, are generally sung as Breves: the rule holding good, whether the notes are separately formed, or joined together in an oblique figure; thus—

Ex. 4. *Written.* *Sung.*



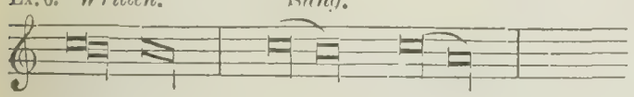
Sometimes, however, (but not always,) if the passage be a descending one, the notes are to be sung as Longs; or, the first may be a Long, and the second, a Breve. But, this exception is a rare one; and it is safer to assume that the strict rule is in force, unless the fitting together of the parts should prove the contrary.

Ex. 5. *Written.* *Sung* (in a few rare cases).



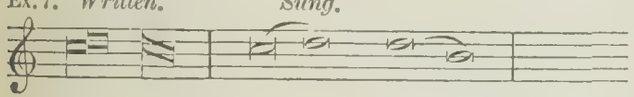
Two square white notes, in ligature, with a tail descending on the right side, are Longs, whether they ascend, or descend, and whether they are separately formed, or joined into a single oblique figure.

Ex. 6. *Written.* *Sung.*



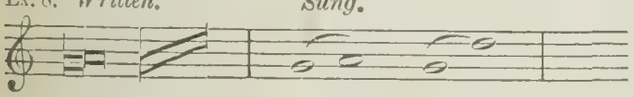
Two similar notes, with a tail descending on the left side, are Breves.

Ex. 7. *Written.* *Sung.*



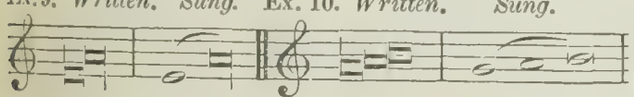
Two such notes, with a tail ascending on the left side, are Semibreves.

Ex. 8. *Written.* *Sung.*



Ligatures of two notes, with a tail ascending on the left side, and another descending on the right, are to be sung—by a combination of Ex. 6 and 8—as a Semibreve, followed by a Long (Ex. 9).

Ex. 9. *Written.* *Sung.* Ex. 10. *Written.* *Sung.*

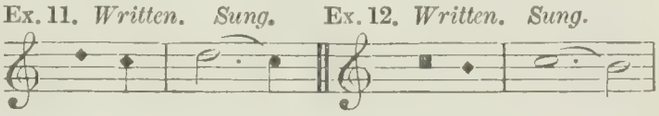


In Ligatures of more than two notes, all except the first two are most frequently treated as if they were not in ligature. Thus, in Palestrina's Hymn, *Ave Maris Stella*, we find a Ligature of three square white notes, with a tail ascending on the left, sung as two Semibreves, and a Breve: that is to say, the first two notes are treated as in Ex. 8, while the third note retains its true length (Ex. 10).

On this point, however, some early authorities differ considerably. For instance, Ornithoparcus, writing in 1517, tells us that (1) Every middle note, however shaped, or placed, is a Breve; (2) A Long may begin, or end, a Ligature, but can never be used in the middle of it; (3) A Breve may be used either in the beginning, middle, or end of a Ligature; (4) A Semibreve may also be used in the beginning, middle, or end of a Ligature, if it have a tail ascending on the left. [See MICROLOGUS, II.]

Black square and lozenge-shaped notes, without tails, lose, when intermixed with white notes, one fourth of their value, whether they occur in ligature, or not. Thus, a black Semibreve is equal to three Crotchets only, or a dotted Minim—in which case it is always followed by a Crotchet; as in Ex. 11—

Ex. 11. *Written.* *Sung.* Ex. 12. *Written.* *Sung.*

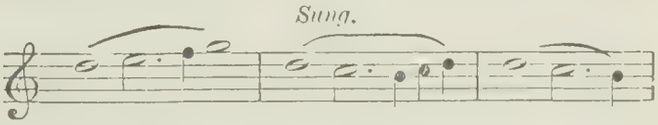


But, a black Semibreve, following a black Breve, is shortened into a Minim, though the strict rule holds good with regard to the Breve (Ex. 12).

There is often, indeed, a little uncertainty with regard to the degree in which a black note is to be shortened; more especially, when the same Ligature contains both black and white notes—as in the following examples from Palestrina.

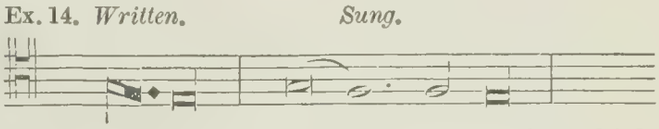
Ex. 13. *Written.*

Sung.



A very little experience will enable the student to discover the intention of such forms as these, at a glance. Though the three we have selected seem, at first sight, to offer unexpected complications, it will be found, on closer examination, that the laws laid down with regard to Ex. 8, 10, 11, and 12, leave no doubt as to the correct solution of any one of them. Even when an oblique note is half white, and half black, it is only necessary to remember that each colour is subject to its own peculiar laws.

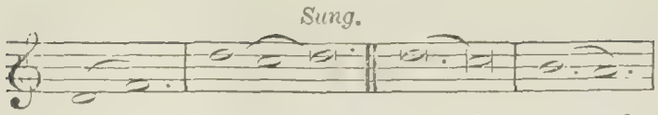
Ex. 14. *Written.* *Sung.*



Cases, however, frequently occur, in which black notes are to be treated precisely as white ones. It is true, these passages are more often found in single notes, than in Ligatures; but it is difficult, sometimes, to understand why they should have been introduced at all.

Sometimes, a Ligature is accompanied by one or more Points of Augmentation, the position of which clearly indicates the notes to which they are to be applied.

Ex. 15. *Written.*



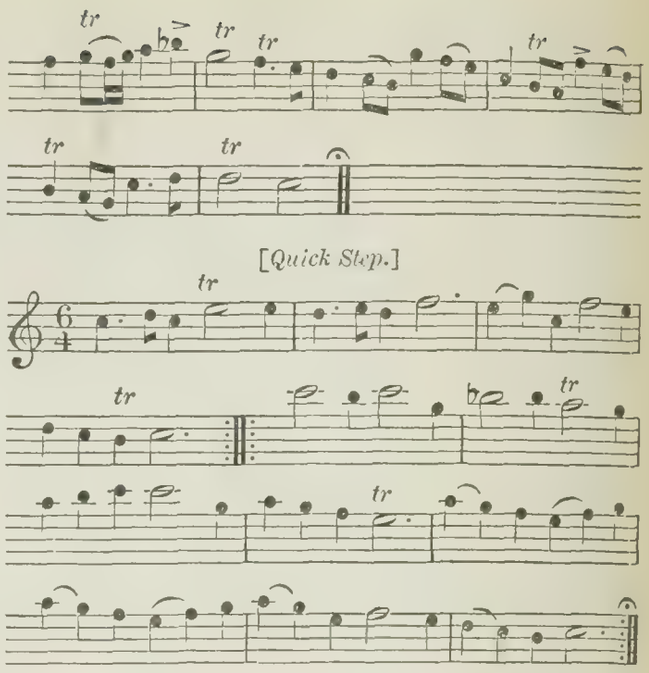
In some old printed books, the last note of a Ligature is placed obliquely, in which case it is always to be sung as a Breve.

The student will meet with innumerable other forms, more or less difficult to decypher: but, those we have illustrated will be sufficient to guide him on his way, in all ordinary cases; and, in exceptional ones, he will find that long experience alone will be of service to him. [W.S.R.]

LIGHT OF THE WORLD, THE. An oratorio in two parts; the words compiled from the Scriptures, the music by Arthur S. Sullivan. Written for the Birmingham Festival, and first performed there Aug. 27, 1873. [G.]

LILLIBURLERO. 'The following rhymes,' says Dr. Percy, 'slight and insignificant as they may now seem, had once a more powerful effect than either the Philippics of Demosthenes or Cicero; and contributed not a little towards the great revolution of 1688.' Bishop Burnet says: 'A foolish ballad was made at that time, treating the papists, and chiefly the Irish, in a very ridiculous manner, which had a burden said to be Irish words, 'Lero, lero, liliburlero,' that made an impression on the [king's] army, that cannot be imagined by those that saw it not. The whole army, and at last the people both in city and country, were singing it perpetually. And perhaps never had so slight a thing so great an effect.'

Henry Purcell, the composer of the tune, here receives no share of the credit, of which nine tenths, at least, belong to him. The song was first taken up by the army, because the tune was already familiar as a quick step to which the soldiers had been in the habit of marching. Then the catching air was repeated by others, and it has retained its popularity down to the present time. As the march and quick step have not been reprinted since 1686, although by Henry Purcell, it is well that, at last, they should reappear. The only extant copy of both is in *The Delightful Companion: or, Choice New Lessons for the Recorder or Flute,* 2nd edition, 1686, oblong quarto. As this little book is engraved upon plates, and not set up in types, as then more usual, and this march and quick step are on sheet F, in the middle of the book, we may reasonably assume that they were included in the first edition also, which cannot be less than a year or two earlier in date.



The words are the merest doggrel. They refer to King James's having nominated to the lieutenancy of Ireland, in 1686, General Talbot, newly created Earl of Tyrconnel, who had recommended himself to his bigoted master by his arbitrary treatment of the Protestants in the preceding year, when he was only lieutenant-general. One stanza as sung to the tune may suffice. After that, the two lines of new words only are given.

Ho! broder Teague, dost hear de decree?
Lilliburlero bullen a la.
Dat we shall have a new deputie.
Lilliburlero bullen a la.
Lero lero, lilli burlero, lero lero, bullen a la,
Lero lero, lilli burlero, lero lero, bullen a la.

Ho! by shaint Tyburn, it is de Talbote,
And he will cut all de English troate.

Dough by my shoul de English do praat,
De law's on dare side, and Creish knows what.

But if dispence do come from de pope,
We'll hang Magna Charta, and dem in a rope:

For de good Talbot is made a lord,
And with brave lads is coming aboard:

Who all in France have taken a sware
Dat dey will have no protestant heir.

Ara! but why does he stay behind?
Ho! by my shoul 'tis a protestant wind.

But see, de Tyrconnel is now come ashore,
And we shall have commissions gillore.

And he dat will not go to mass
Shall be turn out, and look like an ass.

But now de hereticks all go down,
By Creish and shaint Patrick, de nation's our own.

Dare was an old prophesy found in a bog,
'Ireland shall be rul'd by an ass, and a dog.'

And now dis prophesy is come to pass,
For Talbot's de dog, and Ja..s is de ass.

Such stuff as this would not have been tolerable without a good tune to carry it down. And yet Lord Wharton has had the entire credit: 'A late viceroy, who has so often boasted himself upon his talent for mischief, invention, lying, and for making a certain *Lilliburlero* song; with which, if you will believe himself, he sung a deluded prince out of three kingdoms.'[1]

From this political beginning Lilliburlero

[1] A true relation of the several Facts and Circumstances of the intended Riot and Tumult on Queen Elizabeth's Birthday. 3rd edit. 1712.

became a party tune in Ireland, especially after 'Dublin's Deliverance; or the Surrender of Drogheda,' beginning

Protestant boys, good tidings I bring,

and 'Undaunted Londonderry,' commencing

Protestant boys, both valiant and stout,

had been written to it.

It has long ago lost any party signification in England, but it was discontinued as a march in the second half of the last century, in order to avoid offence to our Irish soldiers of the Roman Catholic faith.

The tune has been often referred to by dramatists and by other writers, as by Shadwell and Vanbrugh in plays, and by Sterne in *Tristram Shandy*. Purcell claims it as 'A new Irish tune' by 'Mr. Purcell' in the second part of *Music's Handmaid*, 1689, and in 1691 he used it as a ground-bass to the fifth piece in *The Gordian Knot unty'd*. The first strain has been commonly sung as a chorus in convivial parties:

A very good song, and very well sung,
Jolly companions every one.

And it is the tune to the nursery rhyme:

There was an old woman toss'd up on a blanket
Ninety-nine times as high as the moon.

A large number of other songs have been written to the air at various times. [W.C.]

LILT (Verb and Noun), to sing, pipe, or play cheerfully, or, according to one authority, even sadly; also, a gay tune. The term, which is of Scottish origin, but is used in Ireland, would seem to be derived from the bagpipe, one variety of which is described in the 'Houlate' (an ancient allegorical Scottish poem dating 1450), as the 'Liltpype.' Whenever, in the absence of a musical instrument to play for dancing, the Irish peasant girls sing lively airs to the customary syllables la-la-la, it is called 'lilting.' The classical occurrence of the word is in the Scottish song, 'The Flowers of the Forest,' a lament for the disastrous field of Flodden, where it is contrasted with a mournful tone:—

I've heard them liltin' at the ewe milkin',
Lasses a liltin' before dawn of day;
Now there's a moanin' on ilka green loanin',
The Flowers of the Forest are a' wede away.

The Skene MS., ascribed (though not [1] conclusively) to the reign of James VI. of Scotland, contains six Lilts: 'Ladie Rothemayeis' (the air to the ballad of the Burning of Castle Frindraught), 'Lady Laudians' (Lothian's), 'Ladie Cassilles' (the air of the ballad of Johnny Faa), Lesleis, Aderneis, and Gilcreich's Lilts. We quote 'Ladie Cassilles':—

[1] See Mr. Chappell's criticisms, 'Popular Music,' p. 614.

Mr. Dauney, editor of the Skene MS., supposes the Liltpipe to have been a shepherd's pipe, not a bagpipe, and the Lilts to have sprung from the pastoral districts of the Lowlands. [R.P.S.]

LILY OF KILLARNEY. A grand opera in 3 acts, founded on Boucicault's 'Colleen Bawn'; the words by John Oxenford, the music by Jules Benedict. Produced at the Royal English Opera, Covent Garden, Feb. 8, 1862. [G.]

LIMPUS, Richard, organist, born Sept. 10, 1824, was a pupil of the Royal Academy of Music, and organist successively of Brentford; of St. Andrew's, Undershaft; and St. Michael's, Cornhill. He composed a good deal of minor music, but his claim to remembrance is as founder of the College of Organists, which owing to his zeal and devotion was established in 1864. He was secretary to the College till his death, March 15, 1875. [See Organists, College of.] [G.]

LINCKE,[2] Joseph, eminent cellist and composer, born June 8, 1783, at Trachenberg in Prussian Silesia; learnt the violin from his father, a violinist in the chapel of Prince Hatzfeld, and the cello from Oswald. A mismanaged sprain of the right ancle left him lame for life.[3] At 10 he lost his parents, and was obliged to support himself by copying music, until in 1800 he procured a place as violinist in the Dominican convent at Breslau. There he studied the organ and harmony under Hanisch, and also pursued the cello under Lose, after whose departure he became first cellist at the theatre, of which C. M. von Weber was then Capellmeister. In 1808 he went to Vienna, and was engaged by Prince Rasoumowsky[4] for his private quartet-party, at the suggestion of Schuppanzigh. In that house, where Beethoven was supreme, he had the opportunity of playing the great composer's works under his own supervision.[5] Beethoven was much attached to Lincke, and continually calls him 'Zunftmeister violoncello,' or some other droll name, in his letters. The Imperial library at Berlin[6] contains a comic canon in Beethoven's writing on the names Brauchle and Lincke.

The two Sonatas for P. F. and Cello (op. 102) were composed by Beethoven while he and Lincke were together at the Erdödys in 1815.[7]

Lincke played in Schuppanzigh's public quartets, and Schuppanzigh in turn assisted Lincke at his farewell concert, when the programme consisted entirely of Beethoven's music, and the

[2] He always wrote his name thus, though it is usually spelled Linke.
[3] It is perhaps in allusion to this that Bernard writes, 'Lincke has only one fault—that he is crooked' (krumm).
[4] Weiss played the viola, and the Prince the second violin.
[5] Compare Thayer's Beethoven, iii. 49.

[7] See Thayer, iii. 343.

great composer himself was present. His playing appears to have been remarkable for its humour, and he is said to have been peculiarly happy in expressing Beethoven's characteristic style, whence no doubt the master's fondness for him.[1] He then went to Grätz, and from thence to Pancovecz near Agram, the residence of Countess Erdödy, as her chamber-virtuoso, where he remained a year and a half. In 1818 he was engaged by Freiherr von Braun as first cellist in the theatre 'an der Wien,' and in 1831 played with Merk, the distinguished cellist, in the orchestra of the court-opera. He died on March 26, 1837. His compositions consist of concertos, variations, capriccios, etc., his first 3 works only (variations) having been published. [C.F.P.]

LINCOLN'S INN FIELDS THEATRE stood nearly in the centre of the south side of Lincoln's Inn Fields, the principal entrance being in Portugal Street. It was erected by Christopher Rich, and opened (after his death) in 1714 by his son, John Rich, with Farquhar's comedy, 'The Recruiting Officer.' Here Rich first introduced his pantomimes, a curious mixture of masque and harlequinade, in which he himself, under the name of Lun, performed the part of Harlequin. Galliard was his composer, and Pepusch his music director. [GALLIARD; PEPUSCH.] Here 'The Beggar's Opera' was first produced in 1727. [BEGGAR'S OPERA.] Rich removing in 1732 to the new theatre in Covent Garden, the house in Lincoln's Inn Fields was let for a variety of purposes. Here in 1734 Italian operas were given, in opposition to Handel's at the King's Theatre, with Porpora as composer and Senesino as principal singer; and here, when Handel was compelled to quit the King's Theatre, he, in his turn, gave Italian operas, and also, occasionally, oratorio performances. His 'Dryden's Ode on St. Cecilia's day' was first performed here in 1739, and in 1740 his 'L'Allegro, Il Pensieroso, ed Il Moderato,' his serenata 'Parnasso in Festa,' and his operetta 'Hymen.' Plays were occasionally performed here until 1756, when the building was converted into a barrack. It was afterwards occupied as Spode and Copeland's 'Salopian China Warehouse,' until it was taken down in 1848 for the enlargement of the College of Surgeons. This theatre must not be confounded with two others which previously stood near the same spot, viz. the Duke's Theatre, erected by Sir William Davenant in 1662, and occupied until 1671, when the company removed to Dorset Garden Theatre, and the Theatre in Little Lincoln's Inn Fields, built upon the same site and opened in 1695 with Congreve's 'Love for Love,' and occupied until the company removed to the Queen's Theatre in 1705, when it was abandoned. [KING'S THEATRE.] [W.H.H].

LIND, JENNY, was born at Stockholm Oct. 6, 1820 (not, as Fétis says, on Feb. 8). Count Puke, director of the Court Theatre, admitted her to the school of singing which is attached to that establishment, and she received there her first lessons from a master named Berg. She made her *début* at the Opera in her native city, in March 1838, as *Agatha* in Weber's 'Freischütz,' and played afterwards the principal *rôle* in 'Euryanthe,' *Alice* in 'Robert le Diable,' and finally 'La Vestale,' all with brilliant success. In fact, 'she upheld the Royal Theatre until June 1841, when she went to Paris in hope of improving her style of singing.' There Manuel Garcia gave her lessons, during a period of nine months, but 'she herself mainly contributed to the development of her naturally harsh and unbending voice, by ever holding before herself the ideal which she had formed from a very early age. She had been wont to sing to her mother's friends from her third year; and, even at that period, the intense feeling of melancholy, almost natural to all Swedes, which filled her young soul, gave to her voice an expression which drew tears from the listeners.' Meyerbeer, who happened to be at Paris at the time, heard her, was delighted, and foretold a brilliant future for the young singer. She obtained a hearing at the Opera in 1842, but no engagement followed. Naturally hurt at this, she is said to have determined never to accept an engagement in Paris; and, whether this be true or not, it is certain that, as late as March 1847, she declined an engagement at the Académie Royale, for no other reason than that of '*affaires personelles*;' nor did she ever appear in Paris again.

Jenny Lind now went to Berlin, in August 1844, and for a time studied German. In September she returned to Stockholm, and took part in the fêtes at the crowning of King Oscar; but returned to Berlin in October, and obtained an engagement at the Opera through the influence of Meyerbeer, who had written for her the principal *rôle* in his 'Feldlager in Schlesien,' afterwards remodelled as 'L'Etoile du Nord.' She appeared first, December 15, as *Norma*, and was welcomed with enthusiasm; and afterwards played, with equal success, her part in Meyerbeer's new opera. In the following April she sang at Hamburg, Cologne, and Coblentz. After this tour she returned again to Stockholm by way of Copenhagen, and once more enjoyed a triumphant success. At the Gewandhaus, Leipzig, she made her first appearance Dec. 6, 1845. Engaged soon after for Vienna, she appeared there April 18, 1846.

On May 4, 1847, Jenny Lind made her first appearance in London, at Her Majesty's Theatre, in 'Robert.' Moscheles had already met her in Berlin, and wrote thus (Jan. 10, 1845) of her performance in 'The Camp of Silesia,'—'Jenny Lind has fairly enchanted me; she is unique in her way, and her song with two concertante flutes is perhaps the most incredible feat in the way of bravura singing that can possibly be heard . . . How lucky I was to find her at home! What a glorious singer she is, and so unpretentious withal!' This character, though true to life, was, however, shamefully belied by the management of the London Theatre, both

[1] See the 'Neue Zeitschrift für Musik,' 1837, No. 32.

before and after her arrival. It is curious now to look back upon the artifices employed, the stories of broken contracts (this not without some foundation), of long diplomatic *pourparlers*, special messengers, persuasion, hesitation, and vacillations, kept up during many months,—all in order to excite the interest of the operatic public. Not a stone was left unturned, not a trait of the young singer's character, public or private, un-*exploité*, by which sympathy, admiration, or even curiosity, might be aroused (see Lumley's 'Reminiscences,' 1847). After appearing as the heroine of a novel ('The Home,' by Miss Bremer), and the darling of the Opera at Stockholm, she was next described as entrancing the opera-goers of Berlin,—where indeed she was doubtless a welcome contrast to their ordinary *prime donne*; and her praises had been sung by the two great German composers, and had not lost by translation. But, not content with fulsome praise founded on these circumstances, the paragraphists, inspired of course by those for whose interest the paragraphs were manufactured, and assuredly without her knowledge or sanction, did not hesitate to speak in the most open way,—and as if in commendation of her as a singer, and above other singers,—of Mlle. Lind's private virtues, and even of her charities. Singers have ever been charitable, generous, open-handed and open-hearted; to their credit be it recorded: the exceptions have been few. With their private virtues critics have nought to do; these should be supposed to exist, unless the contrary be glaringly apparent. The public was, however, persistently fed with these advertisements and harassed with further rumours of doubts and even disappointment in the early part of 1847, it being actually stated that the negociations had broken down,—all after the engagement had been signed and sealed!

The interest and excitement of the public at her first appearance was, therefore, extraordinary; and no wonder that it was so. Yet her great singing in the part of 'Alice' disappointed none but a very few, and those were silenced by a tumultuous majority of idolators. She certainly sang the music splendidly, and acted the part irreproachably. The scene at the cross in the second act was in itself a complete study, so strongly contrasted were the emotions she portrayed,—first terror, then childlike faith and confidence,—while she preserved, throughout, the innocent manner of the peasant girl. 'From that first moment till the end of that season, nothing else was thought about, nothing else talked about, but the new *Alice*—the new *Sonnambula*—the new *Maria* in Donizetti's charming comic opera,—his best. Pages could be filled by describing the excesses of the public. Since the days when the world fought for hours at the pit-door to see the seventh farewell of Siddons, nothing had been seen in the least approaching the scenes at the entrance of the theatre when Mlle. Lind sang. Prices rose to a fabulous height. In short, the town, sacred and profane, went mad about "the Swedish nightingale"' (Chorley). Ladies constantly sat on the stairs at the Opera, unable to penetrate further into the house. Her voice, which then at its very best showed some signs of early wear, was a soprano of bright, thrilling, and remarkably sympathetic quality, from D to D, with another note or two occasionally available above the high D. The upper part of her register was rich and brilliant, and superior both in strength and purity to the lower. These two portions she managed, however, to unite in the most skilful way, moderating the power of her upper notes so as not to outshine the lower. She had also a wonderfully developed 'length of breath,' which enabled her to perform long and difficult passages with ease, and to fine down her tones to the softest pianissimo, while still maintaining the quality unvaried. Her execution was very great, her shake true and brilliant, her taste in ornament altogether original, and she usually invented her own *cadenze*. In a song from 'Beatrice di Tenda,' she had a chromatic cadence ascending to E in alt, and descending to the note whence it had risen, which could scarcely be equalled for difficulty and perfection of execution. The following, sung by her at the end of 'Ah! non giunge,' was given to the present writer by an ear-witness:—

In this comparatively simple *cadenza*, the high D, C, E, though rapidly struck, were not given in the manner of a shake, but were positively *martelées*, and produced an extraordinary effect. Another cadence, which, according to Moscheles, 'electrified' them at the Gewandhaus, occurred three times in one of Chopin's Mazurkas;—

'What shall I say of Jenny Lind?' he writes again (1847): 'I can find no words adequate to give you any real idea of the impression she has made. . . . This is no short-lived fit of public enthusiasm. I wanted to know her off the stage as well as on; but, as she lives some distance from me, I asked her in a letter to fix upon an hour for me to call. Simple and unceremonious as she is, she came the next day herself, bringing her answer verbally. So much modesty and so much greatness united are seldom if ever to be met with; and, although her intimate friend Mendelssohn had given me an insight into the noble qualities of her character, I was surprised to find them so apparent.' Again and again he speaks in the warmest terms of her, and subsequently of her and her husband together.

Meanwhile Mlle. Lind maintained the mark which she had made in 'Robert,' by her imper-

sonation of the *Sonnambula*, a most effective character,—'Lucia,' *Adina*, in 'L'Elisir,' 'La Figlia del Regimento,' and, perhaps, altogether her best part, *Giulia* in Spontini's 'Vestale.' In 1848 she returned to Her Majesty's Theatre, and added to these 'Lucia di Lammermoor' and 'L'Elisir d'Amore.' In 1849 she announced her intention not to appear again on the stage, but so far modified this resolution as to sing at Her Majesty's Theatre in Mozart's 'Flauto Magico' arranged as a concert, without acting (April 15); and still further by re-appearing in 'La Sonnambula' (April 26) and 3 other operas. Her last appearance 'on any stage' took place in 'Roberto,' May 18, 1849. Henceforward she betook herself to the more congenial platform of the concert-room. How she sang there, many of the present generation can still remember,—'the wild, queer, northern tunes brought here by her—her careful expression of some of Mozart's great airs—her mastery over such a piece of execution as the Bird song in Haydn's Creation—and lastly, the grandeur of inspiration with which the "Sanctus" of angels in Mendelssohn's "Elijah" was led by her (the culminating point in that Oratorio). These are the triumphs which will stamp her name in the Golden Book of singers' (Chorley). On the other hand, the wondrous effect with which she sang a simple ballad, in the simplest possible manner, can never be forgotten by those who ever heard it. After another season in London, and a visit to Ireland in 1848, Mlle. Lind was engaged by Barnum, the American speculator, to make a tour of the United States. She arrived there in 1850, and remained for nearly two years, during part of the time unfettered by an engagement with any *impresario*, but accompanied by Mr., now Sir Julius, Benedict. The Americans, with their genius for appreciation and hospitality, welcomed her everywhere with frantic enthusiasm, and she made £20,000 in this progress. Here it was, in Boston, on Feb. 5, 1852, that she married Mr. Otto Goldschmidt. [GOLDSCHMIDT.]

Returned to Europe, Mme. Goldschmidt now travelled through Holland, and again visited Germany. In 1856 she came once more to England, and, until recent years, appeared frequently in oratorios and concerts.

It must be recorded that the whole of her American earnings was devoted to founding and endowing art-scholarships and other charities in her native Sweden; while, in England, the country of her adoption, among other charities, she has given a whole hospital to Liverpool and a wing of another to London. The scholarship founded in memory of her friend Felix Mendelssohn also benefited largely by her help and countenance; and it may be said with truth that her generosity and her sympathy are never appealed to in vain by those who have any just claims upon them. [MENDELSSOHN SCHOLARSHIP.]

Madame Lind-Goldschmidt now lives in London, respected and admired by all who know her, the mother of a family, mixing in society, but in no degree losing her vivid interest in music. The Bach Choir, conducted by Mr. Goldschmidt, which has lately given the English public the first opportunity of hearing in its entirety the B minor Mass of that composer, has profited in no small degree by the careful training bestowed on the female portion of the chorus by this great singer, and the enthusiasm inspired by her presence among them. [J.M.]

LINDA DI CHAMOUNI. Opera in 3 acts; words by Rossi, music by Donizetti. Produced at the Kärnthnerthor theatre, Vienna, May 19, 1842; in Paris, Nov. 17, 1842; in London, at Her Majesty's, June 1843. [G.]

LINDBLAD, ADOLF FREDRICK, born near Stockholm in 1804. This Swedish composer passed several years of his early life in Berlin, and studied music there under Zelter. In 1835 he returned to Stockholm and there resided, giving singing lessons and composing until his death in August 1878.

Lindblad has composed but little instrumental music; a symphony in C which was given under Mendelssohn's direction at one of the Gewandhaus Concerts at Leipzig in November 1839, and a duo for pianoforte and violin (op. 9) are considered the best, but they aim so little at effect and are so full of the peculiar personality of their author that they can never be popular, and even his own countrymen are not familiar with them. It is his vocal compositions which have made him famous. He is eminently a national composer. He has published a large collection of songs for voice and piano to Swedish words, which are full of melody, grace, and originality. Written for the most part in the minor key, they are tinged with the melancholy which is characteristic of Swedish music. In such short songs as 'The Song of the Dalecarlian maiden,' 'Lament,' 'The wood by the Aaren lake,' etc., whose extreme simplicity is of the very essence of their charm, his success has been most conspicuous. In longer and more elaborate songs, where the simplicity at which he aimed in his accompaniment has limited the variety of harmony and figures, the effect is often marred by repetition and consequent monotony. Yet even in this class of work there are many beautiful exceptions, and 'A day in Spring,' 'A Summer's day,' and 'Autumn evening,' are specially worthy of mention.

Jenny Lind, who was Lindblad's pupil, introduced his songs into Germany, and their rapidly acquired popularity earned for the author the title of 'the Schubert of the North.' His only opera, 'Frondörörne,' is scarcely known anywhere, but several of his vocal duets, trios, and quartets have a considerable reputation in Sweden.

An analysis of Lindblad's Symphony will be found in the Allg. Mus. Zeitung for Oct. 23, 1839 (comp. col. 937 of the same volume). There is a pleasant reference to him, honourable to both parties alike, in Mendelssohn's letter of Dec. 28, 1833. [A.H.W.]

LINDLEY, ROBERT, born at Rotherham March 4, 1776, showed so early a predilection

for music that when he was about 5 years of age, his father, an amateur performer, commenced teaching him the violin, and at 9 years of age, the violoncello also. He continued to practise the latter until he was 16, when Cervetto, hearing him play, encouraged him and undertook his gratuitous instruction. He quitted Yorkshire and obtained an engagement at the Brighton theatre. In 1794 he succeeded Sperati as principal violoncello at the Opera and all the principal concerts, and retained undisputed possession of that position until his retirement in 1851. Lindley's tone was remarkable for its purity, richness, mellowness and volume, and in this respect he has probably never been equalled. His technique, for that date, was remarkable, and his accompaniment of recitative was perfection. He composed several concertos and other works for his instrument, but his composition was by no means equal to his execution. He died June 13, 1855. His daughter married John Barnett the composer.

His son, WILLIAM, born 1802, was also a violoncellist. He was a pupil of his father and first appeared in public in 1817 and soon took a position in all the best orchestras. He gave great promise of future excellence, but was unable to achieve any prominence owing to extreme nervousness. He died at Manchester, Aug. 12, 1869. [W.H.H.]

LINDPAINTNER, PETER JOSEPH VON, born at Coblenz Dec. 8, 1791, studied the violin, piano, and counterpoint at Augsburg, and subsequently appears to have received some instruction at Munich from Winter. In 1812 he accepted the post of Musik-director at the Isarthor theatre in Munich, and whilst so engaged completed his musical studies under Jos. Grätz, an excellent contrapuntist. In 1819 he was appointed Kapellmeister to the Royal Band at Stuttgart, and held that post until his death, which took place Aug. 21, 1856, during a summer holiday at Nonnenhorn, on the Lake of Constance. He was buried at Wasserburg. He died full of honours, a member of almost every musical institution of the Continent, and the recipient of gifts from many crowned heads—amongst others a medal from Queen Victoria, in 1848, for the dedication of his oratorio of Abraham.

By quiet and persistent labour he raised his band to the level of the best in Germany, and acquired a very high reputation. 'Lindpaintner,' says Mendelssohn, describing a visit to Stuttgart in 1831, 'is in my belief the best conductor in Germany; it is as if he played the whole orchestra with his baton alone; and he is very industrious.' Of the many professional engagements offered him in other towns and foreign countries, he accepted but one, and that, in 1853, three years before his death, was to conduct the New Philharmonic Concerts in London, at which his cantata The Widow of Nain, his overtures to Faust and the Vampyre, and others of his compositions were given with success, including the song of The Standard-bearer, at that time so popular, sung by Pischek. He wrote 28 operas, 3 ballets, 5 melodramas and oratorios, several cantatas, 6 masses, a Stabat Mater, and above 50 songs with pianoforte accompaniment. To these were added symphonies, overtures, concertos, fantasias, trios and quartets for different instruments. He rescored Judas Maccabæus, no doubt cleverly, and at the time it was said, well. Some of his symphonies, his operas 'Der Vampyr' and 'Lichtenstein,' his ballet 'Joko,' the overture to which is still heard at concerts, his music to Goethe's 'Faust' and Schiller's 'Song of the Bell,' have been pronounced to be among the best of his works. And two of his songs, 'The Standard-bearer' and 'Roland,' created at the time a veritable furore.

Though wanting in depth and originality Lindpaintner's compositions please by their clearness and brilliancy, melody and well-developed form; and the hand of a clever and practised musician is everywhere visible in them. [A.H.W.]

LINLEY, FRANCIS, born 1774 at Doncaster, blind from his birth, studied music under Dr. Miller, and became an able organist. He was chosen organist of St. James's Chapel, Pentonville, and soon afterwards married a blind lady of considerable fortune. He purchased the business of Bland, the musicseller in Holborn, but his affairs becoming embarrassed, his wife parted from him and he went to America, where his playing and compositions were much admired. He returned to England in 1799 and died in Oct. 1800. His works consist of songs, pianoforte and organ pieces, flute solos and duets, and an 'Organ Tutor.' His greatest amusement was to explore churchyards and read the inscriptions on the tombstones by the sense of touch. [W.H.H.]

LINLEY, THOMAS, born about 1725 at Wells, Somerset, commenced the study of music under Thomas Chilcot, organist of Bath Abbey church, and completed his education under Paradies. He established himself as a singing master at Bath, and for many years carried on the concerts there with great success. On the retirement of John Christopher Smith in 1774 Linley joined Stanley in the management of the oratorios at Drury Lane, and on the death of Stanley in 1786 continued them in partnership with Dr. Arnold. In 1775, in conjunction with his eldest son, Thomas, he composed and compiled the music for 'The Duenna,' by his son-in-law, Sheridan, which had the then unparalleled run of 75 nights in its first season. In 1776 he purchased part of Garrick's share in Drury Lane, removed to London and undertook the management of the music of the theatre, for which he composed several pieces of merit. Linley died at his house in Southampton Street, Covent Garden, Nov. 19, 1795, and was buried in Wells Cathedral. His dramatic pieces were 'The Duenna,' 1775; 'Selima and Azor' (chiefly from Grétry, but containing the charming original melody, 'No flower that blows'), 1776; 'The Camp,' 1778; 'The Carnival of Venice,' 'The Gentle Shepherd,' and 'Robinson Crusoe,' 1781; 'The Triumph of Mirth,' 1782; 'The Spanish Rivals,' 1784; 'The Strangers at home,' and 'Richard Cœur de Lion' (from Grétry), 1786; and 'Love in the East,' 1788; besides the song

in 'The School for Scandal,' 1777, and accompaniments to the songs in 'The Beggar's Opera.' He also set such portions of Sheridan's Monody on the Death of Garrick, 1779, as were intended to be sung. 'Six Elegies' for 3 voices, composed at Bath (much commended by Burney), and 'Twelve Ballads' were published in his lifetime. The posthumous works of himself and his son, Thomas, which appeared a few years after his death, in 2 vols., consist of songs, cantatas, madrigals, and elegies, including the lovely 5-part madrigal by him, 'Let me, careless,' one of the most graceful productions of its kind. As an English composer Linley takes high rank.

Eliza Ann, his eldest daughter, 'The Maid of Bath,' born 1754, received her musical education from her father, and appeared at an early age at the Bath concerts as a soprano singer with great success. In 1770 she sang at the oratorios in London and at Worcester Festival, and rose high in public favour. In 1771 she sang at Hereford Festival, and in 1772 at Gloucester. In March, 1773, she became, under somewhat romantic circumstances, the wife of Richard Brinsley Sheridan, and, after fulfilling engagements at Worcester Festival and at Oxford, contracted before her marriage, she retired at the zenith of her popularity. Her voice was of extensive compass, and she sang with equal excellence in both the sustained and florid styles. She died of consumption at Bristol in 1792.

Mary, his second daughter and pupil, also a favourite singer, sang with her sister at the oratorios, festivals, etc., and for a few years afterwards, until her marriage with Richard Tickell, commissioner of stamps. She died in July 1787.

Maria, his third daughter, was also a concert and oratorio singer. She died at Bath Sept. 5, 1784, at an early age. Shortly before her death she raised herself in bed, and with momentary animation sang part of Handel's air 'I know that my Redeemer liveth,' and then, exhausted with the effort, sank down and soon afterwards expired.

Thomas, his eldest son, born at Bath in 1756, displayed at an early age extraordinary skill on the violin, and at 8 years old performed a concerto in public. After studying with his father he was placed under Dr. Boyce. He then went to Florence and took lessons on the violin from Nardini, and whilst there became acquainted with Mozart, then about his own age, and a warm attachment sprang up between them; when they parted they were each bathed in tears, and Mozart often afterwards spoke of Linley with the greatest affection. On returning to England he became leader and solo-player at his father's concerts at Bath, and subsequently at the oratorios etc. at Drury Lane. In 1773 he composed an anthem with orchestra ('Let God arise') for Worcester Festival. In 1775 he assisted his father in 'The Duenna,' by writing the overture, three or four airs, a duet and a trio. He subsequently composed a chorus and two songs for introduction into 'The Tempest.' In 1776 he produced 'An Ode on the Witches and Fairies of Shakspere.' He also composed a short oratorio, 'The Song of Moses,' performed at Drury Lane, and added accompaniments for wind instruments to the music in 'Macbeth.' He was unfortunately drowned, through the upsetting of a boat, whilst on a visit at the Duke of Ancaster's, Grimsthorpe, Lincolnshire, Aug. 7, 1778. The greater part of his miscellaneous compositions are contained in the 2 vols. of posthumous works above mentioned.

Another son, Ozias Thurston, born 1765, was also instructed in music by the father. He entered the Church and obtained a living, which he resigned on being appointed, May 5, 1816, a junior fellow and organist of Dulwich College, where he died March, 1831.

William, his youngest son, born about 1767 and educated at St. Paul's and Harrow, learned music from his father and Abel. Mr. Fox procured for him a writership at Madras, and he was subsequently paymaster at Vellore and subtreasurer at Fort St. George. He returned from India with a competence, and devoted his attention to literature and music, composed many glees, published a set of songs, two sets of canzonets, and many detached pieces, edited 'Shakspere's Dramatic Songs,' 2 vols. fol. 1815–16, and wrote two comic operas, two novels, and several pieces of poetry. He died in 1835. [W.H.H.]

LIPINSKI, Karl Joseph, eminent violinist of the modern school, born Oct. 30 (or according to a family tradition Nov. 4), 1790, at Radzyn in Poland, son of a land-agent and amateur violinist, who taught him the elements of fingering. Having outgrown this instruction he for a time took up the cello, on which he advanced sufficiently to play Romberg's concertos. He soon however returned to the violin, and in 1810 became first Concertmeister, and then Capellmeister, of the theatre at Lemberg. Not being able to play the piano, he used to lead the rehearsals with his violin, and thus acquired that skill in part playing which was one of his great characteristics as a virtuoso. In 1814 he resigned his post, and gave himself up to private study. In 1817 he went to Italy, chiefly in the hope of hearing Paganini. They met in Milan, and Paganini took a great fancy to him, played with him daily, and even performed in public with him at two concerts (April 17 and 30, 1818), a circumstance which greatly increased Lipinski's reputation. Towards the close of the year Lipinski returned to Germany, but soon went back to Italy, attracted by the fame of an aged pupil of Tartini's, Dr. Mazzurana. Dissatisfied with Lipinski's rendering of one of Tartini's sonatas, but unable on account of his great age (90) to correct him by playing it himself, Mazzurana gave him a poem, which he had written to explain the master's intentions. With this aid Lipinski mastered the sonata, and in consequence endeavoured for the future to embody some poetical idea in his playing—the secret of his own success, and of that of many others who imitated him in this respect. In 1829 Paganini and Lipinski met again in Warsaw, but unfortunately a rivalry was excited between them which destroyed the old friendship. In 1835 and 36, in

the course of a lengthened musical *tournée*, he visited Leipsic, then becoming the scene of much musical activity owing to Mendelssohn's settlement there; and there he made the acquaintance of Schumann, which resulted in the dedication to him of the 'Carneval' (op. 9) which was composed in 1834. In 1836 he visited England and played his military concerto at the Philharmonic Concert of April 25. In 1839 Lipinski became Concertmeister at Dresden, where he entirely reorganised the royal chapel, thus doing very much the same service to Dresden that Hellmesberger subsequently did to Vienna. He retired with a pension in 1861, and died on December 16, of sudden paralysis of the lungs, at Urlow, his country house near Lemberg.

His compositions (now forgotten) are numerous, and his concertos, fantasias, and variations, are valuable contributions to violin music. One of the best known was the 'Military Concerto,' which for years was much played and was the object of the ambition of many a student of the violin. It is even now occasionally heard in public. In conjunction with Zalewski, the Polish poet, he edited an interesting collection of Galician 'Volkslieder' with pianoforte accompaniments. [F.G.]

The most prominent qualities of Lipinski's playing were a remarkably broad and powerful tone, which he ascribed to his early studies on the cello; perfect intonation in double stops, octaves, etc.; and a warm enthusiastic individuality. But the action of his right arm and wrist were somewhat heavy. He was an enthusiastic musician, and especially in his later years played Beethoven's great quartets and Bach's solos in preference to everything else. [P.D.]

LISBETH. The title of the French version of Mendelssohn's 'Heimkehr aus der Fremde'; translated by J. Barbier, and produced at the Théatre Lyrique June 9, 1865. [G.]

LISCHEN ET FRITZCHEN. An operetta in 1 act; words by Paul Dubois, music by Offenbach. Produced at Ems; and reproduced at the Bouffes-Parisiens, Paris, Jan. 5, 1864; in London (French), at St. James's, June 2, 1868. [G.]

LISLEY, John, contributed a six-part madrigal—'Faire Citharea presents hir doves'—to 'The Triumphes of Oriana,' 1601, but no other composition by him has survived, nor is anything known of his biography. [W.H.H.]

LISZT, Franz, is one of the favourites of fortune, and his success is perhaps unequalled, certainly unsurpassed in the history of Art. At his first public appearance at Vienna, Jan. 1, 1823, his genius was acknowledged with an enthusiasm in which the whole musical republic, from Beethoven down to the obscurest dilettante, joined unanimously. His concert tours were so many triumphal progresses through a country which extended from Madrid to St. Petersburg, and in which he was acknowledged as the king of pianists; and the same success accompanied all he undertook in life. When, tired of the shallow fame of the virtuoso, he devoted himself to composition, he had, it is true, at first to encounter the usual obstacles of popular indifference and professional ill-will. But these were soon overcome by his energy, and Liszt is at present living to see his works admired by many and ignored by none. As an orchestral conductor also he added laurels to his wreath.

Franz Liszt was born Oct. 22, 1811, at Raiding, in Hungary, the son of Adam Liszt, an official in the imperial service, and a musical amateur of sufficient attainment to instruct his son in the rudiments of pianoforte-playing. At the age of 9 young Liszt made his first appearance in public at Oedenburg with such success that several Hungarian noblemen guaranteed him sufficient means to continue his studies for six years. For that purpose he went to Vienna, and took lessons from Czerny on the pianoforte and from Salieri and Randhartinger in composition. The latter introduced the lad to his friend Franz Schubert. His first appearance in

print was probably in a variation (the 24th) on a waltz of Diabelli's, one of 50 contributed by the most eminent artists of the day, for which Beethoven, when asked for a single variation, wrote thirty-three (op. 120). The collection, entitled Vaterländische Künstler-Verein, was published in June 1823. In the same year he proceeded to Paris, where it was hoped that his rapidly growing reputation would gain him admission at the Conservatoire in spite of his foreign origin. But Cherubini refused to make an exception in his favour, and he continued his studies under Reicha and Paër. Shortly afterwards he also made his first serious attempt at composition, and an operetta in one act, called 'Don Sanche,' was produced at the Académie Royale, Oct. 17, 1825, and well received. Artistic tours to Switzerland and England, accompanied by brilliant success, occupy the period till the year 1827, when Liszt lost his father and was

thrown on his own resources to provide for himself and his mother. During his stay in Paris, where he settled for some years, he became acquainted with the leaders of French literature, Victor Hugo, Lamartine and George Sand, the influence of whose works may be discovered in his compositions. For a time also he became an adherent of Saint-Simon, but soon reverted to the Catholic religion, to which, as an artist and as a man, he has since adhered devoutly. In 1834 he became acquainted with the Countess D'Agoult, better known by her literary name of Daniel Stern, who for a long time remained attached to him and by whom he had three children. Two of these, a son and a daughter, the wife of M. Ollivier the French statesman, are dead. The third, Cosima, is the wife of Richard Wagner. The public concerts which Liszt gave during the latter part of his stay in Paris placed his claim to the first rank amongst pianists on a firm basis, and at last he was induced, much against his will, to adopt the career of a virtuoso proper. The interval from 1839 to 1847 Liszt spent in travelling almost incessantly from one country to another, being everywhere received with an enthusiasm unequalled in the annals of Art. In England he played at the Philharmonic Concerts of May 21, 1827 (Concerto, Hummel), May 11, 1840 (Concertstück, Weber), and June 8, 1840 (Kreutzer-sonata). Here alone his reception seems to have been less warm than was expected, and Liszt, with his usual generosity, at once undertook to bear the loss that might have fallen on his agent. Of this generosity numerous instances might be cited. The charitable purposes to which Liszt's genius has been made subservient are legion, and in this respect as well as in that of technical perfection he is unrivalled amongst virtuosi. The disaster caused at Pesth by the inundation of the Danube (1837) was considerably alleviated by the princely sum—the result of several concerts—contributed by this artist; and when two years later a considerable sum had been collected for a statue to be erected to him at Pesth, he insisted upon the money being given to a struggling young sculptor, whom he moreover assisted from his private means. The poor of Raiding also had cause to remember the visit paid by Liszt to his native village about the same time. It is well known that Beethoven's monument at Bonn owed its existence, or at least its speedy completion, to Liszt's liberality. When the subscriptions for the purpose began to fail, Liszt offered to pay the balance required from his own pocket, provided only that the choice of the sculptor should be left to him. From the beginning of the forties dates Liszt's more intimate connection with Weimar, where in 1849 he settled for the space of 12 years. This stay was to be fruitful in more than one sense. When he closed his career as a virtuoso, and accepted a permanent engagement as conductor of the Court Theatre at Weimar, he did so with the distinct purpose of becoming the advocate of the rising musical generation, by the performance of such works as were written regardless of immediate success, and therefore had little chance of seeing the light of the stage. At short intervals eleven operas of living composers were either performed for the first time or revived on the Weimar stage. Amongst these may be counted such works as *Lohengrin*, *Tannhäuser*, and *The Flying Dutchman* of Wagner, *Benvenuto Cellini* by Berlioz, Schumann's *Genoveva*, and music to Byron's 'Manfred.' Schubert's *Alfonso and Estrella* was also rescued from oblivion by Liszt's exertions. For a time it seemed as if this small provincial city were once more to be the artistic centre of Germany, as it had been in the days of Goethe, Schiller and Herder. From all sides musicians and amateurs flocked to Weimar, to witness the astonishing feats to which a small but excellent community of singers and instrumentalists were inspired by the genius of their leader. In this way was formed the nucleus of a group of young and enthusiastic musicians, who, whatever may be thought of their aims and achievements, were and are at any rate inspired by perfect devotion to music and its poetical aims. It was, indeed, at these Weimar gatherings that the musicians who now form the so-called School of the Future, till then unknown to each other and divided locally and mentally, came first to a clear understanding of their powers and aspirations. How much the personal fascination of Liszt contributed to this desired effect need not be said. Amongst the numerous pupils on the pianoforte, to whom he at the same period opened the invaluable treasure of his technical experience, may be mentioned Hans von Bülow, the worthy disciple of such a master.

But, in a still higher sense, the soil of Weimar, with its great traditions, was to prove a field of richest harvest. When, as early as 1842, Liszt undertook the direction of a certain number of concerts every year at Weimar, his friend Duverger wrote 'Cette place, qui oblige Liszt à séjourner trois mois de l'année à Weimar, doit marquer peut-être pour lui la transition de sa carrière de virtuose à celle de compositeur.' This presage has been verified by a number of compositions which, whatever may be the final verdict on their merits, have at any rate done much to elucidate some of the most important questions in Art. From these works of his mature years his early compositions, mostly for the pianoforte, ought to be distinguished. In the latter Liszt the virtuoso predominates over Liszt the composer. Not, for instance, that his 'transcriptions' of operatic music are without superior merits. Every one of them shows the refined musician, and for the development of pianoforte technique, especially in rendering orchestral effects, they are of the greatest importance. They also tend to prove Liszt's catholicity of taste; for all schools are equally represented in the list, and a selection from Wagner's 'Lohengrin' is found side by side with the Dead March from Donizetti's 'Don Sebastian.' To point out even the most important among these selections

and arrangements would far exceed the limits of this notice. More important are the original pieces for the pianoforte also belonging to this earlier epoch and collected under such names as 'Consolations' and 'Années de pélerinage,' but even in these, charming and interesting in many respects as they are, it would be difficult to discover the germs of Liszt's later productiveness. The stage of preparation and imitation through which all young composers have to go, Liszt passed at the piano and not at the desk. This is well pointed out in Wagner's pamphlet on the Symphonic Poems:—

'He who has had frequent opportunities,' writes Wagner, 'particularly in a friendly circle, of hearing Liszt play—for instance, Beethoven—must have understood that this was not mere reproduction, but real production. The actual point of division between these two things is not so easily determined as most people believe, but so much I have ascertained beyond a doubt, that, in order to reproduce Beethoven, one must be able to produce with him. It would be impossible to make this understood by those who have, in all their life, heard nothing but the ordinary performances and renderings by virtuosi of Beethoven's works. Into the growth and essence of such renderings I have, in the course of time, gained so sad an insight, that I prefer not to offend anybody by expressing myself more clearly. I ask, on the other hand, all who have heard, for instance, Beethoven's op. 106 or op. 111 (the two great sonatas in B♭ and C) played by Liszt in a friendly circle, what they previously knew of those creations, and what they learned of them on those occasions? If this was reproduction, then surely it was worth a great deal more than all the sonatas reproducing Beethoven which are "produced" by our pianoforte composers in imitation of those imperfectly comprehended works. It was simply the peculiar mode of Liszt's development to do at the piano what others achieve with pen and ink; and who can deny that even the greatest and most original master, in his first period, does nothing but reproduce? It ought to be added that during this reproductive epoch, the work even of the greatest genius never has the value and importance of the master works which it reproduces, its own value and importance being attained only by the manifestation of distinct originality. It follows that Liszt's activity during his first and reproductive period surpasses everything done by others under parallel circumstances. For he placed the value and importance of the works of his predecessors in the fullest light, and thus raised himself almost to the same height with the composers he reproduced.'

These remarks at the same time will to a large extent account for the unique place which Liszt holds amongst modern representatives of his instrument, and it will be unnecessary to say anything of the phenomenal technique which enabled him to concentrate his whole mind on the intentions of the composer.

The works of Liszt's mature period may be most conveniently classed under four headings. First: works for the pianoforte with and without orchestral accompaniments. The two Concertos in E♭ and A, and the fifteen Hungarian Rhapsodies are the most important works of this group, the latter especially illustrating the strongly pronounced national element in Liszt. The representative works of the second or orchestral section of Liszt's works are the Faust Symphony in three tableaux, the Dante Symphony, and the twelve 'Symphonic Poems.' Of the latter a full list is given on p. 149*b*. It is in these Symphonic Poems that Liszt's mastery over the orchestra as well as his claims to originality are chiefly shown. It is true that the idea of 'Programme-Music,' such as we find it illustrated here, had been anticipated by Berlioz. Another important feature, the so-called 'leading-motive' (i. e. a theme representative of a character or idea, and therefore recurring whenever that character or that idea comes into prominent action), Liszt has adopted from Wagner. [LEIT-MOTIF.] At the same time these ideas appear in his music in a considerably modified form. Speaking, for instance, of Programme-Music, it is at once apparent that the significance of that term is understood in a very different sense by Berlioz and by Liszt. Berlioz, like a true Frenchman, is thinking of a distinct story or dramatic situation, of which he takes care to inform the reader by means of a commentary; Liszt, on the contrary, emphasizes chiefly the pictorial and symbolic bearings of his theme, and in the first-named respect especially is perhaps unsurpassed by modern symphonists. Even where an event has become the motive of his symphonic poem, it is always from a single feature of a more or less musically realisable nature that he takes his suggestion, and from this he proceeds to the deeper significance of his subject, without much regard for the incidents of the story. It is for this reason that, for example, in his Mazeppa he has chosen Victor Hugo's somewhat pompous production as the groundwork of his music, in preference to Byron's more celebrated and more beautiful poem. Byron simply tells the story of Mazeppa's danger and rescue. In Victor Hugo the Polish youth, tied to

> 'A Tartar of the Ukraine breed
> Who looked as though the speed of thought
> Was in his limbs,'

has become the representative of man '*lié vivant sur ta croupe fatale, Génie, ardent coursier.*' This symbolic meaning, far-fetched though it may appear in the poem, is of incalculable advantage to the musician. It gives æsthetic dignity to the wild, rattling triplets which imitate the horse's gallop, and imparts a higher significance to the triumphal march which closes the piece. For as Mazeppa became Hetman of the Cossacks, even so is man gifted with genius destined for ultimate triumph:

> 'Chaque pas que tu fais semble creuser sa tombe.
> Enfin le temps arrive . . . il court, il tombe,
> Et se relève roi.'

A more elevated subject than the struggle and

final victory of genius an artist cannot well desire, and no fault can be found with Liszt, provided always that the introduction of pictorial and poetic elements into music is thought to be permissible. Neither can the melodic means employed by him in rendering this subject be objected to. In the opening *allegro agitato* descriptive of Mazeppa's ride, strong accents and rapid rhythms naturally prevail; but, together with this merely external matter, there occurs an impressive theme (first announced by the basses and trombones), evidently representative of the hero himself, and for that reason repeated again and again throughout the piece. The second section, *andante*, which brings welcome rest after the breathless hurry of the *allegro*, is in its turn relieved by a brilliant march, with an original Cossack tune by way of trio, the abstract idea of triumphant genius being thus ingeniously identified with Mazeppa's success among '*les tribus de l'Ukraine*.' From these remarks Liszt's method, applied with slight modification in all his symphonic poems, is sufficiently clear; but the difficult problem remains to be solved, How can these philosophic and pictorial ideas become the nucleus of a new musical form to supply the place of the old symphonic movement? Wagner asks the question 'whether it is not more noble and more liberating for music to adopt its form from the conception of the Orpheus or Prometheus motive than from the dance or march?' but he forgets that dance and march have a distinct and tangible relation to musical form, which neither Prometheus and Orpheus, nor indeed any other character or abstract idea, possess. The solution of this problem must be left to a future time, when it will also be possible to determine the permanent position of Liszt's symphonic works in the history of Art.

The legend of St. Elizabeth, a kind of oratorio, full of great beauty, but sadly weighed down by a tedious libretto, leads the way to the third section—the Sacred compositions. Here the *Gran Mass*, the *Missa Choralis*, the Mass for small voices, and the oratorio *Christus* are the chief works. The 13th Psalm, for tenor, chorus, and orchestra,[1] may also be mentioned. The accentuation of the subjective or personal element, combined as far as possible with a deep reverence for the old forms of church music, is the keynote of Liszt's sacred compositions.

We finally come to a fourth division not hitherto sufficiently appreciated by Liszt's critics—his Songs. It is here perhaps that his intensity of feeling, embodied in melody pure and simple, finds its most perfect expression. Such settings as those of Heine's 'Du bist wie eine Blume,' or Redwitz's 'Es muss ein wunderbares sein' are conceived in the true spirit of the Volkslied. At other times a greater liberty in the rhythmical phrasing of the music is warranted by the metre of the poem itself, as, for instance, in Goethe's wonderful night-song, 'Ueber allen Gipfeln ist Ruh',' the heavenly calm of which Liszt has rendered by his wonderful harmonies in a manner which alone would secure him a place amongst the great masters of German song. Particularly, the modulation from G major back into the original E major at the close of the piece is of surprising beauty. Less happy is the dramatic way in which such ballads as Heine's 'Loreley' and Goethe's 'König in Thule' are treated. Here the melody is sacrificed to the declamatory element, and that declamation, especially in the last-named song, is not always faultless. Victor Hugo's 'Comment disaient-ils' is one of the most graceful songs amongst Liszt's works, and in musical literature generally.

[1] Performed at Mr. Bache's annual concert in 1873.

The remaining facts of Liszt's life may be summed up in a few words. In 1859 he left his official position at the Opera in Weimar owing to the captious opposition made to the production of Cornelius's 'Barber of Bagdad,' at the Weimar theatre. Since that time he has been living at intervals at Rome, Pesth, and Weimar, always surrounded by a circle of pupils and admirers, and always working for music and musicians in the unselfish and truly catholic spirit characteristic of his whole life. How much Liszt can be to a man and an artist is shown by what perhaps is the most important episode even in his interesting career—his friendship with Wagner. The latter's eloquent words will give a better idea of Liszt's personal character than any less intimate friend could attempt to do.

'I met Liszt,' writes Wagner, 'for the first time during my earliest stay in Paris, at a period when I had renounced the hope, nay, even the wish, of a Paris reputation, and, indeed, was in a state of internal revolt against the artistic life which I found there. At our meeting he struck me as the most perfect contrast to my own being and situation. In this world, into which it had been my desire to fly from my narrow circumstances, Liszt had grown up, from his earliest age, so as to be the object of general love and admiration, at a time when I was repulsed by general coldness and want of sympathy.... In consequence I looked upon him with suspicion. I had no opportunity of disclosing my being and working to him, and, therefore, the reception I met with on his part was altogether of a superficial kind, as was indeed natural in a man to whom every day the most divergent impressions claimed access. But I was not in a mood to look with unprejudiced eyes for the natural cause of his behaviour, which, though friendly and obliging in itself, could not but wound me in the then state of my mind. I never repeated my first call on Liszt, and without knowing or even wishing to know him, I was prone to look upon him as strange and adverse to my nature. My repeated expression of this feeling was afterwards told to him, just at the time when my 'Rienzi' at Dresden attracted general attention. He was surprised to find himself misunderstood with such violence by a man whom he had scarcely known, and whose acquaintance now seemed not without value to him. I am still moved when I remember the repeated and eager attempts he made to change

my opinion of him, even before he knew any of my works. He acted not from any artistic sympathy, but led by the purely human wish of discontinuing a casual disharmony between himself and another being; perhaps he also felt an infinitely tender misgiving of having really hurt me unconsciously. He who knows the selfishness and terrible insensibility of our social life, and especially of the relations of modern artists to each other, cannot but be struck with wonder, nay, delight, by the treatment I experienced from this extraordinary man.... At Weimar I saw him for the last time, when I was resting for a few days in Thuringia, uncertain whether the threatening prosecution would compel me to continue my flight from Germany. The very day when my personal danger became a certainty, I saw Liszt conducting a rehearsal of my 'Tannhäuser,' and was astonished at recognising my second self in his achievement. What I had felt in inventing this music he felt in performing it: what I wanted to express in writing it down, he expressed in making it sound. Strange to say, through the love of this rarest friend, I gained, at the moment of becoming homeless, a real home for my art, which I had hitherto longed for and sought for always in the wrong place. . . . At the end of my last stay at Paris, when ill, miserable, and despairing, I sat brooding over my fate, my eye fell on the score of my "Lohengrin," which I had totally forgotten. Suddenly I felt something like compassion that this music should never sound from off the death-pale paper. Two words I wrote to Liszt: his answer was, the news that preparations for the performance were being made on the largest scale that the limited means of Weimar would permit. Everything that men and circumstances could do, was done, in order to make the work understood. ... Errors and misconceptions impeded the desired success. What was to be done to supply what was wanted, so as to further the true understanding on all sides, and with it the ultimate success of the work? Liszt saw it at once, and *did* it. He gave to the public his own impression of the work in a manner the convincing eloquence and overpowering efficacy of which remain unequalled. Success was his reward, and with this success he now approaches me, saying: "Behold we have come so far, now create us a new work, that we may go still further."'

In addition to the commentaries on Wagner's works just referred to, Liszt has also written numerous detached articles and pamphlets, those on Robert Franz, Chopin, and the music of the Gipsies, being the most important. It ought to be added that the appreciation of Liszt's music in this country is almost entirely due to the unceasing efforts of his pupil, Mr. Walter Bache, at whose annual concerts many of his most important works have been produced. Others, such as 'Mazeppa' and the 'Battle of the Huns,' were first heard in England at the Crystal Palace.

The following is a catalogue of Liszt's works, as complete as it has been possible to make it. It is compiled from the recent edition of the thematic catalogue (Breitkopf & Härtel, No. 14,373), published lists, and other available sources.

I. ORCHESTRAL WORKS.

1. ORIGINAL.

1. Symphonie zu Dante's Divina Commedia, orch. and female chorus: ded. to Wagner. 1. Inferno; 2. Purgatorio; 3. Magnificat. Score and parts. B. & H.[1] Arr. for 2 P.Fs.

188. Schumann's Musikalische Haus- und Lebens-regeln; translated into French. Schuberth, 1860.

[F. H.]

LITANIÆ LAURETANÆ (Litany of Loreto). A solemn Litany, sung in honour of the Blessed Virgin Mary.

It is no longer possible to ascertain when, where, or by whom, this Litany was originally written: but, if we may trust the very generally received tradition that it was first chaunted at Loreto, and carried thence, by Pilgrims, to all parts of the world, it cannot be of earlier date than the closing years of the 13th century. It has, undoubtedly, been chaunted there, every evening, from time immemorial. In other places, it is most frequently sung, either in solemn Processions, or, during the Exposition of the Blessed Sacrament at Benediction: but its use —especially on the Continent—is by no means restricted to those particular occasions. In Rome, for instance, it is constantly sung, at almost every popular Service, to a simple Plain Chaunt melody, familiar to all Italians, and printed, in its purest form, in the new Ratisbon edition of the 'Directorium Chori.' This is, probably, the oldest music to which the words were ever adapted. Its date, like theirs, is uncertain: but it is at least old enough to have attracted the attention of the great Polyphonic Composers of the 16th century, some of whom have treated it in their best, and most devout style, and, when adopting it as a Canto fermo, have carefully abstained from destroying the simplicity of its character by the introduction of vain and irrelevant conceits.

Palestrina was especially devoted to the Litany; and, in 1593, published a volume, containing, in two books, ten different settings, of exquisite beauty, composed for the use of the 'Confraternity of the Holy Rosary.' One of the most beautiful divisions of the work is reprinted in the fourth volume of Proske's 'Musica Divina': but a great number of the Composer's finest Litanies still remain in MS.

Another volume of Litanies, by various authors, was published at Munich, in 1596, by Georgius Victorinus, under the title of 'Thesaurus Litaniarum.' We here find, among other interesting works, a charming Litany, by Orlando di Lasso, founded entirely upon the Plain Chaunt Canto fermo, and so simple in construction that the most modest Choir need feel no hesitation in attempting it. This Litany is also reprinted, entire, in the fourth volume of 'Musica Divina,' together with some others from the same rare work, which, fortunately, is not the only collection that has been preserved to us from the 16th century. Under the title of *Litaniæ Catholicæ ad Christum, Beatam Virginem, et Sanctos,* a highly interesting work was printed by Wolfgang Eder, at Ingolstadt, in 1589. Another, called *Sacræ Litaniæ variæ,* was published at Antwerp, in 1595. A precious volume, believed to be unique, wanting the title and first nine pages—and, therefore, without date—is preserved in the Library bequeathed by Dr. Proske to the cathedral of Ratisbon. And many other printed collections are still extant, containing quite a little treasury of Art.

At Notre Dame de Paris, the Litany is annually sung, in grand Procession, on the afternoon of the Feast of the Assumption, to a form of the First Tone, which, set with the melody in the Tenor, produces an indescribably solemn effect. [W. S. R.]

LITANY (Old Eng. *Letanie*; Lat. *Litaniæ*; Gr. Λιτανεία, a Supplication). A solemn form of prayer; sung, by Priests and Choir, in alternate Invocations and Responses; and found in most Office-Books, both of the Eastern and Western Church. [See Litaniæ, etc.]

The origin of the Litany may be traced back to a period of very remote antiquity. Its use was, probably, first instituted in the East: but it was certainly sung, at Vienne, in France, as early as the year 450, if not very much earlier. The English translation—of which alone we propose to treat in the present article—was first published, without musical notes, on the Twenty-seventh of May, 1544—five years before the appearance of King Edward the Sixth's 'First Prayer-Book.' Three weeks later—on the Sixteenth of June—another copy, with the Plain Chaunt annexed, was printed, in London, by Grafton; the Priest's part in black notes, and that for the Choir, in red. It would seem, however, that the congregations of that day were not quite satisfied with unisonous Plain Chaunt: for, before the end of the year, Grafton produced a third copy, set for five voices, 'according to the notes used in the Kynges Chapel.'

This early translation was, in all probability, the work of Archbishop Cranmer, who refers to it in a letter preserved in the State Paper Office. And, as he recommends the notes (or similar ones) to be sung in a certain new Procession which he had prepared by the King's command, there is little doubt that it was he who first adapted the English words to the ancient Plain Chaunt. If this surmise be correct, it supplies a sufficient reason for the otherwise unaccountable omission of the Litany in Marbecke's 'Booke of Common Praier Noted.'

In the year 1560—and, again, in 1565—John Day printed, under the title of 'Certaine notes set forth in foure and three partes, to be song at the Morning Communion, and Evening Prayer,' a volume of Church Music, containing a Litany, for four voices, by Robert Stone, a then gentleman of the Chapel Royal. According to the custom of the time, the *Canto fermo* is here placed in the Tenor, and enriched with simple, but exceedingly pure and euphonious harmonies, as may be seen in the following example, which will give a fair idea of the whole.

The Rev. J. Jebb has carefully reproduced this interesting composition, in his 'Choral Responses and Litanies'; together with another Litany by Byrd, (given on the authority of a MS. preserved in the Library of Ely Cathedral,) and several others of scarcely inferior merit. The only parts of Byrd's Litany now remaining are, the Cantus, and Bassus: in the following example, therefore, the Altus, and Tenor, (containing the Plain Chaunt,) are restored, in accordance with the obvious intention of the passage, in small notes.

All these Litanies, however, and many others of which only a few fragments now remain to us, were destined soon to give place to the still finer setting by Thomas Tallis. Without entering into the controversy to which this work has given rise, we may assume it as proved, beyond all possibility of doubt, that the words were originally set, by Tallis, in four parts, with the Plain Chaunt in the Tenor. In this form, both the Litany, and Preces, are still extant, in the 'Clifford MS.' (dated 1570), on the authority of which they are inserted in the valuable collection of 'Choral Responses' to which allusion has already been made: and, however much we may be puzzled by the consecutive fifths in the Response, 'And mercifully hear us when we call upon Thee,' and the chord of the $\frac{4}{2}$ in 'We beseech Thee to hear us, Good Lord,' we cannot but believe that the venerable transcription is, on the whole, trustworthy. Tallis's first Invocation, which we subjoin from the 'Clifford MS.,' is, alone, sufficient to show the grandeur of the Composer's conception.

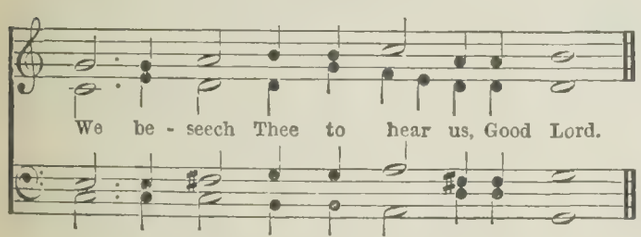
More than one modern writer has condemned the celebrated five-part Litany printed by Dr. Boyce as an impudent corruption of this four-part text. Dean Aldrich goes so far as to assure Dr. Fell, in a letter still extant, that 'Barnard was the first who despoilt it.' The assertion is a rash one. It is too late, now, to ascertain, with any approach to probability, the source whence Barnard's version, printed in 1641, was, *in the*

first instance, derived. There are, in truth, grave difficulties in the way of forming any decided opinion upon the subject. Were the weakness of an unpractised hand anywhere discernible in the counterpoint of the later composition, one might well reject it as an 'arrangement': but it would be absurd to suppose that any Musician capable of deducing the five-part Response, 'Good Lord, deliver us,' from that in four parts, would have condescended to build his work upon another man's foundation.

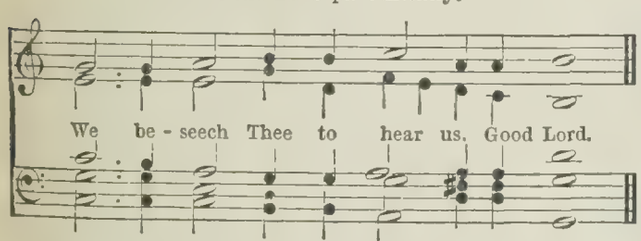
From the 4-part Litany. From the 5-part Litany.

The next Response, 'We beseech Thee to hear us, Good Lord,' presents a still more serious *crux*. The *Canto fermo* of this differs so widely from any known version of the Plain Chaunt melody that we are compelled to regard the entire Response as an original composition. Now, so far as the *Cantus*, and *Bassus*, are concerned, the two Litanies correspond, at this point, exactly: but, setting all prejudices aside, and admitting the third chord in the 'Clifford MS.' to be a manifest *lapsus calami*, we have no choice but to confess, that, with respect to the mean voices, the advantage lies entirely on the side of the five-part harmony. Surely, the writer of this could—and would—have composed a Treble and Bass for himself!

From the 'Clifford MS.'



From the Five-part Litany.



The difficulties we have pointed out with regard to these two Responses apply, with scarcely diminished force, to all the rest: and, the more closely we investigate the internal evidence afforded by the double text, the more certainly shall we be driven to the only conclusion deducible from it; namely, that Tallis has left us two Litanies, one for four voices, and the other for five, both founded on the same Plain Chaunt, and both harmonised on the same Basses, though developed, in other respects, in accordance with the promptings of two totally distinct ideas.

The four-part Litany has never, we believe, been published in a separate form. The best edition of that in five parts is, undoubtedly, Dr. Boyce's; though Messrs. Oliphant, and John Bishop, have done good service, in their respective reprints, by adapting, to the music of the Preces, those 'latter Suffrages,' which, having no place in the First Prayer-Book of King Edward VI, were not set by any of the old Composers. Some later editions, in which an attempt has been made at 'restoration,' have, it is to be feared, only resulted in depraving the original text to a degree previously unknown. [W. S. R.]

LITOLFF, Henry Charles, was born in London Feb. 6, 1818. His father, a French Alsatian soldier taken prisoner by the English in the Peninsular War, had settled in London as a violinist after the declaration of peace, and had married an Englishwoman. In the beginning of the year 1831 Henry Litolff was brought by his father to Moscheles, who on hearing the boy play was so much struck by his unusual talent, that he offered to take him gratis as a pupil; and under his generous care Litolff studied for several years. He made his first appearance (or one of his first) at Covent Garden Theatre July 24, 1832, as 'a pupil of Moscheles, 12 years of age.' In his 17th year a marriage of which the parents disapproved obliged him to leave England and settle for a time in France. For several years after this event Litolff led a wandering life, and during this period he visited Paris, Brussels, Leipzig, Prague, Dresden, Berlin, and Amsterdam, giving in these towns a series of very successful concerts. In 1851 he went to Brunswick, and undertook there the business of the late music-publisher Meyer. In 1860 he transferred this business to his adopted son, Theodor Litolff, and he, in 1861, started the well-known 'Collection Litolff,' as a cheap and accurate edition of classical music, which was among the earliest of the many series of similar size and aim now existing. It opened with the sonatas of Beethoven, Mozart, and Haydn (vols. 1–4). Henry Litolff himself went to Paris, where he has since resided.

As a pianist Litolff's rank is high; fire, passion, and brilliancy of execution were combined with thought and taste in his playing. Had it been also correct, it would have reached the highest excellence. In his works, however, there is great inequality; beautiful and poetic ideas are often marred by repetition and a want of order, and knowing what the author's true capacity is, the result is a feeling of disappointment. About 115 of his works, including several operas, have been published. Among the best of them may be reckoned some of his pianoforte pieces, such as the well-known 'Spinnlied,' a few of his overtures and his symphony-concertos, especially nos. 3,[1] 4, and 5; the latter are remarkable for their wealth of original ideas in harmony, melody, and rhythm, and for their beautiful instrumentation. [A.H.W.]

LIVERPOOL MUSICAL FESTIVALS. These have not taken place with regularity. The

[1] Played at the Crystal Palace, by Mr. Oscar Beringer, March 28, 1874.

first was held in 1784, the next in 1790, and the next in 1799. They were then suspended till 1823, 1830, and 1836 (Oct. 4–7, Sir G. Smart conductor), when Mendelssohn's 'St. Paul' was performed for the second time, and for the first time in England. Up to this date the concerts had been held in churches, but the St. George's Hall (Town Hall), having been erected in the meantime, and opened Sept. 1854, the next festival took place there in 1874, Sept. 29–Oct. 1 —conductor, Sir Julius Benedict.

Liverpool has a Philharmonic Society, which was founded Jan. 10, 1840, and opened its hall Aug. 27, 49. There are twelve concerts every year, six before and six after Christmas. Sir Julius Benedict succeeded Mr. Alfred Mellon as conductor April 9, 67, and has been conductor ever since.—The Liverpool Musical Society, which formerly gave oratorio concerts in St. George's Hall, has been extinct since 1877.—The St. George's Hall has a very fine organ by Willis, on which performances are given by Mr. W. T. Best on Thursday evenings and Saturday afternoons and evenings.—Orchestral concerts are given by Mr. Charles Halle during the winter season in the Philharmonic Hall. [G.]

LLOYD, Edward—son of Richard Lloyd, chorister, and afterwards assistant lay vicar of Westminster Abbey, and assistant vicar choral of St. Paul's (born March 12, 1813, died June 28, 1853), and Louisa, sister of Dr. John Larkin Hopkins—was born March 7, 1845, and received his early musical education in the choir of Westminster Abbey under James Turle. In 1866 he obtained the appointment of tenor singer in the chapel of Trinity College, Cambridge, which he resigned in 1867 on being appointed a Gentleman of the Chapel Royal, a post which he held about two years. He has since devoted himself entirely to concert singing. He made his first great success at Gloucester Festival, in 1871, in Bach's St. Matthew Passion-music, and in 1874 won universal admiration by his singing of 'Love in her eyes sits playing' at the Handel Festival at the Crystal Palace. He has since gained increased reputation as an oratorio and concert singer. His voice is a pure tenor of excellent quality, and his style musician-like and finished. [W.H.H.]

LOBE, Johann Christian, musician, and writer on music of some eminence, was born May 30, 1797, at Weimar, and owed his musical instruction to the Grand Duchess Maria Paulowna. The flute was his instrument, and after performing a solo at the Gewandhaus, Leipzig, in 1811, he settled at his native place as second flute in the Duke's band. He has written five operas, besides overtures for the orchestra, P.F. quartets, and other compositions. But it is as a *litterateur* that he is most interesting to us. He resigned his place at Weimar in 1842, and in 46 undertook the editing of the Allgem. mus. Zeitung of Leipzig, which he retained until the termination of that periodical in 48. In 1853 he began a publication called 'Fliegende Blätter für Musik, of which about 20 numbers were published; he then edited the musical department of the Leipzig Illustrirter Zeitung, and made endless contributions to other periodicals. His principal books, some of which have appeared first in the periodicals, are 'Musikalische Briefe . . . von einer Wohlbekannten,' 2 vols, Leipzig, 1852; 'Aus dem Leben eines Musiker' (Ib. 59); a Catechism of Composition, and another of Music (both have been translated); 'Consonanzen und Dissonanzen' (Ib. 1870); Lehrbuch der musikalischen Composition (4 vols. Ib. 1851 to 67). To the amateur student these works are all valuable, because they treat of the science of music in a plain and untechnical way, and are full of intelligence and good sense. The Musikalische Briefe, a series of short sketches of the progress of music and of the characteristics of musicians, will be read with interest by many. Some conversations with Mendelssohn appear to be faithfully reported, and bring out some of his traits in a very amusing manner. [G.]

LOBGESANG, eine Symphonie-Cantate. A well-known work of Mendelssohn's (op. 52), composed for the Gutenberg festival, and first performed at the church of S. Thomas, Leipzig, in the afternoon of June 25, 1840. The form of the work is no doubt due to Beethoven's 9th Symphony, and in Germany it is taken as the third of his published symphonies. It was performed the second time at Birmingham, Sept. 23, 1840 (Mendelssohn conducting); and after this performance was considerably altered throughout — including the addition of the entire scene of the Watchman—and published by Breitkopfs early in 1841. First performances, as published—Leipzig, Dec. 3, 1840; London, Sacred Harmonic Society, March 10, 1843. The selection of the words was doubtless in great measure Mendelssohn's own, though the title 'Symphonie-Cantate' was Klingemann's.[1] The English adaptation was made with his concurrence by Mr. J. A. Novello, to whom more of the English texts of Mendelssohn's works are due than is generally known. The phrase (a favourite one with Mendelssohn) with which the symphony opens, and which forms the coda to the entire work, is the Intonation to the 2nd Tone for the Magnificat. [G.]

LOBKOWITZ. A noble and distinguished Austrian family, founded early in the 15th century, by Nicholas Chuzy von Ujezd, and deriving its name from a place in Bohemia. The country seat of the family is at Raudnitz, near Theresienstadt, and its town residence is the well-known palace on the Lobkowitz-Platz, Vienna. Two princes of this race have been closely and honourably connected with music. 1. Ferdinand Philip was born at Prague April 17, 1724. By the death of his father and two elder brothers he became the head of the house before he was 15. Gluck was in his service, and was much aided in his early success by the assistance of the Prince. The two were present together at the coronation of Francis I. (Sept. 28, 1745); after which they went to London in company with the

1 See Mendelssohn's Letter, Nov. 18, 1840.

Duke of Newcastle, who had represented the English Court at the coronation. There[1] Lobkowitz is said to have lived in a house of the Duke's for two years, and it was during this time that Gluck produced his operas at the King's Theatre, and appeared in public in the strange character of a performer on the musical glasses. [See GLUCK, vol. i. 601 *a*; HARMONICA, 662 *a*.] A story is told by Burney of his having composed a symphony bar by bar alternately with Emanuel Bach. The feat was an absurd one, but it at least shows that he had considerable practical knowledge of music. He died at Vienna, Jan. 11, 1784, and was succeeded by his son JOSEF FRANZ MAXIMILIAN, born Dec. 7, 1772. This is the prince whose name is so familiar to us in connection with Beethoven. He seems, notwithstanding the temptations of his immense early wealth, to have been an exemplary character, with no vices, and with no fault but an inconsiderate generosity rising to prodigality, which ultimately proved his ruin. He married Princess Marie Caroline Schwarzenberg, Aug. 2, 1792. His taste for music was an absorbing passion. He played both violin and cello, and had a splendid bass voice, which he cultivated thoroughly and with success. He maintained a complete establishment of orchestra, solo and chorus singers, with Wranitzky and Cartellieri at their head, for the performances of masses, oratorios, operas, symphonies, etc. When Beethoven arrived at Vienna in Nov. 1792, Lobkowitz was twenty, and the two young men soon became extremely intimate. True, beyond the frequent mention of his name in Ries's Recollections, there is not much definite proof of this[2]; but it is conclusively shown by the works dedicated to him by Beethoven; for we must remember that the dedication of a work by this most independent of composers, was, in nineteen cases out of twenty, a proof of esteem and affection. The works are these—and excepting those inscribed with the name of the Archduke Rudolph they form the longest and most splendid list of all his dedications:—6 Quartets, op. 18 (1801); Sinfonia Eroica, op. 55 (1806); Triple Concerto, op. 56 (1807); the 5th and 6th Symphonies—in C minor and Pastorale (1809)—shared by Lobkowitz with Rasumowsky; Quartet in Eb, op. 74 (1810); and the Liederkreis, op. 98 (1816). We must not suppose that the course of such a friendship as this betokens was always smooth; the anecdote told on p. 167 of vol. i. of this work, shows that Prince Lobkowitz, like all the intimates of Beethoven, and other men of genius, had occasionally a good deal to put up with. No doubt the Prince was a kind and generous friend to the composer. It was he who advised him to apply for the position of composer to the opera, and promoted two profitable concerts for him in his own palace and with his own band in 1807. Two years later he joined Kinsky and the Archduke in subscribing to Beethoven's annuity, contributing 700 florins (paper) per annum. On Jan. 1, 1807, an association of noblemen, with Lobkowitz at its head, took charge of the Court theatres, and during 1810, 11, and 12, the Prince had the sole direction of the opera. The anecdotes by eye-witnesses of his tact and generosity in this position are many, but we have no room for them here. Nor are others wanting to testify to his enlightened zeal in reference to other musicians beside Beethoven. He was one of the promoters and founders of the great 'Gesellschaft der Musikfreunde' in Vienna, and sang the bass solos at the second performance of Alexander's Feast, Dec. 3, 1812 [See Vol. i. p. 591]. He had Haydn's 'Creation' translated into Bohemian, and performed it at Raudnitz. In addition to his great expenditure on music, he, like Kinsky, raised, equipped, and maintained a body of riflemen during the campaign of 1809. At length came the depreciation in the Austrian currency, the bankruptcy of the Government, and the Finance-patent of 1811. Lobkowitz was unable to change his habits or reduce his expenditure, and in 1813 his affairs were put into the hands of trustees, and he left Vienna for the smaller spheres of Prague and Raudnitz. By the Finance-patent Beethoven's 700 florins were reduced to 280 flor. 26 kr. in Einlösungsscheine—all that the trustees had power to pay. Beethoven was clamorous, and his letters are full of complaints against the Prince—most unjust as it turned out, for early in 1815, through the Prince's own exertions the original amount was restored with arrears. Beethoven acknowledged this by the dedication of the Liederkreis. On Jan. 24, 1816, the Princess Lobkowitz died, and in less than a year, on Dec. 16, 1816, was followed by her husband.[3] [A. W. T.]

LOCATELLI, PIETRO, a celebrated violinist, was born—like Lolli and Piatti—at Bergamo in 1693, and was still very young when he became a pupil of Corelli at Rome. Very little is known of his life, but he appears to have travelled a good deal, and finally to have settled at Amsterdam, where he established regular public concerts, and died in 1764.

There can be no doubt that Locatelli was a great and original virtuoso. As a composer we must distinguish between a number of caprices and études—which he evidently wrote merely for practice, to suit his exceptional powers of execution, and which have no musical value—and the sonatas and concertos, which contain very graceful and pathetic movements, and certainly prove him to have been an excellent musician. In these serious works he certainly shows himself as a worthy disciple of his great master. All the more striking is the contrast when we look at his caprices and études. Here his sole aim appears to have been to endeavour to enlarge the powers of execution on the violin at any price, and no doubt in this respect he has succeeded only too well; for, not content with

[1] Comp. Burney, Hist. iv. 452.

[2] Beethoven nicknames him 'Prince Fitzi Putzli'—but then he nicknames every one.

[3] For fuller details of the Lobkowitz family the reader is referred to a paper by Mr. Thayer in the Musical World of May 17, 24, 31, 1879.

legitimately developing the natural resources of the instrument, he oversteps all reasonable limits, and aims at effects which, being adverse to the very nature of the violin, are neither beautiful nor musical, but ludicrous and absurd. A striking example of this tendency of his is to be found in a caprice entitled, 'Le Labyrinth,' where the following arpeggio passages occur:—

This savours strongly of charlatanism, and it is astonishing to find a direct pupil of Corelli one of the first to introduce such senseless feats of execution into the art of violin-playing. Wasielewsky not unjustly speaks of him as the great-grandfather of our modern 'Finger-heroes' (Fingerhelden).

Locatelli published ten different [1] works:—

Op. 1. Twelve concerti grossi. Amsterdam, 1721.
2. Sonatas for flute. Amsterdam, 1732.
3. L'arte del violino, containing 12 concerti grossi and 24 caprices. 1733.
4. Six concertos. 1735.
5. Six sonatas en trio. 1737.
Op. 6. Six sonatas for violin solo. 1737.
7. Six concerti a quattro. 1741.
8. Trios. 2 violins and bass. 1741.
9. L'arte di nuova modulazione. Caprices enigmatiques.
10. Contrasto armonico: concertos a quattro.

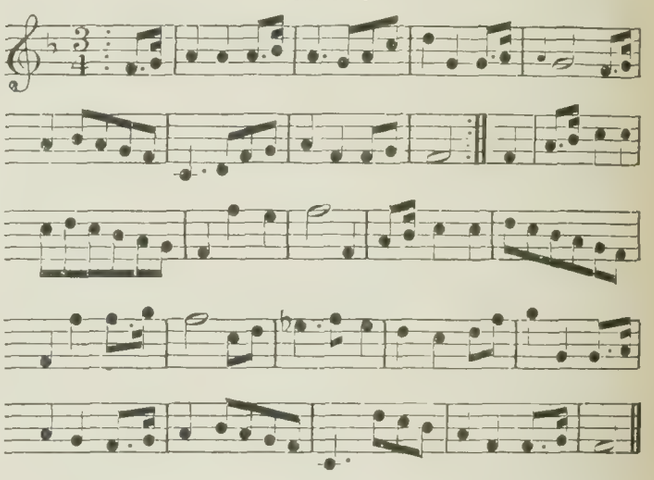
Modern editions of some of his Sonatas and Caprices have been issued by Witting, Alard, and David. His Sonata di Camera in G minor has lately been played at the Monday Popular Concerts by Mme. Norman Neruda. [P. D.]

LOCHABER NO MORE, an air claimed both for Scotland and Ireland, of which some two or three versions are extant. The source of these is in Scottish minstrelsy called 'Lord Ronald (or, according to Sir W. Scott, *Randal*) my son.' The air in Ireland is known as 'Limerick's lamentation,' from a tradition associating its plaintive melody with the events that followed the second capitulation of Limerick, in 1690, when at the embarkation of the Irish soldiery at Cork for France, their wives and children were forcibly separated from them under circumstances of unusual barbarity. The Scottish and Irish airs are here compared.

'Lord Ronald my son' (*one* strain only).

'Limerick's Lamentation.'

'Lochaber.'



The verses 'Farewell to Lochaber,' ending 'And then I'll leave thee and Lochaber no more,' were written by Allan Ramsay. Burns recovered in Ayrshire two verses of the old ballad 'Lord Ronald,' in conjunction with this tune: he is recorded to have exclaimed, on hearing Lochaber played on the harpsichord, 'Oh, that's a fine tune for a broken heart!'

The Irish air lies in the fourth and last of the scales given in the article on IRISH MUSIC [vol. ii. p. 20 *a*], having its semitones between 3 and 4, 6 and 7; it is also marked by traces of the *narrative form* characteristic of ancient Irish melody. In the Leyden MS., a Scottish relic of 1690 or thereabouts, in tablature for the Lyra-Viol, a tune closely allied to the above airs is given as 'King James' March to *Irland*.' James is known to have landed at Kinsale, March 12, 1689. On comparison of the versions, in bar 6 of the 1st and bar 3 of the 2nd strain the Irish air appears to most advantage: the skip of a major ninth in Lochaber is most likely a corruption: it is certainly characteristic of neither Irish nor Scottish melody: Mr. Moore (who is supported both by Bunting and Holden in claiming for Ireland this beautiful air) is in his prefaces to the Irish Melodies rather severe upon the Scots for stealing not only Irish airs, but Irish saints.

An interesting example of the effect of 'Lochaber no more' is given by Robert Nicholl. 'During the expedition to Buenos Ayres, a Highland soldier while a prisoner in the hands of the

[1] From Fétis, 'Biogr. Universelle.'

Spaniards, having formed an attachment to a woman of the country, and charmed by the easy life which the tropical fertility of the soil enabled them to lead, had resolved to remain and settle in South America. When he imparted this resolution to his comrade, the latter did not argue with him, but, leading him to his tent, he placed him by his side, and sang him "Lochaber no more." The spell was on him, the tears came into his eyes, and wrapping his plaid around him, he murmured "Lochaber nae mair—I maun gang back—Na!" The songs of his childhood were ringing in his ears, and he left that land of ease and plenty for the naked rocks and sterile valleys of Badenoch, where, at the close of a life of toil and hardship, he might lay his head in his mother's grave.' [R.P.S.]

LOCK, MATTHEW, born at Exeter, was a chorister of the cathedral there under Edward Gibbons, and afterwards studied under Wake. He and Christopher Gibbons composed the music for Shirley's masque, 'Cupid and Death,' 'represented at the Military Ground in Leicester Fields' before the Portuguese Ambassador, March 26, 1653. In 1656 he published his 'Little Consort of Three Parts' for viols or violins, composed, as he tells us, at the request of his old master and friend, William Wake, for his scholars. He composed the music, 'for y^e^ king's sagbutts and cornets,' performed during the progress of Charles II from the Tower through the city to Whitehall on April 22, 1661, the day before his coronation, for which he received the appointment of Composer in Ordinary to the King. He composed several anthems for the Chapel Royal, and on April 1, 1666, produced there a Kyrie and Credo, in which he departed from the ordinary usage by composing different music to each response. This occasioned some opposition on the part of the choir, in consequence of which he published his composition, with an angry preface, on a folio sheet, under the title of 'Modern Church Music; Pre-Accused, Censur'd, and Obstructed in its Performance before His Majesty, April 1, 1666, Vindicated by the Author, Matt. Lock, Composer in Ordinary to His Majesty.' (Of this publication, now excessively rare, there is a copy in the library of the Sacred Harmonic Society). To this period may probably be assigned the production of 13 anthems for 3 and 4 voices, all contained in the same autograph MS., which Roger North describes as 'Psalmes to musick in parts for the use of some vertuoso ladyes in the city.' Soon afterwards, having, it is supposed, become a convert to the Romish faith, he was appointed organist to the queen. He had in 1664 composed 'the instrumental, vocal, and recitative music' for Sir Robert Stapylton's tragi-comedy, 'The Stepmother,' and in 1670 renewed his connection with the theatre by furnishing the instrumental music for Dryden and Davenant's alteration of 'The Tempest,' the vocal music being supplied by Humfrey and Banister. In 1672 Davenant's alteration of 'Macbeth,' with the songs and choruses from Middleton's 'Witch' introduced, was produced at the theatre in Dorset Garden; and Downes, the prompter, in his 'Roscius Anglicanus,' 1706, expressly states that the vocal music was composed by Lock. The very remarkable music then performed remained unpublished until about the middle of the last century, when it appeared under the editorial care of Dr. Boyce, with Lock's name as composer, and as his it was long undisputedly accepted. But Downes's proved inaccuracy in some other things at length occasioned doubts of the correctness of his statement as to the authorship of the Macbeth music, and eventually Lock's right to it was denied and its composition claimed by some for Purcell, by others for Eccles, and by others again for Leveridge. No positive proof however has been adduced in support of any one of these claims, and until such is forthcoming it would be premature to set aside the long standing traditional attribution of the music to Lock. [See MACBETH MUSIC.] In 1673 Lock composed the music (with the exception of the act tunes, by Draghi) for Shadwell's 'Psyche,' which he published in 1675, under the title of 'The English Opera,' together with his 'Tempest' music, prefaced by some observations, written with his usual asperity, but curious as an exposition of his views of the proper form for opera. The work itself is constructed upon the model of Lully's operas. In 1672 an extraordinary controversy commenced between Lock and Thomas Salmon, who had published 'An Essay to the Advancement of Musick by casting away the perplexity of different cliffs and writing all sorts of musick in one universal character.' Lock attacked the work in 'Observations upon a late book entitled An Essay etc.,' written in a most acrimonious and abusive tone, to which Salmon replied in 'A Vindication' of his essay, bristling with scurrility, and Lock in 1673 retorted in 'The Present Practice of Music vindicated &c. To which is added Duellum Musicum, by John Phillips [Milton's nephew]. Together with a Letter from John Playford to Mr. T. Salmon in confutation of his Essay,' which closed the dispute. Of its merits it is sufficient to observe that the old practice has continued in use to this day, whilst Salmon's proposed innovation was never accepted, and probably, but for the notice taken of it by Lock, would have long ago passed into oblivion. In 1673 Lock published a small treatise entitled 'Melothesia, or Certain General Rules for playing upon a Continued Bass, with a choice Collection of Lessons for the Harpsichord or Organ of all sorts,' said to be the first of the kind published in England.[1] His compositions were numerous and various. His anthem, 'Lord, let me know mine end,' was printed by Boyce, and several other anthems exist in MS. in the Tudway collection, the Fitzwilliam Museum, at Westminster Abbey, Ely, and elsewhere. Some anthems and Latin hymns are in 'Cantica Sacra, 2nd set,' 1674; some hymns in 'Harmonia Sacra,' 1688 and 1714; songs in 'The Treasury of

[1] William Penny's 'Art of Composition, or, Directions to play a Thorow Bass' is mentioned in Clavel's 'Catalogue of Books printed in England since the Dreadful Fire,' 1670, and in a catalogue of Henry Playford's, but no copy has been found.

Musick,' 1669; 'Choice Ayres, Songs and Dialogues,' 1676-84; and 'The Theater of Music,' 1687; and eight three-part vocal compositions by him (including 'Ne'er trouble thyself at the times or their turning,' reprinted in some modern collections) in 'The Musical Companion,' 1667. Instrumental compositions by him are printed in 'Courtly Masquing Ayres,' 1662; 'Musick's Delight on the Cithern,' 1666; 'Apollo's Banquet,' 1669; 'Musick's Handmaid,' 1678 (reprinted in J. S. Smith's 'Musica Antiqua'); and Greeting's 'Pleasant Companion,' 1680. In several of these is 'A Dance in the Play of Macbeth,' evidently written for an earlier version than Davenant's.[1] The library of the Sacred Harmonic Society contains the autograph MS. of a 'Consort of ffoure Parts' for viols, containing six suites, each consisting of a fantazia, courante, ayre and saraband, which Roger North (1728) tells us was 'the last of the kind that hath been made.' Lock died in August 1677. He is said to have been buried in the Savoy, but the fact cannot be verified, the existing registers extending no further back than 1680. Purcell composed an elegy on his death, printed in 'Choice Ayres' etc., Book II, 1689. A portrait of him is in the Music School, Oxford. [W.H.H.]

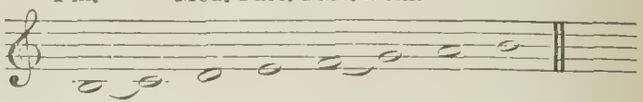
LOCKEY, Charles, son of Angel Lockey of Oxford, was admitted a chorister of Magdalen College, April 1, 1828, and remained so until 1836, when he went to Bath to study under Edward Harris. In 1842 he became a pupil of Sir George Smart and lay clerk of St. George's Chapel, Windsor. In 1843 he was appointed vicar choral of St. Paul's Cathedral. In 1846 he was engaged for the Birmingham Festival and allotted the tenor song 'Then shall the righteous,' in the first performance of 'Elijah.' On hearing him rehearse the song, Mendelssohn immediately requested him also to sing 'If with all your hearts,' which had before been assigned to another singer. 'A young English tenor,' says the composer,[2] 'sang the last air so very beautifully that I was obliged to collect myself to prevent my being overcome, and to enable me to beat time steadily.'—In April 1848 Lockey was appointed a gentlemen of the Chapel Royal. He married May 24, 1853, Miss Martha Williams, contralto singer. In 1859 an affection of the throat deprived him of his voice and compelled his retirement. [W.H.H.]

LOCRIAN MODE (Lat. *Modus Locrius, Modus Hyperœolius*). The Eleventh Ecclesiastical Mode: a tonality which can scarcely be said to have any real existence—as it is universally discarded, in practice, on account of its false relation of *Mi contra Fa*—though, in theory, it necessarily takes its regular place in the series. [See Mi contra Fa.]

Theoretically, the Final of the Locrian Mode is B. Its compass, in the Authentic form, ranges between that note, and its octave above; and its semitones lie between the first and second, and third and fourth degrees. Its Dominant is G, (F being inadmissible, by reason of its forbidden relation with the Final,) and its Mediant, D. Its Participants are E, and F; its Conceded Modulations, C, and the A below the Final; and its Absolute Initials, B, C, D, and G.

Mode XI.

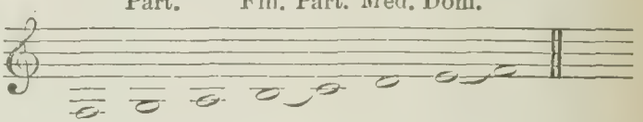
Fin. Med. Part. Part. Dom.



In its Plagal, or Hypolocrian form, (Mode XII,) its compass lies between F and the F above; and its semitones fall between the fourth and fifth and the seventh and eighth degrees. Its Final is B; its Dominant, E; and its Mediant, D. Its Participants are G, and C; its Conceded Modulations, A, and the upper F; and its Absolute Initials, G, A, B, C, D, and E.

Mode XII

Part. Fin. Part. Med. Dom.



It will be observed that the actual notes of Modes XI and XII correspond, exactly, with those of Modes IV and V. The reason why the two former are discarded, and the two latter held in good repute, is this. Mode IV, being Plagal, is subject to the 'Arithmetical Division'; i.e. it consists of a Perfect Fourth, placed below a Perfect Fifth. But, Mode XI is Anthentic; and, by virtue of the 'Harmonic Division,' consists of a *Quinta falsa*, placed below a *Tritonus*—both of which intervals are forbidden, in Plain Chaunt. Again, Mode V, being Authentic, and therefore subject to the 'Harmonic Division,' resolves itself into a Perfect Fifth, below a Perfect Fourth. But, Mode XII is Plagal; and, under the 'Arithmetical Division,' exhibits a *Tritonus*, below a *Quinta falsa*. [See Modes, the ecclesiastical.]

A very few Plain Chaunt Melodies, and Polyphonic Compositions, are sometimes referred to these rejected Modes: but, such cases are exceedingly rare; and it will generally be found that they are really derived, by transposition, from some other tonality. [W.S.R.]

LODER, Edward James, son of John David Loder, born at Bath, 1813, was in 1826 sent to Frankfort to study music under Ferdinand Ries. He returned to England in 1828, and went back to Germany with the view of qualifying himself for the medical profession, but soon changed his mind and again placed himself under Ries. When he again came back to England he was commissioned by Arnold to compose the music for 'Nourjahad,' an old drama of his to which he had added songs, etc., to convert it into an opera, for the opening of the new English Opera House, then building. The opera was produced in July, 1834, and, notwithstanding very general admiration of the music, proved unattractive owing to the poverty of the libretto.

[1] Pepys, who from Nov. 5, 1664, to Dec. 21, 1668, saw 'Macbeth' performed seven times, mentions (April 19, 1667) the 'variety of dancing and musick' in it.

[2] Letter of Aug. 26, 1846.

In 1835 Loder set Oxenford's 'Dice of Death.' He next entered into an engagement with Dalmaine & Co., the music publishers, to furnish them with a new composition every week, in part performance of which he produced his 'Twelve Sacred Songs,' dedicated to Sterndale Bennett. As it became necessary that some of the pieces produced under this arrangement should be heard in public, an opera entitled 'Francis I,' was written to incorporate them and produced at Drury Lane in 1838. As might have been expected, so heterogeneous a compound met with little success, although one song, 'The old house at home,' obtained a widespread popularity. His opera 'The Night Dancers,' his finest work, was produced at the Princess's Theatre in 1846, revived there in 1850, and again at Covent Garden in 1860. 'Puck,' a ballad opera, additions to 'The Sultan,' and 'The Young Guard,' were brought out at the Princess's in 1848. His cantata 'The Island of Calypso,' was written for the National Concerts at Her Majesty's Theatre in 1850, but, owing to their cessation, remained unperformed until given at the New Philharmonic Concerts in 1851. 'Raymond and Agnes,' an opera, was produced at Manchester in 1855. Besides these works Loder has written some string quartets and numerous songs, of which 'The brave old oak,' and 'Invocation to the deep' are well known. His compositions are distinguished by the melodiousness of the parts and their skilful instrumentation. He was for several years conductor at the Princess's Theatre, and afterwards at Manchester, but although musically well qualified for the office his want of regular, business-like habits militated greatly against his success. About 1856 he was attacked by cerebral disease, which long afflicted him, and prevented his resuming his old avocations. He died April 5, 1865.

John Fawcett Loder, born 1812, an excellent violinist and able orchestral leader, for many years resided at Bath and managed the concerts there. When Bath ceased to be a place of fashionable resort Loder removed to London, and on the retirement of François Cramer in 1845 succeeded him as leader at most of the best concerts and festivals. He died April 16, 1853. Two other Loders, John, a violinist, and William, a violoncellist, both died several years ago, as did the wife of the latter, formerly Emily Woodyatt, a good second soprano singer. [W.H.H.]

LODER, Kate Fanny, only daughter of George Loder, born at Bath, Aug. 21, 1826, commenced playing the pianoforte when a mere child. In her 12th year she became a pupil of Henry Field, and a year afterwards entered the Royal Academy of Music, where she studied the pianoforte under Mrs. Anderson, and harmony and composition under Charles Lucas. At the end of the first year of her studentship she obtained a king's scholarship. Early in 1840 she appeared in public at her uncle's concerts at Bath, and in March at the Royal Academy concerts. In 1841 she was re-elected king's scholar. She quitted the Academy in 1844, in which year she played the Adagio and Rondo from Mendelssohn's G minor Concerto in presence and to the satisfaction of the composer at Mrs. Anderson's concert at Her Majesty's Theatre. She was then appointed professor of harmony at the Academy. She first appeared at the Philharmonic Society March 15, 1847, when she played Weber's Concerto in E♭, and in 1848 (May 29) her performance there of Mendelssohn's G minor Concerto received the unprecedented distinction of an encore. Her reputation was now confirmed, and her public performances frequent. In 1851 she was married to Mr. (now Sir) Henry Thompson, the eminent surgeon. On March 6, 1854, at the Philharmonic Concert, she made her last public appearance. She has composed an opera, an overture, two string quartets, two sonatas and some studies for the pianoforte, a sonata for pianoforte and violin, and several minor pianoforte pieces. [W.H.H.]

LODOISKA. Comedy in 3 acts. 1. Words by Fillette-Loreaux, music by Cherubini. Produced at the Feydeau July 18, 1791. The overture is still occasionally played. 2. Words by Dejaure (same story), music by R. Kreutzer. Produced at the Italiens Aug. 1, 1791. [G.]

LOEWE, Johann Carl Gottfried, born Nov. 30, 1796, at Loebejuen, between Köthen and Halle, twelfth and youngest child of a Cantor and schoolmaster. Near his home were collieries employing 300 miners, and this underground world, so near in his boyish fancy to the world of spirits, took powerful hold on his imagination, to reappear later when he was composing 'Der Bergmann' (The Miner). His father taught him music early, and his singing, especially his power of hitting the right note, having attracted attention, he was offered in 1807 a place in the choir of Köthen. There he remained two years, hearing Pergolese's 'Stabat Mater,' and other good music, and went thence to the Gymnasium of the Franke Institution at Halle. Türk, the head of this, was director of the town choral society, and at the twelve annual concerts produced much good music, although he had some curious notions, for Loewe tells that he always omitted the introduction to the Finale of Beethoven's 1st Symphony (then well known) as 'ludicrous,' and for fear of making the audience laugh. Niemeyer, chancellor of the Gymnasium, was proud of the choir, and made them sing to distinguished visitors, among others to Mme. de Staël, who made Loewe a present, and to King Jerome, who at Türk's instigation gave him an annuity of 300 thalers. This enabled him to devote himself entirely to music. He had already become a pianist by studying Bach's 'Wohltemperirte Clavier,' and he now took daily lessons from Türk, and worked hard at Kirnberger, Marpurg, and Forkel. He also learned French and Italian. Two of his songs of this date, 'Clothar' and 'Die Einsetzungsworte des Abendmahls' (op. 2)[1] have survived. Meantime the war of 1812–13 broke out, and

[1] He afterwards printed three ballads by Herder and Goethe as op. 1.

Loewe has left a graphic account of its horrors in his 'Selbstbiographie' (edited by Bitter, Berlin 1870). Türk died in 1814, and the flight of King Jerome (Oct. 26, 1813) deprived Loewe of his income, but by the aid of Niemeyer he entered the university of Halle as a theological student under Michaelis. Naue, Türk's successor, founded a Singakademie like that of Zelter at Berlin. Loewe joined this, and thus became acquainted with his future wife, Julie von Jacob, a very gifted person, whom he married Sept. 7, 1821. In 1818 he composed his first ballads, 'Edward,' and the 'Erl-king,' followed in 1824 (after his wife's death) by 'Der Wirthin Töchterlein,' which, by Marx's assistance, were printed. In 1819 and 20 he paid visits to Dresden, Weimar, and Jena, making the acquaintance of Weber, Hummel, and Goethe. In 1820 he was invited to Stettin, and having passed with credit through various tests, such as a musical exercise submitted to Zelter, and a trial sermon, was duly installed professor at the Gymnasium and Seminary, and Cantor. In 1821 he became Musikdirector to the municipality, and organist of St. Jacobus. He made a considerable mark both as a conductor and professor[1] in Stettin and throughout Pomerania. In 1837 he was elected member of the Akademie of Berlin. He was a favourite with both Frederic William III. and IV., the latter being especially fond of his ballads. He travelled much, and was present at the Musical Festivals of Düsseldorf (1837) and Mayence (the Guttenberg Commemoration), visiting Hamburg, Lübeck, and Bremen on the way. In 1844 he went to Vienna, and in 1847 to London. The Duchess of Coburg had specially recommended him to the Prince Consort and Queen Adelaide; he sang and played at Court, the Prince turning over his music; and here he heard Jenny Lind for the first time; but he left not the least trace of his presence behind him. In 1851 he went to Sweden and Norway, and in 57 to France. In 1864 he had a singular illness—a trance of six weeks' duration, and in 1866 the authorities of Stettin asked him to resign. After this mortification — somewhat atoned for by the King's opportune bestowal of a higher grade of the Order of the Red Eagle than he had before enjoyed—he left Stettin for Kiel, where he quietly expired April 20, 1869, after another trance. His heart was buried near his organ in St. Jacobus at Stettin.

Carl Loewe was an industrious composer, as will be seen from the list of his music :—5 operas, of which one only was performed—'Die drei Wünsche' (Theatre Royal, Berlin, 1834). Mantius was the tenor; Spontini took unusual pains; the opera was a great success, and the Crown Prince presented the composer with a gold medal. Oratorios—'Die Festzeiten'; 'Die Zerstörung Jerusalems' (1829); 'Die sieben Schläfer'[2] (1833); 'Die eherne Schlange' (1834); 'Die Apostel von Philippi (1835, for voices only); 'Guttenberg' (1836); 'Palestrina' (1841); 'Huss' (1842); 'Hiob,' 'Der Meister von Avis,' 'Das Sühnopfer des neuen Bundes,' 'Das hohe Lied Salomonis,' and 'Polus Atella' (all between 1848 and 60); 'Die Heilung des Blindgebornen' (1861); 'Johannes der Taufer' (62); and 'Die Auferweckung des Lazarus' (63). The three last, like 'Die Apostel von Philippi,' were for voices only, without accompaniment, a species of composition peculiar to himself. His second wife and pupil, Auguste Lange of Königsberg, sang in his oratorios with himself. He published 145 works with opus-numbers—symphonies, concertos, duets, and other pieces for P.F., but above all, ballads, in which he specially excelled, and in which he may be considered as the successor of Zumsteeg. His poetic feeling and power of musical expression give him a high rank among composers, although his music, like Reichardt's, has gone by for ever. He was the author of a 'Gesanglehre' (Stettin, 1826; 3rd ed., 1834), and of 'Musikalischer Gottesdienst, Anweisung zum Kirchengesang und Orgelspiel' (1851, 4 editions). The University of Greifswald conferred on him a Doctor's degree. Two of his songs are included in the 1st volume of 'The Musical Library.' [F.G.]

LOEWE, Johanna Sophie, dramatic singer, granddaughter of Friedrich August Leopold Loewe (who died 1816 as director of the Lübeck theatre) and daughter of Ferdinand Loewe, an actor, was born at Oldenburg in 1815, and accompanied her father to Mannheim, Frankfort, and Vienna, where he was engaged at the Burg Theater, through the influence of his sister, Julie Loewe, a celebrated actress. Here Sophie studied singing under Ciccimara and other good masters. Her début as a concert-singer was so successful that she was at once engaged for the court opera, and first appeared on the stage in 1832 in a German version of Donizetti's 'Otto mese in due ore.' A contemporary report speaks of 'her voice as not powerful, but cultivated and sympathetic, her personal appearance prepossessing, and her acting as evincing dramatic ability much above the common.' Towards the close of 1836 she went to Berlin, where she created a furore as Isabella in 'Robert le Diable,' and was at once engaged at a high salary, appearing as Amina in the 'Sonnambula' on April 28, 1837. In 1838 she was appointed chamber-singer to the king, but soon resigned, and travelled to London, Paris, and Italy. In London she appeared at Covent Garden, May 13, 1841, in Bellini's 'Straniera,' but her success was only temporary. According to Chorley she had been puffed as a new Grisi, there being an idea that Grisi had lost her voice, and he says that the public were grievously disappointed; but he allows that she was the best Elvira he had ever seen, and that her manner was sprightly, graceful, and intelligent, her 'demeanour unimpeachable, and her costume superb' as the Dogaressa in 'Marino Falieri' (Mod. German Music,

[1] Some experiments in acoustics, conducted with his colleague Grassmann, produced results of real value.

[2] Scores of these three are in the Library of the Sacred Harmonic Society.

i. 210-213). She never returned to England. She failed to obtain an engagement in Paris, and in 1845 sang again in Berlin, but coming just after Jenny Lind, was only moderately received. In 1848 she married Prince Lichtenstein and retired. She died at Pesth, Nov. 29, 1866. Her special characteristic was the singular harmony between her bodily and mental gifts. In conversation she was witty and intellectual, and as a singer had a great diversity of rôles, playing both Elvira and Donna Anna, Jessonda and Madeleine ('Postillon'), Lucrezia and Adine ('Elisir'). An admirable portrait of her was painted by Krüger, and engraved by Sachse of Berlin.

Her niece and namesake, SOPHIE LÖWE, a soprano, daughter of the regisseur of the Court Theatre at Stuttgart, and pupil of Stockhausen, made her first appearance in London in 1871, and sang at the concerts for several seasons with success, till her marriage in 1877. [F. G.]

LOGIER, JOHANN BERNARD, a descendant of a family of French refugees, was born in 1780 at Kaiserslautern in the Palatinate, where his father and grandfather were organists. He received his early musical education from his father. After the death of his parents, and when about 10 years old, he came to England in the company of an English gentleman, with whom he resided for two years, and studied the flute and pianoforte. He then joined the band of a regiment commanded by the Marquis of Abercorn, of which Willman, father of the celebrated clarinet player, was master, and with which he went to Ireland. In 1796 he married Willman's daughter, and engaged in composing for and instructing military bands and teaching the pianoforte. At the close of the war, his regiment being disbanded, he became organist at Westport, Ireland. Whilst there he invented his machine for guiding the hands of learners on the pianoforte, and devised the system of instruction known by his name. [For an account of this machine and system, and the controversy which raged on their introduction, see CHIROPLAST.] In 1821 the Prussian government sent Franz Stoepel to London to inquire into the merits of the system, and the result was that Logier was invited to Berlin to superintend the promulgation of it in Prussia. He remained in Berlin three years, being allowed an annual vacation of three months to visit England. In 1826, having acquired a competency by the sale of his chiroplast and elementary works, his very numerous classes, and the fees received for permission to use his invention and teach on his system,—it was asserted that he had received 100 fees of 100 guineas each for that purpose,—he retired and settled in Ireland, near Dublin, where he died July 27, 1846. He composed some sonatas and other pieces, besides making numerous arrangements for the pianoforte. He also composed an ode on the commencement of the 50th year of the reign of George III., Oct. 1809, performed in Dublin. Besides the publications connected with his chiroplast, he was author of 'A Complete Introduction to the Keyed Bugle,' of which instrument he is said to have been the inventor. [W. H. H.]

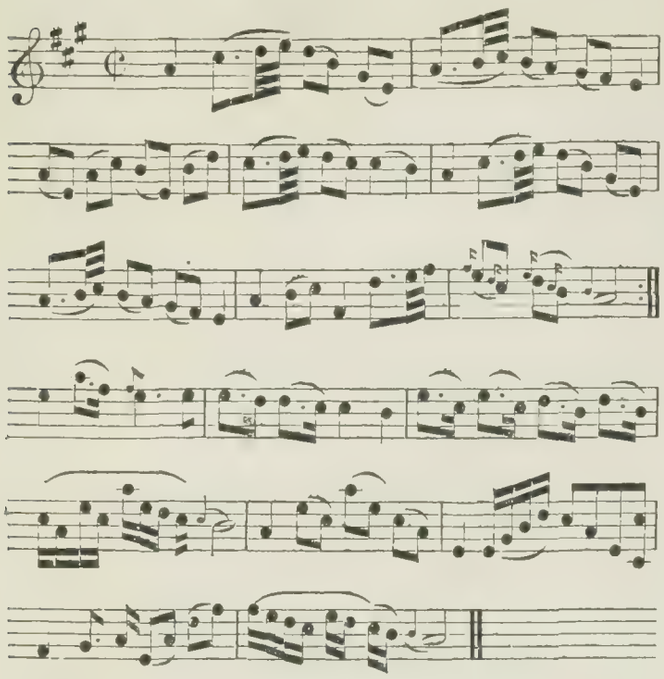
LO, HE COMES WITH CLOUDS DESCENDING, the first line of the hymn which is usually sung to the tune called HELMSLEY, or OLIVERS. This tune claims a notice on account of the various opinions that have been expressed respecting its origin. The story runs that Thomas Olivers, the friend of John Wesley, was attracted by a tune which he heard whistled in the street, and that from it he formed the melody to which were adapted the words of Cennick and Wesley's Advent hymn. The tune heard by Olivers is commonly said to have been a Hornpipe danced by Miss Catley in the 'Golden Pippin,' a burlesque by Kane O'Hara, but this seems inconsistent with chronology. The hymn-tune appeared first, as a melody only, in the second edition of Wesley's 'Select Hymns with Tunes annexed,' 1765, under the name of 'Olivers,' and in the following form:

In 1769 an improved version, in three parts, was published by the Rev. Martin Madan in the Lock 'Collection of Hymn and Psalm Tunes.' It is there called 'Helmsley,' and under that name became widely popular.

But at this time the 'Golden Pippin' was not even in existence. O'Keeffe, who possessed the original MS., tells in his 'Recollections' that it was dated 1771. The burlesque, in three acts, was produced at Covent Garden in 1773: it failed at first, but obtained some success when altered and abridged. The source from whence 'Olivers' was derived seems to have been a concert-room song commencing 'Guardian[1] angels, now protect me,' the music of which probably originated in Dublin, where it was sung by a Mr. Mahone, and no doubt also by Miss Catley, who

[1] The same words, under the title of 'The Forsaken Nymph,' had been set by Handel, some years before, to a totally different air.

resided in the Irish capital from 1763 to 1770. The melody of 'Guardian Angels' is as follows;



This melody was not in the 'Golden Pippin' as originally written, but (adapted to the words of the burlesque) was introduced into it in 1776 in the place of a song by Giordani, and was sung by Miss Catley in the character of Juno. The published score of the 'Golden Pippin' does not contain any hornpipe, but such a dance may have been interpolated in the action of the piece. It will be noticed that the resemblance between 'Olivers' and 'Guardian angels' extends only to the first part of the tune, the second part being wholly different. On the other hand, the hornpipe corresponds with the hymn-tune throughout, and with 'Helmsley' more closely than with 'Olivers.' In 1765, when the latter was published, Miss Catley was in Ireland, and did not return to London until five years afterwards, and if the hornpipe was not of earlier date than the 'Golden Pippin,' it seems to follow that instead of the hymn-tune having been derived from the hornpipe, the latter was actually constructed from the hymn-tune, which by that time had become a great favourite. [G. A. C.]

LOHENGRIN. A romantic drama in 3 acts; words and music by Richard Wagner. Composed in 1847, and produced at Weimar, under the direction of Liszt, Sept. 1850; in London, in Italian, at Covent Garden, May 8, 1875. [G.]

LOLLI, Antonio, a celebrated violinist, born at Bergamo about 1730. If it cannot be doubted that he was a most extraordinary performer, he appears certainly also to have been the type of an unmusical, empty-headed virtuoso, and in addition a complete fool.

Hardly anything is known of the earlier part of his life and career. It is however generally assumed that he was almost entirely self-taught. We know for certain that he was at Stuttgart in 1762 with Nardini. There he remained, attached to the court of the Duke of Würtemberg, till 1773, when he went to St. Petersburg, where he is said to have enjoyed the special favour of the Empress Katherine II. He remained in her service till 1778. In 1779 he came to Paris and played with great success at the Concert spirituel. After this he went to Spain, and in 1785 we find him in London, where however, according to Burney, he appeared but seldom in public. He continued to travel, and we read of his appearance now at Palermo, now at Copenhagen; then again at Vienna or Naples. He died in Sicily in 1802.

According to all contemporaneous testimony Lolli was an extraordinary performer, but an indifferent musician. Schubart, the well-known German poet and musician, who had many opportunities of hearing both him and Nardini, speaks with unmeasured praise of Lolli's feats of execution, the wonderful ease and absolute certainty with which he played the most difficult double stops, octaves, tenths, double-shakes in thirds and sixths, harmonics, etc. As to his having been a bad musician, or rather no musician at all, the testimonies are equally unanimous. The Abbé Bertini plainly states that Lolli could not keep time, could not read even easy music, and was unable to play an Adagio properly. On one occasion, when asked to play an Adagio, he said: 'I am a native of Bergamo; we are all born fools at [1] Bergamo,—how should I play a serious piece?' When in England, he almost broke down in a Quartet of Haydn which the Prince of Wales had asked him to play. If, with all these drawbacks as a musician, he nevertheless created wherever he played an immense sensation, we are all the more compelled to believe that his powers of execution were of the most exceptional kind.

He is described as a handsome man, but a great dandy and charlatan, very extravagant, and a gambler. The Emperor Joseph II, himself a very fair musician, habitually called him 'muddle-headed Lolli' (der Faselhans). Burney (Hist. iv. 680) writes that 'owing to the eccentricity of his style of composition and execution, he was regarded as a madman by most of the audience. In his freaks nothing can be imagined so wild, difficult, grotesque, and even ridiculous as his compositions and performance.' True, Burney adds, 'I am convinced that in his lucid intervals he was in a serious style a very great, expressive, and admirable performer,' but it appears doubtful whether Burney ever heard him in a 'lucid interval,' and therefore his 'conviction' is gratuitous.

His compositions (Concertos and Sonatas for the violin), poor and insipid as they are, yet are said to have been his own productions in a limited sense only. We are assured that he wrote a violin part only, and that this was corrected, furnished with accompaniments, and brought into shape, by another hand. [P. D.]

LOMBARDI, I, alla prima crociata. Italian opera in 4 acts; libretto by Solera, music by Verdi. Produced at the Scala, Milan, Feb. 11, 1843; in London, at Her Majesty's, March 3, 1846; and in Paris, Théatre Italien, Jan. 10,

[1] In Signor Alfredo Piatti, Bergamo has produced a signal contradiction to this statement.

1863. A great part of the music was afterwards employed by Verdi in the opera of JERUSALEM. [G.]

LOMBARDY, SCHOOL OF MUSIC OF. [See MILAN.]

LONDON. The University of London has [1] recently determined to grant the degrees of Mus. Bac. and Mus. Doc. under the following regulations. Candidates for the Mus. Bac. degree must have passed the Matriculation Examination ten months before. For the degree itself there are two examinations. The first, which is held in December, comprises the following subjects:—the relation between vibrations and the pitch of sounds; the nature of harmonics, and the simpler phenomena of stretched strings and compound sounds; the theory of musical intervals, of the scales, and of consonance and dissonance; the history of music so far as it relates to the growth of musical forms and rules. The second Mus. Bac. examination, held later in the same month, comprises the following subjects:—practical harmony; counterpoint in five parts with canon and fugue; form in musical composition; instrumentation; arranging for the piano from an instrumental score; a critical knowledge of the scores of certain standard works. Before admittance to this examination the candidate must have submitted to the examiners a vocal composition by himself, containing real five-part vocal counterpoint, with accompaniment for a quintet string band. Technical skill in performance is not part of the qualification for this degree: but a mark of merit is offered to candidates for playing at sight from a five-part vocal score, or playing an accompaniment from a figured bass.

For the Mus. Doc. there are also two examinations, both in December. The subjects of the first are the following:—the phenomena of sound and sound-waves, and generally the higher branches of acoustics; temperament; the scales of all nations; Greek and Church Modes; history of measured music; consonance and dissonance; theory of progressions; history and theory of harmony and counterpoint. The subjects of the second Mus. Doc. examination comprise practical harmony of the more advanced character; counterpoint in eight real parts, with canon, fugue, etc.; treatment of voices in composition; instrumentation for full orchestra; general acquaintance with the works and character of the greatest composers, and a critical acquaintance with certain specified works. Before being admitted to this examination the candidate must send in a vocal composition such as would occupy about 40 minutes in performance, containing eight-part vocal harmony and fugal counterpoint, a portion for one or more solo voices, and an overture in the form of the first movement of a classical symphony. The above list of subjects is abbreviated from the much longer official list, to which reference for more exact details is recommended. The fee for each examination is £5—i.e. £10 in all for each degree. [C.A.F.]

[1] The regulations were determined on in Dec. 1877, and first acted upon in Dec. 1878.

LONDON SACRED HARMONIC SOCIETY, THE, was formed on March 6, 1848, after the dismissal of Mr. Surman from the post of conductor to the Sacred Harmonic Society. The Rev. George Roberts was president, Mr. Surman conductor, and the affairs of the society were managed by a committee. Six concerts were given in Exeter Hall during the year 1848, resulting in a loss of £394. The so-called society lingered on for some years, and gave its last concert on Dec. 22, 1856 (Messiah). After this it seems to have ceased to exist. [G.]

LONDON VIOLIN-MAKERS. London has probably been for centuries the seat of a manufacture of stringed instruments. The popularity of the viol during the 16th and 17th centuries produced many makers of the instrument, among whom are found Jay, Smith, Bolles, Ross, Addison, Shaw, Aldred, etc. Its design admitted of little variety, and the specimens which have been preserved have only an archæological interest. Of slight construction, and usually made of thin and dry wood, most of the old viols have perished. The violin type, marked (1) by a back curved like the belly, instead of a flat back; by an increased vibration, produced (2) by sound-holes larger in proportion, and with contrary flexures (*f*), and (3) by four strings instead of six, with a fixed tuning by fifths, and greater thicknesses of wood, reached England from the continent in the middle of the seventeenth century. Its marked superiority in all respects soon drove the treble viol from the field: and a native school of violin-makers forthwith arose, who imitated the general characteristics of the new foreign model, though preserving to some extent the character of the viol. The new pattern, at first adopted for the smaller instruments, gradually extended itself to the larger ones. But viol-shaped tenors continued to be made long after this form had been abandoned for the 'treble' viol, and the violin had taken its place: bass-viols were made still later; and the viol double-bass, with its flat back and tuning by fourths, is even yet in use.

1. EARLY ENGLISH SCHOOL (1650–1700). An independent school of violin-makers naturally arose in London by the application of the traditions of viol-making to the construction of instruments of the violin type. Connoisseurs have traced certain resemblances between these early fiddles and contemporary instruments made on the continent. But the total result of an examination of these works entitles them to rank as a distinct school. Jacob Rayman, who dates from Blackman Street and the Bell Yard, Southwark (1641–1648), Christopher Wise (1656), Edward Pemberton (1660), and Thomas Urquhart (1660), are famous names among these early makers. Their instruments, though of rude ungeometrical pattern, are usually covered with a fine varnish, and have a tone of good quality. Edward Pamphilon (1680–1690), who lived on London Bridge, became more famous. His instruments still preserve a high reputation: and their resemblance to the Brescian school has given

rise among Parisian dealers to the practice, which has of late years made its way to England, of labelling them 'Gaspar di Salo.' Few Pamphilon labels exist; and nothing will persuade the Parisian connoisseur that these instruments are not veritable relics of some pre-Cremonese Italian school. Nothing, however, is more certain than that they were made when the last of the Amatis was an ancient man, and when the geometrical pattern was going out of fashion in Italy itself. Like those of Joseph Guarnerius, the works of Pamphilon are fashioned directly by hand, without the intervention of a model or mould. Often they are of stiff and graceless outline; sometimes they show curves of bold and free design, and are wrought out with scrupulous care and delicacy. In his more artistic moments, Pamphilon was fond of finishing the sound-holes with a drawn-out curl, resembling the volute of a scroll; and the bottom curve of the sound-hole runs out at something like a right angle to the axis of the fiddle. The heads are too small, a fault which is shared by all the old English makers from Rayman to Banks: they are, however, artistically shaped, and often deeply scooped in the volute. The works of Pamphilon are covered with fine yellow oil varnish, which presents a most attractive appearance. They are not difficult to be met with: the writer has casually entered the shop of a country dealer, and found three excellent ones for sale at low prices. The tenors are small, but of a good tenor tone. No Pamphilon violoncello is known to exist. The bass-viol, with flat back, was still in fashion. Barak Norman (1688–1740), a maker of eminence only inferior to Pamphilon, followed the Italians in extending the violin type to the bass instrument, and producing the violoncello. It is evident from his works that he had seen foreign instruments. His early years were chiefly employed in the construction of viols; and his first productions of the violin kind show a resemblance to Urquhart. Gradually he produced tenors and violoncellos of the new model, on most of which his monogram, elaborately wrought, is to be found. Norman became about 1715 a partner with Nathaniel Cross at the 'Bass Viol' in St. Paul's Churchyard. His works are always in request among connoisseurs. That the Early English school had its offshoots in the country is proved by the works of Thomas Duke, of Oxford (1720). None of these makers were influenced by the pattern of Stainer, which ultimately displaced the old English type of violin, as completely as the violin had displaced the viol.

2. School of Stainer-Copyists (1700–1750). The bright and easily-produced tones yielded by the Stainer model, soon made it popular in England, and the London makers vied with each other in reproducing it. The first and best of the Stainer-copyists is Peter Wamsley, of the Golden Harp in Piccadilly (1710–1734). The workmanship of Wamsley varies: like most of his successors, he made instruments of three or four qualities, probably at prices to correspond. The finer specimens of his work, well finished, and covered with a certain thick and brilliant red varnish, which he could make when he pleased, do high credit to the London school. He did not despise viol-making; nor, on the other hand, did he confine himself to the imitation of Stainer. Both he and Thomas Barrett, of the Harp and Crown in Piccadilly (1710–1730), tried their hands at free imitations of Stradivarius. Joseph Hare (1720–1726) did the same. Barrett was a more mechanical workman than Wamsley, and used a thin yellow varnish. Between 1730 and 1770 the majority of the violins produced in England were imitations of Stainer, somewhat larger, and covered with a thin greyish yellow varnish: one or two makers only used better varnish, of a brown or dullish red colour. Among the makers were Thomas Cross (1720), the partner of Barak Norman, who used a + as a device: John Johnson of Cheapside (1750–1760): Thomas Smith, a capital maker of large solid instruments on the Stainer model, who succeeded to the business of Wamsley at the 'Golden Harp' in Piccadilly (1740–1790), and Robert Thompson, at the 'Bass Violin' in St. Paul's Churchyard (1749), where he was succeeded by his sons Charles and Samuel (1770–1780). To these may be added Edward Heesom (1748); Edward Dickenson, at the Harp and Crown in the Strand; and John Norris and Robert Barnes (1760–1800), who worked together in Great Windmill Street, and in Coventry Street, Piccadilly. William Forster also began with the Stainer pattern. [See Forster, William].

3. School of Amati-Copyists. Foremost among these stands Benjamin Banks (1750–1795). He learnt the trade in the workshop of Wamsley; and though he early migrated to Salisbury, where he spent the greater part of his life, belongs in all respects to the London school. He followed Daniel Parker (1740–1785) in breaking the spell of Stainer, and seriously imitating the style of Nicholas Amati. Banks copied that maker with great fidelity. Though his violins are less in request, his tenors and basses, of which he made large numbers, are excellent instruments, and produce good prices. He used a fine rich varnish, in several tints, yellow, red, and brown. His son Benjamin returned to London: two other sons, James and Henry, carried on his business at Salisbury, but at length migrated to Liverpool. Joseph Hill (1760–1780), at the 'Harp and Flute' in the Haymarket, and a fellow-apprentice with Banks in the shop of Wamsley, made solid instruments which are still in request, but adhered less strictly to the Amati model. Edward Aireton, another alumnus of Wamsley's, worked on this model. But the chief of the older Amati-copyists is the celebrated Richard Duke of Holborn (1760–1780). Duke's high reputation amongst English fiddlers is amply justified by his works, which must be carefully distinguished from the myriad nondescripts to which his name has been nefariously affixed. 'When a really fine specimen of Duke,' says Mr. Hart, 'is once seen, it is not likely to be forgotten. As

copies of Amati such instruments are scarcely surpassed, varnish, work and material being of the best description.' Duke, in obedience to a fashion, though a declining one, also copied Stainer, but, in Mr. Hart's opinion, less successfully. His pupils, John and Edward Betts, followed him in imitating Amati. The latter was the better workman. 'Each part,' says Mr. Hart, 'is faultless in finish; but when viewed as a whole the result is too mechanical. Nevertheless, this maker takes rank with the foremost of the English copyists.' John Betts occupied a shop in the Royal Exchange, where his business was still carried on a few years since. The Forsters (see that article) followed the prevailing fashion, and copied not only Nicholas Amati, but Antonius and Hieronymus.

4. Later imitators of the Cremona School. We now reach a group of makers dating from about 1790 to 1840, and forming the last and in some respects the best section of the London School. These makers forsook altogether the imitation of Stainer, occupied themselves less with that of Amati, and boldly passed on to Stradivarius and Joseph Guarnerius. Lupot and others were doing the same in Paris. Richard Tobin, John Furber, Charles Harris, Henry Lockey Hill, Samuel Gilkes, Bernard Fendt the elder (known as 'Old Barney'), and John Carter, are among the best London makers of this period: and Vincenzo Panormo, though of Italian extraction, really belongs to the same school. Stradivarius was the chief model of these makers, and in reproducing his style they gave to the world a host of valuable instruments. The elder Fendt is commonly accounted the best maker of violins since the golden age of Cremona, though the vote of the French connoisseur would be in favour of Lupot. Bernard Fendt the younger, and his brother Jacob, together with Joseph and George Panormo, sons of Vincenzo, continued this school in another generation, though with unequal success. The Kennedy family (Alexander 1700–1786, John 1730–1816, Thomas 1784–1870) were second-rate makers of the same school. The abolition of the import duty on foreign instruments, together with the accumulation of old instruments available for use and more sought for than new ones, ruined the English violin manufacture. During the present century, Italian violins have poured into England from all parts of Europe. Paris, to say nothing of Mirecourt and Neukirchen, affords an ample supply of new violins of every quality, at rates which drive from the field English labour, whether more or less skilled. A few makers only weathered the storm. Gilkes's son William Gilkes, and pupil John Hart, of Princes Street, as well as Simon Forster, made instruments up to the time of their deaths: and there are still living two representatives of the old English school in the persons of William Ebsworth Hill of Wardour Street, best known as a dealer in Italian instruments, but in fact a violin-maker of no ordinary merit, and John Furber of Grafton Street, who still pursues the old craft. Both are descended from violin-making families dating back to the beginning of the last century. George Hart, of Princes Street, son of John Hart, and author of a most useful work called 'The Violin, its famous makers and their imitators' (1875), is chiefly known as a dealer. A few French violin-makers who have settled in London, among whom are Chanot and Boullangier, belong to the Parisian school.

This list does not profess to exhaust the London makers of stringed instruments. But it includes the most famous and prolific among them: and it may be safely added that, taken in the mass, the instruments which have been produced in London are equal in general quality to those of any city north of the Alps, not excepting Paris itself. Until the time of Lupot, the English makers were unquestionably superior as a school to the French, though they were rivalled by the Dutch: and Lupot himself might have shrunk from a comparison with the best works of Fendt and Panormo. Whether the art of violin-making in England will ever recover the blow which it has received from Free Trade, remains to be seen. [E.J.P.]

LONG (Lat. *Longa, Notula caudata*). A note, intermediate in value between the Large and the Breve. In Plain Chaunt, the Long appears as a square black note, with a tail, which may either ascend, or descend, on either side. In Polyphonic Music, it is figured as a square white note, with a tail descending on the right. In this case, the position of the tail is important: for, though it is sometimes, in modern music, made to ascend, it can only be transferred to the left hand side in Ligatures, when it materially affects the duration of the note. [See Ligature.]

In Plain Chaunt. In Polyphonic Music.

The Long represents one third of the Perfect Large, and half of the Imperfect. [See Large.] Its duration, in the Lesser Mode Perfect, is equal to that of three Breves: in the Lesser Mode Imperfect, to that of two. [See Mode.] Its corresponding Rest is drawn, when Perfect, across three spaces; when Imperfect, across two only.

Perfect Long Rest. Imperfect Long Rest.

In Plain Chaunt, it is longer than the Breve, but not in any definite proportion, except in Ligatures, where it represents a Breve and a half, or three Semibreves. Merbecke, in his 'Booke of Common Praier Noted' (1550) calls it a 'Close,' and uses it only at the end of a verse: but this restriction is not usual in Plain Chaunt Office-Books. [W.S.R.]

LONGHURST, John Alexander, born in 1809, studied under John Watson, musical director at Covent Garden, and on April 22, 1820, came out at Covent Garden as the Page in Bishop's 'Henri Quatre,' and gained great

popularity by his singing in the duet 'My pretty page,' with Miss Stephens. During that and the next four years Bishop composed original parts for him in 'Montrose,' 'The Two Gentlemen of Verona,' 'Maid Marian,' 'Clari,' 'The Beacon of Liberty,' and 'As You Like It,' besides giving him the boy's parts in 'The Miller and his Men,' 'The Slave,' etc., which he had formerly written for Gladstanes and Barnett. Early in 1826 he was allotted the part of Puck in Weber's 'Oberon,' then in preparation, but shortly afterwards, whilst in the middle of a popular ballad, 'The Robin's Petition,' his voice suddenly broke, and he was compelled to relinquish singing. Weber mentions the event in a letter to his wife, March 9, 1826:—'The young fellow who was to have sung Puck has lost his voice, but I have a charming girl,[1] who is very clever and sings capitally.' After a short time he became known as a teacher of singing and the pianoforte and excellent accompanyist. He died in 1855 aged 46.

His younger brother, WILLIAM HENRY, Mus. Doc., born in the parish of Lambeth, Oct. 6, 1819, was admitted a chorister of Canterbury Cathedral, Jan. 6, 1828, under Highmore Skeats, sen., having afterwards Stephen Elvey and Thomas Evance Jones as his masters. In 1836 he was appointed lay clerk and assistant organist of the cathedral. On Jan. 26, 1873, he was chosen to succeed Jones as organist and master of the choristers. His doctor's degree was conferred on him by the Archbishop of Canterbury (Tait), Jan. 6, 1875. His compositions consist of anthems, services, songs, etc., and a MS. oratorio, 'David and Absalom.' [W.H.H.]

LOOSEMORE, HENRY, Mus. Bac., was a chorister in one of the Cambridge colleges, afterwards lay clerk there, and organist of King's College. He graduated at Cambridge in 1640. In 1660 he was appointed organist of Exeter Cathedral. A service and anthems by him are in the Tudway collection (Harl. MSS. 7337, 7338) and at Ely, and two Latin litanies (in D minor and G minor) are printed in Jebb's 'Choral Responses and Litanies.' He died in 1667.

His son, GEORGE, Mus. Doc., was a chorister of King's College, Cambridge, under his father, and in 1660 became organist of Trinity College. He took his Doctor's degree at Cambridge in 1665. Anthems by him are in the Tudway collection (Harl. MS. 7339) and at Ely Cathedral.

Another son, JOHN, built the organ of Exeter Cathedral in 1665, and died 1681. Parts of his work still remain in that organ. [W.H.H.]

LORD OF THE ISLES, THE. A Dramatic Cantata founded on Scott's poem; the music by Henry Gadsby. Produced at Brighton Feb. 13, 1879. [G.]

LORELEY, DIE. An opera by[2] Geibel, upon the composition of which Mendelssohn was engaged at the time of his death (Nov. 4, 47). He had completed—as far as anything of his could be said to be complete until it was published—the finale to the act in which the heroine, standing on the Loreley cliff, invokes the spirits of the Rhine. This number was first performed at Leipzig, and at the Birmingham Festival, Sept. 8, 1852, to an English adaptation by Mr. Bartholomew, and was published as 'Op. 98, No. 27 of the posthumous works.' In Oct. 1868 an Ave[3] Maria (scene 3) for soprano solo and chorus, and late in 1871 a Vintagers' Chorus (scene 4) were published, and portions of the 2nd and 7th scenes are more or less advanced towards completion. The Finale is frequently put on the stage in Germany. The opera has been since composed by Max Bruch (produced at Cologne in August 1864).

2. The Loreley is the subject of an opera by F. Lachner, words by Molitor, produced at the Court Theatre, Munich, in 1846. [G.]

LORENZ, FRANZ, physician and writer, born at Stein, Lower Austria, April 4, 1805; took his doctor's degree 1831, and is now residing in Wiener-Neustadt. Like many other physicians, he has done much for music, and his publications are of special interest and value:—'In Sachen Mozart's' (Vienna, 1851), much praised by Köchel in his Mozart-Catologue (Preface, xvii.); 'Haydn, Mozart, and Beethoven's Kirchenmusik,' etc.; 'W. A. Mozart als Clavier-Componist' (Breslau, 1866); various accurate and interesting contributions on Mozart, Beethoven, and Haydn, to the Deutsche Musik-Zeitung,[4] 1861, 62; the Wiener Zeitung,[5] Aug. 3, 1850, Aug. 16, 1863.[6] It is to Dr. Lorenz that we owe Krenn's important account of Beethoven's last autumn, and the other anecdotes and traits there given. [See KRENN.] [C.F.P.]

LORTZING, GUSTAV ALBERT, opera-composer, born at Berlin, Oct. 23, 1803, son of an actor. He studied for a time under Rungenhagen, but the wandering life entailed by his father's profession made steady instruction an impossibility, and at 9 he was thrown upon his own resources, played the pianoforte, violin, and cello, studied the works of Albrechtsberger and others, and soon began to compose. At the same time, he habitually sung and acted on the stage, and thus secured a familiarity with the practical requirements of the boards which was of great advantage to him. In 1822 he went with his parents to Cologne, where he married before he was 20, and produced his first operetta 'Ali Pascha von Janina.' The company to which he belonged served the theatres of Detmold, Münster, and Osnabrück, in addition to that of Cologne, and at all these his opera was repeated. In 1833 he was engaged as first tenor at the Stadttheater at Leipzig, and here he passed a happy and successful 10 years. In 1837 he wrote and composed two comic operas, 'Die beiden Schützen' and

[1] Miss Harriet Cawse, afterwards Mrs. John Fiddes.

[2] 'Dem Andenken Felix Mendelssohn-Bartholdy's' (Hannover, Rümpler 1861).

[3] This was performed in London early in 1860 under the care of Mr. Benedict.

[4] Mozart's Requiem (1861, No. 33, 48); Mozart's Klavier-Sonaten (do. 41, 42); Mozart's Masses (1862, No. 34, 35); Beethoven at Gneixendorf (do. 10); Haydn and his princely patrons (do. 45, 47, 48).

[5] Mozart's death.

[6] Haydn and Beethoven.

'Czaar und Zimmermann.' Both were successful, and the latter was at once performed all over Germany. His next few works however fell flat, and it was not till 1842 that his 'Wildschütz,' arranged from Kotzebue's comedy, again aroused the public. He then gave up acting, and in 1844 was appointed Capellmeister of the theatre, a post for which he was unfitted both by his easy disposition and his defective education, and which he resigned in the following year. He next produced 'Undine' (1845) with success at Hamburg and Leipzig, and 'Der Waffenschmidt' (1846) at Vienna, where he was for a short time Capellmeister at the theatre 'an der Wien.' In 1849 the success of his 'Rolandsknappen' at Leipzig, again procured him the offer of the Capellmeistership, but to his disappointment the negotiations fell through, and Rietz was appointed. His life was now a hard one; he travelled from place to place with his numerous family, earning a precarious existence now as an actor, now by conducting his own operas; enduring at the same time the mortification of having his later operas rejected by all the more important theatres. In 1850 he obtained the conductorship at the Friedrich-Wilhelmstadt theatre in Berlin, where he had only farces and vaudevilles to direct; but he was completely worn out, and died on the 21st of Jan. 1852. The public discovered its neglect too late, honoured his remains with a solemn funeral procession, and raised a subscription which placed his family above want. He left an opera, 'Regina,' several overtures, incidental music for various plays, Lieder, and part songs, all unpublished. His operas are still stock-pieces at the comic theatres in Germany, and 'Undine' is frequently performed, although romantic subjects were not his forte. 'Czaar und Zimmermann' was produced as 'Peter the Shipwright,' at the Gaiety theatre, London, as lately as April 17, 1871.

As a composer Lortzing is remarkable for naturalness. Instead of straining after a depth and subtlety beyond his powers, he wisely aims at expressing natural and healthy sentiments by means of graceful and pleasing music, and his keen sense of humour enables him to give an interest to commonplace situations. He was never able to free himself entirely from a slight amateurishness in the technical part of his work, but his compositions, though not belonging to the highest branch of art, are good of their kind, and in spite of an occasional tendency to farcical exaggeration, are sound and artistic music. [A.M.]

LOTTI, Antonio, eminent composer, son of Matteo Lotti, a Venetian, Capellmeister to the then Catholic Court of [1] Hanover; born probably in 1667, and possibly in Venice, since he styles himself 'Veneto' on the title-page of his book of Madrigals (1705), and his brother Francesco was lawyer to the Procuratori, a post tenable only by a native. At any rate, his early years were passed in Venice, and before he was 16 he produced an opera, 'Il Giustino,' to words by a nobleman, Nicolo Beregani. His master was Legrenzi, then Maestro di capella to the Doge. Lotti entered the Doge's chapel as a boy; in 1687 joined the 'Confraternità musicale di Santa Cecilia'; was appointed, May 30, 1689, 'cantore di contra alto,' with a salary of 100 ducats; and Aug. 6, 1690, became deputy organist, with an addition of 30 ducats. On May 31, 1692, the Procuratori of St. Mark's unanimously elected him organist in place of Pollarolo, appointed vice maestro di capella. As second organist he composed a book of Masses, for which he received 100 ducats July 22, 1698. On Aug. 17, 1704, he succeeded Spada as first organist, and retained the post forty years, receiving permission in 1732 to employ as substitute his pupil Saratelli, who eventually succeeded him. In 1733 the Maestro di capella, Antonio Biffi, died, and an eager competition for the vacant post ensued. Lotti's chief rivals were Pollarolo and Porpora, and at the first election, March 8, 1733 (the dates throughout are from State documents), he obtained 6 votes out of 12. A majority being necessary, the matter remained in suspense, and meantime Lotti was authorised to call himself Maestro di capella. Porpora retired before the second election (April 2, 1736), but his place was taken by a scarcely less formidable competitor, Giovanni Porta. Lotti however received 9 votes, and thus obtained the post, with its salary of 400 ducats and an official residence. In the interim he composed his celebrated 'Miserere,' which superseded that of his master Legrenzi, and has been performed in St. Mark's on Maundy Thursday ever since. This was followed by a number of masses, hymns, and psalms, with organ accompaniment only, although his predecessors had employed the orchestra. He also composed 17 operas (for list see Fétis), produced with success between the years 1693 and 1717, at the theatres of S. Angelo, S. Cassiano, S. Giovann' Crisostomo, and SS. Giovanni e Paolo. Some of these having attracted the attention of the Crown Prince of Saxony during his stay in Venice (1712), he engaged Lotti to visit Dresden, with a company of singers, including Boschi and Personelli, both members of the chapel, and his own wife, a Bolognese singer named Santa Stella. The joint salary of husband and wife was fixed at 2,100 'doppii' (about £1600). The party set out on September 5, 1717, having obtained special leave of absence from the Procuratori of St. Mark's—'per farvi un opera.' In Dresden Lotti composed 'Giove ed Argo,' 'Ascanio, ovvero gl' odi delusi del Sangue,' and 'Teofane' with Pallavicini; intermezzi, and various other pieces, including church works, among which may be specified the 8-part 'Crucifixus' occurring in a 'Credo' for 5 voices and instruments. The Procuratori gave him one extension of leave, but in 1719 he was compelled to return or vacate his post; and accordingly left Dresden in October in a travelling-carriage, which he ever after

[1] Through the kindness of Dr. Kestner of Hanover I am able to say that no documents as to music or musicians at the Court of Hanover in the 17th century are now to be found there. The Register of the Catholic Church at Hanover contains, under Nov. 5, 1672, an entry of the baptism of Hieronymus Dominicus, son of Matthias de Lottis and Marina de Papirinis, and under Nov. 9, 1673, of that of a daughter of Matteo de Lotti. The Register was begun in May 1671, so that it does not go far back enough for our purpose. [G.]

retained as a memorial of his visit, and finally bequeathed to his wife. After his return he composed entirely for the church and chamber. Lotti died of a long and painful dropsy on Jan. 5, 1740, and was buried in the church of S. Geminiano, where his widow (who died 1759 and was buried with him) erected a monument to his memory. It was destroyed with the church in 1815.

Besides the compositions already mentioned he wrote for Vienna an opera, 'Constantino,' overture by Fux (1716), and two oratorios, 'Il Voto crudele' (1712), and 'L'Umiltá coronata' (1714); for Venice, the oratorios 'Gioa, Rè di Giuda,' 'Giuditta' (printed by Poletti), and the celebrated madrigal 'Spirto di [1]Dio' for the Doge's espousal of the Adriatic, performed on the Bucentoro in 1736—a very effective composition. His book of Madrigals (1705) dedicated to the Emperor Joseph I., contains the one in 5 parts, 'In una siepe ombrosa,' which Bononcini claimed in London as his own composition, and which led to his disgrace (see p. 650 *a*, note). Another is given as a model by Padre Martini in his 'Esemplare di contrappunto.' Nevertheless they were severely handled at the time in a 'Lettera famigliare d'un accademico filarmonico,' circulated in MS. anonymously, but attributed on Fontana's authority to Marcello, who had been a pupil of Lotti's. Many of his compositions are still in the King of Saxony's musical library, and Breitkopf & Härtel once possessed several of his MSS., as did also Dr. Burney.

Lotti's rank among musicians is a high one, from the fact that though the last representative of the old severe school, he used modern harmonies with freedom and grace. The expression and variety of his music struck even his contemporaries, especially Hasse, when he was at Venice in 1727. Burney, who heard his church music sung in Venice in 1770 (Tour, ii. 152) credits him with 'grace and pathos,' and characterises his choral music as both solemn and touching, and so capable of expression, though written in the old contrapuntal style, as to have affected him even to tears. Of his cantatas he says that they contain recitatives full of feeling (Hist. iv. 534). As a specimen of his writing for a single voice we may cite the favourite song 'Pur dicesti.' He was so afraid of overloading the voices that he never used orchestral accompaniments in church music. There are wind instruments as well as the four strings in his Dresden operas, but not in those produced in Venice.

Besides Saratelli and Marcello, Alberti, Bassani, Gasparini, and Galuppi were among his pupils. A motet of Lotti's, 'Blessed be thou,' and a madrigal, 'All hail Britannia,' both for 4 voices, are given in Mr. Hullah's Part Music (1st ed.), and a fine Credo in C, also for 4 voices, in his Vocal Scores and Part Music (2nd ed.). Proske has a Mass of his (à 4) in Musica Divina, vol. i., and Rochlitz a Crucifixus, à 6, and another à 8, and a Qui tollis, à 4, in his Sammlung. There is also a Kyrie in the Auswahl vorz. Musikwerke (Trautwein). Four Masses and a Requiem are in Lück's Sammlung, and various other pieces in the collections of Schlesinger, Moskowa, etc. [F.G.]

[1] A MS. of this is in the Library of the Sacred Harmonic Society, No. 1940.

LOTTINI, Antonio, the principal Italian basso in London in 1737 and 8. He sustained that part in Handel's 'Faramondo' in 1737, in his 'Serse,' and in the 'Conquista del Vello d'oro' in 1738. [J.M.]

LOUIS FERDINAND, Prince,—accurately Friedrich Christian Ludwig,—born Nov. 18, 1772, killed at the battle of Saalfeld, Oct. 13, 1806, was the son of Prince August Ferdinand of Prussia, and therefore nephew of Frederick the Great and of Prince Henry (the patron of J. P. Salomon, and cousin of Frederick William II), the cello-player for whom Beethoven wrote his op. 5. His sister Louise married Prince Radziwill, who composed the Faust music and to whom Beethoven dedicated the Overture op. 115. Louis Ferdinand thus belonged to a musical as well as a royal family, and he appears to have been its brightest ornament on the score of natural gifts—his uncle the Great Frederick excepted—even down to our own time; in music undoubtedly so. He was kindly and generous in the highest degree, and free from all pride of rank; energetic and enterprising, and as a soldier bold to temerity. In conversation he was brilliant, in social intercourse delightful. On the point of morals his reputation was not good; but one who knew him well, while admitting that, being prevented by his rank from making a marriage of affection, 'he chose female friends with whom he lived in the most intimate relations,' asserts positively that 'he never seduced an innocent girl, or destroyed the peace of a happy marriage.' This, in the time of Frederick William II, was high praise. He was passionately fond of his two illegitimate children, and left them to the care of his sister, Princess Radziwill. That he very early entered the army was a matter of course, for no other career was open to a Prussian prince; but that, amid all the distractions of a military life, no small part of which (1792–1806) was spent in hard service, he should have become a sound practical musician and composer proves his energy and perseverance no less than his talent; but music was his passion, and in garrison or camp he had musicians with him and kept up his practice. He preferred English pianofortes, of which he is said to have purchased no less than thirteen.

We find no account of his masters and early studies, nor any but vague notices of his rapid progress, until 1793. He was then with his regiment at Frankfort, and is reported to have aided a poor musician not only with his purse, but by a very fine performance of a sonata in a concert. Three years later, in 1796, Beethoven, then in Berlin, formed that opinion of his playing which he afterwards expressed to Ries (Biog. Not. p. 110), that, though the playing of Himmel—then among the most renowned of pianists—was elegant and pleasing, it was not to be compared to that of the Prince. Ries also (Ib.) records

Beethoven's compliment to him—that he did not play at all like a king or a prince, but like a thorough solid pianist. [See the article on DUSSEK for an account of his relations with that great musician.] In 1804 he made a journey to Italy. In Bohemia he visited Prince Lobkowitz at his seat, Raudnitz. We see no sufficient reason to doubt the truth of an anecdote the scene of which lay then and there. Lobkowitz had purchased from Beethoven the recently composed Heroic Symphony, and had had it performed in his palace at Vienna. He consulted with Wranitzky, his Kapellmeister, as to a programme for the entertainment of his guest. Wranitzky proposed the new symphony. Louis Ferdinand listened with the utmost interest, and at the close of the performance requested a repetition, which was of course granted. After supper, having to depart early the next morning, he besought the favour of a third performance, which was also granted.

It was under the fresh impression of this music that Louis Ferdinand renewed his acquaintance with Beethoven. We have no particulars of the meeting. Ries (Biog. Not. p. 11) only relates, that an old [1] Countess, at the supper after a musical entertainment, excluded Beethoven from the table set for the Prince and the nobility, at which the composer left the house in a rage. Some days later Louis Ferdinand gave a dinner, and the Countess and Beethoven being among the guests, had their places next the Prince on either hand, a mark of distinction of which the composer always spoke with pleasure. A pleasant token of their intercourse survives in the dedication to the Prince of the P. F. Concerto in C minor, which was first played in July 1804, and published in November.

In the autumn of the next year (1805), the Prince being at Magdeburg on occasion of the military manœuvres, Spohr was invited to join them. 'I led,' says Spohr (Selbstbiog.), 'a strange, wild, stirring life, which for a short time thoroughly suited my youthful tastes. Dussek and I were often dragged from our beds at six in the morning and called in dressing-gown and slippers to the Prince's reception room, where he, often in shirt and drawers (owing to the extreme heat), was already at the pianoforte. The study and rehearsal of the music selected for the evening often continued so long, that the hall was filled with officers in stars and orders, with which the costume of the musicians contrasted strangely enough. The Prince however never left off until everything had been studied to his satisfaction.' Louis Ferdinand's compositions, like his playing, were distinguished for boldness, splendour, and deep feeling; several of those which are in print were composed before the intercourse with Dussek had ripened his taste, and made him more fully master of his ideas. These he would gladly have suppressed. The Pianoforte Quartet in F minor is considered to be his most perfect work.

Ledebur's list of the published compositions (made 1861) is as follows:—

Op. 1. Quintet for P.F. and Strings, C minor.	Op. 9. Rondo for P.F., 2 Violins, Flute, 2 Clarinets, 2 Horns, Viola, and Cello, B.
„ 2. Trio for P.F., Violin, and Cello, A♭.	„ 10. Trio for P.F., Violin, and Cello, E♭.
„ 3. Do., do., E♭.	„ 11. Larghetto, variations, P.F., with Violin, Viola, and Cello, oblig.
„ 4. Andante, do., B♭.	„ 12. Octet for P.F., Clarinet, 2 Horns, 2 Violins, 2 Cellos.
„ 5. Quartet for P.F., Violin, Viola, and Cello, E♭.	„ 13. Rondo for P.F.
„ 6. Do., do., F minor.	Also a 2nd Quintet for P.F. and Strings.
„ 7. Fugue, 4 voix, for P.F. solo.	
„ 8. Nocturno for P.F., Flute, Violin, Cello obligati, and 2 Horns ad lib., F.	

[A.W.T.]

LOULIÉ, ETIENNE, protégé of Mlle. de Guise, and music-master, in the second half of the 17th century, is only known as the author of 'Eléments ou Principes de Musique' (Paris 1696), at the close of which is an engraving and description of his 'Chronometre.' Loulié was the first to attempt to indicate the exact *tempo* of a piece of music by means of an instrument beating the time. The one he invented took the minute as the unit, and went up to 72 degrees of rapidity; but being six feet in height was too cumbrous for general use. Nevertheless to Loulié belongs the merit of the idea which more than a century later was carried into practice by MAELZEL. [G.C.]

LOURE. This word, whether derived from the Latin *lura*, a bag or purse, or the Danish *luur*, a shepherd's flute, or merely an alteration of the Old French word *outre* with the article prefixed, *l'outre*—signified originally a kind of bagpipe, common in many parts of France, but especially in Normandy. The peasants of Lower Normandy still call the stomach 'la loure,' just as those of Normandy and Poitou call an 'outre' or leathern wine-bottle, 'une vèze.' Again, the Old French words 'chèvre,' 'chevrie,' 'chevrette,' were derived from *cabreta* in dog-latin, and 'gogue' meant an inflated bag or bladder. These circumstances seem to point to the conclusion that the names of all these instruments, 'chèvre,' 'chevrette,' 'gogue,' 'loure,' 'vèze,' 'saccomuse,' etc., refer to the wind-bag, ordinarily made of goat-skin; an argument strengthened by the English 'bagpipe' and the German 'Sackpfeife,' 'Balgpfeife,' 'Dudelsack,' etc.

From its primary signification—a kind of bagpipe inflated from the mouth—the word 'loure' came to mean an old dance, in slower rhythm than the gigue, generally in 6–4 time. As this was danced to the nasal tones of the 'loure,' the term 'louré' was gradually applied to any passage meant to be played in the style of the old bagpipe airs. Thus 'lourer' is to play legato with a slight emphasis on the first note of each group. The 'louré' style is chiefly met with in pastoral, rustic, and mountaineer music.

As an example we give the first strain of a Loure from Schubert's Die Tanzmusik.

[G.C.]

[1] Not the Countess Thun, as has been stated—she died long before.

LOVATTINI, GIOVANNI, an Italian singer, celebrated for the most beautiful of tenor voices and for his excellent acting. He sang in London (1767) in Piccinni's 'Buona Figliuola,' very strongly cast with La Guadagni and Morigi. Lovattini continued to sing here for several years, until the end of 1774, according to Lord Mount-Edgcumbe; but the present writer has only traced him as late as 1772, when he was singing in 'La Schiava' of Piccinni and Guglielmi's 'Virtuosa.' We have no record of his later career; but in 1834 Lord Mount-Edgcumbe saw, 'in the pavement of a church at Bologna, a small square, inscribed with the three words, *Qui giace Lovattini.*' [J.M.]

LOVE'S TRIUMPH. An opera in 3 acts; words by J. R. Planché, after 'Le Portrait vivant,' music by W. Vincent Wallace. Produced at the Royal English Opera, Covent Garden, (Pyne and Harrison) Nov. 3, 1862. [G.]

LOWE, EDWARD, was a native of Salisbury and a chorister in the cathedral there under John Holmes, the organist. In 1630 he succeeded Dr. William Stonard as organist of Christ Church Cathedral, Oxford. In 1660 he was appointed one of the organists of the Chapel Royal. In 1661 he published at Oxford 'A Short Direction for the performance of Cathedrall Service, published for the information of such as are ignorant of it and shall be called upon to officiate in Cathedral or Collegiate Churches where it hath formerly been in use,' containing the notation of the Preces, Responses, Litany, etc., for ordinary days, and, under the title of 'Extraordinary Responses upon Festivalls,' a version of Tallis's Responses and Litany, and also 'Veni Creator,' harmonised for 4 voices. In 1662, on the resignation of Dr. Wilson, he was appointed Professor of Music at Oxford, having been deputy for some time before. In 1664 he published 'A Review' of his 'Short Direction,' adapted to the then newly-revised Liturgy, and including also several chants and John Parsons's Burial Service. This edition was eprinted by Dr. Rimbault in 1843, and by Dr. Jebb in his 'Choral Responses' in 1857. Low composed several anthems, some of which are in the Tudway collection and at Ely Cathedral. He died at Oxford, July 11, 1682, and was buried in the Divinity Chapel on the north side of the cathedral. [W.H.H.]

LOWE, THOMAS, favourite tenor singer, made his first appearance on any stage at Drury Lane, Sept. 11, 1740, as Sir John Loverule in 'The Devil to pay'; Oct. 17 he performed Macheath, and Dec. 20 had the distinction of being the original singer of Arne's beautiful songs, 'Under the greenwood tree' and 'Blow, blow, thou winter wind' in 'As You Like It.' He was the original singer of the following parts in Handel's oratorios;—Priest of Dagon and Israelitish Man in 'Samson,' 1742; First Elder in 'Susanna,' 1743; Joshua, 1746; Zadok in 'Solomon,' 1749; and Septimius in 'Theodora,' 1750. In 1745 and several subsequent years he sang at Vauxhall Gardens, and in 1763 became lessee and manager of Marylebone Gardens, and continued so until 1768, when an unsuccessful season compelled him in Feb. 1769 to assign his interest in the place to trustees for the benefit of his creditors. His powers beginning to fail he was compelled to accept engagements at Finch's Grotto Garden, Southwark, and similar places. In 1784 he was engaged at Sadlers' Wells. Lowe is said to have possessed a finer voice than Beard, but to have been inferior as musician and singer. [W.H.H.]

LUCAS, CHARLES, born at Salisbury, July 28, 1808, was a chorister in the cathedral under Arthur Thomas Corfe from 1815 to 1823, when he became a pupil of the Royal Academy of Music, and studied the violoncello under Lindley, and harmony and composition under Lord and Dr. Crotch. He remained there for 7 years. In 1830 he became a member of Queen Adelaide's private band, and composer and arranger of music for it, and soon afterwards music preceptor to Prince George (now Duke) of Cambridge and the Princes of Saxe Weimar. In 1832 he succeeded Cipriani Potter as conductor at the Royal Academy of Music. He also became a member of the opera and other orchestras as a violoncellist. In 1839 he was appointed organist of Hanover Chapel, Regent Street. He was for some time conductor of the Choral Harmonists' Society. On the retirement of Lindley he succeeded him as principal violoncello at the opera, the provincial festivals, etc. From 1856 to June 30, 1865, he was a member of the music-publishing firm of Addison, Hollier, & Lucas. In 1859 he was appointed successor to Potter as Principal of the Royal Academy of Music, which office he held until July 1866, when ill health compelled him to relinquish it. His compositions include 'The Regicide,' opera, 3 symphonies, string quartets, anthems, songs, etc. He edited 'Esther' for the Handel Society. He died March 30, 1869. His son, STANLEY LUCAS, born 1834, was Secretary to Leslie's Choir from its formation to Oct. 1855; has been Secretary to the Royal Society of Musicians since 1861, and to the Philharmonic Society since 1866, and is otherwise much connected with music in London. [W.H.H.]

LUCCA. In 1640 an Academy, that of the 'Accesi,' was founded at Lucca entirely for dramatic musical representation. [C.M.P.]

LUCCA, PAULINE, one of the most brilliant operatic artists of a brilliant epoch, is a native of Vienna. Her high musical gifts showed themselves early, when, a mere child, she sang in the choir of the Karlskirche, in 1856. One Sunday the principal singer was missing, and the young chorister put forward to supply her place in the solo of a mass of Mozart's, revealed a beauty of voice and charm of style that startled all present. She studied under Uschmann and Lewy, and her parents being in straitened circumstances, entered the chorus of the Opera at Vienna, which she quitted in 1859 to come out at Olmütz. Just before leaving, it fell to her to lead the Bridesmaids' Chorus in the Freischütz, her performance creating a sensation that made Vienna eager to retain her; but it was too late. On

Sept. 4, 1859, she made her début at Olmütz as Elvira in 'Ernani,' and there became a favourite at once. In March 1860 she appeared at Prague as Valentine in 'The Huguenots,' and as Norma. The fame of a young singer of rare gifts, including the rarest of all, original genius, reached Meyerbeer in Berlin, then vainly seeking an artist to whom he could entrust the unconventional rôle of Selika in his yet unpublished 'Africaine.' At his instigation Mlle. Lucca was engaged for Berlin, where she first appeared in April 1861, and soon roused an enthusiasm rarely equalled by any former singer. She studied the rôle of Selika and others under Meyerbeer's personal supervision. At Berlin she was engaged as Court singer for life; and on July 18, 1863, made her first appearance in this country, at Covent Garden, in the part of Valentine, creating an extraordinary impression, which was further enhanced by her performance of Margherita, in 'Faust,' during her second fleeting visit to our shores the following year. In July 1865 the Africaine was produced at Covent Garden, and Mlle. Lucca's impersonation of Selika must be ranked among the very highest achievements in the lyrical drama. She reappeared in London every season (excepting 69) up to 1872; and sang throughout Germany with triumphant success, and at St. Petersburg, where she was received with the wildest enthusiasm. Her voice, a full soprano, with a compass of $2\frac{1}{2}$ octaves extending easily to C in alt, and sympathetic throughout, seemed capable of taking every grade of expression; and to her rare lyrical endowments she united one still rarer—a genius for representation. In London, besides the parts specified above, she was heard mostly in Zerlina (Fra Diavolo), Leonora (Favorita), and Cherubino; but Berlin knew better the extent of a répertoire said to include over 56 rôles. Auber was so delighted with her singing of his music, that he presented her with the pen with which 'Fra Diavolo' was written, in token of his admiration. Meyerbeer pronounced her a very David Garrick, and no wonder. To each impersonation she imparted a specific individuality, presenting characters as directly opposed as Cherubino and Selika, Halévy's Juive and Nicolai's Merry Wife of Windsor, Wagner's Elsa, and Angela in the 'Domino Noir,' with the same truth, natural ease, and vivid originality; whilst to colourless rôles, such as Agata in the Freischütz, she gave a distinct personality and charm. In 1872 she severed her connection with Berlin, and went to America, where she remained two years, on an operatic tour through the States. She returned to Europe in 1874, and sang at all the chief cities of Germany, except Berlin. At Vienna, where she now resides, she has remained one of the chief attractions of each season. Besides starring engagements in Germany, she appeared in Brussels 1876, St. Petersburg and Moscow 1877, and Madrid 1878. At Vienna she has recently added Donna Anna, Carmen, and Madeleine in 'Le Postillon,' to her list of successful parts. In 1865 she married Baron Rahder. [B. T.]

LUCCHESINA, Maria Antonia Marchesini, detta LA, an Italian mezzo-soprano, who sang in London, 1737–39. In the former year she played *Rosimonda* in Handel's 'Faramondo'; in the following year, beside other parts, that of *Arsamene*, a male character, in 'Serse'; and she sang the music of David in 'Saul' on its first production, Jan. 16, 1739. [J.M.]

LUCIA DI LAMMERMOOR. Opera in 3 acts; libretto by Cammarano, music by Donizetti. Produced at Naples in 1835; in Paris, in 4 acts (words by A. Royer and Waez), at the Théatre de la Renaissance, Aug. 10, 1839, and the Académie-royale Feb. 20, 1846; in London, at Her Majesty's, April 5, 1838; in English, at Princess's theatre, Jan. 19, 1843. [G.]

LUCIO SILLA. A Dramma per musica, in 3 acts; libretto by G. da Gamera, music by Mozart. Produced at Milan Dec. 26, 1772—the last which he wrote for Italy. [G.]

LUCREZIA BORGIA. Opera in 3 acts; libretto adapted by Romani from Victor Hugo's drama, music by Donizetti. Produced at La Scala, Milan, Spring, 1834; given at Théatre Italien, Paris, Oct. 27, 1840. Victor Hugo then stopped the performance, and the words were re-written under the title of 'La Rinegata.' In England it was produced (in 2 acts) at Her Majesty's theatre June 6, 1839, for the début of Mario; in English, at Princess's theatre, Dec. 30, 1843. [G.]

LÜBECK, Charles H., conductor and violinist, born Feb. 11, 1799, at Alssen, near Dusseldorf; held the post of Kapellmeister at the Hague until his death, Feb. 11, 1866. His eldest son, Ernst Heinrich, a very distinguished pianist, was born 1829, and first appeared in public at 12 years of age, when he played Beethoven's Eb Concerto. He made a tour to the United States, Mexico and Peru, which lasted from 1849 to 1852. On his return he was made Court pianist at the Hague. In 1855 he moved to Paris, where he principally resided until driven from the city by the disturbances of the Commune, which gave a shock to his brain from which it never recovered. He became at length hopelessly insane, and died Sept. 17, 1876. He wrote only for piano. Among his compositions are the following:—Berceuse in Ab, op. 13; Tarentelle; Polonaise, op. 14; 'Trilby the Sprite, Révérie caracteristique.' The two former were chosen by him for performance at the Philharmonic Concert May 7, 1860, when he also played Mendelssohn's Concerto in G minor. In the same year he first appeared at the Musical Union. His playing was distinguished for brilliancy and technique. Berlioz says of him: 'Son talent est tout à fait extraordinaire, non seulement par un mécanisme prodigieux, mais par un style musical excellent et irreprochable. C'est la verve unie à la raison, la force unie à la souplesse; c'est brillant, pénétrant, et élastique comme une lame d'épée.'

His brother, Louis, born 1832 at the Hague, was for some years teacher of the violoncello at the Leipzig Conservatorium, until about 1872, when he moved to Frankfort. [J.A.F.M.]

LUISA MILLER. Opera in 4 acts; libretto (from Schiller's 'Cabale und Liebe') by Camarrano, music by Verdi. Produced at Naples December, 1849. Given in French at the Grand Opera, Paris, as 'Louise Miller,' Feb. 2, 1853; in English, at Sadlers' Wells, June 3, and in Italian, at Her Majesty's, June 8, 1858—both as 'Luisa Miller.' [G.]

LULLI, or LULLY, Jean Baptiste, the first French composer of a series of operas, son of Lorenzo de' Lulli, a gentleman of Florence, and Catarina del Serta, was born at or very near Florence in 1633, though the precise date is unknown, the certificate of his baptism not having been discovered. An old Franciscan monk gave the gifted but mischievous child some elementary instruction, and taught him the guitar and the rudiments of music. The Chevalier de Guise took him to France, and having entered the service of Mlle. de Montpensier—'La Grande Mademoiselle'—in the kitchen, Lully employed his leisure in learning the songs of the day and playing them upon his violin. As his talent became known he was promoted from the kitchen to the Princess's band, where he soon distanced the other violinists. Mademoiselle, having discovered that he had composed the air of a satirical song at her expense, promptly dismissed him; but his name was sufficient to procure him a place in the King's band. Here some airs of his composition so pleased Louis XIV that he established on purpose for him a new band, called 'les petits violons,' to distinguish it from the large band of 24 violins. His new post enabled him to perfect himself as a solo-player, and gave him valuable practice as a conductor and composer for the orchestra. Baptiste, as he was then called, had common sense as well as ambition, and soon perceived that without deeper study he could not make full use of his talents. To remedy his defective education he took lessons on the clavecin and in composition from the organists Métru, Gigault, and Roberdel; and at the same time lost no opportunity of ingratiating himself with men of rank, a useful process for which he had a special gift. He was soon chosen to compose the music for the court ballets, in which Louis XIV himself danced, and after the success of 'Alcidiane' (1658), words by Benserade, was commissioned to write the divertissements for 'Sersè,' an Italian opera by Cavalli, performed at the Louvre (Nov. 22, 1660) in honour of the King's recent marriage with Marie Thérèse of Austria (June 9 previous), and, a year and a half later, the ballets for 'Ercole amante,' another opera by Cavalli, performed at the opening of the magnificent 'Salle de spectacles' at the Tuileries (Feb. 7, 1662). It was by studying the works of this Venetian composer, and observing his method, that Lully laid the foundation of his own individual style. In composing the divertissements for 'Le Mariage forcé,' 'Pourceaugnac,' and 'Le Bourgeois Gentilhomme,' he made good use of the feeling for rhythm which he had imbibed from Cavalli, and also endeavoured to make his music express the life and variety of Molière's situations and characters. The exquisitely comic scene of the polygamy in 'M. de Pourceaugnac' is in itself sufficient evidence of the point to which he had attained, and of the glorious future which awaited him.

From 1658 to 1671—the year in which Molière produced his tragedy-ballet 'Psyché'—Lully composed no less than 30 ballets, all unpublished.[1] These slight compositions, in which Lully took part with considerable success as dancer and comic actor, confirmed him in the favour of Louis XIV, who successively appointed him composer of his instrumental music, 'surintendant' of his chamber music, and in 1662 'maître de musique' to the royal family. But neither these lucrative posts nor his constantly increasing reputation were sufficient to appease his insatiable ambition. With all his genius he possessed neither honour nor morals, and would resort to any base expedient to rid himself of a troublesome rival. His envy had been roused by the privilege conceded to the Abbé Perrin (June 28, 1669) of creating an 'Académie de Musique,' and was still further excited by the success of Cambert's operas 'Pomone,' and 'Les Peines et les Plaisirs de l'Amour' (1671). With the astuteness of a courtier Lully took advantage of the squabbles of the numerous associés-directeurs of the opera, and with the aid of Mme. de Montespan, procured the transference of Perrin's patent to himself (March 1672). Once master of a theatre, the man whom honest Boileau branded as a 'cœur bas,' a 'coquin ténébreux,' and a 'bouffon odieux,' proved his right to a place in the first rank among artists, though as a man he could claim neither sympathy nor respect. In the poet Quinault he was fortunate enough to discover a *collaborateur* of extraordinary merit, and in conjunction with him Lully in the space of 14 years composed 20 operas or divertissements, of which the following is a list:—

1. Les Fêtes de l'Amour et de Bacchus (pasticcio). 3 acts. Nov. 15, 1672.
2. Cadmus et Hermione. 5 acts. Feb. 1673.
3. Alceste. 5 acts. Jan. 2, 1674.
4. Thésée. 5 acts. Jan. 11, 1675.
5. Le Carnaval. Masquerade (pasticcio). Oct. 17, 1675.
5. Atys. 5 acts. Jan. 10, 1676.
7. Isis. 5 acts. Jan. 5, 1677.
8. Psyché. 5 acts. April 9, 1678.
9. Bellérophon. 5 acts. Jan. 31, 1679.
10. Proserpine. 5 acts. Nov. 19, 1680.
11. Le Triomphe de l'Amour. Ballet. April 19, 1681.
12. Persée. 5 acts. April 17, 1682.
13. Phaéton. 5 acts. April 27, 1683.
14. Amadis de Gaule. 5 acts. Jan. 18, 1684.
15. Roland. 5 acts. Feb. 8, 1685.
16. Idylle sur la Paix. Divertissement. 1685.
17. L'Eglogue de Versailles. Divertissement. 1685.
18. Le Temple de la Paix. Ballet. Sept. 12, 1685.
19. Armide et Renaud. 5 acts. Feb. 15, 1686.
20. Acis et Galatée. 3 acts. Sept. 17, 1686.

The variety of subjects in this list is surprising, but Lully was perfectly at home with all, passing easily from lively and humorous divertissements to scenes of heroism and pathos, from picturesque and dramatic music to downright comedy, and treating all styles with equal power. He revolutionised the ballets de la cour, replacing the slow and stately airs by lively allegros, as rapid as the pirouettes of the danseuses

[1] Philidor's precious MS. collection in the library of the Paris Conservatoire de Musique contains the music of several of these divertissements. Celler published that of 'Le Mariage forcé,' for P.F., in 1867; and that of 'Le Bourgeois Gentilhomme' has recently been arranged for P.F. (1876).

whom he introduced on the stage, to the great delight of the spectators. For the 'recitativo secco' of the Italians he substituted accompanied recitative, and in this very important part of French opera scrupulously conformed to the rules of prosody, and left models of correct and striking declamation. On the other hand, he made no attempt to vary the form of his airs, but slavishly cut them all after the fashion set by Cavalli in his operas, and by Rossi, and Carissimi in their cantatas. But although the 'chanson à couplets,' the 'air-complainte' (or 'arioso' as we call it), and the 'air declamé'—afterwards brought to such perfection by Gluck—unduly predominate in his works, that monotony of form is redeemed by a neatness of execution and a sweetness of expression worthy of all praise. He thoroughly understood the stage—witness the skill with which he introduces his choruses; had a true sense of proportion, and a strong feeling for the picturesque. The fact that his works are not forgotten, but are still republished, in spite of the progress of the lyric drama during the last 200 years, is sufficient proof of his genius. Not but that he has serious faults. His instrumentation, though often laboured, is poor, and his harmony not always correct: a great sameness of treatment disfigures his operas, and the same rhythm and the same counterpoint serve to illustrate the rage of Roland and the rocking of Charon's boat. Such faults are obvious to us; but they were easily passed over at such a period of musical revolution. It is a good maxim that in criticising works of art of a bygone age we should put them back in their original frames; and according to this rule we have no right to demand from the composer of 'Thésée,' 'Atys,' 'Isis,' 'Phaéton,' and 'Armide' outbursts of passion or agitation which would have disturbed the solemn majesty of his royal master, and have outraged both stage propriety and the strict rules of court etiquette. The chief business of the King's Surintendant de la musique undoubtedly was to please his master, who detested brilliant passages and lively melodies; and making due allowance for these circumstances we affirm that Lully's operas exhibit the grace and charm of Italian melody and a constant adherence to that good taste which is the ruling spirit of French declamation. Such qualities as these will always be appreciated by impartial critics.

Lully was also successful in sacred music. Ballard published his motets for double choir in 1684, and a certain number of his sacred pieces, copied by Philidor, exist in the libraries of Versailles and of the Conservatoire. Mme. de Sevigné's admiration of his 'Miserere' and 'Libera' (Letter, May 6, 1672) is familiar to all. Equally well known is the manner of his death. While conducting a Te Deum (Jan. 8, 1687) in honour of the King's recovery from a severe illness, he accidentally struck his foot with the bâton; an abscess followed; the quack in whose hands he placed himself proved incompetent, and he died in his own house in the Rue de la Ville-l'Evêque on Saturday, March 22.

As both Surintendant de la musique and secretary to Louis XIV, Lully was in high favour at court, and being extremely avaricious, used his opportunities to amass a large fortune. At his death he left 4 houses, all in the best quarters of Paris, besides securities and appointments valued at 342,000 livres (about £14,000). His wife Madeleine, daughter of Lambert the singer, whom he married July 24, 1662, and by whom he had three sons and three daughters, shared his economical tastes. For once laying aside their parsimonious habits, his family erected to his memory a splendid monument surmounted by his bust, which still exists in the left-hand chapel of the church of the 'Petits Pères,' near the Place des Victoires. Cotton[1] was the sculptor, and the well-known Latin epitaph was composed by Santeul:—

Perfida mors, inimica, audax, temeraria et excors,
Crudelisque, e cæca probris te absolvimus istis,
Non de te querimur tua sint haec munia magna.
Sed quando per te populi regisque voluptas,
Non ante auditis rapuit qui cantibus orbem
LULLIUS eripitur, querimur modo surda fuisti.

'Lulli musicien,' a pamphlet to which both Fétis and the author of this article are greatly indebted, was chiefly compiled by the Prévost d'Exmes from various articles written by Sénecé, de Fresneuse, and Titon du Tillet. There are many portraits of Lully, of which the best-known are those engraved by Edelinck, Thomas, St. Aubin (from the bust by Colignon), and Desrochers. Mignard's portrait of him has been lost, and the full-length engraving by Bonnard, which forms the frontispiece to the score of 'Psyché,' published by Fourcault, is now extremely scarce. Our engraving is copied from Edelinck.

Lully's eldest son, Louis, born in Paris Aug. 4, 1664, died about 1715, composed with his brother Jean Louis 'Zéphire et Flore,' 5 acts (1688),

[1] Not Cosson, as Fétis has called him.

revived in 1715; by himself, 'Orphée' (1690), a failure; and with Marais, 'Alcide,' 5 acts, successfully produced in 1693, and revived as 'La Mort d'Hercule' in 1705, as 'La Mort d'Alcide' in 1716, and again under its original title in 1744. He also composed with Colasse a 4-act ballet, 'Les Saisons,' the memory of which has been preserved by one of J. B. Rousseau's satires; and a cantata, 'Le Triomphe de la Raison,' performed at Fontainebleau in 1703.

His brother, JEAN LOUIS, third son of the great composer, and a musician of considerable promise, died in 1688, aged 21. His father's court appointments devolved on him, and on his death his brother became 'Surintendant' and 'Compositeur de la chambre du roi,' to which posts he owed the slender reputation he succeeded in acquiring. [G.C.]

LUMBYE, HANS CHRISTIAN, Danish composer of marches and dance-music, born 1808 in Copenhagen. Like Strauss and Lanner he had an orchestra, which, when not travelling professionally, has been engaged since 1848 at the Tivoli near Copenhagen. Besides his many marches and dances ('Krolls Ballklänge'; 'Eine Sommernacht in Danemark'; 'Der Traum des Savoyarden,' etc.), still popular, he composed an opera 'Die Hexenflöte.' On his retirement in 1865, he was created a Kriegsrath. He died March 20, 1874. His son GEORG now enjoys nearly as great a popularity in Copenhagen as his father once did. [F.G.]

LUMLEY, BENJAMIN, born in 1812, was bred to the law, and in Nov. 1832 admitted a solicitor. Being concerned for Laporte he became mixed up with the affairs of the Opera, and on Laporte's death in 1841 was induced to become its manager. Pursuing a policy initiated by his predecessor, he gave prominence to the ballet to the neglect of the opera, and in a few years had so alienated his performers that at the end of the season of 1846 nearly the whole of his principal singers, band, and chorus, seceded and joined the newly formed establishment at Covent Garden. The popularity of Jenny Lind sustained him during the next three seasons; and after her retirement from the stage in 1849, the return of Sontag to public life enabled him to maintain his position for a time, but afterwards the fortune of the house waned, until, at the end of the season of 1852, the manager was compelled to close the theatre until 1856, when the burning of Covent Garden induced him again to try his fortune. He struggled on for three seasons, but at the end of 1858 was forced to submit. He produced during his period of management the following operas for the first time in England—Donizetti's 'Figlia del Reggimento,' 'Don Pasquale,' 'Linda di Chamounix,' and 'Favorita'; Verdi's 'Ernani,' 'Attila,' 'Nabucco,' 'Traviata,' 'Trovatore,' and 'Masnadieri'; Costa's 'Don Carlos,' and Halevy's 'Tempesta': and introduced, among others, the following singers—Jenny Lind, Tadolini, Frezzolini, Cruvelli, Parodi, Castellan, Johanna Wagner, Piccolomini, Tietjens, Gardoni, Calzolari, Fraschini, Giuglini, Fornasari, Ronconi, and Belletti. After his retirement he returned to his original profession. In 1864 he published an account of his managerial career, under the title of 'Reminiscences of the Opera' (Hurst and Blackett, 1864). He died March 17, 1875. [W.H.H.]

LUPO, THOMAS, violinist, was one of the musicians of James I. and afterwards entered the service of Prince Henry at a salary of £40 per annum. In 1607 he assisted Dr. Campion in the composition of the music for his masque on the marriage of Lord Hayes. [See CAMPION.] On the death of Prince Henry he was retained by his brother Charles. In 1614 he contributed two pieces to Leighton's 'Teares or Lamentacions.' In 1622, having 'by casual means fallen into decay,' he petitioned Prince Charles for an advance of £30 'to satisfy his creditors,' which he obtained, as well as a further advance of £20 on May 17 of the same year. He continued in Charles's service after his accession, and held his post for many years. His name occurs in two warrants dated Dec. 20, 1625, and April 17, 1641, exempting the King's musicians from payment of subsidies. He composed anthems, madrigals, songs and fancies, some of which are preserved in the MSS. in the library of Christ Church, Oxford. JOSEPH LUPO, probably a relative, was a composer of fancies, and author of commendatory verses prefixed to John Mundy's 'Songs and Psalmes,' 1594. [W.H.H.]

LUPOT, NICOLAS, the most famous of French violin-makers. The family came from the village of Mirecourt in the Vosges mountains, which has for three centuries or more been the seat of a violin manufacture. JEAN LUPOT, the great-grandfather of Nicolas, was a violin-maker here. His son LAURENT, born 1696, established himself in the trade at Lunéville (1751–1756) and Orléans (1756–1762). FRANÇOIS, son of Laurent, first worked with his father at Lunéville, and in 1758 migrated to Stuttgart, where he remained for twelve years as fiddle-maker in ordinary to the Grand Duke of Wirtemberg. In 1770 he returned, and settled at Orléans. He was the father of two sons, NICOLAS, the 'French Stradivarius,' born at Stuttgart in 1758, and FRANÇOIS, in his time a reputable bow-maker, born at Orléans in 1774. Nicolas began his career early. We have good instruments made by him at Orléans (Rue d'Illiers), before he had completed his twentieth year. These juvenile instruments are cheap in Paris at 500 francs.

In 1794 Nicolas Lupot removed to Paris and set up a shop in the Rue de Grammont (1798–1803). He afterwards removed to the Rue Croix des Petits Champs, where he made those famous copies of the great Italian makers on which his reputation rests. Lupot wisely dropped all pretensions to originality, and became the first of copyists. His favourite pattern was the Stradivarius: his few copies of Guarnerius violins are less successful. Many instruments are signed with his autograph. He made several quintets of two violins, two tenors, and bass, to which he sought to give a perfect unity of tone and appearance. These quintets fetch fancy

prices: but any Lupot violin dated from 1805 to 1824 is worth from 1000 to 1200 francs. The violoncellos are rarer: a handsome one is worth 2000 francs. Nicolas Lupot ranked in his time as the first of his trade in Europe. Spohr, who long played on one of his violins, recommends him as a maker. His weakest point is his varnish. He employed several kinds: the usual one is a thick and not very transparent oil varnish, which is sometimes badly dried, and presents a rough and lumpy appearance. Lupot died in 1824. His business descended to his son-in-law, Charles Francis Gand: and the present well-known makers. Gand and Bernardel, 21 Rue Croix des Petits Champs, correctly describe themselves as the 'Ancienne Maison Lupot, 1798.' François Lupot, the bow-maker, and brother of Nicolas, invented the 'coulisse,' or metal groove attached to the 'nut,' and carefully fitted to the stick, on which it works. He died in 1837, leaving as his successor Dominique Peccate, who ranks as the best bow-maker after Tourte. [E.J.P.]

LURLINE. Grand legendary opera in 3 acts; words by E. Fitzball, music by W. Vincent Wallace. Produced at the Royal English Opera, Covent Garden, Feb. 23, 1860. [G.]

LUSINGANDO, or LUSINGHIERO, literally 'flattering' or 'coaxing,' whence its musical meaning comes to be 'in a soft tender manner,' resembling Amoroso in character, except that the latter is generally used at the beginning of movements, and the former as applying only to a short passage. Beethoven uses it in the Quartet, op. 131, in the slow movement (no. 4), where the entry of the second subject is marked 'Andante moderato e lusinghiero.' Lusingando is a very favourite direction of Weber's, occurring in the Piano Sonata op. 4, first movement, 'tranquillo e lusingando,' in L'invitation à la Valse, where the coquettish second subject reappears pianissimo in C major, and in several other places. Chopin uses it in the Rondo in F (in 3-4 time). [J.A.F.M.]

LUSTIGEN WEIBER VON WINDSOR, DIE. An opera in 3 acts; words from Shakspeare, by Mosenthal, music by Otto Nicolai. Produced at Berlin in May 1849; in London, at Her Majesty's (in Italian), as 'Falstaff,' May 3, 1864; and in Paris at the Théatre Lyrique as 'Les Joyeuses Commères de Windsor,' May 25, 66. The overture is the strongest part of the work. [G.]

LUTE (Fr. *Luth*; Ital. *Liuto*; Germ. *Laute*; Spanish *Laud*; Port. *Alaude*). A large and beautiful stringed instrument with a long neck and fretted fingerboard; at one time much in use, but now obsolete. In mediæval Latin the lute is called *Testudo* and the guitar *Cithara*, both inaccurate identifications of ancient Greek instruments of very different construction. [See Lyre.] The lute is of Oriental origin, and its Arabic name *Al'ud*—from which its European names are derived by the omission of the initial vowel of the definite [1] article *Al*. The Portuguese *Alaude* alone retains it. The lute became known throughout the West in the time of the Crusades. We class the Russian *Kobsa* as a lute: while the *Balalaïka* of the same country is of the guitar kind. As in the viol di gamba and violoncello, the formal difference between a lute and a guitar is to be found in the back, which in the lute is pear-shaped and in the guitar is flat. The lute is without ribs, which are essential to the framing of the guitar. [See Guitar.]

The invention of stringed instruments with fingerboards, or the neck serving as a fingerboard, precedes the earliest historical monuments. The long-necked Egyptian *Nefer* was certainly depicted in the 4th dynasty; and wall-painting of the time of Moses, preserved in the British Museum, shows that it then had frets. We observe a similar instrument in Assyrian monuments, and the Hebrew *Nebel* has been supposed to be one. Strangely enough the Greeks had it not. The Arabs derived the lute from Persia, and with the instrument a finesse in the division of the octave into smaller parts than our semitones, rendered possible by the use of frets, and still an Asiatic peculiarity; the best authorities assuring us that the modern Arabian *ud* and *tambura* are thus adjusted. It is usual to speak of these fractions as $\frac{1}{3}$ of a tone. Kiesewetter however ('Musique des Arabes,' Leipzig, 1842, pp. 32, 33) gives the Persian-Arab scale as a division of 17 in the octave; 12 of the intervals being the Pythagorean *limma* (not quite our equal semitone), and 5 of the dimension of the *comma*, an interval, though small, quite recognisable by a trained ear. [See Comma.] Mr. Engel ('Musical Instruments,' 1874, p. 60) states that the Arabs became acquainted with the Persian lute before their conquest of the country, and names an Arab musician who, sent to the Persian king to learn singing and performance on the lute, brought it to Mekka in the 6th century of our era. The strings of the Arab lute are of twisted silk, an Asiatic, especially Chinese, material for strings. The same, bound round the neck, has served for the frets. [See Frets.] The modern Egyptian lute, named [2] *oud* or *e'oud*, of which there is a specimen at South Kensington, and an excellent woodcut in Lane's 'Modern Egyptians,' chap. v., has seven pairs of gut strings, and is moreover played with a plectrum of eagle's or vulture's quill.

The Western lute was a Mediæval and a Renaissance instrument. It flourished during the creative period of Gothic architecture and later, its star beginning to pale as the violin quartet arose, and setting altogether when the pianoforte became in general use. There were publications for the lute as late as 1740—6 Sonatas by Falkenhagen, Nuremberg; and, 1760, Gellert's Odes by Beyer. The great J. S. Bach himself wrote three sets of pieces for the lute. Carl F. Becker has described them in 'Die Hausmusik in Deutschland,' Leipzig 1840. He gives (p. 54) their titles—'Partita al Liuto, composta del Sign. J. S. Bach' (in C minor), 'Pièces pour le Lut,

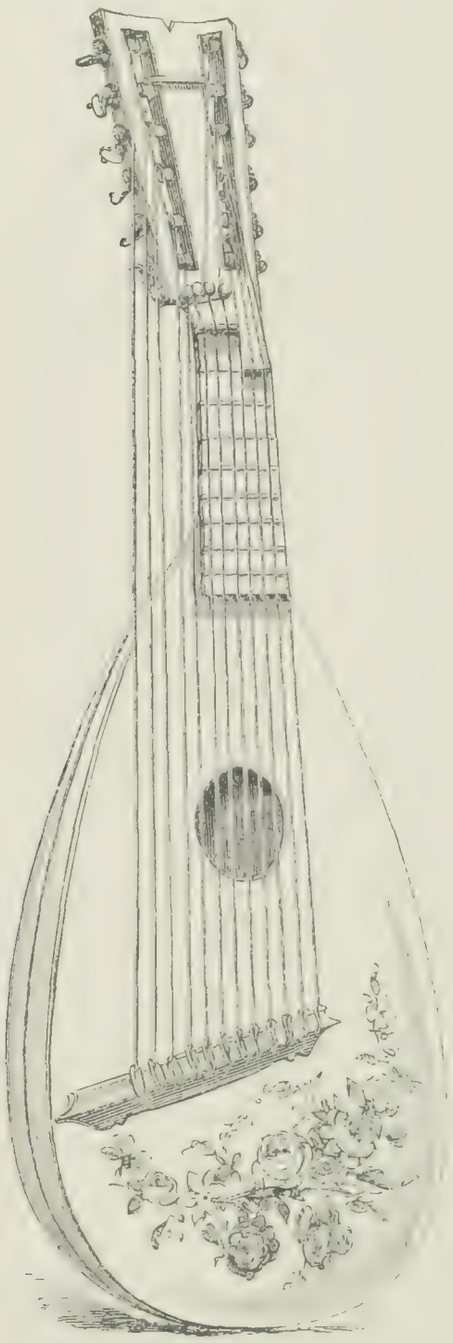
[1] In the same way *El-arz*, the cedar, became in English *Larch*.

[2] Observe the elision of the consonant.

par J. S. Bach'; lastly, 'Fuga del Signore J. S. Bach' (in G minor), of which the subject—

is to be found in a violin sonata by the same composer. These lute pieces were in MS. May we think with Becker that it was not improbable that Bach played the lute?

To proceed to the description of the instrument. The pear-shaped or vaulted body of the lute is built up of staves of pine or cedar. The belly, of

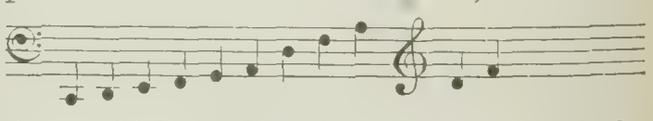


pine, has a sound-post beneath the bridge, like a violin, and one or more sound-bars for support and to assist the resonance. It is graduated in thickness towards the edges and is pierced with from one to three sound-holes in decorative knots or rose patterns. Great pains were evidently taken in choosing and making this very essential part of the instrument. Attached to the body is a neck of moderate length covered by a finger-board divided by frets of brass or catgut into a measured scale. The strings were entirely of catgut until towards the end of the 17th century, when silver spun bass strings were introduced. There would appear by comparison of old lutes to have been much diversity in the stringing and tuning, and there is a broad division in the large lutes between those notes, generally in pairs of unisons, which lie over the finger-board and frets, and the diapason notes that are not stopped, and serve only to determine the key or modulation. When off the finger-board these deeper strings were attached to pegs elevated by a second and higher neck. These extended instruments became known as theorboes, and in time virtually banished the older single-necked lutes. [See CHITARRONE, THEORBO, and ARCHLUTE, the bass theorbo.] The fingers of the right hand, without a plectrum, touched the strings *pizzicato* in melody or chords. The tender charm and colouring of the lute-player's tone can, in these days of exaggerated sonorousness, be scarcely imagined.—The frets of the finger-board followed a division by half-tones, and in the old lutes were eight to each pair of strings. Later, as will be presently shewn, they were carried farther in the higher strings. Mace (Musick's Monument; London, 1676, p. 50) said nine was the best number, but there was a limitation to this stopping nearer the bridge, by the proportions of the strings in length, thickness, and weight being unduly disturbed to the detriment of the tone. According to Baron ('Untersuchung des Instruments der Lauten,' Nuremberg, 1727) and an older authority, Praetorius, the lute had originally four open notes (*a*); in course of time two G's were added (*b*). Melchior Neusiedler of Augsburg, who was

living A.D. 1574, added the F below the bass G, making thirteen strings in all, the highest, or Chanterelle, being a single string. This compass Baron calls Gamaut, and the deeper bass strings he calls Brummer or Bombarte, the finer ones Bombärtlein. Brummer was usually applied, and the appellations in German, Italian, and English were as follows:—

G. Quintsaite.—Canto.—Treble.
D. Kleinsangsaite.—Sottana.—Small Mean.
A. Grossangsaite.—Mezzana.—Great Mean.
F. Kleinbrummer.—Tenore.—Counter Tenor.
C. Mittelbrummer.—Bordone.—Tenor.
G. Grossbrummer.—Basso.—Bass.

At page 122 of his work, Baron gives the compass of an 'eleven course' lute thus,



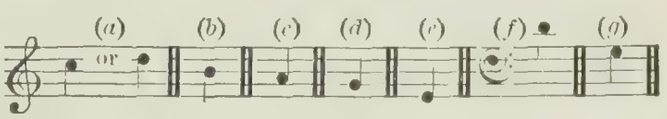
the two highest (the melody strings) being single, the remainder pairs. His division of the finger-board has ten frets for the F; eleven for the G; and twelve for each of the highest six. There is

thus a compass of $3\frac{1}{2}$ octaves from C below the bass stave to the F on the fifth line of the treble stave. We gather further from him that this tuning would represent 'cammer,' or theatre pitch; for the 'chor,' or church pitch, the chanterelle would be tuned to the treble G, to the greater peril of the strings. Praetorius ('Organographia,' Wolfenbüttel, 1619, p. 49) has G for the chanterelle. There were, at last, thirteen pairs of strings in large lutes, descending at the tuner's pleasure to the deep A or G. Mace (p. 41) explains a large compass of strings as bringing the stopping 'to a natural form and aptitude for the hand.' There were other tunings besides the above D minor. Mace gives a new French tuning in E minor, and a 'flat' tuning which he preferred; referring to that we quote from Baron (*b*) as the old lute, theorbo, or viol-way: but he wisely remarks (p. 191) 'that tuning upon any instrument which allows the artist most scope, freedom and variety, with most ease and familiarity, to express his conceptions most fully and completely, without limitation or restraint throughout all the keys, must needs be accounted the best.'

It must have been very troublesome to keep a lute in order. Mace, in his often-quoted work, recommends that a lute should be kept in a bed which is in constant use, and goes on to say that once in a year or two, if you have not very good luck, you will be constrained to have the belly taken off as it will have sunk from the stretch of the strings, 'which is a great strength.' Matheson said a lutenist of eighty years old had certainly spent sixty in tuning his instrument, and that the cost in Paris of keeping a horse or a lute was about the same. Baron replied that the horse would soon be like one of Pharaoh's lean kine.

In Italian lutes of early date the tuning pegs were disposed diagonally across the head in two rows, the projections for tuning being at the back. They were afterwards inserted at the side of the head as in a violin, the head being bent back at an obtuse or even a right angle to the neck. Ultimately metal screws replaced the pegs, but only when large single strings were put on instead of double strings. The lute is now esteemed solely for the great beauty of its form and design. Inlays of various hard woods, tortoiseshell, ivory, and mother of pearl, and sometimes painting on the sound-board, have been employed to decorate them. Through their decorative value many lutes have been preserved: the violin makers have however destroyed more for the sake of the wood, which is prized for repairing old fiddles. Lutes and viols having been made by the same artists, the word *luthier* in French still designates a maker of violins (compare German *Luther*).

The lute-player had not our musical notation; systems special to the instrument, and known as TABLATURE, being long in vogue. Many instruction books were written for the lute, with examples in tablature; the oldest known to exist in this country is the 'Lauttenbuch' of Wolf Heckel (Strasburg, 1562) preserved in the Library of the Sacred Harmonic Society. The next in order of date is in the British Museum, being an English translation by F. K. (London, 1574), of the famous Tutor of Adrien Le Roy, which had appeared in Paris in 1551. There is another in the same library by Thomas Robinson, written in the form of a dialogue (London, 1603). We must not omit the treatise by Thomas Mace (London, 1676) to which we have so frequently referred. Praetorius, in his Organographia, was careful to describe the then (1619) familiar lute. He gives (p. 51) a graduated family of lutes with their quints or chanterelles which show how much variety in size and scale was permitted. They are—(1) Klein Octav (*a*); (2) Klein Discant (*b*); (3) Discant (*c*); (4) Recht Chorist oder Alt (*d*); (5) Tenor (*e*); (6) Bass (*f*); (7) Gross Octav Bass (*g*).



Thus it will be seen that the lute generally known and described here, the 'French' lute of Mace, is the Alto lute. Vincentio Galilei, the father of the astronomer, was the author of a dialogue on the lute (Venice, 1583). Other noteworthy continental publications were by Judenkunig, Vienna, 1523; Gerle, Nuremberg, 1545; Hans Neusiedler, Nuremberg, 1556; Melchior Neusiedler, 1574; Ochsenkhuns, Heidelberg, 1558; Kargel, Strassburg, 1586; Besardus, Cologne, 1603; Campion, Paris, 1710; and Baron, Nuremberg (already quoted from), 1727.

Much valuable information collected about lute makers and the literature of the lute is communicated by Mr. Engel in his admirable catalogue of the South Kensington Museum referred to. The finest lutes were made in Italy; and Bologna, Venice, Padua, and Rome were especially famous for them. There would appear to have been a fusion of German and Italian skill in northern Italy when the Bolognese lutes were reputed to excel over all others. Evelyn in his Diary (May 21, 1645) remarks their high price and that they were chiefly made by Germans. One of the earliest of these was Lucas (or Laux, as he inscribed his name on his instruments) Maler, who was living in Bologna about 1415. There is one of his make at South Kensington, represented in the drawing, a remarkable specimen, notwithstanding that the head is modernised, the stringing altered, and the belly later adorned with painting. According to Thomas Mace, 'pittifull old, batter'd, crack'd things' of Laux Maler would fetch a hundred pounds each, which, considering the altered value of money, rivals the prices paid now-a-days for fine Cremona volins. He (p. 48) quotes the King (Charles II) as having bought one through the famous lutenist Gootiere; and one of the same master's pupils bought another, at that very high price! [A. J. H.]

LUTENIST, a lute-player. In the 16th and 17th centuries lutenists, or, as they were sometimes called, 'lewters' or 'luters,' invariably

formed part of the musical retinue of kings and princes, and one at least was commonly attached to the households of nobles and landed gentry. On Aug. 8, 1715, a lutenist's place was created in the Chapel Royal of St. James's, and John Shore was appointed to it, who held it until his death in 1752, when it was given to John Immyns, who filled it until his death in 1764. The office afterwards became a sinecure, and was eventually annexed to the Mastership of the Children as a means of increasing the stipend. It continued until the death of William Hawes in 1846, when it was abolished. [W.H.H.]

LUTHER, MARTIN, born at Eisleben, on St. Martin's Eve, Nov. 10, 1483. For the main facts of the life of the great Reformer, the reader must consult some other work, as our space compels us to confine ourselves to his relation to music, and especially to the hymns and services of the Church. It was after his departure from the Wartburg, March 22, 1522, that he began to occupy himself with projects for the reform of the services of the Church, among which his alterations in the musical parts of the Mass led to such great results. There is ample evidence that German hymns were sung during the service before Luther's alterations; but if not the actual founder, there is no doubt that he was the establisher of congregational singing. The musical part of the Mass had grown to an inordinate length; accordingly, in his first 'Formula Missae' (1523), Luther objects to the singing of long graduals, and recommends that the choice of certain hymns should be left to the priest. The Reformer had long cherished the idea of a German Mass, and during the latter part of the year 1524 he was occupied with arranging that service. In order to help him in the musical part of his work, he summoned to Wittenberg two able musicians, Conrad Rupf, Kapellmeister to the Elector of Saxony, and Johann Walther, Cantor at the Court of Frederick the Wise at Torgau. To the latter we are indebted for much information about Luther as a musician. He says that at this time he stayed with Luther at Wittenberg for three weeks, and that the Reformer himself set to music several Gospels and Epistles and the words of consecration, inventing the tunes on his flute, while Walther noted them down. Luther used also to discuss the eight Church Tones; giving the Epistle to the 8th Tone, and the Gospel to the 6th. 'For,' said he, 'Christ is a gentle Lord, and His words are lovely; therefore let us take the 6th Tone for the Gospel; and since St. Paul is a grave apostle, we will set the Epistle to the 8th Tone.' The result of these labours was the publication of the 'Order of the German Mass,' which contained the following alterations. Instead of the introit there was ordered to be sung a hymn or German psalm ('Ich will den Herrn loben,' or 'Meine Seele soll sich rühmen'). Then followed the Kyrie Eleison, sung three times (instead of nine). After the Collect and Epistle a German hymn ('Nun bitten wir den heil'gen Geist,' or another) was sung, and after the Gospel, instead of the Latin Patrem, the Creed in German (Wir glauben all'). The sermon then followed, and after this a paraphrase of the Lord's Prayer, and the Exhortation to Communicants. After the Consecration, was sung 'Jesaia dem Propheten,' Huss's hymn 'Jesus Christus, unser Heiland,' or 'Christe, du Lamm Gottes.' This form of service was first used on Christmas Day, 1524, in the parish church of Wittenberg, but it was not published until the following year. It is evident that while introducing a more popular element into the music of the Mass, Luther did not despise the singing of a trained choir. In the 'Vermahnung zum Gebet wider den Türken' (1541) he says: 'I rejoice to let the 79th Psalm, "O God, the heathen are come," be sung as usual, one choir after another. Accordingly, let one sweet-voiced boy step before the desk in his choir and sing alone the antiphon or sentence "Domine, ne secundum," and after him let another boy sing the other sentence, "Domine, ne memineris"; and then let the whole choir sing on their knees, "Adjuva nos, Deus," just as it was in the Popish Fasts, for it sounds and looks very devotional.' At the same time that he was engaged in arranging the German Mass, Luther was turning his attention to writing and adapting hymns to be sung during the service. In 1524 he wrote to his friend, George Spalatin, 'I wish, after the example of the Prophets and ancient Fathers of the Church, to make German psalms for the people, that is to say, sacred hymns, so that the word of God may dwell among the people by means of song also.' In the same year (1524) the first Protestant hymn-book appeared: 'Etlich christliche Lyeder Lobgesang und Psalm dem reinen Wort Gottes gemess auss der h. gschrifft durch mancherlay Hochgelerter gemacht, in der Kirchen zu singen, wie es den zum tail bereyt zu Wittenburg in yebung ist. Witenburg, 1524.' It is not certain whether Luther actually arranged this book; it contains only eight hymns (four of which are by him), and five tunes. During the same year several other collections appeared, and their number increased so rapidly that space forbids the insertion of a list of even those that were published during Luther's lifetime. Scattered through these different collections, there is great difficulty in deciding what hymns are really Luther's, and what are merely adaptations; the lists given at the end of this article have been compiled from the latest authorities, especially from Herr Koch, in his great work, 'Geschichte des Kirchenlieds, etc.' (Stuttgart, 1866–77). The immediate popularity which these early Protestant hymns attained was immense; they were taught in the schools, and carried through the country by wandering scholars, until his enemies declared that Luther had destroyed more souls by his hymns than by his writings and speeches. Noble words, closely wedded to noble music, severely simple, yet never trivial, these hymns seem an echo of the Reformer's own great spirit, and sound even now as true and grand as when they first stirred Germany to its very soul. On June 11, 1525, Luther was married to

Catherine von Bora, formerly a nun at Nimptsch in Saxony. This marriage proved a most happy connection, and the letters of his friends abound with descriptions of the domestic felicity to which it gave rise. We are told that after supper he used to sing motets and hymns with his children and friends, his favourite composers being Senfl and Josquin des Prés, the works of the latter of whom he particularly admired. Luther possessed a fine deep voice, and played both the flute and lute, the latter so well as to attract the attention of passers-by as he journeyed to Worms. It has been said that he wrote motets himself, but there is no proof of this, and it is probably a mistake arising from the existence, in the Munich Library, of a collection of motets with a preface by the Reformer. In 1538 Luther wrote a short treatise in praise of music; a poem by him on the same subject (entitled 'Frau Musika') also exists, and may be found in the Leipziger Allgemeine Musikalische Zeitung for 1811. The latter years of Luther's life were principally spent at Wittenburg, but he died at Eisleben, on the 18th February, 1546. He was buried in the Schloss-Kirche at Wittenberg; his greatest hymn, 'Ein feste Burg,' being sung over his grave.

The following is a list of Hymns, the words of which were written or arranged by Luther, together with their dates, so far as it has been possible to ascertain them.

I. Translations and Arrangements of Latin Hymns.

1. 'Jesus Christus unser Heiland,' 1524. From John Huss's hymn 'Jesus Christus nostra salus.'

2. 'Verleih uns Frieden gnädiglich,' 1529. From 'Da pacem Domine,' an antiphon of the 6th or 7th century.

3. 'Christum wir sollen loben,' 1524. From a Christmas hymn by Cœlius Sedulius (5th cent.), 'A solis ortus.'

4. 'Der du bist drei,' 1543. From 'O Lux beata,' an Epiphany hymn of the 5th century.

5. 'Herr Gott, dich loben wir,' 1529. From the 'Te Deum.'

6. 'Komm, Gott, Schöpfer,' 1524. From the 'Veni Creator.'

7. 'Komm, heiliger Geist,' 1524. From the 'Veni sancte Spiritus' attributed to King Robert of France, 997.

8. 'Nun komm der Heiden Heiland,' 1524. From a Christmas hymn by St. Ambrose, 'Veni Redemptor.'

9. 'Was fürcht'st du Feind,' Dec. 12, 1541. From 'Hostis Herodes impie,' an Epiphany hymn by Cœlius Sedulius.

10. 'Wir glauben all' an Einen Gott,' 1524. From the creed 'Patrem credimus.'

II. Amplifications of early German translations of Latin Hymns.

11. 'Gelobet seyst du,' 1524. Six verses added to a 15th-century translation of the Christmas Sequence of Gregory the Great, 'Grates nunc omnes.'

12. 'Mitten wir im Leben sind,' 1524. Two verses added to a 15th-century Funeral hymn on Notker's Antiphon 'Media vita in morte sumus.'

III. Corrections or Arrangements of early German Hymns.

13. 'Christ lag in Todesbanden,' 1524. From the 12th-century hymn 'Christ ist uferstanden.'

14. 'Gott der Vater, wohn uns bei,' 1524. From a 15th-century Litany.

15. 'Gott sei gelobet und gebenedeiet,' 1524. From a sacramental hymn of the 16th century.

16. 'Nun bitten wir den heiligen Geist,' 1524. From a 13th-century Whitsuntide hymn.

IV. Hymns based upon Latin Psalms.

17. 'Ach Gott vom Himmel,' 1523. Ps. xii. 'Salvum me fac.'

18 a. 'Aus tiefer Noth,' 1523. First version, containing four verses. Ps. cxxx. 'De profundis.'

18 b. Do., 1524. Second version, containing five verses.

19. 'Ein feste Burg,' 1529. Ps. xlvi. 'Deus noster refugium.'

20. 'Es spricht der Unweisen,' 1524. Ps. xiv. 'Dixit insipiens.'

21. 'Es wollt uns Gott,' 1524. Ps. lxvii. 'Deus misereatur.'

22. 'Wär Gott nicht mit uns,' 1524. Ps. cxxiv. 'Nisi qui Dominus.'

23. 'Wohl dem, der in Gottesfürchte,' 1524. Ps. cxxviii. 'Beati omnes.'

V. Hymns based upon passages of the Bible.

24. 'Christ unser Herr,' 1541. The Baptism of Christ.

25. 'Diess sind die heiligen zehn Gebot,' 1524. The Decalogue.

26. 'Jesaia, dem Propheten,' 1526. The Vision of Isaiah.

27. 'Mensch, willst du leben,' 1524. Abbreviated version of the Decalogue.

28. 'Mit Fried und Freud,' 1524. The 'Nunc Dimittis.'

29. 'Sie ist mir lieb,' 1535. The Christian Church (Rev. xii.).

30. 'Vater unser,' 1539. The Lord's Prayer.

31. 'Vom Himmel hoch,' 1535. The Nativity (a children's hymn).

VI. Original Hymns.

32. 'Ein neues Lied,' 1523. A hymn to the memory of two Lutheran martyrs, H. Voes and J. Esch, who were burnt at Brussels July 1, 1523.

33. 'Erhalt uns, Herr,' 1541. A children's hymn against the two arch-enemies of Christ, the Pope and the Turk.

34. 'Jesus Christus, unser Heiland,' 1524. An Easter hymn.

35. 'Nun freut euch,' 1523. A hymn of thanksgiving.

36. 'Vom Himmel kam,' 1543. A Christmas hymn.

The following are the hymn-tunes which were probably composed by Luther.

1. 'Jesaia dem Propheten das geschah.' Appeared in the place of the Sanctus in Luther's 'Eine Weiss, Christlich Mess zu halten,' 1526.

2. 'Ein' feste Burg ist unser Gott.' First appeared in 'Geistliche Lieder, auffs new gebessert zu Wittenberg. Dr. Mart. Luther, 1529.' This book was printed by Joseph Klug.

The following arrangements of this hymn appeared during Luther's life:—

(*a*) For 3 voices, with the melody in the Tenor, in 'News Gesang, mit dreyen stimmen den Kirchen und Schulen zu nutz, neulich in Preussen durch Joannem Kugelmann gesetzt' (Augsburg, 1540). Hans Kugelmann was Kapellmeister to Duke Albert of Brandenburg.

(*b*) For 4 voices, with the melody in the Bass, in G. Rhaw's 'Newe deutsche geistliche Gesenge cxxiii' (Wittenberg 1544).

(*c*) For 5 voices, with the melody in the Tenor, by Stephen Mahu, in G. Rhaw's Hymn-book.

(*d*) For 4 voices, with the melody in the Bass, by M. Agricola, in G. Rhaw's Hymn-book.

(*e*) For 4 voices, with the melody in the Bass, by L. Hellinck, in G. Rhaw's Hymn-book.

3. 'Aus tiefer Noth ruf ich zu dir.' First appeared in the 'Geistliche Gesangbüchleyn. Tenor.' (Wittenberg 1524.)

4. 'Ein neues Lied wir heben an.' First appeared in 'Enchiridion, Oder eyn Handtbüchlein eynem yetzlichen Christen fast nutzlich bey sich zu haben zur stetter vbung unnd trachtung Geystlicher gesenge vnd Psalmen, Rechtschaffen vnd kunstlich vertheutscht. 1524.' Printed at Erfurt.

5. 'Es spricht der Unweisen Mund wohl.' Appeared in the 'Gesangbüchleyn,' 1524.

6. 'Mensch, willst du leben seliglich.' From the 'Gesangbüchleyn,' 1524.

7. 'Mit Fried und Freud ich fahr dahin.' From the 'Gesangbüchleyn,' 1524.

8. 'Vom Himmel hoch, da komm ich her.' Appeared in Lotther's Magdeburg Gesangbuch, 1540.

9. 'Jesus Christus unser Heiland.' From the 'Enchiridion,' 1524.

10. 'Nun freut euch, liebe Christen g'mein.' From the so-called 'Achtliederbuch,' 1524. In Adam Dyson's Hymn-book (Breslau 1525) it is set to the tune of 'Es ist das Heil,' which was probably composed by Speratus.

11. 'Nun freut euch, liebe Christen g'mein.' From Klug's 'Geistliche Lieder' (Wittenberg 1529).

12. 'Vater unser im Himmelreich.' In Köphyl's Strasburg Gesangbuch (1537) and in Lotther's Magdeburg Hymn-book (1540).

13. 'Wohl dem, der in Gottesfürchte steht.' In the 'Geistliche Gesangbüchleyn,' 1524.

Of the above tunes, Nos. 1 and 2 are almost without doubt by Luther; Nos. 3 to 8 are very probably by him; and Nos. 9 to 13 are ascribed to him with less certainty. The following works contain much information as to Luther as a musician, and have been carefully consulted in the compilation of this article.

Forkel's Musikalischer Almanach for 1784.

The Leipziger Allgemeine musik. Zeitung for 1804 and 1810.

'Ueber Luther's Verdienst um den Kirchengesang.' Rambach (Hamburg 1813).

'Luther's geistliche Lieder nebst dessen Gedanken über die Musica.' Groll (Berlin 1817).

'Luther's Gedanken über die Musik.' Beck (Berlin 1825).

'Dr. Martin Luther's deutsche geistliche Lieder, etc.,' v. Winterfeld (Leipzig 1840).

'Luther's geistliche Lieder.' Wackernagel (Stuttgart 1848).

'Geschichte der biblisch-kirchlichen Dicht- und Tonkunst und ihrer Werke.' Schauer (Jena 1850).

'Choralkunde.' G. Döring (Dantzig, 1865).

'Geschichte des Kirchenlieds, etc.' Koch (Stuttgart, 1866-77).

'Luther musicien'; Revue et Gazette musicale, July 13, 1879.

[W.B.S.]

LUTHER'S HYMN, a popular name among the last generation for a hymn beginning 'Great God, what do I see and hear?' set to an old German tune 'Es ist gewisslich an der Zeit,' and formerly much in vogue at musical festivals and sacred concerts. It was sung by Braham, and Harper used to accompany it with very effective fanfares on the trumpet between the lines. The author of neither words (German nor English) nor tune is exactly known. There is a tradition that Luther made the words to the tune

as he heard it sung by a traveller. It was first printed in 1535, but it is certain that the melody had already served as 2nd melody to the older hymn 'Nun freut euch, lieben Christen g'mein.'[1]

It will be found in the ordinary collections as 'Luther's Hymn.' [G.]

LUTHERAN (German) CHAPEL, of St. James's Palace. The building now used as the German Chapel is said to have been erected about 1626 by Inigo Jones, for Queen Henrietta Maria, who had been permitted the free use in England of her religion. In 1662 it was assigned for the like purpose to Queen Catherine of Braganza, the first mass being celebrated on Sept. 21 in that year. The choir was composed of Italians, and the soprani were eunuchs. At the Revolution the friars were expelled, and the chapel was in Dec. 1688 appropriated to the use of French Protestants. Shortly afterwards a service in Dutch was also established in it for the benefit of the followers of William III. About 1703, Queen Anne and Prince George of Denmark established a German Lutheran service in a small chapel in the Middle Court of St. James's Palace, which was in 1781 transferred to the present chapel, the French and Dutch services being removed at the same time to the chapel vacated by the Germans, where they were performed until their discontinuance in 1839. Upon the removal, a new organ was erected in the chapel. The present organ, by Snetzler, was built for Buckingham House, and removed here prior to the demolition of that edifice in 1825. The organists since 1781 have been Augustus Friedrich Christopher Kollmann, died Aug. 23, 1829; George Augustus Kollmann, died March 19, 1845; Miss Joanna Sophia Kollman, died in May, 1849; and Frederic Weber, the present organist. [W. H. H.]

LUTZ, Wilhelm Meyer, was born in 1829 at Männerstadt, Kissingen, where his father was organist and teacher of harmony to the Schoolmaster's Institute. He showed a gift for the piano at a very early age, and when 12 played in public with the orchestra. His father removing to Würzburg, he entered the Gymnasium and University there, and at the same time studied music under Eisenhofer and Keller. Since 1848 Mr. Lutz has been settled in England, first as organist to St. Chad's, Birmingham, and St. Ann's, Leeds, and then organist and choirmaster to St. George's Catholic Cathedral, London, a post he still holds, and for which he has composed several grand masses and much other music. Mr. Lutz has also had a long and wide experience of the stage as *chef d'orchestre*, first at the Surrey Theatre (1851-55), and since 1869 at the Gaiety Theatre; and has also had the management of the operatic tours of Grisi and Mario, Pyne and Harrison, and other eminent artists. Many of his operas and operettas are well and favourably known in England, amongst them 'Faust and Marguerite' (Surrey Theatre, 1855), 'Blonde and Brunette' (1862), 'Zaida' (1868), 'Miller of Milburg' (1872), 'Legend of the Lys' (1873), a cantata entitled 'Herne the Hunter,' etc., etc. A string quartet which he wrote for M. Sainton's chamber concerts was very well spoken of, and he has much music, orchestral and chamber, in MS. [G.]

LWOFF, Alexis, violinist, composer, and writer on musical subjects, was born at Reval in 1799. His father, a high Russian government official, made him enter a military career, but not without having previously given him an excellent musical and general education. Owing to his many brilliant qualities he quickly advanced to high military rank, and in 1836 we find him at the same time a general, personal adjutant to the Emperor, and chief-director of the music at the Imperial Court and of the singers in the Imperial chapel, to which last post he succeeded on the death of his brother Theodor in 1836.

His merits as a violinist, especially as a quartet-player, were fully recognised at Berlin, Leipzig, Paris, and other places. Schumann is loud in praise of his thoroughly musical style of playing (Ges. Schriften, iii. 216). It is however as the composer of the Russian National Hymn that his name will be perpetuated. This hymn, a simple but noble strain, well known in England through the version of the late Mr. Chorley, included in Hullah's 'Part Music,' and often used as a hymn tune, met in Russia with a most enthusiastic reception, and is now the universally adopted National Anthem of that country. Lwoff has published a violin-concerto, 2 fantasias for violin, 4 operas, and a number of sacred choruses for the services of the Imperial Chapel. He also harmonised the traditional chants and tunes of the Russian Church, and edited them in eleven volumes.

Lwoff died on his property in the province of Kowno, Dec. 28, 1870, having suffered for 20 years from a very distressing affliction of his organs of hearing. Berlioz and he were much allied. They first met in St. Petersburg in 1847, and the volume of the correspondence of the former, recently published, contains two letters addressed to him. [P. D.]

LYCEUM THEATRE. The original theatre bearing this name occupied the site of a building erected in 1765 (on ground formerly belonging to Exeter House) for the exhibitions of the 'Society of Artists' (subsequently 'Royal Academy of Arts),' but afterwards used for a great variety of entertainments. It was constructed about 1798 under the direction of Dr. Arnold, who contemplated performing in it operas and other musical pieces, but being unable to obtain a license was compelled to abandon his intention, and the house was occupied, occasionally only, for pictorial exhibitions, table entertainments, etc., until 1809, when Samuel James Arnold, the Doctor's son, succeeded in getting a license for English operatic performances during four months in each year, June 3, to Oct. 3. Drury Lane

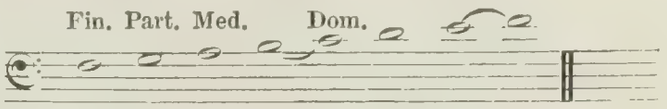
[1] See Döring, 'Choralkunde' (1865), pp. 31, 407.

Theatre having been burnt down, Feb. 24, 1809, the company performed at the Lyceum from April 11 following during the rebuilding of their own house. Arnold opened the theatre June 26, under the title of 'The English Opera House,' for the performance of operas, melodramas and musical farces. In 1815, having obtained a 99 years' lease of the ground, he employed Samuel Beazley to rebuild the theatre on the same site, behind the houses on the north side of the Strand, a narrow avenue from which formed the approach to the box entrance, the pit and gallery doors being in Exeter Court to the westward. On April 2, 1818, the elder Charles Mathews gave here his 'Mail Coach Adventures,' the first of that remarkable series of entertainments known as his 'At Home.' The most noticeable operatic event in the history of the house was the production on the English stage of Weber's 'Der Freischütz,' July 22, 1824. The house being burnt down, Feb. 16, 1830, the present theatre (also designed by Beazley) was erected. It does not occupy the exact site of its predecessor, advantage having been taken of the opportunity to form the continuation of Wellington Street on the north side of the Strand, by building the stage of the new house at the west instead of the east end. During the rebuilding the company performed at the Adelphi and Olympic Theatres. The new house opened July 14, 1834, the first new opera performed in it being Loder's 'Nourjahad,' and Barnett's 'Mountain Sylph,' produced later in the year, achieving a great success. Early in 1839 'Promenade Concerts à la Musard' (the first of the kind given in England) took place here under the conductorship of Signor Negri. In 1841 the management passed into the hands of Balfe, who produced his opera 'Keolanthe,' but his career was brief. The house then ceased to be an English opera-house and became, under its old name of 'Lyceum,' a theatre for the performance of the general drama, Keeley, Madame Vestris, Madame Celeste, Falconer, and others by turns holding the reins of management. The present manager (1879) is Henry Irving. For three seasons, 1837, 38, and 71, Italian opera buffa was given here in the winter, and the house has frequently been occupied by French comedians. During the rebuilding of Covent Garden Theatre after the fire in 1856 the performances of the Royal Italian Opera were given at the Lyceum, and in the same year the Pyne and Harrison English Opera Company performed there. It was last occupied for the performance of operas in English by the Carl Rosa Company in 1876 and 1877. [W.H.H.]

LYDIAN MODE. (Lat. *Modus Lydius, Modus V, Tonus V.*) The Fifth of the Ecclesiastical Modes; called, by mediæval writers, *Modus lætus*, (The Joyful Mode,) from its generally jubilant character.

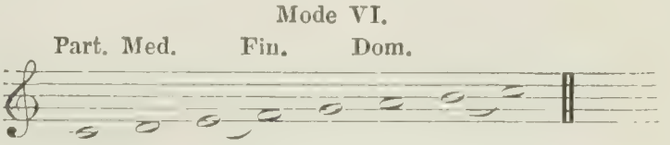
The Final of the Lydian Mode is F: and its compass, in the Authentic form, lies between that note, and the octave above. Its semitones fall between the fourth and fifth, and seventh and eighth degrees. Its Dominant is C; its Mediant, A; and its Participant G. Its Conceded Modulations are, B, D, and E; and its Absolute Initials, F, A, and C.

Mode V.



In the Plagal, or Hypolydian form, (Mode VI,) its compass lies between the C below the Final, and the C above it: and its semitones fall between the third and fourth, and seventh and eighth degrees. The Final of the Hypolydian Mode is F; its Dominant is A; its Mediant is D; its Participant, the lower C. Its Conceded Modulations are B (the 7th), B (the inverted 7th), and G: the two B's being frequently made flat, to avoid the Tritonus. [See MODES.] Its Absolute Initials are C, D, and F.

Mode VI.



The Fifth Mass in Palestrina's Tenth Book—*Missa Quinti Toni*—is written, as its name implies, in the Lydian Mode. A beautiful example of the use of the Hypolydian, and one which fully justifies the epithet antiently applied to it—*Modus devotus* (The Devout Mode)—is to be found in the first movement of the Plain Chaunt *Missa pro Defunctis*, printed, at length, in the article, KYRIE.

The Lydian Mode of the Middle Ages has nothing, but its name, in common with the older Greek scale, which is said, on the authority of Apuleius, and other antient authors, to have been characterised by a tone of soft complaint—a peculiarity which modern poets have not forgotten, in their allusions to it. [W.S.R.]

LYRE (λυρα), an ancient musical instrument, in use among the Greeks, and undoubtedly derived by them from Asia. It consisted of a hollow body or sound-chest, from which were raised two arms, sometimes also hollow, which were curved both outward and forward. These arms were connected near the top by a crossbar or yoke. Another crossbar was on the sound-chest, and formed a bridge to convey the vibrations of the strings to it. The strings—at different times four, seven, or ten in number—were made of gut, and were stretched between the yoke and the bridge, or carried on to a tail-piece below the bridge. The lyre differs from the harp in having fewer strings, and from the lute or guitar in having no fingerboard. It was played by being struck with the plectrum, which was held in the right hand, but the fingers of the left hand were also used to touch the strings. The larger lyres (*Cithara*) were supported by a ribbon slung across the player's shoulders, or held as shewn in the illustration, but the treble lyre (or *Chelys*) was held by the left arm or between the knees. The illustration is taken from a drawing upon an amphora (B.C. 440–330) in

the first vase room British Museum, Case 53, No. 744. The portion engraved represents Apollo holding a Cithara or large lyre as rarely shown

in detail in Greek art. With his left hand he at once supports the instrument and stops the strings. The plectrum would be held in the right hand and be guided by the thumb, the fingers closing over it.

The modern Greek 'lyra' is a kind of rebec, a bowed instrument with three strings, having no connection with the ancient lyre or cithara, the link between the latter and modern stringed instruments being supplied by the PSALTERY, in use in the Byzantine epoch, from which was developed the clavecin, and ultimately the pianoforte. But in the 14th century there were several *bowed* instruments known in Europe as lyres, and also the HURDY GURDY, the *lyra mendicorum*. In Italy, in the last century, there was a bowed lyra bearing a similar relation to the viol that the well-known theorbo did to the lute—namely, that from a second and higher neck, bass strings were hung that were not in contact with the fingerboard. Three varieties have been distinguished—Lyra di braccio, Lyra di gamba, and Archiviole di lyra. It would be for one of these, a favourite instrument with Ferdinand IV. King of Naples, that Haydn wrote twelve pieces. [See vol. i. 709, 720.] The museums, at home or abroad, known to the writer, have no specimens of this bijuga viol; the cut is taken from the Archiviole di lyra in 'Recueil de Planches de l'Encyclopédie,' tome iii. (Paris, 1784). [A.J.H.]

LYRIC; LYRICAL. The term Lyric is obviously derived from the lyre, which served as an accompaniment or support to the voice in singing the smaller forms of poetry among the ancient Greeks. The poems thus accompanied were distinguished by the name of Odes, and all Odes were in those times essentially made to be sung. Among the Romans this style of poetry was not much cultivated, and the poems which fall under the same category, such as those of Horace and Catullus, were not expressly intended to be sung; but inasmuch as they were cast after the same manner as the Greek poems which had been made to be sung, they also were called Odes or Lyrics. On the same principle, the name has been retained for a special class of poems in modern times which have some intrinsic relationship in form to the Odes of the ancients; though, on the one hand, the term Ode has considerably changed its signification, and become more restricted in its application; and, on the other, the term Lyric is not generally associated either in the minds of the poets or their public with music of any sort. It is true that a great proportion are not only admirably fitted to be sung, but actually are set to most exquisite music; but this fact has little or no influence upon the classification. Thus the able and intelligent editor of the beautiful collection of modern lyrics called the Golden Treasury explains in his preface that he has held the term 'Lyrical' 'to imply that each poem shall turn upon a single thought, feeling, or situation,' and though he afterwards uses the term 'Song' as practically synonymous, he does not seem to imply that it should necessarily be sung. In another part of his preface he suggests an opinion which is no doubt very commonly held, that the lyrical and dramatic are distinct branches of poetry; and Mendelssohn has used the word in this sense even in relation to music, in a letter, where he speaks of his Lobgesang as follows: 'The composition is not a little Oratorio, its plan being not dramatic but lyrical.' But it is in respect of this sense of the term that its use in modern times is so singularly contradictory. It is true that the class of poems which modern critics have agreed to distinguish as Lyrics are quite different in spirit from the dramatic kind—Mr. Robert Browning's 'Dramatic Lyrics' notwithstanding—but the principle of classification has really been erroneous all along, as though a man were called a sailor because he chose to wear a sailor's hat. Consequently the apparent anomaly of calling dramatic works lyrical

when they are associated with music is not the fault of musicians, but of the long-continued habit of mankind of classifying things according to outward resemblance, instead of regarding the true basis of the terms of classification. The term Lyric, then, originally implied music, and the Lyre stood as the type of accompaniment, of whatever kind; and it is strictly in conformity with this derivation to give the name 'Lyrical' to dramatic works which are associated with music; and we have a forcible and substantial reminder of this use of the term in the name of the celebrated 'Théâtre Lyrique' in Paris.

It has been necessary to enter into some detail on this subject in order to explain the confusion which exists in the use of the word. It must be confessed that nothing can now be gained by trying to go back to its original meaning; for the modern sense, as expressed by the editor of the Golden Treasury, has a prescriptive title of such great antiquity as would suffice to bar the most unquestionable prior claim. It would be well to bear in mind, however, that the term can have two significations, and that in relation to poetry pure and simple it does not necessarily imply music, in our language at least; and that in relation to the stage it should imply nothing else. [C. H. H. P.]

M.

MACBETH. 1. Tragedy in 3 acts; words by Rouget de l'Isle and Hix, music by Chelard. Produced at the Académie, June 29, 1827, without success. In London, King's Theatre, July 4, 1832.

2. Opera in 4 acts; libretto by Piave, music by Verdi. Produced at the Pergola, Florence, March 1847; at Paris, with alterations, at the Théâtre Lyrique, April 21, 1865.

3. An overture for orchestra in B minor, by Spohr (op. 75).

4. The first act of an opera, Macbeth, was published by von Collin in 1809; and sketches by Beethoven for the overture (D minor, 6-8) and first chorus therein, are given by Mr. Nottebohm in Mus. Wochenblatt, 1879, No. 10. [G.]

MACBETH MUSIC. Three musicians, of varied eminence, have successively composed music for Sir William Davenant's additions to—rather than alterations of—Shakespeare's tragedy of Macbeth. Sir William designed to increase its attractions for the public by combining with it music, improved scenery, and stage-machinery. He died before he could bring his experiment into practice; but it was carried out by his widow and son, at the new theatre in Dorset Garden in 1672. Downes, who was then, and for many years after, the prompter of the theatre, took advantage of the information he acquired through his position, to write a book, called 'Roscius Anglicanus, or an Historical Review of the Stage' (12mo. 1708). In this he says: 'The tragedy of *Macbeth*, altered by Sir William Davenant, being dressed in all its finery, as new clothes, new scenes, machines, as flying for the witches, with all the singing and dancing in it, the first composed by Mr. Lock, the other by Mr. Channell and Mr. Priest, it being all excellently performed, being in the nature of an Opera, it recompensed double the expenses; it proves still a lasting play.'

Downes is the only contemporary authority who refers to the authorship; but the Hon. Roger North, an accomplished musician, remarks generally, 'in music, Matthew Lock had a robust vein,' a criticism peculiarly applicable to the music in 'Macbeth.' Immediately after 'Macbeth,' Matthew Lock composed the instrumental music for Shakespeare's 'Tempest,' produced in 1673; also the vocal music for Shadwell's 'Psyche' in Feb. 1673–4. These were published by him in 1675; but music for witches was not well suited for private use, and the Macbeth music remained in manuscript until after his death in 1677. These three are Lock's only known productions for the theatre, and they were all parodied by a contemporary, one Thomas Duffett. The parody upon 'Macbeth' is 'An Epilogue spoken by Hecate and the three witches, according to the famous Mode of Macbeth,' printed with a farce called 'The Empress of Morocco,' 4to. 1674. That upon 'The Tempest' is entitled 'The Mock Tempest,' 4to. 1675; and that upon 'Psyche' is called 'Psyche Debauch'd,' 4to. 1678. Stage parodies are only written and accepted upon works that have been successful, and although the music in 'Macbeth' was ill adapted for private use, owing to its subject, that of 'Psyche' had a long-continued and widely spread popularity. Two of the vocal pieces, 'The delights of the bottle' and 'All joy to fair Psyche,' were lengthened into penny ballads, to be sung in the streets, and several other ballads which were written to the tune of the first are still extant—such as 'The Prodigal Son,' 'The Wine Cooper's Delight,' etc. Matthew Lock's robust vein is equally characterised in these airs. (See 'Popular Music of the Olden Time,' ii. 498–501.)

The only reason that can be assigned why modern musicians should have doubted Matthew Lock's authorship of the music in 'Macbeth' is that a manuscript score of it exists in the handwriting of Henry Purcell. His autograph seems to have been tolerably well ascertained. First, Dr. Philip Hayes recorded his judgment by writing on the manuscript 'Purcell's score of y^{e} music in Macbeth, also the score from whence it was printed under Mat. Lock's name.' It may

be conceded that the score is in Purcell's handwriting, and that it is the one from which Dr. Boyce had then printed the music for the first time, but assigned its composition to Mat. Lock. The present possessor of this MS. is Mr. W. H. Cummings, one of the most careful and reliable of antiquaries, as well as one intimately acquainted with Purcell's style, and with his numerous works. The means of judging equally well of Lock's music for the theatre, are not to be had, for want of examples, especially if 'Macbeth' is to be deducted from them. But there remains the inexorable logic of dates to prove that, although the manuscript be in Purcell's handwriting, he could not have been the composer of a work which was produced on the stage when he was only in his fourteenth year. Henry Purcell was born in 1658, and died in November 1695, aged 37. A sufficient reason for Purcell's having made a transcript of it is to be found in the fact that he was called upon to write music of a somewhat similar character to that in 'Macbeth,' for the sorceress in 'Dido and Æneas,' with 'choral responses and wild laughter of the infernal spirits'; and this was to be his own preliminary essay for the stage. There was a certain amount of conventionality, but not amounting to plagiarism, in the treatment of demoniacal music. This has been remarked in the music to Middleton's play of 'The Witch,' in Eccles's music to 'Macbeth,' and in Purcell's own music to 'Dido and Æneas.' Of the last, Mr. Hogarth says: 'The little duet in this scene, between two of the witches, "But ere we this perform," is remarkable for its ingenuity of contrivance, and easy flow of melody; and the full chorus which follows, and concludes the scene, has the broad simplicity of Matthew Lock.' ('Memoirs of the Musical Drama,' i. 151.) Sir John Hawkins states that Purcell wrote the music to 'Dido and Æneas' 'at the age of nineteen,' and that he composed it for the Mr. Josias Priest, who was concerned in the production of 'Macbeth' with Lock. But Sir John was mistaken as to Purcell's age, and as to 'Dido and Æneas' having been performed at Priest's house in Leicester Fields. In 1680 Priest removed from Leicester Fields (now Leicester Square), to Chelsea, and announced it in the London Gazette, No. 1567, dated Nov. 25, 1680: 'Josias Priest, Dancing Master, who kept a Boarding School of Gentlewomen in Leicester Fields, is removed to the Great School House at Chelsey, that was Mr. Portman's,' etc., and it was there 'Dido and Æneas' was produced. By happy chance, one of the books of words, distributed among the audience on that occasion, is preserved in the library of the Sacred Harmonic Society. It is of six folio pages, without title or imprint, and is headed: 'An Opera performed at Mr. Josias Priest's Boarding School at Chelsey, by young gentlewomen. The words made by Mr. Nat. Tate. The musick composed by Mr. Henry Purcell.' 'Nat' is probably a misprint for 'Nah.'—Nahum Tate. Other corroborative evidence of its production has been discovered by Mr. W. H. Cummings. This is promised in a new and more complete edition of the opera. All proves Purcell to have been at least in his 22nd year when he produced his first opera. The year then ended in March. The study of sacred and of chamber music had so predominated in Purcell's musical education, that with all his genius, when first writing for the stage, he would naturally desire a dramatic model to improve upon. This was easily to be obtained through Mr. Priest, whose connection with the theatre would enable him to borrow Lock's score to be copied. Mr. W. H. Cummings submitted the 'Macbeth' MS. to Mr. Netherclift, the well-known expert, 'who came to the conclusion that it had a certain boyish resemblance to fac-similes of Purcell's after-writings, but not sufficient of itself for him to form a decided judgment as to the identity of authorship.' This 'boyish resemblance' is precisely what might have been expected under the circumstances above detailed. Every young composer requires some model to start upon, just as the early works of Beethoven remind us of his model, Mozart.

Matthew Lock died in 1677, three years before Purcell made his preliminary essay for the stage, an essay which led to his being engaged to write the music for Nat Lee's 'Theodosius,' which appeared at the Duke's Theatre in 1680. This was the commencement of Purcell's dramatic career.[1] Matthew Lock had been appointed to compose music for the public entry of Charles II. at the Restoration, and he was soon after appointed Composer in Ordinary to the King, and organist to the Queen. His abilities had often been called upon in a minor degree for the Duke's Theatre, as in composing the original music for Davenant's song, 'My lodging it is on the cold [2]ground,' sung by Mary Davies in 'The Rivals' (4to, 1668)—and 'I prithee, love, turn to me,' in 'Apollo's Banquet,' 1669—also for 'the antique round' to be danced by the witches in

[1] In the Preface to Purcell's 'Dido and Æneas,' by the late Edward Taylor, Gresham Professor of Music, and in the Introduction to Purcell's 'Bonduca,' by the late Dr. E. F. Rimbault, the date of the first production of 'Dido and Æneas' has been silently thrown back to '1675.' In antiquarian matters, Dr. Rimbault was at that time the guide of Professor Taylor, but when Dr. Rimbault wrote the preface to his own edition of 'Dido and Æneas,' he had discovered his early error. It is easy to see how he made the mistake. In his Introduction to 'Bonduca,' Dr. Rimbault gives a list of Purcell's compositions for the stage, with dates derived, not from Purcell or from any musical authority, but from the 'Biographia Dramatica,' as to when these works were *first* produced upon the stage. Therein he found three plays in 1676—Shadwell's 'Epsom Wells,' his 'The Libertine,' and Dryden's 'Aureng Zebe.' In 1677 he found Mrs. Behn's 'Abdelazor,' and in 1678 Shadwell's alteration of 'Timon of Athens.' Not one of these plays is attributed to Purcell in Downes's contemporary account, and it is in direct contravention to Downes's statement that in 1680 'Theodosius,' 'compos'd by the famous master, Mr. Henry Purcell (*being the first he e'er compos'd for the stage*) made it a living and gainful play to the Company.' He adds that 'The Court, especially the Ladies, by their daily charming presence, gave it great encouragement.' The very name of Dryden ought to have convinced Dr. Rimbault that his inference as to Purcell having written music for 'Aureng Zebe' in 1676, when Purcell was in his eighteenth year, was unsound; but possibly he relied upon Novello's index to Hawkins's 'History of Music,' and did not see page 707, where the important notice of Dryden *versus* Purcell occurs. In it Monsieur Grabu is complimented at the expense of Purcell and other Englishmen in 1685. It was only some five years after Grabu had failed that Dryden gave his 'King Arthur' to Purcell to set. Again, it might be urged that Purcell did not compose the music for those five plays, but only for some parts of them—as in 'Timon of Athens' he rewrote the masque music in Act 2. Much more might be said were Purcell's music the subject, but here it is 'Macbeth Music.'

[2] Not the present air, but one styled 'On the cold ground,' in 'The Dancing Master' of 1665.

Act iv. sc. 2, of the original 'Macbeth,' before Davenant made his additions. This dance is included in 'Musick's Delight on the Cithren,' 1666. 'Witches' Dances' in manuscripts of that age are not necessarily by Matthew Lock. There are two such in Add. MSS. No. 10,444, in the British Museum, taken from some masque.

Eccles's music for 'Macbeth' is to be found in score in the British Museum (Add. MSS. No. 12,219). It was brought out at Drury Lane Theatre in 1696. As this was the year after Purcell's death, the date disposes of the myth of Purcell's having had any hand in after-improving it. As Eccles's music is not *the* music of 'Macbeth,' it must stand or fall upon its own merits. It was much admired by W. Linley, who edited 'Dramatic Songs' in, or for, Shakespeare's plays; but in the more trustworthy judgment of Mr. Cummings, 'it abounds in wearisome and uninteresting imitative phrases'; and again, Mr. Cummings says, 'Eccles could not have been the author of the music accredited to Lock; the former is so extremely laboured and diffuse, the latter so much more dramatic and effective in its conciseness and simplicity.' ('Concordia,' Nov. 27, 1875.)

'The music in Macbeth,' says Mr. Cummings, 'is not equal to Purcell at his best period: yet, if he composed it, as I believe, at the age of fourteen or sixteen, it adds another leaf to the laurel crown of England's greatest musical genius.' On the other hand, it may be said, that Purcell requires no borrowed plumes, and that the sole ground for attributing the music to him rests upon this manuscript. If we are to accept it as evidence that Purcell *composed* the music for 'Macbeth,' we must re-write the history of Purcell. It must henceforth be that, at the age of fourteen (sixteen is inadmissible) he appeared as a juvenile prodigy, having composed the music for 'Macbeth,' which met with an enthusiastic reception, but this meteor at once disappeared; Purcell preferred retirement for eight years, and during that period did nothing more than favour Mr. Priest with music for young ladies and gentlemen to perform, until he chose once more to shine upon the stage in 1680. The inferences drawn by Mr. Cummings in his able article show his enthusiasm for Purcell, and perhaps he had then in his mind the founding of the Purcell Society which he has since succeeded in establishing. No writer could have stated the evidence more fairly, whether the inferences to be drawn from it were for or against his opinion.

Of Richard Leveridge's claim, it is sufficient to say that he composed new music for the 2nd act of 'Macbeth' in or about 1708. It has since passed completely into oblivion, and there is no need to say anything more about it. [W. C.]

MACCHERINI, Giuseppina, the wife of a good tenor [Ansani], was born at Bologna in 1745. In 1781 she arrived in London, whither a great reputation had preceded her, but never was expectation more completely disappointed. Her voice was a mere thread, scarcely audible in the orchestra. She was soon put aside, and a fine opera, called 'Giunio Bruto,' in which her husband and Pacchierotti played, necessarily abandoned. She retired to her native town in 1788, and died there Sept. 19, 1825. [J.M.]

MACE, Thomas, one of the clerks of Trinity College, Cambridge, was author of a remarkable book published (in small folio, 272 pp., beside 18 pp. of prefatory matter) in 1676, entitled 'Musick's Monument; or, A Remembrancer of the best Practical Musick, both Divine and Civil, that has ever been known to have been in the world,' the first part of which treats of the then condition of parochial psalmody and cathedral music and the means of improving their performance; the second of the lute, including directions for choosing, tuning, repairing, performing on and composing for the instrument, with a full explanation of the tableture and numerous lessons; and the third of the viol and of music generally, with other curious matter. The book is written in a quaint, familiar style, intermingled with a profusion of strangely compounded terms, and produces a striking impression of the author's love of his art and his devout and amiable disposition. It was published by subscription at 12s. per copy in sheets. A lengthy epitome of it is given in Hawkins's History, pp. 727–733, Novello's edition. A few scanty biographical particulars are culled from it, viz. that Mace married in or shortly after 1636; that before the marriage his wife resided in Yorkshire, he in Cambridge; that in 1644 he was in York during the siege of the city by the Parliamentary army; that in consequence of having broken both arms he was compelled to make a shake upon the lute in an irregular manner; that he invented a 'table organ' (described in his book, with an engraving) to accompany a 'consort of viols'; that in consequence of partial deafness rendering the soft tones of the lute inaudible to him, he in 1672 invented a lute of 50 strings, which he termed the Dyphone, or Double Lute; that he had a family, and that his youngest son, John, learned in 1672 to play well upon the lute almost solely by the perusal of the MS. of his book [see Immyns, John]; that the writing of the work was not commenced until after Christmas, 1671, and it was licensed for publication May 5, 1675; and lastly that owing to his increased deafness, which we may presume prevented him pursuing his profession, he was in somewhat straitened circumstances. Hawkins asserts that Mace was born in 1613, evidently arriving at that conclusion from the inscription beneath the portrait (engraved by Faithorne after Cooke) prefixed to his book, 'Ætat. suæ. 63.' But it is probable that the portrait was painted at an earlier date than the year of publication. The date of his death is not known. [W. H. H.]

MACFARREN, George Alexander, Mus. Doc., son of George Macfarren, dramatist, was born in London, March 2, 1813. In early life he displayed partiality for music, but did not regularly commence its study until 1827, when

he became a pupil of Charles Lucas. In 1829 he entered the Royal Academy of Music, and made composition his principal study, learning also the pianoforte and trombone; and in 1834 he was appointed one of its professors. On Oct. 27, 1834, he produced at the Society of British Musicians his first important work, a Symphony in F minor, and in 1836 his fine Overture 'Chevy Chase.' In August 1838 his 'Devil's Opera,' produced at the English Opera House, Lyceum, at once drew public attention to him. In 1840 he produced at Drury Lane an 'Emblematical Tribute on the Queen's Marriage,' and also edited, for the Musical Antiquarian Society, Purcell's opera 'Dido and Æneas.' In 1843 he became secretary of the Handel Society, for which he edited 'Belshazzar,' 'Judas Maccabeus,' and 'Jephthah.' In Jan. 1845 he directed the successful production of Mendelssohn's 'Antigone' at Covent Garden Theatre. In 1846 his opera, 'Don Quixote,' was successfully produced at Drury Lane, and in 1849 his opera, 'Charles II.' was given at the Princess's. His serenata, 'The Sleeper Awakened,' was brought out at the National Concerts at Her Majesty's theatre in 1851, and in the same year he composed his fine cantata, 'Lenora.' His beautiful cantata, 'May Day,' was written for Bradford Festival, 1856, and his cantata, 'Christmas,' was composed in 1859. He then resumed the composition of opera, and brought out 'Robin Hood' at Her Majesty's Theatre in 1860, with great success. This was followed by 'Freya's Gift,' masque, and 'Jessy Lea,' opera, 1863; 'She stoops to conquer,' 'The Soldier's Legacy,' and 'Helvellyn,' operas, 1864. Dr. Macfarren's vision had at a comparatively early age become impaired; the malady increased year by year, until it terminated in total blindness. But this calamity did not diminish his exertions; and with extraordinary energy he continued to perform his duties as a professor at the Royal Academy of Music, and to compose, dictating his compositions to an amanuensis. On Oct. 23, 1873, his oratorio, 'St. John the Baptist,' was produced at the Bristol Festival with marked success. On March 16, 1875, he was elected Professor of Music at Cambridge on the death of Sterndale Bennett, and has greatly distinguished himself by the manner in which he has performed the duties of the office. In April following he accumulated the degrees of Bachelor and Doctor of Music. About the same time he was appointed Principal of the Royal Academy of Music. 'The Resurrection,' oratorio, was produced at Birmingham Festival in 1876, 'Joseph,' oratorio, at Leeds Festival in 1877; and 'The Lady of the Lake,' a cantata, at Glasgow, on Nov. 15, 1877. Besides the before-mentioned works Dr. Macfarren's compositions are very numerous; they include a cathedral service, anthems, chants and psalm tunes, and 'Introits for the Holy Days and Seasons of the English Church,' 1866; 'Songs in a Cornfield,' 1868; 'Shakspere Songs for 4 voices,' 1860–4; Songs from Lane's 'Arabian Nights,' and Kingsley's and Tennyson's poems; very many songs, duets, etc., overtures to 'The Merchant of Venice,' 'Romeo and Juliet,' 'Hamlet,' 'Chevy Chase' (already mentioned), and 'Don Carlos'; symphonies, string quartets and a quintet; a concerto for violin and orchestra; and sonatas for pianoforte alone and in combination with other instruments. He harmonised the airs in Chappell's 'Popular Music of the Olden Time,' and arranged 'Moore's Irish Melodies,' 1859, and Scotch Songs. He has also appeared as a writer on music and music critic, having produced 'Rudiments of Harmony,' 1860, and 'Six Lectures on Harmony,' 1867; Analyses of oratorios etc., for the Sacred Harmonic Society, 1853–7; and of orchestral works for the programme books of the Philharmonic Society, 1869–71; also many articles in 'The Musical World,' and lives of musicians for the 'Imperial Dictionary of Universal Biography.' He has lectured at the Royal and London Institutions. As Professor at Cambridge and Principal of the Royal Academy of Music, Dr Macfarren stands at the head of English musicians. He shares with Sterndale Bennett and Sullivan the rare distinction, for an Englishman, of having had his works performed at the Gewandhaus Concerts of Leipzig and elsewhere in Germany. His industry and fertility under the greatest drawbacks are marvellous. His great kindness, and his readiness to communicate his vast knowledge and the stores of his capacious and retentive memory to all who require them, are well known, and have endeared him to a large circle of friends and admirers.

NATALIA MACFARREN, his wife, contralto singer and able teacher, is also well known by her translations of opera libretti and other works.

WALTER CECIL MACFARREN, his brother, born Aug. 28, 1826, chorister of Westminster Abbey under James Turle from 1836 to 1841, and pupil of the Royal Academy of Music from 1842 to 1846, studied the pianoforte under W. H. Holmes, and composition under his brother, G. A. Macfarren, and Cipriani Potter. He was appointed a professor at the Academy in 1846 and conductor of its concerts in 1873. He was elected a director of the Philharmonic Society in 1868 and its treasurer in 1876. He has composed 2 Church Services and a number of chants and hymn tunes; overtures, 'Beppo,' 'A Winter's Tale,' 'Hero and Leander,' and 'Pastoral'; a pianoforte concerto; sonatas for pianoforte alone and in combination with other instruments; songs both sacred and secular; many madrigals and part-songs; and numerous pieces of all kinds for pianoforte. He has edited Mozart's pianoforte works, Beethoven's sonatas, and the extensive series of pianoforte pieces known as 'Popular Classics.' [W.H.H.]

MACICOTATICUM or MACHICOTAGE. A species of ornamentation, applied to Plain Chaunt melodies, by means of extraneous notes inserted between those of the true *Canto fermo*, after the manner of what, in modern music, would be

called *fioritura*. To the once prevalent custom of *Machicotage* in France are to be attributed many of the corruptions observable in Gallican Office Books before the late careful revisions. The *Processionale Parisiense* (Paris 1787) directs that the melodies shall be *machicotée* by the Clergy, and continued by the Choir '*sine macicotatico*': and, in former times, the Ecclesiastics entrusted with the duty of so singing them, were called *Maceconici*, or *Machicots*. [W.S.R.]

MACKENZIE, Alexander Campbell, son of a favourite Edinburgh musician, was born in Edinburgh, 1847, was sent to Germany at the age of 10 to study music at Schwarzburg-Sondershausen under Ulrich Eduard Stein. He entered the ducal orchestra as violinist at the age of 14, and remained in Germany until 1862, when he came to London in order to study the violin under M. Sainton, and was elected King's Scholar of the Royal Academy of Music in 1862.

In 1865 he returned to Edinburgh, established a position as pianoforte teacher, and has since remained in Scotland, with the view of devoting himself entirely to composition. His principal works are 'Cervantes, an overture for orchestra'; a Scherzo for ditto; Overture to a Comedy; a String Quintet, and many other pieces in MS.; Pianoforte Quartet in B♭ (Leipzig, Kahnt), op. 11; Trois Morceaux pour Piano, op. 15; two Songs, op. 12; besides songs, part-songs, anthems, and pieces for the piano. [G.]

MACKINTOSH, John, born 1767, an eminent performer on the bassoon, who from 1821 to 1835 held the first place in all the principal London and provincial orchestras. He produced a full, rich, and powerful, but somewhat coarse, tone. He is believed to have died in 1840. His son Alphonso was a violinist. [W.H.H.]

McMURDIE, Joseph, Mus. Bac., born in 1792 in the parish of St. Bride, London, graduated at Oxford in 1814. He composed many glees (principally for the Concentores Sodales) and songs, and made numerous arrangements for the pianoforte. He was for some time a director of the Philharmonic Society. He died at Merton, Surrey, Dec. 23, 1878. [W.H.H.]

MAÇON, LE. Opéra-comique in 3 acts; words by Scribe and Delavigne, music by Auber. Produced at the Opera Comique, May 3, 1825; in England at St. James's, March 13, 1850. [G.]

MADRIGAL (Ital. *Madrigale, Madriale, Mandriale*). The derivation of the word, Madrigal, has so hopelessly perplexed all who have attempted to trace it to its source, that, until some new light shall be thrown upon the subject, further discussion would seem to be useless. We must, therefore, leave our readers to form their own judgment upon the four theories which have been most generally accepted: namely, (1) that the word is derived from the Italian, *madre*, (mother), and signifies a Poem, addressed—as is said to have been the case with the first Madrigals—to Our Lady; (2) that it comes from the Greek word, μάνδρα, (Lat. and Ital. *mandra*, a sheep-fold), and was suggested by the generally pastoral character of the composition; (3) that it is a corruption of the Spanish word, *madrugada*, (the dawn), and is used, in Italian as the equivalent of *Mattinata*, (a Morning Song); (4) that it owes its origin to the name of a town situated in a delightful valley in Old Castile. On one point, however, all authorities are agreed: viz. that the name was first given to a certain kind of Poem, and afterwards transferred to the music to which it was sung—which music was always, during the best periods of Art, written for three or more Voices, in the antient Ecclesiastical Modes, and without instrumental accompaniment.

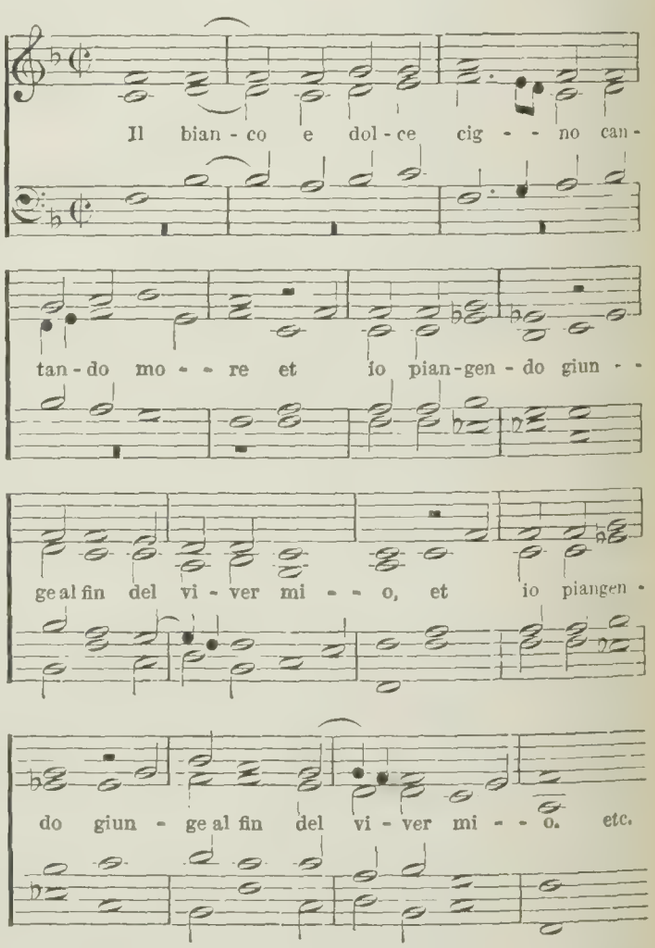
Our actual knowledge of the condition of the Madrigal, before the invention of printing, is sadly imperfect: but, in the absence of positive evidence, analogy leaves us little cause to doubt that its earlier phases must have corresponded, as closely as we know its later ones to have done, with those of the Motet—for, the application of Discant to Sæcular Melody must have suggested the one no less surely than its association with Plain Chaunt gave birth to the other. The originators of this process were, in all probability, the Troubadours, and Minnesingers, who so strongly influenced the progress of popular music in the Middle Ages: and there is reason to believe that the rarity of early MS. records is due to the fact that they were accustomed to sing their Discant extempore—or, as it was formerly called, *alla mente*. But, long before this first glimmering of Science resulted in the invention of Counterpoint, the Age of Chivalry had passed away, and the Minstrels, as a corporate body, had ceased to exist. Hence, the farther development of the Madrigal devolved upon the Ecclesiastical Musicians, who cherished it tenderly, and brought all the resources of their Art to bear upon it; treating it, technically, exactly as they treated their compositions for the Church, though, in the æsthetic character of the two styles—founded on an instinctive perception of the contrast between Sacred and Profane Poetry—they observed a marked difference. This we may readily understand, from the description left us by Thomas Morley, who, writing in 1597, tells us, that, 'As for the Musicke, it is next unto the Motet, the most artificiall and to men of Vnderstanding the most delightfull. If therefore you will compose in this Kind you must possesse your selfe with an amorus humor (for in no cõposition shall you proũe admirable except you put on, and possesse your selfe wholy with that vaine wherein you compose) so that you must in your Musicke be waũering like the wind, sometime wanton, sometime drooping, sometime graũe and staide, otherwhile effeminat, you may maintaine points and reũert them, vse triplaes, and shew the uttermost of your varietie, and the more varietie you show the better shall you please.' In the 16th century, these directions were observed to the letter—so closely, that it would be difficult to give a more graphic sketch of Polyphonic Music, in its sæcular dress, than

that conveyed by Master Morley's quaint expressions.

The most antient specimen of sæcular Polyphonic Music now known to exist is the famous Canon, 'Sumer is i cumen in,' preserved, among the Harleian MSS., in the British Museum. No clue can be obtained as to the authorship of this ingenious composition; nor has its exact date ever been satisfactorily demonstrated, though Dr. Burney—who, in the second volume of his Musical History, has printed it, not only in its original notation, but, also, in the form of a detailed solution, scored for six voices—ventures to say that he 'can hardly imagine it to be much more modern' than the 13th or 14th century. Its extreme antiquity is, indeed, indisputable: but it can scarcely be called a Madrigal, notwithstanding the rustic character of its words. The true Madrigal is unquestionably the offspring of the great Flemish School. We hear of it, in the Low Countries, as early, at least, as the middle of the 15th century, when it was already well known to the Netherlanders, in the form of a Polyphonic Song, often of very elaborate construction, and always written in strict conformity with the laws of the old Church Modes. These characteristics—which it retained, to the last, in all countries, and through all scholastic changes—are unmistakeable signs of its close relationship to the Motet, of which we have also ample proof, in the certainty that it originated in Counterpoint on a *Canto fermo*. As a general rule, this *Canto fermo* was naturally supplied by the melody of some popular *Chanson*: but, just as we sometimes find a popular melody intruding itself into the Mass, so, in these early Madrigals, we are occasionally startled by the apparition of some well-known fragment of severe Ecclesiastical Plain Chaunt; as in Agricola's *Belle sur toutes*, in which the lighter theme is almost profanely contrasted with that of *Tota pulchra es, Maria*—a combination which Ambros naïvely compares to the Song of a pair of Lovers, who quietly carry on their discourse, in the two upper parts, while a holy Monk lectures them in the Bass.

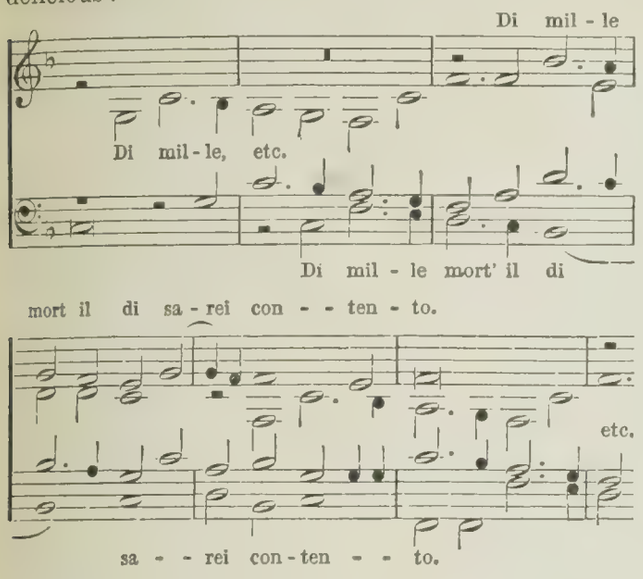
For the earliest published copies of these interesting works, we are indebted to Ottaviano dei Petrucci—the inventor of the process by which music was first printed from movable types—whose three collections, entitled '*Harmonice musices Odhecaton. A.*' (Venice 1501), '*Canti B numero Cinquanta B*' (ib. 1501), and '*Canti C no. cento cinquanta C*' (ib. 1503), were long supposed to be lost, and now only exist in the form of unique copies of the first, and second, preserved in the Library of the Liceo Filarmonico, at Bologna, and a splendidly bound exemplar of the third, in the Hofbibliothek at Vienna. In these precious volumes we find a copious selection from the sæcular works of Busnois, Okenheim, Johannes Tinctor, Hobrecht, Regis, Caron, Josquin des Prés, Alexander Agricola, Brumel, Pierre de la Rue, and twenty-nine other writers, whose *Chansons* illustrate the First Period in the history of the Flemish Madrigal—a period no less interesting than instructive to the critical student, for it is here that we first find Science, and Popular Melody, working together for a common end.

The Second Period, though its printed records date only thirty-five years later, shews an immense advance in Art. Its leading spirits, Jacques Archadelt, Philipp Verdelot, Giaches de Wert, Huberto Waelrant, and some other writers of their School, were not only accomplished contrapuntists, but had all learned the difficult art of restraining their ingenuity within due bounds, when simplicity of treatment was demanded by the character of the words they selected for their theme. Hence, they have left us works, which, for purity of style, and graceful flow of melody, can scarcely be exceeded. Archadelt, though a true Fleming by taste and education, as well as by birth, spent much of his time in Italy; and published his First Book of Madrigals at Venice, in 1538, with such success, that, within eighty years it ran through no less than sixteen editions. Five other books followed, containing, besides his own works, a number by other celebrated writers, among whom, however, he stands his ground nobly. From a copy of the fourth edition of the First Book, preserved in the British Museum, we transcribe a few bars of one of the loveliest Madrigals he ever wrote—*Il bianco e dolce cigno*—which, we should imagine, needs only publication in an attainable form, in order to become a favourite with every Madrigal Society in England.[1]



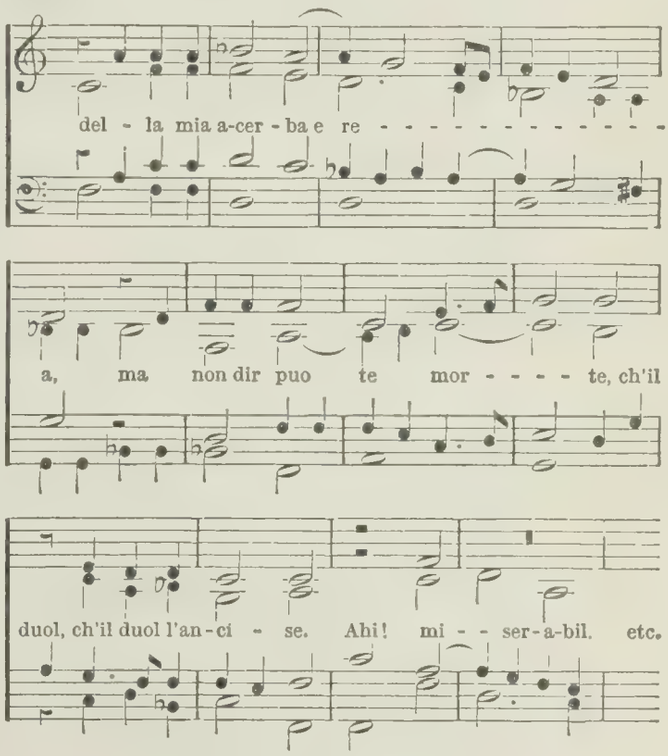
[1] The only modern edition with which we are acquainted is transposed a third, and adapted to English words in which no translation of the original Italian is attempted; consequently, the Music, and the Poetry, are at cross purposes, from beginning to end.

The few concluding bars of this contain some imitations the smoothness of which is perfectly delicious :—



Though a far less prolific writer than Archadelt, Waelrant was a true genius, and a true disciple of the good old Flemish School. His '*Symphonia Angelica*,' printed, at Antwerp, in 1594, contains compositions by some of the best of his contemporaries; but, none more beautiful than his own *Vorrei morire*—well-known, in England, and frequently sung, as 'Hard by a fountain,' though the English words make no attempt to convey the meaning of the original Italian. Of Verdelot's numerous works, very few, unhappily, have been handed down to us with all the parts complete: we possess, however, quite enough of his writings to prove, that, like his great contemporary, Giaches de Wert, he was deeply imbued with the national style; which, from first to last, was clear in its construction, smooth in its flow of melody, euphonious in its harmonic combinations, and, though less rich in contrapuntal embroidery than the later Italian Schools, never wanting either in interest, or in animation. The last great Composer by whom this peculiar style was cultivated, in Northern Europe, was Orlando di Lasso, who, though his fame rests chiefly upon his Ecclesiastical Music, has left us many books of splendid Madrigals, which may almost be said to form, of themselves, a Third Period. With him, the School of the Netherlands came to an end. But, long before his death, the Madrigal had been transplanted to other countries: and, in Italy, especially, it took firm root, and bore abundant fruit.

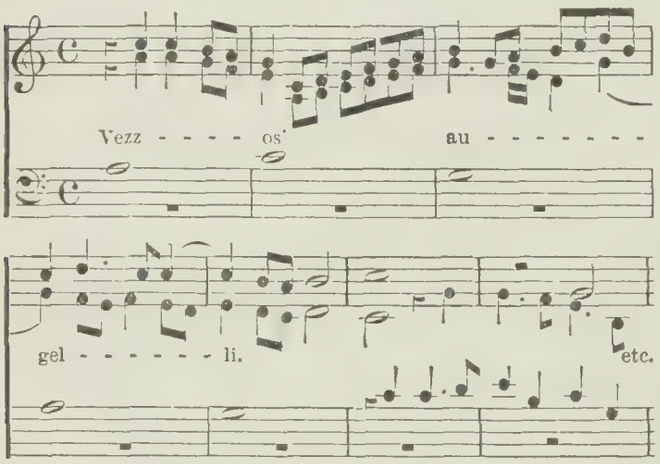
The first really great Italian Madrigal-writer was Costanzo Festa, whose delicious *Quando ritrovo la mia pastorella*, printed in Archadelt's Third Book, has enjoyed a greater degree of popularity, in England, under its familiar title, 'Down in a flowery vale,' than any other work of the kind that ever was imported hither.[1] This fine composition bears evident traces of the Flemish manner; as do, more or less, all the works belonging to what may be called the First Roman Period. In the Second Period, this foreign influence was entirely destroyed, and the true Roman style inaugurated, by the appearance of Palestrina's *Primo libro di Madrigali a quattro voci*, in 1555, followed by a *Libro secondo*, in 1586, and two books of *Madrigali spirituali*, in 1581, and 1594—the year of the great Composer's death. It may be well said, that, in these four volumes, Palestrina has shewn his command over all styles. The character of the *Madrigali spirituali*—more serious than that of the *Chanson*, but less so than that of the Motet—shews a deep appreciation of the difference which should always subsist between ordinary Sacred Music, and Music intended to be actually used in the Services of the Church. The spirit of the sæcular Madrigals changes, every moment, with the sense of the words. The second volume, (that of 1586,) contains a more than usually beautiful example—*Alla riva del Tebro*—in which the grief of a despairing Lover is described in discords as harsh as any that we are accustomed to hear in the works of the most modern Composers for the Lyric Stage. Yet, every one of these discords is prepared, and resolved, in accordance with the strictest laws of Counterpoint: and these very laws are used as vehicles for the expression of all that music can ever be made to express. For instance, the lovely Cadence at the word, *morte*, when sung with the necessary *ritardando*, tells, more plainly than any verbal explanation could possibly have done, how all such woes as those alluded to are healed, for ever, by death :—



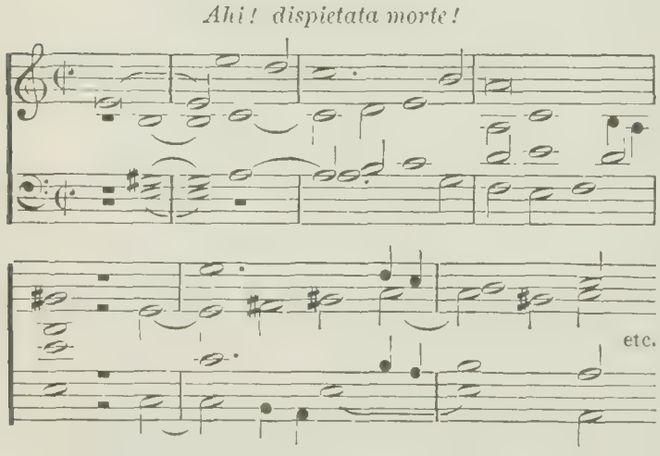
Such works as these naturally excited the emulation of contemporary Composers; and led each one to do his best for the advancement of a style, so new and captivating. Palestrina's example was worthily imitated by his successor in office, Felice Anerio, whose three volumes of *Madrigali spirituali*, printed at Rome, in 1585,

[1] In the English edition—admirably translated by Thomas Oliphant—the time of the movement has been very unjustifiably changed, from four minims, to four crotchets in a measure.

were succeeded by two books of sæcular Madrigals of exquisite beauty, and a charming set of *Canzonette*, for three and four Voices, issued in 1603. Francesco Anerio, and the brothers, Giovanni Maria, and Bernardino Nanini, contributed a large store of volumes of equal merit. Ruggero Giovanelli turned his genius to good account: and the Roman School, now in its highest state of perfection, boasted many other Madrigalists of superlative excellence. Foremost among these stood Luca Marenzio, who devoted his best energies to the advancement of sæcular Art; producing nine books of Madrigals for five Voices, between the years 1580 and 1589, six, for six Voices, within a very few years afterwards, and many later ones, all of which were so well appreciated, that, even during his lifetime, he was honoured with the well-earned title of *Il più dolce Cigno d'Italia*. The style of this 'Sweetest Swan' was, by nature, a little less grave than that of Palestrina: but, like that great Master, he possessed the happy faculty of accommodating it to all possible circumstances, and did so with such unvarying success, that he may be justly regarded as the most satisfactory representative of the Third Roman Period. His little Madrigal, *Vezzosi augelli*, scored, by P. Martini, in the second volume of his *Saggio di Contrappunto*, is a miracle of prettiness, and contrasts strangely enough with the deep sadness displayed in the opening bars of his *Ahi! dispietata morte!*



Ahi! dispietata morte!



But it was not in Rome alone that the Madrigal was cultivated with success. It found an equally congenial home in Venice, where it was first introduced by Adrian Willaert, who, though by birth and education a Fleming, did so much for the City of his adoption that he is universally represented as the Founder of the great Venetian School. His influence, and that of his countryman, and faithful disciple, Cipriano di Rore, may be traced throughout its entire course, from beginning to end. Even in the works of Giovanni Croce it is clearly perceptible, notwithstanding the marked individuality which places the stamp of independent genius on everything he wrote. Andrea Gabrieli, and his nephew, Giovanni, Fra Costanzo Porta, and Orazio Vecchi, were all deeply imbued with the same spirit; Hans Leo Hasler carried it to Nuremberg, where it wrought a good and lasting work; and Gastoldi—believed, by Morley, to have been the inventor of the 'Fa la'—was, really, no more than the exponent of an idea which had already been freely used by Willaert, and more than one of his immediate followers. It may, in truth, be said, that Flemish Art failed to attain its full maturity, until it was transplanted from the Netherlands to Venice. All honour to the great Republic for developing its rich resources. It was a glorious trust committed to her; and she fulfilled it nobly.

In Florence, the Madrigal attained a high degree of popularity—at first, in the form of the Frottola, which, Cerone tells us, is to be distinguished from the true Madrigal by the poverty of its contrapuntal artifices—afterwards, in the more fully developed productions of Franceso Corteccia, Matteo Rampollini, Pietro Masacconi, and Baccio Moschini. But its course, here, was brought to an untimely close, by a growing passion for instrumental accompaniment which entirely destroyed the old Florentine love for pure vocal music. In Naples, it flourished brilliantly; though rather in the shape of the Villanella—the Neapolitan equivalent of Gastoldi's Fa la—than in a more serious guise. In France, it was but slightly prized, notwithstanding the number of *Chansons* adapted, by the early Netherlanders, to well-known specimens of French popular poetry: and, in Germany, it failed to supplant the national taste for the *Volkslied*, with which it had very little in common, and which, before the middle of the 16th century, was itself pressed into the service of the all-absorbing Chorale. But, in England, it took root as firmly as ever it had done, either in Rome, or in Venice, and gave rise to a national School which is well able to hold it own against any rival. The old Canon, 'Sumer is i cumen in,' has been cited as a proof that Polyphonic Music originated in England. This position cannot be maintained. The beginnings of Counterpoint have, hitherto, eluded all enquiry. But, we have already shewn that the Madrigal was invented in the Netherlands; and, that the first published fruits of its discovery were issued, at Venice, in 1501. The first Polyphonic Songs that appeared in England were printed, by Wynkyn de Worde, in 1530, in a volume of the existence of which neither Burney nor Hawkins seem to have been aware, though it contains a

highly interesting collection of works, both sacred, and sæcular, by Taverner, and other English Composers. No second collection appeared, till 1571, when a volume, of much inferior merit, was printed, for Thomas Whythorne, by John Daye. In 1588, William Byrd issued his first book of 'Psalmes, Sonets, and Songs of sadnes and pietie': and, in the same year, Nicholas Yonge—a merchant, who obtained a rich store of Madrigals from his Italian correspondents—published, under the title of *Musica Transalpina*, a volume containing more than fifty pieces, selected from the works of Noe Faigneant, Rinaldo del Mel, Giaches de Wert, Cornelius Verdonck, Palestrina, Luca Marenzio, and several more of the best Flemish and Italian Composers of the day. In the preface to this volume, the word, '*Madrigal*,' is used, (to the best of our belief), for the first time, in England. The compositions selected by the worthy merchant are all adapted to English verses, in which, though the diction is sometimes sufficiently uncouth, the rhythm and sense of the original Italian are often carefully imitated: and, to the zeal of their enthusiastic collector, who had them constantly sung at his house, we are mainly indebted for the favour with which, from that time forth, the Madrigal was universally received in this country. Nine years later, Yonge ventured upon a second collection. Meanwhile, Byrd had already published another volume of original compositions, under the title of 'Songs of sundrie natures,' in 1589; in 1590, Thomas Watson had edited a 'Sett of Italian Madrigalls Englished, not to the sense of the originall dittie, but after the affection of the Noate'; and, between 1593, and 1595, Thomas Morley had produced two books of Canzonets, one, of 'Madrigals to foure Voyces,' and one of Ballets. The number of publications, therefore, was increasing rapidly.

By this time, the Madrigal had fairly established itself as a national institution: and English Composers did all that in them lay, to bring it to perfection. The most noted among them seemed never tired of producing new works. Simultaneously with Yonge's second collection—that is, in 1597—appeared two original sets of great importance, one, by Thomas Weelkes, the other, by George Kirbye. In the same year, Morley issued a third and fourth volume of Canzonets; and John Dowland delighted all Europe with his 'First Booke of Songes or Ayres of foure parts.' Wilbye's first book appeared in 1598, and Benet's in 1599. In 1601, Morley edited a famous volume, entitled, 'The Triumphes of Oriana,' containing Madrigals, for five and six Voices, by Michael Este, Weelkes, Benet, Hilton, Wilbye, and sixteen other Composers, besides himself. Michael Este published a volume of his own, in 1604, another in 1606, and a third, in 1610. Bateson's two books were issued in 1604, and 1618. Dowland's second book appeared in 1600, his third, in 1603, and his 'Pilgrim's Solace,' in 1612. Thomas Ford printed two books of 'Musicke of sundrie Kinds,' in 1607, and Wilbye his second book in 1609; Orlando Gibbons produced his first (and only) volume of 'Madrigals and Motets,' in 1612; and, even as late as 1630—exactly a century after the publication of Wynkyn de Worde's curious volume—a book of 'Mottects' (all, really, Madrigals, though with instrumental accompaniments *ad libitum*) was given to the world by Martin Pierson.

Rich collections of these rare old editions—including many volumes which we have not space to particularise—are preserved in the Libraries of the British Museum, the Sacred Harmonic Society, and the Universities of Oxford and Cambridge: and many of the most popular Madrigals have been reprinted, in a modern form, over and over again.[1] It is difficult to decide upon the comparative merits of particular works, where the general standard of excellence is so high, and the number so great. An endless variety of styles is observable, even to the most superficial enquirer: but careful analysis proves this to be rather the result of individual feeling, than an index to the prevailing taste at any given epoch. The history of the School, therefore, must be comprised, like our notice of the Venetian Madrigal, within the limits of a single Period: and we shall best illustrate it by selecting a few typical works for separate criticism.

Byrd's Madrigals are sometimes constructed upon a very elaborate plan, and abound in points of ingenious and delightful imitation, as do those of Weelkes, Cobbold, and Wilbye, and their contemporaries, Kirbye, and Bateson—witness the following beautiful passage from the last-named Composer's contribution to 'The Triumphes of Oriana'—

[1] It is much to be regretted that so few modern editors think it worth while to mention the source whence their reprints are derived; or even to give the original names of Flemish or Italian Madrigals. Still more deeply to be deplored is the mischievous system of transposition, now so common, which frequently destroys all trace of the composer's intention, and always prevents the tyro from ascertaining the Mode in which a given Madrigal is written. As Madrigals must always be sung without accompaniment, transposition, in the book, is wholly unmeaning, and helps no one.

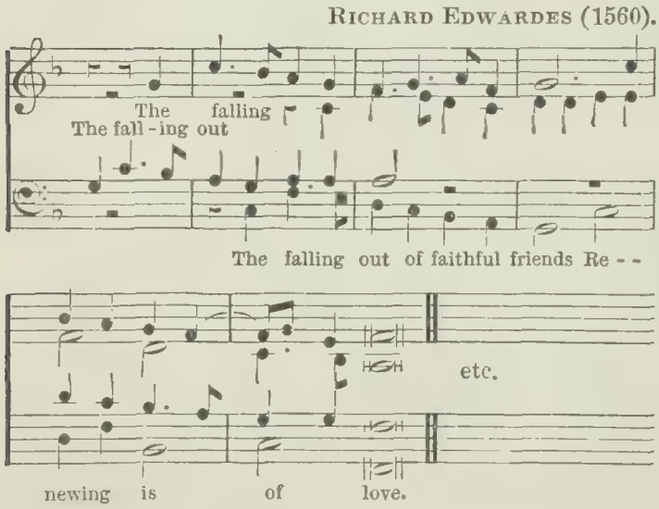
Morley, Hilton, and Michael Este, preferred a lighter vein, and produced some of the most delicious Fa las which remain to us. Among those who affected 'Ayres' and Canzonets, John Dowland incontestibly holds the first place. His 'Awake, sweet Love,' and 'Now, Oh! now, I needs must part,' are gems of Art—perfect in their simplicity, yet no less masterly in design than tender in expression. Orlando Gibbons, and a charming Composer of earlier date—Richard Edwardes—wrote like born Netherlanders. A more interesting comparison than that between the two following examples, and the extracts already given from Archadelt's '*Bianco e dolce Cigno*' can scarcely be imagined.

'The Silver Swan.'

ORLANDO GIBBONS.

'In going to my lonely bed.'

RICHARD EDWARDES (1560).



After the second decade of the 17th century, no work of any lasting reputation was produced, and the style soon fell into neglect. Under the Stuart Dynasty, Polyphonic Song lost much of its popularity; and the Great Rebellion crushed out all artistic feeling: but Art lived on; and, in due time, the Madrigal, forgotten in Flanders, and replaced in Italy by a new kind of Chamber Music with instrumental accompaniment, merged gradually, in England, into the Glee—a kind of composition cultivated in no other country, and of far higher æsthetic value than its German representative, the Part Song. The writer who—no doubt, unconsciously—helped, more than any other, to prepare the way for this great change, was Thomas Ford, whose lovely Canzonets, 'Since first I saw your face,' and 'There is a Ladie, sweete, and kind,' hold a position as nearly as possible midway between the Madrigal and the Glee, breathing all the spirit of the one, while introducing progressions only permissible in the other. It is, however, worthy of remark—though the fact seems, hitherto, to have escaped notice—that intervals, forbidden by the strict laws of Counterpoint, were tolerated, in England, at an earlier period than on the Continent. Wilbye used the Diminished Triad with a boldness which would have made Anerio's hair stand on end. Such licenses as these once permitted, the substitution of modern tonalities for the Ecclesiastical Modes followed, as a matter of course—and, this accomplished, the change from the Madrigal to the Glee was complete.

Having traced the history of the Madrigal thus far, it remains only to say a few words as to the manner of its performance.

It is absolutely indispensable that it should be sung without any instrumental accompaniment whatever: and, unlike the Glee, (which is always performed by solo Voices,) it is most effective when entrusted to a moderately full, but not too numerous Chorus. Changes of tone, embracing every shade of difference between *ff* and *ppp*, and introduced, sometimes by the most delicate possible gradations, and sometimes, in strongly-marked contrast, will be continually demanded, both by the character of the music, and the sense of the words: and, remembering how earnestly Morley insists upon 'varietie,' the student will be prepared to learn that *ritardandi* and *accelerandi* will be scarcely less frequently brought into requisition. Nevertheless, strict mechanical precision must be secured, at any cost. The slightest uncertainty, either of intonation, or of rhythm, will suffice to ruin everything; and, to draw the line fairly, between intensity of expression, and technical perfection, is not always an easy matter. There is, indeed, only one way of overcoming the difficulty. To imagine Damon regulating his love-lorn ditty by the tick of a metronome would be absurd. The place of the metronome, therefore, must be supplied by a Conductor, capable of fully sympathising, either with Damon's woes, or Daphne's fond delights, but wholly incapable of shewing the least indulgence to his Singers, who must learn to obey the rise and fall of his *bâton*, though it move but a hair's breadth in either direction. [W. S. R.]

MADRIGAL SOCIETY. Founded in 1741 by John Immyns, a member of the Academy of Ancient Music, the Madrigal Society enjoys the distinction of being the oldest musical association in Europe. Its first meetings were held at the

Twelve Bells in Bride Lane, whence it removed to the Anchor and Crown, Whitefriars, as proved by the earliest minute-book in the Society's library, dated 1744. In 1745 the Society removed to the Founders' Arms, Lothbury, where rules were adopted limiting the number of members to sixteen, with an admission fee of 8s. and a subscription of 3s. per quarter. Having returned for a time to the Twelve Bells, its original home, the Society afterwards migrated to the Queen's Arms, Newgate Street, in 1748, when the rules were revised. One rule enacted 'That all musical performances shall cease at half an hour after ten o'clock, unless some of the members shall be cheerfully incited to sing catches, in which case they shall be indulged half an hour, and no longer.' Numerous fines were imposed for such offences as the retention of books from the Society's library; and any member eating his supper, or a part thereof, during practice time was to forfeit sixpence, to be applied to buying ruled paper. The performance on each night was to be divided into two 'acts,' with an interval of half an hour, and in each act four madrigals were to be sung. Between 1750 and 1757 additional rules were adopted, by one of which each member to whose turn it came to serve as President was bound to present a score and parts of a madrigal ready for performance, or 'to forfeit a penny extraordinary to the plate' every night until he did so. By another rule any gentleman who had been educated in, or at the time belonged to, any cathedral or choir was to be admitted to visit the Society at his pleasure; and a similar privilege was accorded to any of 'the gentlemen of the Academy of Ancient Music.' Membership was confined to persons belonging to cathedral choirs, or those 'vouched for by two or more members of the Society as being capable of singing their part in concert both in time and in tune'; and others proposed for election were required, by way of probation, to sing between the acts their proper parts in an ancient madrigal for three or four voices, or some two-part song to be sung with double voices. The Society at this time (1749–50) met every Wednesday evening, and consisted of twenty members, who subscribed 4s. 6d. a quarter. According to Sir John Hawkins (who was himself a member) 'most of them were mechanics, some weavers from Spitalfields, others of various trades and occupations, who were well versed in the practice of Psalmody, and who, with a little pains and the help of the ordinary solmisation, which many of them were very expert in, became soon able to sing almost at sight a part in an English or even an Italian madrigal. They also sang catches, rounds, and canons, though not elegantly, yet with a degree of correctness that did justice to the harmony; and, to vary the entertainment, Immyns would sometimes read, by way of lecture, a chapter from Zarlino, translated by himself. They were men not less distinguished by their love of vocal harmony than by the harmless simplicity of their tempers and by their friendly disposition towards each other.' At times they took country excursions, and the minutes record that on Whit-Monday, 1751, 'the party proceeded up the river, breakfasting at Wandsor (Wandsworth), dining at Richmond, besides stopping to whet their whistles at Mortlack (Mortlake).' In 1764 Mr. Immyns died. In 1768 the subscription was raised to 8s. a quarter, the number of members being about thirty, and it was agreed to hold an entertainment for their friends once at least every year. In 1769 the Society removed to the Feathers Tavern, Cheapside; in 1775 to the King's Arms, Cornhill; in 1778 they were at the Half Moon, Cheapside, and the London Tavern; in April, 1792, at the King's Head in the Poultry; in May, 1792, at the Globe, Fleet Street; and in 1795 removed to the Crown and Anchor, when the charge for supper, 'on account of the advance in wine,' was raised to 2s. 6d. for members, 4s. for visitors, and 3s. for professors. Festival dinners were held in 1798, 1802, 1803, and 1809, and were continued at intervals, and in 1876 ladies dined at the festival for the first time. In 1814 the subscription was raised to £3, and in 1816 the charge for supper, including a pint of wine, was fixed at 6s. On September 27, 1821, the supper meeting, after being held for eighty years, gave place to a monthly dinner, still held at the Freemasons' Tavern during the season, which then lasted from October to July, but now numbers five meetings, commencing in November. In 1811 was offered for the first time a prize of a silver cup, value ten guineas, 'for the best madrigal in not less than four nor more than six parts, the upper part or parts to be for one or two treble voices. The character of the composition to be after the manner of the madrigals by Bennet, Wilbye, Morley, Weelkes, Ward, Marenzio, and others, and each part to contain a certain melody either in figure or imitation; therefore, a melody harmonized will be inadmissible.' W. Beale's 'Awake, sweet muse,' and W. Hawes's 'Philomela' were selected for a final ballot from fourteen compositions sent in, which included S. Wesley's 'O sing unto my roundelay,' and W. Linley's 'Ah me, quoth Venus.' The prize was given to Beale. The earlier members included Immyns, the founder, by profession an attorney, afterwards appointed lutist to the Chapel Royal and amanuensis to Dr. Pepusch; Dr. John Worgan, organist and composer; Sir John Hawkins, the musical historian (1741–1751); Rev. C. Torriano and Jonathan Battishill, the composer (elected 1752); E. T. Warren, editor of the Glee Collection (1762); Dr. Arne and his son Michael, and Luffman Atterbury, composer of the glee 'Come, let us all a-Maying go' (1765); Theodore Aylward, one of the assistant directors at the Handel Commemoration of 1784 (1769); Joah Bates, the conductor of the Handel Commemoration (1774); Dr. B. Cooke, organist of Westminster Abbey (1778); James Bartleman (1793); J. P. Street, Librarian and many years Father of the Society; R. J. S. Stevens, the Gresham Professor, and W. Horsley, the glee-

writer (1798); Reg. Spofforth, the glee-writer, and Robert Cooke, master of the Westminster choristers (1802); W. Beale (1805); Dr. Callcott (1806); W. Hawes and W. Linley (1809); G. E. Williams, organist of Westminster Abbey (1814); Sir J. L. Rogers, bart., and T. Greatorex, organist of Westminster Abbey (1819); J. T. Cooper (1825); Jonathan Nield, Rev. W. J. Hall (1828); P. J. Salomons (1829); Vincent Novello and Thomas Oliphant, afterwards secretary (1830); J. W. Hobbs, J. Calkin (1831); G. Cooper, deputy organist of St. Paul's, James Turle, organist of Westminster Abbey (1832). The present members include Dr. Stainer, organist of St. Paul's Cathedral; J. Turle; Dr. Bridge; E. J. Hopkins; W. Chappell, F.S.A.; Dr. W. Pole; Otto Goldschmidt; Dr. John Hullah, and Rev. T. Helmore. Up to 1820 the members presided in rotation, but in that year it was resolved to appoint Sir J. L. Rogers as permanent president. The office has since been filled by Lord Saltoun, 1842–53; Sir George Clerk, Bt., 1853–66; Prince Dhuleep Singh, 1867–71; Thomas Oliphant, 1871–73; Hon. and Rev. H. Legge, 1874–77. It is now vacant. The Librarians have been:—J. P. Street, 1792–1848; John Bishop, 1849–70; C. D. Budd, 1871–78; J. C. Meek, 1879. The conductors or musical directors permanently appointed since W. Hawes, 1809–46, have been:—James Turle, 1846–49; James King, 1849–54; Cipriani Potter, 1855–70; Otto Goldschmidt, 1871–77; Dr. John Stainer, 1878. Dr. John Hullah and Dr. J. F. Bridge have been assistant conductors since 1878. Under the present rules the Society consists of forty members, elected by ballot, the subscription (including dinner fees) being five guineas, and for professional members three guineas. The following was the programme at the Society's last Festival, June 19, 1879:—100th Psalm, arranged by Dr. W. Pole (8 parts); 'Come, shepherds, follow me' (Bennet); 'Sister, awake' (Bateson); 'Cynthia, thy song' (Croce); 'Die not, fond man' (Ward); 'Fair Oriana' (Hilton); 'O say, ye saints' (Sir J. Rogers); 'Stay one moment, gentle river' (Oliphant); 'Shall I, wasting in despair' (G. A. Osborne); 'Take heed, ye shepherd swains' (Pearsall); 'Lady, your eye' (Weelkes); 'Lady, see on every side' (Marenzio); 'Nymphs are sporting' (Pearsall); 'Fa-la-la.' Mr. J. Edward Street is the present secretary; and Mr. Kellow J. Pye the treasurer. [C.M.]

MAELZEL, Johann Nepomuk, born Aug. 15, 1772, at Ratisbon, son of an organ builder. In 1792 he settled in Vienna, and devoted himself to teaching music, and to constructing an automaton instrument of flutes, trumpets, drums, cymbals, triangle, and strings struck by hammers, which played music by Haydn, Mozart, and Crescentini, and was sold for 3000 florins. His next machine was the Panharmonicon, like the former, but with clarinets, violins, and cellos added. It was worked by weights acting on cylinders, and was exhibited in Vienna in 1804. Maelzel then bought Kempelen's Chessplayer; and took it with the Panharmonicon to Paris. The Chessplayer he afterwards sold to Eugene Beauharnais. He next constructed a Trumpeter, which played the Austrian and French cavalry marches and signals, with marches and allegros by Weigl, Dussek, and Pleyel. In 1808 he was appointed court mechanician, and about that time made some ear trumpets, one of which Beethoven used for years. In 1812 he opened the 'Art Cabinet,' among the attractions of which were the Trumpeter and a new and enlarged Panharmonicon; and soon afterwards made public a musical chronometer, an improvement of a machine by Stöckel, for which he obtained certificates from Beethoven and other leading musicians. Maelzel and Beethoven were at this time on very friendly terms. They had arranged to visit London together, and Maelzel had meantime aided the great master in his impecuniosity by urging on him a loan of 50 ducats in gold. In order to add to the attractions of the Panharmonicon, which they proposed to take with them, Maelzel conceived and sketched in detail the design[1] of a piece to commemorate the Battle of Vittoria (June 21, 1813), which Beethoven composed for the instrument. While it was being arranged on the barrel, Maelzel further induced him to score it for the orchestra, with the view to obtain funds for the journey; and it was accordingly scored, and performed at a concert on Dec. 8, 1813, the programme of which consisted of the Symphony No. 7; the marches of Dussek and Pleyel, by the automaton, and the Battle-piece. The concert was repeated on the 12th, and the two yielded a net profit of over 4000 florins. At this point Beethoven took offence at Maelzel's having announced the Battle-piece as his property, broke completely with him, rejected the Trumpeter and his marches, and held a third concert (Jan. 2, 1814) for his own sole benefit. After several weeks of endeavour to arrange matters, Maelzel departed to Munich with his Panharmonicon, including the Battle-piece, and also with a full orchestral score of the same, which he had obtained without Beethoven's concurrence and caused to be performed at Munich. Beethoven on this entered an action against him in the Vienna courts, and it is his memorandum of the grounds of the action, as prepared for his advocate, which is usually entitled[2] his 'deposition.' He further addressed a[3] statement to the musicians of London, entreating them not to countenance or support Maelzel. The action came to nothing, and Maelzel does not appear to have gone to London. He stopped at Amsterdam, and there got from Winkel, a Dutch mechanic, the idea of employing a new form of pendulum as a metronome. He soon perfected the instrument, obtained a patent for it, and in 1816 we find him in Paris established as a manufacturer of this metronome, under the style of 'Mälzl et Cie.' Winkel claimed it as his invention, and the claim was confirmed, after examination, by the Dutch Academy of Sciences. A wish to

[3] Thayer iii. 467.

repurchase Kempelen's Chessplayer and to push his Metronome took him back to Munich and Vienna in 1817. Beethoven's good word was of more consequence than any one else's, and knowing Maelzel's cleverness, Beethoven's amenability to a good companion, and the fact that the performance on which the lawsuit was grounded having taken place out of Austria, the action could not lie, it need not surprise us to find that the suit was given up, and the costs divided equally. After this Maelzel travelled much, and even reached the United States, where he passed the rest of his life, except a voyage or two to the West Indies, exhibiting the Chessplayer, the Conflagration of Moscow, and his other curious inventions[1]. He was found dead in his berth on board the American brig Otis, July 21, 1838. Maelzel was evidently a sharp, shrewd, clever man of business, with a strong propensity to use the ideas of others for his own benefit.

For the details of his Metronome see the article under that head. It was entirely different from the Stöckel-Mälzel 'Chronometer,' and it was upon the latter, and not upon the Metronome, that Beethoven wrote the catch which is connected with the Allegretto of his Symphony No. 8. [A.W.T.]

MÄSSIG. 'In moderate time'; the German equivalent of Moderato, used much by Schumann, as in the sixth of the fugues on the name Bach, and constantly throughout the Album. 'Im mässigen Tempo' occurs in the fourth fugue of op. 72, 'Sehr mässig' in the Lager-scene, No. 3 of op. 76. He uses 'Mässig durchaus energisch' as the translation of 'Moderato con energia' in the second movement of the Fantasia in C, op. 17. The 'Marsch-mässig' of Beethoven's op. 101 has no relation to the above, but means in March-style. [J.A.F.M.]

MAESTOSO. 'With majesty,' or in a dignified way. It is used either alone, as a direction of time, in which case it indicates a pace rather slower than andante, or, combined with other indications of tempo, as a guide to the expression. Beethoven uses it frequently in both these ways. It occurs alone in the Pianoforte Sonata, op. 111, first movement, in the Namensfeier overture, op. 115, Quartet in Eb, op. 127, etc.; also in Pizarro's song at the end of Act I of Fidelio, 'Auf euch, auf euch, nur will ich bauen.' In the final chorus of that opera, 'Wer ein holdes Weib errungen,' the direction originally stood Maestoso vivace, but was afterwards changed to Allegro ma non troppo. The first movement of the Choral Symphony is marked Allegro ma non troppo, un poco maestoso; the passage in the last movement to the words 'Seid umschlungen Millionen' is Andante maestoso; and the four bars of 3–4 time immediately before the final Prestissimo are marked Maestoso simply. Mendelssohn uses Allegro maestoso frequently, as in Elijah, 'I am he that comforteth,' and 'Be not afraid,' and in St. Paul very often. He uses Moderato maestoso in 'Then did Elijah the prophet.' Maestoso con brio occurs as the equivalent of the German 'Rauschend und festlich' in Schumann's Novelette, No. 5. [J.A.F.M.]

MAESTRO, master. This word is almost exclusively applied to the great classical composers, but occasionally it is used of the very highest class of executive musicians, though even in this case it may be taken as implying an appreciation of their compositions rather than of their performances. It is seldom applied to teachers as such, but refers almost always to composers of note.

Maestro di capella is the exact Italian equivalent to the German term Kapellmeister, or conductor.

Maestro dei putti (master of the boys) is an office which was founded in 1538 (not, as is generally supposed, in the Papacy of Julius II. which was much earlier), and which was first held by Arcadelt. Its duties are to teach singing to the boys of St. Peter's, in Rome, and more or less to superintend the choir arrangements. It thus represents our 'Choirmaster.' [See ARCADELT, vol. i. p. 81.]

Maestro al cembalo is an officer at the Opera, next in importance to the conductor, and occasionally taking his place. His duties consist of superintending the rehearsals of the music, and accompanying at them. This post was held by Handel at Hamburg, when he was quite young [see HANDEL, vol. i. p. 648], and afterwards by Matheson. [J.A.F.M.]

MAGNIFICAT. The 'Song of the Blessed Virgin Mary' has been used as the Vesper Canticle of the Church, from time immemorial; and the Evening Office has always been so constructed as to lead up to it as its chief point of interest.

In Plain Chaunt Services, it is sung to the same Tones as the Psalms; but, with certain differences of detail. For instance, the Intonation—except on Ferias, and a few Festivals of minor importance—is prefixed to every Verse. The Mediation is distinguished from the ordinary form by the presence of certain ornamental notes, introduced, *per ligaturam*, for the purpose of adding to its solemnity: but it will be observed, that, in the Roman Vesperal, the Mediation of the first Verse is altogether omitted, in consequence of the small number of syllables, the melody passing on, at once, from the Reciting-Note to the Ending, which, in all cases, corresponds exactly with the formula prescribed for the Psalm-Tones. Finally, the *Tempo* is infinitely slower than that used in any other part of the Service. This last peculiarity is a very important one: for, according to the Ritual of the Western Church, the Officiant and Sacred Ministers are occupied, during the singing of *Magnificat*, in incensing the Altar—a process, which, when full Ceremonial is used, occupies a considerable time.

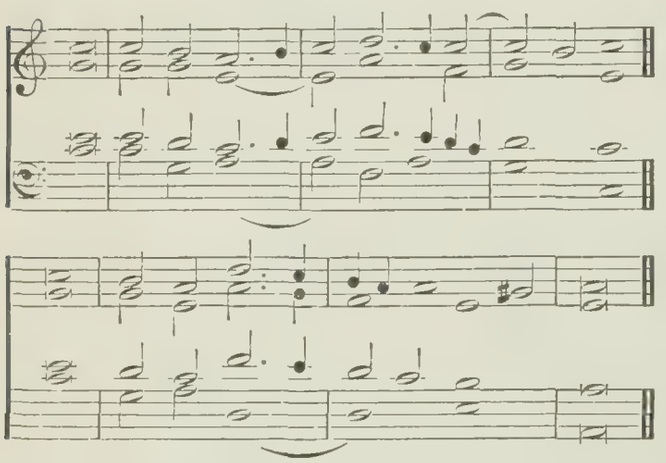
After the invention of Discant, a custom arose, of singing *Magnificat* in alternate Verses of Plain Chaunt, and *Faux Bourdon*. Sometimes, the *Faux Bourdon* was simply a harmonised Psalm-Tone, with the melody in the Tenor, as in the following example of a very beautiful 'Use' which has long been traditional in French Cathedrals.

[1] See Prof. G. Allen, of Philadelphia, U.S.A., in the Book of the first American Chess Congress.

Magnificat, Primi Toni.

Sometimes, the Plain Chaunt was contrasted with an original *Faux Bourdon*, written in the required Mode, but not, like the former example, on the actual melody of the Psalm-Tone. Dr. Burney, during his visit to Rome, met with an exceedingly interesting MS. collection of *Faux Bourdons*, of this description, by some of the greatest Masters of the 16th century. From his autograph transcription of this volume—now preserved, under the name of *Studij di Palestrina*, in the Library of the British Museum—we extract the following beautiful example by Giovanni Maria Nanini [1].

Ton. IV.



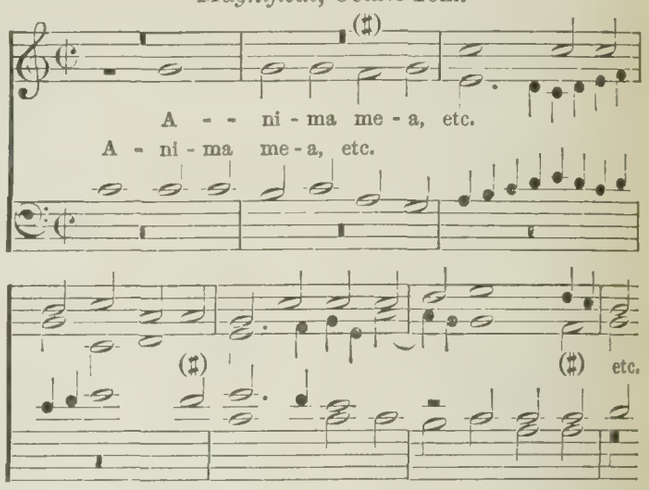
These two methods of singing *Magnificat* are so wonderfully effective, that it is difficult to choose between them: and, happily, they are both so easy, that no Choir need fear to attempt them. But, the development of the idea did not rest here. It is scarcely possible to name any great Church Composer who has not illustrated the text of the Canticle with original music, over and over again. Josquin des Prés, Morales, Goudimel, Animuccia, Vittoria, Orlando di Lasso, and a host of authors, representing every School, and every well-marked Period, have left us innumerable examples. Palestrina published a volume, in 1591, containing two settings in each of the first eight Modes; and has left nearly as many more in MS. His favorite plan was, to

[1] It will be seen that Nanini has ended his Chaunt with the harmony of the Dominant, instead of that proper to the Final of the Mode. A similar peculiarity is observable in many other *Faux Bourdons* adapted, by the Old Masters, to alternate Verses of Canticles and Psalms. The reason of this is self-evident. One or other of the Subsidiary Cadences of the Mode is employed, in order that its true Final Cadence may be reserved for the conclusion of the Antiphon which is to follow. The Sistine *Miserere* may be cited as the exception which proves the rule. It ends with the proper Final Cadence, because, in the Office of *Tenebræ*, it is always sung without an Antiphon.

[1] See ANTIPHON.]

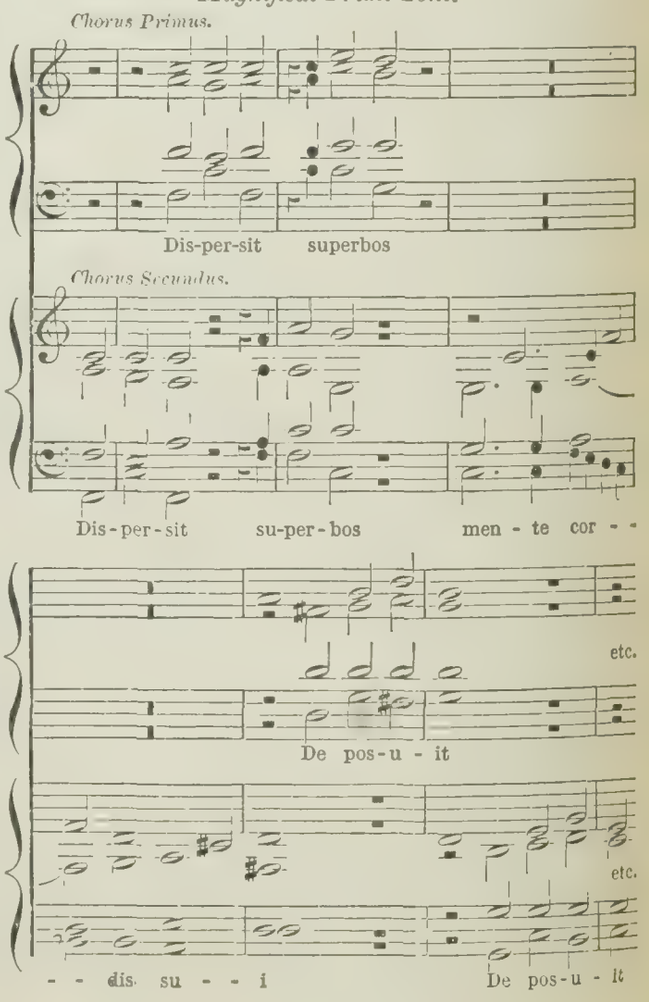
treat the alternate Verses, only, in complex imitation, and closely-interwoven fugal points; leaving, sometimes the even, and sometimes the odd Verses, to be sung in unisonous Plain Chaunt, in the manner already described. The following extract from one of the finest compositions in the series will serve to exemplify his usual mode of treatment.

Magnificat, Octavi Toni.



This method was also adopted by Francesco Suriano, Orlando di Lasso, and many other writers; but Felice Anerio, Luca Marenzio, Giovanni Gabrieli, and some of the most noted of their contemporaries, treated the Canticle in Polyphone, throughout, frequently disposing their Voices in two or more antiphonal Choirs. A fine example of this later style is preserved in Gabrieli's eight-part *Magnificat* in the First Mode.

Magnificat Primi Toni.



The fathers of English Cathedral Music treated *Magnificat* in a manner peculiarly their own—clear in design, pure, solemn, and richly harmonious, but differing in no wise from their rendering of the other Canticles, and demanding no slower *Tempo* than the rest. The finest of these, which may well bear comparison with the works of the great Flemish and Italian Schools, are to be found in the 'Services' of Tallis, Byrd, Farrant, Tomkins, Bevin, Batten, and Orlando Gibbons. Their number is comparatively small: but it is to be feared that many invaluable compositions of the Elizabethan Æra have been lost to us, through the spoliation of Cathedral Libraries, during the great Rebellion. After the Restoration, the style rapidly deteriorated: and, notwithstanding the efforts of a few talented Composers—especially, Drs. Creyghton, and Croft—who conscientiously followed the precepts of the earlier School, it sank, eventually, so low, that even the platitudes of Kent, and Jackson, fail to represent its latest stages of degradation. Happily, the number of fine examples still remaining is quite sufficient for all practical purposes; and all are now published in cheap, and easily accessible forms.

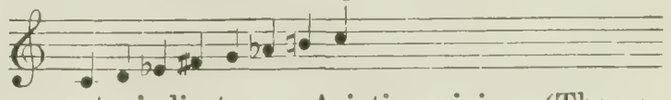
The text of *Magnificat* has also been grandly illustrated, by Bach, Mendelssohn, and other Composers of the modern School, in the Oratorio style, with full orchestral accompaniments. For some particulars respecting the history of a *Magnificat* of this description, which has lately given rise to discussions of more than ordinary interest, see ERBA, DON DIONIGI; and HANDEL (vol. i. p. 491*b*, and 654, note). [W. S. R.]

MAGYAR (Hungarian) MUSIC. The most important part of the national music of Hungary is so called because it proceeds from the Magyar portion of the inhabitants. 'The so-called Hungarian style of music,' says the writer of two excellent articles on this subject in the Monthly Musical Record for February and March, 1877, 'as it has come to be recognised, cannot by any means be regarded as indigenous, but may most properly be briefly defined as the product of a commixture of several races. More than one-fourth[1] of the population of Hungary proper (*i.e.* Transleithan Hungary, as it has come to be called since its union with the Austrian empire in 1869) consists of Magyars, the descendants of the ancient Scythians of the Tartar-Mongolian stock, who, after wandering from the Ural mountains to the Caspian Sea, and thence to Kiov, established themselves in Hungary in the ninth century. The remainder of the population is made up of Slavs, Germans, Wallachians, Jews, and Gipsies. Of this mixed population, the Magyars, as the dominant lords of the soil, and the Gipsies, as the privileged musicians of the country, are in the main to be regarded as the joint originators of the national style.'

The union of these two latter races resulted in the combination of their musical characteristics. That of the Magyar music is the peculiarity of its rhythms, and that of the Gipsy music is the presence of turns, embellishments, and 'grace-notes' added to and built upon the melody, and eventually becoming a most important feature in it.

[1] The proportion appears to be more like one half than a quarter.

This latter peculiarity, together with the scale which is characteristic of Hungarian music—a scale with two superfluous seconds, or the harmonic minor with a sharp fourth—



seem to indicate an Asiatic origin. (The ordinary European scales are also in use.) These two chief characteristics will be examined in order.

I. The rhythms, of Magyar origin. The great distinctive feature of the bar-rhythms is *syncopation*, generally consisting of the accentuation of the second quaver in the bar of 2–4 time (the rhythm known as *alla zoppa*, 'in a limping way'), but sometimes extending over larger spaces, as in No. 2 of the Ungarische Tänze of Brahms, bars 1–2, 5–6, etc., where the syncopation extends over two bars. Even where the melody is without syncopation, the accompaniment almost always has it. The phrase-rhythms are not confined to strains of 4 and 8 bars, but phrases of 3, 5, 6, and 7 bars are not unfrequently to be met with. There is no more beautiful example of 7-bar rhythm (although not professedly Hungarian in character) than the second of Schumann's Stücke im Volkston for piano and violoncello, in F major. As examples of 3- and 6-bar rhythms may be cited the third and first of Brahms's Ungarische Tänze, and of 5-bar rhythm, the second part of the following melody ('Beszegödtem Tarnóczára'), the first part being a phrase of 6 bars.

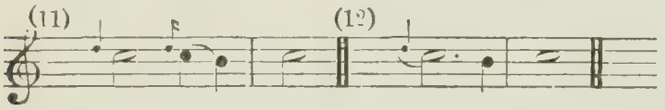
3-4 time, and consequently 6-8, is unknown in genuine Magyar music, although some modern Hungarian composers have introduced it in slow movements. A very beautiful rhythm of seven in a bar (written, for greater clearness, as a bar of 3–4 followed by a bar of common time) occurs in the 'Hungarian Song' on which Brahms has written variations, Op. 21, No. 2.

II. The turns and embellishments added to the melody, of Gipsy, and hence Oriental, origin.

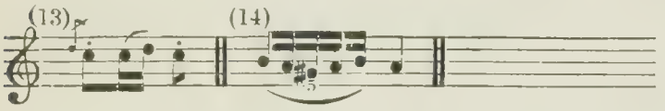
This peculiarity has been observed by travellers in India, who say that in the performance of the natives any embellishments and 'fioriture' are permitted to be introduced at the will of the performer, provided only that the time of

the melody remains intact. The following is a list of the most characteristic turns and 'grace-notes' used in Hungarian music, given by the writer above mentioned:

and the double cadence



to which may be added



The charm which these 'agrémens' give is well illustrated by the first two bars of Schubert's 'Moment musical,' in F minor, where the phrase

is seen to be compounded of the comparatively uninteresting phrase

together with No. 13 and part of No. 4 of the above embellishments.

But the importance of Hungarian music lies not so much in its intrinsic beauty or interest, as in the use made of it by the great classical masters, and the influence which it exercises on their works. The first composer of note who embodies the Hungarian peculiarities is Haydn. The most obvious instance of course is the well-known 'Rondo all' Ongarese,' or 'Gipsy Rondo,' in the Trio No. 1 in G major; but besides this avowedly Hungarian composition there are many passages in his works which show that the years during which he held the post of conductor of Prince Esterhazy's private (and almost entirely Hungarian) band, were not without their effect. Instances of this may be found in many of the 'Salomon symphonies' (the Symphony in B♭, No. 9), etc. We next come to Beethoven, in whom the Hungarian element appears but rarely. In the music to 'King Stephen,' however, it is prominent, as we might expect, in many parts, and the chorus 'Wo die Unschuld Blumen streute' is marked 'Andante con moto all' Ongarese.' The composer however who has made the greatest use of Hungarian characteristics is Schubert. Constantly throughout his works we come upon a peculiarity which at once tells us of its nationality. The C major Symphony (No. 9) for instance, or the Fantasia in C major, op. 15, are full of Hungarian feeling and character, while almost all the peculiarities of the Hungarian style are present in the little 'Moment musical' before alluded to, and still more in the splendid Divertissement à la hongroise (op. 54).

Never, probably, has Hungarian music had such an influence over compositions as at the present time, and among living composers. It is enough to cite such names as Liszt, Brahms, and Joachim, to bring to the mind of every reader the use made by each of them of Hungarian forms and themes. We may think it only natural that the first and the last of these should, being natives of Hungary, have a natural love for their national music, as we see in the 'Legend of St. Elizabeth,' the symphonic poem 'Hungaria,' the fourteen 'Rhapsodies Hongroises,' by Liszt, and the noble Hungarian violin concerto of Joachim, which is a splendid instance of the combination of national characteristics with the classical forms. In the case of Brahms, however, there is no national prejudice to which the partiality for the Hungarian element might be ascribed, and yet here we meet with many Magyar characteristics, not only in the Ungarische Tänze, which are nothing more than transcriptions for the piano of the wild performance of the Hungarian bands (according to the best authorities on this subject), but also in the Sextets for strings, the pianoforte variations, etc.

The following are some of the most important Magyar compositions.

Dances.—The Csárdás, derived from Csárdá, an inn on the Puszta (plain), where this dance was first performed. Every Csárdás consists of two movements,—a 'Lassu,' or slow movement, andante maestoso, and a 'Friss,' or 'quickstep,' allegro vivace. These two alternate at the will of the dancers, a sign being given to the musicians when a change is wished. [See Csárdás.]

The 'Kör-táncz,' or Society-Dance, of which a part consists of a *Toborzó*, or Recruiting dance.

The 'Kanász-táncz,' or Swineherd's Dance, is danced by the lower classes only.

Operas.—Among national Magyar operas—*i.e.* operas of which the libretti are founded on national historic events, and the music is characterised by Magyar rhythms, etc.—may be mentioned 'Hunyadi László,' 'Báthory Maria,' 'Bánk Ban,' and 'Bránkovics,' by Francis Erkel, and the comic opera 'Ilka,' by Doppler. Besides these two composers, the names of Mocsonyi, Császár, Fáy, and Bartha, may be given as examples of operatic writers.

Songs.—Many collections of Nepdal, or popular songs, have been published. One of these, 'Repüli Fecske,' has been made widely known by M. Remenyi's adaptation of it for the violin.

The great National March—The 'Rákocsy Induló,' made famous by Hector Berlioz, who introduced it in Paris with an immense orchestra.

The National Hymn of Hungary is called 'Százat,' or 'Appeal.'

That the Magyars know how to value their own national music may be shown by the existence at Budapest of a National Conservatorium, of which Liszt is Director, and two national theatres, one (the older, which has existed for nearly half a century) for opera and drama, and the other, opened three years ago, for vaudevilles, operettas, etc. A new grand opera-house is in course of construction, and will be opened in a few months. Musical journalism is represented by two weekly publications, one of which, the 'Zenészeti Sapok,' edited by Abrányi, is often referred to as an authority on Magyar music. [J.A.F.M.]

MAID OF ARTOIS, THE. A grand opera in 3 acts; words by Bunn, music by Balfe. Produced at Drury Lane May 27, 1836. [G.]

MAID OF HONOUR, THE. A comic opera in 3 acts; words by Fitzball, music by Balfe. Produced at Drury Lane Dec. 20, 1847. [G.]

MAINZER, Joseph, was born in 1801 at Trêves, where his father was a butcher. He was educated in the Maîtrise of Trêves Cathedral, learnt to play several instruments, and developed considerable musical gifts, then spent some time in the coal mines near Saarbruck, with the view of being an engineer, and at length embraced the ecclesiastical profession, was ordained priest in 1826, and afterwards became Abbé. His first practical introduction to music was as singing-master to the seminary at Trêves, for which he published a 'Singschule' or Method (Trêves, 1831). His political tendencies obliged him to leave Germany, and we find him in 1833 at Brussels writing an opera ('Triomphe de la Pologne') and editing the musical portion of 'L'Artiste.' His next destination was Paris, where he opened workmen's classes for music and singing, joined the staff of the 'Gazette Musicale' and wrote the musical feuilletons for the 'National.' Between 1835 and 1841 he published several educational works on music, chiefly for very young beginners, as well as other works, and an opera, 'La Jaquerie,' which was damned on Oct. 10, 1839. He then came to England, competed against Sir H. R. Bishop for the musical professorship at Edinburgh in 1841, and finally established himself at Manchester. In February of that year Mr. Hullah had started his classes on Wilhem's system, and Mainzer attempted to follow suit in the north, and with considerable success. His 'Singing for the [1]million' was at that time well known and went through many editions. He over-worked himself in this cause, and died, much esteemed and regretted, at Manchester, Nov. 10, 1851. A periodical started by him and entitled 'Mainzer's Musical Times' was the predecessor and basis of the present 'Musical Times.' [G.]

MAÎTRISE, a term formerly applied in France both to the quarters assigned in cathedrals and collegiate churches to the choristers and their master, and to the institution itself, which originally included a complete education, lay and ecclesiastical. These schools turned out many great men, several rising to be bishops and popes; among the latter Pope Urban IV, a cobbler's son, whose early years were passed in the 'Psallette' at Troyes. Some centuries later, when the Maîtrises had undergone great changes, they were still the only establishments in which even secular musicians could obtain their training. From the Maîtrises the Church obtained choristers, organists, and maîtres de chapelle, and the world its favourite composers. Here also, although instrumental music was neglected, and dramatic music positively forbidden, the regimental bands found their bassoon-players, and the lyric theatres their 'clavecinistes-accompagnateurs,' cellists, and singers.

A complete account of the Maîtrises would involve a review of the whole history of music anterior to the French Revolution, so we must be content with specifying a few of the masters, composers, choristers, and organists who have reflected honour on these ancient institutions. They were real schools of music, the pupils being maintained at the cost of the chapters. Indeed they much resembled the Conservatorios of Italy, both in their mode of administration, and in the course of instruction given. They were not however all organised alike, but varied with local circumstances. Thus in some the boys, the master, and the priests, lived in common, in others separately; in some the maintenance of the children was in the hands of the master, in others there was a regular purveyor. But in all the main end was the study of music. Before the Revolution there were in France 400 Maîtrises and choirs, with as many maîtres de chapelle, maintained either by the chapters of cathedrals and collegiate churches, the curés, or the monasteries. Each Maîtrise contained on an average from 25 to 30 persons, and the musicians thus diffused throughout the country numbered in all about 10,000, of whom 4,000 were pupils or choristers. There was naturally much rivalry among the different establishments, which was of great benefit to music. To show how great and widely spread was their influence we may name a few of the principal musicians and composers who owed their education and their very varied styles to this one capacious source, before the establishment of opera in France:—Eustache du Caurroy, Intermet, and Claudin (Claude de Sermisy), who flourished under Henri IV; Veillot, maitre of Notre Dame; Hautcousteau, maitre of the Sainte Chapelle; Péchon, maitre of St. Germain; Frémart, Cosset, Gobert, Boesset, Moulinier, and Michel Lambert, all contemporaries of Chanoine Annibal Gantez, whose 'Entretien des musiciens' (Auxerre, 1643, small 12mo. very scarce) contains curious, and not very edifying details of the lives of the maitres de chapelle of his day. Then, with the use of opera, came Cambert, Campra, and Gilles, a pupil of Poitevin, and composer of a celebrated 'messe des morts' performed at the funeral of Rameau, Bernier, a learned contrapuntist, Rameau himself, Gau-

[1] M. Fétis amusingly infers from this title that Mainzer expected to number a million pupils.

zargues, and others of less note. Among organists—Marchand, the Couperins, Daquin, who threatened to be a formidable rival to Handel and Rameau, Balbâtre, Charpentier, Séjan, and Boëly. Among composers—Lalande, Montéclair, Blanchard, Mondonville, Floquet, Philidor, Gossec, Grétry, Champein, Méhul, Lesueur, Gaveaux, Boieldieu, and Felicien David. Among singers, Jélyotte, Legros, Larrivée, Lays, and Rousseau, whose voices were first heard in the service of the Church, afterwards delighted the habitués of the opera.

The Maîtrises, though suppressed in 1791, were afterwards reconstituted, on a different footing. The Conservatoire national de musique is now the great nursery of French musicians, but many a church has still its Maîtrise, where the choristers—boys and men—are trained by a maître de chapelle in everything necessary to insure a good execution of plain-song and sacred music. We have already spoken of Choron's school of music (CHORON), still in existence as the 'Ecole Niedermeyer.' Niedermeyer and D'Ortigue also founded a periodical called 'La Maîtrise' specially devoted to sacred music. It survived only four years, but to it we refer the reader for further details. Besides Gantez's' work already mentioned, another book, also published in 1643 by Jean de Bordenave, a Canon of Béarn, 'L'Estat des églises collégiales et cathédrales,' contains much information, though impaired by its want of method and arrangement. [G.C.]

MAJESTÄTISCH. 'Majestic'; in a dignified manner. This is used as the equivalent of Maestoso by Beethoven in No. 5 of the 6 Lieder von Gellert, 'Die Ehre Gottes in der Natur.' The whole direction is 'Majestätisch und erhaben' (majestic and sublime). The word also occurs as a direction to a song of Schubert's called 'Liedesend.' [J.A.F.M.]

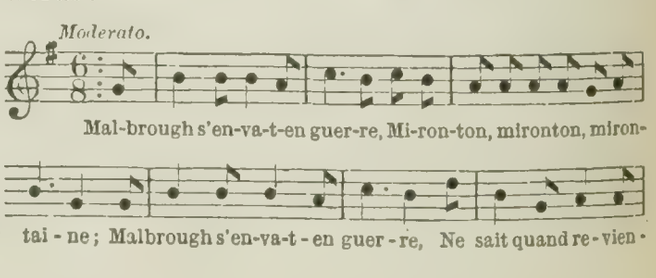
MAJOR. When intervals have two forms which are alike consonant or alike dissonant, these are distinguished as major and minor, the former being always a semitone greater than the latter. Thus thirds and sixths have two forms, which are both consonant, and are respectively called major and minor. Seconds, sevenths, and ninths have each two forms, which are dissonant, and are similarly distinguished as major and minor. The major however is not always the greatest form of an interval, for, under certain circumstances, some intervals are capable of further extension, and are then described as 'augmented' or 'superfluous,' as augmented seconds or augmented or superfluous sixths. The major forms of concords are such as contain a major third from the root note, and these are both more harmonious and better defined than the minor concords; for, in the first place, the major third agrees with the fourth harmonic of the fundamental tone, and, in the second, the combinational tones of the chord for the most part only double notes already existing in the chord. Whereas in the minor concords the minor third does not correspond with any of the really perceptible harmonics of the root note, and the triad cannot in any position be free from false combinational tones. It is mainly for these reasons that the major chord is so often found at the conclusion of a piece of music in a minor mode in the works of the earlier masters, from Josquin des Prés up to Mozart. [See HARMONY, vol. i. pp. 671, 2.]

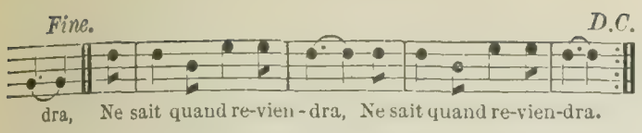
The most important and best defined scale of modern music is called 'major,' because it has a major third from the tonic in the ascending series; whence in former times it was common to distinguish the scale or mode by the terms 'greater' or 'lesser' third, as, 'in the key of G with the greater third,' where one would now say 'G major.' This major scale is the natural diatonic series of modern music, represented by the series starting from C. It is fundamentally the most perfect for harmonic purposes, as it presents the greatest number of concords, and the larger proportion of these in their most harmonious form; and it also provides most perfectly and simply the means of making the tonal relationship intelligible; since, as Helmholtz points out, 'the tones (of the scale) are constituents of the compound tone of the tonic, or the fifth above or the fifth below it. By which means all the relations of tones are reduced to the simplest and closest relationship existing in any musical system—that of the fifth.' This scale corresponds to the Greek Lydian and the Ecclesiastical Ionic.

The term 'major' is also used in a theoretical sense of tones, to distinguish the interval of a tone which has the ratio 9 : 8 from that which has the ratio 10 : 9, which is called a minor tone. For example, in the key of C, C–D is a major tone and D–E a minor tone, and the difference between them is a comma. [C.H.H.P.]

MAJORANO. [See CAFFARELLI.]

MALBROUGH, or MALBROOK. The date of this celebrated French song, and the names of the authors of both words and music, are doubtful; but there is reason to believe that the couplets called 'Mort et convoi de l'invincible Malbrough' were improvised on the night after the battle of Malplaquet (Sept. 11, 1709), in the bivouack of Maréchal de Villars, at Quesnoy, three miles from the field of battle. The name of the soldier, who perhaps satirised the English general as a relief to his hunger, has not been preserved, but in all probability he was well acquainted with the lament on the death of the Duke of Guise, published in 1566. In fact, the idea, the construction, and many details in the two songs are very similar, though the rhythm and position of the rhymes are different, and they cannot be sung to the same music. The following is the air, admirably adapted to the words :—





Chateaubriand, hearing the tune sung by Arabs in Palestine, suggested that it had been carried there by the Crusaders, either in the time of Godfrey de Bouillon, or in that of Louis IX. and Joinville; but no musician can entertain this idea for a moment. The breadth of the phrasing, the major mode, and the close on the dominant, are as characteristic of the popular tunes of the time of Louis XIV. as they are unlike the unrhythmical melodies of the middle ages.

It is not surprising that neither words nor music are to be found in the many collections of both: nowadays the merest trifles appear in print, then all songs were sung from memory. It would probably have died out had not Madame Poitrine used it as a lullaby for the infant dauphin in 1781. Marie Antoinette took a fancy to her baby's cradle-song, and sang it herself, and 'Malbrough s'en va-t-en guerre' was soon heard in Versailles, Paris, and at length throughout France. Beaumarchais introduced it into his 'Mariage de Figaro' (1784), which still further contributed to its popularity. It then became a favourite air for couplets in French vaudevilles; and Beethoven brings it into his 'Battle Symphony' (1813) as the symbol of the French army. The air is now equally popular on both sides of the Channel. Many an Englishman who would be puzzled to recognise Marlborough under the guise of Malbrook is familiar with the tune to the convivial words, 'We won't go home till morning' and 'For he's a jolly good fellow.'

The piece was made the subject of an opera-bouffe in 4 acts, words by Siraudin and Busnach, music by Bizet, Jonas, Legouix, and Delibes, brought out at the Athénée, Dec. 15, 1867. [G. C.]

MALCOLM, Alexander, was author of 'A Treatise on Music, Speculative, Practical and Historical,' 8vo. Edinburgh, 1721; 2nd edition, 8vo. London, 1730; a well-executed work. An ill-made abridgement appeared in London, 1776. In 1721 one Mitchell published 'An Ode on the Power of Music,' dedicated to Malcolm, the greater part of which is prefixed to the 2nd edition of the Treatise. [W. H. H.]

MALEK ADEL. An opera seria in 3 acts; words by Count Pepoli, music by Costa. Produced at the Théâtre Italien, Paris, Jan. 14, 1837, and in London at Her Majesty's, May 18, 1837. [G.]

MALIBRAN, Maria Felicità, one of the most distinguished singers the world has ever seen, was born March 24, 1808, at Paris, where her father, Manuel Garcia, had arrived only two months before. When 3 years old she was taken to Italy, and at the age of 5 played a child's part in Paër's 'Agnese,' at the *Fiorentini*, Naples. So precocious was she that, after a few nights of this opera, she actually began to sing the part of *Agnese* in the duet of the second Act, a piece of audacity which was applauded by the public. Two years later, she studied *solfeggi* with Panseron, at Naples; and Hérold, happening to arrive about the same time, gave her her first instruction on the piano. In 1816 Garcia took her to Paris with the rest of his family, and thence to London in the autumn of 1817. Already speaking fluently Spanish, Italian, and French, Maria picked up a tolerable knowledge of English in the $2\frac{1}{2}$ years she spent in London. Not long after, she learned German with the same facility. Here, too, she had good teaching on the piano, and made such rapid progress that, on her return to Paris in 1819, she was able to play J. S. Bach's clavier-works, which were great favourites with her father. In this way she acquired sound taste in music.

At the early age of 15 she was made by her father to learn singing under his own direction; and, in spite of the fear which his violent temper inspired, she soon showed the individuality and originality of her genius. Two years had barely elapsed when (1824) Garcia allowed her to appear for the first time before a musical club which he had just established. There she produced a great sensation, and her future success was confidently predicted. Two months later, Garcia returned to London where he was engaged as principal tenor; and here he set on foot a singing-class, in which the education of Maria was continued, if not completed. Fétis says that it was in consequence of a sudden indisposition of Mme. Pasta, that the first public appearance of Maria was unexpectedly made; but this account is not the same as that given by Ebers or by Lord Mount-Edgcumbe. The latter relates that, shortly after the repair of the King's Theatre, 'the great favourite Pasta arrived for a limited number of nights. About the same time Ronzi fell ill, and totally lost her voice, so that she was obliged to throw up her engagement and return to Italy. Madame Vestris having seceded, and Caradori being unable for some time to perform, it became necessary to engage a young singer, the daughter of the tenor Garcia, who had sung here for several seasons. She was as yet a mere girl, and had never appeared on any public stage; but from the first moment of her appearance she showed evident talents for it both as singer and actress. Her extreme youth, her prettiness, her pleasing voice, and sprightly easy action, as Rosina in 'Il Barbiere di Seviglia,' in which part she made her début, gained her general favour; but she was too highly extolled, and injudiciously put forward as a *prima donna*, when she was only a very promising débutante, who in time, by study and practice, would in all probability, under the tuition of her father, a good musician, but (to my ears at least) a most disagreeable singer, rise to eminence in her profession. But in the following year she went with her whole family (all of whom, old and young, are singers *tant bons que mauvais*) to establish an Italian opera in America, where, it is said, she is married, so that she will probably never return to this country, if to Europe.' Ebers says, 'her voice was a contralto, and

managed with great taste.' Her début took place June 7, 1825. She was immediately afterwards engaged for the remainder of the season (about six weeks) at £500. On July 23, she sang *Felicia* in the first performance of Meyerbeer's 'Crociato.' At the end of the season, Garcia went, with his daughter, to the provincial festivals, and then embarked for New York. In this new sphere Maria rapidly improved, and acquired confidence, experience, and the habit of the stage. She appeared in 'Otello,' 'Romeo,' 'Don Giovanni,' 'Tancredi,' 'Cenerentola,' and in two operas written for her by her father, 'L'amante astuto,' and 'La Figlia dell' aria.' She had scarcely made her début when the enthusiasm of the public knew no bounds; and, in the midst of her popularity, Garcia gave her in marriage to M. Malibran, an elderly and seemingly wealthy French merchant, in spite of her repugnance to the union. This marriage, celebrated March 25, 1826, was as unhappy as it was ill-assorted; a year had hardly elapsed before the young wife found herself, on Malibran's bankruptcy, free to leave him, and she at once seized the opportunity. In September 1827 she had returned to France. Preceded by a bright reputation, she began by reaping a harvest of applause in private concerts, followed in January 1828 by a great and genuine success, at Galli's benefit, in 'Semiramide.' Her genius for dramatic singing was at once recognised, though her style was marred by a questionable taste in her choice of ornament. This she had, in Paris, the best opportunity of correcting, both by the advice of kindly critics and the example of accomplished singers. Engaged for the season at the Italian opera, she made her début April 8. The public, at first doubting, soon welcomed her as a really great singer, and were particularly struck with wonder and delight at the novelty and originality of her style. In the season of 1829 Malibran made her re-appearance in London, where she shared the applause of the public with Sontag, and the same result followed her singing with that artist at Paris in the autumn. Engaged again at the Italian Opera in the same capital in January 1830, she was paid frs. 1075 for each representation. This was less than she had received from Laporte in London, for he had given her frs. 13,333·33 a month, an odd sum, unless it meant frs. 40,000 for three months; and she stipulated only to appear twice a week, making each of those appearances cost frs. 1666·66, or about £66. Though she certainly continued to draw no higher salary at the Paris Opera in 1830 and 31, and her charge for singing at private concerts in London, 1829, was only 25 guineas, yet Mr. Alfred Bunn engaged her, soon after, for nineteen nights at £125 per night, *payable in advance.*

Sontag, marrying and retiring from the stage early in 1830, left Malibran mistress of the field, and henceforth she had no rival, but continued to sing each season in London and Paris with ever-increased *éclat.* In 1830 an attachment sprang up between her and de Bériot; and this ended only with her life. They built in 1831 a handsome villa in a suburb of Brussels, to which they returned after every operatic campaign. In the summer of 1832, a sudden inspiration took this impulsive artist to Italy in the company of Lablache, who happened to pass through Brussels; and an Italian tour was improvised, which was a sort of triumphal progress. Milan, Rome, Naples, and Bologna were visited with equal success.

On her return to Brussels in November, Mme. Malibran gave birth to a daughter, who did not live; she had already a son. In the following spring she came to London, and sang at Drury Lane, in English Opera, receiving frs. 80,000 for 40 representations, with two benefits which produced not less than frs. 50,000. The prices offered to her increased each year to an unprecedented extent. She received at the Opera in London, during May and June 1835, £2.775 for 24 appearances. Sums, the like of which had not been heard of before in such cases, were paid to her at the provincial festivals in England, and her last engagement at Naples was for frs. 80,000 for 40 nights, with 2½ benefits, while that which she had accepted at Milan from the Duke Visconti, the director of La Scala, was, exclusively of some other profitable conditions, frs. 450,000 for 185 performances, viz. 75 in 1835–6, 75 in 1836–7, and 35 in the autumn of 38.

Having played here in English versions of 'Sonnambula' and 'Fidelio,' Malibran returned to Naples, where she remained until May, 1834, proceeding then to Bologna, and thence to Milan. She soon came back, however, to London for a flying visit; and was singing at Sinigaglia in July. On the 11th of the next month she went to Lucca, where her horses were taken from her carriage, which was drawn to her hotel by enthusiastic admirers after her last appearance. She next went to Milan, where she signed the above-mentioned *scrittura,* and thence to Naples, where she sang during the Carnival. Here she met with an accident, her carriage being upset at the corner of a street; and she suffered injuries which prevented her from appearing in public for a fortnight. Even then, she made her first appearance with her arm in a sling, which added to the interest of the occasion. From Naples she went, in the same triumphant manner, to Venice, her arrival being announced by fanfares of trumpets. There she was besieged with fresh enthusiasm, which followed her in her return to Paris and London. She returned in August to Lucca, where she played in 'Ines di Castro,' written for her by Persiani, and in 'Maria Stuarda.'

At this juncture, her marriage was annulled by the Courts at Paris, and on March 26, 1836, she married de Bériot, with whom she returned immediately to Brussels.

In the following April, once more in London, Mme. Malibran de Bériot had a fall from her horse. She was dragged some distance along the road, and received serious injuries to her head, from which she never entirely recovered; but her

wonderful energy enabled her for a time to disregard the consequences of this accident. She returned to Brussels, from whence she went to Aix-la-Chapelle, and gave two concerts there with de Bériot. In September she had come to England again, for the Manchester Festival,—at which her short, brilliant life came to an end. She had arrived, with her husband, after a rapid journey from Paris, on Sunday, September 11, 1836. On the following evening she sang in no less than 14 pieces. On the Tuesday, though weak and ill, she insisted on singing both morning and evening. On Wednesday, the 14th, her state was still more critical, but she contrived to sing the last sacred music in which she ever took part, 'Sing ye to the Lord,' with thrilling effect; but that same evening her last notes in public were heard, in the Duet, with Mme. Caradori Allan, 'Vanne se alberghi in petto,' from 'Andronico.' This was received with immense enthusiasm, the last movement was encored, and Malibran actually accomplished the task of repeating it. It was her last effort. While the concert-room still rang with applause, she was fainting in the arms of her friends; and, a few moments later, she was conveyed to her hotel. Here she died, after nine days of nervous fever, in the prostration which naturally followed upon the the serious injuries her brain had received from the accident which had befallen her in the midst of a life of perpetual excitement. She died on Friday, Sept. 23, 1836, about 20 minutes before midnight, under the care of her own doctor, a homœopath, Belluomini, who had declined to act with the two regular physicians who had at first attended her. Two hours after her death, de Bériot was, with Belluomini, in a carriage on his way to Brussels, to secure the property of his late wife. She was buried on Oct. 1, in the south aisle of the collegiate church, Manchester. She was but 28 years of age when she died. Her remains were, soon afterwards, removed to Brussels, where they were re-interred in the cemetery of Lacken where a mausoleum was erected by de Bériot, containing a bust of the great singer by the celebrated sculptor Geefs.

It is difficult to appreciate the charm of a singer whom one has never heard. In the case of Maria Malibran, it is exceptionally difficult, for the charm seems to have consisted chiefly in the peculiarity of *timbre* and unusual extent of her voice, in her excitable temperament which prompted her to improvise passages of strange audacity upon the stage, and on her strong musical feeling which kept those improvisations nearly, but not quite, always within the bounds of good taste. That her voice was not faultless, either in quality or uniformity, seems certain. It was a contralto, having much of the soprano register super-added, and with an interval of dead notes intervening, to conceal which she used great ingenuity, with almost perfect success. It was, after all, her mind that helped to enslave her audience; without that mental originality, her defective vocal organ would have failed to please where, in fact, it provoked raptures. She was a phenomenal singer; and it is one misfortune of the present generation that she died too young for them to hear her.

Many portraits of Malibran have appeared, none very good. A large one, after Hayter, representing her with a harp, as 'Desdemona,' is usually accounted the best; but it is only indifferent. Another, by R. J. Lane, A.R.A., showing her made up as 'Fidalma,' and then, afterwards, in a stage-box, in her usual dress, is much better. It is this latter portrait which we have engraved.

Several biographies have appeared of this extraordinary person, with anecdotes of whom it would be easy to fill a volume; that which was written by the Comtesse Merlin is little better than a romance. Malibran composed and published many *nocturnes*, songs, and *chansonnettes*; some of the unpublished pieces were collected and published by Troupenas at Paris under the name of 'Dernières Pensées musicales de Marie-Félicité Garcia de Bériot,' in 4to. [J.M.]

MALINCONIA, LA. The name attached by Beethoven to a very romantic intermezzo or introduction, of 44 bars length, between the Scherzo and the Finale of his Quartet in B♭, No. 6, op. 18. The time is Adagio, and the direction given is 'Questo pezzo si deve trattare colla più gran delicatezza.' The theme of the Malinconia appears twice in the Finale, much in the same way that the Andante does in that of the Quintet, op. 29. [G.]

MANCANDO, 'failing,' or 'weak,' is used to denote a decrescendo, or lessening of tone, in an already soft passage. It occurs in the Scherzo of Beethoven's Pianoforte Sonata in E♭, op. 7, in the last variation of the Sonata in A♭, op. 26, and in the slow movement of the Quartet, op. 59, No. 2. It is also much used by Schumann and Chopin, and is almost always found in slow movements, although the first instance cited from Beethoven is an exception. [J.A.F.M.]

MANCHESTER. The oldest musical association in this city is THE GENTLEMEN'S CONCERTS, which can be traced back to 1749, and probably existed some time previously to that date. The orchestra was formerly composed of amateurs and professional members, but is now entirely professional. Ten monthly orchestral concerts are given each year at the Concert Hall. Mr. Charles Halle has been the Conductor since May 1850.

THE MANCHESTER CHORAL SOCIETY was formed about the year 1840, for the purpose of performing the leading oratorios and choral works of Handel, Haydn, Mozart, Mendelssohn, etc. Its members were professional and amateur indiscriminately; the accompaniment was limited to the organ; and the concerts, which became very popular, were held in the Royal Institution.

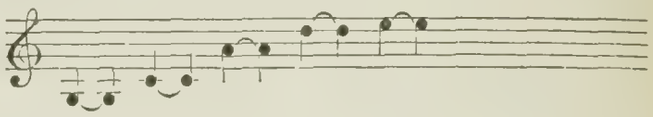
THE HARGREAVES CHORAL SOCIETY was founded in 1841, on the bequest of a large sum of money, and an extensive library of choral music, by Mr. Hamer Hargreaves, for the formation of a society for the practice of sacred choral music, with an instrumental band. The concerts were supported by 150 performers, under the direction of Mr. John Waddington, through whose care and skill the performances attained a degree of completeness never before reached in the North of England. The Society had the honour of introducing Elijah to Manchester on April 20, 1847, under the direction of the composer. It was dissolved in 1849, mainly in consequence of a difficulty in obtaining suitable accommodation.

MR. CHARLES HALLE'S GRAND CONCERTS were begun in 1857, and still continue weekly at the Free Trade Hall, from the last week in October to the first week in March. 20 concerts are given each season, 12 miscellaneous, and 8 choral. The programmes embrace the newest and most interesting orchestral works, concertos and solo compositions played by the best artists, and solo vocal works by eminent singers. The concerts are conducted by Mr. Halle, and the chorus, which is 250 strong and remarkably efficient, is under the control of Mr. Edward Hecht. The reputation of the band is great, and they are frequently engaged at Liverpool, Leeds, Bradford, Edinburgh, and other towns in the North.

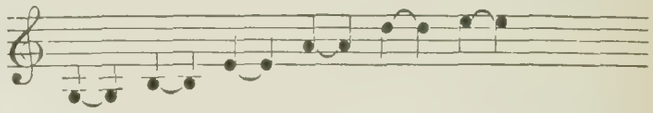
CLASSICAL CHAMBER CONCERTS were started about 1840 by Mr. C. A. Seymour and Herr Rudersdorf, but though much appreciated by the cultivated amateurs of Manchester, they were not adequately supported, and have for many years ceased to exist. [G.]

MANDOLINE (Ital. *Mandolino*) is a small and very beautifully formed stringed instrument of the lute kind, with deeper convexity of back than the lute. It is, as its name implies, less in size than the MANDÓLA or MANDÓRA, a much scarcer instrument. Mándola, or Mándorla, signifies 'almond,' and it has been supposed that the shape of the instrument has given it the name. But this cannot be accepted, since the almost universal use of the syllable 'Man' unchanged, or changed by phonetic variation to 'Ban,' 'Pan,' 'Tan,' etc., for the first syllable of names of lute instruments from East to West, removes it to a wider etymological field.

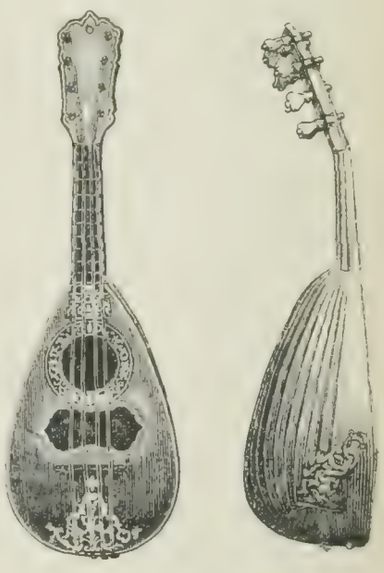
There are two varieties of Mandoline, the Neapolitan and the Milanese; the former having four pairs of strings, the latter usually five. The Milanese 'Mandurina' is tuned



There is one at South Kensington with six pairs, tuned



The Milanese variety, however, is rare in comparison with the Neapolitan, the tuning of which is like that of the violin, in fifths. The lowest pair of strings is of gut, spun over with silver or copper, like a guitar first string; the next of steel also spun over; the second and first pairs are of steel only. The Mandoline is played with a plectrum of tortoiseshell, whalebone, horn, or ostrich-quill, more or less flexible, which is held in the right hand, the left being employed to stop the strings, for which purpose there are seventeen frets across the fingerboard. The scale of the instrument is three octaves and one note, from the G below the treble stave to the octave of A above it. The Serenade in Mozart's Don Giovanni, 'Deh vieni,' was written to be accompanied by the Mandoline :—



The *pizzicato* of the violins is of a different colour of tone, and offers but a poor substitute.

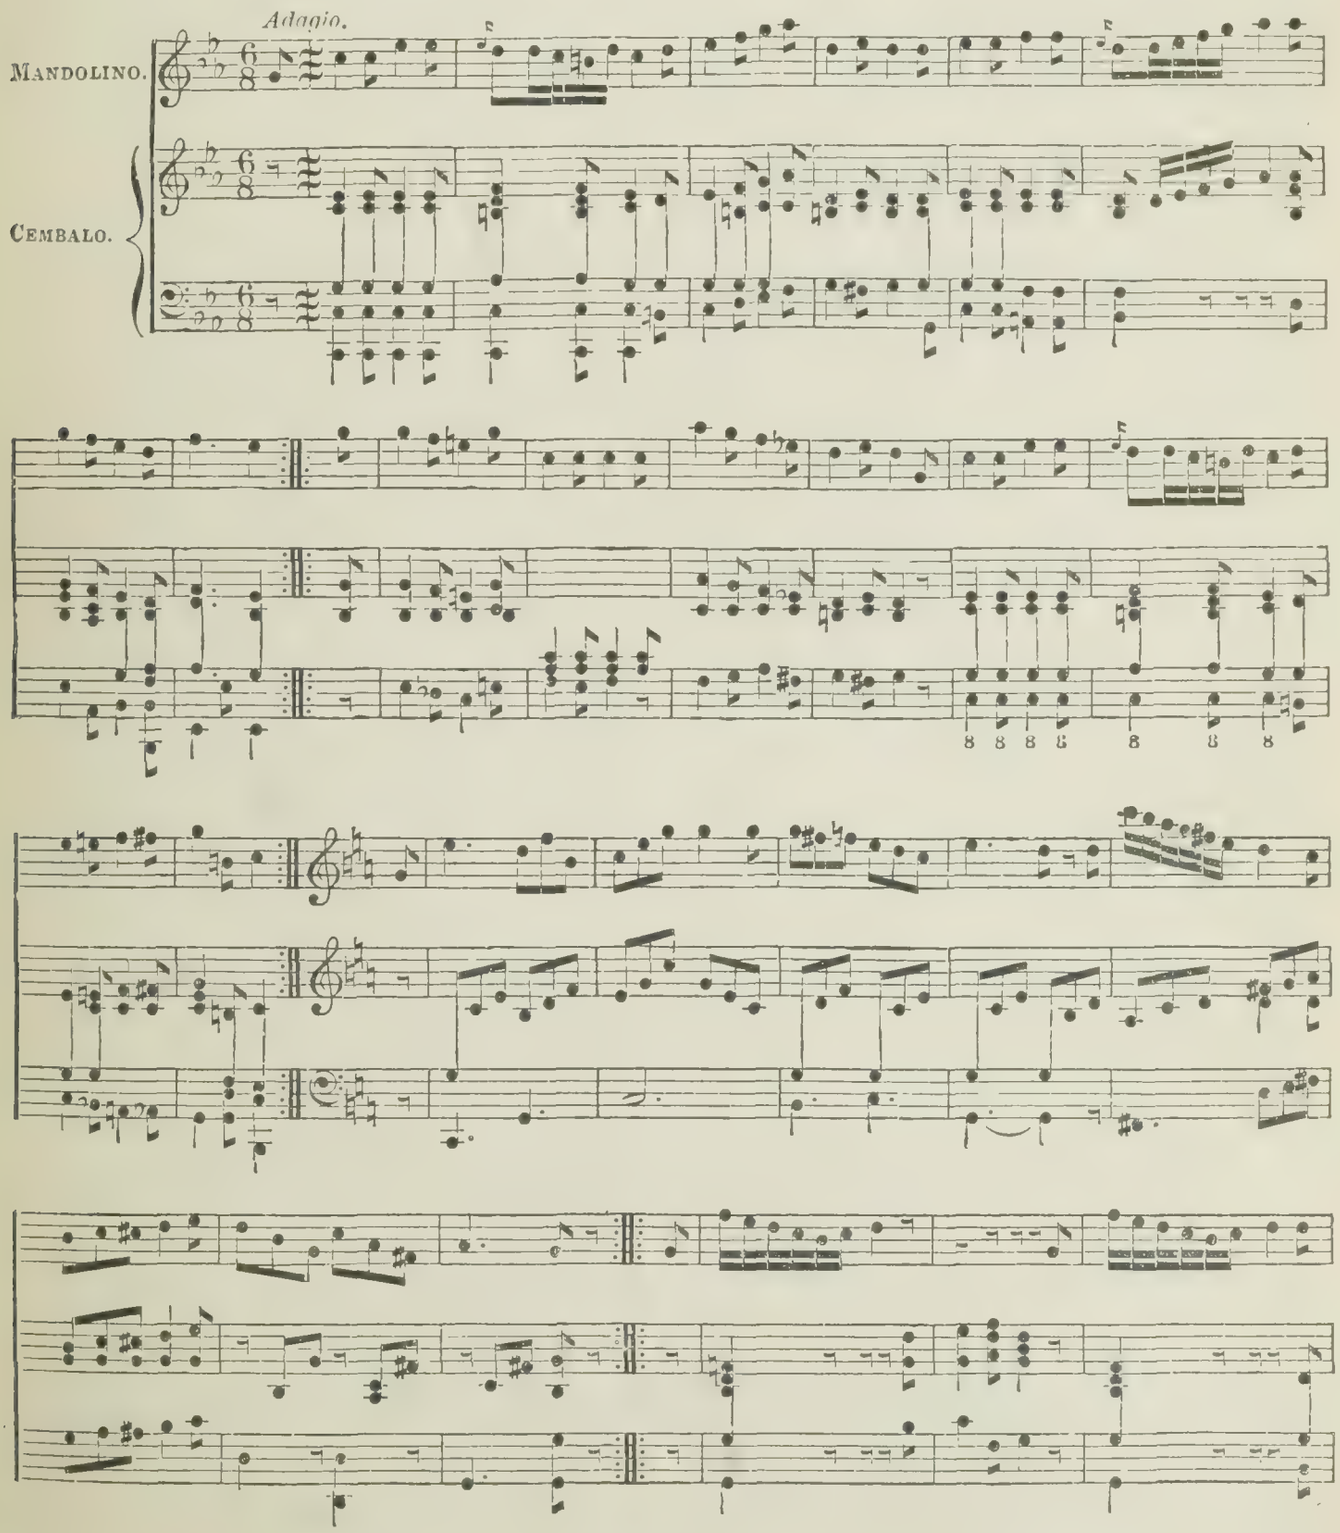
The Mandoline is not however the correct instrument. Don Juan would have played a Bandurria, a kind of half guitar and truly national Spanish instrument, sometimes incorrectly called a Mandoline. The back of the bandurria is flat; it has only in common with the Mandoline that it is played with a plectrum of tortoiseshell,

called in Spanish 'pua,' and that it is the practice to insert a plate of the same substance in the belly below the soundhole to prevent the plectrum scratching. The bandurria has twelve strings tuned in pairs, the higher three notes of catgut the lower of silk overspun with metal. It is tuned much more deeply than the Mandoline. The compass is in all three octaves.

The Spanish 'Estudiantina,' in London 1879, had eleven bandurrias in their band and six guitars.

The most recent instruction-book for the Neapolitan Mandoline is by Signor Carmine de Laurentiis, and is published by Ricordi, Milan. Our illustration is from an instrument in the possession of Mr. Carl Engel.

Beethoven's friend Krumpholz was a virtuoso on the Mandoline, and this probably explains the fact of Beethoven's having written a piece for the instrument (Thayer, ii. 49). The autograph is to be found in the volume of MS. sketches and fragments preserved in the British Museum, Add. MSS. 29,801. Though entitled 'Sonatina per il Mandolina. Composta da L. v. Beethoven,' it is only in one movement, and is here printed probably for the first time. It will be observed that the phrase with which the Trio (C major) begins is the same which Beethoven afterwards used in the Allegretto of op. 14, No. 1.



[A.J.H.]

MANERIA (Ital. *Maniera*). A word, transferred from the terminology of antient music to that of Plain Chaunt, in which it is applied to those combinations of Authentic and Plagal Modes, having a common Final, which are more familiarly called 'Mixed Modes.' [W.S.R.]

MANIER (Ger.), lit. 'manner'; derived, like our word 'manner,' through the French *manière*, a manner, and *manier*, to handle, from the Latin *manus*, a hand. It has two entirely distinct meanings, one dealing with the æsthetics of music, the other with its technicalities. In the first of these connections the word signifies 'mannerism,' or the faulty adherence to some peculiarity in style, bringing such peculiarity into undue prominence. It is the abuse of individuality, without which quality no composer can be truly great. The German word is always used in this sense of reproach; it never has the meaning of 'individuality.'

The second meaning of the word is the same as the French *agrémens*, ornaments introduced into, and built upon, the melody, whether indicated by small notes, or marks, or added at the will of the performer. [See AGRÉMENS, vol. i. p. 42, where the subject is fully treated.] [J.A.F.M.]

MÄNNERGESANGVEREIN, an association of men formed for the cultivation of singing in 4 parts—2 tenors and 2 basses. They sprang from the Liedertafeln, and the most important were founded by Dr. A. Schmid, in Vienna (1845), and by Franz Weber in Cologne. The latter visited England in the spring of 1860, and sang before the Queen at Windsor. (See LIEDERTAFEL). [F.G.]

MANNS, AUGUST, an eminent conductor, born of poor parents at Stolzenburg, near Stettin, in North Germany, March 12, 1825. His first teacher was the Village-musician at the neighbouring village of Torgelow, from whom he learnt the violin, clarinet, and flute. His next instruction was received from Urban, the Town-musician of Elbing, near which his parents had removed, and to whom he was apprenticed. Here he had regular practice in an orchestra, especially that of the Dantzig opera company during its annual visits to Elbing; and this led to his entering one of the regimental bands of Dantzig as 1st clarinet, while he played among the 1st violins at the theatre. He now began to arrange and compose for the band, and generally to take a prominent part in the music of the place. In 1848 the Regiment was transferred to Posen, and here Mr. Manns was noticed by Wieprecht, and through his assistance transferred himself from the military band to Gungl's orchestra in Berlin, and was at length advanced to the post of conductor and solo-violin player at Kroll's Garden—the Crystal Palace of Berlin. Here, under Gyer, he worked hard at harmony and composition, and produced much dance music and other pieces which were very popular. After the destruction of Kroll's establishment by fire in 1851, Mr. Manns was chosen by Herr von Roon (the well-known war-minister), then in command of a crack infantry regiment at Königsberg, to be his bandmaster. Colonel von Roon, though not himself a musician, was very anxious that the band of his regiment should shine in the service. He accordingly gave his bandmaster every opportunity of display. At his instance Beethoven's Symphonies (not at that time so universally known as they are now) were arranged for the band, and in other ways the music of the regiment was made very prominent. It was soon afterwards moved from Königsberg to Cologne, and there enjoyed a still greater reputation. Mr. Manns, however, longed for a wider field, and wisely leaving to others the department of composition, in which his abilities were quite sufficient to have insured him considerable success, he fortunately accepted, in the spring of 1854, an engagement as sub-conductor in the band of the Crystal

Palace, then a wind band only, under Herr Schallehn. This position he gave up in October, and after following his profession at Leamington and Edinburgh (in Mr. Wood's opera band) he became conductor of the summer concerts at Amsterdam in 1855, and finally, in the autumn of that year, was engaged as conductor of the Crystal Palace band, a post which he entered upon on October 14, 1855. The music at the Crystal Palace was at that time in a very inchoate condition, the band was still a wind band, and the open Centre Transept was the only place for its performances. Under the efforts of the new conductor things soon began to mend. He conducted a 'Saturday Concert' in the 'Bohemian Glass Court' the week after his arrival—through the enlightened liberality of the Directors the band was changed to a full orchestra, a better spot was found for the music, adjoining the Queen's rooms (since burnt) at the north-east end, and at length, through the exertions of the late Mr. Robert Bowley, then General Manager, the Concert Room was enclosed and roofed in, and the present famed Saturday Concerts began, and have progressed, both in the value and variety of the selections and the delicacy and spirit of the performances, ever since. Mr. Manns's duties as conductor, both of the daily music and of the Saturday Concerts, as well as of the numerous *fêtes* and extra performances, where music has to be arranged for large combined masses of wind and string, are naturally very arduous. Mendelssohn (in a letter from Leipzig dated Feb. 27, 1841) says, 'I have conducted fifteen public performances since Jan. 1; enough to knock up any man.' What would he have said if he had had to do this with all the added difficulties caused by the calls of the London season on his musicians, and with two band-performances to arrange and conduct every day as well? Mr. Manns has therefore hitherto only rarely taken engagements outside the Crystal Palace. In 1859 he conducted the Promenade Concerts at Drury Lane, and he is announced to conduct the approaching Winter Series at Glasgow (Dec. 1879 and Jan. 1880).

Mr. Manns often appears in the Crystal Palace programmes as a composer, but it is as the director of his orchestra that he has won his laurels. In a remarkable article in The Times of April 28, 1847, it is said that 'the German conductor makes the orchestra express all the modifications of feeling that an imaginative soloist would give voice to on a single instrument.' It is to this power of wielding his band that Mr. Manns has accustomed his audience during the 24 years of his conductorship. In addition to the many qualities necessary to produce this result he is gifted with an industry which finds no pains too great, and with a devotion, which not only makes him strictly loyal to the indications of the composer, but has enabled him to transcend the limits of a mere conductor, and to urge on his audience music which, though at first received with enthusiasm only by a few, has in time amply justified his foresight by becoming a public necessity. It is not too much to say that his persistent performance of the works of Schumann—to name but one composer out of several—in the early part of his career at Sydenham, has made the London public acquainted with them years before they would otherwise have become so. [G.]

MANTIUS, Eduard, a German tenor singer of great reputation in Northern Germany, was born at Schwerin in 1806. He studied law, first in 1825, at the university of Rostock, and afterwards at Leipzig. It was at the latter place that his fine voice attracted general attention and that he began to study singing under Pohlenz. After having sung with great success at a festival at Halle, conducted by Spontini, he went to Berlin, and by his interpretation of the tenor parts in Handel's oratorios (Samson, Judas, etc.), soon became the declared favourite of the Berlin public. How much his talent was appreciated in the house of the Mendelssohn family may be gathered from many passages in the published letters and other books relating to Mendelssohn. It was Mantius who sang the principal tenor part in the Liederspiel 'Die Heimkehr aus der Fremde' ('Son and Stranger'), at the celebration of the silver wedding of the elder Mendelssohns (Devrient, p. 89). In 1830 he made his first appearance on the stage at Berlin as Tamino in the Zauberflöte. In 1857 he gave his farewell performance as Florestan in Fidelio. During 27 years he had appeared in no less than 152 characters. After quitting the stage he devoted himself with much success to teaching, and he died at Ilmenau, in Thuringia, in 1874. Mantius had not only an exceptionally fine voice, which he knew how to use in a truly artistic and musical manner, but was also a remarkably good actor. His representations of the tenor parts in Mozart's and Gluck's operas were justly regarded as models of their kind. [P.D.]

MANTUA. The earliest Academy in Mantua for poetry and music was that of the 'Invaghiti,' founded in 1560 by Cesare Gonzaga, Duke of Mantua, and Signore di Guastalla. It always remained under royal patronage, and was one of the largest and most flourishing in Italy. In 1494, previous to the founding of this Academy, there was a magnificent theatre in Mantua, in which was represented one of the earliest Italian dramas—the 'Orfeo' of Angelo Poliziano. This pastorale was composed in two days at the instance of Francesco Gonzaga, Duke of Mantua. In the seventeenth century, says Muratori, music, and more especially theatrical music, was held in high esteem; the attention of every one was directed to gorgeous musical entertainments, and more especially the courts of Modena and Mantua tried to outshine each other in magnificence. Their respective Dukes, Ferdinando Gonzaga and Francesco d'Este, vied in obtaining the best musicians and most highly prized singers for their court. It was the custom to pay a sum of not less than 300 scudi to the best actors, and there was no stint of expenditure on

orchestra, costumes, or scenery and lighting. (Annali d'Italia, 1690.) [C.M.P.]

MANUAL (from *manus*, a hand), a clavier, or set of keys, to be played by the hands. The term is used chiefly in reference to the Organ, where the keyboards for the hands and the keyboard for the feet have, for convenience, to be distinguished by some brief and suggestive name. Clavier (from *clavis*, a key) simply means a keyboard, without reference to the members of the body with which it is to be played. [E.J.H.]

MANZOLETTO, a very tolerable 'second man,' who appeared in London with Pacchierotti and Mme. Lebrun, in 1779; and remained there with success for two or three seasons, singing in such operas as 'Alessandro,' 'Zemira,' 'Ricimero,' 'Giunio Bruto,' and 'I Viaggiatori Felici,' in 1782. He was heard again three years later by Lord Mount-Edgcumbe, in Naples and Mantua; but never revisited England. [J.M.]

MANZUOLI, Giovanni, was born at Florence about 1725. Having acquired a reputation in Italy, he repaired, in 1753, to Madrid, where he was engaged at a high salary by Farinelli. In 1764 and 1765 he came to London, and, by his performance, 'the serious opera acquired a degree of favour to which it had seldom mounted since its first establishment in this country' (Burney). His voice was the most powerful soprano that had been heard on our stage since the time of Farinelli, and his style was full of taste and dignity. The applause he earned was hearty and unequivocal; 'it was a universal thunder.' Other singers had more art and feeling; none possessed a sweeter or fuller organ. As to execution, he had none; but he was a good actor, though unwieldy in figure, and ill-made. Nor was he young; but the sensation he excited seems to have been irresistible. All the composers struggled to have the honour of writing for him; even Dr. Arne composed his unsuccessful 'Olimpiade' for the popular singer. Manzuoli, however, left England at the end of the season, and did not return. In the same year he was at Vienna, and he shortly afterwards retired to his native place, with the title of 'Singer to the Court of the Grand Duke of Tuscany.'

In a letter[1] of Mozart's, his first after starting on his Italian tour, Jan. 7, 1770, he says of a singer whom he heard, 'canta un poco Manzuolisch ed a una bellissima voce forte ed é già vecchio,' etc. Burney heard him again, in September of that year, taking part in a service in a convent near Florence, and was delighted, though the voice seemed less powerful, even in a small church, than when he was in England. His name occurs once more, in one of the elder Mozart's letters, written in the following August, 'Manzuoli often visits us;' and he is included among 'the singers, not only celebrated in their profession, but good-hearted and sensible people.' He took part in the 'Serenata' composed by the young Mozart in honour of the nuptials of the Archduke Ferdinand, at Milan, Oct. 17, 1771, and was encored in one of his songs. Mozart writes again, Nov. 24, 1771:—'Herr Manzuoli, the *musico*, who has always been considered and esteemed as the best of his class, has in his old age given a proof of his folly and arrogance. He was engaged at the Opera for the sum of 500 gigliati (ducats), but as no mention was made of the *Serenata* in the contract, he demanded 500 ducats more for singing in it, making 1000. The court only sent him 700 and a gold box (and enough too, I think), but he returned the 700 ducats and the box, and went away without anything. I don't know what the result of this history will be,—a bad one, I fear!' A good portrait of Manzuoli was engraved by G. B. Betti, after a design by L. Betti. Among his pupils was the celebrated Coltellini. [J.M.]

[1] In the collection of the present writer.

MAOMETTO SECONDO. Opera by Rossini. Produced at San Carlo, Naples, during the Carnaval of 1820; adapted and extended as Le Siége de Corinthe. The aria 'Sorgete,' for a bass voice, is often sung at concerts. [G.]

MAPLESON, James Henry, a well-known London impresario. He was a student at the Royal Academy, appeared in public as a singer, and for some time played among the violas in the orchestra. Later he was assistant to Mr. E. T. Smith at Her Majesty's Theatre, and when Mr. Smith announced, in 1861, his intention of abandoning Italian Opera, Mr. Mapleson took the Lyceum, and commenced his career as a manager. He opened there on June 5, 1861; and on the 15th produced Verdi's 'Ballo in Maschera' for the first time in England. His first season at Her Majesty's was 1862, when Trebelli made her début in England; the burning of Her Majesty's drove him to Drury Lane in 1868. He joined Mr. Gye in 1869; the coalition lasted two seasons, and in 1871 he returned to Drury Lane. On April 28, 1877, he reopened Her Majesty's Theatre, of which he is still manager. Mr. Mapleson has lately taken his company to the United States in the intervals of the London season. [G.]

MARA, Gertrude Elisabeth, one of the greatest singers of the last century, was born at Cassel, Feb. 23, 1749. Her mother died soon after the birth of this child, and her father, a poor musician, named Schmeling, is said to have adopted the plan of securing his little daughter in an armchair, while he attended to his affairs. From this cause, it appears, she fell into a rickety state, from which it was long ere she recovered, if indeed she ever recovered entirely. Schmeling contrived to increase his income by mending musical instruments, and the little Gertrude one day got hold of a violin, and began to draw musical sounds from it, being then only four years old. For this she was punished by her father; but the temptation was too strong to be resisted, and she seized every opportunity of practising on such instruments as she could find, whenever Schmeling's back was turned. He found her, however, before long, to his astonishment, playing on a violin, of which she had mastered the scale.

Struck with her genius, he gave her a few lessons, and found her so apt a pupil that, not long afterwards, he was able to play duets with her before a few amateurs. But even now, in her fifth year, the poor child could not stand without support, and her father was obliged to carry her to the place where she was to play. By favour of an amateur, Schmeling and his child were enabled to visit the fair at Frankfort, where the little girl's performance excited great wonder. A subscription was set on foot, a better education was given to her, and when she had reached the age of nine her health had improved, and she was able to proceed to Vienna with her father, and there give some concerts. The English ambassador advised Schmeling to take the child to England, advice on which the poor musician, furnished with letters of introduction by the ambassador, gladly acted. He soon obtained the patronage of many noble and influential persons, including the Queen, for his wonderful child. The little girl, petted and admired by all the great ladies, was, however, persuaded by them to give up the violin, which they thought an unfeminine instrument, and was encouraged to sing. Her voice was already resonant and clear, but she had, of course, had no instruction. Schmeling, by the help of her protectresses, placed the young Gertrude under the tuition of the *musico* Paradisi. She made rapid progress, but it soon became necessary to remove her from the power of her profligate instructor.

Returning to Cassel, Schmeling found it impossible to get an engagement for his daughter, as he had hoped, at the Court; for the King would not hear of any but Italian singers. Hiller now received her into his music-school, at Leipzig, where she remained for five years. In 1771 she came out from this academy, with a voice remarkable for its extent and beauty, a great knowledge of music, and a brilliant style of singing. She was the first great singer that Germany had produced. Her education had been formed on the music of Hasse, Graun, Benda, Jommelli, Pergolese, Porpora, and Sacchini; but Hasse, with his vocal passages and facile style, was her favourite master. Her voice extended from the middle G to E in alt. She made her *début* in an opera of Hasse's at Dresden, and was successful. With difficulty, the King, Frederick II, was persuaded to hear her; and, though strongly prejudiced against her on account of her nationality, he was immediately converted by her singing an air of Graun's at sight, and finally engaged her for life to sing at Court, with a salary of fr. 11.250. Here she profited by the hints of Concialini and Porporino, and perfected her singing of slow and legato airs.

It was at this juncture that, in spite of all advice, and although the King twice refused his consent, she married the violoncellist, Mara. She soon discovered her folly, and regretted it when too late. This part of her life was extremely unhappy; she was made miserable on the one hand by the excesses of a debauched and dissipated husband, and on the other by the tyranny of a king who allowed her no liberty or indulgence. On one occasion, she was actually brought from her bed, by his orders, transmitted through an officer and guard of soldiers, and forced to sing at the Opera, though complaining, truly or untruly, of indisposition. She at length succeeded in escaping to Dresden, where she was detained by the Prussian ambassador. Frederick, however, who had lost some front teeth, and could no longer play the flute, cared now but little for music, and gave her a tardy permission to annul her engagement. Mme. Mara, free at last, arrived in 1780 at Vienna, where Storace was playing in *opera buffa*, for which the Emperor had a great liking. This was not Mara's line, and she was coldly received. Provided, however, with a letter to Marie-Antoinette from the Empress, she passed through Germany, Holland, and Belgium, singing at various places on her way. At Munich Mozart heard her, but was not favourably impressed. He wrote, Nov. 13, 1780, 'Mara has not the good fortune to please me. She does too little to be compared to a Bastardella (yet this is her peculiar style), and too much to touch the heart like a Weber [Aloysia], or any judicious singer.' He tells a story of her and her husband a few days later (letter of Nov. 24), which shows both of them in a very unpleasant light, as behaving with foolish effrontery and pretension. She was again at Vienna in March 1781, and Mozart mentions her as giving a concert there. She reached Paris in 1782. Here she found the celebrated Todi, and a rivalry immediately sprung up between these two singers, which divided society into factions, as when Handel and Buononcini, or Gluck and Piccinni, were opposed to each other by amateurs incapable of admiring both. Many anecdotes are told of the Mara and Todi dispute, among which one has become famous. At a concert where both singers appeared, an amateur asked his neighbour, 'Quelle etait la meilleure:' to which the other replied, 'C'est Mara.' 'C'est bien Todi' (bientôt dit) was the punning answer.

Two years later, in the spring of 1784, Mara made her first appearance in London, where her greatest successes awaited her. She was engaged to sing six nights at the Pantheon. Owing to the general election, she sang to small audiences, and her merits were not recognised until she sang at Westminster Abbey, in the Handel Commemoration, when she was heard with delight by nearly 3000 people. She sang in the repeated Commemoration in 1785, and in 1786 made her first appearance on the London stage in a serious pasticcio, 'Didone Abbandonata,' the success of which was due entirely to her singing. In March 1787 Handel's opera of 'Giulio Cesare' was revived for a benefit, and Mara played in it the part of 'Cleopatra,' which Cuzzoni had sung in 1724. It was so successful that it was constantly repeated during the season. Mara again took a leading part in the Festival in Westminster Abbey in 1787, and she remained connected with the opera in London till 1791, after which, though she sang

occasionally on the stage, and even in English ballad operas, she was more frequently heard in concerts and oratorios. For these she was better suited, as her figure was not good enough for the theatre, nor was she a good actress. It is, indeed, not impossible that her stage-presence was still to some extent spoiled by the disease which crippled her as a child; and there is a caricature in which she is shown, singing at a 'Wapping Concert' *seated* (Feb. 28, 1766), with the following apology below:—

MADAM MARY . . . . . begs her Polite Audience will excuse her sitting during the Performance, as she contracted in her infancy a Disorder called Le Genoue Inflexible, or (Stiff Knee) which prevents her standing, even in the most Sacred Pieces of Music—her Enemies call it Pride, but must appear only malice, when she could not rise before their Majesties; or at the Sacred Name of Jehovah.

There is, again, a letter of Mara's extant,[1] in which she apologises for not being able even to sit on a platform throughout a concert, a thing she had never been able to do, owing to the heat and fatigue, which she could not bear. Her health was, in fact, never strong. She had, however, the advantage of knowing our language, which she had learnt in childhood, during her first visit to England; and she is said to have gained large sums here by her oratorio-singing.

In 1788 she was singing in the Carnival at Turin, and the following year at Venice. She returned to London in 1790, and went to Venice again in 1791. Coming once more to London in the next season, she remained here for ten years. After this time, she found her voice losing strength, and she quitted England in 1802, after enjoying a splendid benefit of over £1000 at her farewell concert. She sang without effect at Paris, where she had the misfortune to come after Grassini; and then, after passing through Germany, Mara retired to Moscow, where she bought a house.

Her worthless husband, and her numerous lovers,—among whom the last was a flute-player named Florio,—had helped her to spend the immense sums which she had earned, until she found herself without means, and compelled to support herself by teaching. By following this occupation, she acquired a small competence, which was again lost to her (1812) in the fire of Moscow, which destroyed the merchant's house in which she had placed it. Forced to begin once more to seek a means of subsistence, when almost 64 years old, Mara travelled in Livonia, where she was kindly received, and settled in Revel. She now supported herself again for about four years by teaching, and then formed the strange desire to revisit London, the scene of her former glory. Here she arrived in 1819 (according to Fétis), though Lord Mount-Edgcumbe puts her visit before the burning of Moscow. In any case, the poor old woman, announced in a mysterious manner by Messrs. Knyvett as 'a most celebrated singer whom they were not at liberty to name,' appeared at the King's theatre, when it was discovered that not a shred of her voice remained,—and never appeared again. She returned to Livonia, and died at Revel, Jan. 20, 1833, at the advanced age of 84, soon after receiving from Göthe a poem for her birthday, 'Sangreich war dein Ehrenweg' (Weimar, 1831).

A life of Mara, by G. C. Grosheim, was published at Cassel in 1823, and a more interesting one by Rochlitz in his 'Für Freunde der Tonkunst,' vol. i. The best portrait of her was engraved (oval) by J. Collyer, after P. Jean, 1794. [J. M.]

MARCATO. 'In a marked, decisive manner.' The principal use of this direction is to draw the attention to the melody or subject when it is in such a position that it might be overlooked, as for instance, 'Il basso ben marcato,' in Chopin's Krakowiak, op. 11; or when there are two subjects both of which are to be brought prominently forward, as in the 9th Symphony of Beethoven (last movement) where the two subjects come together in 6-4 time, the words being 'Freude, schöner Götterfunken,' and 'Seid umschlungen,' etc.; and in the Études Symphoniques of Schumann, No. 2, 'Marcato il canto' and 'Marcato il tema.' Beethoven also uses 'Queste note ben marcato' in the string quartet, op. 18, No. 6, slow movement, and 'Melodia marcata,' in the Trio, op. 9, No. 2.

'Marcatissimo' is used by Chopin, Étude, op. 25, No. 11, at the end, and by Schumann in the last movement of the Sonata in F♯ minor, op. 11, and in No. 8 of the Études Symphoniques. The latter composer is the only one of note who uses this direction at the beginning of a movement, to denote the character of the whole. This he does frequently, as 'Allegro marcato,' in the third of the Intermezzi, op. 4; and 'Ben marcato,' in Nos. 1 and 3 of the Romances, op. 28. As a rule Marcato is coupled with a certain degree of force, as in Schumann's first Novelette, 'Marcato con forza (Markirt und kräftig)'; but in the grand Sonata, op. 14 (last movement), we find 'Leggiero marcato,' and near the end, 'Leggierissimo marcando.' The sign which is equivalent to Marcato is < over the separate notes, but this refers to the notes themselves, and Marcato to the whole passage. [J.A.F.M.]

MARCELLO, BENEDETTO, eminent composer, a Venetian of noble birth, son of Agostino Marcello and Paola Capello, born July 31, or August 1, 1686. He was highly educated, and had great natural gifts for music, and was a pupil of Lotti and Gasparini. The violin was his first instrument, but he soon gave his whole attention to singing and composition. His father, objecting to the time thus occupied, sent him from home to study law, but on his death Benedetto returned to Venice, and contrived to combine the practice of music with his professional avocations. He held important government posts, was a member of the Council of Forty, and afterwards Proveditore of Pola (1730). Here he remained 8 years, when his health having been ruined by the climate he became Camerlengo at Brescia, and there died July 24, 1739. His

[1] In the collection of the present writer.

monument in the church of S. Giuseppe states his age to have been 52 years, 11 months, and 23 days. He was elected Cavaliero of the Filarmonici of Bologna in 1812, and was also a member of the Pastori Arcadi of Rome. In his youth he was wild, but sobered down in middle life. His great work, in 8 volumes, folio, 'Estro poetico-armonico, Parafrasi sopra i primi 50 Psalmi, Poesia di Girolamo Giustiniani,' appeared in two parts of 25 Psalms each (Venice, 1724-27). They are composed for 1, 2, 3, and 4 voices, with figured basses, and occasionally with 2 violins and cello obligati; and for expression far surpass any other work of the kind. Dr. Burney, in his notice of Marcello (Hist. iv. 543), considers that they have been overpraised, and that even in the composer's day his airs and themes were neither new nor original. In spite however of this judgment it is not to much to say that, as a whole, they constitute one of the finest productions of musical literature. An English edition, edited by Avison and Garth, was published in London in 1757 in 8 vols.; a second in Italian soon after (Venice); and a third by Valle (1803–8). The latest, with P.F. accompaniment by Mirecki, was printed by Carli of Paris. Marcello also composed instrumental concertos (1701), and 'Canzoni madrigaleschi' (Bologna, 1717); besides 'Calista in Orsa,' pastoral (libretto printed in 1725, music unpub.); 'La Fede riconosciuta,' opera (Vicenza, 1702); 'Arianna,' cantata; and 'Giuditta,' oratorio, all to his own words. As a poet he was above the average, and furnished the libretto for Ruggieri's 'Arato in Sparta' (Venice, 1709). In 1720 he published a satirical pamphlet 'Il Teatro alla Moda,' reprinted in 1727, 33, 38 (Venice), and 1741 (Florence). The Library of St. Mark in Venice contains a MS. 'Teoria Musicale'; the Royal Library of Dresden ancient copies of two cantatas, 'Timotheus,' to his own Italian translation of Dryden's poem, and 'Cassandra'; the Court Library of Vienna many autographs and other works, including the cantatas 'Addio di Ettone,' 'Clori e Daliso,' and 'La Stravaganza'; and the Royal Library of Brussels 'Il Trionfo della musica nel celebrarsi la morte di Maria Vergine,' an oratorio for 6 voices and chorus. This score was once in the possession of Fétis, who speaks highly of its expression, pathos, and effective instrumentation. Rossini has borrowed one of the most prominent themes in his overture to the 'Siege of Corinth' note for note from Marcello's 21st Psalm. For Marcello's 'Lettera Famigliare,' see Lotti. [F.G.]

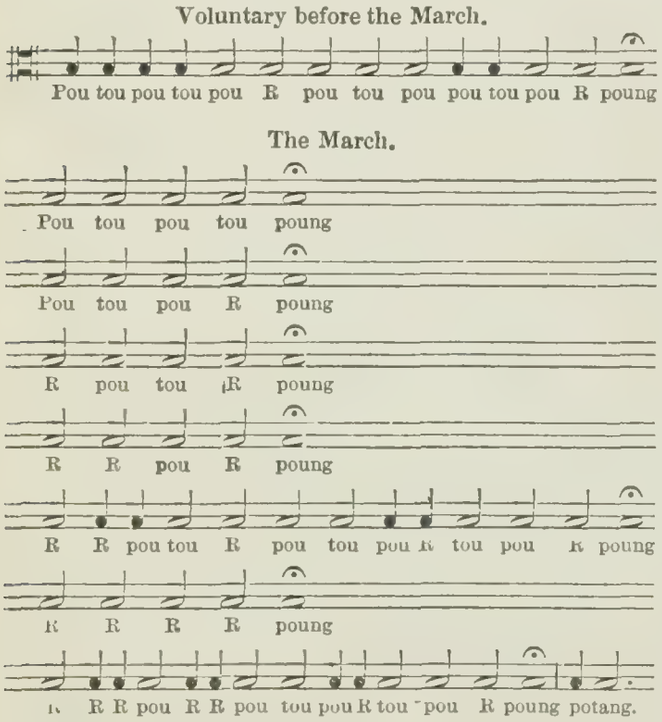
MARCH (Ger. *Marsch*; Fr. *Marche*; Ital. *Marcia*), a form originally associated with military movements, and afterwards imported into the music of the stage, the orchestra, the chamber, and the oratorio. In ancient times the sound of instruments was used as a means of stimulating the action of large numbers of people, whether in processes of labour requiring consentaneous effort, or as a means of exciting ardour in armies advancing to battle by the tones of 'the shrill trump, the spirit-stirring drum, the ear-piercing fife'—equally familiar being Milton's reference to the effect of the sound 'of trumpets loud and clarions,' and the influence on a mighty host of 'Sonorous metal blowing martial sounds.' Like most forms however in instrumental music, the development of the March followed that of vocal music. We find Marches in the early operas, in the stage works of Lully, and later in those of Handel and Rameau. In clavecin music, too, it appears at a comparatively early date, the 'Suites des Pièces' of the French composer Couperin offering examples.

Of the Military March as now understood, as a strictly rhythmical and harmonised composition, written for a band of wind instruments, and intended not only to stimulate courage but also to ensure the orderly advance of troops, it does not appear that any examples are extant earlier than about the middle of the 17th century, and these seem to have originated during the Thirty Years' War, and are to be traced to the form of the *Volkslied*; war-songs, in which patriotic and military ardour was expressed lyrically, having long preceded the exclusive use of instruments for that purpose. A good specimen of the old German military march is that which Meyerbeer introduced in his 'Ein Feldlager in Schlesien' ('Camp of Silesia'), and afterwards, with other portions of that work, in his 'L'Etoile du Nord,' in the camp scene of which the fine old 'Dessauer March' stands prominently out from the elaborations with which the composer has surrounded it.

The earliest instance of the march form in regular rhythmical phrasing seems to be the well-known and beautiful Welsh tune, the national Cambrian war-song, 'The March of the Men of Harlech.' This melody, which has only become generally popular within recent years, is stated by Llwyd, the 'Bard of Snowdon,' to have originated during the siege of Harlech Castle in 1468. If this be so, Dr. Crotch was justified in saying (in his 'Specimens of Different Kinds of Music') 'the military music of the Welsh is superior to that of any other nation'—*i.e.* reading the remark with reference to the war-songs of the period.

In England the Military March would seem to have been of later development. Sir John Hawkins, however, in his History of Music, says:—'It seems that the old English march of the foot was formerly in high estimation, as well abroad as with us; its characteristic is dignity and gravity, in which respect it differs greatly from the French, which, as it is given by Mersennus, is brisk and alert.' On this subject Sir John quotes a *bon mot* of Sir Roger Williams, a soldier of Queen Elizabeth's time, in answer to the French Marshal Biron's remark that 'the English march being beaten by the drum was slow, heavy, and sluggish'; the reply being, 'That may be true, but, slow as it is, it has traversed your master's country from one end to the other.' Hawkins (writing in 1776) speaks of 'the many late alterations in the discipline and exercise of our troops, and the introduction of fifes and other instruments into our martial music'; and, in reference to an earlier condition thereof, quotes, from Walpole's Catalogue of Royal and Noble

Authors, a warrant of Charles I. to the following effect:—'Whereas the ancient custome of nations hath ever bene to use one certaine and constant forme of March in the warres, whereby to be distinguished one from another. And the March of this our nation, so famous in all the honourable atchievements and glorious warres of this our kingdom in forraigne parts (being by the approbation of strangers themselves confest and acknowledged the best of all marches) was through the negligence and carelessness of drummers, and by long discontinuance so altered and changed from the ancient gravity and majestie thereof, as it was in danger utterly to have bene lost and forgotten. It pleased our late deare brother prince Henry to revive and rectifie the same by ordayning an establishment of one certaine measure, which was beaten in his presence at Greenwich, anno 1610. In confirmation whereof wee are graciously pleased, at the instance and humble sute of our right trusty and right well-beloved cousin and counsellor Edward Viscount Wimbledon, to set down and ordaine this present establishment hereunder expressed. Willing and commanding all drummers within our kingdome of England and principalitie of Wales exactly and precisely to observe the same, as well in this our kingdome, as abroad in the service of any forraigne prince or state, without any addition or alteration whatsoever. To the end that so ancient, famous, and commendable a custome may be preserved as a patterne and precedent to all posteritie,' etc. etc.—This document also contains the following [1] notation—



subscribed 'Arundell and Surrey. This is a true copy of the original, signed by his Majestie. Ed. Norgate, Windsor.'

The primary (indeed absolute) importance of the drum in the early form of the March is very evident. Rousseau, in his 'Dictionnaire de Musique,' in his article on that subject, thus defines it:—'Marche: Air militaire qui se joue par des instrumens de guerre, et marque le métre et la cadence des Tambours, laquelle est proprement la Marche.' The same author, writing towards the close of the last century, speaks of the superiority of the German military music, and says that the French troops had few military instruments for the infantry excepting fifes and drums; and very few marches, most of which were 'très malfaites.' Rousseau gives—as follows—the first part of the March of the Musketeers of the King of France, as illustrating 'L'accord de l'air et de la Marche.'

In its earlier instrumental form the German March had two reprises, each of eight, twelve, or even sixteen bars, and its melodic origin would seem to have been influenced by the national dance called the 'Allemande,' in 2–4 time. The modern March is now usually in common time—four crotchets in a bar—consisting of reprises of four, eight, or even sixteen bars, with a subsidiary movement entitled a 'Trio' (generally in the dominant or subdominant key), which occupies a similar place to that of the Trio associated with the Minuet or Scherzo of a symphony; that is, following the March, which is repeated after it. With the ordinary (Parade) March, about 75 steps go to the minute; with the Quick March (Germ. *Geschwind Marsch*; Fr. *Pas redoublé*) about 108; while the Storming March (Germ. *Sturm Marsch*; Fr. *Pas de charge*) implies about 120 steps per minute, these being measured by rapid beats of the drum.

Military Marches, intended of course to stimulate hopeful enthusiasm, are generally written in a bright major key, trumpets, drums, and other instruments of percussion being prominently used; and Funeral Marches in a solemn minor one—a remarkable exception to the latter rule being offered by the Dead March in 'Saul,' the key of which is C major, a mode usually associated with cheerful sentiments. This is indeed a notable instance of 'The long majestic march, and energy divine,' and most readers must have experienced the sublimely pathetic effect of its 'muffled drums beating funeral marches to the grave.' 'The stormy music of the drum' (of course unmuffled) is still an important element in all the pieces used at the parade or on the battle-field; as it exercises a commanding influence on rhythmical precision, as already indicated. Formerly, as above indicated, that instrument was the all-essential feature in the March,

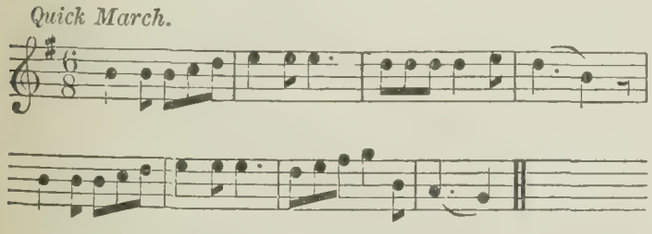
[1] The notes are lozenge-shaped in the original.

instead of being, as afterwards, subsidiary in a musical sense. The impressive effect attained by Handel—by simple means—in the piece just referred to, has been paralleled in more recent times by Beethoven's employment of larger orchestral resources, in the sublime 'Marcia Funebre' in his 'Sinfonia Eroica.'

The March usually begins with a crotchet before the commencing phrase, as in Handel's Marches in 'Rinaldo' (1711), in 'Scipio,' the Occasional Overture, etc. There are however numerous instances to the contrary, as in Gluck's March in 'Alceste,' that in Mozart's 'Die Zauberflöte,' and Mendelssohn's Wedding March, which latter presents the unusual example of beginning on a chord remote from the key of the piece. A March of almost equal beauty is that in Spohr's Symphony 'Die Weihe der Töne,' and here (as also in the March just referred to) we have an example of a feature found in some of the older Marches—the preliminary flourish of trumpets, or FANFARE [see vol. i. p. 502 *b*].

There is also, as already said, a description of march in half time—2-4 (two crotchets in a bar), called with us the Quick March—*Pas redoublé, Geschwind Marsch.* Good specimens of this rhythm are the two Marches (Pianoforte duets) by Schubert, No. 3, op. 40, and No. 1, op. 51, in the latter of which we have also the preliminary fanfare. The march form in pianoforte music has indeed been used by several modern composers: by Beethoven in his three Marches for two performers (op. 45); and the Funeral March in his Sonata, op. 26; and, to a much greater extent, by Franz Schubert in his many exquisite pieces of the kind for four hands, among them being two (op. 121) in a tempo (6-8), sometimes, but not often, employed in the march style: another such specimen being the 'Rogues' March,' associated for more than a century (probably much longer) with army desertion. This is also in the style of the Quick March, the tune being identical with that of a song once popular, entitled 'The tight little Island'—it having, indeed, been similarly employed in other instances. The following is the first part of this March, whose name is better known than its melody:—

Quick March.



Besides the March forms already referred to, there is the Torch-dance [see FACKELTANZ, vol. i. p. 501 *a*], which, however, is only associated with pageants and festivities. These and military marches being intended for use in the open air, are of course written entirely for wind instruments, and those of percussion; and in the performance of these pieces many regimental bands, British and foreign, have arrived at a high degree of excellence. [H.J.L.]

MARCHAND, LOUIS, a personage whose chief claim to our notice is his encounter with Bach, and, as might be imagined, his signal defeat. He was born at Lyons Feb. 2, 1669.[1] He went to Paris at an early age, became renowned there for his organ-playing, and ultimately became court organist at Versailles. By his recklessness and dissipated habits he got into trouble, and was exiled in 1717. The story goes, that the king, taking pity on Marchand's unfortunate wife, caused half his salary to be withheld from him, and devoted to her sustenance. Soon after this arrangement, Marchand coolly got up and went away in the middle of a mass which he was playing, and when remonstrated with by the king, replied, 'Sire, if my wife gets half my salary, she may play half the service.' On account of this he was exiled, on which he went to Dresden, and there managed to get again into royal favour. The King of Poland offered him the place of court organist, and thereby enraged Volumier, his Kapellmeister, who was also at Dresden, and who, in order to crush his rival, secretly invited Bach to come over from Weimar. At a royal concert, Bach being incognito among the audience, Marchand played a French air with brilliant variations of his own, and with much applause, after which Volumier invited Bach to take his seat at the clavecin. Bach repeated all Marchand's showy variations, and improvised twelve new ones of great beauty and difficulty. He then, having written a theme in pencil, handed it to Marchand, challenging him to an organ competition on the given subject. Marchand accepted the challenge, but when the day came it was found that he had precipitately fled from Dresden, and, the order of his banishment having been withdrawn, had returned to Paris, where his talents met with more appreciation. He now set up as a teacher of music, and soon became the fashion, charging the then unheard-of sum of a louis d'or a lesson. In spite of this, however, his expensive habits brought him at last to extreme poverty, and he died in great misery, Feb. 17, 1732. His works comprise 2 vols. of pieces for the clavecin, and one for the organ, and an opera, 'Pyramus et Thisbe,' which was never performed.

His ideas, says Fétis, are trivial, and his harmonies poor and incorrect. There is a curious criticism of him by Rameau, quoted in La Borde, 'Essai sur la musique' (vol. iii.), in which he says that 'no one could compare to Marchand in his manner of handling a fugue'; but, as Fétis shows, this may be explained by the fact that Rameau had never heard any great German or Italian organist. [J.A.F.M.]

MARCHESI, LUIGI, sometimes called MARCHESINI, was born at Milan, 1755. His father, who played the horn in the orchestra at Modena, was his first teacher; but his wonderful aptitude for music and his beautiful voice soon attracted

[1] Spitta, whose accuracy and judgment are unimpeachable, in his Life of Bach gives the date 1671, as an inference from an old engraving. But see Fétis (s.v.), who quotes an article in the Magazin Encyclopédique, 1812, tom. iv. p. 341, where this point is thoroughly investigated, and a register of Marchand's birth given.

the attention of some amateurs, who persuaded the elder Marchesi to have the boy prepared for the career of a sopranist. This was done at Bergamo, and young Marchesi was placed under the *evirato*, Caironi, and Albujo, the tenor, for singing; while his musical education was completed by the Maestro di Cappella, Fioroni, at Milan.

Marchesi made his début on the stage at Rome in 1774, in a female character, the usual introduction of a young and promising singer, with a soprano voice and beautiful person. Towards the close of 1775 the Elector of Bavaria engaged Marchesi for his chapel, but his sudden death, two years after, put an end to this engagement, and the young singer went to Milan, where he performed the part of 'second man,' with Pacchierotti as first, and to Venice, where he played second to Millico. He was advanced in that same year to first honours at Treviso. In the next and following years he sang as 'first man' at Munich, Padua, and Florence, where he created a furore by his exquisite singing of 'Mia speranza, io pur vorrei,' a rondo in Sarti's 'Achille in Sciro.' In 1778 he had worked his way to the great theatre of San Carlo, and continued there during two seasons. He was now looked upon as the first singer in Italy, and was fought for by rival *impresarj*. Once more in Milan (1780), he sang in Misliwiceck's 'Armida,' in which he introduced the famous rondo of Sarti, which all Italy had been humming and whistling since he sang it at Florence, and also an air by Bianchi, almost as successful, 'Se piangi e peni.' His portrait was engraved at Pisa, and the impressions were quickly bought up. He now sang in turn at Turin, Rome, Lucca, Vienna, and Berlin, always with renewed éclat; and he went in 1785 to St. Petersburg with Sarti and Mme. Todi. The rigorous climate of Russia, however, filled him with alarm for his voice, and he fled rapidly back to Vienna, where he sang in Sarti's 'Giulio Sabino.'

We next find him (1788) in London, singing in the same opera by Sarti, having just completed an engagement at Turin. His style of singing now seemed (to Burney) 'not only elegant and refined to an uncommon degree, but often grand and full of dignity, particularly in the recitatives and occasional low notes. Many of his graces were new, elegant, and of his own invention; and he must have studied with intense application to enable himself to execute the divisions and running shakes from the bottom of his compass to the top, even in a rapid series of half-notes. But beside his vocal powers, his performance on the stage was extremely embellished by the beauty of his person and the grace and propriety of his gestures. From this time till 1790 he continued to delight the English, appearing meanwhile at short intervals in the various capitals and chief cities of Europe. In 1794 he sang at Milan in the 'Demofoönte' of Portogallo, and was described in the cast as 'all attual servizio di S. M. il Re di Sardegna.' This memorable occasion was that of the début of Mme. Grassini. He continued to sing at Milan down to the spring of 1806, when he left the stage, and passed the remainder of his life in his native place, honoured and loved. He composed some songs, published in London (Clementi), at Vienna (Cappi), and at Bonn (Simrock). An air, written by him, 'In seno quest' alma,' was also printed.

A beautiful portrait of Marchesi was engraved (June, 1790) by L. Schiavonetti, after R. Cosway; and a curious caricature (now rare) was published under the name of 'A Bravura at the Hanover Square Concert,' by J. N[ixon], 1789, in which he is represented as a conceited coxcomb, bedizened with jewels, singing to the King, Prince of Wales, and courtiers.

Marchesi died at Milan, his native place, December 15, 1829. [J.M.]

MARCHESI, Mathilde de Castrone, *née* Graumann, born March 26, 1826, at Frankfort-on-the-Main. The daughter of a wealthy merchant, she was very highly educated, but in 1843, her father having lost his fortune, she adopted the musical profession. She studied singing at Vienna with Nicolai; but in 1845 went to Paris to learn from Garcia. Here she took lessons in declamation from Samson, Rachel's master, and had the advantage of hearing all the first singers of the age—Persiani, Grisi, Alboni, Duprez, Tamburini, Lablache. Her own aptitude for teaching was already so remarkable that Garcia, whilst prevented by the effects of an accident from giving his lessons, handed over his whole clientèle for the time to his young pupil. In 1849 Mdlle. Graumann removed to London, where she obtained a high standing as a concert singer. Her voice was a mezzo soprano, and her excellent style never failed to please. She has sung successfully in Germany, Belgium, Holland, Switzerland, France, and the United Kingdom. She married Signor Marchesi, also a vocalist, in 1852, and in 1854 accepted the post of professor of singing at the Vienna Conservatoire, the vocal department of which was then in its infancy. But she soon won high distinction for it and herself. Among her pupils at this period were Mdlles. Ilma de Murska, Fricci, Kraus, and others who have since become famous. She resigned her appointment in 1861, and removed with her husband to Paris, where pupils came to her from far and wide. At this time appeared her 'Ecole de Chant.' Rossini, in acknowledging the dedication of a volume of 'Vocalizzi,' extols her method as an exposition of the true art of the Italian school of singing, inclusive of the dramatic element; and specially valuable when, he complains, the tendency is to treat the vocal art as though it were a question of the capture of barricades! In 1865 she accepted a professorship at the Cologne Conservatoire, but resigned it in 1868 to return to Vienna to resume her post as teacher of singing at the Conservatoire, which she held for ten years. Among her famous recent scholars were Mdlles. d'Angeri and Smeroschi, Mme. Schuch-Proska, and, greatest of all, Etelka Gerster. She resigned her appointment at the Conservatoire

in 1878, but continues to reside and teach in Vienna, where her services to art have met with full recognition. A pupil of hers having created a *furore* at a concert, the public, after applauding the singer, raised a call for Mme. Marchesi, who had to appear and share the honours. From the Emperor of Austria she has received the Cross of Merit of the 1st class, a distinction rarely accorded to ladies; and she holds decorations and medals from the King of Saxony, the Grand Duke of Saxe Weimar, the Emperor of Germany, and the King of Italy. She is a member of the St. Cecilia Society in Rome, and of the Academy of Florence. She has published a grand practical Method of singing, and 24 books of vocal exercises. [B.T.]

MARCHESI, Salvatore, Cavaliere de Castrone, Marchese della Rajata, husband of the foregoing, a barytone singer and vocal teacher, born at Palermo, 1822. His family belonged to the nobility, and his father was four years Governor-General of Sicily. In 1838 he entered the Neapolitan Guard, but, for political reasons, resigned his commission in 1840. Whilst studying law and philosophy at Palermo, he took lessons in singing and composition from Raimondi; and he continued his musical studies at Milan, under Lamperti and Fontana. Having participated in the revolutionary movement of 1848, he was forced to seek shelter in America, where he made his *début*, as an operatic singer, in 'Ernani.' He returned to Europe to take instruction from Garcia, and settled in London, where, for several seasons, he was favourably known as a concert-singer. He married Mdlle. Graumann in 1852, and, with her, made numerous concert tours in England, Germany, and Belgium, appearing also in opera with success, both in England and on the continent. He has held posts as teacher of singing at the Conservatoires of Vienna and Cologne, and was appointed chamber singer to the court of Saxe Weimar, 1862. From the King of Italy he has received the orders of the Knights of St. Maurice and St. Lazarus. Signor Marchesi is known also as the composer of several German and Italian songs, and as the Italian translator of many French and German libretti —'Medea,' 'La Vestale,' 'Iphigenia, 'Tannhäuser,' 'Lohengrin,' etc. He has published various writings on music, and some books of vocal exercises. [B.T.]

MARCHESINI. [See Lucchesina and Marchesi, Luigi.]

MARENZIO, Luca. The oldest account we can find of this great Italian composer is given by O. Rossi,[1] in 1620. It tells us of Marenzio's birth at Coccaglia, a small town on the road between Brescia and Bergamo, of the pastoral beauty of his early surroundings, and the effect they may have had in forming the taste of the future madrigal composer, of the patronage accorded him by great princes, of his valuable post at the court of Poland, worth 1000 scudi a year, of the delicate health which made his return to a more genial climate necessary, of the kind treatment he received from Cardinal Cintio Aldobrandino at Rome, of his early death in that city, and burial at S. Lorenzo in Lucina. The same author gives an account of Giovanni Contini, organist[2] of the cathedral at Brescia, and later in the service of the Duke of Mantua, under whose direction Marenzio completed his studies, having for his fellow-pupil Lelio Bertani,[2] who afterwards served the Duke of Ferrara for 1500 scudi a year, and was even asked to become the Emperor's chapel-master.

Donato Calvi, writing in 1664,[3] anxious to claim Marenzio as a native of Bergamo, traces his descent from the noble family of Marenzi, and finds in their pedigree a Luca Marenzo. He adds further details to Rossi's account, how the King of Poland knighted the composer on his departure, how warmly he was welcomed by the court of Rome on his return, how Cardinal C. Aldobrandino behaved like a servant rather than a patron to him. We also learn that he died Aug. 22, 1599, being then a singer in the Papal chapel, and that there was a grand musical service at his funeral.

In the next account Brescia again puts in a claim, and Leonardo Cozzando[4] asserts that Marenzio was born at Cocaglio, that his parents were poor, and that the whole expense of his living and education was defrayed by Andrea Masetto, the village priest. To Cozzando we are also indebted[5] for a special article on Marenzio's great merits as a singer, and after reading of him under the head of Brescian composers, we find him further mentioned under 'Cantori.'

A fourth account, quite independent of these, and one of the earliest of all, is that given by Henry Peacham, published in 1622.[6] Of the composers of his time, Byrd is his favourite, Victoria and Lassus coming next. Then of Marenzio he says:—

'For delicious Aire and sweete Invention in Madrigals, *Luca Marenzio* excelleth all other whosoever, having published more Sets than any Authour else whosoever: and to say truth, hath not an ill Song, though sometime an over-sight (which might be the Printer's fault) of two *eights* or *fifts* escape him; as betweene the *Tenor* and *Base* in the last close, of, *I must depart all haplesse*: ending according to the nature of the Dittie most artificially, with a Minim rest. His first, second, and third parts of *Thyrsis, Veggo dolce mio ben che fa hoggi mio Sole Cantava*, or *sweete singing Amaryllis*[7], are Songs, the Muses themselves might not have beene ashamed to have had composed. Of stature and complexion, hee was a little and blacke man: he was Organist in the Popes Chappell at *Rome* a good while, afterward hee went into *Poland*, being in displeasure with the Pope for overmuch familiaritie with a kinswoman of his (whom the Queene of *Poland*, sent for by *Luca Marenzio* afterward, she being one of the rarest women in *Europe*, for her voyce and the Lute:) but returning, he found the affection of the Pope so estranged from him, that hereupon hee tooke a conceipt and died.'

[4] Libraria Bresciana. Leonardo Cozzando. (Brescia, Rizzardi, 1685.)

[5] 'Vago e curioso ristretto, etc., dell' Historia Bresciana.' Leonardo Cozzando. (Brescia, Rizzardi, 1694.)

[6] 'The Compleat Gentleman,' by Henry Peacham, M^r. of Arts. (London, 1622.)

[7] The proper titles of these, which are given in the above confused manner in Peacham's book are—'Tirsi morir volea (à 5)'; 'Vezgo dolce mio bene (à 4)'; 'Ch' fa hogg' il mio sole (à 5)'; and 'Canta a la piu vaga (à 5),' the English words 'Sweete Singing Amaryllis' being adapted to the music of the last.

The above accounts agree in all important points, and even the descent from a noble Bergamese family is not inconsistent with the parents' poverty and their residence at Coccaglia. Marenzio certainly died at a comparatively early age, in 1599, and we may therefore place his birth about 1560, though not later, for he began to publish in 1581. On the 10th of April in that year he was in Venice, dedicating his first book of madrigals (à 6) to Alphonse d'Este, Duke of Ferrara. He was in Rome, Dec. 1, 1582,[1] on April 24,[2] and Dec. 15,[3] 1584, was chapel-master to the Cardinal d'Este in the same year,[4] and was still in the same city on July 15, 1585.[5]

We do not think he went to Poland just yet, but we have no more publications for some years. Marenzio probably received his appointment soon after the accession of Sigismund III. (1587), and is said to have kept it for several years.

He was back in Rome in 1595, writing to Dowland, July 13,[6] and to Don Diego de Campo, Oct. 20,[7] and in the same year is said to have been appointed to the Papal chapel.[8] It was now that he lived on such familiar terms with Cardinal Aldobrandino, the Pope's nephew, and taking this into account Peacham's tale may have some truth in it, and Marenzio may have fallen in love with a lady belonging to his patron's family. If, however, he died of a broken heart, as is suggested, it must have been caused simply by the Pope's refusal to allow a marriage. That Marenzio did nothing to forfeit his good name[9] is proved by the certain fact that he retained his office in the Papal chapel till his death.

Marenzio's principal works are:—9 books of madrigals (à 5), 6 books (à 6), each book containing from 13 to 20 nos., and 1 book (à 4) containing 21 nos.; 5 books of 'Villanelle e Arie alla Napolitana,' containing 113 nos. (à 3) and 1 (à 4); 2 books of four-part motets, many of which have been printed in modern notation by Proske;[10] 1 mass (à 8), and many other pieces for church use. The first five books of madrigals à 5 were printed 'in uno corpo ridotto,' in 1593, and a similar edition of those à 6 in 1594. These books, containing 78 and 76 pieces respectively, are both in the British Museum. Marenzio's works were introduced into England in 1588, in the collection entitled 'Musica Transalpina' (1588); and two years afterwards a similar book was printed, to which he contributed 23 out of 28 numbers.[11] His reputation here was soon established, for in 1595 John Dowland, the lutenist, 'not being able to dissemble the great content he had found in the profered amity of the most famous Luca Marenzio,' thought the mere advertisement of their correspondence would add to the chance of his own works being well received. Burney does not hesitate to say that the madrigal style was brought to the highest degree of perfection by Marenzio's superior genius, and that the publication of the 'Musica Transalpina' gave birth to that passion for madrigals which became so prevalent among us when our own composers so happily contributed to gratify it.[12]

Thus it came to pass that Luca Marenzio became bound up in our own musical history, and few foreign musicians of the 16th century have been kept so constantly before the English public. The Madrigal Society became a home for his works nearly 150 years ago, and they are continually sung by much younger societies. 'To guard faithfully and lovingly the beautiful things, and to reverence the great masters, of olden times, is quite a part of the English character, and one of its most beautiful traits.'[13] [J.R.S.-B.]

MARGARITA. [See EPINE.]

MARIA DI ROHAN. Opera in 3 acts; music by Donizetti. Produced at Vienna, June 5, 1843; at the Théâtre Italien, Paris, Nov. 20, 1843, and in London, Covent Garden, May 8, 1847. [G.]

MARINO FALIERO. Opera seria, in 2 acts; music by Donizetti. Produced at the Théâtre Italien in 1835; in London, King's Theatre, May 14, 1835. [G.]

MARIO, CONTE DI CANDIA, the greatest operatic tenor that the present generation has heard, was born in 1812 at Genoa, of an old and noble family. His father had been a general in the Piedmontese army; and he himself was an officer in the Piedmontese Guard, when he first came to Paris in 1836, and immediately became a great favourite in society. Never was youth more richly gifted for the operatic stage; beauty of voice, face, and figure, with the most winning grace of Italian manner, were all his. But he was then only an amateur, and as yet all unfitted for public singing, which his friends constantly suggested to him, even if he could reconcile his pride with the taking of such a step. Tempted as he was by the offers made to him by Duponchel, the director of the Opera, —which are said to have reached the sum of frs. 1500 a month, a large sum for a beginning, —and pressed by the embarrassments created by expensive tastes, he still hesitated to sign his father's name to such a contract; but was finally persuaded to do so at the house of the Comtesse de Merlin, where he was dining one evening with Prince Belgiojoso and other well-known amateurs; and he compromised the matter with his family pride by signing only the Christian name, under which he became afterwards so famous,—Mario.

8 We cannot find any old authority for the date of appointment, but it is too probable to doubt it.
9 The only thing worth setting right in the story. As to the rest of it, the sequence of events cannot be fitted into his life; Burney considers the whole account savours of hearsay evidence and absurdity, and gives no credit to it.

He is said to have spent some time in study, directed by the advice of Michelet, Ponchard, and the great singing-master, Bordogni; but it cannot have been very long nor the study very deep, for there is no doubt that he was a very incomplete singer when he made his first appearance. This was on Nov. 30, 1838, in the *rôle* of 'Robert le Diable.' Notwithstanding his lack of preparation and want of habit of the stage, his success was assured from the first moment when his delicious voice and graceful figure were first presented to the French public. Mario remained at the Académie during that year, but in 1840 he passed to the Italian Opera, for which his native tongue and manner better fitted him.

In the meantime, he had made his first appearance in London, where he continued to sing through many years of a long and brilliant career. His *début* here was in Lucrezia Borgia, June 6, 1839; but, as a critic of the time observed, 'the vocal command which he afterwards gained was unthought of; his acting did not then get beyond that of a southern man with a strong feeling for the stage. But physical beauty and geniality, such as have been bestowed on few, a certain artistic taste, a certain distinction,—not exclusively belonging to gentle birth, but sometimes associated with it,—made it clear, from Signor Mario's first hour of stage-life, that a course of no common order of fascination was begun.'

Mario sung, after this, in each season at Paris and in London, improving steadily both in acting and singing, though it fell to his lot to 'create' but few new characters,—scarcely another beside that of the 'walking lover' in 'Don Pasquale,' a part which consisted of little more than the singing of the serenade 'Com' è gentil.' In other parts he only followed his predecessors, though with a grace and charm which were peculiar to him, and which may possibly remain for ever unequalled. 'It was not,' says the same critic quoted above (Mr. Chorley), 'till the season of 1846 that he took the place of which no wear and tear of time had been able to deprive him.' He had then played 'Almaviva,' 'Gennaro,' 'Raoul,' and had shown himself undoubtedly the most perfect stage lover ever seen, whatever may have been his other qualities or defects. His singing in the duet of the 4th Act of the 'Ugonotti,' raised him again above this; and in 'La Favorita' he achieved, perhaps, his highest point of attainment as a dramatic singer.

Like Garcia and Nourrit, Mario attempted 'Don Giovanni,' and with similarly small success. The violence done to Mozart's music partly accounts for the failure of tenors to appropriate this great character; Mario was unfitted for it by nature. The reckless profligate found no counterpart in the easy grace of his love-making; he was too amiable in the eyes of the public to realise for them the idea of the 'Dissoluto Punito.'

As a singer of 'romances' Mario has never been surpassed. The native elegance of his demeanour contributed not a little to his vocal success in the drawing-room; for refinements of accent and pronunciation create effects there which would be inappreciable in the larger space of a Theatre. Mario was not often heard in oratorio, but he sang 'Then shall the righteous,' in Elijah, at the Birmingham Festival of 1849, and 'If with all your hearts,' in the same oratorio, at Hereford, in 1855. For the stage he was born, and to the stage he remained faithful during his artistic life. To the brilliance of his success in opera he brought one great helping quality, the eye for colour and all the important details of costume. His figure on the stage looked as if it had stepped out of the canvas of Titian, Veronese, or Tintoretto. Never was an actor more harmoniously and beautifully dressed for the characters he impersonated,—no mean advantage, and no slight indication of the complete artistic temperament.

For five and twenty years Mario remained before the public of Paris, London, and St. Petersburg, constantly associated with Mme. Grisi. In the earlier years (1843–6) of that brilliant quarter of a century, he took the place of Rubini in the famous quartet, with Tamburini and Lablache; this, however, did not last long; and he soon remained alone with the sole remaining star of the original constellation, Mme. Grisi. To this gifted *prima donna* Mario was united, after the dissolution of her former marriage; and by her he had three daughters. He left the stage in 1867, and retired to Paris, and then to Rome, where he is still living. Two years ago it became known that he was in reduced circumstances, and his friends got up a concert in London for his benefit. [J.M.]

MARIONETTE-THEATRE, a small stage on which puppets, moved by wires and strings, act operas, plays, and ballets, the songs or dialogue being sung or spoken behind the scenes. The repertoires included both serious and comic pieces, but mock-heroic and satiric dramas were the most effective. Puppet-plays[1], in England and Italy called 'fantoccini,' once popular with all classes, go back as far as the 15th century. From that period to the end of the 17th century Punch was so popular as to inspire Addison with a Latin poem, 'Machinæ gesticulantes.' In 1713 a certain Powell erected a Punch theatre under the arcade of Covent Garden, where pieces founded on nursery rhymes, such as the 'Babes in the Wood,' 'Robin Hood,' and 'Mother Goose,' were performed; later on they even reached Shakspere and opera. About the same period Marionette-theatres were erected in the open spaces at Vienna, and these have reappeared from time to time ever since[2]. Prince Esterhazy, at his summer residence, Esterház, had a fantastically decorated grotto for his puppet-plays, with a staff of skilled machinists, scene-painters, playwrights, and above all a composer, his Capellmeister Haydn, whose love of humour found ample scope in these performances. His opera 'Philemon und Baucis' so delighted the Empress Maria

[1] See Strutt's 'Sports and Pastimes of the People of England,' London, 1830.

[2] In 1877 Raupach's 'Müller und sein Kind,' and the 'Ring des Nibelungen' were performed there and elsewhere by puppets.

Teresa, that by her desire Prince Esterhazy had the whole apparatus sent to Vienna for the amusement of the Court. In London, fantoccini were playing between the years 1770 and 80 at Hickford's large Rooms in Panton Street, Haymarket, Marylebone Gardens, and in Piccadilly. In Nov. 1791 Haydn was present at one of these performances[1] in the elegant little theatre called Varietés Amusantes, belonging to Lord Barrymore, in Savile Row. He was much interested, and wrote in his diary, 'The puppets were well-managed, the singers bad, but the orchestra tolerably good.' The playbill may be quoted as a specimen.

FANTOCCINI

Dancing and music.

Overture, Haydn.

A comedy in one act, 'Arlequin valet.'

Overture, Piccini.

The favourite opera (5th time) 'La buona Figliuola,' the music by Piccini, Giordani and Sarti.

Spanish Fandango.

Concertante, Pleyel.

A comedy in one act, 'Les Petits Riens,' the music by Sacchini and Paisiello.

To conclude with a Pas de deux a-la-mode de Vestris and Hillisberg.

Leader of the band: Mr. Mountain.

First hautboy: Sgr. Patria.

To begin at 8; the doors open at 7 o'clock.

The theatre is well aired and illuminated with wax.

Refreshments to be had at the Rooms of the theatre. Boxes 5/. Pit 3/.

A critic in 'The Gazetteer' says:—'So well did the motion of the puppets agree with the voice and tone of the prompters, that, after the eye had been accustomed to them for a few minutes, it was difficult to remember that they were puppets.'

Fantoccini are by no means to be despised even in these days. They give opportunity for 'many a true word to be spoken in jest'; they show up the bad habits of actors, and form a mirror in which adults may see a picture of life none the less true for a little distortion. [C.F.P.]

MARITANA. Opera in 3 acts, founded on Don Cesar de Bazan; words by Fitzball, music by W. V. Wallace. Produced at Drury Lane by Mr. Bunn, Nov. 15, 1845. [G.]

MARKULL, Friedrich Wilhelm, born Feb. 17, 1816, near Elbing, Prussia. He studied composition and organ playing under Friedrich Schneider, at Dessau; became in 1836 principal organist at Dantzig and conductor of the 'Gesangverein' there. Markull also enjoys reputation as a pianist, and has given excellent concerts of chamber music. He has composed operas, oratorios, and two symphonies, and many works for the organ, and contributes musical articles for Dantzig journals. [H.S.O.]

MARPURG, Friedrich Wilhelm, eminent writer on music, born 1718 at Marpurgshof, near Seehausen, in Brandenburg. Little is known of his musical education, as Gerber gives no details, although Marpurg furnished him with the history of his life. Spazier ('Leipzig musik. Zeitung,' ii. 553) says that in 1746 he was secretary to General Rothenburg in Paris, and there associated with Voltaire, Maupertuis, D'Alembert, and Rameau; and Eberhard remarks that his acquaintance with good society would account for his refined manners and his tact in criticism. The absence in his works of personality and of fine writing, then so common with musical authors, is the more striking as he had great command of language and thoroughly enjoyed discussion. His active pen was exercised in almost all branches of music—composition, theory, criticism, and history. Of his theoretical works the most celebrated are—the 'Handbuch beim Generalbasse, und der Composition,' founded on Rameau's system (3 parts, 1757-8, Berlin); 'Der kritische Musicus an der[2] Spree' (Berlin, 1750), containing on p. 129 a lucid explanation of the old Church Modes; the 'Anleitung zur Singecomposition' (Berlin, 1758), and the 'Anleitung zur Musik' (Berlin, 1763), both still popular; the 'Kunst das Clavier zu spielen' (1750); the 'Versuch über die musikalische Temperatur' (Breslau, 1776), a controversial pamphlet intended to prove that Kirnberger's so-called fundamental bass was merely an interpolated bass; and the 'Abhandlung von der Fuge,' 62 plates (Berlin 1753-54; 2nd edition 1806; French, Berlin 1756), a masterly summary of the whole science of counterpoint at that period, with the solitary defect that it is illustrated by a few short examples, instead of being treated in connection with composition. This Marpurg intended to remedy by publishing a collection of fugues by well-known authors, with analyses, but he only issued the first part (Berlin, 1758). Of his critical works the most important is the 'Historisch-kritische Beiträge,' 5 vols. (Berlin, 1744-62). Among the historical may be specified a MS. 'Entwurf einer Geschichte der Orgel,' of which Gerber gives the table of contents; and the 'Kritische Einleitung in die Geschichte der Tonkunst' (Berlin, 1751). A *jeu d'esprit*, 'Legende einiger Musikheiligen von Simon Metaphrastes dem Jüngeren' (Cologne, 1786), appeared under his pseudonym. Of compositions he published, besides collections of contemporary music, '6 Sonaten für das Cembalo' (Nuremberg, 1756); 'Fughe e capricci' (Berlin, 1777): and 'Versuch in figurirten Chorälen,' vols. 1 and 2; 'Musikalisches Archiv,' an elucidation of the 'Historisch, kritischen Beiträge,' was announced, but did not appear.

Marpurg died May 22, 1795, in Berlin, where he had been director of the government lottery from 1763. [F.G.]

MARSCHNER, Heinrich, celebrated German opera-composer, born Aug. 16, 1796, at Zittau in Saxony. He began to compose sonatas, Lieder, dances, and even orchestral music, with no further help than a few hints from various musicians with whom his beautiful soprano voice and his pianoforte playing brought him into contact. As he grew up he obtained more

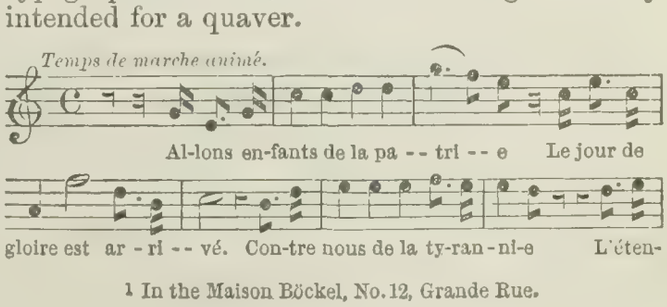
[1] See Pohl's 'Haydn in London,' p. 162.

[2] The Spree is the river which flows (or rather creeps) through Berlin.

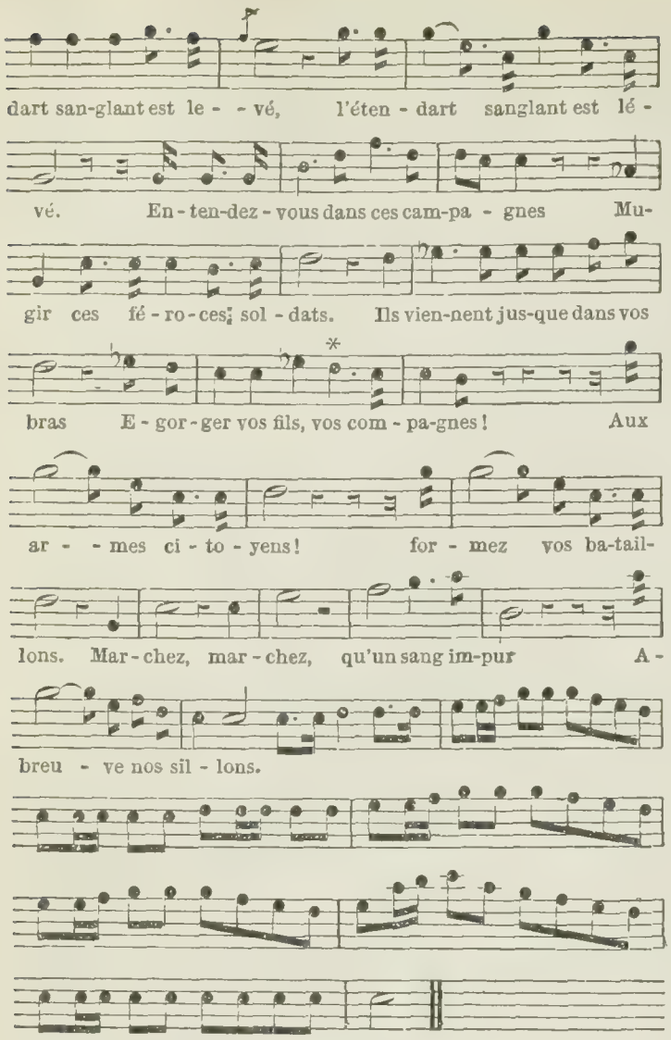
systematic instruction from Schicht of Leipzig, whither he went in 1816 to study law. Here also he made the acquaintance of Rochlitz, who induced him to adopt music as a profession. In 1817 he travelled with Count Thaddäus von Amadée, a Hungarian, to Pressburg and Vienna, where he made the acquaintance of Kozeluch and of Beethoven, who is said to have advised him to compose sonatas, symphonies, etc, for practice. In Pressburg he composed 'Der Kyffhäuser Berg,' and 'Heinrich IV.' Weber produced the latter at Dresden, and Marschner was in consequence appointed in 1823 joint-Capellmeister with Weber and Morlacchi of the German and Italian Opera there. Weber had hoped to obtain the post for his friend Gänsbacher, but he soon recovered the disappointment, and the friendship which ensued between them was of great service to Marschner. He resigned on Weber's death in 1826, and after travelling for some time, settled in 1827 at Leipzig as Capellmeister of the theatre. Here he produced 'Der Vampyr' (March 29, 1828), his first romantic opera, to a libretto by his brother-in-law Wohlbrück, the success of which was enormous in spite of its repulsive subject. In London it was produced, Aug. 25, 1829, in English, at the Lyceum, and ran for 60 nights, and Marschner had accepted an invitation to compose an English opera, when Covent Garden Theatre was burnt down. His success here doubtless led to his dedicating his opera 'Des Falkner's Braut' to King William IV, in return for which he received a gracious letter and a golden box in 1833. His attention having been turned to English literature, his next opera, 'Der Templer und die Jüdin,' was composed to a libretto constructed by himself and Wohlbrück from 'Ivanhoe.' The freshness and melody of the music ensured its success at the time, but the libretto, disjointed and overloaded with purely epic passages which merely serve to hinder the action, killed the music. In 1831 Marschner was appointed Court Capellmeister at Hanover, where he produced 'Hans Heiling' (May 24, 1833) to a libretto by Eduard Devrient, which had been urged upon Mendelssohn in 1827 (Devrient's 'Recollections,' p. 40). This opera is Marschner's masterpiece. Its success was instantaneous and universal, and it retains to this day an honourable place at all the principal theatres of Germany. In 1836 it was performed under his own direction at Copenhagen with marked success, and he was offered the post of General Musik-director in Denmark, an honour which the warmth of his reception on his return to Hanover induced him to decline. After 'Hans Heiling'—owing chiefly to differences with the management of the theatre—Marschner composed little for the stage, and that little has not survived. He died at Hanover, Dec. 14, 1861. Besides the operas already mentioned he composed 'Lucretia' and 'Schön' Ellen' (1822); 'Des Falkner's Braut' (Leipzig, 1832; Berlin, 1838); 'Das Schloss am Aetna' (Berlin, 1838); 'Adolph von Nassau' (Hanover, 1843); 'Austin' (1851); and an operetta 'Der Holzdieb.' He also composed incidental music for von Kleist's play 'Die Hermannsschlacht,' and published over 180 works of all kinds and descriptions; but principally Lieder for one and more voices, still popular; and choruses for men's voices, many of which are excellent and great favourites. An overture, embodying 'God save the king,' is mentioned as being performed in London at a concert on the occasion of the baptism of the Prince of Wales (Jan. 25, 1842).

As a dramatic composer of the Romantic school, Marschner ranks next to Weber and Spohr, but it is with the former that his name is most intimately connected, though he was never a pupil of Weber's. The strong similarity between their dispositions and gifts, the harmonious way in which they worked together, and the cordial affection they felt for each other, are interesting facts in the history of music. Marschner's favourite subjects were ghosts and demons, whose uncanny revels he delineated with extraordinary power, but this gloomy side of his character was relieved by a real love of nature and out-door life, especially in its lighter and more humorous characteristics. He worked with extreme rapidity, which is the more remarkable as his scores abound in enharmonic modulations, and his orchestration is unusually brilliant and elaborate. Such facility argues an inexhaustible store of melody, and a perfect mastery of the technical part of composition. [A.M.]

MARSEILLAISE, LA. The words and music of this popular French hymn are the composition of Claude Joseph Rouget de Lisle, a captain of engineers, who was quartered at Strasburg when the volunteers of the Bas Rhin received orders to join Luckner's army. Dietrich, the Mayor of Strasburg, having, in the course of a discussion on the war, regretted that the young soldiers had no patriotic song to sing as they marched out, Rouget de Lisle, who was of the party, returned to his lodgings[1], and in a fit of enthusiasm composed, during the night of April 24, 1792, the words and music of the song which has immortalised his name. With his violin he picked out the first strains of this inspiriting and truly martial melody; but being only an amateur, he unfortunately added a symphony which jars strangely with the vigorous character of the hymn itself. The following copy of the original edition, printed by Dannbach of Strasburg under the title 'Chant de guerre pour l'armée du Rhin, dédié au Maréchal Lukner' (*sic*), will be interesting from its containing the symphony, which has been since suppressed, and from an obvious typographical error, a crotchet being evidently intended for a quaver.



[1] In the Maison Böckel, No. 12, Grande Rue.



The 'Chant de Guerre' was sung in Dietrich's house on April 25, copied and arranged for a military band on the following day, and performed by the band of the Garde Nationale at a review on Sunday, the 29th. On June 25 a singer named Mireur sang it at a civic banquet at Marseilles with so much effect that it was immediately printed, and distributed to the volunteers of the battalion just starting for Paris. They entered Paris on July 30, singing their new hymn; and with it on their lips they marched to the attack on the Tuileries on August 10, 1792. From that day the 'Chant de guerre pour l'armée du Rhin' was called 'Chanson' or 'Chant des Marseillais,' and, finally, 'La Marseillaise.' The people, shouting it in the streets, probably altered a note or two; the musicians, Edelmann, Grétry, and most of all Gossec, in their accompaniments for pianoforte and orchestra, greatly enriched the harmonies, and soon the 'Marseillaise,' in the form we have it now (and which need hardly be quoted), was known from one end of France to the other.

The original edition contained only six couplets; the seventh was added when it was dramatised for the Fête of the Fédération, in order to complete the characters—an old man, a soldier, a wife, and a child—among whom the verses were distributed. Rouget de Lisle had been cashiered for expressing disapproval of the events of the 10th of August, and was then in prison, from which he was only released after the fall of Robespierre, on the 9th Thermidor (July 28), 1794. The following fine stanza for the child was accordingly supplied by Dubois, editor of the 'Journal de Littérature':—

> 'Nous entrerons dans la carrière,
> Quand nos aines n'y seront plus;
> Nous y trouverons leur poussière
> Et la trace de leurs vertus.
> Bien moins jaloux de leur survivre
> Que de partager leur cercueil,
> Nous aurons le sublime orgueil
> De les venger ou de les suivre.'

Dubois also proposed to alter the concluding lines of the sixth stanza:—

> '*Que* tes ennemis expirants
> *Voient* ton triomphe et notre gloire'
> 'Dans tes ennemis expirants
> Vois ton triomphe et notre gloire.'

These are minute details, but no fact connected with this most celebrated of French national airs is uninteresting.

That Rouget de Lisle was the author of the words of the 'Marseillaise' has never been doubted—indeed Louis Philippe conferred a pension upon him; but it has been denied over and over again that he composed the music. Strange to say, Castil-Blaze (see 'Molière musicien,' vol. ii. pp. 452–454), who should have recognised the vigour and dash so characteristic of the French, declared it to have been taken from a German hymn.

In F. K. Meyer's Versailler Briefe (Berlin, 1872) there is an article upon the origin of the Marseillaise, in which it is stated that the tune is the same as that to which the Volkslied 'Stand ich auf hohen Bergen' is sung in Upper Bavaria. The author of the article heard it sung in 1842 by an old woman of 70, who informed him that it was a very old tune, and that she had learnt it from her mother and grandmother. The tune is also said to exist in the Credo of a MS. Mass composed by Holtzmann in 1776, which is preserved in the parish church of Meersburg. (See the Gartenlaube for 1861, p. 256.) Recent enquiry (August, 1879) on the spot from the curate of Meersburg has proved that there is no truth in this story.

Fétis, in 1863, asserted that the music was the work of a composer named Navoigille, and reinforces his statement in the 2nd edition of his 'Biographie Universelle.' Georges Kastner ('Revue et Gazette Musicale,' Paris, 1848) and several other writers, including the author of this article (see Chouquet's 'L'Art Musical,' Sept. 8, 1864–March 9, 65), have clearly disproved these allegations; and the point was finally settled by a pamphlet, 'La Vérité sur la paternité de la Marseillaise' (Paris, 1865), written by A. Rouget de Lisle, nephew of the composer, which contains precise information and documentary evidence, establishing Rouget de Lisle's claim beyond a doubt. The controversy is examined at length by Loquin in 'Les mélodies populaires de la France,' Paris, 1879. The 'Marseillaise' has been often made use of by composers. Of these, two may be cited—Salieri, in the opening chorus of his opera, 'Palmira' (1795), and Grison, in the introduction to the oratorio 'Esther' (still in MS.), both evidently intentional. Schumann uses it in his song of the Two Grenadiers with

magnificent effect; and also introduces it in his Overture to Hermann und Dorothea.

A picture by Pils, representing Rouget de Lisle singing the 'Marseillaise,' is well-known from the engraving. [G.C.]

MARSH, ALPHONSO, son of Robert Marsh, one of the musicians in ordinary to Charles I., was baptized at St. Margaret's Westminster, Jan. 28, 1627. He was appointed a Gentleman of the Chapel Royal in 1660. Songs composed by him appear in 'The Treasury of Musick,' 1669, 'Choice Ayres and Dialogues,' 1676, and other publications of the time. He died April 9, 1681. His son ALPHONSO was admitted a Gentleman of the Chapel Royal April 25, 1676. Songs by him are contained in 'The Theater of Music,' 1685–7, 'The Banquet of Musick,' 1688–92, and other publications. He died April 5, 1692, and was buried April 9, in the west cloister of Westminster Abbey. [W.H.H.]

MARSH, JOHN, born at Dorking, 1750, a distinguished amateur composer and performer, resident at Salisbury (1776–81), Canterbury (1781–6), and Chichester (1787–1828), in each of which places he led the band at the subscription concerts and occasionally officiated for the cathedral and church organists. He composed two Services, many anthems, chants, and psalm tunes, glees, songs, symphonies, overtures, quartets, etc., and organ and pianoforte music, besides treatises on harmony, thorough bass, etc. He died in 1828. A fully detailed account of his career is given in the 'Dictionary of Musicians,' 1824, but it does not possess sufficient interest to be repeated here. [W.H.H.]

MARSHALL, WILLIAM, Mus. Doc., son of William Marshall of Oxford, music-seller, born 1806, was a chorister of the Chapel Royal under John Stafford Smith and William Hawes. He was appointed organist of Christ Church Cathedral and St. John's College, Oxford, in 1823, and was also organist of All Saints' Church. He graduated as Mus. Bac. Dec. 7, 1836, and Mus. Doc. Jan. 14, 1840. He resigned his Oxford appointments in 1846, and afterwards became organist of St. Mary's Church, Kidderminster. He was author of 'The Art of Reading Church Music,' 1842, and editor (jointly with Alfred Bennett) of a collection of chants, 1829, and also editor of a book of words of anthems, 1840, 4th edit. 1862. He died at Handsworth, Aug. 17, 1875.

His younger brother, CHARLES WARD MARSHALL, born 1808, about 1835 appeared, under the assumed name of MANVERS, on the London stage as a tenor singer, with success. In 1842 he quitted the theatre for concert and oratorio singing, in which he met with greater success. After 1847 he withdrew from public life. He died at Islington Feb. 22, 1874. [W.H.H.]

MARSON, GEORGE, Mus. Bac., contributed to 'The Triumphes of Oriana,' 1601, the five-part madrigal 'The nimphes and shepheards.' He composed services and anthems, some of which are still extant in MS. [W.H.H.]

MARTELÉ and MARTELLATO (Ital.), from *marteler* and *martellare*, to hammer; said of notes struck or sung with especial force, and left before the expiration of the time due to them. Notes dashed, dotted, or emphasized by > or *fz.*, are Martelées or Martellate in execution. The term Martellement is sometimes employed for acciaccatura. [J.H.]

MARTHA. Opera in 3 acts; music by Flotow. Produced at Vienna Nov. 25, 1847. It was an extension of LADY HENRIETTE, in which Flotow had only a third share. The alterations in the book are said to have been made by St. Georges, and translated into German by Friedrich. It was produced in Italian at Covent Garden, as Marta, July 1, 1858; in English at Drury Lane, Oct. 11, 1858, and in French at the Théâtre Lyrique, Dec. 16, 1865. The air of 'The last rose of summer' is a prominent motif in this opera. [G.]

MARTIN, GEORGE WILLIAM, born March 8, 1825, received his early musical education in the choir of St. Paul's cathedral under William Hawes. He has composed many glees, madrigals, and part-songs, for some of which he has been awarded prizes, and has edited and published cheap arrangements of the popular oratorios and other works of Handel, Haydn, and others. For some years he directed performances given under the name of the National Choral Society. He has an aptitude for training choirs of school children, and has conducted many public performances by them. [W.H.H.]

MARTIN, JONATHAN, born 1715, was a chorister of the Chapel Royal under Dr. Croft. On quitting the choir he was placed under Thomas Roseingrave for instruction on the organ, and soon attained such proficiency as to be able to deputise for his master at St. George's, Hanover Square, and for Weldon at the Chapel Royal. On June 21, 1736 he was admitted organist of the Chapel Royal on the death of Weldon, and promised 'to compose anthems or services for the use of His Majesty's Chapel, whenever required by the Subdean for the time being.' Probably he was never called upon to fulfil his promise, as his only known composition is a song in Rowe's tragedy, 'Tamerlane,' 'To thee, O gentle sleep.' He died of consumption, April 4, 1737, and was buried April 9, in the west cloister of Westminster Abbey. [W.H.H.]

MARTINES, or MARTINEZ, MARIANNE, daughter of the master of the ceremonies to the Pope's Nuncio, born May 4, 1744, at Vienna. Metastasio, a great friend of her father's, lived for nearly half a century with the family, and undertook her education. Haydn, then young, poor, and unknown, occupied a wretched garret in the same house, and taught her the harpsichord, while Porpora gave her lessons in singing and composition, her general cultivation being under Metastasio's own care. Of these advantages she made good use. Burney, who knew her in 1772[1], speaks of her in the highest terms,

[1] See 'Present State of Music in Germany,' i. 311-13, 352, 354, 362.

specially praising her singing; and she also won the admiration of both Hasse and Gerbert. After the death of the parents, and of Metastasio, who left them well off, she and her sister gave evening parties, which were frequented by all the principal artists. On one of these occasions Kelly[1] heard Marianne play a 4-hand sonata of Mozart's with the composer. Latterly Marianne devoted herself to teaching talented pupils. In 1773 she was made a member of the Musical Academy of Bologna. In 1782, the 'Tonkünstler Societät' performed her oratorio 'Isacco,' to Metastasio's words. She also composed two more oratorios, a mass, and other sacred music; Psalms, to Metastasio's Italian translation, for 4 and 8 voices; solo-motets, arias, and cantatas, concertos, and sonatas for clavier, overtures and symphonies. The Gesellschaft der Musikfreunde possesses the autographs of many of these works. Marianne expired on the 13th of Dec. 1812, a few days after the death of her younger sister Antonie. [C. F. P.]

MARTINI, Giovanni Battista, or Giambattista, commonly called Padre Martini, one of the most important scientific musicians of the 18th century, born at Bologna, April 25, 1706; was first taught music by his father Antonio Maria, member of a musical society called 'I Fratelli.' Having become an expert violinist, he learned to sing and play the harpsichord from Padre Predieri, and counterpoint from Antonio Riccieri, a castrato of Vincenzo, and composer of merit. At the same time he studied philosophy and theology with the monks of San Filippo Neri. Having passed his noviciate at the Franciscan convent at Lago, he was ordained on Sept. 11, 1722, and returning to Bologna in 1725 became maestro di capella of the church of San Francesco. Giacomo Perti held a similar post at San Petronio, and from him Martini received valuable advice on composing church-music, at the same time laying a scientific foundation for the whole theory of music by a conscientious study of mathematics with Zanotti, a well-known physician and mathematician. He thus gradually acquired an extraordinary and comprehensive mass of knowledge, with an amount of literary information far in advance of his contemporaries. His library was unusually complete for the time[2], partly because scientific men of all countries took a pleasure in sending him books. Burney, whose own library was very extensive, expressed his astonishment at that of Martini, which he estimates to contain 17,000 vols. ('Present State of Music in France and Italy,' p. 202). After his death a portion found its way to the court library at Vienna; the rest remained at Bologna in the Liceo Filarmonico. His reputation as a teacher was European, and scholars flocked to him from all parts, among the most celebrated being Paolucci, Ruttini, Sarti, Ottani, and Stanislas Mattei, afterwards joint founder of the Liceo Filarmonico. These he educated in the traditions of the old Roman school, the main characteristic of which was the melodious movement of the separate parts. Martini was also frequently called upon to recommend a new maestro di capella or to act as umpire in disputed questions. He was himself occasionally involved in musical controversy; the best-known instance being his dispute with Redi about the solution of a puzzle-canon by Giovanni Animuccia, which he solved by employing two keys in the third part. This, though approved by Pitoni, was declared by Redi to be unjustifiable. To prove his point Martini therefore wrote a treatise maintaining that puzzle-canons had not unfrequently been solved in that manner, and quoting examples. Another important controversy was that held with Eximeno [see Eximeno]. In spite of these differences of opinion his contemporaries describe him as a man of great mildness, modesty, and good nature, always ready to answer questions, and give explanations. It is difficult to think without emotion of the warm welcome which he, the most learned and one of the oldest musicians of his country, bestowed on Mozart when he visited Bologna in 1770 as a boy of 14, or to resist viewing it as a symbol of the readiness of Italy to open to Germany that vast domain of music and tradition which had hitherto been exclusively her own. His courtesy and affability brought the Bolognese monk into friendly relations with many exalted personages, Frederic the Great and Frederic William II of Prussia, Princess Maria Antonie of Saxony, and Pope Clement XIV among the number. He suffered much towards the close of his life from asthma, a disease of the bladder, and a painful wound in the leg; but his cheerfulness never deserted him, and he worked at the fourth volume of his History of Music up to his death, which took place in 1784—on October 3, according to Moreschi, Gandini, and Della Valle; on August 4 according to Fantuzzi. His favourite pupil Mattei stayed with him to the last. Zanotti's requiem was sung at his funeral, and on December 2 the Accademia Filarmonica held a grand function, at which a funeral mass, the joint composition of 13 maestri di capella, was performed, and an 'Elogio' pronounced by Lionardo Volpi. All Italy mourned for him, and a medallion to his memory was struck by Tadolini. He was a member of two 'Accademie,' the 'Filarmonici' of Bologna, and the 'Arcadici' of Rome, his assumed name in the latter being Aristoxenus Amphion.

Martini's two great works are the 'Storia della Musica' (3 vols., Bologna, 1757, 70, 81), and the 'Esemplare ossia Saggio . . . di contrapunto' (2 vols., Bologna, 1774, 75). The first is a most learned work; each chapter begins and ends with a puzzle-canon, the whole of which were solved and published by Cherubini. The three volumes all treat of ancient music;

1 Kelly's mistakes of detail are innumerable. He gives the name 'Martini,' and imagining Marianne to be the sister of her father—'a very old man' and 'nearly his own age'—speaks of her as 'in the vale of years,' though still 'possessing the gaiety and vivacity of a girl.' She was barely 40.

2 He had 10 copies of Guido d'Arezzo's Micrologos,

the music of the middle ages down to the 11th century was to have been the subject of the 4th vol., which he did not live to finish. A report having sprung up that the completed MS. was in the Minorite convent at Bologna, Fétis obtained access to the library through Rossini, but found only materials, of which no use has yet been made. The 'Saggio' is a most important collection of examples from the best masters of the ancient Italian and Spanish schools, and a model of its kind. Besides a number of small treatises and controversial writings (for list see Fétis) Martini left masses and other church music in the style of the time. The following were printed:—'Litaniæ' op. 1 (1734); 'XII Sonate d'intavolatura,' op. 2 (Amsterdam, Le Cène, 1741), excellent and full of originality; 'VI Sonate per organo e cembalo' (Bologna 1747); 'Duetti da Camera' (Bologna, 1763). The Liceo of Bologna possesses the MSS. of two oratorios, 'San Pietro' (two separate compositions), and 'L'Assunzione di Salomone al trono d'Israele'; a farsetta 'La Dirindina'; and 3 Intermezzi, 'L'Impresario delle Canarie,' 'Don Chisciotto,' and 'Il Maestro di Musica.' A requiem (103 sheets), and other church compositions are in Vienna. Pauer, in his 'Alte Klaviermusik,' gives a gavotte and ballet of Martini's. Farrenc has published 12 sonatas in his 'Trésor musical,' and other works are given by Lück, Körner, Ricordi, etc. The best of many books on his life and works is the 'Elogio' of Pietro Della Valle (Bologna, 1784). [F.G.]

MARTYRS, LES. Opera in 4 acts; words by Scribe, music by Donizetti. Produced at the Académie, April 10, 1840; at the Royal Italian Opera, as 'I Martiri,' April 20, 1852. The work was an adaptation of Poliuto, a former Italian opera of Donizetti's. [G.]

MARX, Adolph Bernhard, learned musician and author, born May 15, 1799, at Halle, son of a physician, learned harmony from Türk, studied law, and held a legal post at Naumburg. His love of music led him to Berlin, where he soon gave up the law, and in 1824 he founded with Schlesinger the publisher the 'Allgemeine Berliner Musikzeitung.' This periodical, which only existed seven years, did important service in creating a juster appreciation of Beethoven's works in North Germany, a service which Beethoven characteristically refers to in a letter[1] to Schlesinger, Sept. 25, 1825. His book on the same subject, however, 'Beethoven's Leben und Schaffen' (Berlin, 1859, 2nd ed. 1865, 3rd 1875), is a fantastic critique, too full of mere conjecture and misty æstheticism. In 1827 he received his doctor's diploma from the university of Marburg, and was made 'Docent,' or tutor, in the history and theory of music at the university of Berlin. He became Professor in 1830, and in 1832 Musikdirector of the university choir. In 1850 he founded with Kullak and Stern the 'Berliner Musikschule,' afterwards the 'Berliner Conservatorium,' but withdrew in 1856 (Kullak having resigned in '55), and henceforth devoted himself to his private pupils and to his work at the University. He died in Berlin, May 17, 1866. His numerous works are of unequal merit, the most important being the 'Lehre von der musikalischen Composition,' 4 vols. (Breitkopf & Härtel, 1837, 38, 45). His 'Gluck und die Oper' (Berlin, 2 vols. 1862) contains many ingenious observations, but is of no historical value. Besides what he did for Beethoven's music, Marx deserves credit for bringing to light many little-known works of Bach and Handel. His compositions are not remarkable; neither his oratorios 'Johannes der Täufer,' 'Moses,' and 'Nahid und Omar,' nor his instrumental music, obtaining more than a 'succès d'estime.' Nevertheless some particulars given in his 'Erinnerungen' (Berlin, 1865) as to his manner of composing are well worth reading, as indeed is the whole book for its interesting picture of the state of music in Berlin between 1830 and 60. With Mendelssohn he was at one time extremely intimate, and no doubt was in many respects useful to him; but his influence diminished as Mendelssohn grew older and more independent. [F.G.]

[1] Nohl, Briefe, No. 368.

MARXSEN, Eduard, born July 23, 1806, at Nienstädten near Altona, where his father was organist. He was intended for the church, but devoted himself to music, which he studied at home and with Clasing of Hamburg. He then assisted his father till the death of the latter in 1830, when he went to Vienna, and took lessons in counterpoint from Seyfried, and the pianoforte from Bocklet. He also composed industriously, and on his return to Hamburg gave a concert (Oct. 15, 1834) at which he played 18 pieces of his own composition. He has since lived at Hamburg in great request as a teacher. Brahms is the most remarkable of his pupils. Of his 60 or 70 compositions, one for full orchestra called 'Beethoven's Schatten' was performed in 1844 and 45 at concerts in Hamburg. [F.G.]

MARYLEBONE GARDENS. This once celebrated place of entertainment was situate at the back of and appurtenant to a tavern called 'The Rose of Normandy' (or briefly 'The Rose'), which stood on the east side of High Street, Marylebone, and was erected about the middle of the 17th century. The earliest notice of it is in 'Memoirs by Samuel Sainthill, 1659,' printed in 'The Gentleman's Magazine,' vol. 83, p. 524, where the garden is thus described: 'The outside a square brick wall, set with fruit trees, gravel walks, 204 paces long, seven broad; the circular walk 485 paces, six broad, the centre square, a Bowling Green, 112 paces one way, 88 another; all except the first double set with quickset hedges, full grown and kept in excellent order, and indented like town walls.' It is next mentioned by Pepys, May 7, 1668: 'Then we abroad to Marrowbone and there walked in the garden, the first time I ever was there, and a pretty place it is.' Long's bowling green at the Rose at Marylebone, half a mile distant from London, is mentioned in the London

Gazette, Jan 11, 1691-2. Count de Tallard, the French ambassador, gave a splendid entertainment before leaving England to the Marquis of Normanby (afterwards Duke of Buckinghamshire) and other persons of note 'at the great Bowling Green at Marylebone,' in June, 1699. About that time the house became noted as a gaming house much frequented by persons of rank; Sheffield, Duke of Buckinghamshire, was a constant attendant, and, as Quin told Pennant, gave every spring a dinner to the chief frequenters of the place, at which his parting toast was 'May as many of us as remain unhanged next spring meet here again.' It was he who was alluded to in Lady Mary Wortley Montague's oft-quoted line, 'Some dukes at Marybone bowl time away.' Gay, in his 'Beggar's Opera,' 1727, makes Marylebone one of Macheath's haunts, and mentions the 'deep play' there. Prior to 1737 admission to the gardens was gratuitous, but in that year Daniel Gough, the proprietor, charged 1s. each for admission, giving in return a ticket which was taken back in payment for refreshments to that amount. In 1738 Gough erected an orchestra and engaged a band of music 'from the opera and both theatres,' which performed from 6 to 10 o'clock, during which time they played 18 pieces. In August 'two Grand or Double Bassoons, made by Mr. Stanesby, junior, the greatness of whose sound surpass that of any other bass instrument whatsoever; never performed with before,' were introduced. In 1740 an organ was erected by Bridge. In 1746 robberies had become so frequent and the robbers so daring that the proprietor was compelled to have a guard of soldiers to protect the visitors from and to town. In 1747 Miss Falkner appeared as principal singer (a post she retained for some years), and the admission to the concert was raised to 2s. In 1748 an addition was made to the number of lamps, and Defesch was engaged as first violin, and about the same time fireworks were introduced. In 1751 John Trusler became proprietor; 'Master (Michael) Arne' appeared as a singer, balls and masquerades were occasionally given, the doors were opened at 7, the fireworks were discharged at 11, and 'a guard was appointed to be in the house and gardens, and to oblige all persons misbehaving to quit the place.' In 1752 the price of admission was reduced to 6d., although the expense was said to be £8 per night more than the preceding year. In 1753 the bowling green was added to the garden, and the fireworks were on a larger scale than before. In 1758 the first burletta performed in the gardens was given; it was an adaptation by Trusler jun. and the elder Storace of Pergolesi's 'La Serva Padrona,' and for years was a great favourite. The gardens were opened in the morning for breakfasting, and Miss Trusler made cakes which long enjoyed a great vogue. In 1762 the gardens were opened in the morning gratis and an organ performance given from 5 to 8 o'clock. In 1763 the place passed into the hands of Thomas (familiarly called Tommy) Lowe, the popular tenor singer, the admission was raised to 1s. and Miss Catley was among the singers engaged. In the next year the opening of the gardens on Sunday evenings for tea drinking was prohibited; and in October a morning performance, under the name of a rehearsal, was given, when a collection was made in aid of the sufferers by destructive fires at Montreal, Canada, and Honiton, Devonshire. Lowe's management continued until 1768, when he retired, having met with heavy losses. In 1769 Mr. (afterwards Dr.) Arnold became proprietor, and engaged Mrs. Pinto (formerly Miss Brent), Master Brown, and others as vocalists, Pinto as leader, Hook as organist and music director, and Dr. Arne to compose an ode. In 1770 Barthelemon became leader, and Mrs. Barthelemon, Bannister and Reinhold were among the singers. A burletta by Barthelemon, called 'The Noble Pedlar,' was very successful. In 1771 Miss Harper (afterwards Mrs. John Bannister) appeared, Miss Catley reappeared, and several new burlettas were produced. In 1772 Torrè, an eminent Italian pyrotechnist, was engaged, and the fireworks became a more prominent feature in the entertainments, to the great alarm of the neighbouring inhabitants, who applied to the magistrates to prohibit their exhibition, fearing danger to their houses from them. Torrè however continued to exhibit during that and the next two seasons. But the gardens were losing their popularity: in 1775 there appear to have been no entertainments of the usual kind, but occasional performances of Baddeley's entertainment, 'The Modern Magic Lantern,' deliveries of George Saville Carey's 'Lecture upon Mimicry,' or exhibitions of fireworks by a Signor Caillot. In 1776 entertainments of a similar description were given, amongst which was a representation of the Boulevards of Paris. The gardens closed on Sept. 23, and were not afterwards regularly opened. In or about 1778 the site was let to builders, and is now occupied by Beaumont Street, Devonshire Street, and part of Devonshire Place. The tavern, with a piece of ground at the back, used as a skittle alley, continued to exist in nearly its pristine state until 1855, when it was taken down, and rebuilt on its own site and that of an adjoining house, and on the ground behind it was erected the Marylebone Music Hall. [W. H. H.]

MASANIELLO. The name in England of Auber's opera, LA MUETTE DE PORTICI. Produced in English as 'Masaniello, or the Dumb Girl of Portici,' at Drury Lane, May 4, 1829; in Italian (in 3 acts) at Royal Italian Opera, Covent Garden, March 15, 1849. [G.]

MASNADIERI, I—*i.e.* The Brigands—an opera in 4 acts; libretto by Maffei, from Schiller's 'Robbers,' music by Verdi. Produced at Her Majesty's Theatre, London, July 22, 1847, Verdi conducting and Jenny Lind acting. An experiment had been made by Mercadante eleven years before on a libretto adapted from the Huguenots, under the title of 'I Briganti,' produced at the Italiens, Paris, March 22, 1836. [G.]

MASON, JOHN, Mus. Bac., was admitted clerk of Magdalen College, Oxford, in 1508, graduated Feb. 12, 1509, and was in the same year appointed instructor of the choristers and chaplain of Magdalen College. Wood says he was in much esteem in his profession. He was collated prebendary of Pratum minus, July 21, and of Putson minor, July 22, 1525, and treasurer of Hereford Cathedral, May 23, 1545. He is mentioned by Morley in his 'Introduction' as one of those whose works he had consulted. He died in 1547. [W. H. H.]

MASON, LOWELL, Mus. Doc., born at Medfield, Massachusetts, Jan. 8, 1792, died at Orange, New Jersey, Aug. 11, 1872. He was self-taught, and in his own words 'spent twenty years of his life in doing nothing save playing on all manner of musical instruments that came within his reach.' At 16 he was leader of the choir in the village church, and a teacher of singing classes. At 20 he went to Savannah in Georgia, as clerk in a bank, and there continued to practise, lead, and teach. In the course of these labours he formed, with the help of F. L. Abel, a collection of psalm tunes based on Gardiner's 'Sacred Melodies'—itself adapted to tunes extracted from the works of Haydn, Mozart, and Beethoven. [See GARDINER, vol. i. 582 *b*.] This collection was published by the Handel and Haydn Society of Boston in 1822 under the title of 'the Handel and Haydn Society's collection of Church Music,' Mason's name being almost entirely suppressed. The book sold well: it enabled the Society to tide over the period of its youth, and establish itself as one of the characteristic institutions of Boston, it initiated a purer and healthier taste for music in New England, and it led to Mason's removal to Boston and to his taking 'a general charge of music in the churches there,' in 1827. He then became president of the society; but as his object was not so much the cultivation of high class music as the introduction of music as an essential element of education in the common schools, he soon left it and established the Boston Academy of Music in 1832. He founded classes on the system of Pestalozzi, and at length in 1838 obtained power to teach in all the schools of Boston. At the same time he founded periodical conventions of music teachers, which have been found very useful, and are now established in many parts of the States. He also published a large number of manuals and collections which have sold enormously and produced him a handsome fortune. He visited Europe first in 1837 with the view of examining the methods of teaching in Germany, and embodied the results in a volume entitled 'Musical Letters from Abroad' (New York, 1853). He was for long closely connected with the Public Board of Education of Massachusetts, his kindness and generosity were notorious, and he was universally admired and esteemed. His degree of Doctor in Music, the first of the kind conferred by an American college, was granted by the New York University in 1835. The last years of his life were spent at Orange in New Jersey, the residence of two of his sons. He formed a very fine library which he collected far and wide, regardless of expense.

Of his sons, WILLIAM, born 1828, received a liberal education in music, and was long recognised as a leading pianist in New York; while LOWELL and HENRY are respectively president and treasurer of the Mason and Hamlin Organ Company at Boston. [A. W. T.]

MASON, Rev. WILLIAM, son of a clergyman, born at Hull 1725, graduated at Cambridge, B.A. 1745, M.A. 1749; took orders 1755, became chaplain to the king and rector of Aston, Yorkshire, and afterwards prebendary (1756), canon residentiary and precentor (1763) of York Cathedral. In 1782 he published a book of words of anthems, to which he prefixed a 'Critical and Historical Essay on Cathedral Music' (another edition, 1794). He also wrote essays 'On Instrumental Church Music,' 'On Parochial Psalmody,' and 'On the causes of the present imperfect alliance between Music and Poetry.' He composed some church music, the best known of which is the short anthem 'Lord of all power and might.' He was author of several poems, and of two tragedies, 'Elfrida' and 'Caractacus,' and was the friend and biographer of the poet Gray. He died at Aston, April 5, 1797. [W. H. H.]

MASQUE. The precursor of the opera; a dramatic entertainment, usually upon an allegorical or mythological subject, and combining poetry, vocal and instrumental music, scenery, dancing, elaborate machinery, and splendid costumes and decorations—which was performed at Court or at noblemen's houses on festive occasions, the performers being usually persons of rank. Masques were frequently exhibited at the courts of James I. and Charles I., and vast sums were lavished upon their production. The Masque of the Inner Temple and Gray's Inn, presented in Feb. 1613, on the marriage of the Princess Elizabeth to the Elector Palatine of the Rhine, cost £1086 8*s*. 11*d*.[1] The principal author of those masques was Ben Jonson, whose genius was peculiarly fitted to a style of composition which afforded him ample opportunity of displaying his erudition. Beaumont, Chapman, Samuel Daniel, Campion, Shirley, Heywood, and Carew, also employed their talents upon masques, as did a greater than they, Milton, whose 'Comus' was represented at Ludlow Castle in 1634. Inigo Jones devised the machinery and designed the costumes for the Court masques;[2] Lanière and others painted the scenery; and Ferrabosco, Campion, H. and W. Lawes, Ives, Lanière, Lock, C. Gibbons and others composed the music. Two of Ben Jonson's masques—'The Masque of Queens,' 1610, and 'The Twelfth Night's Revels,' 1606, were printed from his autograph MSS. in the British Museum by the Shakspere Society at the end of Cunningham's 'Life of Inigo Jones.' After the

[1] In regarding these figures the difference in the value of money then and now must be borne in mind.

[2] Many of his sketches for this purpose are in the possession of the Duke of Devonshire.

Restoration what were called masques were occasionally given at Court, but they appear to have been rather masked or fancy dress balls than dramatic entertainments. An exception was Crowne's masque, 'Calisto; or, the Chaste Nymph,' performed at court by the princesses and courtiers Dec. 15 and 22, 1675. In the 18th century masques were not unfrequently to be seen on the public stage. The 'pantomimes' produced by Rich (for most of which Galliard composed the music) were really masques with harlequinade scenes interspersed. More recently masques have been performed on occasion of royal weddings; thus 'Peleus and Thetis,' a masque, formed the second act of the opera 'Windsor Castle,' by William Pearce, music by J. P. Salomon, performed at Covent Garden on the marriage of the Prince of Wales, 1795, and 'Freya's Gift,' masque by John Oxenford, music by G. A. Macfarren, was produced at the same house on the marriage of the present Prince of Wales, 1863. Soon after the death of Sir Walter Scott in 1832, 'The Vision of the Bard,' masque by James Sheridan Knowles. was produced at Covent Garden. [W.H.H.]

MASS (Lat. *Missa*; from the words, *'Ite, missa est'*—'Depart! the assembly is dismissed'—sung, by the Deacon, immediately before the conclusion of the Service. Ital. *Messa*; Fr. *Messe*; Germ. *Die Messe*). The custom of singing certain parts of the Mass to music of a peculiarly solemn and impressive character has prevailed, in the Roman Church, from time immemorial.

Concerning the source whence this music was originally derived, we know but very little. All that can be said, with any degree of certainty, is, that, after having long been consecrated, by traditional use, to the service of Religion, the oldest forms of it with which we are acquainted were collected together, revised, and systematically arranged, first, by Saint Ambrose, and, afterwards, more completely, by Saint Gregory the Great, to whose labours we are mainly indebted for their transmission to our own day in the pages of the Roman Gradual. Under the name of Plain Chaunt, the venerable melodies thus preserved to us are still sung, constantly, in the Pontifical Chapel, and the Cathedrals of most Continental Dioceses. The specimen we have printed, in the article, KYRIE, will give a fair general idea of their style; and it is worthy of remark, that the special characteristics of that style are more or less plainly discernible in all music written for the Church, during a thousand years, at least, after the compilation of Saint Gregory's great work.

Each separate portion of the Mass was antiently sung to its own proper Tune; different Tunes being appointed for different Seasons, and Festivals. After the invention of Counterpoint, Composers delighted in weaving these and other old Plain Chaunt melodies into polyphonic Masses, for two, four, six, eight, twelve, or even forty Voices: and thus arose those marvellous Schools of Ecclesiastical Music, which, gradually advancing in excellence, exhibited, during the latter half of the 16th century, a development of Art, the æsthetic perfection of which has never since been equalled. The portions of the Service selected for this method of treatment were, the *Kyrie*, the *Gloria*, the *Credo*, the *Sanctus*, the *Benedictus*, and the *Agnus Dei*; which six movements constituted—and still constitute—the musical composition usually called the 'Mass.' A single Plain Chaunt melody—in technical language, a *Canto fermo*—served, for the most part, as a common theme for the whole: and, from this, the entire work generally derived its name—as *Missa 'Veni sponsa Christi'*; *Missa 'Tu es Petrus'*; *Missa 'Iste confessor.'* The *Canto fermo*, however, was not always a sacred one. Sometimes—though not very often during the best periods of Art—it was taken from the refrain of some popular song; as in the case of the famous *Missæ 'L'Homme armé,'* founded upon an old French love-song—a subject which Josquin des Prés, Palestrina, and many other great Composers have treated with wonderful ingenuity. More rarely, an original theme was selected: and the work was then called *Missa sine nomine*, or *Missa brevis*, or *Missa ad Fugam*, or *ad Canones*, as the case might be; or named, after the Mode in which it was composed, *Missa Primi Toni*, *Missa Quarti Toni*, *Missa Octavi Toni*; or even from the number of Voices employed, as *Missa Quatuor Vocum*. In some few instances—generally, very fine ones—an entire Mass was based upon the six sounds of the Hexachord, and entitled *Missa ut, re, mi, fa, sol, la*, or *Missa super Voces Musicales*.

Among the earliest Masses of this description, of which perfect and intelligible copies have been preserved to us, are those by Du Fay, Dunstable, Binchoys, and certain contemporaneous writers, whose works characterise the First Epoch of really practical importance in the history of Figured Music—an epoch intensely interesting to the critic, as already exhibiting the firm establishment of an entirely new style, confessedly founded upon novel principles, yet depending, for its materials, upon the oldest subjects in existence, and itself destined to pass through two centuries and a half of gradual, but perfectly legitimate development. Du Fay, who may fairly be regarded as the typical composer of this primitive School, was a Tenor Singer in the Pontifical Chapel, between the years 1380, and 1432. His Masses, and those of the best of his contemporaries, though hard, and unmelodious, are full of earnest purpose; and exhibit much contrapuntal skill, combined, sometimes, with ingenious fugal treatment. Written exclusively in the antient Ecclesiastical Modes, they manifest a marked preference for Dorian, Phrygian, Lydian, and Mixolydian forms, with a very sparing use of their Æolian and Ionian congeners. These Modes are used, sometimes, at their true pitch; sometimes, transposed a fourth higher—or fifth lower—by means of a B♭ at the signature: but, never, under any other form of transposition, or, with any other signatures than those corresponding with the modern keys of C, or F—a restriction which remained in full force as late as the

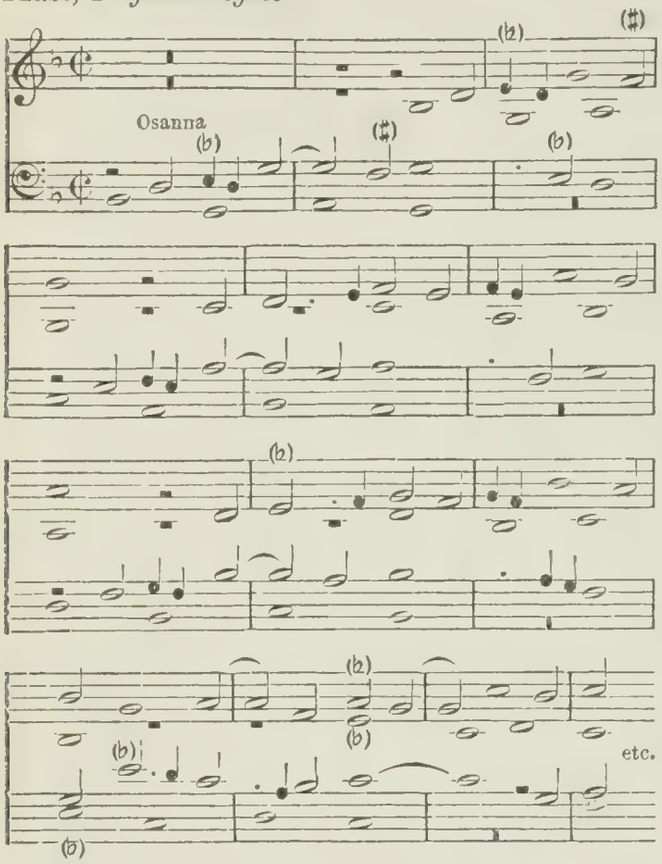
first half of the 17th century, and was even respected by Handel, when he wrote, as he sometimes did with amazing power, in the older scales. So far as the treatment of the *Canto fermo* was concerned, no departure from the strict rule of the Mode was held to be, under any circumstances, admissible: but, a little less rigour was exacted, with regard to the counterpoint. Composers had long since learned to recognise the demand for what we should now call a Leading-note, in the formation of the *Clausula vera*, or True Cadence—a species of Close, invested with functions analogous to those of the Perfect Cadence in modern music. To meet this requirement, they freely admitted the use of an accidental semitone, in all Modes (except the Phrygian) in which the seventh was naturally Minor. But, in order that, to the eye, at least, their counterpoint might appear no less strict than the *Canto fermo*, they refrained, as far as possible, from indicating the presence of such semitones in their written music, and, except when they occurred in very unexpected places, left the singers to introduce them, wherever they might be required, at the moment of performance. Music so treated was called *Cantus fictus*: and the education of no Chorister was considered complete, until he was able, while singing it, to supply the necessary semitones, correctly, in accordance with certain fixed laws, a summary of which will be found in the article, Musica Ficta. For the rest, we are able to detect but little attempt at expression; and very slight regard for the distinction between long and short syllables. The verbal text, indeed, was given in a very incomplete form; the word, *Kyrie*, or *Sanctus*, written at the beginning of a movement, being generally regarded as a sufficient indication of the Composer's meaning. In this, and other kindred matters, the confidence reposed in the Singer's intelligence was unbounded—a not unnatural circumstance, perhaps, in an age in which the Composer, himself, was almost always a Singer in the Choir for which he wrote.

Even at this remote period, the several movements of the Mass began gradually to mould themselves into certain definite forms, which were long in reaching perfection, but, having once obtained general acceptance, remained, for more than a century and a half, substantially unchanged. The usual plan of the *Kyrie* has already been fully described. [See Kyrie.] The *Gloria*, distinguished by a more modest display of fugal ingenuity, and a more cursive rendering of the words, was generally divided into two parts, the *Qui tollis* being treated as a separate movement. The *Credo*, written in a similar style, was also subjected to the same method of subdivision, a second movement being usually introduced at the words, '*Et incarnatus est*,' or '*Crucifixus*,' and, frequently, a third, at '*Et in Spiritum Sanctum*.' The design of the *Sanctus*, though more highly developed, was not unlike that of the *Kyrie*; the '*Pleni sunt coeli*,' being sometimes, and the *Osanna*, almost always, treated separately. The *Benedictus* was allotted, in most cases, to two, three, or four Solo Voices; and frequently assumed the form of a Canon, followed by a choral *Osanna*. In the *Agnus Dei*—generally divided into two distinct movements—the Composer loved to exhibit the utmost resources of his skill: hence, in the great majority of instances, the second movement was written, either in Canon, or in very complex Fugue, and, not unfrequently, for a greater number of voices than the rest of the Mass.

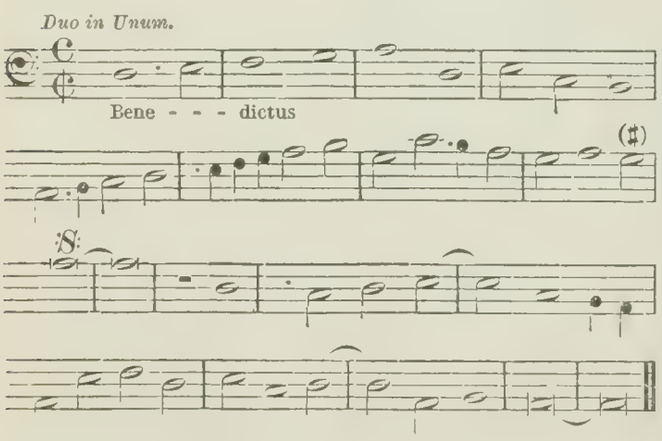
The best-known composers of the Second Epoch were Okenheim, Hobrecht, Caron, Gaspar, the brothers De Fevin, and some others of their School, most of whom flourished between the years 1430, and 1480. As a general rule, these writers laboured less zealously for the cultivation of a pure and melodious style, than for the advancement of contrapuntal ingenuity. For the sober fugal periods of their predecessors, they substituted the less elastic kind of imitation, which was then called Strict or Perpetual Fugue, but afterwards obtained the name of Canon; carrying their passion for this style of composition to such extravagant lengths, that too many of their works descended to the level of mere learned ænigmas. Okenheim, especially, was devoted to this particular phase of Art, for the sake of which he was ready to sacrifice much excellence of a far more substantial kind. Provided he could succeed in inventing a Canon, sufficiently complex to puzzle his brethren, and admit of an indefinite number of solutions, he cared little whether it was melodious, or the reverse. To such Canons he did not scruple to set the most solemn words of the Mass. Yet, his genius was, certainly, of a very high order; and, when he cared to lay aside these extravagances, he proved himself capable of producing works far superior to those of any contemporary writer.

The Third Epoch was rendered remarkable by the appearance of a Master, whose fame was destined to eclipse that of all his predecessors, and even to cast the reputation of his teacher, Okenheim, into the shade. Josquin des Prés, a Singer in the Pontifical Chapel, from 1471 to 1484, and, afterwards, *Maitre de Chapelle* to Louis XII, was, undoubtedly, for very many years, the most popular Composer, as well as the greatest and most learned Musician, in Christendom. And, his honours were fairly earned. The wealth of ingenuity and contrivance displayed in some of his Masses is truly wonderful; and is rendered none the less so by its association with a vivacity peculiarly his own, and an intelligence and freedom of manner far in advance of the age in which he lived. Unhappily, these high qualities are marred by a want of reverence which would seem to have been the witty genius's besetting sin. When free from this defect, his style is admirable. On examining his Masses, one is alternately surprised by passages full of unexpected dignity, and conceits of almost inconceivable quaintness—flashes of humour, the presence of which, in a volume of Church Music, cannot be too deeply regretted, though they are really no more than passing indications of the genial temper of a man whose greatness was far too real to be affected, either one way or the other, by a natural

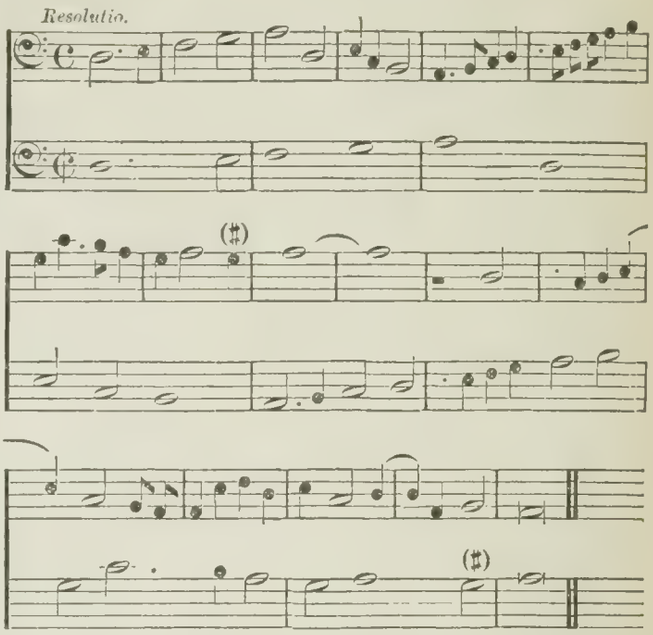
light-heartedness which would not always submit to control. As a specimen of his best, and most devotional style, we can scarcely do better than quote a few bars from the *Osanna* of his Mass, *Faysans regrés*[1]—



The religious character of this movement is apparent, from the very first bar; and the ingenuity with which the strict Canon is carried on, between the Bass and Alto, simultaneously with the Fugue between the Tenor and Treble, is quite forgotten in the unexpected beauty of the resulting harmonies. Perhaps some portion of the beauty of our next example—the *Benedictus* from the *Missa 'L'Homme armé'*—may be forgotten in its ingenuity. It is a strict Canon, in the Unison, by Diminution; and, though intended to be sung by two Voices, is printed in one part only, the singer being left to find out the secret of its construction as best he can—



A hint at the solution of this ænigma is given, to the initiated, by the double Time-signature at the beginning. [See INSCRIPTION.] The intention is, that it should be sung by two Bass Voices, in unison, both beginning at the same time, but one singing the notes twice as quickly as the other: thus—

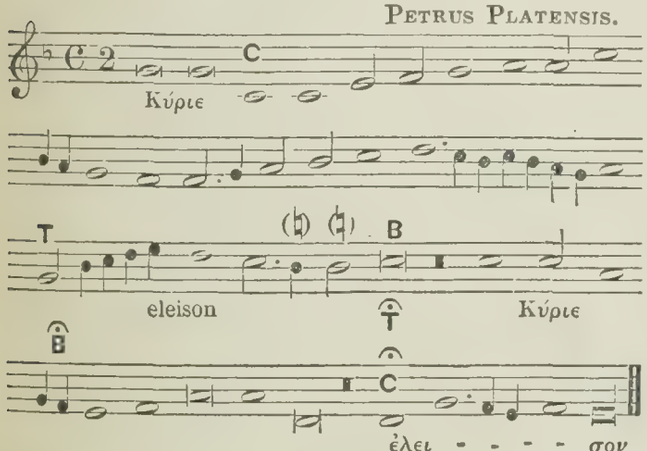


This diversity of Rhythm is, however, a very simple matter, compared with many other complications in the same Mass, and still more, in the *Missa 'Didadi,'* which abounds in strange proportions of Time, Mode, and Prolation, the clue whereto is afforded by the numbers shewn on the faces of a pair of dice! Copious extracts from these curious Masses, as well as from others by Gombert, Clemens non Papa, Mouton, Brumel, and other celebrated Composers, both of this, and the preceding Epoch, will be found in the *'Dodecachordon'* of Glareanus (Basle, 1547), a work which throws more light than almost any other on the mysteries of antient counterpoint.

Of the numerous Composers who flourished during the Fourth Epoch—that is to say, during the first half of the 16th century—a large proportion aimed at nothing higher than a servile imitation of the still idolised Josquin; and, as is usual under such circumstances, succeeded in reproducing his faults much more frequently than his virtues. There were, however, many honourable exceptions. The Masses of Carpentrasso, Morales, Cipriano di Rore, Vincenzo Ruffo, Claude Goudimel, Adriano Willaert, and, notably, Costanzo Festa, are unquestionably written in a far purer and more flowing style than those of their predecessors: and even the great army of Madrigal writers, headed by Archadelt, and Verdelot, helped on the good cause bravely, in the face of a host of charlatans whose caprices tended only to bring their Art into disrepute. Not content with inventing ænigmas *'Ad omnem tonum,'* or *'Ung demiton plus bas'*—with colouring their notes green, when they sang of grass, or red, when allusion was made to blood—these corrupters of taste prided themselves upon adapting, to the several voice-parts for which they wrote, different sets of words, totally unconnected with each other; and this evil custom spread so widely, that Morales himself did not scruple to

[1] The accidentals in this, and the following examples, are all supplied in accordance with the laws of *Cantus fictus*.

mix together the text of the Liturgy, and that of the '*Ave Maria*'; while a Mass is still extant in which the Tenor is made to sing '*Alleluia*,' incessantly, from beginning to end. When the text was left intact, the rhythm was involved in complications which rendered the sense of the words utterly unintelligible. Profane melodies, and even the verses belonging to them, were shamelessly introduced into the most solemn compositions for the Church. All the vain conceits affected by the earlier writers were revived, with tenfold extravagance. Canons were tortured into forms of ineffable absurdity, and esteemed only in proportion to the difficulty of their solution. By a miserable fatality, the Mass came to be regarded as the most fitting possible vehicle for the display of these strange monstrosities, which are far less frequently met with in the Motet, or the Madrigal. Men of real genius fostered the wildest abuses. Even Pierre de la Rue—who seems to have made it a point of conscience to eclipse, if possible, the fame of Josquin's ingenuity—wrote his Missa, '*O salutaris Hostia*,' in one line, throughout; leaving three out of the four Voices to follow the single part in strict Canon. In the *Kyrie* of this Mass—which we reprint, in modern notation, from the version preserved by Glareanus [1]—the solution of the ænigma is indicated by the letters placed above and below the notes. C shows the place at which the Contra-tenor is to begin, in the interval of a Fifth below the Superius. T indicates the entrance of the Tenor, an Octave below the Superius: B, that of the Bass, a Fifth below the Tenor. The same letters, with pauses over them, mark the notes on which the several parts are to end. The reader who will take the trouble to score the movement, in accordance with these directions, will find the harmony perfectly correct, in spite of some harshly dissonant passing-notes: but it is doubtful whether the most indulgent critic would venture to praise it for its devotional character.



It is easy to imagine the depths of inanity accessible to an ambitious composer, in his attempts to construct such a Canon as this, without a spark of Pierre de la Rue's genius to guide him on his way. Such attempts were made, every day: and, had it not been that good men and true were at work, beneath the surface, consciently preparing the way for a better state of things, Art would soon have been in a sorry plight. As it was, notwithstanding all these extravagances, it was making real progress. The dawn of a brighter day was very near at hand; and the excesses of the unwise only served to hasten its appearance.

The Fifth Epoch, extending from the year 1565 to the second decad of the following century, and justly called 'The Golden Age of Ecclesiastical Music,' owes its celebrity entirely to the influence of one grave earnest-minded man, whose transcendant genius, always devoted to the noblest purposes, and always guided by sound and reasonable principles, has won for him a place, not only on the highest pinnacle of Fame, but, also, in the inmost hearts of all true lovers of the truest Art.

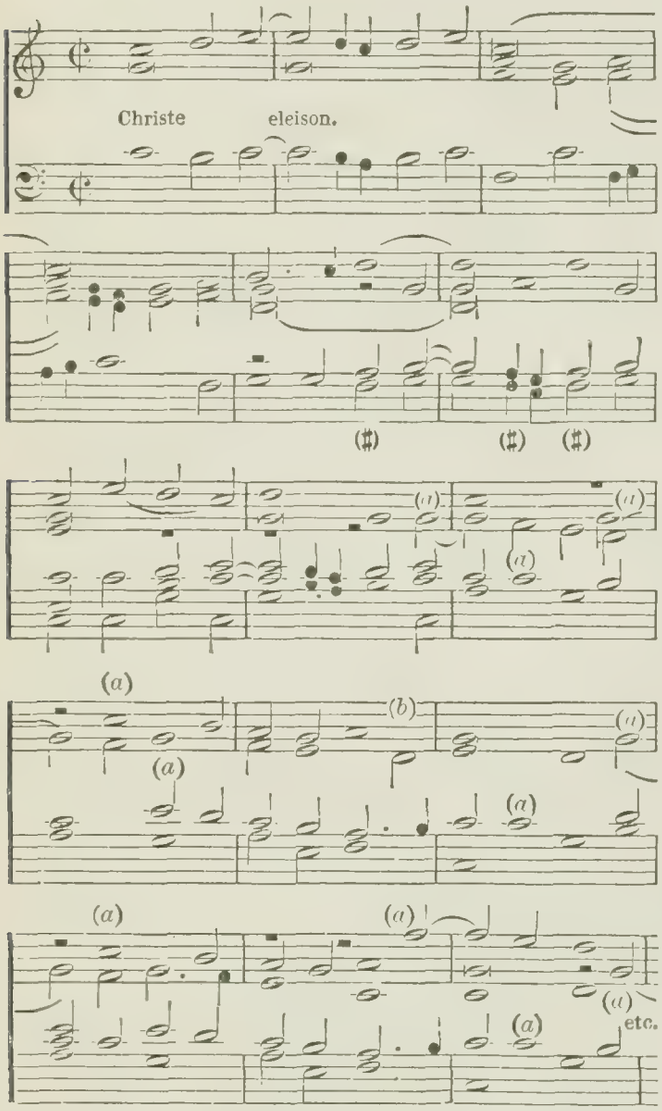
The abuses to which we have just alluded became, in process of time, so intolerable, that the Council of Trent found it necessary to condemn them, in no measured terms. In the year 1564, Pope Pius IV commissioned eight Cardinals to see that certain decrees of the Council were duly carried out. After much careful deliberation, the members of this Commission had almost determined to forbid the use of any polyphonic music whatever, in the Services of the Church: but, chiefly through the influence of Card. Vitellozzo Vitellozzi, and S. Carlo Borromeo, they were induced to suspend their judgment, until Palestrina, then Maestro di Capella of S. Maria Maggiore, should have proved, if he could, the possibility of producing music of a more devotional character, and better adapted to the words of the Mass, and the true purposes of Religion, than that then in general use. In answer to this challenge, the great Composer submitted to the Commissioners three Masses, upon one of which —first sung in the Sistine Chapel, on the Nineteenth of June, 1565, and since known as the *Missa Papæ Marcelli* [2]—the Cardinals immediately fixed, as embodying the style in which all future Church music should be composed. It would be difficult to conceive a more perfect model. In depth of thought, intensity of expression, and all the higher qualities which distinguish the work of the Master from that of the pedant, the *Missa Papæ Marcelli* is universally admitted to be unapproachable; while, even when regarded as a monument of mere mechanical skill, it stands absolutely unrivalled. Yet, except in the employment of the Hypoionian Mode [3]—a tonality generally avoided by the older composers—it depends for its effect, upon the introduction of no new element whatever, either of construction, or of form. Avoiding all show of empty pedantry, and carefully concealing the consummate art with which the involutions

[1] Dodecachordon, p. 445, ed. 1547.

[2] It is difficult to understand why Palestrina should have given it this name, ten years after the death of Pope Marcellus II. The reader will find the whole subject exhaustively discussed, in the pages of Baini (tom. 1. sez. 2. cap. 1 *et seq.*)

[3] The preface to a recent German edition of the *Missa Papæ Marcelli* erroneously describes the work as written in the Mixolydian Mode. The *Crucifixus*, and *Benedictus*, are undoubtedly Mixolydian; but, the Mass itself is, beyond all question, written in the Fourteenth, or Hypoionian Mode, to the tonality, compass, and cadences of which it conforms, throughout.

of its periods are conducted, it freely uses all the old contrivances of Fugue, and, in the second *Agnus Dei*, of closely interwoven Canon: but, always, as means towards the attainment of a certain end—never, in place of the end itself. And, this entire subjugation of artistic power to the demands of expression is, perhaps, its most prominent characteristic. It pervades it, throughout, from the first note to the last. Take, for instance, the *Christe eleison*, in which each Voice, as it enters, seems to plead more earnestly than its predecessor for mercy—



It is impossible, while listening to these touchingly beautiful harmonies, to bestow even a passing thought upon the texture of the parts by which they are produced: yet, the quiet grace of the theme, at (*a*), and the closeness of the imitation to which it is subjected, evince a command of technical resources which Handel alone could have hidden, with equal success, beneath the appearance of such extreme simplicity. Handel has, indeed, submitted a similar subject to closely analagous treatment—though, in quick time, and with a very different expression—in the opening *Tutti* of his Organ Concerto in G: and it is interesting to note, that the exquisitely moulded close, at (*b*), so expressive, when sung with the necessary *ritardando*, of the confidence of Hope, has been used, by Mendelssohn, interval for interval, in the Chorale, 'Sleepers wake!' from 'Saint Paul,' to express the confidence of Expectation.

We have selected this particular passage for our illustration, principally for the sake of calling attention to these instructive coincidences: but, in truth, every bar of the Mass conceals a miracle of Art. Its subjects, all original, and all of extreme simplicity, are treated with an inexhaustible variety of feeling which shews them, every moment, in some new and beautiful light. Its six voices—Soprano, Alto, two Tenors of exactly equal compass, and two Basses matched with similar nicety—are so artfully grouped as constantly to produce the effect of two or more antiphonal Choirs. Its style is solemn, and devotional, throughout; but, by no means deficient in fire, when the sense of the words demands it. Baini truly calls the *Kyrie*, devout; the *Gloria*, animated; the *Credo*, majestic; the *Sanctus*, angelic; and, the *Agnus Dei*, prayerful. Palestrina wrote many more Masses, of the highest degree of excellence; but, none—not even *Assumpta est Maria*—so nearly approaching perfection, in every respect, as this. He is known to have produced, at the least, ninety-five; of which forty-three were printed during his life-time; and thirty-nine more, within seven years after his death; while thirteen are preserved, in manuscript,[1] among the Archives of the Pontifical Chapel, and in the Vatican Library. The effect produced by these great works upon the prevailing style was all that could be desired. Vittoria, and Anerio, in the great Roman School, Gabrieli, and Croce, in the Venetian, Orlando di Lasso, in the Flemish, and innumerable other Masters, brought forward compositions of unfading interest and beauty. Not the least interesting of these is a Mass, for five voices, in the transposed Æolian Mode, composed by our own great William Byrd, at the time when he was singing, as a Chorister, at Old Saint Paul's. This valuable work was edited, in 1841, for the Musical Antiquarian Society, by Dr. Rimbault, from a copy, believed to be unique, and now safely lodged in the Library of the British Museum. Though composed (if Dr. Rimbault's theory may be accepted, in the absence of a printed date) some years before the *Missa Papæ Marcelli*, it may fairly lay claim to be classed as a production of the 'Golden Age'; for, it was certainly not printed until after the appearance of Palestrina's Second Book of Masses; moreover, it is entirely free from the vices of the Fourth Epoch, and, notwithstanding a certain irregularity in the formation of some of the Cadences, exhibits unmistakeable traces of the

[1] One of these, *Tu es Petrus*, was printed, for the first time, in 1869, in Schrems's continuation of Proske's 'Musica Divina' (Ratisbon, Fr. Pustet).

Roman style: a style, the beauties of which were speedily recognised from one end of Europe to the other, exercising more or less influence over the productions of all other Schools, and thereby bringing the music of the Mass, during the latter half of the Sixteenth Century, to a degree of perfection beyond which it has never since advanced.

The Sixth Epoch was one of universal decadence. In obedience to the exigencies of a law with the operation of which the Art-historian is only too familiar, the glories of the 'Golden Age' had no sooner reached their full maturity, than they began to show signs of incipient decay. The bold unprepared discords of Monteverde, and the rapid rise of Instrumental Music, were, alike, fatal to the progress of the Polyphonic Schools. Monteverde, it is true, only employed his newly-invented harmonies in sæcular music: but, what revolutionist ever yet succeeded in controlling the course of the stone he had once set in motion! Other Composers soon dragged the unwonted dissonances into the Service of the Church: and, beyond all doubt, the unprepared seventh sounded the death-knell of the Polyphonic Mass. The barrier between the tried, and the untried, once broken down, the laws of counterpoint were no longer held sacred. The old paths were forsaken; and those who essayed to walk in the new wandered vaguely, hither and thither, in search of an ideal, as yet but very imperfectly conceived, in pursuit of which they laboured on, through many weary years, cheered by very inadequate results, and little dreaming of the effect their work was fated to exercise upon generations of musicians then unborn. A long and dreary period succeeded, during which no work of any lasting reputation was produced: for, the Masses of Carissimi, Colonna, and the best of their contemporaries, though written in solemn earnest, and interesting enough when regarded as attempts at a new style, bear no comparison with the compositions of the preceding epoch; while those arranged by Benevoli (1602–1672) and the admirers of his School, for combinations of four, six, eight, and even twelve distinct Choirs, were forgotten, with the occasions for which they were called into existence. Art was passing through a transitional phase, which must needs be left to work out its own destiny in its own way. The few faithful souls who still clung to the traditions of the Past were unable to uphold its honours: and, with Gregorio Allegri, in 1652, the 'School of Palestrina' died out. Yet, not without hope of revival. The laws which regulated the composition of the Polyphonic Mass are as intelligible, to-day, as they were three hundred years ago; and it needs but the fire of living Genius to bring them, once more, into active operation, reinforced by all the additional authority with which the advancement of Modern Science has, from time to time, invested them.

Before quitting this part of our subject, for the consideration of the later Schools, it is necessary that we should offer a few remarks upon the true manner of singing Masses, such as those of which we have briefly sketched the history: and, thanks to the traditions handed down, from generation to generation, by the Pontifical Choir, we are able to do so with as little danger of misinterpreting the ideas of Palestrina, or Anerio, as we should incur in dealing with those of Mendelssohn, or Sterndale Bennett.

In the first place, it is a mistake to suppose that a very large body of Voices is absolutely indispensable to the successful rendering, even of very great works. On ordinary occasions, no more than thirty-two singers are present in the Sistine Chapel—eight Sopranos, and an equal number of Altos, Tenors, and Basses: though, on very high Festivals, their number is sometimes nearly doubled. The vocal strength must, of course, be proportioned to the size of the building in which it is to be exercised: but, whether it be great, or small, it must, on no account, be supplemented by any kind of instrumental accompaniment whatever. Every possible gradation of tone, from the softest imaginable whisper, to the loudest *forte* attainable without straining the Voice, will be brought into constant requisition. Though written, always, either with a plain signature, or with a single flat after the clef, the music may be sung at any pitch most convenient to the Choir. The time should be beaten in minims; except in the case of 3-1, in which three semibreves must be counted in each bar. The *Tempo*—of which no indication is ever given, in the old part-books—will vary, in different movements, from about ♩=50 to ♩=120. On this point, as well as on the subject of *pianos* and *fortes*, and the assignment of certain passages to Solo Voices, or Semi-chorus, the leader must trust entirely to the dictates of his own judgment. He will, however, find the few simple rules to which we are about to direct his attention capable of almost universal application; based, as they are, upon the important relation borne by the music of the Mass to the respective offices of the Priest, the Choir, and the Congregation. To the uninitiated, this relation is not always very clearly intelligible. In order to make it so, and to illustrate, at the same time, the principles by which the Old Masters were guided, we shall accompany our promised hints by a few words explanatory of the functions performed by the Celebrant, and his Ministers, during the time occupied by the Choir in singing the principal movements of the Mass—functions, the right understanding of which is indispensable to the correct interpretation of the music.

High Mass—preceded, on Sundays, by the Plain Chaunt *Asperges me*—begins, on the part of the Celebrant and Ministers, by the recitation, in a low voice, of the Psalm, *Judica me Deus*, and the *Confiteor*; on that of the Choir, by the chaunting, from the Gradual, of the Introit, appointed for the day. [See INTROIT.]

From the Plain Chaunt Introit, the Choir proceed, at once, to the *Kyrie*; and this transition from the severity of the Gregorian melody to the pure harmonic combinations of Polyphonic Music is one of the most beautiful that can be imagined. The *Kyrie* is always sung slowly, and devoutly

(𝅗𝅥=56-66), with the tenderest possible gradations of light and shade. The *Christe*—also a slow movement—may often be entrusted, with good effect, to Solo Voices. The second *Kyrie* is generally a little more animated than the first, and should be taken in a quicker time (𝅗𝅥= 96-112). The *Kyrie* of Palestrina's *Missa brevis* is one of the most beautiful in existence, and by no means difficult to sing, since the true positions of the *crescendi* and *diminuendi* can scarcely be mistaken. [See KYRIE.]

While the Choir are singing these three movements, the Celebrant, attended by the Deacon, and Subdeacon, ascends to the Altar, and, having incensed it, repeats the words of the Introit, and *Kyrie*, in a voice audible to himself and his Ministers alone. On the cessation of the music, he intones, in a loud voice, the words, *Gloria in excelsis Deo*, to a short Plain Chaunt melody, varying with the nature of the different Festivals, and given, in full, both in the Missal, and the Gradual. [See INTONATION.] This Intonation, which may be taken at any pitch conformable to that of the Mass, is not repeated by the Choir, which takes up the strain at *Et in terra pax.*

The first movement of the *Gloria* is, in most cases, a very jubilant one (𝅗𝅥=100-120): but, the words *adoramus te*, and *Jesu Christe*, must always be sung slowly, and softly (𝅗𝅥= 50-60); and, sometimes, the *Gratias agimus*, as far as *gloriam tuam*, is taken a shade slower than the general time, in accordance with the spirit of the Rubric which directs, that, at these several points, the Celebrant and Ministers shall uncover their heads, in token of adoration. After the word, *Patris*, a pause is made. The *Qui tollis* is then sung, *Adagio* (𝅗𝅥=56-66); with *ritardandi* at *miserere nobis*, and *suscipe deprecationem nostram.* At the *Quoniam tu solus*, the original quick time is resumed, and carried on, with ever increasing spirit, to the end of the movement; except that the words, *Jesu Christe*, are again delivered slowly, and softly, as before. The provision made, in the *Missa Papæ Marcelli*, for the introduction of these characteristic changes of *Tempo*, is very striking, and points clearly to the antiquity of the custom.

The Celebrant now recites the Collects for the day; the Subdeacon sings the Epistle, in a kind of Monotone, with certain fixed Inflexions; the Choir sings the Plain Chaunt Gradual, followed by the Tract, or Sequence, according to the nature of the Festival; and the Deacon sings the Gospel, to its own peculiar Tone. [See GRADUAL; TRACT; SEQUENCE; ACCENTS.] If there be a Sermon, it follows next in order: if not, the Gospel is immediately followed by the Creed.

The words, *Credo in unum Deum*, are intoned, by the Celebrant, to a few simple notes of Plain Chaunt, which never vary—except in pitch—and which are to be found both in the Gradual, and the Missal. [See INTONATION.] The Choir continue, *Patrem omnipotentem*, in a moderate *Allegro*, more stately than that of the *Gloria* (𝅗𝅥=96-112), and marked by the closest possible attention to the spirit of the text. A *ritardando* takes place at *Et in unum Dominum*; and the words, *Jesum Christum*, are sung as slowly, and as softly, as in the *Gloria*, (𝅗𝅥=50-60). The quicker time is resumed at *Filium Dei*; and a grand *forte* may generally be introduced, with advantage, at *Deum de Deo*, and continued as far as *facta sunt*—as in Palestrina's *Missa 'Assumpta est Maria,'* and many others. After the words, *de coelis*, a long pause takes place, while the Congregation kneel. The *Et incarnatus est* then follows, in the form of a soft and solemn *Adagio* (𝅗𝅥=54-63), interrupted, after *factus est*, by another pause, long enough to enable the people to rise from their knees in silence. The *Crucifixus* is also a slow movement; the return to the original *Allegro* being deferred until the *Et resurrexit.* In the *Missa Papæ Marcelli*, and many other very fine ones, this part of the *Credo* is written for four solo voices; but, the necessity for an acceleration of the time at the *Et resurrexit* is very strongly marked. In the beautiful *Missa brevis* already mentioned, the Basses lead off the *Et resurrexit*, in quick time, while the Soprano, and Alto, are still engaged in finishing a *ritardando*—a very difficult, though by no means uncommon point, which can only be overcome by very careful practice.

Another change of time is sometimes demanded, at *Et in Spiritum Sanctum*: but, more generally, the *Allegro* continues to the end of the movement; interrupted only at the words *simul adoratur*, which are always sung *Adagio*, and *pianissimo*, while the Celebrant and Ministers uncover their heads.

The *Credo* is immediately followed by the Plain Chaunt *Offertorium* for the day. But, as this is too short to fill up the time occupied by the Celebrant in incensing the Oblations, and saying, *secreto*, certain appointed Prayers, it is usually supplemented, either by a Motet, or a grand Voluntary on the Organ. [See MOTET; OFFERTORIUM.] This is followed by the Versicle and Response called the *Sursum corda*, and the Proper Preface, at the end of which a Bell is rung, and the *Sanctus* is taken up by the Choir.

The *Sanctus* is invariably a *Largo*, of peculiar solemnity (𝅗𝅥=56-72). Sometimes, as in Palestrina's very early Mass, *Virtute magna*, the *Pleni sunt coeli* is set for Solo Voices. Sometimes, it is sung in chorus, but in a quicker movement, as in the same Composer's *Missa Papæ Marcelli*, and *Æterna Christi munera*—involving, in the last-named Mass, a difficulty of the same kind as that which we have already pointed out in the *Et resurrexit* of the *Missa Brevis.* The *Osanna*, though frequently spirited, must never be a noisy movement. In the *Missa brevis*, so often quoted, it is continuous with the rest of the *Sanctus*, and

clearly intended to be sung *pianissimo*—an extremely beautiful idea, in perfect accordance with the character of this part of the Service, during which the Celebrant is proceeding, *secreto*, with the Prayers which immediately precede the Consecration of the Host. After the Elevation—which takes place in silence—the Choir begin the *Benedictus*, in soft low tones, almost always entrusted to Solo Voices. The *Osanna*, which concludes the movement, is, in the great majority of cases, identical with that which follows the *Sanctus*. The *Pater noster* is sung, by the Celebrant, to a Plain Chaunt melody, contained in the Missal. After its conclusion, the Choir sings the last movement of the Mass—the *Agnus Dei*—while the Celebrant is receiving the Host. The first division of the *Agnus Dei* may be very effectively sung by Solo Voices, and the second, in subdued chorus (𝄐=50-72), with gentle gradations of *piano*, and *pianissimo*, as in the *Kyrie*. When there is only one movement, it must be sung twice; the words *dona nobis pacem* being substituted, the second time, for *miserere nobis*. The *Agnus Dei* of Josquin's *Missa 'L'Homme armé'* is in three distinct movements.

The Choir next sings the Plain Chaunt *Communio*, as given in the Gradual. The Celebrant recites the Prayer called the Post-Communion. The Deacon sings the words, '*Ite, missa est*,' from which the Service derives its name. And the Rite concludes with the *Domine salvum fac*, and Prayer for the reigning Sovereign.

The Ceremonies we have described are those peculiar to High or Solemn Mass. When the Service is sung by the Celebrant and Choir, without the assistance of a Deacon and Subdeacon, and without the use of Incense, it is called a *Missa cantata*, or Sung Mass. Low Mass is said by the Celebrant, alone, attended by a single Server. According to strict usage, no music whatever is admissible, at Low Mass: but, in French and German village Churches, and, even in those of Italy, it is not unusual to hear the Congregations sing Hymns, or Litanies, appropriate to the occasion, though not forming part of the Service. Under no circumstances can the duties proper to the Choir, at High Mass, be transferred to the general Congregation.

It is scarcely necessary to say, that the music of every Mass worth singing will naturally demand a style of treatment peculiar to itself; especially with regard to the *Tempi* of its different movements. A modern editor tells us that more than four bars of Palestrina should never be sung, continuously, in the same time.[1] This is, of course, an exaggeration. Nevertheless, immense variety of expression is indispensable. Everything depends upon it: and, though the leader will not always find it easy to decide upon the best method, a little careful attention to the points we have mentioned will, in most cases, enable him to produce results very different from any that are attainable by the hard dry manner which is too often supposed to be inseparable from the performance of antient figured music.

Our narrative was interrupted, at a transitional period, when the grand old mediæval style was gradually dying out, and a newer one courageously struggling into existence, in the face of difficulties which, sometimes, seemed insurmountable. We resume it, after the death of the last representative of the old *régime*, Gregorio Allegri, in the year 1652.

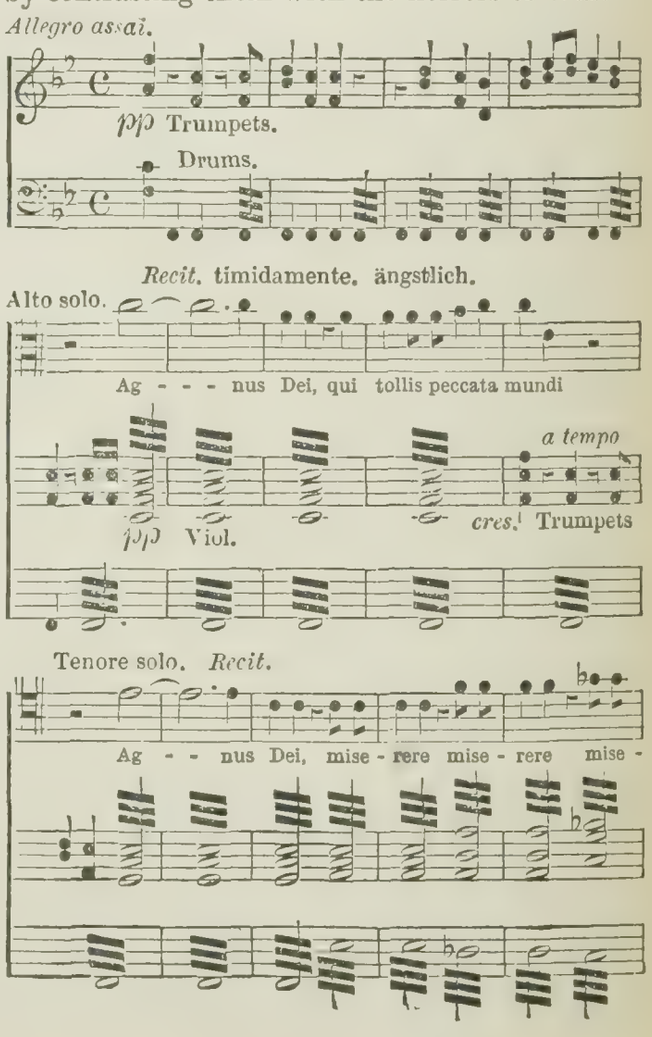
The most remarkable Composers of the period which we shall designate as the Seventh Epoch in the history of the vocal Mass—comprising the latter part of the Seventeenth Century, and the earlier years of the Eighteenth—were, Alessandro Scarlatti, Leo, and Durante: men whose position in the chronicles of Art is rendered somewhat anomalous, though none the less honourable, by the indisputable fact, that they all entertained a sincere affection for the older School, while labouring, with all their might, for the advancement of the newer. It was, undoubtedly, to their love for the Masters of the Sixteenth Century that they owed the dignity of style which constitutes the chief merit of their compositions for the Church: but, their real work lay in the direction of instrumental accompaniment, for which Durante, especially, did more than any other writer of the period. His genius was, indeed, a very exceptional one. While others were content with cautiously feeling their way, in some new and untried direction, he boldly started off, with a style of his own, which gave an extraordinary impulse to the progress of Art, and impressed its character so strongly upon the productions of his followers, that he has been not unfrequently regarded as the founder of the modern Italian School. Whatever opinion may be entertained on that point, it is certain that the simplicity of his melodies tended, in no small degree, to the encouragement of those graces which now seem inseparable from Italian Art; while it is equally undeniable that the style of the Cantata, which he, no less than Alessandro Scarlatti, held in the highest estimation, exercised an irresistible influence over the future of the Mass.

The Eighth Epoch is represented by one single work, of such gigantic proportions, and so exceptional a character, that it is impossible, either to class it with any other, or to trace its pedigree through any of the Schools of which we have hitherto spoken. The artistic status of John Sebastian Bach's Mass in B minor,—produced in the year 1733—only becomes intelligible, when we consider it as the natural result of principles, inherited through a long line of masters, who bequeathed their musical acquirements, from father to son, as other men bequeath their riches: principles, upon which rest the very foundations of the later German Schools. Bearing this in mind, we are not surprised at finding it free from all trace of the older Ecclesiastical traditions. To compare it with Palestrina's *Missa Papæ Marcelli*—even were such a perversion of criticism possible—would be as unfair, to either side, as an attempt to judge the master-pieces of Rembrandt

[1] The only other Composer, antient, or modern, with regard to whose works such a remark could have been hazarded, is Chopin—the unfettered exponent of the wildest dreams of modern romanticism. So strangely does experience prove that 'there is nothing new under the sun'!

by the standard of Fra Angelico. The two works are not even coincident in intention—for, it is almost impossible to believe that the one we are now considering can ever have been seriously intended for use as a Church Service. Unfitted for that purpose, as much by its excessive length, as by the exuberant elaboration of its style, and the overwhelming difficulty of its execution, it can only be consistently regarded as an Oratorio —so regarded, it may be safely trusted to hold its own, side by side with the greatest works of the kind that have ever been produced, in any country, or in any age. [See ORATORIO.] Its masterly and exhaustively developed Fugues; its dignified Choruses, relieved by Airs, and Duets, of infinite grace and beauty; the richness of its instrumentation, achieved by means which most modern composers would reject as utterly inadequate to the least ambitious of their requirements; above all, the colossal proportions of its design—these, and a hundred other characteristics into which we have not space to enter, entitle it to rank as one of the finest works, if not the very finest, that the great Cantor of the Thomas-Schule has left, as memorials of a genius as vast as it was original. Whether we criticise it as a work of Art, of Learning, or of Imagination, we find it equally worthy of our respect. It is, moreover, extremely interesting, as an historical monument, from the fact, that, in the opening of its *Credo*, it exhibits one of the most remarkable examples on record of the treatment of an antient *Canto fermo* with modern harmonies, and an elaborate orchestral accompaniment. [See INTONATION.] Bach often shewed but little sympathy with the traditions of the Past. But, in this, as in innumerable other instances, he proved his power of compelling everything he touched to obey the dictates of his indomitable will.

While the great German composer was thus patiently working out his hereditary trust, the disciples of the Italian School were entering upon a Ninth Epoch—the last which it will be our duty to consider, since its creative energy is, probably, not yet exhausted—under very different conditions, and influenced by principles which led to very different results. If we have found it necessary to criticise Bach's wonderful production as an Oratorio, still more necessary is it, that we should describe the Masses of this later period as Sacred Cantatas. Originating, beyond all doubt, with Durante; treated with infinite tenderness by Pergolesi and Jomelli; endowed with a wealth of graces by the genius of Haydn and Mozart; and still farther intensified by the imaginative power of Beethoven and Cherubini; their style has steadily kept pace, step by step, with the progress of modern music; borrowing elasticity from the freedom of its melodies, and richness from the variety of its instrumentation; clothing itself in new and unexpected forms of beauty, at every turn; yet, never aiming at the expression of a higher kind of beauty than that pertaining to earthly things, or venturing to utter the language of devotion in preference to that of passion. In the Masses of this æra we first find the individuality of the Composer entirely dominating over that of the School—if, indeed, a School can be said to exist, at all, in an age in which every Composer is left free to follow the dictates of his own unfettered taste. It is impossible to avoid recognising, in Haydn's Masses, the well-known features of 'The Creation' and 'The Seasons'; or, in those of Mozart, the characteristic features of his most delightful Operas. Who, but the Composer of '*Dove sono i bei momenti*,' or, the Finales to Don Giovanni, and the Flauto Magico, could ever have imagined the *Agnus Dei* of the First Mass, or the *Gloria* of the Second? Still more striking is the identity of thought which assimilates Beethoven's *Missa solemnis* to some of the greatest of his sæcular works; notwithstanding their singular freedom from all trace of mannerism. Mozart makes himself known by the refinement of his delicious phrases: Beethoven, by the depth of his dramatic instinct—a talent which he never turned to such good account as when working in the absence of stage accessories. We are all familiar with that touching episode in the 'Battle Symphony,' wherein the one solitary Fifer strives to rally his scattered comrades by playing *Malbrook s'en va-t-en guerre* —a feat, which, by reason of the thirst and exhaustion consequent upon his wound, he can only accomplish in a minor key. No less touching, though infinitely more terrible, is that wonderful passage of Drums and Trumpets, in the *Dona nobis pacem* of the Mass in D, intended to bring the blessings of Peace into the strongest possible relief, by contrasting them with the horrors of War.



Whether, or not, the peace to which our attention is thus forcibly directed be really that alluded to in the text, in no wise affects the power of the passage. All that Beethoven intended to express was his own interpretation of the words; and it is in his own strong language, and not in that of the Schools, that he expresses it. Cherubini makes equal use of the dramatic element; more especially in his magnificent *Requiem Mass* in D minor [see REQUIEM], his grand Mass, in the same key, and his famous Mass in A, written for the Coronation of Charles X: but, always in a way so peculiarly his own, that the touch of his master hand stands everywhere confessed. In all these great works, and innumerable others, by Weber, Schubert, Hummel, Niedermeyer, Rossini, and Gounod, we find the dramatic form of expression entirely superseding the devotional; uncompromising realism triumphing over the idealism of the older Schools; the personal feelings and experiences of the Masters over-riding the abstract sense of the text. This circumstance makes it extremely difficult to assign to these creations of genius a true æsthetic position in the world of Art. Church Services in name, they have certainly failed, notwithstanding their universally-acknowledged beauties, in securing for themselves a lasting home in the Church. That their use has been tolerated, rather than encouraged, in Rome itself, is proved, by the significant fact, that not one single note of any one of them has ever once been heard within the walls of the Sistine Chapel. And the reason is obvious. They cast Ecclesiastical tradition to the winds; and, substituting for it the ever-varying sentiment of individual minds, present no firm basis for the elaboration of a definite Church style, which, like that of the Sixteenth Century, shall prove its excellence by its stability. Yet, in the midst of the diversity which naturally ensues from this want of a common ideal, it is instructive to notice one bond of union between the older Masters and the new, so strongly marked that it cannot possibly be the result of an accidental coincidence. Their agreement in the general distribution of their movements is most remarkable. We still constantly find the *Kyrie* presented to us in three separate divisions. The *Qui tollis*, and *Et incarnatus est*, are constantly introduced in the form of solemn Adagios. The same *Osanna* is almost always made to serve, as in the *Missa Papæ Marcelli*, as a conclusion both to the *Sanctus*, and the *Benedictus*. And, in this vitality of typical form, we find a convincing proof—if one be necessary—that the broad æsthetic principles of Art are immutable, and calculated to survive, through an indefinite period, the vicissitudes of technical treatment in widely differing Schools. [W.S.R.]

MASSART, LAMBERT-JOSEPH, professor of the violin at the Paris Conservatoire, was born in 1811 at Liège. He came early under Kreutzer's tuition, and afterwards entered the Conservatoire to study composition. According to Fétis (Biogr. d. Mus.) his playing is distinguished by perfect intonation, facility in bowing, and gracefulness of style. In 1843 he was appointed professor of the violin at the Conservatoire, and in this position has been eminently successful. Among his numerous pupils the most eminent is HENRI WIENIAWSKI. [P.D.]

MASSÉ, FELIX MARIE VICTOR, born at Lorient March 7, 1822; entered the Conservatoire at 12, obtained the first prizes for piano, harmony, and fugue, and in 1844, after some years study with Halévy, the 'Grand prix de Rome' for composition. His cantata 'Le Rénégat' was given 3 times at the Opéra (Feb. 1845), a rare event. During his stay in Rome he composed a 'Messe Solennelle,' performed at the church of St. Louis des Français (May 1, 1846), a careful and clever work, though wanting in religious sentiment—never Massé's strong point. The unpublished score is in the library of the Conservatoire. After his two years in Rome he travelled through Italy and Germany, and returned to Paris, where he was much appreciated in society. Publishers readily accepted his 'Mélodies' and 'Romances,' and he gained access to the stage with little delay. 'La Chanteuse voilée,' 1 act (Opéra Comique, Nov. 26, 1850), was followed by 'Galathée,' 2 acts (April 14, 1852), and 'Les Noces de Jeannette' (Feb. 4, 1853), a charming lyric comedy in 1 act. These early successes justified the hope that in Massé the French stage had found a composer as fruitful and melodious, if not as original, as Auber; but his later efforts have been less fortunate. 'La Reine Topaze' (Dec. 27, 1856) indeed succeeded completely, and has kept the boards, but 'La Fiancée du Diable' (June 3, 54); 'Miss Fauvette' (Feb. 13, 55); 'Les Saisons' (Dec. 22, 55); 'Les Chaises à porteurs' (April 28, 58); 'La Fée Carabosse' (March 7, 59); 'La Mule de Pedro' (March 6, 63); 'Fior d'Aliza' (Feb. 5, 66); and 'Le Fils du Brigadier' (Feb. 25, 67), though fairly received, soon disappeared. Some however contain good music, especially 'Les Saisons' and 'Fior d'Aliza.' In 1860 he became chorus-master to the Académie de Musique, and in 66 succeeded Leborne as professor of composition at the Conservatoire—gratifying appointments as showing the esteem of his brother artists, although the work they entailed left him little time for composition. On June 20, 1872, he was elected to the Institut as successor to Auber.

After a long period of silence Massé produced 'Paul et Virginie,' 3 acts (Nov. 15, 1876; given in Italian at Covent Garden Opera-house, June 1, 1878). In spite of its success and its

evident ambition, this opera seems less original and less homogeneous in style than 'Galathée' or 'Les Noces de Jeannette,' and its best parts, as in all his operas, are the short pieces and the simple romances.

To complete the list of his operas we may mention 'La Favorita e la Schiava' (Venice, 1855), and 'Le Cousin Marivaux' (Baden, 1857); also two drawing-room operettas 'Le Prix de Famille' and 'Une loi Somptuaire.' He has published 3 'Recueils' of 20 songs each, selected from his numerous romances. Many of these are charming little pieces.

In 1877 he was made an officer of the Legion of Honour. For the last two years he has been suffering from a malady which compelled him to resign his post at the Académie in 1876, and has since caused his complete withdrawal from the world. He is engaged on an opera, 'Cléopâtre,' from which he expects much; and it is to be hoped he may recover sufficiently to superintend its production. We also wish he could be persuaded to give to the world other specimens of musical criticism besides his 'Notice sur la vie et l'œuvre d'Auber,' a valuable contribution to musical literature. [G.C.]

MASSENET, Jules Emile Frédéric, born at Montaud, near St. Etienne, May 12, 1842, was educated at the Paris Conservatoire, where he won the first piano prize in 1859; the second prize for fugue in 1862; the first prize for fugue, and the 'Prix de Rome' in 1863. On his return from Italy, through the influence of Ambroise Thomas, his 'La Grand'tante' was produced at the Opéra Comique (April 3, 1867). Even in this first attempt Massenet showed himself a skilled and graceful musician. Some 'Suites d'orchestre' performed at the 'Concerts populaires' attracted attention for their new and ingenious effects. It was only, however, after the Franco-German war that he rose to the first rank among young French composers by the production of 'Don César de Bazan,' opéra-comique in 3 acts and 4 tableaux (Nov. 30, 1872); incidental music to the tragedy 'Les Erynnies' (Jan. 6, 1873); and an oratorio 'Marie Magdeleine' (April 11, 1873). He has since composed 'Eve' (March 18, 1875), an oratorio something in the style of Gounod's 'Gallia'; more 'Suites d'orchestre'; an 'Ouverture de Concert,' and the overture to 'Phèdre'; a number of melodies for 1 and 2 voices; pianoforte music for 2 and 4 hands; choruses for 4 equal voices; 'Le Roi de Lahore' (April 27, 1877), opera in 4 acts and 6 tableaux; and 'Narcisse,' a cantata with orchestral accompaniment. In July 1879 he completed another oratorio, 'La Vierge,' and is at work upon two new operas. From this enumeration it will be seen that his published compositions are numerous and varied. His best and most individual work is 'Marie Magdeleine.' The 'Roi de Lahore' can scarcely be considered an advance upon 'Don César de Bazan.' The 'Suites d'orchestre' may be blemished here and there by mannerism and affectation, but if M. Massenet will refrain from all mere cleverness, and draw his inspiration solely from within, he will prove an honour to the French school, and to his art. [G.C.]

MATASSINS, MATACINS, or MATACHINS —also called *Bouffons*—a dance of men in armour, popular in France during the 16th and 17th centuries. It was probably derived from the ancient Pyrrhic dance, although the name has been traced to an Arabic root. Jehan Tabourot in his 'Orchésographie' (Langres, 1588) gives a long and interesting account of this dance, with six illustrations of the different positions of the dancers, 'qui sont vestus de petits corcelets, auec fimbries és espaules, et soubs la ceinture, une pente de taffetats soubz icelles, le morion de papier doré, les bras nuds, les sonnettes aux iambes, l'espee au poing droit, le bouclier au poing gaulche.' The Matassins were four in number, generally all men, but sometimes two men and two women. They danced several distinct figures, between which they performed mimic fights with one another. Molière has introduced Matassins into his comédie-ballet of M. de Pourceaugnac, and the dance is said to have been common at Bordeaux, Marseilles, and Strasburg as late as 1735. The following, according to Tabourot, is the air which usually accompanied the dance.

[W.B.S.]

MATELOTTE, a Dutch sailors' dance, somewhat similar to the English hornpipe. The dancers wore wooden shoes, and their arms were interlaced behind their backs. The music of the Matelotte consists of two parts in 2–4 time, and is remarkable for its short decided rhythm. There is a sabot dance in Lortzing's 'Czar und Zimmermann,' but it is not a true Matelotte, being written in waltz time. The following example is quoted by Schubert, Die Tanzmusik (Leipzig, 1867): it is there attributed to the 17th century, but no information is given as to whether it is a genuine dance tune or merely an adaptation. We quote the first strain only :—

[W.B.S.]

MATERNA, Amalie (Frau Friedrich), a distinguished prima donna in German opera, was born at St. Georgen, Styria, where her father was a schoolmaster. Her first stage-appearances were made at the Thalia-Theater, Gratz, about 1864. She married soon afterwards Karl

Friedrich, a popular German actor, and together with him was engaged at the suburban Karls theater, Vienna, where she sang for some time in operetta. But her qualifications for the higher lyrical walks could not long remain undiscovered, and in 1869 she made her début at the Imperial Opera House as Selika in the 'Africaine,' with signal success, at once winning for herself the high position she has since maintained among opera-singers of the German school. With a soprano voice of unusual volume, compass, and sustaining power, a fine stage presence, and much musical and dramatic intelligence, Frau Materna leaves nothing to be desired in certain rôles. At the Wagner Festival at Baireuth, 1876, she may be said to have earned a world-wide reputation by her really magnificent impersonation of Brunnhilde in the Niebelungen Trilogy, an exceptional part for which she was exceptionally qualified, and in which she is unlikely to meet with a rival. She sang in England with great success at the Wagner concerts at the Albert Hall in 1877. [B.T.]

MATHER, Samuel, son of William Mather (born 1756, organist of St. Paul's church, Sheffield, from 1788 to his death in 1808), was born in 1783. In 1799 he was appointed organist of St. James's church, Sheffield, and in 1808 succeeded his father at St. Paul's. In 1805 he was chosen bandmaster of the Sheffield Volunteers. In 1806 he was engaged in establishing the Yorkshire Amateur Concerts, which were for many years given triennially at that town, Leeds and York alternately, and in 1814 established the Yorkshire Choral Concert. He composed both sacred and secular music, and edited a book of psalm and hymn tunes. He died in 1824. [W.H.H.]

MATHESON, Johann, German musician and writer, born Sept. 28, 1681, at Hamburg, son of a clerk of excise; as a child showed striking symptoms of versatility, which his parents carefully cultivated. Besides the ordinary education he studied music, and at nine years could play the harpsichord and organ, sing and compose. His ability and versatility were truly extraordinary, and recal those of the 'admirable Crichton.' A good classical scholar and a proficient in modern languages, a student of law and political science, a fine player both on harpsichord and organ, and thoroughly skilled in theory, an elegant dancer, a master of fence, and a cultivated man of the world. The first step in his changeful career was his appearance in 1697 as a singer in the Hamburg opera, then in its most flourishing condition. In 1699 he produced his first opera, 'Die Pleyaden,' singing his part on the stage, and then sitting down at the harpsichord to conduct the orchestra. To this period belongs his acquaintance with Handel, who came to Hamburg in 1703. Matheson tells us that he recognised Handel's genius immediately, that they became at once attached, and that their friendship continued, with occasional breaks caused by Matheson's vanity, during the whole time of Handel's stay in Hamburg (1709). He claims to have done Handel an important service by introducing him to the musical world of Hamburg, at that time very celebrated; but he acknowledges that he picked up from him many a 'contrapuntal device.' Handel's 'Nero' (1705) was the last opera in which Matheson appeared; he then retired from the stage, and declined more than one organist's post which was offered to him. He became tutor to the son of the English envoy, and in 1706 was made secretary of legation. His post was one of labour and responsibility, but he still continued to teach, conduct, compose, and write on musical subjects. In 1715 he was appointed Cantor and Canon of the cathedral; and took an active part in the development of the Church-cantata, so soon after carried to its highest pitch by J.S. Bach. [See Kirchencantaten.] This was the result of an attempt, made more particularly by the Hamburg composers, to vary the monotony of congregational singing by the introduction of airs, duets, choruses, etc., and was considered by the orthodox an impious and sacrilegious innovation. Matheson supported this 'adapted dramatic' style, as it was called, both as a composer and as a pamphleteer; and even ventured on a further innovation, by introducing female singers into church.

In 1719 he received from the Duke of Holstein the title of Court-Capellmeister. In 1728 he was attacked with deafness, which obliged him to resign his post at the cathedral. Thenceforward he occupied himself chiefly with writing, and died at an advanced age in 1764. He is said to have resolved to publish a work for every year of his life, and this aim he more than accomplished, for when he died at 83, his printed works amounted to 88, besides a still larger number of completed MSS.

None of his compositions have survived. With all his cleverness and knowledge he had no real genius; his vocal music was overburdened with declamatory passages—a fault easily explained by his own experience on the stage, but one which is often detrimental and must have been very incongruous in church music. He composed 24 oratorios and cantatas; 8 operas; sonatas for flute and violin; suites for clavier; arias; *pièces de circonstance* for weddings, funerals, etc. A 'Passions-Cantate' to words by Brockes deserves attention, not for its intrinsic value, but because the poem was set by nearly all the great composers of the day, including Keiser and Matheson, Telemann and Handel.

His books are of far greater value than his compositions. In these, notwithstanding a peculiar self-satisfied loquacity, he shows himself a ready and skilful champion for earnestness and dignity in art, for progress, and for solidity of attainment in the practical part of music. In both branches, theoretical and practical, he attacked and demolished much that was antiquated, furnishing at the same time a great deal that was new and instructive, and bequeathing to posterity a mine of historical material. He also found time for much other literary work, especially translations (chiefly from English works on politics and jurisprudence),

and even translated a small treatise on tobacco. This extraordinary versatility, and his untiring industry, go far to redeem the vanity which animated his character and actions, and continually shows itself in his writings. His autobiography in the 'Ehrenpforte' contains an amusingly egotistical description of his manifold labours. His more important books are scarce, and much valued, especially the historical ones, which are the standard sources of information on the state of music at that period, especially in Hamburg. These are 'Das neu eröffnete Orchester' (1713), followed by 'Das beschützte' and 'Das forschende Orchester' (1717 and 1721); 'Der musikalische Patriot' (1728); and the 'Grundlage einer Ehrenpforte' (1740), a collection of biographies of contemporary musicians. The two last are the most important. His theoretical works are the 'Exemplarische Organisten Probe' (1719), republished in 1731 as the 'Grosse Generalbassschule; the 'Kleine Generalbassschule' (1735); the 'Kern melodischer Wissenschaft' (1737); and finally the 'Vollkommene Capellmeister' (1739), perhaps his most valuable work. As a controversial writer he was wanting in temper; his 'Ephorus Göttingensis' (1727), directed against Professor Joachim Meyer of Göttingen on the Church-cantata question, is the only work of that class we need specify. [A. M.]

MATHILDE DI SHABRAN. Opera buffa, in three acts; the music by Rossini. Produced at the Apollo Theatre, Rome, in the Carnival of 1821, and at the Théatre Italien, Paris, Oct. 15, 1829; in London at the Royal Italian Opera, Covent Garden, Apr. 18, 1854. [G.]

MATILDA OF HUNGARY. A dramatic opera in 3 acts; libretto by Mr. Bunn, music by W. Vincent Wallace. Produced at Drury Lane Feb. 22, 1847.

MATINS (Lat. *Matutinae*; *Officium matutinum*). The first division of the Canonical Hours.

The Office of Matins, as set forth in the Roman Breviary, opens with the series of Versicles and Responses beginning with the 'Domine, labia mea aperies,' followed by the Psalm 'Venite, exultemus,' with its proper Invitatorium, and the Hymn appointed for the Day. The remainder of the Service is divided into portions called Nocturns, of which three are generally sung, on Sundays and Festivals, and one only, on Ferial Days.

The First Nocturn consists either of three, or twelve Psalms, sung with three proper Antiphons, which, on certain Festivals, are doubled—that is to say, sung, entire, both before and after the Psalm. On Ferial Days, and Festivals of minor solemnity, each Antiphon is sung, entire, after the Psalm, but the first few words of it, only, at the beginning. The Psalms are followed by the Pater noster, Absolution, and Benediction; and these, by the First, Second, and Third Lessons for the Day, each succeeded by its proper Responsorium.

Three Psalms, with their proper Antiphons, are sung, in like manner, in the Second Nocturn; which concludes with the Fourth, Fifth, and Sixth Proper Lessons, and Responsories.

In the Third Nocturn, three more Psalms are followed by the Seventh, Eighth, and Ninth Lessons and Responsories; the place of the Ninth Responsory being generally, but not always, supplied by the Hymn, 'Te Deum Laudamus.'

The Third Nocturn is immediately followed by the Office of LAUDS; which, indeed, may be regarded as the natural corollary of the Service. In antient times, the First Nocturn was sung soon after midnight: but the whole Office is now generally sung 'by anticipation'—that is to say, on the afternoon or evening of the day before that for which it is appointed. The Plain Chaunt Music used, both at Matins, and Lauds, will be found in the 'Antiphonarium Romanum,' and the 'Directorium Chori.' [See LAUDS; ANTIPHON; INVITATORIUM.]

In the First Prayer-Book of King Edward VI, the name of 'Mattins' is given to the Service now called 'The Order for Morning Prayer,' which is derived, in about equal degrees, from the Latin Offices of Matins and Lauds. [W. S. R.]

MATRIMONIO SEGRETO, IL. An opera buffa in 2 acts; libretto by Bertatti, music by Cimarosa. Produced at Vienna in 1792; in Paris, May 10, 1801; in London, King's Theatre, Jan. 25, 1803. In English at Covent Garden, Nov. 1, 1842, and with new translation by W. Grist, at the Crystal Palace, Dec. 13, 1877. [G.]

MATTEI, COLOMBA, a singer who appeared in London as 'seconda donna,' in 1754, was not only a charming singer, but a spirited and intelligent actress, and became, soon after, a great favourite as 'prima donna.' She sang in 'Ipermestra,' and (1755) in Jommelli's 'Andromaca;' and continued to sing till 1760 with similar success. Burney tells us that she was a pupil of Perez and Bertoni, and sang many songs of their composition, taught her by themselves, in an exquisite style. 'Her manner, though not quite in the *grand gusto*, was extremely amiable and pleasing; her figure was unexceptionable; and her acting acquired her as much applause as her singing.' [J.M.]

MATTEI, STANISLAO, ABBATE, pupil of Martini, and master of Rossini, born at Bologna Feb. 10, 1750. Though of humble parentage (his father was a locksmith) he was sent to the Latin school. Having been present accidentally at a service in the Minorite Convent, he was so enchanted with the music that he became a constant attendant, and thus attracted the notice of Padre Martini, by whose advice he entered upon his noviciate. Master and pupil became tenderly attached, and as soon as Mattei had been ordained he became the Padre's confessor, and remained with him till his death. He acted as Martini's deputy from 1770, and succeeded him as maestro di capella. From 1776 his compositions were produced in the service. On the suppression of the monasteries in 1798, he went to live with his aged mother, and began an active career as a teacher. From this time he was

known as the Abbate Mattei. Later he became maestro di capella of San Petronio, and professor of counterpoint at the Liceo from its foundation in 1804. Among his pupils were Rossini, Morlacchi, Donizetti, Perotti, Robuschi, Palmerini, Bertolotti, Tadolini, Tesei, and Pilotti, who succeeded him at San Petronio. He lived in complete retirement, accessible only to his pupils, and died May 17, 1825. He was president of the 'Filarmonici' in 1790 and 94, and was a member of the Subalpine Académie, and of the 'Institut de France' (Jan. 24, 1824). He had a thorough practical acquaintance with the old traditions, as may be seen by his 'Prattica d'accompagnamento sopra basi numerati,' 3 vols. (Bologna, 1829, 30), which consists mainly of well-chosen examples, with a few rules. In his explanations to his pupils he does not seem to have been very clear; at least Rossini complained to Fétis in 1841 that he had one stereotyped answer when asked to explain a rule in harmony or counterpoint, 'it is always written thus.' Of his music 3 masses only are generally known. The libraries of San Giorgio and the Minorite convent in Bologna, contain most of his compositions, but the scores of an intermezzo 'Il Librago' and of a 'Passion' performed in 1792, seem to have been lost. Full particulars of his life are given in the 'Vita di Stanislao Mattei' by Filippo Canuti (Bologna, 1829, with portrait). [F.G.]

MATTEIS, Nicola, an eminent Italian violinist, came to England about 1672. Nothing whatever is known of his antecedents. The earliest notice of him is found in Evelyn's Diary under date of Nov. 19, 1674: 'I heard that stupendous violin, Signor Nicholao (with other rare musicians), whom I never heard mortal man exceed on that instrument. He had a stroke so sweet, and made it speak like the voice of a man, and, when he pleased, like a concert of several instruments. He did wonders upon a note, and was an excellent composer. Here was also that rare lutanist, Dr. Wallgrave, but nothing approached the violin in Nicholao's hand. He played such ravishing things as astonished us all.' Roger North also (Memoirs of Musick), speaks very highly of his abilities. When he first came here he exhibited many singularities of conduct which he afterwards abandoned. He published here, without date, 'Arie, Preludij, Alemande, Sarabande, etc., per il Violino. Libro Primo. Altre Arie, etc., piu difficile e studiose per il Violino. Libro Secondo'; also 'Ayres for the Violin, to wit, Preludes, Fuges, Alemands, Sarabands, Courants, Gigues, Fancies, Divisions, and likewise other Passages, Introductions, and Fugues for Single and Double stops with divisions somewhat more artificial for the Emproving of the Hand upon the Basse-Viol or Harpsichord. The Third and Fourth Books.' He was likewise author of 'The False Consonances of Musick, or, Instructions for playing a true Base upon the Guittarre, with Choice Examples and clear Directions to enable any man in a short time to play all Musicall Ayres. A great help likewise to those that would play exactly upon the Harpsichord, Lute, or Base-Viol, shewing the delicacy of all Accords, and how to apply them in their proper places. In four parts'—which even in North's time had become scarce, and is now excessively rare. In 1696 Matteis composed an Ode on St. Cecilia's day for the then annual celebration in London, and was also one of the stewards of a Cecilian celebration at Oxford. A song by him is included in a collection of 'Twelve New Songs,' published in 1699. According to North 'he fell into such credit and imployment that he took a great hous, and after the manner of his country lived luxuriously, which brought diseases upon him of which he dyed.' The date of his death is unknown. He is said to have been the inventor of the half-shift, but it is claimed also for others.

His son, Nicholas, was taught the violin by his father, and became an excellent player. He went to Germany and resided for some time at Vienna, but returned to England and settled at Shrewsbury as a teacher of languages, as well as of the violin, where Burney learned French and the violin of him. He died there about 1749. [W.H.H.]

MAURER, Ludwig Wilhelm, distinguished violinist, born Aug. 8, 1789, in Potsdam, pupil of Haak, Concertmeister to Frederic the Great. At 13 he appeared with great success at a concert given in Berlin by Mara, and was in consequence admitted to the royal chapel as a probationer. After the battle of Jena (1806) the chapel was dismissed, and Maurer travelled, first to Königsberg and Riga, where he made the acquaintance of Rode and Baillot, and then to Mittau and St. Petersburg, his playing being everywhere appreciated. At Moscow he again met Baillot, through whose good offices he became Capellmeister to the Chancellor Wsowologsky, who had a private orchestra. Here he remained till 1817, when he made another successful tour, being particularly well received in Berlin and Paris. In 1832 he returned to Wsowologsky, and stayed till 45, when after another tour he settled finally in Dresden. The best known of his compositions are a Symphonie concertante for 4 violins and orchestra, first played in Paris by himself, Spohr, Müller, and Wich in 1838; and three Russian airs with variations (op. 14). Of his operas 'Alonzo,' 'Der entdeckte Diebstahl,' and 'Der neue Paris,' the overtures only have been printed. He also published several concertos—one of which was at one time very often played at the Philharmonic Concerts in London—and two collections of quartets (op. 17 and 26). He died at St. Petersburg, Oct. 25, 1878. His two sons Wsevolod, a violinist, and Alexis, a cellist, are good musicians. They are now settled in Russia. [F.G.]

MAXWELL, Francis Kelly (sometimes called John), D.D., chaplain of the Asylum, Edinburgh, published anonymously 'An Essay upon Tune, being an attempt to free the scale of music and the tune of instruments from imperfection' (Edinburgh, 1781; London, 1794);—an able work. He died in 1782. [W.H.H.]

MAY, Edward Collett, born October 29, 1806, at Greenwich, where his father was a shipbuilder. His first teacher was his brother Henry, an amateur musician and composer of considerable ability. When about fifteen years of age, Thomas Adams, then organist of St. Paul's, Deptford, and an intimate friend of the May family, struck by the promise and intelligence of Edward, offered to take him as a pupil. This offer was, of course, willingly accepted, and for several years he received regular instruction in composition and organ-playing from that admirable musician and then peerless executant. Subsequently he became a pupil of Cipriani Potter for the pianoforte, and of Crivelli for singing. In 1837 he was appointed organist of Greenwich Hospital, an office he held till the abolition of the institution in 1869. May's entry on the particular work to which his talents have now for so many years been so successfully devoted, grew out of his accidental attendance at one of many lectures on popular instruction in vocal music, given by the writer of this notice about the year 1841. From that time to the present (1879) he has devoted himself enthusiastically and exclusively to such teaching; and it may be safely asserted, that to no individual, of any age or country, have so many persons of all ages and of both sexes been indebted for their musical skill. At one institution alone, the National Society's Central School, more than a thousand teachers and many more children have been instructed by him. At Exeter Hall, the Apollonicon Rooms, and subsequently St. Martin's Hall, several thousand adults passed through his classes; while, for many years past, he has been the sole musical instructor at the Training Schools, Battersea, St. Mark's, Whitelands, Home and Colonial, and Hockerill; institutions from which upwards of 250 teachers are *annually* sent forth to elementary schools. After many years connection with the Institution, Mr. May has recently—wholly without solicitation on his part—been appointed Professor of Vocal Music in Queen's College, London. The words of Béranger, applied to Wilhem, may with equal propriety be applied to May,—not merely has he devoted the best years of his life and all his energies to public musical instruction, but sacrificed every other aim or object to it—'même sa gloire.'

His daughter, Florence May, is known in London as a pianoforte player of considerable cultivation and power. [J.H.]

MAY-QUEEN, THE, a Pastoral; words by Mr. Chorley, music by W. Sterndale Bennett, written for a festival at Leeds, and produced there Sept. 8, 1858. The overture was composed before the year 1844, and was originally entitled 'Marie du Bois.' [G.]

MAYER, Charles, celebrated pianist, born March 21, 1799, at Königsberg. His father, a good clarinet player, went soon after his birth to St. Petersburg, and four years after to Moscow, where he settled with his family. He first learned from his mother, a good pianoforte teacher, and later became a pupil of Field. After the burning of Moscow in 1812 the family fled to St. Petersburg, where the mother became pianoforte teacher, and where the lessons with Field were resumed. The pupil played so exactly like his master that connoisseurs were unable to tell which was at the piano if a screen was interposed. In 1814 Mayer accompanied his father to Paris, where he was well received. He first played his concert-variations on 'God save the king' in Amsterdam. In 1819 he returned to St. Petersburg, where he worked hard and successfully at teaching, and formed as many as 800 pupils. In 1845 he travelled to Stockholm, Copenhagen, Hamburg, Leipzig, and Vienna, but this was his last tour. In 1850 he settled in Dresden, where he taught, gave concerts, and composed up to his death, which took place on July 2, 1862. His pieces reach the astonishing number of 900. Mayer's playing was distinguished by great purity of style, and expression, and his compositions are eminently suited to the instrument. They include a concerto with orchestra in D, op. 70; a concerto symphonique, op. 89; and variations and fantasias on opera airs. His 'Polka Bohémienne' in A, was at one time immensely popular. [F.G.]

MAYER, or MAYR, Johann Simon, esteemed opera composer in the beginning of this century, born June 14, 1763, at Mendorf in Bavaria; early showed talent for music, which he first learned from his father the village schoolmaster and organist. When about 10 he entered the Jesuit seminary at Ingolstadt, but did not neglect his music, either then or when after the banishment of the Jesuits he studied law in Ingolstadt. Having made the acquaintance of a nobleman, Thomas de Bessus of Graubündten, he lived in the house as music master, and was afterwards sent by his patron to Bergamo, to study with Lenzi, maestro di capella there. Mayr found however that his master knew little more than himself, and was on the point of returning to Germany, when Count Pesenti, a canon of Bergamo, provided him with the means of going to F. Bertoni in Venice. Here again his expectations were deceived, but he picked up some practical hints and a few rules from Bertoni, and hard work and the study of good books did the rest. He had already published some songs in Ratisbon; and in Bergamo and Venice he composed masses and vespers. After the success of his oratorio 'Jacob a Labano fugiens,' composed in 1791 for the Conservatorio dei Mendicanti, and performed before a distinguished audience, he was commissioned to compose three more oratorios for Venice ('David,' 'Tobiae matrimonium' and 'Sisara'). For Forli he wrote 'Jephte' and a Passion. Thrown on his own resources by the sudden death of his patron, he was urged by Piccinni to try the stage, and his first opera 'Saffo, ossia i riti d' Apollo Leucadio' was so well received at the Fenice in Venice (1794) that he was immediately overwhelmed with commissions, and between that date and 1814 composed no less than 70 operas. Indeed it was not till Rossini's success that his fame declined. Many of his melodies were sung about the streets, such as the pretty cavatina 'O quanto

l'anima' from 'Lauso e Lidia.' In 1802 he became maestro di capella of Santa Maria Maggiore in Bergamo, and was so much attached to his work there, that he declined not only invitations to London, Paris, Lisbon, and Dresden, but also the post of Censor to the Conservatorio of Milan, his appointment to which had been signed by the Viceroy of Italy in 1807. As professor of composition in the musical Institute of Bergamo,—founded in 1805, reorganised in 1811—he exercised great and good influence, Donizetti was one of his pupils there. He was the founder of two institutions for decayed musicians and their widows, the 'Scuola caritatevole di Musica,' and the 'Pio Instituto di Bergamo.' He had been blind for some years before his death, which took place on Dec. 2, 1845. The city of Bergamo erected a monument to him in 1852, and in 1875 his remains and those of Donizetti were removed with much ceremony to the church of Santa Maria Maggiore. The most celebrated of his operas are 'Lodoïska' (1795), 'Ginevra di Scozia' (1801), 'Medea' (1812), and 'Rosa bianca e Rosa rossa' (1814). He also set the libretto of Cherubini's 'Deux Journées.' He is said to have been the first to introduce the crescendo of the orchestra to which Rossini owes so much of his fame. He wrote a small book on Haydn (1809), a biography of Capuzzi the violinist, and poems on his death in 1818; also 'La Dottrina degli elementi musicali' still in MS. in Bergamo. [F.G.]

MAYNARD, John, a lutenist, published in 1611 'The XII Wonders of the World, Set and composed for the Violl de Gamba, the Lute, and the Voyce to sing the Verse, all three jointly and none severall: also Lessons for the Lute and Base Violl to play alone; with some Lessons to play Lyra-waye alone, or if you will to fill up the parts with another Violl set Lute-way.' The work contains 12 songs severally describing the characters of a Courtier, Divine, Soldier, Lawyer, Physician, Merchant, Country Gentleman, Bachelor, Married Man, Wife, Widow and Maid; and 12 pavans and galliards for the lute. A curious canon. 'Eight parts in one upon the Plaine Song,' is on the title page. The composer described himself as 'Lutenist at the most famous Schoole of St. Julian's in Hartfordshire,' and dedicated his work 'To his ever-honoured Lady and Mistris the Lady Joane Thynne, of Cause Castle in Shropshire.' Some organ pieces by one Maynard (presumably the same) are contained in a MS. in the library of the Sacred Harmonic Society. [W.H.H.]

MAYSEDER, Joseph, violinist and composer, son of a poor painter, born in Vienna, Oct. 26, 1789. Beginning at 8, he learnt the violin from Suche and Wranitzky. Schuppanzigh took a great interest in the lad, and entrusted him with the second violin in his quartets. In 1800 he gave his first concert in the Augarten with brilliant success. He rapidly made his way with the court and nobility, and among musicians. In 1816 he entered the court chapel, in 1820 became solo-violin at the court theatre, and in 1835 was appointed chamber-violinist to the Emperor. The municipality awarded him the large gold 'Salvator Medal' in 1811, and presented him with the freedom of the city in 1817. In 1862 the Emperor bestowed on him the order of Franz-Joseph. In 1815 he gave, with Hummel (afterwards replaced by Moscheles) and Giuliani, the so-called 'Dukaten-concerten.' He also gave concerts with Merk the cellist, but after 1837 he never appeared in public. He never played abroad; even on his visit to Paris in 1820, he would only play before a select circle of artists, including Kreutzer, Baudiot, Cherubini, Habeneck, Lafont, and Viotti. He took a great interest in the string-quartet party which met at Baron Zmeskall's house (where Beethoven was often present), and afterwards in that at Prince Constantine Czartoryski's (from 1843 to 56). His many pupils spread his name far and wide. His tone was peculiarly fascinating, and his execution had great breadth and elevation of style. With the exception of a grand mass he composed only chamber music of a style similar to his playing. He published 63 works, including concertos, polonaises, variations, 5 quintets and 8 quartets for strings, études and duets for violin, 4 trios, sonatas, etc. for P.F., trio for violin, harp, and horn, etc. Mayseder died universally respected Nov. 21, 1863. [C.F.P.]

MAZAS, Jacques-Féréol, French violinist and composer, was born in 1782 at Beziers. He entered the Paris Conservatoire in 1802, and after having studied for three years under Baillot, obtained the first prize for violin-playing. He had great success at Paris, especially with his performance of a violin-concerto by Auber at the Conservatoire. He travelled through a very large part of Europe, and returned in 1829 to Paris, without however gaining his former success. In 1837 he left Paris again, and accepted the directorship of a music-school at Cambrai. He died in 1849.

Mazas wrote a large number of brilliant violin pieces, quartets, trios, and duets for stringed instruments (the latter still much valued for teaching purposes), an instruction-book for the violin, and one for the viola. Fétis mentions also two operas, two violin-concertos, and an overture. [P.D.]

MAZURKA, Mazourka, Masurek, or Masure, a national Polish dance, deriving its name from the ancient Palatinate of Masovia. Mazurkas were known as early as the 16th century; they originated in national songs[1] accompanied with dancing. They were introduced into Germany by Augustus III, Elector of Saxony and King of Poland (1733–1763), and after becoming fashionable in Paris, reached England towards 1845. The Mazurka was naturalised in Russia after the subjugation of Poland, but the Russian dance differs from the Polish in being performed by an indefinite number, while the latter is usually danced by four or eight couples. The

[1] This feature it has retained. Chopin, in a letter of Aug. 26, 1829, says, 'the thought fortunately struck Maciejowski to write four stanzas for a Mazurka, and I set them to music.' (Karasowski, i. 80.)

Mazurka is remarkable for the variety and liberty allowed in its figures, and for the peculiar steps necessary to its performance. Indeed, the whole dance partakes of the character of an improvisation, even the invention of new steps and figures being allowable. The music (in 3-4 or 3-8 time) consists usually of two or four parts of eight bars, each part being repeated. In the earliest Mazurkas the bass was invariably on one note, usually the tonic. There is often a strong accent on the second beat of the bar, which was emphasized in the bass by the breaking off of the regular accompaniment. The tune should also end on the second beat of the bar, but in old Mazurkas there is often no definite conclusion, and the repeats are made ad libitum. The *Tempo* is much slower than that of the ordinary waltz. Chopin, who wrote eleven sets of Mazurkas, treated the dance in a new and characteristic manner. He extended its original forms, eliminated all vulgarity, introduced all sorts of Polish airs, and thus retained little more than the intensely national character of the original simple dance tune. (See Karasowski's Life of Chopin, chap. vii; and also the somewhat rhapsodical but still interesting remarks of Liszt in his essay on Chopin.) No less than 14 sets of his Mazurkas have been published, containing 52 in all (op. 6, 7, 17, 24, 30, 33, 41, 50, 56, 59, 63, 67, 68 and one without opus number). Weber gives the title 'Masurik' to the 4th of his six pieces for the P. F. à quatre mains (op. 10).

The following example is a simple Mazurka popular in the neighbourhood of Warsaw. The first part of the melody has a vocal accompaniment:—

[W. B. S.]

MAZZINGHI, Joseph, son of Tommaso, of an ancient Corsican family, born in London in 1765, was a pupil of John Christian Bach, under whom he made such progress that, on the death of his father in 1775, he was, although but 10 years of age, appointed organist of the Portuguese Chapel. He then studied under Bertolini, Sacchini and Anfossi. In 1784 he became musical director and composer at the King's Theatre, and produced the operas of 'Il Tesoro' and 'La Belle Arsène,' besides many songs, duets, etc., for introduction into other operas, and the music for several ballets. The score of Paisiello's opera 'La Locanda' having been consumed in the fire of the Opera House in June, 1789, Mazzinghi rescored the work so faithfully as to admit of its continued performance. For the English theatre he set the following pieces;—'A Day in Turkey,' 1791; 'The Magician no Conjuror,' 1792; 'Ramah Droog,' 1793; 'The Turnpike Gate,' 1799; 'Paul and Virginia,' 1800; 'The Blind Girl,' 1801; 'Chains of the Heart,' 1802 (the last five in collaboration with Reeve); 'The Wife of two Husbands,' 1803; 'The Exile,' 1808; and 'The Free Knights,' 1810. The last piece contained the duet 'When a little farm we keep,' which for nearly half a century was highly popular and constantly introduced into other pieces, and is even now occasionally heard. The manner of its original performance was strikingly characteristic of the utter want of regard for congruity which prevailed among the stage managers of that day. Although the piece was represented as taking place in Westphalia in the 14th century, the duet was accompanied *upon the pianoforte!*

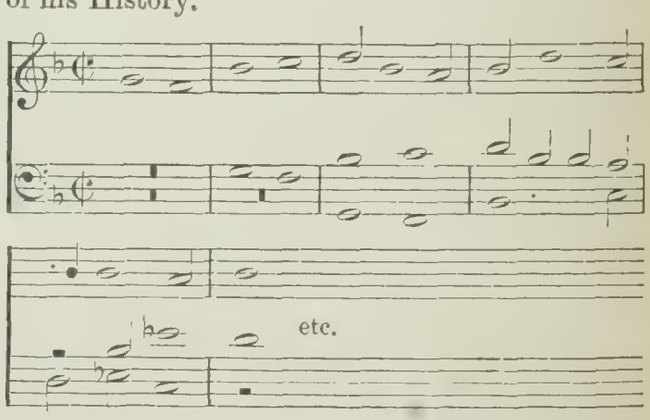
Mazzinghi was music master to the Princess of Wales, afterwards Queen Caroline, and had an extensive practice as a teacher of the pianoforte, for which instrument he composed nearly 70 sonatas and arranged a multitude of pieces, besides writing an 'Introduction' to it. His glees, trios, harmonised airs, songs and other vocal pieces, were legion. His pastoral glee, 'The Wreath' ('Tell me, shepherds,') was long in favour. He likewise composed a mass for 3 voices, and 6 hymns. Having about 1830 attained the rank of Count he retired to Bath, where he died, Jan. 15, 1844. [W. H. H.]

MEAN (Old Eng. *Meane, Mene*; Lat. *Medius.*) 1. An old name for a middle Voice-part, whether Alto, or Tenor.

2. A name given to the second instrument in a Concert of Viols, as in Orlando Gibbons's 'Fantasies in three parts, for Viols,' reprinted by the Musical Antiquarian Society.

3. The name of the Second and Third Strings of the Viol—the former being called the Small, and the latter, the Great Meane.

4. The title of an ingenious Fugue, for the Organ, composed by William Blitheman,[1] and printed, by Hawkins, in the Appendix to Vol. V. of his History.



The piece may probably owe its singular title to the *obligato* character of the middle part. [W. S. R.]

1 William Blitheman was a noted Organist, and Gentleman of the Chapel Royal, in the reign of Queen Elizabeth; and is, moreover, celebrated as having been the Master of Dr. John Bull. He died, in London, on Whitsunday 1591; and was buried in the Church of S. Nicholas Cole-Abbey, where his talents were set forth in a poetical Epitaph, which was destroyed, in the Great Fire, but has been preserved by Stow, and reprinted by Hawkins.

MEASURE, in relation to music pure and simple, apart from the dance, means the group of beats or main rhythms which are contained between two bar-lines. This is the measure of time, and defines the number of pulsations, such as 2, 3, 4, 6, 9, or other aggregate which is to be taken as the determinate standard or unit by which the multifarious complications of rhythms in an extended piece of music are to be ultimately regulated. [C.H.H.P.]

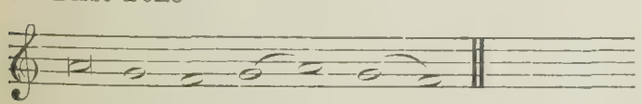
MEASURE originally denoted any dance remarkable for its well-defined rhythm, but in time the name was applied to a solemn and stately dance, of the nature of a Pavan or a Minuet. The dignified character of the dance is proved by the use of the expression 'to tread a measure'; a phrase of frequent occurrence in the works of the Elizabethan dramatists. In the reigns of Elizabeth and James I, Measures were danced at court, and at the public entertainments periodically given by the Societies of Law and Equity. On these occasions the great legal and state dignitaries took part in them, but the custom seems rapidly to have died out under Charles I. It is somewhat remarkable that no trace can be found of any special music to which Measures were danced; this circumstance seems to prove that there was no definite form of dance tune for them, but that any stately and rhythmical air was used for the purpose. [W.B.S.]

MÉDÉE. Opera in 3 acts; words by Hoffmann, music by Cherubini. Produced at the Théâtre Feydeau, March 13, 1797; in London, at Her Majesty's Theatre, in Italian, with recitatives by Arditi, June 6, 1865. [G.]

MEDESIMO TEMPO, 'in the same time,' is occasionally used in the same way as L'Istesso Tempo, and has the same meaning. [J.A.F.M.]

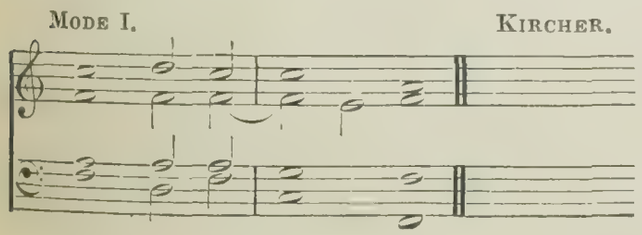
MEDIAL CADENCE (*Clausula in medio modi*). I. Among the numerous Cadences formed upon the Regular and Conceded Modulations of the Ecclesiastical Modes, that proper to the Mediant holds a place inferior in importance only to those occupied by the Final and Dominant.

In Plain Chaunt Melodies, the Medial Cadence sometimes leads to a close so satisfactory that it almost sounds final; as in the First Ending of the First Tone—

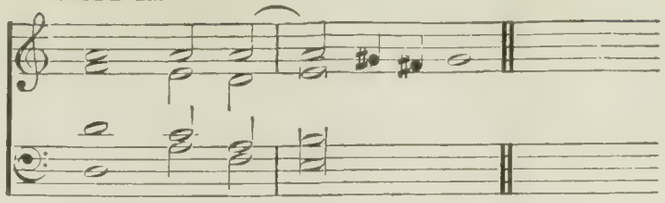


In Polyphonic Music, it is susceptible of infinite variety of treatment, as may be seen from the following examples—

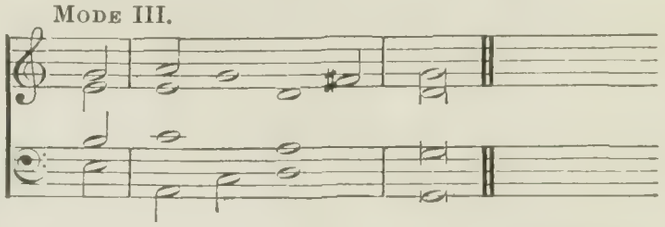
Mode I. Kircher.



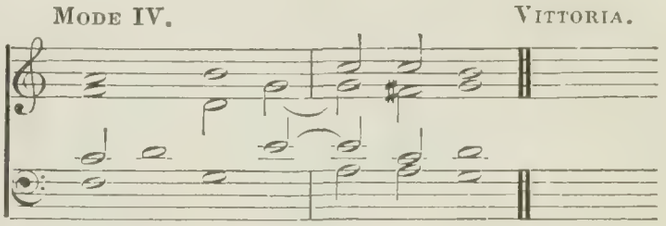
Mode II.



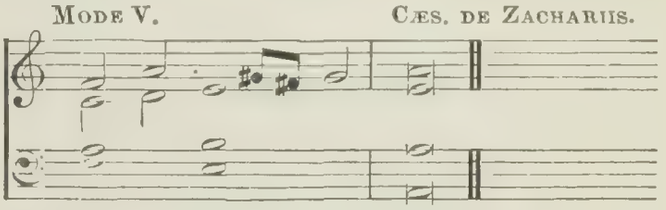
Mode III.



Mode IV. Vittoria.

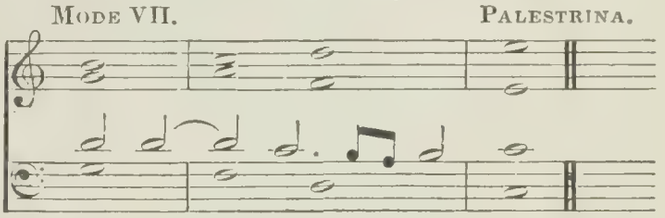


Mode V. Cæs. de Zachariis.



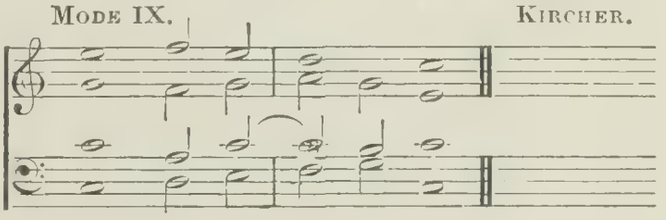
Mode VI. Orlando di Lasso.

Mode VII. Palestrina.

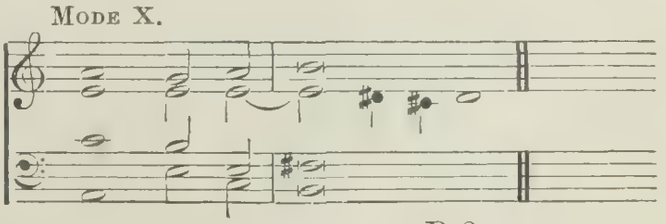


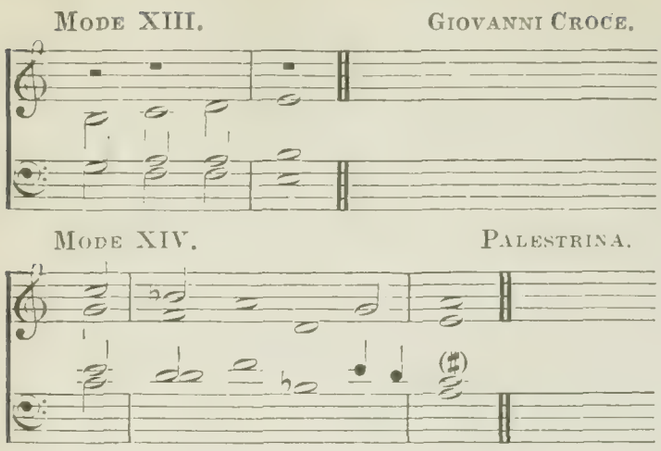
Mode VIII. Palestrina.

Mode IX. Kircher.



Mode X.





In the selection of these examples, we have confined ourselves exclusively to True Cadences, for the sake of illustrating our subject with the greater clearness: but, the Old Masters constantly employed Cadences of other kinds, in this part of the Mode, for the purpose of avoiding the monotony consequent upon the too frequent repetition of similar forms. It is only by careful study of the best works of the best period, that the invigorating effect of this expedient can be fully appreciated. [See Mediant; Modes, the Ecclesiastical; Modulations; Clausula Vera, Appendix.]

II. This term is also applied, by Dr. Callcott, and some other writers on Modern Music, to closes in which the Leading Chord is represented by an Inverted instead of a Fundamental Harmony.

Though Cadences of this kind are in constant use, we rarely meet with them, now, under their old name. Most writers of the present day prefer to describe them as Inverted Cadences, specifying particular instances, when necessary, as the First or Second Inversion of the Perfect, Imperfect, or Plagal Cadence, as the case may be: the opposite term, 'Radical Cadence,' being reserved for closes in which the Root appears in the Bass of both Chords. [W.S.R.]

MEDIANT (from the Lat. *Medius*, middle). I. One of the three most significant Regular Modulations of the Ecclesiastical Modes, ranking next in importance to the Dominant, or Reciting-Note. [See Modes, the Ecclesiastical; Modulations, Regular and Conceded.]

The normal position of the Mediant, in the Authentic Modes, lies as nearly as possible midway between the Final and the Dominant. It makes its nearest approach to the fulfilment of this condition, in Modes I, V, IX, and XIII, in which the Dominant is represented by the Fifth of the Scale, and the Mediant, by the Third. In Mode III, the substitution of C for B, in the case of the Dominant, leads to an irregularity: the Mediant is still the Third of the Scale; but, it lies a Third above the Final, and a Fourth below the Reciting-Note. A similar incongruity would arise in the proscribed Mode XI, were it in practical use: for, theoretically, its Final is B, its Dominant G, and its Mediant D. In Mode VII, C is taken for the Mediant, instead of B, in order to avoid forbidden relations with F: the position, therefore, in this case, is, a Fourth above the Final, and a Second below the Dominant.

In the Plagal Modes, the position of the Mediant is governed rather by the necessity for securing a convenient note for the Modulation, than by any fixed law. In Modes II, IV, and X, it is the note immediately below the Dominant: and the same arrangement would take place in the discarded Mode XII, were it in use. In Modes VI, and XIV, it is a Third below the Final. In Mode VIII, it is a Second below the Final; the Second above the Final being sometimes—though not very frequently—substituted for it, in order to avoid forbidden relations with B.

The following Table exhibits, at one view, the Mediants of all the Modes in general use, both Authentic, and Plagal:—

Mode I, F.	Mode V, A.	Mode IX, C.
Mode II, E.	Mode VI, D.	Mode X, B.
Mode III, G.	Mode VII, C.	Mode XIII, E.
Mode IV, G.	Mode VIII, F.	Mode XIV, A.

The functions of the Mediant are important, and well defined.

In the Authentic Modes it is constantly used as an Absolute Initial: and, in cases of emergency, it may be so used in the Plagal Modes, also; especially in the VIIIth, in which it frequently occupies that prominent position. By virtue of this privilege, it may appear as the first note of a Plain Chaunt Melody of any kind. In common with the other Regular Modulations, it may begin, or end, any of the intermediate phrases of a Plain Chaunt Melody; and may even begin the last phrase. But, it can never terminate the last phrase. This rule admits of no exception; and is not even broken in those Endings of the Gregorian Tones for the Psalms which close upon the Mediant: for, in these cases, the real close must be sought for in the Antiphon, which immediately follows the Psalm; and this invariably ends upon the Final of the Mode. [See Antiphon; Tones, the Gregorian.]

II. In Modern Music, the term, Mediant, is always applied to the Third of the Scale, by reason of its intermediate position, between the Tonic and the Dominant.

The office of this note is extremely important, inasmuch as it determines whether the Tonality of the Scale is Major or Minor. [W.S.R.]

MEDIATION (Lat. *Mediatio*). That division of a Gregorian Tone which lies between the Intonation, and the Ending, forming, as it were, the main body of the Chaunt.

The Mediation begins, like the Ending, with a Reciting-Note—the Dominant of the Mode—whence it passes on to a short melodious phrase, the character of which differs, considerably, in

different Tones. Each Tone has, in reality, only one Mediation; though that one exhibits itself, in most cases, in at least three different forms —one, used for the Psalms, one, for the Introits, and a third—commonly called the 'Festal Form'—for the Canticles. Moreover, Tones II, IV, V, VI, and VIII have each a special form of Mediation, used only when the first half of the Verse to which it is sung ends with a monosyllable, or Hebrew proper name. For examples of these different forms, see TONES, THE GREGORIAN; under which heading will also be found a detailed account of the connexion of the Mediation with the other members of the Chaunt.

In addition to these recognised forms of the Mediation, certain others have attained, from time to time, a considerable amount of local popularity, in consequence of the claim put forth, by particular Dioceses—especially in France—to a peculiar 'Use' of their own. The utter abolition of such Diocesan Uses—almost all of which can be proved to have originated in a corrupt method of chaunting—is one of the objects contemplated by the compilers of the Ratisbon Office-Books, as revised by the Sacred Congregation of Rites, and formally sanctioned by the authority of the Holy See. Should this object be attained, and a fixed standard adopted, free from modern innovations, and conformable, in every respect, to the antient purity of the Plain Chaunt, it will have the effect of silencing a few Gallican Mediations, which have long been established favourites, and the absence of which will, at first, perhaps be regretted: but it cannot fail to result in a vast improvement of the general style of chaunting the Psalms, and Canticles. [See MACICOTATICUM.] [W.S.R.]

MÉDECIN MALGRÉ LUI, LE. Adapted from Molière by Barbier and Carré, music by M. Gounod. Produced at the Théâtre Lyrique, Jan. 15, 1858. In English, as 'The Mock Doctor,' at Covent Garden, Feb. 27, 1865. [G.]

MEERESSTILLE UND GLÜCKLICHE FAHRT, *i.e.* Calm Sea and Prosperous Voyage, a poem by Goethe, which has been set to music by two great masters.

1. By Beethoven, for chorus and orchestra. Composed in 1815, first performed at the Great Redoutensaal in Vienna on Christmas day of that year, and published Feb. 28, 1823, by Steiner. It is dedicated 'to the immortal Goethe.' The reverse of the title-page contains 3 lines from Voss's translation of the Odyssey (viii. 479), thus rendered by Lang and Butcher:—

'For from all men on earth minstrels get their meed of honour and worship; inasmuch as the muse teacheth them the paths of song, and loveth the tribe of minstrels.'

A letter from Beethoven to the publisher, dated June 12, and apparently belonging to the year 1824, calls it a cantata, and asks for the loan of the score, that he 'might write a kind of overture to it.' This intention does not appear to have been carried out.

2. By Mendelssohn, for orchestra only. Written in the summer of 1828, first performed at Berlin Dec. 1, 1832, remodelled and 'made thirty times as good as before,' and published as op. 27 and No. 3 of his Concert Overtures in 1834. We learn from a passage in his sister's diary[1] that Mendelssohn wished to avoid the form of an introduction and overture, and to throw his work into two companion pictures. [G.]

MEHLIG, ANNA, a distinguished pianist, was born at Stuttgart, July 11, 1846. She received her musical education at the Conservatorium of her native town, and afterwards spent a year at Weimar studying under Liszt. In 1866 she made her first appearance in England, playing Hummel's Concerto in B minor at the Philharmonic on April 30. She revisited England each year till 1869 inclusive, playing regularly at the Philharmonic and Crystal Palace, and other concerts. She then took a long tour in America, where she met with great success. In 1875 she reappeared in England, playing Chopin's E minor Concerto at the Crystal Palace on Oct. 9, and has been here every season since that time. Her répertoire is large, her power of execution remarkable, and her style is full of refinement and poetry. [G.]

MÉHUL, ETIENNE HENRI, born June 24, 1763, at Givet in the Ardennes, son of a cook, who was too poor to give him much education. Even in childhood he showed a passion for music, and a remarkable perseverance in overcoming obstacles, and at 10 was appointed organist to the convent of the Récollets at Givet. Having learned all that his master, a poor blind organist, could teach him, he was thrown on his own resources, until the arrival, at the neighbouring convent of Lavaldieu, of a new organist, Wilhelm Hauser, whose playing had attracted the attention of the Abbot Lissoir, when visiting the Abbey of Scheussenried in Swabia. The monks of Lavaldieu, wishing to make music a special feature in their services, had a good organ, and the playing of Hauser, who was a sound and good musician, caused quite an excitement in that secluded corner of the Ardennes. Lavaldieu was several leagues from Givet, but Méhul often walked over to hear him; and at length, with the consent of his father, was admitted into the convent, and became the most diligent, as he was the most gifted, of the eight pupils under Hauser's training. At 14 he became deputy organist; and a distinguished amateur who heard him play was so struck by his evident power of imagination, that he determined to take him to Paris, and in 1778 Méhul bade farewell to the flowers he loved to cultivate, and the instructor who had put him in the way to become a great musician. On his arrival in Paris he at once went to Edelmann for instruction in pianoforte playing and composition. To earn his bread he gave lessons, and composed two sonatas (1781) which bear no traces of a master mind; but this was not the line in which he was destined to distinction. In 1779 he was present at the first performance of 'Iphigénie en Tauride,' and the effect produced on one with his cultivated intellect, his love of the beautiful,

1 Hensel's 'Die Familie Mendelssohn,' i. 194.

and passionate though reserved nature, was immense. He expressed his admiration to Gluck himself, who received the young enthusiast graciously, gave him valuable advice, and undertook his instruction in the philosophical and poetical parts of music. Encouraged by the success of a cantata with orchestra composed to one of Rousseau's sacred odes, and produced at the Concert Spirituel in March 1782, he might have gone on writing church music, had not Gluck shown him his true vocation, and directed his attention to the stage. Solely for practice he composed one after another three operas, 'Psyché et l'Amour,' a pastoral by Voisenon previously set by Saint Amans; 'Anacréon,' the third act of a ballet by Bernard and Rameau, produced in 1757 as 'Les Surprises de l'Amour'; and 'Lausus et Lydie,' 3 acts, to a libretto adapted by Valadier from Marmontel. These unpublished scores are lost, no trace of them being discoverable in any of the public libraries of Paris.

Méhul now felt himself in a position to appear before the public, and Valadier having furnished him with the libretto of 'Cora et Alonzo,' 4 acts, also taken from Marmontel, the score was soon ready, and accepted by the Académie, but there the matter ended. Tired of waiting, he resolved to try his fortune at another theatre, and having made the acquaintance of Hoffmann he obtained from him the libretto of 'Euphrosine et Coradin, ou le Tyran corrigé,' 3 acts (Sept. 4, 1790). In this opéra-comique the public recognised at once a force, a sincerity of accent, a dramatic truth, and a gift of accurately expressing the meaning of the words, which were throughout the main characteristics of Méhul's mature genius. Its success was instantaneous; and the duet 'Gardez-vous de la jalousie,' the close of which contains a modulation as unexpected as it is effective, speedily became a favourite throughout France. Henceforth Méhul had ample opportunities of satisfying his productive instinct, and he brought out successively:—

'Cora' (1791); 'Stratonice' (May 3, 1792); 'Le jeune Sage et le vieux Fou' (1793); 'Horatius Coclès' and 'Phrosine et Mélidore' (1794); 'La Caverne' (1795), not so successful as Lesueur's on the same subject; 'Doria' and 'Le jeune Henri' (1797); 'Adrien' (June 4) and 'Ariodant' (Oct. 11, 1799); 'Epicure,' with Cherubini (March 14), and 'Bion' (Dec. 27, 1800); 'L'Irato, ou l'Emporté' (Feb. 17, 1801); 'Une Folie' (April 4), 'Le Trésor supposé,' 'Joanna,' and 'L'Heureux malgré lui' (1802); 'Héléna' and 'Le Baiser et la Quittance,' with Kreutzer, Boieldieu, and Nicolo (1803); 'Les deux Aveugles de Tolede' (Jan. 28), 'Uthal' (May 17), and 'Gabrielle d'Estrées' (June 25, 1806); 'Joseph' (Feb. 17, 1807).

Astonishing as it may seem, these 24 operas were not the only works Méhul produced within 17 years. He composed and published in addition many patriotic songs and cantatas, among others the 'Chant national du 14 Juillet,' the 'Chant du Départ,' the 'Chant du Retour,' the 'Chanson de Roland,' and choruses to 'Timoléon' a tragedy by Joseph Chénier; two ballets, 'Le Jugement de Paris' (1793) and 'La Dansomanie' (1800); several operettas, and other 'morceaux de circonstance,' such as 'Le Pont de Lodi,' etc., all unpublished except the 'Chant lyrique' for the inauguration of the statue voted to Napoleon by the Institut.

The epoch at which he composed 'Uthal' and 'Joseph' was the culminating point of Méhul's career. He was already a member of the Institut (1795) and a chevalier of the Legion of Honour (1802), and had been inspector of instruction at the Conservatoire from its foundation. His pupils looked up to him and he was a favourite in the best society, but such homage did not blind him to the fact that in science his colleagues Cherubini and Catel were his superiors, owing to his want of early systematic training. This accounts for his laborious efforts to change his style, and excel in more than one department of music. His symphonies, though performed at the Conservatoire, cannot rank with those of Haydn and Mozart; indeed none of his other orchestral works rise to the level of his overtures. Of his ballets 'Le Retour d'Ulysse' (1807), and 'Persée et Andromède' (1810) in which he introduced many pieces from 'Ariodant,' were well received, but 'Les Amazones, ou la fondation de Thebes' disappeared after nine performances. An opéra-comique in 1 act, 'Le Prince Troubadour' (1813), was not more successful, but his last work, 'La Journée aux Aventures,' 3 acts (Nov. 16, 1816), kept the boards for some time. Its success was partly due to its being known at the time that Méhul was dying of consumption. Two months after its production he was sent to Provence, but the change came too late; he returned to Paris, and died there Oct. 18, 1817, aged 54. Besides six unpublished operas composed between 1787–97, he left the unfinished score of 'Valentine de Milan,' a 3-act opéra-comique, completed by his nephew and pupil Daussoigne-Méhul (born at Givet, June 10, 1790, died at Liege, March 10, 1875), and produced Nov. 28, 1822.

The most conspicuous quality of Méhul's work as a whole is its absolute passion. This is exemplified most strikingly in 'Stratonice' and 'Ariodant.' Not less obvious are the traces of the various influences under which he passed. Between 'Ariodant' and 'Joseph' must be placed all those repeated attempts to vary his style, and convince his detractors that he could compose light and graceful airs as well as grand, pathetic, and sustained melodies, which cannot be considered as anything but failures, although the ignorant amateurs of the day pronounced 'L'Irato' to be true Italian music. 'Joseph,' which dates from the midst of the Revolution, before the Empire, belongs to a different epoch, and to a different class of ideas. Méhul's noble character, his refined sentiment, and religious tendencies, the traces of his early education, in his perfect acquaintance with the church modes and plainsong, and his power of writing excellent church music, are all apparent in this powerful work, the simplicity, grandeur, and dramatic truth of which will always command the admiration of impartial musicians.

Méhul was not so fortunate as Grétry in finding a poet whose creative faculties harmonised thoroughly with his own; and he was fascinated by any subject—antique, chevaleresque,

Ossianic, Spanish, patriarchal, or biblical — so long as it afforded him opportunities for local colouring, the importance of which he often exaggerated. His overtures to 'Le Jeune Henri' 'Horatius Coclès,' 'Timoléon,' and 'Les deux Aveugles de Tolède' are however incomparably superior to anything of the kind which preceded them; and most striking are such passages as the introduction to 'Ariodant' where three cellos and a trombone hold a kind of dialogue, and that in 'Mélidore et Phrosine,' where four horns which have a complete part throughout the score, accompany the voice of a dying man with a kind of smothered rattle. In 'Uthal' the violins are entirely absent, their places being taken by the violas, in order to produce a soft and misty effect. Grétry was shocked at this innovation, and so wearied by its monotony, that he cried on leaving the theatre after the first performance, 'Six francs for a fiddle-string!'

Though Méhul's new and ingenious combinations were not always successful, and though his melodies were often wanting in that life and dash which rouse an audience, it must be acknowledged that with all his faults his work bears the stamp of a very individual mind and character, and the impress of that mighty race of 1789, with whom to will was to do, but amongst whose many gifts that of grace was too often wanting. Had he but possessed this fascinating quality, Méhul might have been the Mozart of France. As it is, we cannot withhold our admiration from the man who carried on Gluck's work with even more than Gluck's musical skill, regenerated opéra-comique, and placed himself at the head of the composers of his own time and nation.

The portrait of Méhul which we engrave is taken from a remarkable print by Quenedey, 1808.

Quatre-mère de Quincy pronounced his eulogium at the Institut in Oct. 1818, and Vieillard, one of his intimate friends, published an interesting 'Notice' of him (Paris, 1859). The library of the Conservatoire contains many of his autographs, several being fragments of unpublished operas. The writer of this article discovered among them 'La Naissance d'Oscar Leclerc,' not elsewhere mentioned, an opéra-comique 'La Taupe,' and an 'Ouverture burlesque' for Piano, violin and reeds, interesting merely as musical curiosities. [G.C.]

MEIBOM (in Latin MEIBOMIUS), Marcus, learned historian of music, born early in the 17th century at Toenningen in Schleswig Holstein. Nothing is known of his studies, but his great work, 'Antiquæ musicæ auctores septem græce et latine' (Amsterdam, Elzevir), was published in 1652, and as in those days eminence was rarely attained in early youth, the date of his birth can hardly have been either 1626 or 1630 as commonly stated. The work was dedicated to Queen Christina of Sweden, at whose court he resided for some time. On one occasion however, while singing at the Queen's request his version of an ancient Greek melody, the whole court burst out laughing, and Meibom imagining that the Queen's physician Bourdelot was the instigator of this unseemly mirth gave him a box on the ear, and was in consequence dismissed. He took refuge with Frederic III. of Denmark, who gave him a professorship at Upsala, but he soon returned to Holland. Having endeavoured in vain to find a capitalist who would carry into execution his scheme of restoring the ancient triremes, he came to England in 1674 with the view of making arrangements for a new edition of the Old Testament. This project also failed, and returning to Holland, he died at Utrecht in 1711. The book already mentioned is one of the most valuable sources of information on ancient music, and may be considered a precursor of Gerber and Coussemaker. For his numerous works on music and geometry the reader is referred to Fétis. [F.G.]

MEISTER, ALTE. A collection of 40 P.F. pieces of the 17th and 18th centuries, edited by E. Pauer, published by Breitkopf & Härtel:—

Rameau, Gavotte and Variations in A minor.
Kirnberger, Fugue (3 parts) in D minor.
Do., Do., (2 parts) in D.
Marpurg, Capriccio in F.
Méhul, Sonata in A.
J. Ch. Bach, Sonata in C minor.
C. P. E. Pach, Allegro in A.
W. Fr. Bach, Fugue in C minor.
Kuhnau, Sonata in D.
Pad. Martini, Prelude, Fugue, and Allegro in E minor.
J. L. Krebs, Partita in B♭.
Do., Do. E♭.
Mätheson, 4 Gigues.
Couperin, La Bandoline, Les Agréments.
Paradies, Sonata in D.
Zipoli, Preludio, Corrente, Sarabanda, and Giga in G minor.
Cherubini, Sonata in B♭.
Hässler, Sonata in A minor.
Wagenseil, Sonata in F.
Benda, Largo and Presto in F.
Frohberger, Toccata in D minor.
Sacchini, Sonata in F.
Hasse, Allegro in B♭.
W. Fr. Bach, Sonata in C.
Rolle, Sonata in E♭.
Handel, Capriccio in G.
Rameau, La Livri, L'Agaçante, La Timide.
Loeilly, Suite in G minor.
Rossi, Andantino and Allegro in G.
F. Turini, Presto in G minor and Sonata in D♭.
C. P. E. Bach, La Xenophone, Sibylle. La Complaisante, Les Langueurs tendres.
Graun, Gigue in B♭ minor.
Matielli, Gigue, Adagio, and Allegro.
Sarti, Allegro in G.
Grazioli, Sonata in G.
D. Scarlatti, 2 Studies.
Mattheson, Suite in C minor.
Couperin, La Bersan, L'Ausonienne. Les Charmes, Le Bavolet flottant.
Schobert, Minuet and Allegro molto in E♭.
Muffat, Gigue in B♭ and Allegro spiritoso in D. [G.]

MEISTERSINGER VON NÜRNBERG, DIE. An opera; words and music by Richard Wagner, completed in Oct. 1867, and first per-

formed at Munich, June 21, 1868, under the direction of von Bülow. [G.]

MEL, RINALDO DEL, 'Gentilhuomo Fiamengo,' and distinguished composer of the 16th century. The date and town of his birth are not known, but his nationality is assured, not only by the above title, which appears on more than one of his works, but by his own words, 'la natione nostra Fiammengo.' He is not to be confused with Gaudio Mell, a name which Adami,[1] Liberati,[2] and Martini[3] give to Palestrina's master Goudimel. Having served Sebastian, King of Portugal, and his successor, Cardinal don Henriquez as Chapelmaster, he arrived in Rome in 1580. This change in his career may be accounted for by the annexation of Portugal to Spain in that year. If Philip II. was unwilling to keep up a useless retinue in Lisbon, he would certainly make no exception in favour of 'Flemish gentlemen,' who indeed were never to his liking. Why Mel turned his steps to Rome we know not. Once there, however, he presented himself without loss of time to Palestrina, but soon found himself out of his depth on musical subjects, and confessed that Rinaldo's questions could not keep pace with Pierluigi's answers. So the ex-Chapelmaster set himself down to school tasks again, ambitious to become a worthy disciple of that Roman school which he declared was the greatest in Europe.[4] His diploma was soon obtained, for his publications began in 1582, and between that year and 1595 he published 5 books of motets and 15 books of madrigals, besides contributing to various collections which carried his name from Rome to Venice, Nuremberg, Antwerp, and Munich.

Up to 1590 he probably lived chiefly in Rome, though we find him at Liége in 1587,[5] where some of his family were in the service of Ernest, Duke of Bavaria. Part of the time he is said to have been chamber musician to Gabriel Paleotto, archbishop of Bologna, who had himself some knowledge of music.[6] When the diocese of Sabina was placed under Paleotto's charge in 1591 he founded a college, improved the cathedral at Magliano, and made many changes in the internal government. The appointment of a new Chapelmaster agrees well enough with these facts, and it is in the year 1591 that we hear of Mel's appointment to the cathedral and the new college. He dates from Calvi, a little town near Magliano, March 20, 1593, and from Magliano[7] itself, 1595. From this time his publications cease, and we have no further record of him. He is said to have been already well advanced in life when he left Portugal, and by this time was probably an old man. So we may assume that the end of his life was near, and that he did not long survive Palestrina.

1 'Osservazioni per ben regolare Capella pontif. (Roma 1711). (Brit. Mus. C. 20 c.)

2 Lettera in risposta ad una del Sig. Pers. (Brit. Mus. 556 c, 8.)

3 'Giudicio di Apollo,' bound up with 3rd vol. of Martini's 'Storia della Musica.' (Brit. Mus. 557 eq.)

4 Baini is responsible for this story. See 'Memorie di Palestrina.'

5 Motets à 6 (Anvers 1558). See also Fétis, Biographie, under 'Melle, Renaut de.'

6 See Fantuzzi, 'Notizie delli Scrittori Bolognesi' (Bologna 1788).

7 See dedication of 'Liber 5us motectorum' (Venice 1595).

Mel's works are at present difficult to obtain. The British Museum does little more than record his name,[8] and in the Fétis Library at Brussels, such a rich treasure-house, he is quite unknown. The only work in modern notation is a Litany in the 'Musica Divina,' Ann. II, vol. 3 (Ratisbon, 1869). [J.R.S.-B.]

MELISMA (Gr. Μέλισμα, a Song). Any kind of Air, or Melody, as opposed to Recitative, or other music of a purely declamatory character. Thus, Mendelssohn employs the term[9] in order to distinguish the Mediation and Ending of a Gregorian Tone from the Dominant, or Reciting Note. Other writers sometimes use it (less correctly) in the sense of *Fioritura*, or even *Cadenza*.

A work by Thomas Ravenscroft, entitled 'Melismata; Musical Phansies fitting the Court, citie, and country humours' (London, 1611), is much prized by collectors. [W.S.R.]

MELL, DAVIS; familiarly called Davie Mell. An eminent Violinist and Clockmaker, resident in London, about the middle of the 17th century, and honourably mentioned by Aubrey and Anthony à Wood. In the year 1657, he visited Oxford, where, as we learn from Wood's Diary, 'Peter Pett, Will. Bull, Ken. Digby, and others of Allsoules, as also A. W. did give him a very handsome entertainment in the Taverne cal'd "The Salutation" in S. Marie's Parish . . . . The Company did look upon Mr. Mell to have a prodigious hand on the Violin, & they thought that no person, as all in London did, could goe beyond him. But, when Tho. Baltzar, an Outlander, came to Oxon. in the next yeare, they had other thoughts of Mr. Mell, who, tho he play'd farr sweeter than Baltzar, yet Baltzar's hand was more quick, & could run it insensibly to the end of the Fingerboard.' [See BALTZAR, THOMAS.]

Aubrey[10] tells a curious story of a child of Mell's, who was cured of a crooked back by the touch of a dead hand. [W.S.R.]

MELLON, ALFRED, born in Birmingham, 1820, became a violinist in the opera and other orchestras, and afterwards leader of the ballet at the Royal Italian Opera, Covent Garden. He was next director of the music at the Haymarket and Adelphi theatres, and subsequently conductor of the Pyne and Harrison English Opera Company, who in 1859 produced his opera, 'Victorine,' at Covent Garden; he was conductor of the Musical Society, and of the Promenade Concerts which for several seasons were given under his name at Covent Garden. In Sept. 1865 he was chosen conductor of the Liverpool Philharmonic Society. He married Miss Woolgar, the well-known actress. He died March 27, 1867. [W.H.H.]

MELODISTS' CLUB, THE. A society at one time of much promise, founded in 1825, by ad-

8 A 'quinto' part of the 2nd book of Madrigals (à 6), the only book of Mel's in the library, gives the title 'Gentilhuomo F.,' and contains the dedication to Cardinal Minucci, which speaks of 'la natione nostra Fiammengo,' and bears the date 'Calvi, March 20, 1593.'

9 See his letter to Zelter, dated Rome, June 16, 1831.

10 'Miscellanies,' under the article 'Miranda.'

mirers of Charles Dibdin, 'for the promotion of ballad composition and melody.' In 1827 and 28 a library was formed, and prizes offered for songs; and the prize songs were afterwards published in a volume. In 1833 two prizes of 10 guineas were offered for songs in the style of Arne, Shield, or Dibdin, and gained by Blewitt and Hobbs. In 1837 prizes of 5 guineas for words and 10 guineas for music of a song; which were gained by Wilson and Hobbs for the song 'Send round the wine.' The object of the Club is well described in the following words of Sir H. Bishop in presenting some music to the Library in 1840: 'It is from my perfect conviction that good and appropriate melody is the chief attribute of excellence in music of every style, from the simple ballad to the most elaborate composition, that I hail the establishment of the Melodists' Club, from its patronage of native genius, and its enccouragement of melody, as essentially calculated to aid the cause of the musical art in this country.' The entrance to the Club was 5 guineas, and the annual subscription 8 guineas. Many noblemen and gentlemen supported it, and its professional members embraced Sir George Smart, Braham, Balfe, T. Cooke, Hawes, Sterndale Bennett, and other eminent English musicians. Among the artists who took part in the music in its earlier day were J. B. Cramer, Moscheles, Hummel, Field, Benedict, Lipinski, and many more players of the highest distinction. Mr. T. Cooke was musical director, and Mr. John Parry hon. secretary. [C. M.]

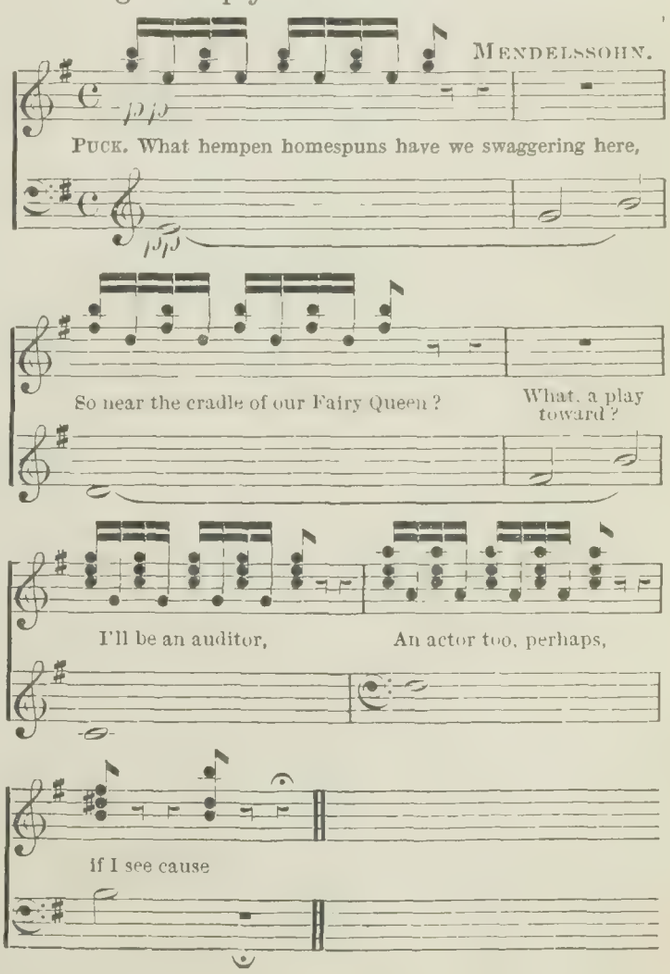
MELODRAMA (Fr. *Melodrame*). I. A Play—generally, of the Romantic School—in which the dialogue is frequently relieved by Music, sometimes of an incidental, and sometimes of a purely dramatic character.

Such a Play was the *Pygmalion* of Jean Jacques Rousseau, who has been credited, on the strength of it, with having invented the style. The so-called English Operas, of the older School—The Beggar's Opera, The Iron Chest, The Castle of Andalusia, The Quaker, The English Fleet, No Song no Supper, Guy Mannering, and a hundred others—are all really Melodramas. It is difficult, indeed, in the case of English and German pieces with spoken Dialogue, to say exactly where Melodrama ends, and Opera begins. The line must be drawn, somewhere: but, unless we adopt the substitution of Recitative for Dialogue as a final test, its exact position must always remain more or less doubtful. On the other hand, were we to accept this distinction, we should be compelled to class at least half of the best German Operas as Melodramas—an indignity which was once actually inflicted upon 'Der Freischütz.'

One rarely-failing characteristic of the popular Melodrama of the present day we must not omit to mention. Both in England, and on the Continent, its Music, as a general rule, is so miserably poor, that the piece would be infinitely more entertaining without it. Perhaps, therefore, we may be justified in giving the name of Opera to those pieces in which the Music is the chief attraction, and that of Melodrama, to those in which the predominating interest is centred in the Dialogue.

II. A peculiar kind of dramatic composition, in which the Actor recites his part, in an ordinary speaking voice, while the orchestra plays a more or less elaborate accompaniment, appropriate to the situation, and calculated to bring its salient points into the highest possible relief.

That the true Melodrama originated in Germany is certain: and there can be equally little doubt that the merit of its invention rests—notwithstanding all the arguments that can be adduced in favour of rival claimants—with Georg Benda, who first used it, with striking effect, in his 'Ariadne auf Naxos,' produced, at Gotha, in the year 1774. Since that time it has been employed to far greater advantage in the German Schools of Composition than in any others; and found more favour with German composers than with those of any other country. The finest examples produced since the beginning of the present century are, the Grave-digging Scene, in 'Fidelio'; the Dream, in 'Egmont'; the Incantation Scene, in 'Der Freischütz'; and some Scenes in Mendelssohn's 'Midsummer Night's Dream.' Unhappily, the performance of these finely-conceived movements is not often very satisfactory. The difficulty of modulating the voice judiciously, in music of this description, is, indeed, almost insuperable. The general temptation is, to let it glide, insensibly, into some note sounded by the Orchestra; in which case, the effect produced resembles that of a Recitative, sung hideously out of tune—a perversion of the Composer's meaning, which, in passages like the following is simply intolerable.



Few Artists seem to think this frightful difficulty worth the trouble of special study. More than one great German singer has, however, succeeded in overcoming it perfectly, and in winning rich laurels by his perseverance; notably, Herr Staudigl, whose rendering of the great Scene in 'Der Freischütz' was a triumph of Melodramatic Art. [W.S.R.]

MELODY is the general term which is vaguely used to denote successions of single notes which are musically effective. It is sometimes used as if synonymous with Tune or Air, but in point of fact many several portions of either Tunes or Airs may be accurately characterised as 'melody' which could not reasonably be made to carry the name of the whole of which they form only a part. Tunes and airs are for the most part constructively and definitely complete, and by following certain laws in the distribution of the phrases and the balance of the groups of rhythms, convey a total impression to the hearer; but melody has a more indefinite signification, and need not be a distinct artistic whole according to the accepted laws of art, though it is obvious that to be artistic it must conform to such laws as lie within its range. For example, the term 'melody' is often with justice applied to the inner parts of fine contrapuntal writing, and examples will occur to every one in numerous choruses and symphony movements and other instrumental works where it is so perfectly woven into the substance of the work that it cannot be singled out as a complete tune or air, though it nevertheless stands out from the rest by reason of its greater beauty.

Melody probably originated in declamation through recitative, to which it has the closest relationship. In early stages of musical art vocal music must have been almost exclusively in the form of recitative, which in some cases was evidently brought to a very high pitch of expressive perfection, and no doubt merged into melody at times, much as prose in passages of strong feeling occasionally merges into poetry. The lowest forms of recitative are merely approximations to musical sounds and intervals imitating the inflexions of the voice in speaking: from this there is a gradual rise to the accompanied recitative, of which we have an example of the highest melodious and artistic beauty in the 'Am Abend da es kühle war,' near the end of Bach's Matthäus Passion. In some cases an intermediate form between recitative and tunes or airs is distinguished as an Arioso, of which we have very beautiful examples in Bach's 'Johannes Passion,' and in several of his Cantatas, and in Mendelssohn's 'Elijah.' Moreover we have opportunities of comparing mere declamatory recitative and melody in juxtaposition, as both Bach and Mendelssohn adopted the device of breaking into melody in especially solemn parts of recitative; as in No. 17 of the Matthäus Passion to the words 'Nehmet, esset,' etc., and in Nos. 41 and 44 in 'St. Paul,' near the end of each.

It appears then that recitative and melody overlap. The former, in proportion as it approximates to speech in simple narration or description, tends to be disjointed and unsystematised; and in proportion as it tends, on the other hand, towards being musically expressive in relation to things which are fit to be musically embodied, it becomes melody. In fact the growth of melody out of recitative is by assuming greater regularity and continuity and more appreciable systematisation of groups of rhythms and intervals.

The elements of effect in melody are extremely various and complicated. In the present case it will only be possible to indicate in the slightest manner some of the outlines. In the matter of rhythm there are two things which play a part—the rhythmic qualities of language, and dance rhythms. For example, a language which presents marked contrasts of emphasis in syllables which lie close together will infallibly produce corresponding rhythms in the national music; and though these may often be considerably smoothed out by civilisation and contact with other peoples, no small quantity pass into and are absorbed in the mass of general music, as characteristic Hungarian rhythms have done through the intervention of Haydn, Schubert, Beethoven, and other distinguished composers. [See MAGYAR MUSIC, p. 197.]

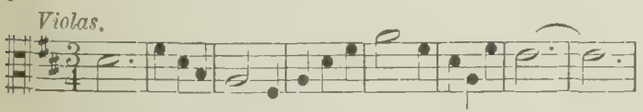
Dance-rhythms play an equally important part, and those rhythms and motions of sound which represent or are the musical counterpart of the more dignified gestures and motions of the body which accompany certain states of feeling, which, with the ancients and some mediæval peoples, formed a beautiful element in dancing, and are still travestied in modern ballets.

In the distribution of the intervals which separate the successive sounds, harmony and harmonic devices appear to have very powerful influence. Even in the times before harmony was a recognised power in music we are often surprised to meet with devices which appear to show a perception of the elements of tonal relationship, which may indicate that a sense of harmony was developing for a great length of time in the human mind before it was definitely recognised by musicians. However, in tunes of barbaric people who have no notion of harmony whatever, passages of melody also occur which to a modern eye look exceedingly like arpeggios or analyses of familiar harmonies: and as it is next to impossible for those who are saturated with the simpler harmonic successions to realise the feelings of people who knew of nothing beyond homophonic or single-toned music, we must conclude that the authors of these tunes had a feeling for the relations of notes to one another, pure and simple, which produced intervals similar to those which we derive from familiar harmonic combinations. Thus we are driven to express their melody in terms of harmony, and to analyse it on that basis: and we are moreover often unavoidably deceived in this, for transcribers of national and ancient tunes, being so habituated to harmonic music and to the scales which have been adopted

for the purposes of harmony, give garbled versions of the originals without being fully aware of it, or possibly thinking that the tunes were wrong and that they were setting them right. And in some cases the tunes are unmercifully twisted into forms of melody to which an harmonic accompaniment may be adjusted, and thereby their value and interest both to the philosopher and to every musician who hears with understanding ears is considerably impaired. [See IRISH MUSIC.]

Modern melody is almost invariably either actually derived from, or representative of, harmony, and is dependent for a great deal of its effect thereupon. In the first place it is immediately representative in one of two ways; either as the upper outline of a series of different chords, and therefore representing changing harmonies; or else by being constructed of different notes taken from the same chord, and therefore representing different phases of permanent harmony. Examples of either of these forms being kept up for any length of time are not very common; of the first the largest number will be found among hymn tunes and other forms of simple note-against-note harmony;—the first phrase of 'Batti batti' approaches it very nearly, and the second subject of the first movement in Beethoven's Waldstein Sonata, or the first four bars of 'Selig sind die Todten' in Spohr's 'Die letzten Dinge' are an exact illustration. Of the second form the first subject of Weber's Sonata in A♭ is a remarkable example:—

since in this no notes foreign to the chord of A♭ are interposed till the penultimate of all. The first subject of the Eroica Symphony in like manner represents the chord of E♭, and its perfectly unadorned simplicity adds force to the unexpected C♯, when it appears, and to its yet more unexpected resolution; the first subject of Brahms's Violin Concerto is a yet further example to the point:—



The simplest variation of these forms is arrived at by the interposition of passing notes between notes which are part of the essential chord or chords, as in the following from 'Cet asile aimable,' in Gluck's 'Orphée.'

The notes with asterisks may all be regarded as passing notes between the notes which represent the harmonies.

This often produces successions of notes which are next to each other in the scale; in other words, progression by single degrees, of which we have magnificent examples in some of the versions of the great subject of the latter part of Beethoven's 9th Symphony, in the first subject of his Violin Concerto, and in the last chorus of Bach's Matthäus Passion. When these passing notes fall on the strong beats of the bar they lead to a new element of melodic effect, both by deferring the essential note of the chord and by lessening the obviousness of its appearance, and by affording one of the many means, with suspensions, appoggiaturas, and the like, of obtaining the slurred group of two notes which is alike characteristic of Bach, Gluck, Mozart, and other great inventors of melody, as in the following example from Mozart's Quartet in D major:—

The use of chromatic preparatory passing notes pushes the harmonic substratum still further out of sight, and gives more zest and interest to the melodic outline; as an example may be taken the following from the 2nd Act of Tristan und Isolde.

Along with these elements of variety there are devices of turns and such embellishments, such as in the beginning of the celebrated tune in Der Freischütz, which Agatha sings in the 2nd scene of the 2nd Act:—

Sequences also, and imitations and anticipations, and all the most elaborate devices of resolution, come into play, such as interpolation of notes between the discordant note and its resolution. Further, there are endless refinements of grouping of phrases, and repetition of rhythms and groups of intervals in condensed forms and in different parts of the scale, which introduce an intellectual element even into the department of pure melody.

Lastly, it may be pointed out that the order and character of the successions of harmony which any special form of melody represents has a great deal to do with its importance. Commonplace tunes represent commonplace and trite successions of harmony in a commonplace way, while melody of a higher order usually represents successions which are in themselves more significant and more freely distributed. The giants of art have produced tunes the melody of which may represent the simplest harmonic successions, but they do it in their own way, and the result is proportionate to their powers and judgment. Unfortunately, the material of the simpler order of melody tends to be exhausted, and a large proportion of new melody has to be constructed on a more complicated basis. To take simple forms is often only to make use of what the great masters rejected; and indeed the old forms by which tunes are constructively defined are growing so hackneyed that their introduction in many cases is a matter for great tact and consideration More subtle means of defining the outlines of these forms are possible, as well as more subtle construction in the periods themselves. The result in both cases will be to give melody an appearance of greater expansion and continuity, which it may perfectly have without being either diffuse or chaotic, except to those who have not sufficient musical gift or cultivation to realise it. In instrumental music there is more need for distinctness in the outline of the subjects than in the music of the drama; but even in that case it may be suggested that a thing may stand out by reason of its own proper individuality quite as well and more artistically than if it is only to be distinguished from its surroundings by having a heavy blank line round it. Melody will always be one of the most important factors in the musical art, but it has gone through different phases, and will go through more. Some insight into its direction may be gained by examination of existing examples, and comparison of average characters at different periods of the history of music, but every fresh great composer who comes is sure to be ahead of our calculations, and if he rings true will tell us things that are not dreamed of in our philosophy. [C.H.H.P.]

MELOPHONIC SOCIETY, THE. Established 1837, 'for the practice of the most classical specimens of choral and other music,' by band and choir, under the management of J. H. Griesbach, H. Westrop, J. Surman, and H. J. Banister. The first performance, on Nov. 23, 1837, at Wornum's Music Hall, Store Street, was the Creation, followed during the season by Beethoven's Mass in C, Romberg's Ode 'The Transient and the Eternal,' Judas Maccabæus, and St. Paul. In subsequent years the programmes comprised works of smaller dimensions, including Beethoven's Choral Fantasia. [C.M.]

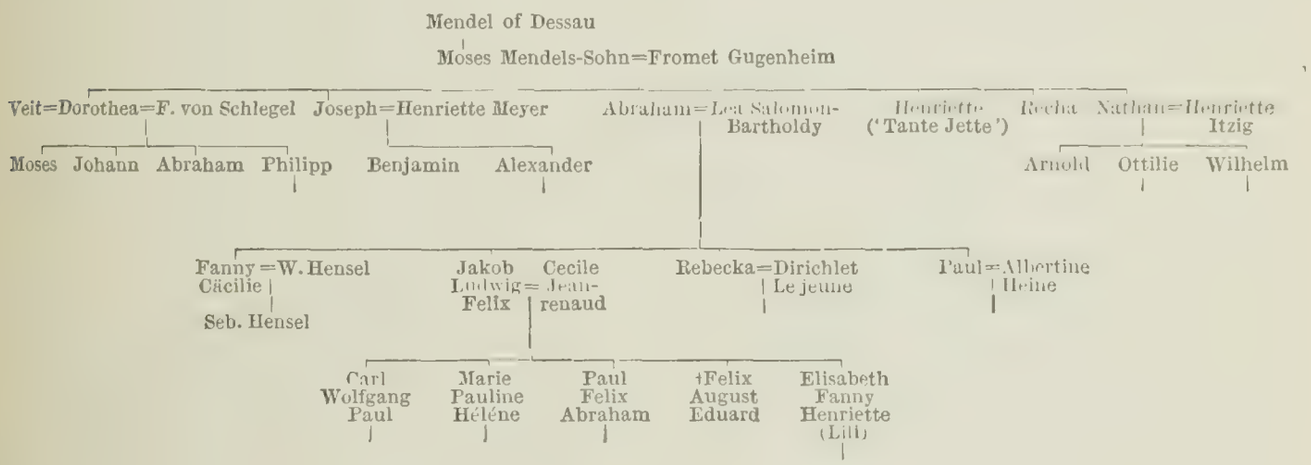
MELOPIANO. A grand piano with a *sostinente* attachment, the invention of Signor Caldera, applied in England by Messrs. Kirkman & Son, who have secured the sole right to use it here, and have made several instruments with it. The principle is original, the apparently sustained sounds being produced by reiterated blows of small hammers placed nearer the wrestplank bridge than the striking-place of the ordinary hammers, and suspended by a bar above and crossing the strings. The bar is kept in tremulous motion by means of a fly-wheel and pedal which the player has to keep going. These additional hammers would cause a continuous sound were it not for the dampers of the ordinary action which govern by simple string communication the checks that keep them still. Pressing down the keys the dampers rise and the checks are withdrawn. A crescendo to the sostinente is obtained by a knee movement which raises the transverse bar, directs the little hammers into closer proximity with the strings, and strengthens their blow. The quick repetition deceives and at the same time flatters the ear by a peculiar charm of *timbre* inherent in steel wire when the sounds can be prolonged. The ordinary hammers are controlled by the performer as usual, and may be accompanied by the attachment, or the damper pedal may be used, for which due provision is made. It will be observed that the Melopiano has a special expression for which special music will no doubt be written or improvised. The cost of the application of this ingenious invention is about 30 guineas. [A.J.H.]

MELUSINE. 'To the legend of the lovely Melusine' is the title of an overture of Mendelssohn's for orchestra, completed at Düsseldorf, November 14, 1833, first performed there in the following July, and published as op. 32, the 4th of the Concert Overtures. In the autograph Mendelssohn spells the name with an *a*—'Melusin*a*.' [G.]

MENDEL, Hermann, editor of the largest and most comprehensive dictionary of music that has yet appeared, born at Halle, Aug. 6, 1834. He studied music with energy in Leipzig and Berlin. From 1862 to 68 he carried on a music business in the latter city, and at the same time wrote in various musical periodicals and took an active part in music generally. His lives of Meyerbeer and Otto Nicolai have been published separately. In 1870 Mendel started the work already mentioned—'Musikalisches Conversations Lexikon'—with the help of a large and distinguished staff of writers. He died on Oct. 26, 1876, and the Lexicon has been since completed in 8 vols. under the editorship of Dr. Reissmann. [G.]

MENDELSSOHN.[1] JAKOB LUDWIG FELIX MENDELSSOHN-BARTHOLDY was born at Hamburg, in the Grosse Michaelisstrasse No. 14,[2] Friday, Feb. 3, 1809. *That* was at all events a lucky Friday. The family was already well known from Moses Mendelssohn, the grandfather of Felix, 'The Modern Plato,' whose 'Phädon,' a dialogue upon the immortality of the soul, based on the Phædo of Plato, was translated, long before the birth of his illustrious grandson, into almost every European[3] (and at least one Asiatic) language. Moses was the son of Mendel, a poor Jewish schoolmaster of Dessau, on the Elbe, and was born there Sept. 6, 1729. The name Mendelssohn, *i.e.* 'son of Mendel,' is the ordinary Jewish, oriental, way of forming a name. Moses migrated at 14 years old to Berlin, settled there in 1762, married Fromet, daughter of Abraham Gugenheim, of Hamburg, had 6 children, 3 sons and 3 daughters, published his Phädon at Berlin in 1767, and died there Jan. 4, 1786. He was a small humpbacked man with a keen eager face, bright eyes, and a humorous mouth. The first peculiarity was traceable in his grandchild Fanny, and the bright eyes were one of Felix's most noticeable characteristics. After the death of Moses his widow left Berlin with Joseph, the eldest son, and returned to her native city.

Abraham, the second son, born Dec. 11, 1776, went to Paris, and in 1803 was cashier to Fould's bank there. In 1804 he resigned this post and went into partnership with his elder brother Joseph; married Dec. 26, 1804, Lea Salomon (born March 15, 1777), of a Jewish family in Berlin, and settled in Hamburg, carrying on his business at the house above mentioned, and having also a house out of town called 'Marten's Mühle.' He remained in Hamburg till 1811, and there were born to him Fanny Cäcilie (Nov. 14, 1805), Jakob Ludwig Felix (Feb. 3, 1809), and Rebecka (April 11, 1811). During the French occupation of Hamburg, life



became intolerable, and shortly after Rebecka's birth the whole family escaped in disguise to Berlin, where they started the eminent banking-house, and lived in a large house on the Neue Promenade, in the N.E. quarter of the town, a broad open street or place between the Spree and the Haacksche Markt, with houses on one side only, the other side lying open to a canal with trees, a sufficiently retired spot as late as 1820 for Felix and his friends to play in front of it.[4] There, ten days after the battle of Leipzig, Abraham's second son and youngest child Paul was born (Oct. 30, 1813). The daughters of Moses Mendelssohn, Dorothea and Henriette, became Catholics. Dorothea married Friedrich von Schlegel, and Henriette was governess to the only daughter of General Sebastiani, afterwards (1847) so unfortunate as the Duchesse de Praslin. The sons remained Jews, but at length Abraham saw that the change was inevitable, and decided[5] to have his children baptised and brought up as Protestant Christians. This decision was taken on the advice and example of his wife's brother, Salomon Bartholdy, to whom also is due the adoption of the name Bartholdy. He himself had taken it, and he urged it on his brother-in-law as a means of distinction from the rest of the family. Salomon was a man of mark. He resided in Rome for some time as Prussian Consul-General; had his villa (Casa Bartholdy) decorated with frescoes,[6] by Veit, Schadow, Cornelius, Overbeck, and Schnorr, collected objects of art, and died there in 1827, leaving his fortune to his sister Lea. He was cast off by his mother

[1] N.B. The following abbreviations are used for the references in this article:—F.M.='Die Familie Mendelssohn,' Berlin 1879; Dev.='Devrient's Recollections,' London 1869; L. i.=Letters from Italy and Switzerland—'Reisebriefe'; L. ii.=Letters from 1833 to 47. When the original is referred to the title 'Briefe,' i. or ii. is used; H.=Hiller's Mendelssohn, London 1874; G. & M.=Goethe and Mendelssohn, 2nd ed., London 1874; B.=Benedict's Sketch, London 1853; Mos.=Moscheles's Life. London 1873; C.=Chorley's Life, London 1873; P.=Polko's Reminiscences, London 1869; Sch.=Schubring's Erinnerungen, in 'Daheim,' 1866, No. 26; C.E.H.=C. E. Horsley's Reminiscences, in 'The Choir' for Jan. and Feb. 1873; Dorn=Recollections of Mendelssohn and his friends by Dr. Heinrich Dorn, in 'Temple Bar' for Feb. 1872; A.M.Z.='Allgemeine musikalische Zeitung' (Leipzig); N.M.Z. 'Neue musikalische Zeitung,' Schumann's paper (Leipzig).

[2] Ferdinand David, destined to become so great a friend of Mendelssohn's, was born in the same house the year after. The house is at the corner of the Brunnenstrasse, and is now, through the affectionate care of Mr. and Madame Otto Goldschmidt, decorated with a memorial tablet over the front door.

[3] Dutch (Hague 1769); French, 2 versions (Paris 1772, Berlin 1772); Italian, 2 do. (Chur 1773, Parma 1800); Danish (Copenhagen 1779); Hebrew (Berlin 1786); English (London 1789); also Russian, Polish, and Hungarian. It is a curious evidence of the slowness with which music penetrates into literary circles in England, that the excellent article on Moses Mendelssohn in the Penny Cyclopædia, from which the words in the text are quoted, though published in 1839, makes no mention of Felix, though he had then been four times in this country. The Phädon attracted the notice of no less a person than Mirabeau—'Sur M. Mendelssohn,' etc., London 1787.

[6] Felix's letter, Feb. 1, 1831; Fanny's do., F.M. ii. 127.

for his conversion, and was only reconciled long after at the entreaty of [1]Fanny. At a later date Abraham and Lea were received into the Christian Church at Frankfort, and Lea took the additional names of Felicia Paulina, from her sons.

Abraham Mendelssohn was accustomed to describe his position in life by saying 'formerly[2] I was the son of my father, now I am the father of my [3] son.' But though not so prominent as either, he was a man of strong character, wise judgment, and very remarkable ability. These qualities are strikingly obvious in the success of his method for the education of his children, and in the few of his letters[4] which are published; and they are testified to in a very remarkable manner by his son in many passages of his letters, and in the thorough deference which he always pays to the judgment of his father, not only on matters relating to the conduct of life, but on points of art. Though not, like Leopold Mozart, a technical musician, and apparently having no acquaintance with the art, he had yet an insight into it which many musicians might envy. 'I am often,' says his son, 'quite unable to understand how it is possible to have so accurate a judgment about music without being a technical musician, and if I could only say what I feel in the same clear and intelligent manner that you always do, I would certainly never make another confused speech as long as I live.'[5] Or again, this time after his death, 'not only my father, but . . . my teacher both in art and in life.'[6]

Though apparently cold in his manners, and somewhat stern in his tone, and towards the end perhaps unduly irritable, Abraham Mendelssohn was greatly beloved by his wife and children. Felix, in particular, is described by the latest biographer[7] as 'enthusiastically, almost fanatically, fond of him,' and the letters show how close was the confidence which existed between them. Hardly less remarkable was the mother. She was one of those rare persons whose influence seems to be almost in proportion to the absence of any attempt to exert it. Hiller, when a boy, saw her once, and the impression made upon him by the power of her quiet kindness and gentleness remained[8] fresh in his mind after more than half a century. When her house was thronged with the intellect and wit of Berlin, she was the centre of the circle and the leader of the conversation.[9] Her letters, of which large numbers exist in manuscript, are full of cleverness and character. The education of her children was her great object in life. She was strict—we may now think [10] over strict; but no one who looks at the result in the character of her children can say that her method was not a wise one. They loved her dearly to the end, and the last letters which Felix wrote to her are full of an overflowing tenderness and a natural confidential intimacy which nothing can surpass. Calm and reserved like her husband, she was full of feeling, and had on occasion bursts of passion. Felix's intention to leave Berlin affected her to a 'terrible' degree—a degree which surprised him. He confesses that his yielding to the wishes of the King, after having made up his mind to retire, was due solely to her. 'You think that in my official position I *could* do nothing else. It was not that. It was my mother.'[11]

How far she was herself a pianoforte-player we are not told, but the remark which she made after Fanny's birth, 'that the child had got Bach-fugue fingers,' shows that she knew a good deal about the matter. We learn also [12] that she herself for some time taught the two eldest children music, beginning with lessons five minutes long, and gradually increasing the time until they went through a regular course of instruction. For many years Felix and Fanny never practised or played without the mother sitting by them, knitting in hand.

Felix was scarcely three when his family escaped to Berlin. The first definite event of which we hear after this is a visit to Paris by Joseph and Abraham in 1816, for the liquidation of the indemnity to be paid by France to Prussia on account of the war. Abraham took his family with him, and Felix and Fanny, then 7 and 11 respectively, were taught the piano by Madame Bigot, a remarkable musician, and apparently an excellent teacher. She was the daughter of a Madame Kiéné, and in 1816 was 30 years old. Miniatures of the four children were taken during this visit, which are still in existence. Soon after their return from Paris to the grandmother's house at the Neue Promenade, where the family still lived, the children's education seems to have begun systematically. Heyse[13] was their tutor for general subjects, Ludwig Berger for the piano, Zelter for thorough bass and composition, Henning for the violin, and Rösel for landscape. Greek Felix learned with Rebecka, two years his junior, and advanced as far as Æschylus.[14] On Oct. 24, 1818, he made his first appearance in public at a concert given by a certain Herr Gugel, in which he played the pianoforte part of a Trio for P. F. and 2 Horns by Woelfl, and was much [15] applauded. The children were kept very closely to their lessons, and Felix is remembered in after-life to have said how much they enjoyed the Sundays, because then they were not forced to get up at 5 o'clock to work. Early in his 11th year, on April 11, 1819, he entered the singing class of the Singakademie as an alto, for the Friday practisings. There and elsewhere 'he took his place,' says Devrient,[16] 'amongst the grown people in his child's suit, a tight-fitting jacket

cut very low at the neck, and with full trowsers buttoned over it. Into the slanting pockets of these he liked to thrust his hands, rocking his curly head (he had long brown curls) from side to side, and shifting restlessly from one foot to the other.'

With 1820, that is to say with his 12th year, Felix seems to have begun systematically to compose; at least with that year begins the invaluable series of 44 volumes, in which Mendelssohn's methodical habits have preserved a collection of autographs or copies of a great part of his works, published and unpublished, down to the time of his death, the majority carefully inscribed with both date and place—which are now deposited in the Imperial Library at Berlin.

To the year 1820 are attributable between 50 and 60 movements, including amongst them a Trio for P.F. and strings (3 movements); a Sonata for P.F. and Violin in F (3 do.); 2 movements for the same in D minor; 2 full Sonatas for P.F. solo; the beginning of a 3rd in G minor, finished the next year, and published in 1868 (as op. 105); 6 pieces for P.F. solo; 3 do. for do., 4 hands; 4 pieces for Organ; 3 songs for single voice; 2 do. for 4 men's voices; a Cantata, 'In rührend feierlichen Tönen'; and a Lustspiel, or little comedy, for Voices and P.F. in 3 scenes, beginning 'Ich Felix Mendelssohn.' The earliest date is that to the cantata—Jan. 13, 1820. The extraordinary neatness and finish, which characterise Mendelssohn's MSS. to the end, are observable in the earliest of these childish productions, and the mysterious letters L. e. g. G. or H. d. m., so familiar to those who know his latest scores, are usually at the head of each.

Among the pieces for 1821 are 5 sinfonies for string quartet, each in 3 movements; 9 fugues for ditto; the completion of the G minor P.F. Sonata (op. 105); motets for 4 voices; a couple of songs; a couple of études for P.F. solo; 2 one-act operas, 'Soldatenliebschaft' and 'Die beiden [1]Pädagogen'; and half a third, 'Die wandernde Comödianten.' This was the year of his acquaintance with Weber, then in Berlin for the production of Freischütz, and of an enthusiasm on the part of the boy for that romantic composer which he never [2]lost. This too was the year of his first visit to Goethe. Zelter took his pupil to Weimar in November, and they passed sixteen days under the old poet's roof.[3]

The same incessant and varied production marks 1822 and 1823. In the summer of 1822 the whole family made a tour in Switzerland. Starting on July 6, they went by Cassel (for Spohr), Frankfort, Darmstadt, Schaffhausen, Amsteg, Interlachen, Vevey, and Chamounix; a large and merry party of ten, besides servants. The tour was taken at great leisure, and on the return two important halts were made—first at Frankfort, to make the acquaintance of Schelble, the conductor of the famous Cäcilien-Verein, whom Felix astonished by extemporising on Bach's motets; and at Weimar, for a second visit to Goethe.[4]

At Secheron, near Geneva, 2 songs were written (Sept. 18); and the Pianoforte Quartet in C minor, afterwards published as op. 1, was begun to be put on paper (the autograph being marked 'Begun at Secheron 20 Sept., 1822'), and was finished after the return home. Besides this, the records of these two years (1822 and 23) contain 6 more symphonies, Nos. 7, 8, 9, 10, 11, 12; 5 detached pieces for strings; 5 concertos for solo instruments with quartet accompaniment, viz. 1 for Violin solo, 1 for P.F. solo, 1 for P.F. and Violin, and 2 for two P.F.s; 2 quartets for P.F. and strings, viz. in C minor (op. 1) and in F minor (op. 2); sonatas for P.F. and Violin (op. 4) and for P.F. and Viola (MS.); a fantasia and 3 other pieces for the Organ; a fugue and fantasia for P.F.; a Kyrie for two choirs; a psalm, 3 songs, a piece for contralto solo and strings in 3 movements to Italian text (No. 167), 2 songs for men's voices, and the completion of the fourth opera, 'Die beiden Neffen,' or 'Der Onkel aus Boston,' which was a full-grown piece in three acts. The symphonies show a similar advance. They are in four movements instead of three, as before, and the length of the movements increases. No. 8, in D, written Nov. 6—Nov. 27, after the return from Switzerland, has an *Adagio e grave* before the opening Allegro. The slow movement is for 3 violas and bass, and the finale has a prominent part for the cello. This symphony must have pleased the composer or some of his audience in whose judgment he believed, since within a month he began to rescore it for full orchestra. He wrote a new trio for the minuet, and in this form it became Symphony No. 9. The three last of the six are for quintet, and the scherzos of Nos. 10 and 12 are founded on Swiss tunes, in No. 12 with the addition of triangles, cymbals, and drums. The independent cello part is conspicuous throughout. This advance in his music is in keeping with the change going on in Felix himself. He was now nearly 15, was growing fast,[5] his features and his expression were altering and maturing, his hair was cut short,[6] and he was put into jackets and trowsers. His extemporising—which he had begun to practise early in 1821[7]—was already remarkable,[8] and there was a dash of audacity in it hardly characteristic of the mature man. Thus Goethe wished to hear a certain fugue of Bach's, and as Felix could not remember it all, he developed it himself at great length, which he would hardly have done later[9].

In 1822 he made a second appearance in public of a more serious nature than before, viz. on March 31, at a concert of Aloys Schmitt's, in which he played with Schmitt a duet of Dussek's for 2 pianos; and on Dec. 5 he again appeared at a concert of Anna Milder's, in a

P.F. concerto of his own, probably that in A minor with quintet accompaniment.[1]

It must not be supposed that the symphonies, operas, quartets, concertos, and other works mentioned were written for exercise only. It had been the custom in the Mendelssohn house for some time past to have musical parties on alternate Sunday mornings, with a small orchestra, in the large dining-room of the house, and the programmes included one or more of Felix's compositions. As a rule the pianoforte part was taken by himself or Fanny, or both, while Rebecka sang, and Paul played[2] the cello. But Felix always conducted, even when so small as to have to stand on a stool to be seen; and thus enjoyed the benefit not only of hearing his compositions played (a benefit for which less fortunate composers—Schubert, for example—have sighed in vain) but of the practice in conducting and in playing before an audience.[3] The size of the room was not sufficient for a large audience, but on these occasions it was always full, and few musicians of note passed through Berlin without being present.[4] In performing the operettas and operas, no attempt was made to act them. The characters were distributed as far as the music went, but the dialogue was read out from the piano, and the chorus sat round the dining-table. Zelter, in strong contrast to his usual habit of impartial[5] neglect of his pupils, was not only regularly there, but would criticise the piece at the close of the performance, and if he often praised would sometimes blame. The comments of his hearers however were received by Felix with perfect simplicity. Devrient has well described how entirely the music itself was his aim, and how completely subordinated were self-consciousness and vanity to the desire of learning, testing, and progressing in his art. These Sunday performances, however, were only one feature of the artistic and intellectual life of the house. Music went on every evening more or less, theatricals, impromptu or studied, were often got up, and there was a constant flux and reflux of young, clever, distinguished people, who made the suppers delightfully gay and noisy, and among whom Felix was the favourite.

The full rehearsal of his fourth opera, 'Die beiden Neffen,' on his birthday, Feb. 3, 1824, was an event in the boy's life. At supper, after the conclusion of the work, Zelter, adopting freemason phraseology, raised him from the grade of 'apprentice,' and pronounced him an 'assistant,' 'in the name of Mozart, and of Haydn, and of old Bach.'[6] A great incentive to his progress had been given shortly before this in the score of Bach's Passion, copied by Zelter's express permission from the MS. in the Singakademie, and given him by his grandmother at Christmas, 1823. The copy was made by Eduard Rietz,[7] who had succeeded Henning as his violin teacher, and to whom he was deeply attached. His confirmation took place about this date, under Wilmsen, a well-known clergyman of Berlin. Preparation for confirmation in Germany is often a long and severe process, and though it may not[8] in Felix's case have led to any increase in church-going, as it probably would in that of an English lad similarly situated, yet we may be sure that it deepened that natural religious feeling which was so strong an element in the foundation of his character.

In the compositions of 1824 there is a great advance. The Symphony in C minor (op. 11)—which we know as 'No. I,' but which on the autograph in the library of the Philharmonic Society is marked 'No. XIII'—was composed between March 3 and 31. The Sestet for P.F. and strings (op. 110), the Quartet in B minor[9] (op. 3), a fantasia for 4 hands on the P.F., and a motet in 5 nos., are all amongst the works of this year. An important event in the summer of 1824 was a visit of the father, Felix, and Rebecka, to Dobberan, a bathing place on the shores of the Baltic near Rostock. For the wind-band at the bath-establishment Felix wrote an overture, which he afterwards scored for a full military band and published as Op. 24. But the chief result of the visit was that he there for the first time saw the sea, and received those impressions and images which afterwards found their tangible shape in the Meeresstille Overture.

Among the great artists who came into contact with Felix at this time was Moscheles, then on his way from Vienna to Paris and London. He was already famous as a player, and Madame Mendelssohn calls him 'the prince of pianists.' He remained in Berlin for six weeks in November and December, 1824, and was almost daily at the Mendelssohns'; and after a time, at the urgent request of the parents, and with great hesitation on his own part, gave Felix regular lessons on the pianoforte every other day. Moscheles was now just turned thirty. It is pleasant to read of his unfeigned love and admiration for Felix and his home—'a family such as I have never known before; Felix a mature artist, and yet but fifteen; Fanny extraordinarily gifted, playing Bach's fugues by heart and with astonishing correctness—in fact, a thorough musician. The parents give me the impression of people of the highest cultivation. They are very far from being over-proud of their children; indeed, they are in anxiety about Felix's future, whether his gifts are lasting, and will lead to a solid, permanent future, or whether he may not suddenly collapse, like so many other gifted children.' 'He has no need of lessons; if he wishes to take a hint from me as to anything new to him, he can easily do so.' Such remarks as these do honour to all concerned, and it is delightful to

[3] It seems that he accompanied the quartet symphonies on the piano. Dorn, in his Recollections, expressly says so, and the slow movement of the Symphony No. 10 contains a note in Mendelssohn's own writing, 'Das Klavier mit dem Basse,' which seems to prove it. The practice therefore did not end with last century, as has been supposed (On the growth of the Modern Orchestra, Mus. Association 1878-9, p. 37). Indeed, as we shall see, Mendelssohn conducted from the Piano at the Philharmonic in 1829.

[7] Or Ritz, as Mendelssohn always spells it. He seems to have been on the whole Felix's most intimate early friend.

[8] Sch. 375. [9] Finished Jan. 18, 1825.

find Mendelssohn years afterwards, in the full glory of his great fame, referring to these very lessons as having fanned the sacred fire within him and urged him on to [1]enthusiasm.

Moscheles has preserved two of the Sunday morning programmes :—

'Nov. 28. Morning music at the Mendelssohn's :—Felix's C minor Quartet ; D major Symphony ; Concerto by Bach (Fanny) ; Duet for 2 pianos in D minor, Arnold.'

'Dec. 12. Sunday music at Mendelssohn's :—Felix's F minor Quartet. I played my Duet for 2 Pianos in G. Little Schilling played Hummel's Trio in G.'

Moscheles was followed by Spohr, who came to superintend the production of his 'Jessonda' (Feb. 14, 1825). He was often at the house, and on very intimate [2]terms, though he does not mention the fact in his Autobiography.

One or two accounts by competent judges of Felix's style of playing at this time have survived. Hiller was with him in Frankfort in the spring of 1825, and [3]speaks both of his extemporising, and of his playing the music of others. With the latter he delighted both Hiller and André (who relished neither his face, his ideas, nor his manners) by playing the *Allegretto* of Beethoven's 7th Symphony in such a 'powerful orchestral style' as fairly to stop André's mouth. With the former he carried Hiller away by extemporising on Handel's choruses in 'Judas,' as he had done Schelble, in the same room, three years before, on subjects from Bach's motets. This time his playing was quite in the vein of his subject, 'the figures thoroughly Handelian, the force and clearness of the passages in thirds and sixths and octaves really grand, and yet all belonging to the subject-matter, thoroughly true, genuine, living music, with no trace of display.' Dorn is more explicit as to his accompanying—the duet in Fidelio. 'He astonished me in the passage, Du wieder nun in meinen Armen, Gott! by the way in which he represented the cello and the basso parts on the piano, playing them two octaves apart. I asked him why he chose that striking way of rendering the passage, and he explained it all to me in the kindest manner. How many times since, says Dorn, has that duet been sung, but how seldom has it been so [4]accompanied!' He rarely played from book, either at this or any other time of his life. Even works like Beethoven's 9th Symphony, and the Sonata in B♭ (op. 106), he knew [5]by heart. One of the grounds of Spontini's enmity to him is said to have been a performance of the 9th Symphony by Felix, without book, before Spontini himself had even heard it, and it is known on the best authority that he played the Symphony through by heart only a few months before his death. Here we may say that he had a passion for Beethoven's latest works, his acquaintance with which dated from their publication, Beethoven's last years (1820–27) exactly corresponding with his own growth to maturity. It was almost the only subject on which he disagreed with his [6]father. On the other hand, the devotion of such very conservative artists as David, Rietz, and Bennett, to those works, is most probably due to Mendelssohn's influence. Marx [7]challenges his reading of Beethoven ; but this is to fly in the face of the judgment of all other critics.

The elder Mendelssohn made at this time a journey to Paris, for the purpose of fetching his sister Henriette back to Germany, and took Felix with him. They arrived on March 22. One of the first things he mentions is the astonishment of his relatives at finding him no longer a [8]child. He plunged at once into musical society. Hummel, Onslow, Boucher, Herz, Halévy, Kalkbrenner, Moscheles (on his way back from Hamburg to London, with his bride), Pixis, Rode, Baillot, Kreutzer, Rossini, Paer, Meyerbeer, Plantade, and many more, were there, and all glad to make acquaintance with the wonderful boy. At Madame Kiéné's—Madame Bigot's mother—he played his new Quartet (in B minor) with Baillot and others, and with the greatest success.

The French musicians, however, made but a bad impression on him. Partly, no doubt, this is exaggerated in his letters, as in his criticism on Auber's [9]Leocadie ; but the ignorance of German music—even [10]Onslow, for example, had never heard a note of Fidelio—and the insults to some of its masterpieces (such as the transformation of Freischütz into 'Robin des [11]Bois,' and the comparison of a passage in Bach to a duet of Monsigny), and the general devotion to effect and outside glitter—these were just the things to enrage the lad at that enthusiastic age. With Cherubini their intercourse was very satisfactory. The old Florentine was more than civil to Felix, and his expressions of satisfaction (so very rare in his mouth) must have given the father the encouragement which he was so [12]slow to take in the great future of his boy. Felix describes him in a few words as 'an extinct volcano, now and then blazing up, but all covered with ashes and stones.' He wrote a Kyrie '*a 5 voci* and *grandissimo* orchestra' at [13]Cherubini's instance, which he describes as 'bigger than anything he had yet [14]done.' It seems to have been lost. Through all this the letters home are as many as ever, full of music, descriptions, and jokes—often very bad ones. Here, for instance, is a good professional query, 'Ask Ritz if he knows what *Fes moll* is.'

On May 19, 1825, the father and son left Paris with Henriette ('Tante Jette'), who had retired from her post at General Sebastiani's with an ample pension, and thenceforward resided at Berlin. On the road home they paid a short

[12] Marx (Errin. ii. 113, 114) says that the father's hesitation as to his son's future was so great, that, even to a late date, he constantly urged him to go into business. He believed that his son had no genius for music, and that it was all the happier for him that he had not.
[13] Zelter's Letters, iv. 35 ; G. & M. 49.
[14] 'An Dickigkeit alles übertrifft.'

visit (the third) to Goethe, at Weimar. Felix played the B minor Quartet, and delighted the poet by dedicating it to [1]him. It is a marvellous work for a boy of sixteen, and an enormous advance on either of its two predecessors; but probably no one—not even the composer—suspected that the Scherzo (in F♯ minor, 3-8) was to be the first of a 'family of scherzi which, if he had produced nothing else, would stamp him as an inventor in the most emphatic signification of the word.' It must be admitted that Goethe made him a very poor return for his charming music. Anything more stiff and ungraceful than the verses which he wrote for him, and which are given in 'Goethe and Mendelssohn,' it would be difficult to find, unless it be another stanza, also addressed to Felix, and printed in vol. vi. p. 144 of the poet's works :—

Wenn das Talent verständig waltet,	If Talent reigns with Wisdom great,
Wirksame Tugend nie veraltet.	Virtue is never out of date.
Wer Menschen gründlich konnt' erfreun,	He who can give us pleasure true
Der darf sich vor der Zeit nicht scheun;	Need never fear what Time can do;
Und möchtet ihr ihm Beifall geben,	And will you Talent your approval give?
So gebt ihn uns, die wir ihn frisch beleben.	Then give it us who make her newly live.

They were at home before the end of May. The fiery Capriccio for P.F. in F♯ minor (afterwards published as op. 5), so full of the spirit of Bach, is dated July 23 of this year, and the score of Camacho's wedding—an opera in two acts by Klingemann, founded on an episode in Don Quixote—Aug. 10. The Capriccio was a great favourite with him, and he called it *un absurdité*.

The Mendelssohn-Bartholdy family was beginning to outgrow the accommodation afforded by the grandmother's roof, and at the end of this summer they removed from No. 7 Neue Promenade to a large house and grounds which had formerly belonged to the noble family of Reck, namely to No. 3 of the Leipziger Strasse, the address so familiar to all readers of Felix's subsequent letters. If we were writing the life of an ancient prophet or poet, we should take the name of the 'Leipzig Road' as a prediction of his ultimate establishment in that town; but no token of such an event was visible at the time. The new residence lay in a part of Berlin which was then very remote, close to the Potsdam Gate, on the edge of the old Thiergarten, or deer-park, of Frederick the Great, so far from all the accustomed haunts of their friends, that at first the laments were loud. The house was of a dignified, old-fashioned kind, with spacious and lofty rooms; behind it a large court with offices, and behind that again a beautiful stretch of ground, half park, half garden, with noble trees, lilacs, and other flowering shrubs, turf, alleys, walks, banks, summer-houses, and seats—the whole running far back, covering about ten acres, and being virtually in the country. Its advantages for music were great. The house itself contained a room precisely fitted for large music parties or private theatricals; and at the back of the court, and dividing it from the garden, there was a separate building called the 'Gartenhaus,' the middle of which formed a hall capable of containing several hundred persons, with glass doors opening right on to the lawns and alleys—in short a perfect place for the Sunday music. Though not without its drawbacks in winter—reminding one in Mr. Hensel's almost pathetic [2]description of the normal condition of too many an English house—it was an ideal summer home, and '3, Leipziger Strasse' is in Mendelssohn's mouth a personality, to which he always turned with longing, and which he loved as much as he hated the rest of Berlin. It was identified with the Mendelssohn-Bartholdys till his death, after which it was sold to the state; and the Herrenhaus, or House of Lords of the German government, now stands on the site of the former court and Gartenhaus.[3]

Devrient [4]takes the completion of Camacho and the leaving the grandmother's house as the last acts of Felix's musical minority; and he is hardly wrong, for the next composition was a wonderful leap into maturity. It was no other than the Octet for strings (afterwards published as op. 20), which was finished towards the end of October 1825, and was dedicated as a birthday gift to Edward Ritz. It is the first of his works which can be said to have fully maintained its ground on its own [5]merits, and is a truly astonishing composition for a boy half-way through his 17th year. There is a radiance, a freedom, and an individuality in the style which are far ahead of the 13th Symphony, or any other of the previous instrumental works, and it is steeped throughout in that inexpressible captivating charm which is so remarkable in all Mendelssohn's best compositions. The Scherzo especially (G minor, 2-4) is a movement of extraordinary lightness and grace, and the Finale, besides being a masterly piece of counterpoint (it is a fugue), contains in the introduction of the subject of the scherzo a very early instance of the 'transformation of themes,' of which we have lately heard so much. Felix had confided to [6]Fanny that his motto for the scherzo was the following stanza in the Intermezzo of Faust :—

Orchestra.—*pianissimo.*

Wolkenzug und Nebelflor	Floating cloud and trailing mist
Erhellen sich von oben;	Bright'ning o'er us hover;
Luft im Laub, und Wind im Rohr,	Airs stir the brake, the rushes shake—
—Und alles ist zerstoben.	And all their pomp is over.

and never was a motto more perfectly carried out in execution. The whole of the last part, so light and airy—and the end, in particular, where the fiddles run softly up to the high G, accompanied only with staccato chords—is a perfect illustration of 'alles ist zerstoben.' He afterwards instrumented it for the full orchestra, but it is hard to say if it is improved by the process.—The

[3] The large yew-tree which stood close outside the Gartenhaus and was endangered by the extension of the new building, was preserved by the special order of the Emperor, and is still (1879) vigorous, and as gloomy as a yew should be.

[4] Dev. 20.

[5] It was played 14 times at the Monday Popular Concerts between 1859 and 1878.

[6] F.M. i. 154.

so-called Trumpet Overture, in C (op. 101), was almost certainly composed this autumn, and was first heard at a concert given by Maurer, in Berlin, on [1]Nov. 2, at which Felix played the P.F. part of Beethoven's Choral Fantasia. This overture was a special favourite of Abraham Mendelssohn's, who said that he should like to hear it while he died. It was for long in MS. in the hands of the Philharmonic Society, and was not published till many years after the death of the composer. 1826 opens with the String [2]Quintet in A (op. 18), which if not perhaps so great as the Octet, is certainly on the same side of the line, and the scherzo of which, in fugue-form, is a worthy companion to its predecessors. The Sonata in E (op. 6) is of this date (March 22, 1826). So is an interesting looking Andante and Allegro (June 27), written for the wind-band of a Beer-garden which he used to pass on the way to bathe; the MS. is safe in the hands of Dr. Paul Mendelssohn-Bartholdy.

But all these were surpassed by the Overture to 'A Midsummer Night's Dream,' which was composed during the peculiarly fine summer of 1826, under the charming conditions of life in the new [3]garden, and the score of which is signed 'Berlin, Aug. 6, 1826.' It appears to have been the immediate result of a closer acquaintance with Shakspeare, through the medium of Schlegel and Tieck's version, which he and his sisters read this year for the first time. Marx claims to have been much [4]consulted during its progress, and even to have suggested essential modifications. Fanny also no doubt was in this, as in other instances, her brother's confidante, but the result must have astonished even the fondest wishes of those who knew him best. It is asserted by [5]one who has the best right to judge, and is not prone to exaggeration, 'that no one piece of music contains so many points of harmony and orchestration that had never been written before; and yet none of them have the air of experiment, but seem all to have been written with certainty of their success.' In this wonderful overture, as in the Octet and Quintet, the airy fairy lightness, and the peculiar youthful grace, are not less remarkable than the strength of construction and solidity of workmanship which underlie and support them. Not the least singular thing about it is the exact manner in which it is found to fit into the music for the whole play when that music was composed 17 years later. The *motives* of the overture all turn out to have their native places in the [6]drama. After many a performance as a duet on the piano, the overture was played by an orchestra in the Mendelssohns' garden-house, to a crowded audience, and its first production in public seems to have been at Stettin, in Feb. 1827, whither Felix went in very severe weather to conduct [7]it. With the composition of this work he may be said to have taken his final musical degree, and his lessons with Zelter were discontinued.

Camacho had been submitted to Spontini as General-Music-Director in the preceding year by Felix himself. Spontini was then, by an odd freak of fortune, living in a house which had for some time been occupied by the Mendelssohns in the early part of their residence in Berlin, viz. 28 Markgrafen Strasse, opposite the Catholic church. Taking the young composer by the arm, Spontini led him to the window, and pointing to the dome across the street, said, 'Mon ami, il vous faut des idées grandes comme cette [8]coupole.' This from a man of 52, in the highest position, to a boy of 17, could hardly have been meant for anything but kindly, though pompous, advice. But it was not so taken. The Mendelssohns and Spontini were not only of radically different natures, but they belonged to opposite parties in music, and there was considerable friction in their intercourse. At length, early in 1827, after various obstructions on Spontini's part, the opera was given out for rehearsal and study, and on April 29 was produced. The house—not the Opera, but the smaller theatre—was crowded with friends, and the applause vehement; at the end the composer was loudly called for, but he had left the theatre, and Devrient had to appear in his stead. Owing to the illness of Blum, the tenor, the second performance was postponed, and the piece was never again brought forward. Partly from the many curious obstructions which arose in the course of the rehearsals, and the personal criticisms which followed it, partly perhaps from a just feeling that the libretto was poor and his music somewhat exaggerated, but mainly no doubt from the fact that during two such progressive years as had passed since he wrote the piece he had [9]outgrown his work, Felix seems to have so far lost interest in it as not to press for another performance. The music was published complete in Pianoforte score by Laue, of Berlin, and one of the songs was included in op. 10, as No. 8. It should not be overlooked that the part of Don Quixote affords an instance of the use of 'Leit-motif'—a term which has very lately come into prominence, but which was here Mendelssohn's own invention.

A nature so keenly sensitive as his could hardly be expected to pass with impunity through such worries as attended the production of the opera. He was so sincere and honest that the sneers of the press irritated him unduly. A year before

[1] A.M.Z. xxvii. p. 825. The autograph was once in possession of Mr. Schleinitz. From him it went into the omnivorous maw of Julius Rietz, and was probably sold by his executors; but to whom? The MS. in our Philharmonic library is a copy with corrections by Mendelssohn.

[2] Zelter, letter of June 6. This MS. too seems to have disappeared.

[3] The first letter that I have found dated from the Leipziger Strasse, 'am 7 July 1826, im Garten,' says, 'to-day or to-morrow I shall begin to dream the Midsummer night's dream.'

[4] Dev. 35. Marx, Errin. ii. 231—3.

[6] Reissmann, 62.

[7] F.M. i. 156. Felix's MS. letter from Stettin, Feb. 17, 1827, is the first in which his father is addressed as 'Herr Stadtrath.'

[8] 'My friend, your ideas must be grand—grand as that dome.' Marx, Errin. i. 247.

[9] 'For God's sake,' says he in 1843 to Mr. Bartholomew, 'do not let my old sin of Camacho's Wedding be stirred up again!' (Polko, by Lady Wallace, p. 217.) In the same manner in 1835 he protests to Mrs. Voigt against the performance of his C minor Symphony—at least without the explanation that it was written by a boy of barely 15. (Acht Briefe, etc., p. 20.)

he had vented his feelings in some lines which will be new to most readers :—

Schreibt der Komponiste ernst, Schläfert er uns ein ; Schreibt der Komponiste froh, Ist er zu gemein.	If the artist gravely writes, To sleep it will beguile. If the artist gaily writes, It is a vulgar style.
Schreibt der Komponiste lang, Ist er zum Erbarmen ; Schreibt ein Komponiste kurz, Kann man nicht erwarmen.	If the artist writes at length, How sad his hearers' lot! If the artist briefly writes, No man will care one jot.
Schreibt ein Komponiste klar, Ist's ein armen Tropf ; Schreibt ein Komponiste tief Rappelt's ihn am Kopf.	If an artist simply writes, A fool he 's said to be. If an artist deeply writes, He 's mad ; 'tis plain to see.
Schreib' er also wie er will, Keinem steht es an ; Darum schreib ein Komponist Wie er will und kann.[1]	In whatsoever way he writes He can't please every man ; Therefore let an artist write How he likes and can.

But on the present occasion the annoyance was too deep to be thrown off by a joke. It did in fact for a time seriously affect his health and spirits, and probably laid the foundation for that dislike of the officialism and pretension, the artists and institutions, the very soil and situation of Berlin, which so curiously pervades his letters whenever he touches on that [2]city. His depression was increased by the death of an old friend, named Hanstein, who was carried off this spring, and by the side of whose deathbed Felix composed the well-known Fugue in E minor (op. 35, no. 1). The chorale in the major, which forms the climax of the fugue, is intended, as we are told on good authority, to express his friend's [3]release. But Felix was too young and healthy, and his nature too eager, to allow him to remain in despondency. A sonata in B♭, for P.F. solo (afterwards published as op. 106) is signed May 31, 1827, and on Whit-Sunday, June 3, we find him at Sakrow, near Potsdam, the property of his friend Magnus, composing the charming Lied, 'Ist es wahr?' which within a few months he employed to advantage in his Quartet in A minor (op. 13). Meantime—probably [4]in 1826—he had entered the university of Berlin, where his tutor Heyse was now a professor. For his matriculation essay he sent in a translation in verse of the Andria of Terence, which primarily served as a birthday present to his [5]mother (March 15). This translation was published in a [6]volume, with a preface and essay, and a version of the 9th Satire of Horace, by Heyse. Mendelssohn's translation has been recently examined by an eminent English scholar, who reports that as a version it is precise and faithful, exceedingly literal, and corresponding closely with the original both in rhythm and metre, while its language, as far as an Englishman may judge of German, is quite worthy of representing the limpid Latin of Terence. Professor Munro also points out that as this was the first attempt in Germany to render Terence in his own metres, it may be presumed to have set the example to the scholars who have since that date, as a rule, translated Plautus and Terence and other kindred Greek and Latin classics in the original metres. It was by no means his first attempt at verse; for a long mock-heroic of the year 1820 has been preserved, called the Paphleïs, in 3 cantos, occupied with the adventures of his brother Paul (Paphlos), full of slang and humour, and in hexameters.

Whether Felix went through the regular university course or not, does not appear, but no doubt the proceeding was a systematic one, and he certainly attended several classes, amongst them those of [7]Hegel, and took especial pleasure in the lectures of the great Carl Ritter on geography. Of his notes of these, two folio volumes, closely written in a hand like copper-plate, and dated 1827 and 28, still exist. Italian he was probably familiar with before he went to Italy; and in later years he knew it so thoroughly as to be able to translate into German verse the very crabbed sonnets of Dante, Boccaccio, Cecco Angiolieri, and Cino, for his uncle Joseph [8]in 1840. Landscape drawing, in which he was ultimately to excel so greatly, he had already worked at for several years. For mathematics he had neither taste nor capacity, and Schubring pathetically describes the impossibility of making him comprehend how the polestar could be a guide in travelling.

The change into the new house was a great event in the family life. Felix began gymnastics, and became a very great proficient in them. He also learned to ride, and to swim, and with him learning a thing meant practising it to the utmost, and getting all the enjoyment and advantage that could be extracted from it. He was a great dancer, now and for many years after. Billiards he played brilliantly. Skating was the one outdoor exercise which he did not succeed in—he could not stand the cold. The garden was a vast attraction to their friends, and *Boccia* (a kind of bowls) was the favourite game under the old chestnut-trees which still overshadow the central alley. The large rooms also gave a great impetus to the music, and to the mixed society which now flocked to the house more than ever. We hear of Rahel and Varnhagen, Bettina, Heine, Holtei, Lindblad, Steffens, Gans, Marx, Kugler, Droysen ; of Humboldt, W.[9] Müller, Hegel (for whom alone a card-table was provided), and other intellectual and artistic persons, famous, or to be famous afterwards. Young people too there were in troops; the life was free, and it must have been a delightful, wholesome, and thoroughly enjoyable time. Among the features of the garden life was a newspaper, which in summer was called 'Gartenzeitung,' 'The Garden Times'; in winter 'Schnee-und-Thee-zeitung,' 'The Snow-and-Tea Times.' It appears to have been edited by Felix and Marx, but all comers were free to contribute, for which purpose pens, ink, and paper lay in one of the summer-houses. Nor was it confined to the younger part of the society, but grave personages, like Humboldt and Zelter even, did not disdain to add their morsel of fun or satire. In all this

9 Father of Max Müller, and author of Schubert's 'Schöne Müllerin.'

brilliant interchange of art, science, and literature, Felix, even at this early date, was the prominent figure. It was now as it was all through his life. When he entered the room every one was anxious to speak to him. Women of double his age made love to him, and men, years afterwards, recollected the evenings they had spent with him, and treasured every word that fell from his [1] lips. One who knew him well at this time, but afterwards broke with him, speaks of the separation as 'a draught of wormwood, the bitter taste of which remained for years.' [2]

The latter half of August and the whole of September were passed in a tour with Magnus and Heydemann [3] through the Harz mountains to Baden-Baden (where his amusing adventures must be read in his letters), and thence by Heidelberg, where he made the acquaintance of [4] Thibaut and his old Italian music, to Frankfort. At Frankfort he saw Schelble and Hiller, and delighted them with his new A minor Quartet (op. 13)—not yet fully written down; and with the 'Midsummer Night's Dream' overture, which although a year old was still new to the world.

The annoyance about Camacho had vanished with the tour, and Felix could now treat the story as a joke, and take off the principal persons concerned. The A minor Quartet was completed directly after his return home, and is dated 'Berlin, Oct. 27, 1827.' Of further compositions this year we know only of the beautiful fugue in E♭ for strings (on his favourite old ecclesiastical subject), which since his death has been published as the 4th movement of op. 81. It is dated Berlin, Nov. 1. Also a 'Tu es Petrus' for choir and orchestra, written for Fanny's birthday (Nov. 14), and published as op. 111. A very comic 'Kinder-symphonie' for the Christmas home party, for the same orchestra as Haydn's, and a motet for 4 voices and small orchestra on the chorale 'Christe du Lamm Gottes,' are named by Fanny in a [5] letter. Soon after this their circle sustained a loss in the departure of Klingemann, one of the cleverest and most genial of the set, to London as Secretary to the Hans Legation. During this winter Felix—incited thereto by a complaint of Schubring's, that Bach always seemed to him like an arithmetical exercise—formed a select choir [6] of 16 voices, who met at his house on Saturday evenings, and at once began to practise the Passion. This was the seed which blossomed in the public performance of that great work a year later, and that again in the formation of the Bachgesellschaft, and the publication of the Grand Mass, and all the Church Cantatas and other works, which have proved such mines of wealth. Long and complicated as the Passion is, he must have known it by heart even at that early date; for among other anecdotes proving as much, Schubring, who may be implicitly believed, relates that one evening after accompanying one of the choruses at the piano without book, he said, 'at the 23rd bar the sopranos have C and not C sharp.'

March 1828 was occupied by the composition of a long cantata to words by Levezow, for the Tercentenary Festival of Albert Dürer, at the Singakademie at [7] Berlin, on April 18. It was undertaken at the request of the Akademie der Künste, and is written for solo voices, chorus, and orchestra, and contains 15 numbers. The 'Trumpet Overture' preceded it in performance. Felix was not in love with his task, but as the work grew into shape and the rehearsals progressed, he became reconciled to it; the performance was good, and Fanny's sisterly verdict is that 'she never remembers to have spent a pleasanter [8] hour.' The work remains in MS. at the Singakademie and the Berlin Bibliothek, and has probably the faults of almost all such compositions. Even Beethoven failed when he had to write to order. Fate however had a second task of the same kind in store for Felix, with some curious variations. This time the cantata was for a meeting (or, as we should now call it, a 'congress') of physicians and investigators of natural science, to whom a festival was given by A. von Humboldt as president. Rellstab wrote the words, and Felix was invited to compose the music. It contains 7 numbers for solo and chorus. Owing to a whim of Humboldt's the chorus was confined to men's voices, and the orchestra to clarinets, horns, trumpets, cellos, and basses. The thing came off in September; but no ladies—not even Fanny—were admitted, no report is given in the musical paper; and as there is no mention of it in the MS. Catalogue the autograph has probably vanished. Chopin was [9] present at the sitting of the congress, and saw Mendelssohn with Spontini and Zelter; but his modesty kept him from introducing himself, and their acquaintance was put off to a later date.

Felix had however during the summer been occupied in a more congenial task than such *pièces d'occasion* as these, viz. in the composition of the Overture to Goethe's 'Calm sea and Prosperous voyage,' on which we find him employed in June. Fanny gives us the interesting [10] information that he especially avoided the form of an Overture with Introduction, and wished his work to stand as two companion pictures. She mentions also his having written pianoforte pieces at this time, including some 'Lieder ohne Worte' (a title not destined to come before the world for some years) and a great Antiphona and Responsorium for 4 choirs, 'Hora est,' etc., which still remains in MS.

For Christmas he wrote a second Kinder-symphonie, which delighted every one so much that it had to be repeated on the [11] spot. He also re-scored Handel's Acis and Galatea, and the Dettingen Te Deum, at Zelter's desire, for the use of the [12] Singakademie. They have since been published, but are not satisfactory specimens of such work. He also wrote the Variations in D

[1] For instances of this see Dorn, and also Gathy in N. M. Z. 1848.
[2] Marx, Errin. ii. 138.
[3] Louis Heydemann was a very eccentric person. He possessed many MSS. of Mendelssohn's—amongst others the Sonata in E (op. 7) and the Cello variations (op. 17). These—10 in number, dating from 1824 to 29—are now all in the possession of Dr. Paul Mendelssohn-Bartholdy.

for P.F. and Cello (op. 17), dated Jan. 30, 1829, and dedicated to his brother Paul, who was more than a fair Cello player. The 'Calm sea and Prosperous voyage' was finished, or finished as nearly as any score of Mendelssohn's can be said to have been finished before it was publicly performed, and had received those innumerable corrections and alterations and afterthoughts, which he always gave his works, and which in some instances caused the delay of their appearance for years—which in fact prevented the appearance of the Italian Symphony till his removal made any further revision impossible. We have already seen that the basis of the work was furnished by the visit to Dobberan. A MS. letter from that place to Fanny (July 27, 1824) gives her an account of the sea in the two conditions in which it is [1]depicted in the overture.

Felix's little choir had steadily continued their practice of the Passion, and the better they knew the mighty work the more urgent became their desire for a public performance by the Singakademie (300 to 400 voices) under Felix's own care. Apart from the difficulties of the music, with its double choruses and double orchestra, two main obstacles appeared to lie in the way—the opposition of Zelter as head of the Akademie, and the apathy of the public. Felix, for one, 'utterly [2]disbelieved' in the possibility of overcoming either, and with him were his parents and Marx, whose influence in the house was great. Against him were Devrient, Schubring, Bauer, and one or two other enthusiasts. At length Devrient and Felix determined to go and beard Zelter in his den. They encountered a few rough words, but their enthusiasm gained the day. Zelter yielded, and allowed Felix to conduct the [3]rehearsals of the Akademie. The principal solo singers of the Opera at once gave in their adhesion; the rehearsals began; Felix's tact, skill, and intimate knowledge of the music carried everything before them, the public flocked to the rehearsals; and on Wednesday, March 11, 1829, the first performance of the Passion took place since the death of Bach; every ticket was taken, and a thousand people turned away from the doors. Thus in Felix's own words (for once and once only alluding to his descent) 'it was an actor and a Jew who restored this great Christian work to the [4]people.' There was a second performance under Felix on Bach's birthday, March 21. It is probable that these successes did not add to Felix's popularity with the musicians of Berlin. Whether it was his age, his manner, his birth, the position held by his family, or what, certain it is that he was at this time in some way under a cloud. He had so far quarrelled with the Royal Orchestra that they refused to be conducted by him, and concerts at which his works were given were badly attended.[5]

Paganini made his first appearance in Berlin this month, gave four concerts, and [6]bewitched the Berliners as he did every one else. He very soon found his way to the Leipziger [7]Strasse. It would be interesting to know if he heard the Passion, and if, like Rossini, some years later, he professed himself a convert to Bach.

Whistling's Handbuch shows that by the end of this year Felix had published his 3 P.F. Quartets; the Sonata for P.F. and V.; the Caprice, op. 5; the Sonata for P.F. solo; the Wedding of Camacho; and the first two books of Songs. The dedications of these throw a light on some things. The quartets are inscribed respectively to Prince A. Radzivil (a friend of the family, who was present at the first performance of the 'Beiden Pädagogen' at the Neue Promenade), Zelter, and Goethe; the Violin Sonata to E. Ritz, Felix's favourite violin player; the 7 Characteristic P.F. pieces to Ludwig Berger, his P.F. teacher. The rest have no dedications.

The engagement of Fanny Mendelssohn to William Hensel the painter of Berlin took place on January 22, 1829, in the middle of the excitement about the Passion; and on April 10 Felix took leave for England. He was now 20. His age, the termination of his liability to military [8]service, the friction just alluded to between himself and the musical world of Berlin—all things invited him to travel, and [9]Zelter was not wrong in saying that it was good for him to leave home for a time. Hitherto also he had worked without fee or reward. He was now to prove that he could make his living by [10]music. But more than this was involved. His visit to England was the first section of a long [11]journey, planned by the care and sagacity of his father, and destined to occupy the next three years of his life. In this journey he was 'closely to examine the various countries, and to fix on one in which to live and work; to make his name and abilities known, so that where he settled he should not be received as a stranger; and lastly to employ his good fortune in life, and the liberality of his father, in preparing the ground for future [12]efforts.' The journey was thus to be to him what the artistic tour of other musicians had been to them; but with the important difference, resulting from his fortunate position in life, that the establishment of his musical reputation was not the exclusive object, but that his journey was to give him a knowledge of the world, and form his character and manners. The answer attributed to a young Scotch student who was afterwards to become a great English archbishop, when asked why he had come to Oxford—'to improve myself and to make friends'—exactly expresses the special object of Mendelssohn's tour, and is the mark which happily distinguished it from those of so many of his predecessors in the art. Music had not been adopted as a profession for Felix without much hesitation, and resistance on the part of some of his relations, and his father was wisely resolved that in so doing nothing should be sacrificed in the general culture

and elevation of his son. 'To improve himself, and to make friends' was Mendelssohn's motto, not only during his grand tour but throughout his career.

It was their first serious parting. His father and Rebecka accompanied him to Hamburg. The boat (the 'Attwood') left on the Saturday evening before Easter Sunday, April 18, and it was not till noon on Tuesday, the 21st, that he reached the Custom House, London. The passage was a very bad one, the engines broke down, and Mendelssohn lay insensible for the whole of Sunday and Monday. He was welcomed on landing by Klingemann and Moscheles, and had a lodging at 103, Great Portland [1] Street, where his landlord was Heincke, a German ironmonger.

It was the middle of the musical season, and Malibran made her first reappearance at the Opera, as Desdemona, on the night of his arrival. His account of her, with other letters describing this period, will be found in Hensel's 'Familie Mendelssohn' (i. 115–294), and in Devrient's 'Recollections.' Other singers in London at that time were Sontag, Pisaroni, Mad. Stockhausen, and Donzelli; also Velluti, the castrato, a strange survival of the ancient world, whom it is difficult to think of in connexion with Felix Mendelssohn-Bartholdy. De Beriot and Madame Dulcken were among the players. Fétis too was in London delivering his lectures on 'La musique à la portée de tout le monde,' in French, to English audiences.

Felix was much with the Moscheleses, and there met Neukomm, with whom, in everything but his music, he sympathised warmly.

His first appearance before an English audience was at the Philharmonic Concert (then held in the Argyll Rooms, at the upper end of Regent Street) on Monday evening, May 25, when he conducted his Symphony in C minor. Old John Cramer 'led him to the piano,' at which in those days the conductor sat or stood, 'as if he were a young [2] lady.' The applause was immense, and the Scherzo (scored by him from his Ottet for this occasion, in place of the original Minuet and Trio) was obstinately encored against his [3] wish. How deeply he felt the warmth of his reception may be seen from his letter to the [4] Society. He published the Symphony with a dedication to the [5] Philharmonic, and they on their part elected him an honorary member on Nov. 29, 1829. It was thus an English body which gave him his first recognition as a [6] composer. The simple applause of London had wiped out the sneers and misunderstandings of Berlin. This he never forgot; it recurs throughout his correspondence, and animates his account of his latest visits to us. Near the close of his life he spoke of it as 'having lifted a stone from his [7] heart.' The English had much to learn, and he could laugh heartily [8] at them; but at least they loved him and his music, and were quite in earnest in their appreciation. Five days afterwards, on the 30th, at 2 p.m., he appeared again in the same room at what is vaguely called in the Times of June 1, 'the fourth grand concert.' He played the Concertstück of Weber—as the same journal informs us—'with no music before him.' A charming [9] letter, equal to any in the whole collection for its gaiety and bright humour, describes his coming to the rooms early to try the piano—a new Clementi—and his losing himself in extemporising till he was recalled by finding that the audience were taking their seats. Two other concerts must be mentioned:—one by Drouet, the flute-player, on Midsummer Night, at which, most appropriately, the Overture to the Midsummer Night's Dream was given, for the first time in England, and he himself played the Eb Concerto of Beethoven, then an absolute novelty in this [10] country. After the concert the score of the overture was left in the hackney coach by Mr. Attwood, and [11] lost. On Mendelssohn's hearing of it, he said, 'Never mind, I will make another.' He did, and on comparing it with the parts no variations were found. The other concert was on July 13, for the benefit of the sufferers from the floods in [12] Silesia. At this the Overture was repeated, and Felix and Moscheles played (for the first and only time in England) a Concerto by the former for two Pianofortes and Orchestra, [13] in E. All this was a brilliant beginning as far as compositions went; it placed him in the best possible position before the musical society of London, but it did not do much to solve the question of livelihood, since the only commission which we hear of his receiving, and which delighted him hugely, he was compelled for obvious reasons to decline, viz. a festival hymn for Ceylon for the anniversary of the emancipation of the natives!—an idea so comical that he says it had kept him laughing inwardly for two [14] days. A MS. letter of this time (dated June 7) is signed 'Composer to the Island of Ceylon.'

But he found time for other things besides music; for the House of Commons, and picture galleries, and balls at Devonshire House and Lansdowne House, and so many other parties, that the good people at home took fright and thought he was giving up music for society, and would [15] become a drawing-room ornament. The charm of his manner and his entire simplicity took people captive, and he laid a good foundation this year for the time to come.

An amusing little picture of [16] himself and his friends Rosen and Mühlenfeld, coming home late from a state dinner at the Prussian Ambassador's, buying three German sausages, and then finding a quiet street in which to devour them, with a

three-part song and peals of laughter between the mouthfuls, shows how gaily life went on outside the concert-room.

At length the musical season was over. Felix and Klingemann left London about July 21, and, stopping at York and [1]Durham, were in [2]Edinburgh by the 28th. On the 29th they were [3]present at the annual competition of Highland Pipers in the Theatre Royal. On the 30th, before leaving 'the gray metropolis of the north,' they went over Holyrood Palace, saw the traditional scene of the murder of Rizzio, and the chapel, with the altar at which Mary was crowned standing 'open to the sky, and surrounded with grass and ivy, and everything ruined and decayed'; 'and I think,' he continues, 'that I found there the beginning of my Scotch [4]Symphony.' The passage which he then wrote down was the first 16 bars of the Introduction, which recurs at the end of the first movement, and thus forms, as it were, the motto of the work.

From Edinburgh they went to Abbotsford, and thence by Stirling, Perth, and Dunkeld, to Blair-Athol; then on foot by Fort-William to Tobermory, sketching and writing enormous letters at every step. On the way they visited Fingal's Cave, and Felix, writing 'auf einer Hebride'—'on one of the Hebrides'—Aug. 7, gives twenty bars of music, 'to show how extraordinarily the place affected me.' These 20 bars, an actual inspiration, are virtually [5]identical with the opening of the wonderful Overture which bears the name of 'Hebrides' or 'Fingal's Cave.' Then came Glasgow, and then Liverpool. At Liverpool they went over a new American liner called the Napoleon, and Felix, finding a Broadwood piano in the saloon, sat down to it and played for himself and his friend the first movement of Fanny's 'Easter-Sonata'—whatever that may have been. Home was always in his thoughts. Then to Holyhead for Ireland, but the weather was dreadful (apparently as bad as in 1879)—'yesterday was a good day, for I was only wet through three times.' So he turned back to Liverpool, there said good-bye to Klingemann, and went on by Chester to the house of Mr. John Taylor, the mining engineer, at Coed-du near Holywell. Here he remained for some days, seeing a very pleasant side of English country life, and making an indelible impression on his hosts; and here he composed the three pieces which form op. 16, the first of which, in key, tempo, and melody, closely resembles the introduction to the Scotch [6]Symphony. The following letter, written after his death by a member of the Taylor family, gives a good idea of the clever, genial, gay, and yet serious, nature of the man at this happy time of life:—

It was in the year 1829 that we first became acquainted with Mr. Mendelssohn. He was introduced to us by my aunt, Mrs. Austin, who had well known his cousin Professor Mendelssohn, at Bonn. He visited us early in the season in Bedford Row, but our real friendship began at Coed-du, which was a house near Mold in Flintshire, rented for many years by my father, Mr. John Taylor.

Mr. Mendelssohn came down there to spend a little time with us, in the course of a tour in England and Scotland. My father and mother received him kindly, as they did everybody, but his arrival created no particular sensation, as many strangers came to our house to see the mines under my father's management, and foreigners were often welcomed there. Soon however we began to find that a most accomplished mind had come among us, quick to observe, delicate to distinguish. There was a little shyness about him, great modesty. We knew little about his music, but the wonder of it grew upon us; and I remember one night when my two sisters and I went to our rooms how we began saying to each other 'Surely this must be a man of genius.... we can't be mistaken about the music; never did we hear any one play so before. Yet we know the best London musicians. Surely by and bye we shall hear that Felix Mendelssohn-Bartholdy is a great name in the world.'

My father's birthday happened while Mr. Mendelssohn was with us. There was a grand expedition to a distant mine, up among the hills; a tent carried up there, a dinner to the miners. We had speeches, and health-drinkings, and Mendelssohn threw himself into the whole thing, as if he had been one of us. He interested himself in hearing about the condition and way of life of the Welsh miners. Nothing was lost upon him. A letter that he wrote to my brother John just after he left Coed-du, charmingly describes the impressions he carried away of that country. Sometimes he would go out sketching with us girls, sitting down very seriously to draw, but making the greatest fun of attempts which he considered to be unsuccessful. One figure of a Welsh girl he imagined to be like a camel, and she was called the camel accordingly. Though he scorned his own drawings, he had the genuine artist-feeling, and great love for pictures. I need not say how deeply he entered into the beauty of the hills and the woods. His way of representing them was not with the pencil; but in the evenings his improvised music would show what he had observed or felt in the past day. The piece called The Rivulet, which he wrote at that time, for my sister Susan, will show what I mean; it was a recollection of a real actual [6]rivulet.

We observed how natural objects seemed to suggest music to him. There was in my sister Honora's garden, a pretty creeping [7]plant, new at that time, covered with little trumpet-like flowers. He was struck with it, and played for her the music which (he said) the fairies might play on those trumpets. When he wrote out the piece (called a Capriccio in E minor) he drew a little branch of that flower all up the margin of the paper.

The piece (an Andante and Allegro) which Mr. Mendelssohn wrote for me, was suggested by the sight of a bunch of carnations and [8]roses. The carnations that year were very fine with us. He liked them best of all [9]the flowers, would have one often in his button-hole. We found he intended the arpeggio passages in that composition as a reminder of the sweet scent of the flower rising up.

Mr. Mendelssohn was not a bit 'sentimental,' though he had so much sentiment. Nobody enjoyed fun more than he, and his laughing was the most joyous that could be. One evening in hot summer we staid in the wood above our house later than usual. We had been building a house of fir branches in Susan's garden up in the wood. We made a fire, a little way off it, in a thicket among the trees, Mendelssohn helping with the utmost zeal, dragging up more and more wood: we tired ourselves with our merry work; we sat down round our fire, the smoke went off, the ashes were glowing, it began to get dark, but we could not like to leave our bonfire. 'If we had but some music,' Mendelssohn said; 'Could any one get something to play on?' Then my brother recollected that we were near the gardener's cottage, and that the gardener had a fiddle. Off rushed our boys to get the fiddle. When it came, it was the wretchedest thing in the world, and it had but one string. Mendelssohn took the instrument into his hands, and fell into fits of laughter over it when he heard the sounds it made. His laughter was very catch-

1 They can be traced by Felix's sketches. 2 F.M. i. 240.

3 F.M. i. 240; Hogarth, 77. I owe the date to the kindness of Mr. Glen of Edinburgh. 4 F.M. i. 244.

5 10 of the present score, as he afterwards diminished the notation by one half. A facsimile is given in F.M. i. 257.

6 Both Allegros are in 6-8, and the Andante is repeated at the end of each. The piece is dated Coed-du, Sept. 4.

6 This piece was long a favourite of his. A water-colour drawing by Schirmer, inspired by Felix's playing of it, is still in the possession of the family (Dev. 175). 7 *Ecremocarpus.*

8 The account given above of the origin and intention of these three pieces (op. 16) is confirmed by a letter of his own printed in F.M. i. 279. The autograph of No. 1 is headed 'Nelken und Rosen in menge'—Carnations and Roses in plenty. 9 Compare Mos. i. 297.

ing, he put us all into peals of merriment. But he, somehow, afterwards brought beautiful music out of the poor old fiddle, and we sat listening to one strain after another till the darkness sent us home.

My cousin [1]John Edward Taylor was staying with us at that time. He had composed an imitation Welsh air, and he was, before breakfast, playing over this, all unconscious that Mr. Mendelssohn (whose bed-room was next the drawing-room) was hearing every note. That night, when we had music as usual, Mr. Mendelssohn sat down to play. After an elegant prelude, and with all possible advantage, John Edward heard his poor little air introduced as the subject of the evening. And having dwelt upon it, and adorned it in every graceful manner, Mendelssohn in his pretty, playful way, bowing to the *composer*, gave all the praise to him.

I suppose some of the charm of his speech might lie in the unusual choice of words which he as a German made in speaking English. He lisped a little. He used an action of nodding his head quickly till the long locks of hair would fall over his high forehead with the vehemence of his assent to anything he liked.

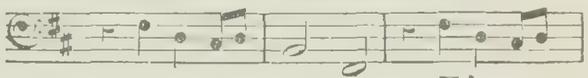
Sometimes he used to talk very seriously with my mother. Seeing that we brothers and sisters lived lovingly together and with our parents, he spoke about this to my mother, told her how he had known families where it was not so; and used the words 'You know not how happy you are.'

He was so far from any sort of pretension, or from making a favour of giving his music to us, that one evening when the family from a neighbouring house came to dinner, and we had dancing afterwards, he took his turn in playing quadrilles and waltzes with the others. He was the first person who taught us gallopades, and he first played us Weber's last waltz. He enjoyed dancing like any other young man of his age. He was then 20 years old. He had written his Midsummer Night's Dream [Overture] before that time. I well remember his playing it. He left Coed-du early in September 1829.

We saw Mr. Mendelssohn whenever he came to England, but the visits he made to us in London have not left so much impression upon me as that one at Coed-du did. I can however call to mind a party at my father's in Bedford Row where he was present. Sir George Smart was there also: when the latter was asked to play he said to my mother, 'No, no, don't call upon the old post-horse, when you have a high-mettled young racer at hand.' The end of it was a duet played by Sir George and Mr. Mendelssohn together. Our dear old master, Mr. Attwood, often met him at our house. Once he went with us to a ball at Mr. Attwood's at Norwood. Returning by daylight I remember how Mr. Mendelssohn admired the view of St. Paul's in the early dawn which we got from Blackfriars bridge. But the happiest visit to us was that one when he first brought his sweet young wife to see my mother. Madame Felix Mendelssohn was a bride then, and we all of us said he could not have found one more worthy of himself. And with the delightful remembrance of his happiness then, I will end these fragments.

His head was at this time full of music—the Eb Violin [2] Quartet (op. 12); an organ piece for Fanny's [3] wedding; the Reformation Symphony, the Scotch Symphony, the Hebrides Overture, as well as vocal music, 'of which he will say nothing.' Other subjects however occupied even more of his letters than music. Such were a private plan for a journey to Italy in company with the parents and Rebecka, for which he enters into a little conspiracy with his sister; and a scheme for the celebration of his parents' silver wedding (Dec. 26, 1829) by the performance of three operettas (Liederspiel), his own 'Soldatenliebschaft,' a second to be written by Hensel and composed by Fanny, and the third an 'Idyll' by Klingemann and himself, which when once it entered his head rapidly took shape, and by the end of October appears to have been virtually [4]complete.

By Sept. 10 he was again in London, this time [5]at 35, Bury Street, St. James's; on the 14th he finished and signed the Eb Quartet, and on the 17th was thrown from a gig and hurt his knee, which forced him to keep his bed for nearly two months, and thus to miss not only a tour through Holland and Belgium with his father, but Fanny's wedding. Confinement to bed however does not prevent his writing home with the greatest regularity. On Sept. 22 he ends his letter with the first phrase of the Hebrides Overture—'aber zum Wiedersehen,



F.'

On Oct. 23 he informs them that he is beginning again to compose—and so on. He was nursed by Klingemann, and well cared for by Sir Lewis and Lady Moller, by Attwood, and Hawes, the musicians, the Göschens, and others. His first drive was on Nov. 6, when he found London 'indescribably beautiful.' A week later he went to [6]Norwood to the Attwoods, then back to town for 'the fourteen happiest days he had ever known,' and on Nov. 29 was at Hotel Quillacq, Calais, on his road home. He reached Berlin to find the Hensels and the Devrients inhabiting rooms in the garden-house. His lameness still obliged him to walk with a stick; but this did not impede the mounting of his [7]piece for the silver wedding, which came off with the greatest success on Dec. 26, and displayed an amount of dramatic ability which excited the desire of his friends that he should again write for the [8]stage. The Liederspiel however was not enough to occupy him, and during this winter he composed a [9]Symphony for the tercentenary festival of the Augsburg Confession, which was in preparation for June 25, 1830. This work, in the key of D, is that which we shall often again refer to as the 'Reformation Symphony.' He also wrote the fine Fantasia in F♯ minor (op. 28), which he called his 'Scotch [10]Sonata'—a piece too little played. A Chair of Music was founded in the Berlin university this winter expressly with a view to its being filled by Mendelssohn. But on the offer being made he declined it, and at his instance Marx was appointed in his [11]stead. There can be no doubt that he was right. Nothing probably could have entirely kept down Mendelssohn's ardour for composition; but it is certain that to have exchanged the career of a composer for that of a university teacher would have added a serious burden to the many

1 Afterwards Gresham Professor.

2 F.M. 276, 279, 280. The autograph of the Quartet, in the possession of Mr. Rudorf, is dated 'London, Sept. 14, 1829.' Though published as No. I. it is thus really his second string quartet. See above, p. 260 *a*.

3 Fanny herself wrote the piece which was actually played at the wedding, Oct. 3, 1829 (F.M. 296). Felix's piece, however, was finished and written out (L. July 25, 1844).

4 F.M. i. 302-304; Dev. 86.

5 F.M. i. 301.

6 Op. 16, No. 2, is dated 'Norwood, Surrey, Nov. 18.' There is a MS. letter from the same address, Nov. 15. The house was on Biggin Hill.

7 'Heimkehr aus der Fremde' (the Return from abroad) was translated by Chorley as 'The Son and Stranger,' and produced at the Haymarket Theatre July 7, 1851.

8 Dev. 94.

9 For some curious details regarding this see Dev. 96. Schubring (374 *b*) tells the same story of the Trumpet Overture.

10 The MS., in Mr. Schleinitz's possession, is entitled 'Sonate écossaise,' and dated 'Berlin, Jan. 29, 1833'; but he played it at Goethe's, May 24, 1830 (L. i. 7).

11 Dev. 98.

occupations which already beset him, besides forcing him to exchange a pursuit which he loved and succeeded in, for one for which he had no turn—for teaching was [1]not his *forte*.

The winter was over, his leg was well, and he was on the point of resuming his 'great journey' in its southern portion, when, at the end of March, 1830, both Rebecka and he were taken with the measles. This involved a delay of a month, and it was not till [2]May 13 that he was able to start. His father accompanied him as far as Dessau, the original seat of the family, where he remained for a few days with his friend Schubring.

He travelled through Leipzig, Weissenfels, and Naumburg, and reached Weimar on the 20th. There he remained a fortnight in the enjoyment of the closest intercourse with Goethe and his family, playing and leading what he calls a mad life—[3]Heidenleben. There his portrait was taken, which, though like, 'made him look very sulky,' and a copy of the score of the Reformation Symphony was made and sent to Fanny. On June 3 he took leave [4]of Goethe for the last time, and went by Nuremberg to Munich, which he reached on [5]June 6. At Munich he made a long halt, remaining till the end of the month; made the acquaintance of Josephine Lang, Delphine Schauroth, and other interesting persons, and was fêted to an extraordinary [6]extent—'several parties every evening, and more pianoforte playing than I ever recollect'—all which must be read in the letter of Marx, and in his own delightful [7]pages. On the 14th, her birthday, he sends Fanny a little Song without Words (Lied) in A, and on the 26th a much longer one in B♭ minor, which he afterwards altered, and [8]published as Op. 30, No. 2. Both here and at Vienna he is disgusted at the ignorance on the part of the best players—Mozart, Haydn, and Beethoven utterly ignored, Hummel, Field, Kalkbrenner, accepted as classics. He himself played the best music, and with the best effect, and his visit must have been an epoch in the taste of both [9]places.

From Munich he went through the Salzkammergut, by Salzburg, Ischl, and the Traunsee, to Linz, and thence to Vienna, Aug. 13. Here he passed more than a month of the gayest [10]life with Hauser the [11]singer, Merk the cellist, the Pereiras, the Eskeles, and others, but not so gay as to interfere with serious composition—witness a cantata or anthem on 'O Haupt voll Blut und [12]Wunden' (MS.), and an 'Ave Maria' for Tenor solo and 8 voices (op. 23, no. 2), both of this date. On Sept. 28 we [13]find him at Presburg, witnessing the coronation of the Crown Prince Ferdinand as King of Hungary; then at Lilienfeld; and by Gratz, Udine, etc., he reached Venice on Oct. 9.

[1] See a similar remark in Hauptmann's Letters to Hauser (i. 157) in reference to a similar attempt in 1835.

[8] In this, as in several other cases, he has altered the notation from quavers to semiquavers.
[9] Letters to Zelter (June 22 and Oct. 16, 1830). [10] L. Feb. 18, 1836.
[11] Afterwards Director of the Munich Conservatorium, and Spohr's correspondent. [12] Dev. 105. [13] L. i. 21.

His stay in Italy, and his journey through Switzerland back to Munich, are so fully depicted in the first volume of his Letters, that it is only necessary to allude to the chief points. He went from Venice by Bologna to Florence, reaching it on Oct. 22, and remaining there for a week. He arrived in Rome on Nov. 1—the same day as Goethe had done, as he is careful to remark—and he lived there till April 10, at No. 5 Piazza di Spagna. The latter half of April and the whole of May were devoted to Naples (Sti. Combi, Sta. Lucia, No. 13, on the 3rd floor) and the Bay—Sorrento, Ischia, Amalfi, etc. Here he met Benedict and renewed the acquaintance which they had begun as boys in Berlin in 1821, when Benedict [14]was Weber's pupil. By June 5 he was back in Rome, and after a fortnight's interval set out on his homeward journey by Florence (June 24), Genoa, Milan (July 7-15), Lago Maggiore and the Islands, the Simplon, Martigny, and the Col de Balme, to Chamouni and Geneva. Thence on foot across the mountains to Interlaken; and thence by Grindelwald and the Furka to Lucerne, Aug. 27, 28. At Interlaken, besides sketching, and writing both letters and songs, he composed the only [15]waltzes of which—strange as it seems in one so madly fond of dancing—any trace survives. At Lucerne he wrote his last letter to [16]Goethe, and no doubt mentioned his being engaged in the composition of the Walpurgisnacht, which must have brought out from the poet the explanation of the aim of his poem which is printed at the beginning of Mendelssohn's music, with the date Sept. 9, 1831. Then, still on foot, he went by Wallenstadt and St. Gall to Augsburg, and returned to Munich early in September.

Into both the Nature and the Art of this extended and varied tract he entered with enthusiasm. The engravings with which his father's house was richly furnished, and Hensel's copies of the Italian masters, had prepared him for many of the great pictures; but to see them on the spot was to give them new life, and it is delightful to read his rapturous comments on the Titians of Venice and Rome, the gems in the Tribune of Florence, Guido's Aurora, and other masterpieces. His remarks are instructive and to the point; no vague generalities or raptures, but real criticism into the effect or meaning or treatment of the work; and yet rather from the point of view of an intelligent amateur than with any assumption of technical knowledge, and always with sympathy and [17]kindness. Nor is his eye for nature less keen, or his enthusiasm less abundant. His descriptions of the scenery of Switzerland during the extraordinarily stormy season of his journey there, are worthy of the greatest painters or letter-writers. Some of his expressions rise to grandeur.

'It was a day,' says he, describing his walk over the Wengern Alp, 'as if made on purpose. The sky was flecked with white clouds floating far above the highest snow-peaks, no mists below

[14] B. 7. [15] L. Aug. 11. [16] G. & M. 80.
[17] Letters, Oct. 25, 1830, June 25, 1831, Sept. 14, 1839.

on any of the mountains, and all their summits glittering brightly in the morning air, every undulation and the face of every hill clear and distinct. . . . I remembered the mountains before only as huge peaks. It was their height that formerly took such possession of me. Now it was their boundless extent that I particularly felt, their huge broad masses, the close connexion of all these enormous fortresses, which seemed to be crowding together and stretching out their hands to each other. Then too recollect that every glacier, every snowy plateau, every rocky summit was dazzling with light and glory, and that the more distant summits of the further ranges seemed to stretch over and peer in upon us. I do believe that such are the thoughts of God Himself. Those who do not know Him may here find Him and the nature which He has created, brought strongly before their [1] eyes.' Other expressions are very happy :—'The mountains are acknowledged to be finest after rain, and to-day looked as fresh as if they had just burst the [2] shell.' Again, in approaching Naples—'To me the finest object in nature is and always will be the sea. I love it almost more than the sky. I always feel happy when I see before me the wide expanse of waters.'

In Rome he devoted all the time that he could spare from work to the methodical examination of the place and the people. But his music stood first, and surely no one before or since was ever so self-denying on a first visit to the Eternal City. Not even for the sirocco would he give up work in the [3] prescribed hours. His plan was to compose or practise till noon, and then spend the whole of the rest of the daylight in the open air. He enters into everything with enthusiasm—it is 'a delightful existence.' 'Rome in all its vast dimensions lies before him like an interesting problem, and he goes deliberately to work, daily selecting some different object—the ruins of the ancient city, the Borghese Gallery, the Capitol, St. Peter's, or the Vatican.' 'Each day is thus made memorable, and, as I take my time, each object becomes indelibly impressed upon me. . . . . When I have fairly imprinted an object on my mind, and each day a fresh one, twilight has usually arrived, and the day is over.' Into society he enters with keen zest, giving and receiving pleasure wherever he goes, and 'amusing himself thoroughly and [4] divinely.' 'His looking-glass is stuck full of visiting-cards, and he spends every evening with a fresh acquaintance.' His visits to Horace Vernet and Thorwaldsen, Santini's visits to him; the ball at Torlonia's, where he first saw the young English beauty, and that at the Palazzo Albani, where he danced with her; the mad frolics of the Carnival, the monks in the street (on whom he 'will one day write a special treatise'), the peasants in the rain, the very air and sunshine—all delight him in the most simple, healthy, and natural manner. 'Oh! if I could but send you in this letter one quarter of an hour of all this pleasure, or tell you how life actually flies in Rome, every minute bringing its own memorable [5] delights.' On the other hand, he has no mercy on anything like affectation or conceit. He lashes the German painters for their hats, their beards, their dogs, their discontent, and their incompetence, just as he does one or two German musicians for their empty pretension. The few words which he devotes to Berlioz (who although always his good friend is antagonistic to him on every point) and his companion Montfort, are strongly tinged with the same [6] feeling. On the other hand, nothing can be more genuinely and good-naturedly comic than his account of the attempt to sing Marcello's psalms by a company of dilettanti assisted by a Papal singer.[7]

This sound and healthy habit of mind it is, perhaps, which excludes the sentimental—we might almost say the devotional—feeling which is so markedly absent from his letters. Strange that an artist who so enjoyed the remains of ancient Italy should have had no love of antiquity as such. At sight of Nisida he recalls the fact that it was the refuge of Brutus, and that Cicero visited him there. 'The sea lay between the islands, and the rocks, covered with vegetation, bent over it then just as they do now. These are the antiquities that interest me, and are much more suggestive than crumbling mason-work.' 'The outlines of the Alban hills remain unchanged. There they can scribble no names and compose no inscriptions. . . . and to these I cling.' In reference to music the same spirit shows itself still more strongly in his indignation at the ancient Gregorian music to the Passion in the Holy Week services. 'It does irritate me to hear such sacred and touching words sung to such insignificant dull music. They say it is *canto fermo*, Gregorian, etc. No matter. If at that period there was neither the feeling nor the capacity to write in a different style, at all events we have now the power to do so'; and he goes on to suggest two alternative plans for altering and reforming the service, suggestions almost reminding one of the proposition in which the Empress Eugénie endeavoured to enlist the other Empresses and Queens of Europe, to pull down the church of the Holy Sepulchre at Jerusalem and rebuild it in conformity with modern taste and requirements. Religious he is, deeply and strongly religious; every letter shows it. It is the unconscious, healthy, happy confidence of a sound mind in a sound body, of a man to whom the sense of God and Duty are as natural as the air he breathes or the tunes which come into his head, and to whom a wrong action is an impossibility. But of devotional sentiment, of that yearning dependence, which dictated the 130th Psalm, or the feeling which animates Beethoven's passionate prayers and [8] confessions, we find hardly a trace, in his letters or his music.

He was very fortunate in the time of his visit to

[1] L. Aug. 14. [2] L. Aug. 24. [3] Berlioz, Voy. mus. i. 76. [4] L. Dec. 10, 1837.

[5] L. Feb. 8.

[6] L. March 29. It is curious to compare Berlioz's account (Voyage mus. i. 73) of Mendelssohn with the above.

[7] L. March 1. [8] See vol. i. 194 *a*.

Rome. Pope Pius VIII. died while he was there, and he came in for all the ceremonies of Gregory XVI.'s installation, in addition to the services of Holy Week, etc. These latter he has described in the fullest manner, not only as to their picturesque and general effect, but down to the smallest details of the music, in regard to which he rivalled Mozart's famous feat. [See MISERERE.] They form the subject of two long letters to Zelter, dated [1]Dec. 1, 1830, and June 16, 1831; and as all the particulars had to be caught while he listened, they testify in the strongest manner to the sharpness of his ear and the retentiveness of his memory. Indeed it is impossible not to feel that in such letters as these he is on his own ground, and that intense as was his enjoyment of nature, painting, society, and life, he belonged really to none of these things—was 'neither a politician nor a dancer, nor an actor, nor a *bel esprit*, but a [2]musician.' And so it proved in fact. For with all these distractions his Italian journey was fruitful in work. The 'Walpurgis-night,' the result of his last visit to Weimar, was finished, in its first form, at Milan (the MS. is dated 'Mailand, July 15, 1831'); the 'Hebrides,' also in its first form, is signed 'Rome, Dec. 16, 1830.' The Italian and Scotch Symphonies were begun and far advanced before he left Italy. Several smaller works belong to this period—the Psalm 'Non Nobis' (Nov. 16, 1830); the three church pieces which form op. 23; a Christmas Cantata, still in MS. (Jan. 28, 1831); the Hymn 'Verleih' uns Frieden' (Feb. 10); the 3 Motets for the nuns of the French Chapel: and although few, if any, of these minor pieces can be really said to live, yet they embody much labour and devotion, and were admirable stepping-stones to the great vocal works of his later life. In fact then, as always, he was what Berlioz [3]calls him, 'un producteur infatigable,' and thus obtained that facility which few composers have possessed in greater degree than Mozart and himself. He sought the society of musicians. Besides Berlioz, Montfort, and Benedict, we find frequent mention of Baini, Donizetti, Coccia, and Madame Fodor. At Milan his encounter with Madame Ertmann, the intimate friend of Beethoven, was a happy accident, and turned to the happiest account. There too he met the son of Mozart, and delighted him with his father's Overtures to Don Juan and the Magic Flute, played in his own 'splendid orchestral style' on the piano. Not the least pleasant portions of his letters from Switzerland are those describing his organ-playing at the little remote Swiss churches at Engelberg, Wallenstadt, Sargans, and Lindau—from which we would gladly quote if space allowed.

Nor was his drawing-book idle. Between May 16 and August 24, 1831, 35 sketches are in the hands of one of his daughters alone, implying a corresponding number for the other portions of the tour. How characteristic of his enormous enjoyment of life is the following passage (Sargans, Sept. 3): 'Besides organ playing I have much to finish in my new drawing-book (I filled another completely at Engelberg); then I must dine, and eat like a whole regiment; then after dinner the organ again, and so forget my rainy day.'

The great event of his second visit to Munich was the production (and no doubt the composition) of his G minor Concerto, 'a thing rapidly thrown [4]off,' which he played on Oct. 17, 1831, at a concert which also comprised his Symphony in C minor, his Overture to the Midsummer Night's Dream, and an extempore performance. Before leaving he received a commission [5]to compose an opera for the Munich Theatre. From Munich he travelled by Stuttgart (Nov. 7) and Heidelberg to Frankfort, and thence to Düsseldorf (Nov. 27), to consult Immermann as to the libretto for the Munich opera, and arranged with him for one founded on [6]The Tempest. The artistic life of Düsseldorf pleased him extremely, and no doubt this visit laid the foundation for his future connection with that town.

He arrived in Paris about the middle of December, and found, of his German friends, Hiller and Franck settled there. He renewed his acquaintance with the Parisian musicians who had known him as a boy in 1825, especially with Baillot; and made many new friends, Habeneck, Franchomme, Cuvillon, and others. Chopin, Meyerbeer, Herz, Liszt, Kalkbrenner, Ole Bull, were all there, and Mendelssohn seems to have been very much with them. He went a great deal into society and played frequently, was constantly at the theatre, and as constantly at the Louvre, enjoyed life thoroughly, saw everything, according to his wont, including the political scenes which were then more than ever interesting in Paris; knew everybody; and in fact, as he expresses it, 'cast himself thoroughly into the [7]vortex.' His Overture to The Midsummer Night's Dream was performed at the Société des Concerts (Conservatoire) on Feb. 19, 1832, and he himself played the Concerto of Beethoven in G at the concert of March 18. His Reformation Symphony was rehearsed, but the orchestra thought it too [8]learned, and it never reached performance. His Octet was played in church at a mass commemorative of Beethoven, and several times in private; so was his Quintet (with a new [9]Adagio) and his Quartets, both for strings and for piano. The pupils of the Conservatoire, he writes, are working their fingers off to play 'Ist es [10]wahr?' His playing was applauded as much as heart could wish, and his reception in all circles was of the very best.

On the other hand, there were drawbacks. Edward Ritz, his great friend, died (Jan. 23) while he was there; the news reached him on his birthday. Goethe too died (March 22). The rejection of his Reformation Symphony, the centre of so many [11]hopes, was a disappointment

[1] This was added to the Reisebriefe in a subsequent edition, and is not included in the English translation.

which must have thrown a deep shadow over everything, and no doubt after so much gaiety there was a reaction, and his old dislike to the French character—traces of which are not wanting in a letter to Immermann dated Jan. 11—returned. In addition to this his health had not latterly been good, and in March he had an attack of [1]cholera. Though he alludes to it in joke, he probably felt the truth of a remark in the Figaro that 'Paris is the tomb of all [2]reputations.' Brilliantly and cordially as he was received, he left no lasting mark there; his name does not reappear in the programmes of the Conservatoire for 11 years, and it was not till the establishment of the Concerts populaires in 1861 that his music became at all familiar to [3]the Parisians. He himself never again set foot in Paris.

On April 23, 1832, he was once more in his beloved London, and at his old quarters, 103 Great Portland Street. 'That smoky nest,' he exclaims, amid the sunshine of the Naples summer, 'is fated to be now and ever my favourite residence; my heart swells when I think of [4]it.' And here he was back in it again! It was warm, the lilacs were in bloom, his old friends were as cordial as if they had never parted, he was warmly welcomed everywhere, and felt his health return in full measure. His letters of this date are full of a genuine heartfelt satisfaction. He plunged at once into musical life. The Hebrides was played in MS. by the Philharmonic on May 14, and he performed his G minor Concerto, on an Erard piano, at the concerts of May 28 and June 18. He gave a MS. score of his overture to the society, and they presented him with a piece of plate. During his stay in London he wrote his Capriccio brillant in B (op. 22), and played it at a [5]concert of Mori's. On Sunday, June 10, he played the organ [6]at St. Paul's. He also published a four-hand [7]arrangement of the M.N.D. Overture with Cramer, and the 1st Book of Songs without [8]Words, with Novello, and played at many concerts. A more important thing still was the revision of the Hebrides Overture, to which he appears to have put the final touches on June 20 (five weeks after its performance at the Philharmonic), that being the date on the autograph score in possession of the family of Sterndale Bennett, which agrees in all essentials with the printed copy. On May 15 Zelter died, and he received the news of the loss of his old friend at Mr. Attwood's house, Biggin Hill, Norwood. The vision of a possible offer of Zelter's post at the Singakademie crossed his mind, and is discussed with his father; but it was not destined to be fulfilled. Among the friends whom he made during this visit, never to lose till death, were the Horsleys, a family living in the country at Kensington. Mr. W. Horsley was one of our most eminent glee-writers, his daughters were unusually musical, one of the sons is now an R.A., and another was for many years a bright ornament to English music. The circle was not altogether unlike his Berlin home, and in his own [9]words he seldom spent a day without meeting one or other of the family.

In July 1832 he returned to Berlin, to find the charm of the summer life in the garden as great as before. His darling sister Rebecka had been married to Professor Dirichlet in May. Another change was that the Devrients had migrated to another place, and Hensel's studios now occupied all the spare space in the garden-house. Immermann's promised libretto was waiting for him on his return, but from the terms in which he asks for Devrient's opinion on it, it is evident that it disappointed him, and we hear no more of the [10]subject. St. Paul was beginning to occupy his mind (of which more anon), and he had not long been back when the election of the conductor for the Singakademie in Zelter's place came on the *tapis*. The details may be read [11]elsewhere; it is enough to say here that chiefly through the extra zeal and want of tact of his friend Devrient, though with the best intentions, Mendelssohn, for no fault of his own, was dragged before the public as an opponent of Rungenhagen; and at length, on Jan. 22, 1833, was defeated by 60 votes out of 236. The defeat was aggravated by a sad want of judgment on the part of the family, who not only were annoyed, but showed their annoyance by withdrawing from the Akademie, and thus making an open hostility. Felix himself said little, but he felt it deeply. He [12]describes it as a time of uncertainty, anxiety, and suspense, which was as bad as a serious illness; and no doubt it widened the breach in his liking for Berlin, which had been begun by the rejection of Camacho. He doubtless found some consolation in a Grand Piano which was forwarded to him in August by Mr. Pierre Erard of London.

His musical activity was at all events not impaired. Besides occupying himself with the Sunday music at home, Felix, during this winter, gave three public concerts at the room of the [13]Singakademie in Nov. and Dec. 1832, and Jan. 1833, at which he brought forward his Walpurgisnight, his Reformation Symphony, his Overtures to the Midsummer Night's Dream, Meeresstille, and Hebrides, his G minor Concerto and his Capriccio in B minor; besides playing two sonatas and the G major Concerto of Beethoven, and a Concerto of Bach in D minor—all, be it remembered, novelties at that time even to many experienced musicians. In addition to this he was working seriously at the Italian Symphony. The Philharmonic Society of London had passed a resolution on Nov. 5, 1832, asking him to compose 'a symphony, an overture, and a vocal piece,' and offering him a hundred guineas for the exclusive right of performance during

2 Fétis is inaccurate in citing this as Mendelssohn's own expression. See Letter, March 31, 1832.
3 This want of sympathy, combined with an astonishing amount of ignorance, is amusingly displayed in the following description from the catalogue of a well-known French autograph collector:—'Mendelssohn Bartholdy (Felix) remarquable intelligence, mais cœur egoïste et froid; qui n'ayant pu gravir d'un pas sur les sommets de l'art, s'est refugié dans la musique de chambre.' Can ignorance and confidence go further?

two [1] years. Of these the Italian Symphony was to be one, and the MS. score of the work accordingly bears the date of March 13, 1833. On April 27 he wrote to the Society offering them the symphony with 'two new overtures, finished since last year' (doubtless the Meeresstille and the Trumpet Overture), the extra one being intended 'as a sign of his gratitude for the pleasure and honour they had again conferred upon him.' Graceful and apparently spontaneous as it is, the symphony had not been an easy task. Mendelssohn was not exempt from the lot of most artists who attempt a great poem or a great composition; on the contrary, 'the bitterest moments he ever endured or could have imagined,' were those which he experienced during the autumn when the work was in progress, and up to the last he had his doubts and misgivings as to the result. Now, however, when it was finished, he found that it 'pleased him and showed [2] progress'—a very modest expression for a work so full of original thought, masterly expression, consummate execution, and sunny beauty, as the Italian Symphony, and moreover such a prodigious [3] advance on his last work of the same kind!

On Feb. 6, 1833, a son was born to the Moscheleses, and one of the first letters written was to Mendelssohn, asking him to be godfather to the child. He sent a capital letter in reply, with an elaborate [4] sketch, and he transmitted later a cradle song—published as Op. 47, No. 6—for his godchild, Felix Moscheles. Early in April he left Berlin for Düsseldorf, to arrange for conducting the Lower Rhine Festival at the end of May. As soon as the arrangements were completed, he went on to London for the christening of his godchild, and also to conduct the Philharmonic Concert of May 13, when his Italian Symphony was performed for the first time, and he himself played Mozart's D minor Concerto. This was his third visit. He was there by April 26—again at his old lodgings in Great Portland Street—and on May 1 he played at Moscheles's annual concert a brilliant set of 4-hand variations on the Gipsy March in Preciosa, which the two had composed [5] together. He left shortly after the 13th and returned to Düsseldorf, in ample time for the rehearsal of the Festival, which began on Whit Sunday, May 26, and was an immense success. Israel in [6] Egypt was the *pièce de resistance*, and among the other works were Beethoven's Pastoral Symphony and Overture to Leonora, and his own Trumpet Overture. Abraham Mendelssohn had come from Berlin for the Festival, and an excellent account of it will be found in his letters, printed by [7] Hensel, admirable letters, full of point and wisdom, and showing better than anything else could the deep affection and perfect understanding which existed between father and son. The brilliant success of the Festival and the personal fascination of Mendelssohn led to an offer from the authorities of Düsseldorf that he should undertake the charge of the entire musical arrangements of the town, embracing the direction of the church music and of two associations, for three years, from Oct. 1, 1833, at a yearly salary of 600 [8] thalers (£90). He had been much attracted by the active artistic life of the place when he visited Immermann at the close of his Italian journey, and there appears to have been no hesitation in his acceptance of the offer. This important agreement concluded, Felix returned to London for the fourth time, taking his father with him. They arrived about the 5th, and went into the lodgings in Great Portland Street. It is the father's first visit, and his letters are full of little hits at the fog, the absence of the sun, the Sundays, and other English peculiarities, and at his son's enthusiasm for it all. As far as the elder Mendelssohn was concerned, the first month was perfectly successful, but in the course of July he was laid up with some complaint in his shin, which confined him to his room for three weeks, and although it gave him an excellent idea of English hospitality, it naturally threw a damp over the latter part of the visit. His blindness, too, seems to [9] have begun to show itself.

His son however experienced no such drawbacks. To his father he was everything. 'I cannot express,' says the grateful old man, 'what he has been to me, what a treasure of love, patience, endurance, thoughtfulness, and tender care he has lavished on me; and much as I owe him indirectly for a thousand kindnesses and attentions from others, I owe him far more for what he has done for me [10] himself.' No letters by Felix of this date have been printed, but enough information can be picked up to show that he fully enjoyed himself. His Trumpet Overture was played at the Philharmonic on June 10. He played the organ at St. Paul's (June 23), Klingemann and other friends at the bellows, and the church empty—Introduction and fugue; extempore; Attwood's Coronation Anthem, 4 hands, with Attwood; and three [11] pieces of Bach's. He also evidently played a great deal in society, and his father's account of a mad evening with Malibran will stand as a type of many [12] such. The Moscheleses, Attwoods, Horsleys, and Alexanders are among the most prominent English names in the diaries and [13] letters. Besides Malibran, Schröder-Devrient, Herz, and Hummel were among the foreign artists in London. On [14] Aug. 4 the two left for Berlin, Abraham having announced that he was bringing home 'a young painter named Alphonse Lovie,' who, of course,

was no other than [1] Felix himself. They reached Berlin in due course, and by Sept. 27, 1833, Felix was at his new post.

Düsseldorf was the beginning of a new period in his career—of settled life away from the influences of home, which had hitherto formed so important an element in his existence. At Berlin both success and non-success were largely biassed by personal considerations; here he was to start afresh, and to be entirely dependent on himself. He began his new career with vigour. He first attacked the church music, and as 'not one tolerable mass' was to be found, scoured the country as far as Elberfeld, Cologne, and Bonn, and returned with a carriage-load of Palestrina, Lasso, and Lotti. Israel in Egypt, the Messiah, Alexander's Feast, and Egmont are among the music which we hear of at the concerts. At the theatre, after a temporary disturbance, owing to a rise in prices, and a little over-eagerness, he was well received and successful; and at first all was *couleur de rose*—'a more agreeable position I cannot wish [2] for.' But he soon found that the theatre did not suit him; he had too little sympathy with theatrical life, and the responsibility was too irksome. He therefore, after a few months' trial, [3] in March 1834, relinquished his salary as far as the theatre was concerned, and held himself free, as a sort of 'Honorary [4] Intendant.' His influence however made itself felt. Don Juan, Figaro, Cherubini's Deux Journées, were amongst the operas given in the first four months; and in the church we hear of masses by Beethoven and Cherubini, motets of Palestrina's, and cantatas of Bach's, the Dettingen Te Deum, 'and on the whole as much good music as could be expected during my first [5] winter.' He lived on the ground floor of Schadow's [6] house, and was very much in the artistic circle, and always ready to make an excursion, to have a swim, to eat, to ride (for he kept [7] a horse), to dance, or to sleep; was working hard at water-colour drawing, under [8] Schirmer's tuition, and was the life and soul of every company he entered. In May was the Lower Rhine Festival at Aix-la-Chapelle, conducted by Ferdinand Ries; there he met Hiller, and also [9] Chopin, whose acquaintance he had already made [10] in Paris, and who returned with him to Düsseldorf. During the spring of 1834 he was made a member of the Berlin Academy of the [11] Fine Arts.

Meantime, through all these labours and distractions, of pleasure or business alike, he was composing busily and well. The overture to Melusina was finished Nov. 14, 1833, and tried; the Eb Rondo for P.F. and orchestra (op. 29) on Jan. 29, 1834; 'Infelice,' for soprano and orchestra, for the Philharmonic [12] Society (in its first shape), is dated April 3, 34; the fine Capriccio in A minor (op. 33, no. 1), April 9, 34. He had also rewritten and greatly improved the Meeresstille [13] Overture for its publication by Breitkopfs with the M. N. D. and Hebrides. A symphony which he mentions as on the road appears to have been superseded by a still more important work. In one of his letters from Paris (Dec. 19, 1831), complaining of the low morale of the opera librettos, he says that if that style is indispensable he 'will forsake opera and *write oratorios*.' The words had hardly left his pen when he was invited by the Cäcilien-Verein of Frankfort to compose an oratorio on [14] St. Paul. The general plan of the work, and such details as the exclusive use of the Bible and Choral-book, and the introduction of chorales, are stated by him at the very outset. On his return to Berlin he and Marx made a compact by which each was to write an oratorio-book for the other; Mendelssohn was to write 'Moses' for Marx, and Marx 'St. Paul' for [15] Mendelssohn. Mendelssohn executed his task at once, and the full libretto, entitled 'Moses, an Oratorio, composed by A. B. M.,' and signed 'F. M. B., 21 Aug. 1832,' is now in the possession of the [16] family. Marx, on the other hand, not only rejected Mendelssohn's book for 'Moses,' but threw up that of 'St. Paul' on the ground that chorales were an anachronism. In fact, this singular man's function in life seems to have been to differ with everybody. For the text of St. Paul, Mendelssohn was indebted to his own selection and to the aid of his friends Fürst and [17] Schubring. Like Handel, he knew his Bible well; in his oratorios he followed it implicitly, and the three books of St. Paul, Elijah, and the Lobgesang are a proof (if any proof were needed after the Messiah and Israel in Egypt) that, in his own words, 'the Bible is always the best of [18] all.' He began upon the music in March 1834, not anticipating that it would occupy him [19] long; but it dragged on, and was not completed till the beginning of 1836.

Though only Honorary Intendant at the Düsseldorf theatre, he busied himself with the approaching winter season, and before leaving for his holiday corresponded much with Devrient as to the engagement of [20] singers. September 1834 he spent in [21] Berlin, and was back at Düsseldorf [22] for the first concert on Oct. 23, calling on his way at Cassel, and making the acquaintance of [23] Hauptmann, with whom he was destined

in later life to be closely connected. The new theatre opened on Nov. 1. He and Immermann quarrelled as to precedence, or as to the distribution of the duties. The selection of singers and musicians, the bargaining with them, and all the countless worries which beset a manager, and which, by a new agreement, he had to undertake, proved a most uncongenial and moreover a most wasteful task; so uncongenial that at last, the day after the opening of the theatre, he suddenly 'made a *salto mortale*' and threw up all [1]connection with it, not without considerable irritability and [2]inconsistency. After this he continued to do his other duties, and to conduct occasional operas, Julius Rietz being his assistant. With the spring of 1835 he received an invitation from Leipzig through Mr. Schleinitz, which resulted in his taking the post of Conductor of the Gewandhaus Concerts there. His [3]answers to the invitation show not only how very careful he was not to infringe on the rights of others, but also how clearly and practically he looked at all the bearings of a question before he made up his mind upon it. Before the change, however, several things happened. He conducted the Lower Rhine Festival for 1835 at Cologne (June 7–9). The principal works were Handel's Solomon—for which he had written an organ part in Italy; Beethoven's Symphony No. 8, and Overture Op. 124, a 'religious march' and hymn of Cherubini's, and the Morning Hymn of his favourite J. F. Reichardt. The Festival was made more than ordinarily delightful to him by a present of Arnold's edition of Handel in 32 vols. from the committee. His father, mother, and sisters were all there. The parents then went back with him to Düsseldorf; there his mother had a severe attack of illness, which prevented his taking them home to Berlin till the latter part of [4]July. At Cassel the father too fell ill, and Felix's energies were fully taxed on the [5]road. He remained with them at Berlin till the end of August, and then left for Leipzig to make the necessary preparations for beginning the subscription concerts in the Gewandhaus on Oct. 4. His house at Leipzig was in Reichel's garden, off the Promenade. Chopin visited him during the interval, and Felix had the pleasure of introducing him to Clara Wieck, then a girl of 16. Later came his old Berlin friend David from Russia to lead the [6]orchestra, and Moscheles from London for a lengthened visit. Mendelssohn's new engagement began with the best auspices. The relief from the worries and responsibilities of Düsseldorf was [7]immense, and years [8]afterwards he refers to it as 'when I first came to Leipzig and thought I was in Paradise.' He was warmly welcomed on taking his seat, and the first concert led off with his Meeresstille Overture.

Rebecka passed through Leipzig on Oct. 14, on her way from Belgium, and Felix and Moscheles accompanied her to Berlin for a visit of two days, returning to Leipzig for the next concert. Short as the visit was, it was more than usually gay. The house was full every evening, and by playing alternately, by playing four hands, and by the comical extempore tricks of which the two friends were so fond, and which they carried on to such perfection, the parents, especially the father, now quite blind, were greatly mystified and [9]amused. And well that it was so, for it was Felix's last opportunity of gratifying the father he so tenderly loved and so deeply reverenced. At half-past 10 a.m. on Nov. 19, 1835, Abraham Mendelssohn was dead. He died the death of the just, passing away, as his father had done, without warning, but also without pain. He turned over in his bed, saying that he would sleep a little; and in half an hour he was gone. Hensel started at once for Leipzig, and by Sunday morning, the 22nd, Felix was in the arms of his mother. How deeply he felt under this peculiarly heavy blow the reader must gather from his own letters. It fell on him with special force, because he was not only away from the family circle, but had no home of his own, as Fanny and Rebecka had, to mitigate the loss. He went back to Leipzig stunned, but determined to do his duty with all his might, finish St. Paul, and thus most perfectly fulfil his father's wishes. He had completed the revision of his Melusina Overture on Nov. 17, only three days before the fatal news reached him, and there was nothing to hinder him from finishing the oratorio.

The business of the day, however, had to go on. One of the chief events in this series of concerts was a performance of the 9th Symphony of [10]Beethoven, Feb. 11, 1836. Another was Mendelssohn's performance of Mozart's D minor Concerto 'as written' (for it seems to have been always hitherto played after some [11]adaptation), on Jan. 29, with cadences which electrified his audience. Leipzig was particularly congenial to Mendelssohn. He was the idol of the town, had an orchestra full of enthusiasm and devotion, a first-rate coadjutor in David, who took much of the mechanical work of the orchestra off his shoulders; and moreover he was relieved of all business arrangements, which were transacted by the committee, especially by Herr Schleinitz. Another point in which he could not but contrast his present position favourably with that at Düsseldorf was the absence of all rivalry or jealousy. The labour of the season however was severe, and he [12]confesses that the first two months had taken more out of him than two years composing would do. The University of Leipzig showed its appreciation of his presence by conferring on him the degree of Phil. Doc. in [13]March.

Meantime Schelble's illness had cancelled the arrangement for producing St. Paul at Frankfort, and it had been secured for the Lower

[9] F.M. i. 422. [10] A.M.Z. 1836, 273. [11] Ibid. 105.
[12] To Hiller, L. Dec. 10, 1837. [13] A.M.Z. 1836, 216.

Rhine Festival of 1836 at Düsseldorf. The Festival lasted from May 22 to May 24 inclusive, and the programmes included, besides the new oratorio, the two overtures to Leonore, both in C, 'No. 1' (then unknown) and 'No. 3'; one of Handel's Chandos anthems, the Davidde penitente of Mozart, and the Ninth Symphony. The oratorio was executed with the greatest enthusiasm, and produced a deep sensation. It was performed on the 22nd, not in the present large music hall, but in the long low room which lies outside of that and below it, and is known as the Rittersaal, a too confined space for the purpose. For the details of the performance, including an escapade of one of the false witnesses, in which the coolness and skill of Fanny alone prevented a break-down, we must refer to the contemporary accounts of Klingemann, Hiller, and [1]Polko. To English readers the interest of the occasion is increased by the fact that Sterndale Bennett, then 20 years old, and fresh from the Royal Academy of Music, was present.

Schelble's illness also induced Mendelssohn to take the direction of the famous Cäcilien-Verein at Frankfort. Leipzig had no claims on him after the concerts were over, and he was thus able to spend six weeks at Frankfort practising the choir in Bach's 'Gottes Zeit,' Handel's 'Samson,' and other works, and improved and inspired them greatly. He resided in Schelble's house at the corner of the 'Schöne Aussicht,' with a view up and down the Main. Hiller was then living in Frankfort; Lindblad was there for a time; and Rossini remained for a few days on his passage through, in constant [2]intercourse with Felix.

Mendelssohn's visit to Frankfort was however fraught with deeper results than these. It was indeed quite providential, since here he met his future wife, Cécile Charlotte Sophie Jeanrenaud, a young lady of great beauty, nearly ten years younger than himself, the second daughter of a clergyman of the French Reformed Church, who had died many years before, leaving his wife (a Souchay by family) and children amongst the aristocracy of the town. The house was close to the Fahrthor, on the quay of the [3]Main. Madame Jeanrenaud was still young and good-looking, and it was a joke in the family that she herself was at first supposed to be the object of Mendelssohn's frequent visits. But though so reserved, he was not the less furiously in love, and those who were in the secret have told us how entirely absorbed he was by his passion, though without any sentimentality. He had already had many a passing attachment. Indeed, being at once so warm-hearted and so peculiarly attractive to women—and also, it should be said, so much sought by them—it is a strong tribute to his self-control that he was never before seriously or permanently involved. On no former occasion, however, is there a trace of any feeling that was not due entirely, or mainly, to some quality or accomplishment of the lady, and not to her actual personality. In the present case there could be no doubt either of the seriousness of his love or of the fact that it centred in Miss Jeanrenaud herself, and not in any of her tastes or pursuits. And yet, in order to test the reality of his feelings, he left Frankfort, at the very height of his passion, for a month's bathing at [4]Scheveningen near the Hague. His friend F. W. Schadow, the painter, accompanied him, and the restless state of his mind may be gathered from his letters to [5]Hiller. His love stood the test of absence triumphantly. Very shortly after his return, on Sept. 9, the engagement took [6]place, at Kronberg, near Frankfort; three weeks of bliss followed, and on Oct. 2 he was in his seat in the Gewandhaus, at the first concert of the season. The day after, Oct. 3, in the distant town of Liverpool, 'St. Paul' was performed for the first time in England, under the direction of Sir G. Smart. The season at Leipzig was a good one; Sterndale Bennett, who had come over at Mendelssohn's invitation, made his first public appearance in his own Concerto in C minor, and the series closed with the Choral Symphony.

His engagement soon became known far and wide, and it is characteristic of Germany, and of Mendelssohn's intimate relation to all concerned in the Gewandhaus, that at one of the concerts, the Finale to Fidelio, 'Wer ein holdes Weib errungen,' should have been put into the programme by the directors with special reference to him, and that he should have been forced into extemporising on that suggestive theme, amid the shouts and enthusiasm of his audience. The rehearsals for the concerts, the concerts themselves, his pupils, friends passing through, visits to his fiancée, an increasing correspondence, kept him more than busy. Bennett was living in Leipzig, and the two friends were much together. In addition to the subscription series and to the regular chamber concerts, there were performances of Israel in Egypt, with new organ part by him, on Nov. 7, and St. Paul, March 16, 1837. The compositions of this winter are few, and all of one kind, namely preludes and fugues for [7]pianoforte. The wedding took place on March 28, 1837, at the Walloon French Reformed Church, Frankfort. For the wedding tour they went to Freiburg, and into the Palatinate, and by the [8]15th of May returned to Frankfort. A journal which they kept together during the honeymoon is full of sketches and droll things of all kinds. In July they were at Bingen, Horchheim, Coblenz, and Düsseldorf for some weeks. At Bingen, while swimming across to Asmannshausen, he had an attack of cramp which nearly cost him his life, and from which he was only saved by the boatman. The musical results of these few months were very important, and include the 42nd Psalm, the String Quartet in E minor, an Andante and Allegro for P.F. in E (still in MS.), the second P.F. Concerto, in D minor, and the 3 Preludes

and Fugues for the Organ (op. 37). He was also in earnest correspondence with [1] Schubring as to a second oratorio, on St. Peter.

It must have been hard to tear himself away so soon from his lovely young wife—and indeed he grumbles about it [2] lustily—but he had been engaged to conduct St. Paul, and to play the organ and his new Pianoforte Concerto, at the Birmingham Festival. Accordingly, on Aug. 24, he left Düsseldorf for Rotterdam, crossed to Margate in the 'Attwood,' the same boat which had taken him over in 1829, and on the 27th is in London, on his fifth visit, at Klingemann's house, as cross as a man [3] can well be. But this did not prevent his setting to work with Klingemann at the plan of an oratorio on [4] Elijah, over which they had two mornings' consultation. Before leaving London for Birmingham, he played the organ at St. Paul's—on Sunday afternoon, Sept. 10—and at Christ Church, Newgate Street, on Tuesday morning, the 12th. It was on the former of these two occasions that the vergers, finding that the congregation would not leave the Cathedral, withdrew the organ-blower, and let the wind out of the organ during Bach's Prelude and Fugue in [5] A minor—'near the end of the [6] fugue, before the subject comes in on the Pedals.' At Christ Church he was evidently in a good vein. He played 'six extempore fantasias,' one on a subject given at the moment, and the Bach Fugue just mentioned. Samuel Wesley—our own ancient hero, though 71 years old—was present and played. It was literally his Nunc dimittis: he died in a month from that [7] date. Mendelssohn's organ-playing on these occasions was eagerly watched. He was the greatest of the few great German organ-players who had visited this country, and the English organists, some of them no mean proficients, learned more than one lesson from him. 'It was not,' wrote Dr. Gauntlett, 'that he played Bach for the first time here,—several of us had done that. But he taught us how to play the *slow* fugue, for Adams and others had played them too fast. His words were, Your organists think that Bach did not write a slow fugue for the organ. Also he brought out a number of pedal-fugues which were not known here. We had played a few, but he was the first to play [8] the D major, the G minor, the E major, the C minor, the short E minor,' etc. Even in those that were known he threw out points unsuspected before, as in the A minor Fugue, where he took the episode on the swell, returning to the Great Organ when the pedal re-enters, but transferring the E in the treble to the Great Organ a bar before the other parts, with very fine [9] effect. This shows that with all his strictness he knew how to break a rule. One thing which particularly struck our organists was the contrast between his massive effects and the lightness of his touch in rapid passages. The touch of the Christ Church organ was both deep and heavy, yet he threw off arpeggios as if he were at a piano. His command of the pedal clavier was also a subject of much [10] remark. But we must hasten on. On the evening of the Tuesday he attended a performance of his oratorio by the Sacred Harmonic Society at Exeter Hall. He had conducted three rehearsals, but could not conduct the performance itself, owing to the prohibition of the Birmingham committee. It was the first time he had heard St. Paul as a mere listener, and his private journal says that he found it 'very interesting.' His opinion of English amateurs may be gathered from his [11] letter to the Society, with which his journal fully agrees. 'I can hardly express the gratification I felt in hearing my work performed in so beautiful a manner,—indeed, I shall never wish to hear some parts of it better executed than they were on that night. The power of the choruses—this large body of good and musical voices—and the style in which they sang the whole of my music, gave me the highest and most heartfelt treat; while I thought on the immense improvement which such a number of *real amateurs* must necessarily produce in the country which may boast of it.' On the Wednesday he went to Birmingham, and remained there, rehearsing and arranging, till the Festival began, Tuesday, 19th. At the evening concert of that day he extemporised on the organ, taking the subjects of his fugue from 'Your harps and cymbals' (Solomon), and the first movement of Mozart's Symphony in D, both of which had been performed earlier in the day; he also conducted his Midsummer Night's Dream Overture. On Wednesday he conducted St. Paul, on Thursday evening played his new Concerto in D minor, and on Friday morning, the 22nd, Bach's Prelude and Fugue ('St. Anne's') in [12] E♭ on the organ. The applause throughout was prodigious, but it did not turn his head, or prevent indignant reflections on the treatment to which Neukomm had been subjected, reflections which do him honour. Moreover, the applause was not empty. Mori and Novello were keen competitors for his Concerto, and it became the prize of the former, at what we should now consider a very moderate figure, before its composer left Birmingham. He travelled up by coach, reaching London at midnight, and was intercepted at the coach-office by the committee of the Sacred Harmonic Society, who presented him with a large silver [13] snuff-box, adorned with an inscription. He then went straight through, arrived in Frankfort on the 27th, and was at Leipzig at 2 p.m. of the day of the first concert, Sunday, Oct. 1. His house was in Lurgenstein's Garden, off the Promenade, the first house on the left, on [14] the second floor.

14 H. 149.

The next few years were given chiefly to Leipzig. He devoted all his heart and soul to the Gewandhaus Concerts, and was well repaid by the increasing excellence of the performance and the enthusiasm of the audiences. The principal feature of the series 1837–8 was the appearance of Clara Novello for the first time in Germany—a fruit of his English experiences. She sang first at the concert of Nov. 2, and remained till the middle of January, creating an extraordinary excitement. But the programmes had other features to recommend them. In Feb. and March, 1838, there were four historical concerts (1. Bach, Handel, Gluck, Viotti; 2. Haydn, Cimarosa, Naumann, Righini; 3. Mozart, Salieri, Méhul, Romberg; 4. Vogler, Beethoven, Weber), which excited great interest. Mendelssohn and David played the solo pieces, and it is easy to imagine what a treat they must have been. In the programmes of other concerts we find Beethoven's 'Glorreiche Augenblick,' and Mendelssohn's own 42nd Psalm. His Serenade and Allegro giojoso (op. 43)—like his Ruy Blas Overture, a veritable [1]impromptu—was produced on April 2, and his String Quartet in Eb (op. 44, no. 3) on the following day.

His domestic life during the spring of 1838 was not without anxiety. On Feb. 7 his first son was born, afterwards named Carl Wolfgang Paul, and his wife had a very dangerous [2]illness. This year he conducted the Festival at Cologne (June 3–6). He had induced the committee to include a [3]Cantata of Bach's, then an entire novelty, in the programme, which also contained a selection from Handel's Joshua. A silver cup (Pokal) was presented to him at the [4]close.

The summer was spent at Berlin, in the lovely garden of the Leipziger Strasse, and was his wife's first introduction to her husband's [5]family. To Felix it was a time of great enjoyment and much productiveness. Even in the early part of the year he had not allowed the work of the concerts to keep him from composition. The String Quartet in Eb, just mentioned, the Cello Sonata in Bb (op. 45), the 95th Psalm, and the Serenade and Allegro giojoso are all dated during the hard work of the first four months of 1838. The actual result of the summer was another String Quartet (in D; op. 44, no. 1), dated [6]July 24, 38, and the Andante Cantabile and Presto Agitato in B (Berlin, June 22, 1838). The intended result is a symphony in Bb, which occupied him much, which he mentions more than [7]once as complete in his head, but of which no trace on paper has yet been found. He alludes to it in a letter to the Philharmonic Society (Jan. 19, 1839)—answering their request for a symphony—as 'begun last year,' though it is doubtful if his occupations will allow him to finish it in time for the 1839 season. So near were we to the possession of an additional companion to the Italian and Scotch Symphonies! The Violin Concerto was also begun in this [8] holiday, and he speaks of a [9]Psalm (probably the noble one for 8 voices, 'When Israel'), a Sonata for P.F. and Violin (in [10]F, still in MS.), and other things. He was now, too, in the midst of the tiresome [11]correspondence with Mr. Planché, on the subject of the opera which that gentleman had agreed to write, but which, like Mendelssohn's other negotiations on the subject of operas, came to nothing; and there is the usual large number of long and carefully written letters. He returned to Leipzig in September, but was again attacked with [12]measles, on the eve of a performance of St. Paul, on Sept. 15. The attack was sufficient to prevent his conducting the first of the Gewandhaus Concerts (Sept. 30) at which David was his substitute. On Oct. 7 he was again at his [13]post. The star of this series was Mrs. Alfred Shaw, whose singing had pleased him very much when last in England; its one remarkable novelty was Schubert's great Symphony in C, which had been brought from Vienna by Schumann, and was first played in MS. on March 22, 1839, at the last concert of the series. It was during this autumn that he received from Erard the Grand piano which became so well known to his friends and pupils, and the prospect of which he celebrates in a remarkable letter now in possession of that Firm.

Elijah is now fairly under way. After discussing with his friends Bauer and Schubring the subject of [14]St. Peter, in terms which show how completely the requirements of an oratorio book were within his grasp, and another subject not very clearly indicated, but apparently approaching that which he afterwards began to treat as [15]Christus—he was led to the contemplation of that most picturesque and startling of the prophets of the Old Testament, who, strange to say, does not appear to have been previously treated by any known composer. Hiller tells [16]us that the subject was suggested by the [17]passage (1 Kings xix. 11), 'Behold, the Lord passed by.' We may accept the fact more certainly than the date (1840) at which Hiller places it. Such a thing could not but fix itself in the memory, though the date might easily be confused. We have already seen that he was at work on the subject in the summer of 1837, and a letter to Schubring, dated Nov. 2, 38, shows that much consultation had already taken place upon it between Mendelssohn and himself, and that considerable progress had been made in the construction of the book of the oratorio. Mendelssohn had drawn up a number of passages and scenes in order, and had given them to Schubring for consideration. His ideas are dramatic enough for the stage! A month later [18]the matter

has made further progress, and his judicious dramatic ideas are even more confirmed; but the music does not seem to be yet touched. During the spring of 1839 he finished the 114th Psalm, and wrote the Overture to Ruy Blas. This, though one of the most brilliantly effective of his works, was, with a chorus for female voices, literally conceived and executed *à l'improviste* between a Tuesday evening and a Friday morning—a great part of both Wednesday and Thursday being otherwise occupied—and in the teeth of an absolute aversion to the [1] play. The performance took place at the theatre on March 11. A letter to Hiller, written a [2] month after this, gives a pleasant picture of his care for his friends. A great part of it is occupied with the arrangements for doing Hiller's oratorio in the next series of Gewandhaus Concerts, and with his pleasure at the appearance of a favourable article on him in Schumann's 'Zeitung,' from which he passes to lament over the news of the suicide of Nourrit, who had been one of his circle in Paris in 1831.

In May he is at Düsseldorf, conducting the Festival (May 19–21)—the Messiah, Beethoven's Mass in C, his own 42nd Psalm, the Eroica, etc. From this he went to Frankfort, to the wedding of his wife's sister Julie to Mr. Schunck of Leipzig, and there he wrote the D minor [3] Trio; then to Horchheim, and then back to Frankfort. On [4] Aug. 21 they were at home again in Leipzig, and were visited by the Hensels, who remained with them till Sept. 4, and then departed for Italy. Felix followed them with a long [5] letter of hints and instructions for their guidance on the journey, not the least characteristic part of which is the closing injunction to be sure to eat a salad of brocoli and ham at Naples, and to write to tell him if it was not good.

The summer of 1839 had been an unusually fine one; the visit to Frankfort and the Rhine had been perfectly successful; he had enjoyed it with that peculiar capacity for enjoyment which he possessed, and he felt 'thoroughly [6] refreshed.' He went a great deal into society, but found none so charming as that of his wife. A delightful picture of part of his life at Frankfort is given in a letter to Klingemann of Aug. 1, and still more so in one to his [7] mother. Nor was it only delightful. It urged him to the composition of part-songs for the open air, a kind of piece which he made his own, and wrote to absolute perfection. The impulse lasted till the end of the winter, and many of his best part-songs—including 'Love and Wine,' 'The Hunter's Farewell,' 'The Lark'—date from this time. In addition to these the summer produced the D minor Trio already mentioned, the completion of the 114th Psalm, and some fugues for the organ, one of which was worked into a sonata, while the others remain in MS.

On Oct. 2 his second child, Marie, was born. Then came the christening, with a visit from his mother and Paul, and then Hiller arrived. He had very recently lost his mother, and nothing would satisfy Mendelssohn but that his friend should come and pay him a long [8] visit, partly to dissipate his thoughts, and partly to superintend the rehearsals of his oratorio of Jeremiah the Prophet, which had been bespoken for the next series of Gewandhaus [9] Concerts. Hiller arrived early in December, and we recommend his description of Mendelssohn's home life to any one who wishes to know how simply and happily a great and busy man can live. Leipzig was proud of him, his wife was very popular, and this was perhaps the happiest period of his life. His love of amusement was as great as ever, and his friends still recollect his childish delight in the Cirque Lajarre and Paul Cousin the clown.

The concert season of 1839–40 was a brilliant one. For novelties there were symphonies by Kalliwoda, Kittl, Schneider, and Vogler. Schubert's 9th was played no less than three [10] times, and one [11] concert was rendered memorable by a performance of Beethoven's four Overtures to Leonora-Fidelio. Mendelssohn's own 114th Psalm was first performed 'sehr [12] glorios' on New Year's Day, and the new Trio on Feb. 10. The Quartet Concerts were also unusually brilliant. At one of them Mendelssohn's Octet was given, he and Kalliwoda playing the two violas; at another he [13] accompanied David in Bach's Chaconne, then quite unknown. Hiller's oratorio was produced on April 2 with great success. Ernst, and, above all, Liszt, were among the virtuosos of this season; and for the latter of these two great players Mendelssohn arranged a soirée at the Gewandhaus, which he thus epitomises—'350 people, orchestra, chorus, punch, pastry, Meeresstille, Psalm, Bach's Triple Concerto, choruses from St. Paul, Fantasia on Lucia, the Erl King, the devil and his [14] grandmother'; and which had the effect of somewhat allaying the annoyance which had been caused by the extra prices charged at Liszt's concerts.

How, in the middle of all this exciting and fatiguing work (of which we have given but a poor idea), he found time for composition, and for his large correspondence, it is impossible to tell, but he neglected nothing. On the contrary, it is precisely during this winter that he translates for his uncle Joseph, his father's elder brother—a man not only of remarkable business power but with considerable literary ability—a number of difficult early Italian poems into German verse. They consist of three sonnets by Boccaccio, one by Dante, one by Cino, one by Cecco Angioleri, an epigram of Dante's, and another of Alfani's. They are printed in the recent editions of the letters, and are accompanied by a letter dated Feb. 20, 1840,

1 Letter, March 18, 1839. In fact it was only written at all because the proceeds of the concert were to go to the Widows' fund of the orchestra. He insisted on calling it 'The Overture to the Dramatic Fund.' 2 Leipzig, April 15; H. p. 133.

3 The autograph is dated—1st Movement, Frankfort, June 6; Finale, Frankfort, July 18. 4 F.M. ii. 85.

13 Probably extempore; the published one is dated some years later.

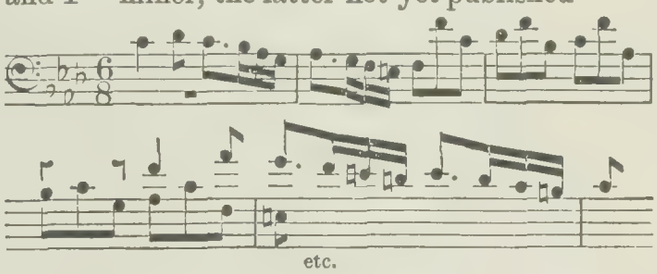
14 Letter, March 30, 1840.

describing half-humorously, half-pathetically, the difficulty which the obscurities of the originals had given him amid all his professional labours. With irrepressible energy he embraced the first moment of an approach to leisure, after what he describes as a 'really overpowering [1] turmoil,' to write a long and carefully-studied official communication to the Kreis-Director, or Home Minister of Saxony, urging that a legacy recently left by a certain Herr Blümner should be applied to the formation of a solid music academy at [2] Leipzig. This was business; but, in addition, during all these months there are long letters to Hiller, Chorley, his mother, Fanny, Paul, and Fürst (and remember that only a small part of those which he wrote has been brought within our reach); and yet he managed to compose both the Lobgesang and the Festgesang for the Festival in commemoration of the invention of Printing, which was held in Leipzig on June 25, the former of which is as characteristic and important a work as any in the whole series of his compositions. The music for both these was written at the express request of the Town Council, acting through a committee whose chairman was Dr. Raymond Härtel, and the first communication with Mendelssohn on the subject was made about the end of the previous July. We know from Mendelssohn [3] himself that the title 'Symphonie Cantata' is due to Klingemann, but the words are probably Mendelssohn's own selection, no trace of any communication with Schubring, Bauer, or Fürst being preserved in the published letters or recollections, and the draft of the words having vanished.

The Festival extended over two days, Wednesday and Thursday, June 24 and 25. On Tuesday evening there was a 'Vorfeier' in the shape of an opera by Lortzing, 'Hans Sachs,' composed for the occasion. At 8 a.m. on Wednesday was a service in the church with a cantata by Richter (of Zittau), followed by the unveiling of the printing press and statue of Gutenberg, and by a performance in the open market-place of Mendelssohn's [4] Festgesang for two choirs and brass instruments, he conducting the one chorus and David the other. On Thursday afternoon a concert was held in St. Thomas's Church, consisting of Weber's Jubilee Overture, Handel's Dettingen Te Deum, and Mendelssohn's Lobgesang.

Hardly was this over when he went to Schwerin with his wife, to conduct St. Paul and other large works, at a Festival there (July 8–10). On the way back they stopped in Berlin for 'three very pleasant [5] days.' Another matter into which at this time he threw all his devotion was the erection of a monument to Sebastian Bach in front of his old habitat at the 'Thomas School.' The scheme was his [6] own, and he urged it with characteristic heartiness. But dear as the name and fame of Bach were to him, he would not consent to move till he had obtained (from the town council) an increase to the pay of the orchestra of the Gewandhaus Concerts. For this latter object he obtained 500 [7] thalers, and on Aug. 10 gave an organ performance *solissimo* in St. Thomas's church, by which he realised 300 [8] thalers. Even this he would not do without doing his very best, and he describes to his mother how he had practised so hard for a week before 'that he could hardly stand on his feet, and the mere walking down the street was like playing [9] a pedal passage.' After such a six months no wonder that his health was not good, and that his 'physician wanted to send him to some Brunnen instead of a Musical [10] Festival.' To a Festival, however, he went. The Lobgesang had not escaped the attention of the energetic Mr. Moore, who managed the music in Birmingham, and some time before its first performance he had written to Mendelssohn with the view of securing it for the autumn meeting. On July 21 Mendelssohn writes in answer, agreeing to come, and making his stipulations as to the other works to be [11] performed. It was his sixth visit to England.

There was a preliminary rehearsal of the work in London under Moscheles's care. Mendelssohn arrived on [12] Sept. 8, visited all his London friends, including the Alexanders, Horsleys, Moscheles, and Klingemann (with whom he stayed, at 4 Hobart Place, Pimlico), went down to Birmingham with Moscheles, and stayed with Mr. Moore. On Tuesday he played a fugue on the organ; on Wednesday, the 23rd, conducted the Lobgesang, and after it was over, and the public had left the hall, played for three-quarters of an hour on the [13] organ. The same day he played his G minor Concerto at the evening concert. On Thursday, after a selection from Handel's Jephthah, he again extemporised on the organ, this time in public. The selection had closed with a chorus, the subjects of which he took for his [14] improvisation, combining 'Theme sublime' with 'Ever faithful' in a masterly manner. On his return to town—on Sept. 30—he played the organ at St. Peter's, Cornhill—Bach's noble Prelude and Fugue in E minor, his own in C minor (op. 37, no. 1) and F [15] minor, the latter not yet published—



and other pieces, concluding with Bach's Passacaglia. Of this last he wrote a few bars as a memento, which still ornament the vestry of the

[14] From the recollections of Mr. Turle and the late Mr. Bowley.
[15] I owe this to Miss Mounsey, the organist of the church. The Fugue is among the MSS. in the Berlin Bibliothek.

church. He had intended to give a [1] Charity Concert during his stay in London, after the Festival, but it was too late in the season for this, and he travelled from London with [2] Chorley and Moscheles in the mail coach to Dover; then an 8-hours' passage to Ostend, and by Liège and Aix-la-Chapelle to Leipzig. It was Moscheles's first introduction to Cécile.

The concerts had already begun, on Oct. 4, but he took his place at the second. The Lobgesang played a great part in the musical life of Leipzig this winter. It was performed at the special command of the King of Saxony at an extra [3] concert in October. Then Mendelssohn set to work to make the alterations and additions which the previous performances had suggested to him, including the scene of the watchman, preparatory to a benefit performance on Dec. 3; and lastly it was performed at the 9th Gewandhaus Concert, on Dec. 17, when both it and the Kreutzer Sonata were commanded by the King and the Crown Prince of Saxony. The alterations were so serious and so universal as to compel the sacrifice of the whole of the plates engraved for the performance at Birmingham. Now, however, they were final, and the work was published by Breitkopf & Härtel early in the following year. Before leaving this we may say that the scene of the watchman was suggested to him during a sleepless night, in which the words 'Will the night soon pass?' incessantly recurred to his mind. Next morning he told Mr. Schleinitz that he had got a new idea for the Lobgesang.

With 1841 we arrive at a period of Mendelssohn's life when, for the first time, a disturbing antagonistic element beyond his own control was introduced into it, depriving him of that freedom of action on which he laid such great stress, reducing him to do much that he was disinclined to, and to leave undone much that he loved, and producing by degrees a decidedly unhappy effect on his life and peace. From 1841 began the worries and troubles which, when added to the prodigious amount of his legitimate work, gradually robbed him of the serene happiness and satisfaction which he had for long enjoyed, and in the end, there can be little doubt, contributed to his premature death. Frederick William IV, to whom, as Crown Prince, Mendelssohn dedicated his three Concert-overtures in 1834, had succeeded to the throne of Prussia on June 7, 1840; and being a man of much taste and cultivation, one of his first desires was to found an Academy of Arts in his capital, to be divided into the four classes of Painting, Sculpture, Architecture, and Music, each class to have its Director, who should in turn be Superintendent of the whole Academy. In music it was proposed to connect the class with the existing establishments for musical education, and with others to be formed in the future, all under the control of the Director, who was also to carry out a certain number of concerts every year, at which large vocal and instrumental works were to be performed by the Royal orchestra and the Opera company. Such was the scheme which was communicated to Mendelssohn by Herr von Massow, on Dec. 11, 1840, with an offer of the post of Director of the musical class, at a salary of 3000 thalers (£450). Though much gratified by the offer, Mendelssohn declined to accept it without detailed information as to the duties involved. That information, however, could only be afforded by the Government Departments of Science, Instruction, and Medicine, within whose regulation the Academy lay, and on account of the necessary changes and adjustments would obviously require much consideration. Many letters on the subject passed between Mendelssohn, his brother Paul, Herr von Massow, Herr Eichhorn the Minister, Klingemann, the President Verkenius, from which it is not difficult to see that his hesitation arose from his distrust of Berlin and of the official world which predominated there, and with whom he would in his directorship be thrown into contact at every turn. He contrasts, somewhat captiously perhaps, his freedom at Leipzig with the trammels at Berlin; the devoted, excellent, vigorous orchestra of the one with the careless perfunctory execution of the other. His radical, *roturier* spirit revolted against the officialism and etiquette of a great and formal Court, and he denounces in distinct terms 'the mongrel doings of the capital—vast projects and poor performances; the keen criticism and the slovenly playing; the liberal ideas and the shoals of subservient courtiers; the Museum and Academy, and the sand.'

To leave a place where his sphere of action was so definite, and the results so unmistakeably good, as they were at Leipzig, for one in which the programme was vague and the results at best problematical, was to him more than difficult. His fixed belief was that Leipzig was one of the most influential and Berlin one of the least influential places in Germany in the matter of music; and this being his conviction (rightly or wrongly) we cannot wonder at his hesitation to forsake the one for the other. However, the commands of a king are not easily set aside, and the result was that by the end of May 1841 he was living in Berlin, in the old home of his family—to his great delight.[4]

His life at Leipzig during the winter of 1840–41 had been unusually laborious. The interest of the Concerts was fully maintained; four very interesting programmes, occupied entirely by Bach, Handel, Haydn, Mozart, and Beethoven, and involving a world of consideration and minute trouble, were given. He himself played frequently; several very important new works by contemporaries—including symphonies by Spohr, Maurer, and Kalliwoda, and the Choral Symphony, then nearly as good as new—were produced, after extra [5] careful rehearsals; and the season wound up with Bach's Passion. In a letter to [6] Chorley of March 15 he calls his spring

campaign 'the most troublesome and vexatious' he had ever known; 'nineteen concerts since Jan. 1, and seven more to come, with at least three rehearsals a week all through.' The amount of general business and correspondence, due to the constant rise in his fame and position, was also alarmingly on the increase. In a letter to his mother, Jan. 25, he tells of 35 letters written in two days, and of other severe demands on his time, temper, and judgment. And when we remember what his letters often are—the large quarto sheet of 'Bath paper,' covered at least on three sides, often over the flaps of the fourth, the close straight lines, the regular, extraordinarily neat writing, the air of accuracy and precision that pervades the whole down to the careful signature and the tiny seal—we shall not wonder that with all this, added to the Berlin worries, he composed little or nothing. 'I have neither read nor written in the course of this music-mad winter,' says [1] he, and accordingly, with one exception, we find no composition with a date earlier than the latter part of April 1841. The exception was a pianoforte duet in A, which he wrote expressly to play with his friend Madame Schumann, at her concert on March 31. It is dated Leipzig, March 23, 1841, and was published after his death as op. 92. As the pressure lessens, however, and the summer advances, he breaks out with some songs, with and without words, and then with the '17 Serious Variations' (June 4), going on, as his way was, in the same rut, with the variations in E♭ (June 25) and in [2] B♭. It was known before he left Leipzig that it was his intention to accept the Berlin post for a year only, and therefore it seemed natural that the 'Auf Wiedersehen' in his Volkslied, 'Es ist bestimmt,' should be rapturously cheered when [3] sung by Schröder-Devrient to his own accompaniment, and that when serenaded at his departure with the same song he should himself join heartily in its closing [4] words. He took his farewell, as we have said, with a performance of Bach's Passion, in St. Thomas's church, on Palm Sunday, April 4, and the appointment of Kapellmeister to the King of Saxony followed him to Berlin.[5]

For some time after his arrival there matters did not look promising. But he had bound himself for a year. Many conferences were held, at which little was done but to irritate him. He handed in his plan for the Musical [6] Academy, received the title of [7] Kapellmeister to the King of Prussia, the life in the lovely garden at the Leipziger Strasse reasserted its old power over him, and his hope and spirits gradually returned. He was back in Leipzig for a few weeks in July, as we find from his letters, and from an Organ prelude in C minor, a perfectly strict composition of 38 bars, written 'this morning' (July 9), on purpose for the album of Mr. Dibdin of [8] Edinburgh. He then began work in Berlin. The King's desire was to revive some of the ancient Greek tragedies. He communicated his idea to Tieck, the poet, one of the new Directors; the choice fell on the Antigone of Sophocles, in Donner's new translation; and by [9] Sept. 9 Mendelssohn was in consultation with Tieck on the subject. He was greatly interested with the plan, and with the novel task of setting a Greek drama, and worked at it with the greatest enthusiasm. By the 28th of the same month he had made up his mind on the questions of unison, melodrama, etc. The first full stage rehearsal took place on the 22nd, and the performance itself at the Neue Palais at Potsdam on the 28th Oct., with a repetition on Nov. 6. Meantime he had taken a house of his own opposite the family residence. A temporary arrangement had been made for the Gewandhaus Concerts of this winter to be conducted by David, and they began for the season on that footing. Mendelssohn however ran over for a short time, after the second performance of Antigone, and conducted two of the series, and the concert for the benefit of the orchestra, returning to Berlin for Christmas.

On Jan. 10, 1842, he began a series of concerts by command of the king, with a performance of St. Paul in the concert-room of the theatre; but, if we may believe Devrient, there was no cordial understanding between him and the band; the Berlin audiences were cold, and he was uncomfortable. 'A prophet hath no honour in his own country.' It must, however, have been satisfactory to see the hold which his Antigone was taking both in [10] Leipzig and Berlin, in each of which it was played over and over again to crowded houses. During the winter he completed the Scotch Symphony, which is dated Jan. 20, 1842. His sister's Sunday concerts were extraordinarily brilliant this season, on account not only of the music performed, but of the very distinguished persons who frequented them; Cornelius, Thorwaldsen, Ernst (a constant visitor), Pasta, Madame Ungher-Sabatier, Liszt, Böckh, Lepsius, Mrs. Austin, are specimens of the various kinds of people who were attracted, partly no doubt by the music and the pleasant *réunion*, partly by the fact that Mendelssohn was there. He made his escape to his beloved Leipzig for the production of the Scotch Symphony, on [11] March 3, but though it was repeated a week later, he appears to have returned to Berlin. He once more, and for the last time, directed the Düsseldorf Festival, on May 15–17; and passing on to London, for his seventh visit, with his wife, conducted his Scotch Symphony at the Philharmonic, amid extraordinary applause and enthusiasm, on June 13, and played his D minor Concerto there on the 27th, and conducted the Hebrides, which was encored. The Philharmonic season wound up with a fish dinner at Greenwich, given him by the directors. On the 12th he revisited St. Peter's, Cornhill. It was Sunday, and as he came in the congregation were singing

a hymn to Haydn's well-known tune. This he took for the subject of his voluntary, and varied and treated it for some time extempore in the happiest and most scientific manner. On the 16th he paid a third visit to Christ Church, Newgate Street, and it was possibly on that occasion that he played an extempore fantasia on Israel in Egypt which positively electrified those who heard it. He also again treated Haydn's Hymn, but this time as a fantasia and fugue, entirely distinct from his performance of four days [1] previous. On the 17th, at a concert of the Sacred Harmonic Society at Exeter Hall, mostly consisting of English Anthems, he played the organ twice; first, Bach's so-called 'St. Anne's' Fugue, with the great Prelude in E♭, and, secondly, an extempore introduction and variations on the Harmonious Blacksmith, ending with a fugue on the same [2] theme. After this he and his wife paid a visit to their cousins in Manchester, with the intention of going on to Dublin, but were deterred by the prospect of the crossing. During the London portion of this visit they resided with his wife's relations, the Beneckes, on Denmark Hill. He was very much in society, where he always enjoyed himself extremely, and where his wife was much admired; and amongst other incidents described in his letters to his [3] mother are two visits to Buckingham Palace, the first in the evening of June 20, and the second on the afternoon of July 9, which show how thoroughly the Queen and Prince Consort appreciated him. On the latter occasion he obtained Her Majesty's permission to dedicate the Scotch Symphony to [4] her. They left on July 10, and by the middle of the month were safe at Frankfort, in the midst of their relatives, 'well and happy,' and looking back on the past month as a 'delightful [5] journey.' August was devoted to a tour in Switzerland, he and Paul, with their wives. Montreux, Interlaken, the Oberland, the Furka, Meiringen, the Grimsel, are all mentioned. He walked, composed, and 'sketched furiously'; visited the old scenes, found the old landladies and old guides, always glad to see him; his health was perfect, his mood gay, and all was bright and happy, save when the spectre of a possible prolonged residence in [6] Berlin intruded its unwelcome form. On Sept. 3 they were at [7] Zürich, on the 5th, 6th, and 7th at the Rigi and [8] Lucerne. While at Zürich he visited the Blind Institution, spent two hours in examining the compositions of the pupils, praised and encouraged them, and finished by extemporising on the piano at great [9] length. On his return, he stayed for a gay fortnight at Frankfort. Hiller, Charles Halle, and their wives were there, and there was much music made, and a great open-air [10] fête at the Sandhof, with part-songs, *tableaux vivants*, etc., etc. A very characteristic and beautiful letter to Simrock, the publisher, urging him to accept some of Hiller's compositions (an appeal promptly responded to by that excellent personage), dates from this [11] time. So well was the secret kept that Hiller never knew of it till the publication of the letter in 1863.

An anecdote of this period may be new to some of our readers. During the summer the King of Prussia had conferred on Mendelssohn, in company with Liszt, Meyerbeer, and Rossini, the great honour of the 'Ordre pour le [12] Mérite,' and the order itself reached him at Frankfort. He set no store by such distinctions, nor perhaps was its Berlin origin likely to increase the value of this particular one. Shortly after it arrived he was taking a walk with a party of friends across the bridge at Offenbach. One of them (Mr. Speyer) stayed behind to pay the toll for the rest. 'Is not that,' said the tollkeeper, 'the Mr. Mendelssohn whose music we sing at our society?' 'It is.' 'Then, if you please, I should like to pay the toll for him myself.' On rejoining the party, Mr. Speyer told Mendelssohn what had happened. He was enormously pleased. 'Hm, said he, I like that better than the Order.' [13]

He took Leipzig on his way to Berlin, and conducted the opening concert of the Gewandhaus series on Oct. 2, amid the greatest enthusiasm of his old friends. A week later and he was in Berlin, and if anything could show how uncongenial the place and the prospect were, it is to be found in his letter to Hiller, and even in the Italian *jeu d'esprit* [14] to Hiller's wife. It is as if his very teeth were set on edge by everything he sees and hears there. Nor were matters more promising when he came to close quarters. A proposition was made to him by the minister immediately after his arrival that he should act as superintendent of the music of the Protestant Church of Prussia, a post at once vague and vast, and unsuited to him. At the same time it was now evident that the plans for the organisation of the Academy had failed, and that there was no present hope of any building being erected for the music school. Under these circumstances, anxious more on his mother's account than on his own not to leave Berlin in disgrace, in fact ready to do anything which should keep him in connection with the place [15] where she was, he asked and obtained a long private interview with the King, in which His Majesty expressed his intention of forming a choir of about 30 first-rate singers, with a small picked orchestra, to be available for church music on Sundays and Festivals, and to form the nucleus of a large body for the execution of grand musical works. Of this, when formed, he desired Mendelssohn to take the command, and to write the music for it; meantime he was to be at liberty to live where he chose, and—his own stipulation—to receive half the salary previously granted. The King evidently had the

matter very closely at heart. He was, says Mendelssohn, quite flushed with pleasure, could hardly contain himself, and kept repeating 'You can scarcely think *now* of going away.' When kings ask in this style it is not for subjects to refuse them. Moreover Mendelssohn was as much attracted by the King as he was repelled by the official etiquette of his ministers, and it is not surprising that he acceded to the request. The interview was followed up by a letter from His Majesty dated [1]Nov. 22, containing an order constituting the Domchor or Cathedral choir, conferring on Mendelssohn the title of General-Music-Director, with a salary of 1500 thalers, and giving him the superintendence and direction of the church and sacred music as his special province.

This involved his giving up acting as Capellmeister to the King of Saxony, and for that purpose he had an interview with that [2]monarch at Dresden, in which he obtained the King's consent to the application of the Blümner legacy to his darling scheme of a Conservatorium at Leipzig.

Thus then 'this long, tedious, Berlin business' was at length apparently brought to an end, and Mendelssohn was back in his beloved Leipzig, and with a definite sphere of duty before him in Berlin, for he had learnt in the meantime that he was at once to supply the King with music to Racine's Athalie, the Midsummer Night's Dream, The Tempest, and Œdipus [3]Coloneus. This, with the proofs of the Scotch Symphony and Antigone to correct, with the Walpurgisnight to complete for performance, the new Conservatorium to organise, the concerts, regular and irregular, to rehearse and conduct, and a vast and increasing correspondence to be kept up, was enough for even his deft and untiring pair of hands. He is cheerful enough under it, and although he complains in one letter that composition is impossible, yet in the next letter Athalie, Œdipus, the Midsummer Night's Dream, the Walpurgisnight, and the new Cello Sonata are beginning again to fill his brain, and he finds time to be pleasant over old Madame Schröder, and to urge the claims of his old Meiringen guide to a place in Murray's [4]Handbook. In the midst of all this whirl he lost his mother, who died in the same rapid and peaceful manner that his father had done. She was taken ill on the Sunday evening—her husband's birthday—and died before noon on Monday Dec. 12—so quickly that her son's [5]letter of the 11th cannot have reached her. The loss affected him less violently than that of his father had done, perhaps because he was now older and too hard-worked, and also because of the home-life and ties by which he was surrounded. But it caused him keen suffering, from which he did not soon recover. It brings into strong relief his love of the family bond, and his fear lest the disappearance of the point of union should at all separate the brothers and sisters; and he proposes, a touching offer for one whose pen was already so incessantly occupied, that he should write to one of the three every week, and the communication be thus maintained with certainty.[6]

The house now became his, but the hesitation with which he accepts his brother's proposal to that effect, lest it should not be acceptable to his sisters or their husbands, is eminently characteristic of his delicate and unselfish generosity.[7] He admits that his mother's death has been a severe trial, and then he drops an expression which shows how heavily the turmoil of so busy a life was beginning to press upon him:—'in fact everything that I do and carry on is a burden to me, unless it be mere passive existence.' This may have been the mere complaint of the moment, but it is unlike the former buoyant Mendelssohn. He was suffering too from what appears to have been a serious cough. But work came to his relief; he had some scoring and copying to do which, though of the nature of

> 'The sad mechanic exercise,
> Like dull narcotics numbing pain,'[8]

yet had its own charm—'the pleasant intercourse with the old familiar oboes and violas and the rest, who live so much longer than we do, and are such faithful [9]friends,' and thus kept him from dwelling on his sorrow. And there was always so much in the concerts to interest and absorb him. The book of Elijah too was progressing fast, and his remarks on it show how anxious he was to make it as [10]dramatic as possible. And he still clung, though as fastidiously as ever, to the hope of getting an opera-book. A long [11]letter in French to M. Charles Duveyrier, dated Jan. 4, 1843, discusses the merits of the story of Jeanne d'Arc for the purpose, and decides that Schiller's play has preoccupied the ground.

At the concert of Feb. 2, 1843, the Walpurgisnight was produced, in a very different condition from that in which it was performed at Berlin just 10 years before, in Jan. 1833. He had rewritten the score 'from A to Z,' amongst other alterations had added two fresh airs, and had at length brought it into the condition in which it is now so well known and so much liked. On Jan. 12 a Symphony in C minor, by Gade, of Copenhagen, was rehearsed. It interested Mendelssohn extremely, and gave him an opportunity to write a [12]letter full of sympathy and encouragement to the distant and unknown composer, one of those letters which were native to him, but which are too seldom written, and for more of which the world would be all the better. The work was produced on March 2, amid extraordinary applause. Berlioz visited Leipzig at this time, and gave a concert of his compositions. Mendelssohn and he had not met since they were both at Rome, and Berlioz was foolish enough to suppose that some raillery of his might be lurking in Mendelssohn's memory, and prevent his being cordially welcomed. But he was soon undeceived. Mendelssohn wrote at [13]once offering

him the room and the orchestra of the Gewandhaus, on the most favourable terms, and asking him to allow one of his works to be played at the approaching concert (Feb. 22) for the Benefit of the Orchestra. An account of the whole, with copious *souvenirs* of their Roman acquaintance (not wholly uncoloured), will be found in Berlioz's 'Voyage musical,' in the letter to [1] Heller. It is enough here to say that the two composer-conductors exchanged bâtons, and that if Berlioz did not convert Leipzig, it was not for want of an amiable reception by Mendelssohn and David. On March 9 an interesting extra concert was [2] given under Mendelssohn's direction, to commemorate the first subscription concert, in 1743. The first part of the programme contained compositions by former Cantors, or Directors of the Concerts—Doles, Bach, J. A. Hiller, and Schicht, and by David, Hauptmann, and Mendelssohn (114th Psalm). The second part consisted of the Choral Symphony.

Under the modest title of the Music School the prospectus of the Conservatorium was issued on Jan. 16, 1843, with the names of Mendelssohn, Hauptmann, David, Schumann, Pohlenz, and C. F. Becker as the teachers; the first trial was held on March 27, and on [3] April 3 it was opened in the buildings of the Gewandhaus. Thus one of Mendelssohn's most cherished wishes was at last accomplished. A letter on the subject to Moscheles, dated April 30, is worth notice as showing how practical his ideas were on business matters, and how sound his judgment. On Sunday, [4] April 23, he had the satisfaction of conducting the concert at the unveiling of the monument to Sebastian Bach, which he had originated, and for which he had worked so earnestly. The programme consisted entirely of Bach's music, in which Mendelssohn himself played a concerto. Then the monument was unveiled, and the proceedings ended with Bach's 8-part motet 'Singet dem Herrn ein neues Lied.' Such good services were appropriately acknowledged by the Town Council with the honorary freedom of the city (Ehrenbürgerrecht).[5]

About this time he made the acquaintance of Joseph Joachim, who came to Leipzig from Vienna as a boy of 12, attracted by the fame of the new music school, and there began a friendship which grew day by day, and only ended with Mendelssohn's death.

On May 1 his fourth child, Felix, was born. On account no doubt partly of his wife's health, partly also of his own—for it is mentioned that he was seriously unwell at the dedication of the Bach monument—but chiefly perhaps for the sake of the Conservatorium, he took no journey this year, and, excepting a visit to Dresden to conduct St. Paul, remained in Leipzig for the whole summer. How much his holiday was interfered with by the tedious, everlasting affair of Berlin—orders and counter-orders, and counter-orders—may be seen from his [6] letters, though it is not necessary to do more than allude to them. By the [7] middle of July he had completed the Midsummer Night's Dream music, had written the choruses to Athalie, and made more than a start with the music to Œdipus, and some progress with a [8] new Symphony; had at the last moment, under a pressing order from Court, arranged the chorale 'Herr Gott, dich loben wir' (Te Deum) for the celebration of the 1000th anniversary of the empire, 'the longest chorale and the most tedious job he had ever had,' and had also, a still harder task, answered a long official letter on the matter of his post, which appeared to contradict all that had gone before, and cost him (in his own words) 'four thoroughly nasty, wasted, disagreeable days.'

He therefore went to Berlin early in August, and on the 6th conducted the music of the anniversary; returned to Leipzig in time to join his friend Madame Schumann in her husband's lovely Andante and Variations for 2 Pianofortes at Madame Viardot's concert on [9] Aug. 19, and on Aug. 25 was pursued thither by orders for a performance of Antigone, and the production of the Midsummer Night's Dream and Athalie in the latter half of September. At that time none of the scores of these works had received his final touches; Athalie indeed was not yet scored at all, nor was a note of the overture written. Then the performances are postponed, and then immediately resumed at the former dates; and in the end Antigone was given on [10] Sept. 19, in the Neue Palais at Potsdam, and the Midsummer Night's Dream at the same place—after 11 [11] rehearsals—on [12] Oct. 14, and on the 18th, 19th, 20th, and 21st at the King's Theatre in Berlin. The music met with enthusiastic applause each time; but the play was for long a subject of wonder to the Berliners. Some disputed whether Tieck or Shakspeare were the author; others believed that Shakspeare had translated it from German into English. Some, in that refined atmosphere, were shocked by the scenes with the clowns, and annoyed that the King should have patronised so low a piece; and a very distinguished personage [13] expressed to Mendelssohn himself his regret that such lovely music should have been wasted on so poor a play—a little scene which he was very [14] fond of mimicking. —Antigone procured him the honour of membership of the Philologen-versammlung of [15] Cassel.

Mendelssohn's position at Berlin had now apparently become so permanent that it was necessary to make proper provision for filling his place at the Leipzig concerts, and accordingly Ferdinand Hiller was [16] engaged to conduct them during

his absence. The first of the series was on Oct. 1. Hiller conducted, and Felix supported his friend by playing his G minor Concerto. Two days afterwards, on Oct. 3, he writes a long communication to the town council of Leipzig, praying for an increase in the salaries of the town-orchestra for their services at the theatre. On Oct. 30 he joined Mad. Schumann and Hiller in the triple concerto of Bach; on Nov. 18 there was a special farewell concert at which he played his new Cello Sonata (op. 58), and which closed with his Octet, he and Gade taking the two viola parts; and by Nov. 25 he had left Leipzig 'with wife and children, and chairs and tables, and piano and [1]everything,' and was in Berlin, settled in the old family house, now his own. On the 30th he conducted the first of the weekly subscription concerts, which he and Taubert directed alternately, and at which he often played. With all his aversion to the Berlin musicians he was obliged to acknowledge that, in some respects at least, the orchestra was good. 'What pleases me most,' he says to his old friend and confidant David, 'are the Basses, because they are what I am not so much accustomed to. The 8 cellos and 4 good double-basses give me sometimes great satisfaction with their [2]big tone.' Then came performances of the Midsummer Night's Dream music, of Israel in Egypt, entertainments and dinners—which amused him notwithstanding all his dislike to aristocrats—and Fanny's Sunday performances. Once immersed in life and music, and freed from official correspondence and worries, he was quite himself. 'He is,' says his sister, 'indescribably dear, in the best of tempers, and quite splendid, as you know he can be in his best times. Every day he astonishes me, because such quiet intercourse as we are having is a novelty to me now, and he is so versatile, and so original and interesting on every subject, that one can never cease to wonder at [3]it.' His favourite resort during his later Berlin life was the house of Professor Wichmann the sculptor, in the Hasenjäger (now Feilner) Strasse. Wichmann's wife was a peculiarly pleasant artistic person, and their circle included Magnus the painter, Taubert, Werder, Count Redern, and other distinguished people, many of them old friends of Mendelssohn's. There, in 1844, he first met Jenny Lind. The freedom of the life in this truly artistic set, the many excursions and other pleasures, delighted and soothed him greatly.

Christmas was kept royally at his house; he was lavish with presents, of which he gives Rebecka (then in Italy) a [4]list. A very characteristic Christmas gift to a distant [5]friend was the testimonial, dated Berlin, Dec. 17, 1843, which he sent to Sterndale Bennett for use in his contest for the professorship at Edinburgh, and which, as it does credit to both these great artists, and has never been published in any permanent form, we take leave to print entire, in his [6]own English.

[1] To Macfarren, G. & M. 160. [2] MS. letter, Dec. 19, 1843.
[3] F.M. iii. 89. [4] Ibid. 91. [5] It reached him on the 23rd.
[6] I am indebted to Mr. J. R. S. Bennett for an exact copy of this letter.

BERLIN, *Dec.* 17, 1843.

MY DEAR FRIEND,

I hear that you proclaimed yourself a Candidate for the musical Professorship at Edinburgh, and that a testimonial which I might send could possibly be of use to you with the Authorities at the University. Now while I think of writing such a testimonial for you I feel proud and ashamed at the same time—proud, because I think of all the honour you have done to your art, your country, and yourself, and because it is on such a brother-artist that I am to give an opinion—and ashamed, because I have always followed your career, your compositions, your successes, with so true an interest, that I feel as if it was my own cause, and as if I was myself the Candidate for such a place. But there is one point of view from which I might be excused in venturing to give still an opinion, while all good and true musicians are unanimous about the subject: perhaps the Council of the University might like to know what *we German* people think of you, how we consider you. And then, I may tell them, that if the prejudice which formerly prevailed in this country against the musical talent of your Country has now subsided, it is chiefly owing to you, to your compositions, to your personal residence in Germany. Your Overtures, your Concertos, your vocal as well as instrumental Compositions, are reckoned by our best and severest authorities amongst the first standard works of the present musical period. The public feel never tired in listening to, while the musicians feel never tired in performing, your Compositions; and since they took root in the minds of the true amateurs, my countrymen became aware that music is the same in England as in Germany, as everywhere; and so by your successes here you destroyed that prejudice which nobody could ever have destroyed but a true Genius. This is a service you have done to English as well as German musicians, and I am sure that your countrymen will not acknowledge it less readily than mine have already done.

Shall I still add, that the Science in your works is as great as their thoughts are elegant and fanciful—that we consider your performance on the Piano as masterly as your Conducting of an Orchestra? that all this is the general judgment of the best musicians here, as well as my own personal sincere opinion? Let me only add that I wish you success from my whole heart, and that I shall be truly happy to hear that you have met with it.

Always yours, sincerely and truly,

FELIX MENDELSSOHN BARTHOLDY.

To W. STERNDALE BENNETT, ESQ.

His exertions for his friend did not stop at this testimonial, but led him to write several long letters pressing his claims in the strongest terms, the drafts of which will be found in the 'green books' at Leipzig. The professorship, however, was not bestowed on Mr. Bennett.

The compositions of the winter were chiefly for the Cathedral, and include the fine setting of the 98th Psalm (op. 91) for 8-part choir and orchestra, for New Year's Day, 1844; the 2nd Psalm, for Christmas, with chorales and 'Sprüche,' and pieces 'before the Alleluja'; also the 100th Psalm, the 43rd ditto, and the 22nd, for Good Friday, for 8 voices, each with its 'Spruch' or anthem—and 7 psalm-tunes or chorales with trombones. At these great functions the church was so full [7]that not even Fanny Hensel could get a place. The lovely solo and chorus, 'Hear my prayer,' for voices and organ, belongs to this time. It is dated Jan. 25, 1844, and was written for Mr. Bartholomew, the careful and laborious translator of his works into English, and sent to him in a [8]letter dated Jan. 31. Also the duets

[7] F.M. iii. 99.
[8] Polko, 220. It was originally written with an organ accompaniment, but Mendelssohn afterwards scored it at the instance of Mr Joseph Robinson of Dublin. How it came to be dedicated to Tauber is not discoverable.

'Maiglöckchen,' 'Volkslied,' and 'Herbstlied' (op. 63, nos. 6, 5, and 4), and many songs, with and without words. The concerts finished with a magnificent performance of Beethoven's 9th Symphony on March 27, and on Palm Sunday (March 31) Israel in Egypt was sung in St. Peter's church. The rehearsals for these two difficult works, new to Berlin, had been extremely troublesome and fatiguing.

At the end of February he received a letter from the Philharmonic Society of London, offering him an engagement as Conductor of the last six concerts of the season. He looked forward with delight to an artistic position 'of such tremendous [1] distinction,' and which promised him the opportunity of doing a service to a [2] Society to which he felt personally indebted; and on March 4 he writes 'with a feeling of true gratitude' accepting for five [3] concerts. Meantime the old annoyances and heartburnings at Berlin had returned. Felix had been requested by the King to compose music to the Eumenides of Æschylus, and had replied that the difficulties were immense, and perhaps insuperable, but that he would try; and in conversation with Tieck he had arranged that as the work could only be given in the large new opera-house, which would not be opened till Dec. 15, it would be time enough for him to write his music and decide whether it was worthy of performance, after his return from England. Notwithstanding this, he received, as a parting gift, on April 28, a long, solemn, almost scolding, letter from [4] Bunsen, based on the assumption that he had refused to undertake the task, and expressing the great disappointment and annoyance of the King. No wonder that Mendelssohn's reply, though dignified, was more than warm. It appeared to him that some person or persons about the Court disbelieved in the possibility of his writing the music, and had pressed their own views on the King as his, and he was naturally and justifiably angry. A dispute with the subscribers to the Symphony Concerts, where he had made an innovation on ancient custom by introducing [5] solos, did not tend to increase his affection for Berlin.

His presence was necessary on Easter Day (April 7) in the Cathedral, but by the end of the month he had left Berlin with his family. On May 4 they were all at Frankfort, and by the 10th or 11th he himself was settled in London at Klingemann's house, 4 Hobart Place. This was his eighth visit. He conducted the Philharmonic Concert of May 13, and each of the others to the end of the series, introducing, besides works already known, his own Midsummer Night's Dream music, and the Walpurgisnight, as well as Beethoven's Overture to Leonora, No. 1, the Ruins of Athens, Bach's Suite in D, Schubert's Overture to Fierrabras, and playing Beethoven's Concerto in G (June 24), then almost a novelty to an English audience. He had brought with him Schubert's Symphony in C, and Gade's in C minor, and his own Overture to Ruy Blas. But the reception of the two first at the trial by the band was so cold, not to say [6] insulting, as to incense him beyond measure. With a magnanimity in which he stands alone among composers, he declined to produce his own Overture, and it was not publicly played in England till after his death.[7]

With the directors of the Philharmonic his intercourse was most harmonious. 'He attended their meetings, gave them advice and assistance, and showed the warmest interest in the success of the concerts and the welfare of the [8] Society.' By the band he was received with 'rapture and [9] enthusiasm.' And if during the earlier concerts one or two of the players acted in exception to this, the occurrence only gave Mendelssohn the opportunity of showing how completely free he was from rancour or personal [10] feeling. No wonder that the band liked him. The band always likes a conductor who knows what he is about. His beat, though very quiet, was certain, and his face was always full of feeling, and as expressive as his baton. There are some of the players still remaining who recollect it well. No one perhaps ever possessed so completely as he the nameless magic art of inspiring the band with his own feeling; and this power was only equalled by his tact and good-nature. It is still remembered that he always touched his hat on entering the orchestra for rehearsal. He was sometimes hasty, but he always made up for it afterwards. He would run up and down to a distant desk over and over again till he had made the meaning of a difficult passage clear to a player. If this good nature failed, or he had to deal with obstinacy, as a last resource he would try irony—sometimes very severe. Such pains and tact as this is never thrown away. The band played as if under a new influence. The season was most successful in a pecuniary sense; Hanover Square Rooms had never been so crammed; as much as 120 guineas were taken on single nights in excess of the usual receipts; and whereas in 1842 the loss had been £300, in 1844 nearly £400 were added to the reserve [11] fund. Among the events which combined to render this series of concerts historical were the first appearances of Ernst (April 15), [12] Joachim (May 27), and Piatti (June 24). His playing of the Beethoven G major Concerto on June 24 was memorable, not only for the magnificence of the performance, but for some circumstances attending the rehearsal on the previous Saturday. He had not seen the music of the concerto for two or three years, and 'did not think it respectful to the Philharmonic Society to play it without first looking through it'—those were his words. He accordingly called at Sterndale Bennett's on the Friday night to obtain a copy, but not succeeding, got

one from Miss Horsley after the rehearsal on the Saturday. At the rehearsal itself, owing to some difficulty in the band coming in at the end of his cadence in the first movement, he played it three times over, each time quite extempore, and each time new, and at the performance on the Monday it was again [1] different.

In addition to the Philharmonic, Mendelssohn took part in many other public concerts—conducted St. Paul for the Sacred Harmonic Society on June 28 and July 5, extemporised at the British Musicians, played his own D minor Trio, and his Duet Variations (op. 83), and took part twice in Bach's Triple Concerto—once (June 1) with Moscheles and Thalberg, when he electrified the room with his sudden [2] improvisation in the cadence, and again (July 5) with Moscheles and Döhler. He also finished a scena for bass voice and orchestra, to words from Ossian—'On Lena's gloomy heath,' which he undertook at the request of Mr. H. Phillips in 1842, and which that gentleman sang at the Philharmonic, March 15, 1847. On June 12 he and Dickens met for the first time. On June 18 he is at Manchester, writing to Mr. Hawes, M.P. to secure a ticket for the [3] House of Commons. Piatti he met for the first time during this visit, at Moscheles's house, and played with him his new Duo in D. No one had a quicker eye for a great artist, and he at once became attached to the noble player who has now made London his winter home, and is so much admired by all frequenters of the Monday Popular Concerts. One of his latest words on leaving England for the last time was, 'I must write a concerto for Piatti.' In fact, he had already composed the first movement. The enthusiasm for him in London was greater than ever, and all the more welcome after the irritations of Berlin. He was more widely known at each visit, and every acquaintance became a friend. He never enjoyed himself more than when in the midst of society, music, fun, and excitement. 'We have the best news from Felix,' says Fanny during this [4] visit, 'and when I tell you that he has ordered a large *Baum-Kuchen* [a peculiar Berlin cake, looking like a piece of the trunk of a tree] to be sent to London for him, you will know that that is the best possible sign.' 'A mad, most extraordinarily mad time,' says he, 'I never had so severe a time before—never in bed till half past one; for three weeks together not a single hour to myself in any one [5] day,' etc. 'My visit was glorious. I was never received anywhere with such universal kindness, and have made more music in these two months than I do elsewhere in two [6] years.' But even by all this he was not to be kept from work. He laboured at his edition of Israel in Egypt for the Handel Society; and on official pressure from Berlin—which turned out to be mere vexation, as the work was not performed for more than a year—actually, in the midst of all the turmoil, wrote the Overture to Athalie, the autograph of which is dated June 13, 1844. Very trying! and very imprudent, as we now see! but also very difficult to avoid. And his power of recovery after fatigue was as great as his power of enjoyment, so great as often no doubt to tempt him to try himself. Three things were in his favour—his splendid constitution; an extraordinary power of sleep, which he possessed in common with many other great men, and of being lazy when there was nothing to do; and most of all that, though excitable to any amount, he was never dissipated. The only stimulants he indulged in were those of music, society, and boundless good spirits.

On July 10 he left London, and on the 13th was in the arms of his wife and children at Soden, near Frankfort. During his absence they had been seriously ill, but his wife had kept the news from him, and when he returned he found them all well, brown, and hearty. For the life of happy idleness which he passed there in the next two months—'eating and sleeping, *without* dress coat, *without* piano, *without* visiting cards, *without* carriage and horses, but *with* donkeys, *with* wild flowers, *with* music-paper and sketch-book, *with* Cécile and the [7] children'—interrupted only by the Festival which he conducted at Zweibrücken on July 31 and Aug. 1, the reader must be referred to his own charming [8] letters. 'Idleness' does not mean ceasing to compose, so much as composing only when he had a mind to it. And that was often; he had no piano, but he completed the Violin Concerto on Sept. 16, after a long and minute correspondence with David, and many of the movements of the six organ sonatas appear in the MS. Catalogue, with dates ranging from July 22 to Sept. 10. Doubtless, too, he was working at the book of 'Christus,' a new oratorio, the first draft of which he had received from Bunsen on Easter Monday of this year. At this time also he arranged a collection of organ pieces by Bach for the firm of [9] Coventry & Hollier, by whom they were published in London in the summer of 1845. The pleasure in his simple home life which crops out now and then in these Frankfort letters, is very genuine and delightful. Now, Marie is learning the scale of C, and he has actually forgotten how to play it, and has taught her to pass her thumb under the wrong finger! Now, Paul tumbles about so as to crack their skulls as well as his own. Another time he is dragged off from his letter to see a great tower which the children have built, and on which they have ranged all their slices of bread and jam—'a good idea for an architect.' At ten Carl comes to him for reading and sums, and at five for spelling and geography—and so on. 'And,' to sum up, 'the best part of every pleasure is gone [10] if Cécile is not there.' His wife is always somewhere in the picture.

But the time arrived for resuming his duties at Berlin, and, leaving his family behind him at Frankfort, he arrived there on Sept. 30, alone, and took up his quarters with the Hensels. We

[1] I owe this to the recollection of Mr. Kellow Pye and Mr. Davison.

are told that before leaving in the spring he had firmly resolved not to return for a permanence; and the extraordinary warmth and brilliancy of his subsequent reception in England, both in public and in social circles, and the delights of freedom in Frankfort, when compared with the constraint and petty annoyances of Berlin—the difficulty of steering through those troubled official waters, the constant collisions with the Singakademie, with the managers of the theatre, the clergy, the King, and the ministers; the want of independence, the coldness of the press, the way in which his best efforts appeared to be misunderstood and misrepresented, and above all the consciousness that he was at the head of a public musical institution of which he did not [1] approve—all these things combined to bring about the crisis. His dislike to the place and the way in which it haunts him beforehand, is really quite plaintive in its persistence—'If I could only go on living for half a year as I have lived the last fortnight (Soden, Aug. 15) what might I not get through? But the constant arrangement and direction of the concerts, and the exertion of it all, is no pleasure to me, and comes to nothing after [2] all.' So he once more [3] communicated with the King, praying to be freed from all definite duties, and from all such commissions as would oblige him to reside in Berlin. To this the King good-naturedly assented; his salary was fixed at 1000 thalers, and he was free to live where he liked. It is easy to understand what a blow this was to [4] his sister, but it was evidently the only possible arrangement for the comfort of the chief person concerned. 'The first step out of Berlin' was to him 'the first step to [5] happiness.' He remained till the end of November, at the special wish of the King, to conduct a few concerts and a performance of St. Paul (Nov. 25), and the time was taken advantage of by Lvoff to commission Hensel to paint a portrait of him, which has been engraved by Caspar, but can hardly be called a favourable likeness. On the 30th he left Berlin amid regret and good wishes, but the coldness of the ordinary musical circles towards him was but too evident.[6]

Very early in December he was in Frankfort, where he found his youngest boy Felix dangerously ill: the child recovered, but only after being in great danger for many weeks. It was probably a relief in the very midst of his trouble to write a long [7] letter to Mr. Macfarren (Dec. 8), giving him minute directions as to the performance of Antigone at Covent Garden. His own health began to give him anxiety, and his resolution was to remain in Frankfort for the whole year and have a thorough rest. He had always good spirits at command, and looked well, and would rarely confess to any uneasiness. But when hard pressed by those with whom he was really intimate, he confessed that his head had for some months past been in constant pain and confusion. 'I myself am what you know me to be; but what you do not know is that I have for some time felt the necessity for complete rest —*not* travelling, *not* conducting, *not* performing—so keenly that I am compelled to yield to it, and hope to be able to order my life accordingly for the whole year. It is therefore my wish to stay here quietly through winter, spring, and summer, *sans* journeys, *sans* festivals, *sans* [8] everything.' This resolve he was able to carry out for some months of [9] 1845, even to resisting a visit to Leipzig when his Violin Concerto was first played by David, on March 13; and his letters to his sisters show how thoroughly he enjoyed the rest.

Antigone was brought out at Covent Garden on Jan. 2, 1845, under the management of M. Laurent, the orchestra conducted by Mr. (now Professor) Macfarren. Musically its success was not at first great, owing to the inadequate way in which the chorus was put on the stage. Writing to his sister at [10] Rome on March 25, Mendelssohn says, 'See if you cannot find *Punch* for Jan. 18. It contains an account of Antigone at Covent Garden, with illustrations, especially a view of the chorus which has made me laugh for three days. The Chorus-master, with his plaid trowsers shewing underneath, is a masterpiece, and so is the whole thing, and most amusing. I hear wonderful things of the performance, particularly of the chorus. Only fancy, that during the Bacchus chorus there is a regular ballet with all the ballet-girls!' A woodcut which made Mendelssohn laugh for three days has *ipso facto* become classical, and needs no apology for its [11] reproduction.

The play improved after a short time, and the fact that it ran for 45 nights (Jan. 2–Feb. 1, Feb. 8–21), and that the management applied to him for his [12] Oedipus, proves that it was appreciated. His letters show how much work he was doing at this time. By April 20 the six Organ Sonatas (op. 65) were in the hands of the copyist, the C minor Trio was finished—'a trifle nasty (*eklig*) to play, but not really difficult—seek and ye shall [13] find'; and the splendid String Quintet in B♭ (dated July 8). The sixth book of Songs without Words was shortly to be published, and dedicated to Klingemann's fiancée; a symphony was well in hand (oh that we had got it!), and the book of Elijah progressing steadily, no doubt urged by the invitation (dated Sept. 1, 1844) which he had received to conduct the Birmingham Festival in 1846. Conduct the whole he could not, the labour would be too great, but he replied that he would conduct his own music as [14] before. Nor had the desire to write an opera by any means left him, 'if only the right material could be [15] found.' He had not forgotten his promise to consider the possibility of setting the choruses of the Eumenides of Æschylus with effect, and a correspondence had taken place between him and the Geheimcabinetsrath Müller, in which, in reply to something very like an offensive innuendo, Mendelssohn stated that in

spite of strenuous efforts he had utterly failed to see any way of carrying out the commission to his own [1]satisfaction. The Œdipus Coloneus, the Œdipus Rex, and the Athalie, were however finished, and at His Majesty's disposal. The editing of Israel in Egypt had given him considerable trouble, owing apparently to the wish of the council of the Handel Society to print Mendelssohn's

marks of expression as if they were Handel's, and also to the incorrect way in which the engraving was executed. These [2]letters are worth looking at, as evidence how strictly accurate and conscientious he was in these matters, and also how gratuitously his precious time was often taken up.

Gade had conducted the Gewandhaus Concerts for 1844–5; but having got rid of the necessity of residing in Berlin, and having enjoyed the long rest which he had proposed, it was natural that Mendelssohn should return to his beloved Leipzig. But in addition to this he had received an intimation from Von Falkenstein as early as June 5, 1845, that the King of Saxony wished him to return to his former position. He accordingly once more took up his residence there early in September (this time at No. 3 Königsstrasse, [3]on the first floor) and his reappearance in the conductor's place at the opening concert in the Gewandhaus on Oct. 5 was the signal for the old applause, and for hearty recognition from the audience and the press. The season was rendered peculiarly brilliant by the presence of Madame Schumann, and of Jenny Lind, who made her first appearance in Leipzig at the subscription concert of Dec. 4. Miss Dolby also made her first appearance Oct. 23, sang frequently, and became a great favourite. Among the more important orchestral items of the season 1845–46 were Schumann's Symphony in B♭, and Mendelssohn's Violin Concerto (David), brought forward together on Oct. 23, 1845.

After the first concert he left for Berlin to produce his Œdipus Coloneus, which was first performed at Potsdam on Nov. 1, and his Athalie at Charlottenburg, both being repeated at Berlin. He returned to Leipzig by [4]Dec. 11, and remained there till the close of the season, taking an active part in all that went on, including Miss Lind's farewell concert on April 12, 1846—the last occasion of his playing in public in Leipzig. At the end of 1845 a formal offer was made to Moscheles, at that time the fashionable pianoforte teacher in London, to settle in Leipzig as Professor of the Pianoforte in the Conservatorium. He took time to consider so important an offer, and on Jan. 25, 1846, with a sacrifice of income and position which does his artistic feeling the highest honour, decided in its favour. Mendelssohn's connection with the school was no sinecure. He [5]had at this time two classes—Pianoforte and Composition. The former numbered about half-a-dozen pupils, and had two lessons a week of 2 hours each. The lessons were given collectively, and among the works studied during the term were Hummel's Septuor; 3 of Beethoven's Sonatas; Preludes and Fugues of Bach; Weber's Concertstück and Sonata in C; Chopin's Studies. The Composition class had one lesson a week of the same length. The pupils wrote compositions of all kinds, which he looked over and heard and criticised in their presence. He would sometimes play a whole movement on the same subjects, to show how they might have been better developed. Occasionally he would make them modulate from one key to another at the piano, or extemporise on given themes, and then would himself treat the same themes. He was often extremely irritable:—'Toller Kerl, so spielen die Katzen!' or (in English, to an English pupil) 'Very ungentlemanlike modulations!' etc. But he was always perfectly natural. A favourite exercise of his was to write a theme on the black-board, and then make each pupil add a counterpoint; the task of course increasing in difficulty with each addition. On one occasion the last of the pupils found it impossible to add a single note, and after long consideration shook his head and gave in. 'You can't tell where to place the next note?' said Mendelssohn. 'No.' 'I am glad of that,' was the reply, 'for neither

[1] L. March 12, 1845.

[2] There are seven of them, and they are given in the Appendix to G. & M., ed. 2, p. 169.

[3] The house has since been renumbered, and is now 21. A bronze tablet on the front states that he died there.

[4] Letter to Moore; P. 238.

[5] This information I owe to Mr. Otto Goldschmidt and Mr. Rockstro, who belonged to both of his classes.

can I.' But in addition to the work of his classes, a great deal of miscellaneous work fell upon him as virtual head of the School. Minute lists of the attendance and conduct of the pupils, drawn up by him, still remain to attest the thorough way in which he did his duty, and we have Moscheles's express [1]testimony that during the overwhelming work of this summer he never neglected his pupils.[2] But it was another ounce added to his load. The fixed labour, the stated hours, when combined with his composition, his correspondence, his hospitality, and all his other pursuits, was too much, and to his intimate friends he complained bitterly of the strain, and expressed his earnest wish to give up all work and worry, and devote himself entirely to his Art—in his own words, to shut himself into his room and write music till he was tired, and then walk out in the fresh air.[3]

Meantime Elijah was fast becoming a realised fact: by [4]May 23, 1846, the first Part was quite finished, and six or eight numbers of the second Part written, and a large portion despatched to London to be translated by Mr. Bartholomew and [5]Klingemann. 'I am jumping about my room for joy,' he writes to a very dear [6]friend on the completion of Part I. 'If it only turns out half as good as I fancy it is, how pleased I shall be!' And yet, much as the oratorio engrossed him, he was corresponding with Mad. Birch-Pfeiffer about an opera, and writes to the same friend as if the long-desired libretto were virtually within his grasp. At this date he interrupted his work for three weeks to conduct a succession of performances on the Rhine—at Aix-la-Chapelle, the Festival, May 31 to June 2; at Düsseldorf, a soirée; at Liège, on Corpus Christi day, June 11, his hymn 'Lauda Sion,' composed expressly for that occasion, and dated Feb. 10, 1846; and at Cologne the first festival of the German-Flemish association, for which he had composed a Festgesang on Schiller's poem 'an die Künstler' (op. 68). His reception throughout this tour was rapturous, and delighted him. The three weeks were one continued scene of excitement. Every moment not taken up in rehearsing or performing made some demand on his strength. He was in the highest spirits all the time, but the strain must have been great, and was sure to be felt sooner or later. It will all be found in a delightful letter to Fanny of [7]June 27, 1846. On June 26 he is again at Leipzig, writing to Moscheles to protest against the exclusion from the band at Birmingham of some musicians who had been impertinent to him at the [8]Philharmonic in 1844. The summer was unusually hot, and his friends well remember how exhausted he often became over his close work. But he kept his time. The remainder of the Oratorio was in Mr. Bartholomew's hands by the latter part of July; the instrumental parts were copied in Leipzig and rehearsed by Mendelssohn there on Aug. 5. One of the last things he did before leaving was to give his consent to the publication of some of Fanny's compositions, which, owing to his 'tremendous reverence for print,' he had [9]always opposed, and now only agreed to [10]reluctantly. He arrived in London, for the ninth time, on the evening of Aug. 18, had a trial rehearsal with piano at Moscheles's house, two band-rehearsals at Hanover Square, went down to Birmingham on Sunday the 23rd, had full rehearsals on Monday morning and Tuesday evening, and the Oratorio was performed on the morning of Wednesday the 26th. The Town Hall was densely crowded, and it was observed [11]that the sun burst forth and lit up the scene as Mendelssohn took his place, amid a deafening roar of applause from band, chorus, and audience. Staudigl was the Elijah, and Mr. Lockey sang the air 'Then shall the righteous' in a manner which called forth Mendelssohn's warmest [12]praise. 'No work of mine'—says he in the long letter which he wrote his brother the same evening—'no work of mine ever went so admirably at the first performance, or was received with such enthusiasm both by musicians and the public, as this.' 'I never in my life heard a better performance—no nor so good, and almost doubt if I can ever hear one like it [13]again.' No less than four choruses and [14]four airs were encored. The applause at the conclusion of both first and second parts was enormous—almost grotesquely so; and an old [15]member of the band well remembers the eagerness with which Mendelssoln shook hands with all who could get near him in the artist's room, thanking them warmly for the performance. He returned to London with Mr. and Mrs. Moscheles, 'on purpose for a fish dinner at Lovegrove's,' spent four days at [16]Ramsgate with the Beneckes 'to eat crabs,' and on Sept. 6 recrossed the Channel with Staudigl. His visit this time had been one of intense hard work, as any one who knows what it is to achieve the first performance of a great work for solos, chorus, and orchestra, will readily understand. And the strain was unremitting, for, owing partly to Moscheles's illness, he had no relaxation, or next to none. In consequence he was so tired as to be compelled to rest [17]three times between Ostend and Leipzig. It is a sad contrast to the buoyancy of the similar [18]journey ten years before.

But notwithstanding the success of the Oratorio the reader will hardly believe that he himself was satisfied with his work. Quite the contrary. His letter to Klingemann of Dec. 6 shows the eagerness with which he went about his corrections; and the alterations were so serious as to justify our [19]enumerating the chief of them:—The

chorus 'Help, Lord!' (No. 1), much changed; the end of the double quartet (No. 7), rewritten; the scene with the widow (No. 8) entirely recast and much extended; the chorus 'Blessed are the men' (No. 9), rescored; the words of the quartet 'Cast thy burden' (No. 15), new; the soprano air 'Hear ye' (No. 21), added to and reconstructed; in the Jezebel scene a new chorus, 'Woe to him' (No. 24), in place of a suppressed one, 'Do unto him as he hath done,' and the recitative 'Man of God' added; the trio 'Lift thine eyes' (No. 28) was originally a duet, quite different; Obadiah's recitative and air (No. 25) are new; the chorus 'Go return,' and Elijah's answer (No. 36) are also new. The last chorus (No. 42) is entirely rewritten to fresh words, the text having formerly been 'Unto Him that is able,' etc. The omissions are chiefly a movement of 95 bars, *alla breve*, to the words 'He shall open the eyes of the blind,' which formed the second part of the chorus 'Thus saith the Lord' (No. 41), and a recitative for tenor 'Elijah is come already and they knew him not, but have done unto him whatsoever they listed,' with which Part 2 of the oratorio originally opened. In addition to these more prominent alterations there is hardly a movement throughout the work which has not been more or less worked upon.

The oratorio was then engraved, and published by Simrock of Berlin in July 1847. Meantime Mendelssohn had been again reminded of his duties at Berlin by an urgent command from the King to set the German Liturgy to music. This (still in MS.), and an anthem or motet (published as op. 79, no. 5), both for double choir, are respectively dated Oct. 28 and Oct. 5, 1846. A song for the Germans in [1] Lyons—dear to him as the birthplace of his wife—and a Psalm-tune for the French Reformed Church in Frankfort, are dated the 8th and 9th of the same month. On Oct. 21 the Moscheleses arrive at Leipzig, and Moscheles begins his duties as Professor of Pianoforte-playing and Composition.—Gade again conducted the Gewandhaus Concerts for this season. A trace of Mendelssohn's interest in them remains in a P.F. accompaniment to the E major Violin [2] Prelude of Bach, which he evidently wrote for David's performance at the Concert of Nov. 12, 1846. The MS. is dated the day before, and is [3] amongst David's papers. During October and November he was very much occupied with the illness of his faithful servant Johann Krebs, to whom he was deeply attached—'mein braver guter Diener' as he calls him—and whose death, on Nov. 23, distressed him much. It was another link in the chain of losses which was ultimately to drag him down. Fortunately he had again, as at the time of his mother's death, some mechanical work to which he could turn. This time it was [4] the comparison of the original autograph parts of Bach's grand mass with his score of the same work. As time went on, however, he was able to apply himself to more independent tasks, and by Dec. 6 was again hard at work on the [5] alterations of Elijah. Since the middle of October he had been in communication [6] with Mr. Lumley, then lessee of Her Majesty's Theatre, London, as to an opera to be founded by Scribe on 'The Tempest,' already tried by Immermann (see p. 268*b*); and a long correspondence between himself, Scribe, and Lumley appears to have taken place, no doubt exhaustive on his part. It came to nothing, from his dissatisfaction with the [7] libretto, but it was accompanied by extreme and long-continued annoyance, owing to his belief that the opera was announced in London as if he were under a contract to complete it, and that for the season of [8] 1847. He was at this moment more or less committed to the subject of Loreley, on which he had communicated with Geibel the poet as early as the preceding [9] April. Geibel, a friend of Mendelssohn's and a warm admirer of his wife's, was at work on the book, and completed it at the beginning of 1847. Mendelssohn occasionally conducted the later Gewandhaus concerts of this season, and some of the programmes were of special interest, such as two historical concerts on Feb. 18 and 25, 1847. One of these gave him the opportunity to write a charming [10] letter to the daughter of Reichardt, a composer for whom he always had a special fondness, and whose Morning Hymn (from Milton) had been performed at the Festival at Cologne in 1835 at his instance.

This was not on the whole a satisfactory autumn. After the extra hard work of the spring and summer, especially the tremendous struggle against time in finishing Elijah, he ought to have had a long and complete rest, like that which so revived him in 1844; whereas the autumn was spent at Leipzig, a less congenial spot than Frankfort, and, as we have shown, in the midst of grave anxiety and perpetual business, involving a correspondence which those only can appreciate who have seen its extent, and the length of the letters, and the care and neatness with which the whole is registered and arranged by his own hands. Knowing what ultimately happened, it is obvious that this want of rest, coming after so much stress, must have told seriously upon him. He himself appears to have felt the necessity of lessening his labours, for we are told that he had plans for giving up all stated and uncongenial duty, and doing only what he felt disposed to do, for building a [11] house in Frankfort, so as to pass the summer there, and the winter in Berlin with his sisters, and thus in some measure revive the old family life to which [12] he so strongly urges his brother-in-law in a remarkable letter of this time. Nothing however could stop the current of his musical power. He was at work on 'Christus,' the new [13] oratorio. As Capellmeister to the King of Saxony he had to arrange

and conduct the Court Concerts at Dresden; and he took a large part in the management of the Gewandhaus Concerts this season, though suffering much from his head, and being all the time under the care of his [1]doctor. How minutely too he did his duty at this time as chief of the Conservatorium is shown by a MS. memorandum, dated Jan. 10, 1847, containing a long list of students, with full notes of their faults, and of the recommendations to be made to their professors. His enjoyment of life is still very keen, and his birthday was celebrated with an immense amount of fun. His wife, and her sister, Mrs. Schunck—a special favourite of Mendelssohn's—gave a comic scene in the Frankfort dialect; and Joachim (as Paganini), Moscheles (as a cook), and Mrs. Moscheles, acted an impromptu charade on the word 'Gewandhaus.' Happily no presentiment disturbed them; and the master of the house was as uproarious as if he had fifty birthdays before him. On Good Friday (April 2) he conducted St. Paul at Leipzig, and shortly afterwards —for the tenth, and alas! the last time—was once more in England, where he had an [2]engagement with the Sacred Harmonic Society to conduct three performances of Elijah in its revised form. One of those kindnesses which endeared him so peculiarly to his friends belongs to this time. Madame Frege had a son dangerously ill, and was unable to hear the performance of St. Paul. 'Na nun,' said he, 'don't distress yourself; when he gets out of danger I'll come with Cécile and play to you all night.' And he went, began with Beethoven's Moonlight Sonata, and played on for three hours, ending with his own Variations sérieuses. A day or two afterwards, he left, travelled over with [3]Joachim, and reached the Klingemanns' house on Monday evening, April 12. The performances took place at Exeter Hall on the 16th, 23rd, 28th, with a fourth on the 30th. The Queen and Prince Consort were present on the 23rd, and it was on that occasion that the Prince wrote the note in his programme book, addressing Mendelssohn as a second Elijah, faithful to the worship of true Art though encompassed by the idolators of Baal, which has often been printed.[4] In the interval Mendelssohn paid a visit to Manchester for a performance of [5]Elijah on the 20th, and another to Birmingham, where he rehearsed and conducted the oratorio at the Town Hall on the 27th; and also conducted his Midsummer Night's Dream music and Scotch Symphony at the Philharmonic on the 26th, and played Beethoven's G major Concerto with even more than his usual brilliancy and delicacy. He probably never played that beautiful concerto—'my old *cheval de bataille*,' as he called it years before—more splendidly than he did on this occasion. To a [6]friend who told him so after the performance he replied, 'I was desirous to play well, for there were two ladies present whom I particularly wished to please, and they were the Queen and Jenny Lind.' A little trait remembered by more than one who heard the performance, is that during the cadence to the first movement—a long and elaborate one, and, as before (see p. 285 *a*), entirely extempore, Mr. Costa, the conductor, raised his baton, thinking that it was coming to an end, on which Mendelssohn looked up, and held up one of his hands, as much as to say 'Not yet.'

On May 1 he lunched at the Prussian embassy and played, and also played for more than two hours at Buckingham Palace in the presence of the Queen and Prince Albert only. On the 4th, at the Beethoven Quartet Society, he played Beethoven's 32 Variations, without book, his own C minor Trio, and a Song without Words; and the same evening was at the opera at Jenny Lind's début. On the evening of the 5th he played a prelude and fugue on the name of Bach on the organ at the Antient Concert. The morning of the 6th he spent at Lord Ellesmere's picture gallery, and in the afternoon played to his friends the Bunsens and a distinguished company at the Prussian embassy. He left the [7]room in great emotion, and without the power of saying farewell. The same day he wrote a Song without words in the album of Lady Caroline Cavendish, and another in that of the Hon. Miss Cavendish, since published as Op. 102, No. 2, and Op. 85, No. 5, respectively. On the 8th he took leave of the Queen and Prince Consort at Buckingham Palace, and left London the same evening, much exhausted, with the Klingemanns. He had indeed, to use his own [8]words, 'staid too long there already.' It was observed at this time by one [9] who evidently knew him well, that though in the evening and when excited by playing, he looked as he had done on former visits, yet that by daylight his face showed sad traces of wear and a look of premature old age. He crossed on the 9th, Sunday, to Calais, drove to Ostend, and on the 11th was at [10]Cologne. At Herbesthal, through the extra zeal of a police official, who mistook him for a Dr. Mendelssohn of whom the police were in search, he was stopped on his road, seriously annoyed, and compelled to write a long statement which must have cost him as much time and labour as to compose an overture. He had been only a day or two in Frankfort when he received the news of the sudden death of his sister Fanny at Berlin on the 14th. It was broken to him too abruptly, and acting on his enfeebled frame completely overcame him. With a shriek he fell to the ground, and remained insensible for some time.

It was the third blow of the kind that he had received, a blow perhaps harder to bear than either of the others, inasmuch as Fanny was his sister, more of his own age, and he himself was older, more worn, and less able in the then weak state of his nerves to sustain the shock. In his

1 Lampadius.

2 The engagement for one performance had been tendered as early as Sept. 14; see Mendelssohn's reply of Oct. 7 to the letter of Mr. Brewer, the secretary to the society, of that date, in P. 227. The other two were proposed Jan. 26, and arranged for between that date and March 10, 1847; see the letter of that date to Bartholomew, ibid. 229. The fourth was an afterthought.

own words, 'a great chapter was ended, and neither title nor beginning of the next were written.'[1]

Early in June, as soon as he had sufficiently recovered to move, the whole family (with Miss Jung as governess, and Dr. Klengel as tutor) went to Baden-Baden, where they were joined by Paul and Hensel; thence by Schaffhausen to Lucerne, Thun and Interlaken, in and about which they made some stay. To Felix the relief was long in coming. On July 7, though well, and often even cheerful, he was still unable to do any musical work, write a proper letter, or recover a consistent frame of mind. He worked at his drawing with more than usual assiduity at this time. Thirteen large water-colour pictures illustrate the journey, beginning with two views of the Falls of Schaffhausen (June 27 and 29), and ending with one of Interlaken (Sept. 4). Many of them are very highly finished, and all are works which no artist need hesitate to sign. They are on a greater scale than any of his previous sketches, and there is a certainty about the drawing, and a solidity in the perspective, which show how well he understood what he was about. The same love of form that shines so conspicuously in his great symphonies is there, and the details are put in, like the oboe and clarinet phrases in his scores, as if he loved every stroke. They are really beautiful works. In addition to these finished drawings, he sketched a good deal in Indian ink.[2]

In the middle of the month Paul and Hensel returned home, but Felix and his family remained till [3] September. Meantime the world was going on, regardless of private troubles, friends visited him, and plans for music began to crowd round him. Among the former were Professor [4] Graves and his wife, Mr. Grote the historian—old friends, the last of whom had taken a long [5] journey on purpose to see him—and Chorley the musical critic. He had received a request from the Philharmonic Society for a Symphony for 1848; an application to write a piece for the opening of the St. George's [6] Hall in Liverpool; had a new Cantata in view for Frankfort, and something for the inauguration of Cologne Cathedral. Elijah was to be given under his baton both at Berlin (Nov. 3) and Vienna—at the latter with Jenny Lind—and the long-cherished opera exercised its old charm over him. But his nerves were still too weak to bear any noise, and he suffered much from headache and weariness; his piano was 'not for playing, but for trying a chord,' 'it was the very worst he had ever touched in his [7] life,' and he shrank [8] from the organ at Fribourg when proposed to him. The organ in the village church of Ringgenberg, on the lake of Brienz, was his only resource, and it was there that for the last time in his life he touched the organ keys. He put aside the music for Liverpool, 'for the present,' and declined the request of the [9] Philharmonic, on the ground that a work for the Society ought not to bear the least trace of the hurry and bustle in which he would have to live for the rest of the year. At the same time he was much agitated at the state of home politics, which were very threatening, and looked with apprehension on the future of Germany. For himself he returned strongly to the plans already alluded to at the end of 1846, of giving up playing and concert-giving, and other exciting and exacting [10] business, and taking life more easily, and more entirely as he liked.

At length the power of application came, and he began to write music. We shall not be far wrong in taking the intensely mournful and agitated String Quartet in F minor (op. 80) as the first distinct utterance of his distress. This over, he arrived by degrees at a happier and more even mental condition, though with paroxysms of intense grief and distress. The contrast between the gaiety and spirit of his former letters, and the sombre, apathetic tone of those which are preserved from this time, is most remarkable, and impossible to be overlooked. It is as if the man were [11] *broken*, and accepted his lot without an idea of resistance. He continually recurred to the idea of retirement from all active life but composition.

Of the music which is due to this time we find, besides the Quartet just mentioned, an Andante and Scherzo in E major and A minor, which form the first movements of op. 81; the fragments of Loreley and of Christus; a Jubilate, Magnificat, and Nunc dimittis for 4 voices (op. 69), which he began before going to London, and finished in Baden-Baden on June 12; and a few songs, such as 'Ich wandre fort' (op. 71, no. 5).

With the close of the summer the party returned [12] homewards, and on Sept. 17 were again in [13] Leipzig. He found there a new Broadwood grand piano which had been forwarded by the London house during his absence in Switzerland, and is said to have played upon it for several hours. Those who knew him best found him 'unaltered in mind, and when at the piano or talking about music still all [14] life and fire.' During these days he played to Dr. Schleinitz a new string quartet, complete except the slow movement, which was to be a set of Variations—but not yet put on paper. He took leave of Mr. Buxton, one of his English publishers, with the words 'You shall have plenty of music from me; I will give you no cause to complain.' But such moments of vivacity would be followed by great depression, in which he could not bear to speak or to be spoken to even by old friends. He was much changed in look, and he who before was never at rest, and whose hands were always in motion, now often sat dull and listless, without moving a finger. 'He had aged, looked pale and weary, walked less quickly than before, and was more intensely affected by every passing thing than he used to be.' Also he complained

of the oppressive [1] air of the town. And yet, though more than one person is still alive who remembers this, not even those most near him appear to have realised the radical and alarming change for the worse which had taken place in his strength.

The Gewandhaus concerts began on Oct. 3, but he took no part in them, and left the conducting to his old colleague Rietz. A friend recollects his saying how happy he was—'as cheerful as a set of organ-passages'—that he hadn't to make out the programmes. He dreaded all public music, and complained much, though blaming himself as not deserving the happiness he had in his 'dear Cécile' and in the recovery of his boy Felix. He had been to Berlin for a week, very shortly after his return, and the sight of his sister's rooms, exactly as she left them, had [2] agitated him extremely, 'and almost neutralized the [3] effects of his Swiss retirement.' He had definitely given up the performance of Elijah at Berlin, but was bent on undertaking that at [4] Vienna on Nov. 14, where he was to hear his friend Jenny Lind in the music which he had written for her voice. On the morning of Oct. 9 he called on the Moscheleses and walked with them to the Rosenthal. He was at first much depressed, but it went off, and he became for the moment almost gay. After this he went to Madame Frege's house, and here his depression returned, and worse than before. His object was to consult her as to the selection and order of the songs in [5] op. 71, which he was about to publish—one of the minute matters in which he was so fastidious and difficult to satisfy. She sang them to him several times, they settled the order, and then he said he must hear them once more, and after that they would study Elijah; she left the room for lights, and on her return found him on the sofa shivering, his hands cold and stiff, his head in violent pain. He then went home, and the attack continued; leeches were applied, and by the 15th he had recovered so far as to listen with interest to the details of the reception of Hiller's new opera at Dresden, and actually to make plans for his Vienna journey. On the 25th he writes to his brother in the old affectionate vein. He is taking tonics, but Paul's face would do him more good than the bitterest medicine. He was not, however, destined to speak to him again. On the 28th he was so much better as to take a walk with his wife, but it was too much, and shortly afterwards he had a second attack, and on Nov. 3 another, which last deprived him of consciousness. He lingered through the next day, fortunately without pain, and expired at 9.24 p.m. on Thursday, Nov. 4, 1847, in the presence of his wife, his brother, Schleinitz, David, and Moscheles. During the illness, the public feeling was intense. Bulletins were issued, and the house was besieged by enquirers. After his death it was as if every one in the town had received a blow and sustained a personal loss. 'It is lovely weather here,' writes a young English [6] student to the York Courant, 'but an awful stillness prevails; we feel as if the king were dead. Clusters of people are seen speaking together in the streets.' Those who remember what happened in London when Sir Robert Peel died can imagine how a similar loss would affect so small, simple, and concentrated a town as Leipzig. The streets were placarded at the corners with official announcements of his death, as if he had been a great officer of state.

On the Friday and Saturday the public were allowed to see the dead body. On Sunday the 7th it was taken to the Pauliner Church at Leipzig. A band preceded the hearse, playing the Song without Words in E minor (Book 5, no. 3), instrumented by Moscheles; and after this came a [7] student of the Conservatorium with a cushion, on which lay a silver crown formerly presented to Mendelssohn by his pupils, and his Order 'pour le merite.' The pall was borne by Moscheles, David, Hauptmann, and Gade; the professors and pupils of the Conservatorium, the members of the Gewandhaus orchestra, the chief functionaries of the Corporation and the University, and several guilds and societies accompanied the coffin, and Paul Mendelssohn was chief mourner. In the church the chorale 'To thee, O Lord,' and the chorus 'Happy and blest,' from St. Paul, were sung, a sermon or oration was delivered by Herr Howard, the pastor of the Reformed Congregation, and the service closed with the concluding chorus of Bach's Passion music. At 10 p.m. the coffin was conveyed to the Leipzig station and transported by rail to Berlin. On the road, during the night, it was met at Cöthen by the choir of the place, under Thile their director, and at Dessau, by Friedrich Schneider, who wiped away the recollection of early antagonisms by a farewell part-song, composed for the occasion, and sung by his choir at the station. It arrived at Berlin at 7 a.m., and after more funeral ceremonies was deposited in the enclosed burial-place of the family in the Alte Dreifaltigkeits Kirchhof, close outside the Halle-thor.

His tombstone is a cross. He rests between his boy Felix and his sister Fanny. His father and mother are a short distance behind.

The 5th Gewandhaus concert, which it was piously observed would naturally have ended at the very moment of his death, was postponed till the 11th, when, excepting the Eroica Symphony, which formed the second part of the programme, it was entirely made up of the compositions of the departed master. Among them were the Nachtlied of Eichendorf (op. 71, no. 6), sung by Madame Frege.

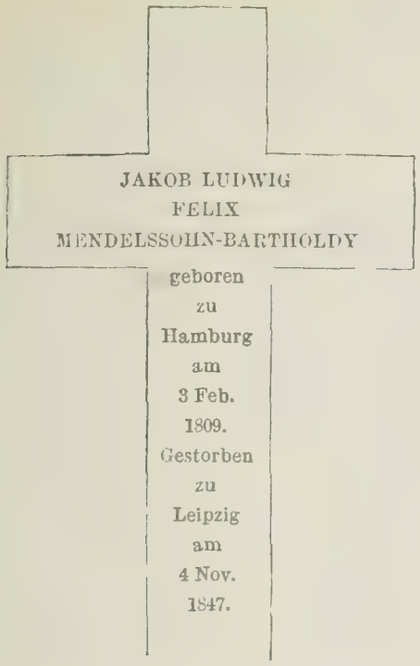
[1] Lamp. 151. [2] Mme. Frege; Mos. ii. 181. [3] B. 57.

[4] The last letter stuck into the last (the 29th) of his green volumes is from Fischhoff of Vienna on this subject, dated Oct. 29. It must have been too late to have been read by him.

[5] Of the seven songs which he brought, the 'Altdeutsches Frühlingslied,' though put on paper on Oct. 7, was composed in the summer. The 'Nachtlied' was composed and written for Schleinitz's birthday, Oct. 1, and is therefore virtually Mendelssohn's last composition. 'An odd birthday present,' said he to Mad. Frege, 'but I like it much, for I feel so dreary.'

[6] Mr. Camidge, son of Dr. Camidge of York.

[7] Mr. de Sentis.



In London the feeling, though naturally not so deep or so universal as in his native place, was yet both deep and wide. His visits had of late been so frequent, and the last one was so recent, and there was such a vivid personality about him, such force and fire, and such a general tone of health and spirits, that no wonder we were startled by the news of his death. The tone of the press was more that of regret for a dear relation, than of eulogy for a public character. Each writer spoke as if he intimately knew and loved the departed. This is especially conspicuous in the long notices of the *Times* and *Athenæum*, which are full not only of keen appreciation, but of deep personal sorrow. Of his private friends I shall only permit myself two quotations. Mrs. Grote, writing nearly thirty years afterwards, names four friends whose deaths had occasioned her the most poignant sorrow of her life; and among these are Felix Mendelssohn, Alexis de Tocqueville, and John Stuart Mill. Mrs. Austin, the aunt of his early friends the Taylors, and herself one of his most intimate allies, in a tribute to his memory as beautiful [1] as it is short, says—

'His is one of the rare characters that cannot be known too intimately. Of him there is nothing to tell that is not honourable to his memory, consoling to his friends, profitable to all men. . . . Much as I admired him as an artist, I was no less struck by his childlike simplicity and sportiveness, his deference to age, his readiness to bend his genius to give pleasure to the humble and ignorant; the vivacity and fervour of his admiration for everything good and great, his cultivated intellect, refined tastes and noble sentiments.'

Nor was the public regret out of proportion to that of his intimate friends. We are not perhaps prone to be very demonstrative over artists, especially over musicians; but this was a man who had wound himself into our feelings as no other musician had done since Handel. What Handel's songs, Harmonious Blacksmith, and other harpsichord pieces had done for the English public in 1740, that Mendelssohn's Songs without Words, and Part-songs, had done in 1840, and they had already made his name a beloved household word in many a family circle both in town and country. He had been for long looked upon as half an Englishman. He spoke English well, he wrote letters and familiar notes in our tongue freely; he showed himself in the provinces; his first important work was founded on Shakspeare, his last was brought out in England, at so peculiarly English a town as Birmingham; and his 'Scotch Symphony' and 'Hebrides Overture' showed how deeply the scenery of Britain had influenced him. And, perhaps more than this, there were in the singular purity of his life, in his known devotion to his wife and family, and his general high and unselfish character, the things most essential to procure him both the esteem and affection of the English people.

The Sacred Harmonic Society, the only Society in London having concerts at that period of the year, performed Elijah on Nov. 17, preceded by the Dead March in Saul, and with the band and chorus all dressed in black. At Manchester and Birmingham similar honours were paid to the departed composer. In Germany commemoration concerts (*Todtenfeier*) were given at Berlin, Vienna, Frankfort, Hamburg, and many other places. His bust was set up in the Theatre at Berlin, and his profile in the Gewandhaus at Leipzig. The first Concert of the Conservatoire at Paris, on Jan. 9, 1848, was entitled 'à la mémoire de F. Mendelssohn-Bartholdy,' and comprised the Scotch Symphony, Hebrides Overture, Violin Concerto, and fragments from St. Paul. Among the very numerous letters of condolence addressed to his widow we will only mention those from the Queen of England, the King of Prussia, and the King of Saxony.

Two works were in the printers' hands at the time of Mendelssohn's death—the Six Songs (op. 71) and the Six Children's pieces (op. 72). These were quickly published. Then there was a pause, and at length, as he had left no will, Madame Mendelssohn confided to a kind of committee, composed of her husband's most intimate musical friends, the task of deciding which pieces out of the immense mass of MS. music should be published, and of supervising the publication. These gentlemen were Dr. Schleinitz, the acting member of the council of the Conservatorium, David, Moscheles, and Hauptmann, all resident in Leipzig, with Paul Mendelssohn in Berlin, and Julius Rietz in Dresden. The instrumental works still in MS. embraced the Trumpet Overture (1825) and Reformation Symphony (1830), the Italian Symphony (1833), the Overture to Ruy Blas (1839), 2 sets of P.F. variations (1841), the Quintet in B♭ (1845), the Quartet in F minor (1847), and fragments of another Quartet in E, Songs without Words, and other P.F. pieces. The Vocal works comprised the Liederspiel 'Heimkehr aus der Fremde' (1829), the Concert-aria 'Infelice' (1843), the Music to Athalie and to Œdipus Coloneus (both 1845), Lauda Sion (1846), fragments of the opera Loreley, and of the oratorio Christus, on which he had been at work not long before his death, Psalms and Sprüche for

[1] Fraser's Mag. April 1848.

voices with and without accompaniment, Songs and Part-songs.

The work of publication began with Lauda Sion, which appeared as op. 73, Feb. 15, 1848. This was followed by Athalie, and by other works down to the four Part-songs which form op. 100 and no. 29 of the posthumous works, which came out in Jan. 1852. Here a pause took place. In the meantime, borne down by her great loss, and also by the death of her third boy, Felix, in 1851, Madame Mendelssohn herself died on Sept. 25, 1853. The manuscripts then came into the hands of Dr. Carl Mendelssohn, the eldest son, and after some years publication re-commenced with the Trumpet Overture, which appeared in 1867, and continued at intervals down to the 'Perpetuum mobile' (op. 119).

Many of the pieces referred to in the above enumeration are included in the series of MS. volumes already mentioned. Forty-four of these volumes are now deposited in the Imperial Library at Berlin, in pursuance of an arrangement dated Dec. 23, 1877, by which, in exchange for the possession of them, the German government agreed with the Mendelssohn-Bartholdy family to found two perpetual scholarships of 1500 marks (£75) per annum each, tenable for four years, for the education of students of music elected by competition from the music schools of Germany. The Trustees of the Fund are three—the Director of the High School of Music at Berlin, a second nominated by the government, and a third by the family. The first election took place on Oct. 1, 1879, and the successful candidates were Engelbert Humperdink of Siegburg, and Josef Kotek of Podolia. In addition, Ernst Seyffardt of Crefeld, and Johann Secundus Cruse of Melbourne, Australia, will receive allowances of 750 marks each out of the arrears of the Fund.

Long before the foundation of the Berlin Scholarships, however, practical steps in the same direction had been taken in England. In Nov. 1847 a resolution was passed by the Sacred Harmonic Society of London for the erection of a public memorial in honour of Mendelssohn. £50 was subscribed thereto by the Queen and Prince Consort, and like sums by the Sacred Harmonic and Philharmonic Societies. Other subscriptions were raised amounting in the whole to over £600. In April 1859, after many negotiations, a model of a statue by Mr. C. Bacon was approved by the subscribers; it was cast in bronze in the following November, and on May 4, 1860, was set up on the Terrace of the Crystal Palace at Sydenham.

A more appropriate memorial was the Mendelssohn Scholarship, which originated in Madame Lind-Goldschmidt in the year 1850, and will be found described under its own heading. [See MENDELSSOHN SCHOLARSHIP.]

In person Mendelssohn was short, [1]not so much as 5 ft. 6 ins. high, and slight of build; in figure lithe, and very light and mercurial. His look was dark and very Jewish; the face unusually mobile, and ever varying in expression, full of brightness and animation, and with a most unmistakeable look of genius. His complexion was fresh, and shewed a good deal of colour. His hair was black, thick, and abundant, but very fine, with a natural wave in it, and was kept back from his forehead, which was high and much developed. By the end of his life, however, it showed a good deal of gray and he began to be bald. His mouth was unusually delicate and expressive, and had generally a pleasant smile at the corners. His whiskers were very dark, and his closely-shaven chin and upper lip were blue from the strength of his beard. His teeth were beautifully white and regular; but the most striking part of his face were the large dark brown eyes. When at rest he often lowered the eyelids as if he were slightly short-sighted—which indeed he was; but when animated they gave an extraordinary brightness and fire to his face, and 'were as expressive a pair of eyes as were ever set in a human being's head.' When he was playing extempore, or was otherwise much excited, they would dilate and become nearly twice their ordinary size, the brown pupil changing to a vivid black. His laugh was hearty, and frequent; and when especially amused he would quite double up with laughter and shake his hand from the wrist to emphasize his merriment. He would nod his head violently when thoroughly agreeing, so that the hair came down over his face. In fact his body was almost as expressive as his face. His hands were [2]small, with taper fingers. On the keys they behaved almost like 'living[3] and intelligent creatures, full of life and sympathy.' His action at the piano was as free from affectation as everything else that he did, and very interesting. At times, especially at the organ, he leant very much over the keys, as if watching for the strains which came out of his finger tips. He sometimes swayed from side to side, but usually his whole performance was quiet and absorbed.[4]

He refused more than [5]once, from motives of modesty, to have his likeness taken. But a great number of portraits were painted and drawn at different times of his life. The best of these, in the opinion of those most capable of judging, is that painted by his friend Professor Edward Magnus at Berlin in the year 1844. The original of this is in the possession of Madame Lind-Goldschmidt, to whom it was presented by Magnus himself, and although deficient in that lively speaking expression which all admit to have been so characteristic of him, it may be accepted as a good representation. It is very superior to the various replicas and copies in existence, which are distinguished by a hopeless meek solemnity of look, absolutely impossible in the original, and which therefore convey an entirely wrong idea of

[1] He was shorter than Sterndale Bennett, who was 5 ft. 6.

[2] A cast of his hand can be bought.

[3] The Bishop of Limerick.

[4] I owe the above description of Mendelssohn's looks chiefly to Mr. John C. Horsley, R.A. Few knew him better, or are more qualified to describe him.

[5] L. Dec. 20, 1831; April 3, May 18, 1835.

the face. Madame Goldschmidt with great kindness allowed the portrait to be photographed, and it was the desire of the writer to give a wood engraving of it; but after two attempts to obtain satisfactory representations, he has been reluctantly compelled to abandon the intention.

Other portraits worth notice are (1) a pencil sketch taken in 1820, in possession of Mrs. Victor Benecke, lithographed in 'Goethe and Mendelssohn.' (2) A half-length taken by Begas in 1821, in the possession of the Paul Mendelssohn-Bartholdy family at Berlin. This is very poorly engraved, both as to resemblance and execution, in 'Goethe and Mendelssohn.' The original is probably much idealised, but it is a striking picture. (3) A three-quarter-length, in a cloak, painted by Hildebrand, and engraved as the frontispiece to Elijah; in possession of Herr Killmann of Bonn. (4) A whole length, sitting, and looking to the side, taken by Hensel in 1844, and now in the possession of the Paul M.-B. family. This, though clever as a picture, can hardly convey the man. The hand is perhaps the most remarkable thing in it, and must be a portrait. (5) A profile taken after death by Hensel, and now in possession of Mrs. V. Benecke. This, which is said by many to be the best representation of him, is fairly engraved as the frontispiece to Lady Wallace's translation of the letters.

A portrait of him in crayons was taken at Weimar for [1] Goethe, which he describes as 'very like, but rather sulky'; another was painted at Rome by [2] Horace Vernet, and another [3] by a painter named Schramm. But none of these have been [4] traced by the writer. The sketch by his brother-in-law, taken in 1840, and given as frontispiece to vol. 2 of the 'Familie Mendelssohn,' must surely be too young-looking for that date. Miniatures of the four children were taken in Paris in 1816, and are now in the hands of the Paul M.-B. family.

The bust by Rietschel (engraved as frontispiece to Devrient) and the profiles by Knauer and Kietz are all said to be good.

Not less remarkable than his face was his way and manner. It is described by those who knew him as peculiarly winning and engaging; to those whom he loved, coaxing. The slight lisp or drawl which remained with him to the end made the endearing words and pet expressions, which he was fond of applying to his own immediate circle, all the more affectionate. But outside this immediate circle also he was very fascinating, and it is probable that, devotedly as he was loved at home, few men had fewer enemies abroad. The strong admiration expressed towards him by men of such very different natures as [5] Schumann and [6] Berlioz, both of whom knew him well, shows what a depth of solid goodness there was in his attractiveness. 'His gentleness and softness,' says one of his English friends, 'had none of the bad side so often found with those qualities; nothing effeminate or morbid. There was a great deal of manliness packed into his little body,' as all readers of the early part of this sketch must be aware. Indeed he had a great capacity for being angry. Anything like meanness or deceit, or unworthy conduct of any kind, roused his wrath at once. 'He had a way,' says a very old friend, 'of suddenly firing up on such occasions, and turning on his heel, in a style which was quite unmistakeable,' and astonishing to those who only knew his smoother side. Towards thoughtlessness, negligence, or obstinate stupidity he was very intolerant, and under such provocation said things the sting of which must have remained for long after, and which he himself deeply [7] regretted. But these were rare instances, and as a rule his personal fascination secured him friends and kept them firm to him. And to those to whom he was really attached—outside his own family, of which we are not speaking—there could hardly be a better friend. The published letters to General von Webern, to Verkenius, Klingemann, Schubring, Hiller, Moscheles, are charged with an amount of real affection rarely met with, but which never leads him to sink his own individual opinion on any point which he thought material, as may be seen in many cases. Talent and perseverance he was always ready to encourage, and the cases of Taubert, Eckert, Gade, Joachim, Rietz, Naumann, Sterndale Bennett, Hiller, and the anonymous student whose cause he pleads so [8] earnestly to the king, show how eager he always was to promote the best interests of those whom he believed to be worthy. The present head of the Frankfort Conservatorium owes his advancement in no small degree to the good offices of Mendelssohn. His warm reception of Berlioz, Liszt, and Thalberg, has been already mentioned, but must be again referred to as an instance of the absence of jealousy or rivalry in his nature, and of his simple wish to give everybody fair play.

The relations of Mendelssohn and Schumann were thoroughly good on both sides. There is a remarkable absence of Schumann's name in Mendelssohn's published letters; but this may have arisen from considerations which influenced the editors, and would possibly be reversed if the letters had been fully given, and if others which remain in MS. were printed. The two men were always good friends. They differed much on some matters of music. Mendelssohn had his strong settled principles, which nothing could induce him to give up. He thought that everything should be made as clear as a composer could make it, and that rough or awkward passages were blemishes, which should be modified and made to sound well. On the other hand, Schumann was equally fixed in the necessity of retaining what he had written down as representing his

[7] He complained bitterly to the Bishop of Limerick in 1847 of his short temper at rehearsals or with his pupils.

[8] Letter, 1844; ii. 325.

intention. But such differences of opinion never affected their intercourse; they were always friendly, and even affectionate, and loved to be together. More than one person living remembers the strong interest which Mendelssohn took in 'Paradise and the Peri' on its first appearance, and how anxious he was that his friends should hear it. Of Schumann's string quartets he records that they 'pleased him extremely'; and it is surely allowable to infer that it was the expression of his pleasure that made Schumann dedicate them to him. He had a particular love for some of Schumann's songs, and as this feeling was not shared by all the members of his family he would sometimes ask for the 'forbidden fruit,' as a kind of synonym for something peculiarly pleasant. The fact that he placed Schumann among his colleagues at the starting of the Leipzig Conservatorium of itself shows how much he valued him.

On the other hand, Schumann is never warmer or more in earnest than when he is praising Mendelssohn's compositions, as may be seen by many an article in his *Gesammelte Schriften*. He dedicated his string quartets to him, as we have said. He defended him with ardour when attacked; during his last sad years Mendelssohn's name was constantly in his mouth as that of his best friend, and his last clearly expressed wish was that his youngest boy should be called after him. A proof of his affectionate feeling is to be found in the no. 28 of his 'Album für die Jugend' (op. 68), which is inscribed 'Erinnerung (Nov. 4, 1847),' and therefore expresses his feelings at the death of his friend. It is not necessary to discover that definite direct meaning in this touching little piece which Mendelssohn found in all music, in order to recognise sadness tempered by a deep sense of grace and sweetness; the result showing how beautiful was the image which Mendelssohn left in the mind of one so completely able to appreciate him as Schumann.

Nowhere is Mendelssohn's naturalness and naïveté more evident than in his constant reference to his own foibles. The hearty way in which he enjoys idleness, and [1]boasts of it, the constant references to eating and drinking, are delightful in a man who got through so much work, who was singularly temperate, and whose only weakness for the products of the kitchen was for rice milk and cherry pie. In this, as in everything else, he was perfectly simple and natural. 'I do not in the least concern myself as to what people wish or praise or pay for; but solely as to what I myself consider [2]good.' No doubt he was very fortunate in being able to disregard 'what people paid for'; but that he did so is a part of his character.

His fun and drollery were more the result of his high spirits than of any real turn for wit. Unlike Beethoven, he rarely indulges in plays on words, and his best efforts in that direction are the elaborately illustrated programmes and *jeux d'esprit* which are preserved in the albums of some of his friends, and in which caricatures, verses, puns, and jokes, are mixed up in a very droll fashion. There is much humour in some of his scherzos, but especially in the funeral march for Pyramus and Thisbe in the M.N.D. pieces, one of the most comical things in all music. It is much to be regretted that he has left no other specimen of his remarkable power in this direction. Probably he indulged in a good deal of such fun which has not been preserved, since both he [3]and his sister refer to that march as a specimen of a style in which he often extemporised. In mimicry he was great, not only in music but in taking off speech and manner. The most humorous passage that I have met with in his letters is still in MS.—'Dass jenseits auch Musik gemacht werden könne, das glauben Sie ja, und haben mirs oft gesagt. Dann wirds wohl kein schlechtes Instrument geben, wie bei Geyer, und keine dumme Flöte pustet da, und keine Posaune schleppt nach, und nirgends fehlt es, und wankt es, und eilt es, das glaube ich wohl.'[4]

No musician—unless perhaps it were Lionardo da Vinci, and he was only a musician in a limited sense—certainly no great composer, ever had so many pursuits as Mendelssohn. Mozart drew, and wrote capital letters, Berlioz and Weber also both wrote good letters, Beethoven was a great walker and intense lover of nature, Cherubini was a botanist and a passionate card-player, but none of them approach Mendelssohn in the number and variety of his occupations. Both billiards and chess he played with ardour to the end of his life, and in both he excelled. When a lad he was devoted to gymnastics; later on he rode much, swam more, and danced whenever he had the opportunity. Cards and skating were almost the only diversions he did not care for. But then these were diversions. There were two pursuits which almost deserve to rank as work—drawing and letter-writing. Drawing with him was more like a professional avocation than an amusement. The quantity of his sketches and drawings preserved is very large. They begin with the Swiss journey in 1822, on which he took 27 large ones, all very carefully finished, and all dated, sometimes two in one day. The Scotch and Italian tours are both fully illustrated, and so they go on year by year till his last journey into Switzerland in 1847, of which, as already said, 14 large highly finished water-colour drawings remain, besides slighter sketches. At first they are rude and childish, though with each successive set the improvement is perceptible. But even with the earliest ones there is no mistaking that the drawing was a serious business. The subjects are not what are called 'bits,' but are usually large comprehensive views, and it is impossible to doubt that the child threw his whole mind into it, did his very best, and shirked nothing. He already felt the force of the motto which fronted his conductor's chair in the

[1] L. July 14, 1836, and in many others. [2] L. Oct. 4, 1837.

[3] F.M. iii. 54, 51.

[4] 'That there may be music in the next world I know you believe, for you have often told me so; but there will certainly be no bad pianos there like Geyer's, no stupid puffing flutes, no dragging trombones, no stopping, or wavering, or hurrying—of that I am quite sure.' MS. letter.

Gewandhaus—'Res severa est verum gaudium.' Every little cottage or gate is put in with as much care as the main features. Every tree has its character. Everything stands well on its legs, and the whole has that architectonic style which is so characteristic of his music.

Next to his drawing should be placed his correspondence, and this is even more remarkable. During the last years of his life there can have been but few eminent men in Europe who wrote more letters than he did. Many even who take no interest in music are familiar with the nature of his letters—the happy mixture of seriousness, fun, and affection, the life-like descriptions, the happy hits, the naïveté which no baldness of translation can extinguish, the wise counsels, the practical views, the delight in the successes of his friends, the self-abnegation, the bursts of wrath at anything mean or nasty. We all remember, too, the length to which they run. Taking the printed volumes, and comparing the letters with those of Scott or Arnold, they are on the average very considerably longer than either. But the published letters bear only a small proportion to those still in [1] MS. In fact the abundance of material for the biographer of Mendelssohn is quite bewildering. That however is not the point. The remarkable fact is that so many letters of such length and such intrinsic excellence should have been written by a man who was all the time engaged in an engrossing occupation, producing great quantities of music, conducting, arranging, and otherwise occupied in a profession which more than any demands the surrender of the entire man. For these letters are no hurried productions, but are distinguished, like the drawings, for the neatness and finish which pervade them. An autograph letter of Mendelssohn's is a work of art; the lines are all straight and close, the letters perfectly and elegantly formed, with a peculiar luxuriance of tails, and an illegible word can hardly be found. To the folding and the sealing everything is perfect. It seems impossible that this can have been done quickly. It must have absorbed an enormous deal of time. While speaking of his correspondence, we may mention the neatness and order with which he registered and kept everything. The 44 volumes of MS. music, in which he did for himself what Mozart's father so carefully did for his son, have been mentioned. But it is not generally known that he preserved all letters that he received, and stuck them with his own hands into books. 27 large [2] thick green volumes exist, containing apparently all the letters and memorandums, business and private, which he received from Oct. 29, 1821, to Oct. 29, 1847, together with the drafts of his Oratorio books, and of the long official communications which, during his latter life, cost him so many unprofitable hours. He seems to have found time for everything. Hiller [3] tells us how during a very busy season he revised and copied out the libretto of his oratorio for him. One of his dearest Leipzig friends has a complete copy of the full score of Antigone, *including the whole of the words of the melodrama*, written for her with his own hand; a perfect piece of caligraphy, without spot or erasure! and the family archives contain a long minute list of the contents of all the cupboards in the house, filling several pages of foolscap, in his usual neat writing, and made about the year 1842. We read of Mr. Dickens [4] that 'no matter was considered too trivial to claim his care and attention. He would take as much pains about the hanging of a picture, the choosing of furniture, the superintending of any little improvement in the house, as he would about the more serious business of his life; thus carrying out to the very letter his favourite motto that What is worth doing at all is worth doing well.' No words could better describe the side of Mendelssohn's character to which we are alluding, nor could any motto more emphatically express the principle on which he acted throughout life in all his work.

His taste and efficiency in such minor matters are well shown in the albums which he made for his wife, beautiful specimens of arrangement, the most charming things in which are the drawings and pieces of music from his own hands. His private account-books and diaries are kept with the same quaint neatness. If he had a word to alter in a letter, it was done with a grace which turned the blemish into a beauty. The same care came out in everything—in making out the programmes for the Gewandhaus concerts, where he would arrange and re-arrange the pieces to suit some inner idea of symmetry or order; or in settling his sets of songs for publication as to the succession of keys, connection or contrast of words, etc. In fact he had a passion for neatness, and a repugnance to anything clumsy. Possibly this may have been one reason why he appears so rarely to have sketched his music. He made it in his head, and had settled the minutest points there before he put it on paper, thus avoiding the litter and disorder of a sketch. Connected with this neatness is a certain quaintness in his proceedings which perhaps strikes an Englishman more forcibly than it would a German. He used the old-fashioned C clef for the treble voices in his scores to the last; the long flourish with which he ornaments the double bar at the end of a piece never varied. A score of Haydn's Military Symphony which he wrote for his wife bears the words 'Possessor Cécile.' In writing to Mrs. Moscheles of her little girls, whose singing had pleased him, he begs to be remembered to the 'drei kleine Diskantisten.' A note to David, sent by a child, is inscribed 'Kinderpost,' and so on. Certain French words occur over and over again, and are evidently favourites. Such are *plaisir* and *trouble*, *à propos*, *en gros*, and others. The word *hübsch*, answering to our 'nice,' was a special [5] favourite, and *nett* was one of his highest commendations.

But to return for a moment to his engrossing

[1] In the hands of his family, of Schleinitz, Mrs. Moscheles, Schubring, P. David, Mme. Goldschmidt, Mme. Preusser, Mr. Euler of Düsseldorf, the Sterndale Bennetts, Mr. Sartoris, and others.

[2] In the hands of Mrs. Wach (Lili M.-B.). Two others seem to be missing.

[3] H. 107.

[4] Preface to his Letters, 1879.

[5] Mos. ii. 165.

pursuits. Add to those just mentioned the many concerts, to be arranged, rehearsed, conducted; the frequent negotiations attending on Berlin; the long official protocols; the hospitality and genial intercourse, where he was equally excellent as host or as guest; the claims of his family; the long holidays, real holidays, spent in travelling, and not, like Beethoven's, devoted to composition—and we may almost be pardoned for wondering how he can have found time to write any music at all. But on the contrary, with him all this business does not appear to have militated against composition in the slightest degree. It often drove him almost to distraction; it probably shortened his life; but it never seems to have prevented his doing whatever music came before him, either spontaneously or at the call of his two posts at Berlin and Dresden. He composed Antigone in a fortnight, he resisted writing the music to Ruy Blas, he grumbled over the long chorale for the thousandth anniversary of the German Empire, and over the overture to Athalie, in the midst of his London pleasures; but still he did them, and in the cases of Antigone and the two overtures it is difficult to see how he could have done them better. He was never driven into a corner.

The power by which he got through all this labour, so much of it self-imposed, was the power of order and concentration, the practical business habit of doing one thing at a time, and doing it well. This no doubt was the talent which his father recognised in him so strongly as to make him doubt whether business was not his real vocation. It was this which made him [1] sympathise with Schiller in his power of 'supplying' great tragedies as they were wanted. In one way his will was weak, for he always found it hard to say No; but having accepted the task it became a duty, and towards duty his will was the iron will of a man of business. Such a gift is vouchsafed to very few artists. Handel possessed it in some degree; but with that one exception Mendelssohn seems to stand alone.

Of his method of composing, little or nothing is known. He appears to have made few sketches, and to have arranged his music in his head at first, much as Mozart did. Probably this arose from his early training under Zelter, for the volumes for 1821, 2, 3, of the MS. series now in the Berlin Library appear to contain his first drafts, and rarely show any corrections, and what there are are not so much sketches as erasures and substitutions. Devrient and Schubring tell of their having seen him composing a score bar by bar from top to bottom; but this was probably only an experiment or *tour de force*. The fragment of the first movement of a symphony which is given on p. 305, is a good average example of the shape in which his ideas first came on to the paper.

Alterations in a work after it was completed are quite another thing, and in these he was lavish. He complains of his not discovering the necessity for them till [2] *post festum*. We have seen instances of this in the Walpurgisnight, St. Paul, the Lobgesang, Elijah, and some of the Concert-overtures. Another instance is the Italian Symphony, which he retained in MS. for 14 years, till his death, with the intention of altering and improving the Finale. Another, equally to the point, is the D minor Trio, of which there are two editions in actual circulation, containing several important and extensive [3] differences. This is carrying fastidiousness even further than Beethoven, whose alterations were endless, but ceased with publication. The autographs of many of Mendelssohn's pieces are dated years before they were printed, and in most, if not all, cases, they received material alterations before being issued.

Of his pianoforte playing in his earlier days we have already spoken. What it was in his great time, at such displays as his performances in London at the Philharmonic in 1842, 44, and 47; at Ernst's Concert in 1844, in the Bach Concerto with Moscheles and Thalberg; at the British Musicians' matinée in 1844; and the British Quartet Society in 1847; at the Leipzig Concerts on the occasion already mentioned in 1836; at Miss Lind's Concert Dec. 5, 1845, or at many a private reunion at V. Novello's or the Horsleys', or the Moscheles' in London, or the houses of his favourite friends in Leipzig, Berlin, or Frankfort—there are still many remaining well able to judge, and in whose minds the impression survives as clear as ever. Of the various recollections with which I have been favoured, I cannot do better than give entire those of Madame Schumann, and Dr. Hiller. In reading them it should be remembered that Mendelssohn was fond of speaking of himself as a player *en gros*, who did not claim (however great his right) to be a virtuoso, and that there are instances of his having refused to play to great virtuosi.

1. 'My recollections of Mendelssohn's playing,' says Madame Schumann, 'are among the most delightful things in my artistic life. It was to me a shining ideal, full of genius and life, united with technical perfection. He would sometimes take the *tempi* very quick, but never to the prejudice of the music. It never occurred to me to compare him with virtuosi. Of mere effects of performance he knew nothing—he was always the great musician, and in hearing him one forgot the player, and only revelled in the full enjoyment of the music. He could carry one with him in the most incredible manner, and his playing was always stamped with beauty and nobility. In his early days he had acquired perfection of technique; but latterly, as he often told me, he hardly ever practised, and yet he surpassed every one. I have heard him in Bach, and Beethoven, and in his own compositions, and shall never forget the impression he made upon me.'

2. 'Mendelssohn's playing,' says Dr. Hiller, 'was to him what flying is to a bird. No one wonders why a lark flies, it is inconceivable

[1] L. Aug. 23 1831. [2] L. Dec. 6, 1846.

[3] The parts of the 'Hebriden' Overture are not in exact accordance with the score of 'Fingals Höhle.' The P.F. arrangement of the M.N.D. Overture published in London is given in notes of half the value of those in the score, published after it in Leipzig.

without that power. In the same way Mendelssohn played the piano because it was his nature. He possessed great skill, certainty, power, and rapidity of execution, a lovely full tone—all in fact that a virtuoso could desire, but these qualities were forgotten while he was playing, and one almost overlooked even those more spiritual gifts which we call fire, invention, soul, apprehension, etc. When he sat down to the instrument music streamed from him with all the fullness of his inborn genius,—he was a centaur, and his horse was the piano. What he played, how he played it, and that he was the player—all were equally rivetting, and it was impossible to separate the execution, the music, and the executant. This was absolutely the case in his improvisations, so poetical, artistic, and finished; and almost as much so in his execution of the music of Bach, Mozart, Beethoven, or himself. Into those three masters he had grown, and they had become his spiritual property. The music of other composers he knew, but could not produce it as he did theirs. I do not think, for instance, that his execution of Chopin was at all to be compared to his execution of the masters just mentioned; he did not care particularly for it, though when alone he played everything good with interest. In playing at sight his skill and rapidity of comprehension were astonishing, and that not with P. F. music only, but with the most complicated compositions. He never practised, though he once told me that in his Leipzig time he had played a shake (I think with the 2nd and 3rd fingers) several minutes every day for some months, till he was perfect in it.'

'His staccato,' says Mr. Joachim, 'was the most extraordinary thing possible for life and crispness. In the Frühlingslied (Songs without Words, Bk. v, No. 6) for instance, it was quite electric, and though I have heard that song played by many of the greatest players, I never experienced the same effect. His playing was extraordinarily full of fire, which could hardly be controlled, and yet was controlled, and combined with the greatest delicacy.' 'Though lightness of touch, and a delicious liquid pearliness of tone,' says [1]another of his pupils, 'were prominent characteristics, yet his power in *fortes* was immense. In the passage in his G minor Concerto where the whole orchestra makes a *crescendo* the climax of which is a 6–4 chord on D, played by the P.F. alone, it seemed as if the band had quite enough to do to work up to the chord he played.' As an instance of the fulness of his tone, the same gentleman mentions the 5 bars of *piano* which begin Beethoven's G major Concerto, and which, though he played them perfectly softly, filled the whole room.

'His mechanism,' says [2]another of his Leipzig pupils, 'was extremely subtle, and developed with the lightest of wrists (never from the arm); he therefore never strained the instrument or hammered. His chord-playing was beautiful, and based on a special theory of his own. His use of the pedal was very sparing, clearly defined, and therefore effective; his phrasing beautifully clear. The performances in which I derived the most lasting impressions from him were the 32 Variations and last Sonata (Op. 111) of Beethoven, in which latter the Variations of the final movement came out more clearly in their structure and beauty than I have ever heard before or since.' Of his playing of the 32 Variations, Professor Macfarren remarks that 'to each one, or each pair, where they go in pairs, he gave a character different from all the others. In playing at sight from a MS. score he characterised every incident by the peculiar tone by which he represented the instrument for which it was [3]written.' In describing his playing of the 9th Symphony, Mr. Schleinitz testified to the same singular power of representing the different instruments. A still stronger testimony is that of Berlioz, who, speaking of the *colour* of the Hebrides Overture, says that Mendelssohn 'succeeded in giving him an accurate idea of it, such is his extraordinary power of rendering the most complicated scores [4]on the Piano.'

His adherence to his author's meaning, and to the indications given in the music, was absolute. Strict time was one of his hobbies. He alludes to it, with an eye to the sins of Hiller and Chopin, in a letter of May 23, 1834, and somewhere else speaks of 'nice strict tempo' as something peculiarly pleasant. After introducing some *ritardandos* in conducting the Introduction to Beethoven's 2nd Symphony, he excused himself by saying [5]that 'one could not always be good,' and that he had felt the inclination too strongly to resist it. In playing, however, he never himself interpolated a *ritardando*, or [6]suffered it in any one else. It especially enraged him when done at the end of a song or other piece. 'Es steht nicht da!' he would say; 'if it were intended it would be written in—they think it expression, but it is sheer [7]affectation.' But though in playing he never varied the *tempo* when once taken, he did not always take a movement at the same pace, but changed it as his mood was at the time. We have seen in the case of Bach's A minor Fugue (p. 274) that he could on occasion introduce an individual reading; and his treatment of the arpeggios in the Chromatic [8]Fantasia shows that, there at least, he allowed himself great latitude. Still, in imitating this it should be remembered how thoroughly he knew these great masters, and how perfect his sympathy with them was. In conducting, as we have just seen, he was more elastic, though even there his variations would now be condemned as moderate by some conductors. Before he conducted at the Philharmonic it had been the tradition in the Coda of the Overture to Egmont to return to a *piano* after the *crescendo*; but this he would not suffer, and maintained the *fortissimo* to the end—a practice now always followed.

He very rarely played from book, and his prodigious memory was also often shown in his

sudden recollection of out-of-the-way pieces. Hiller has given two instances (pp. 28, 29). His power of retaining things casually heard was also shown in his extempore playing, where he would recollect the themes of compositions which he heard then and there for the first time, and would combine them in the happiest manner. An instance of this is mentioned by his [1] father, in which, after Malibran had sung five songs of different nations, he was dragged to the piano, and improvised upon them all. He himself describes another occasion, a 'field day' at Baillot's, when he took three themes from the Bach sonatas and worked them up to the delight and astonishment of an audience [2] worth delighting. At the matinée of the Society of British Musicians in 1844, he took his themes from two compositions by C. E. Horsley and Macfarren which he had just heard, probably for the first time—and other instances could be given.

His extemporising was however marked by other traits than that of memory. 'It was,' says Prof. Macfarren, 'as fluent and as well planned as a written work,' and the themes, whether borrowed or invented, were not merely brought together but contrapuntally worked. Instances of this have been mentioned at Birmingham and elsewhere. His tact in these things was prodigious. At the concert given by Jenny Lind and himself on Dec. 5, 1845, he played two Songs without words—Bk. vi, No. 1, in E♭, and Bk. v, No. 6, in A major, and he modulated from the one key to the other by means of a regularly constructed intermezzo, in which the semiquavers of the first song merged into the arpeggios of the second with the most consummate art, and with magical [3] effect. But great as were his public displays, it would seem that, like Mozart, it was in the small circle of intimate friends that his improvisation was most splendid and happy. Those only who had the good fortune to find themselves (as rarely happened) alone [4] with him at one of his Sunday afternoons are perhaps aware of what he could really do in this direction, and he 'never improvised better' or pleased himself more than when *tête à tête* with the Queen and Prince Albert. A singular fact is mentioned by [5] Hiller, which is confirmed by another friend of his:—that in playing his own music he did it with a certain reticence, as if not desiring that the work would derive any advantage from his execution. The explanation is very much in consonance with his modesty, but whether correct or not there is no reason to doubt the fact.

His immense early practice in counterpoint under Zelter—like Mozart's under his father—had given him so complete a command over all the resources of counterpoint, and such a habit of looking at themes contrapuntally, that the combinations just spoken of came more or less naturally to him. In some of his youthful compositions he brings his science into prominence, as in the Fugue in A (op. 7, no. 5); the Finale of the E♭ stringed Quartet (1823); the original Minuet and Trio of the stringed Quintet in A (op. 18), a double canon of great ingenuity; the Chorus in St. Paul, 'But our God,' constructed on the chorale 'Wir glauben all'; but with his maturity he mostly drops such displays, and Elijah, as is well known, 'contains no fugues.' In extemporising, however, it was at his fingers' ends to the last. He was also fond of throwing off ingenious canons, of which the following, written on the moment for Joachim, March 11, 1844, is a good example.

Etude for one Violin, or Canon for two Violins.

Of his organ-playing we have already spoken. It should be added that he settled his combinations of stops before starting, and did not change them in the course of the piece. He likewise steadily [6] adhered to the plan on which he set out; if he started in 3 parts he continued in 3, and the same with 4 or 5. He took extraordinary delight in the organ; some describe him as even more at home there than on the P. F., though this must be taken with caution. But it is certain that he loved it, and was always greatly excited when playing it.

He was fond of playing the Viola, and on more than one occasion took the first Viola part of his own Octet in public. The Violin he learned when young, but neglected it in later life. He however played occasionally, and it was amusing to see him bending over the desk, and struggling with his part just as if he were a boy. His practical knowledge of the instrument is evident from his violin music, in which there are few difficulties which an ordinarily good player cannot surmount. But this is characteristic of the care and thoughtfulness of the man. As a rule, in his scores he gives each instrument the passages which suit it. A few instances of the reverse are quoted under CLARINET (vol. i. p. 363*b*), but they are quite the exception. He appears to have felt somewhat of the same natural dislike to brass instruments that Mozart did. At any rate in his early scores he uses them with great [7] moderation, and somewhere makes the just remark that the trombone is 'too sacred an instrument' to be used freely.

The list of Mendelssohn's works published up to the present time (Jan. 1880) comprises—

5 Symphonies, including the Lobgesang.

6 Concert overtures; an Overture for military band.

[1] F.M. i. 377. [2] L. i. 305.

[3] Recollections of Joachim and Rockstro.

[4] Dr. Klengel and Sterndale Bennett once had this good fortune, and it was a thing never to be forgotten. [5] H. 18.

[6] Mus. World, viii. 102.

[7] Neither of his three Concert overtures, nor the Italian and Scotch symphonies, have trombones. As to St. Paul, see letter to Mr. Horsley, G. & M. 115.

1 Concerto for Violin and Orchestra; 2 do. for Pianoforte, and 3 shorter works for P. F. and Orchestra.

1 Octet for Strings, 2 Quintets and 7 Quartets for do., with fragments of an 8th; 3 Quartets for P.F. and strings, 2 Trios for the same, a Sonata for the Violin and P. F.; 2 Sonatas and a set of Variations for Cello and P. F.

2 pieces for Piano, four hands; 3 Sonatas for Piano solo, 1 Fantasia for do. ('Scotch Sonata'), 16 Scherzos, Capriccios, etc.; 8 books of Songs without Words, 6 in each, and 2 separate similar pieces; 7 Characteristic pieces; 6 pieces for children; 7 Preludes and Fugues; and 3 sets of Variations.

For the organ, 6 Sonatas, and 3 Preludes and Fugues.

2 Oratorios and fragments of a third.

1 Hymn (Lauda Sion), 2 ditto for Solo, Chorus, and Orchestra.

3 Motets for Female voices and Organ; 3 Church pieces for Solos, Chorus, and Organ.

5 Motets, Jubilate, Nunc Dimittis, Magnificat, and 2 Kyries for voices only; 2 ditto Men's voices only; 2 ditto Chorus and Orchestra.

8 Psalms for Solos, Chorus and Orchestra; 6 'Sprüche' for 8 voices.

1 Opera, and portions of a second; 1 Operetta; the Walpurgisnight.

Music to Midsummer Night's Dream, Athalie, Antigone, and Œdipus.

2 Festival Cantatas; 1 Concert-aria; 10 Duets and 82 Songs for solo voice, with P.F.; 28 Part Songs for mixed voices, and 17 for men's voices.

Of these a complete collected edition, edited by Julius Rietz, has been published by Messrs. Breitkopf & Härtel. The prospectus was issued in July 1876, and the publication began with 1877. The various separate editions are too numerous to be given here, but we may mention that while these sheets are passing through the press, a complete collection of the P. F. works (solo and with orchestra) has been issued by Messrs. Novello in one vol. of 518 pages.

Two editions of the Thematic Catalogue have been published by Messrs. Breitkopf, the 1st in two parts, 1846 and 1853, the 2nd in 1873. A third edition is very desirable, on the model of the admirable catalogues of Beethoven and Schubert, edited by Mr. Nottebohm. The English publishers, and the dates, should in every case be given, since their editions were often published simultaneously with those of the German publishers, and indeed in some cases are the original issues.

The few of Mendelssohn's very early works which he published himself, or which have been issued since his death, show in certain points the traces of his predecessors—of Bach, Mozart, Beethoven, and Weber. But this is only saying what can be said of the early works of all composers, including Beethoven himself. Mendelssohn is not more but less amenable to this law of nature than most of his compeers. The traces of Bach are the most permanent, and they linger on in the vocal works even as late as St. Paul. Indeed, Bach may be tracked still later in the solid construction and architectonic arrangement of the choruses, even of the Lobgesang, the grand Psalms, the Walpurgisnight, and Elijah, works in all respects emphatically Mendelssohn's own, not less than in the religious feeling, the union of noble sentiment with tender expression, and the utter absence of commonness or vulgarity which pervade all his music alike.

In the instrumental works, however, the year 1826 broke the spell of all external influence, and the Octet, the Quintet in A, and above all the M.N.D. Overture, launched him upon the world at 17 as a thoroughly original composer. The Concert-overtures, the 2 great Symphonies, the two P. F. Concertos, and the Violin Concerto, fully maintain this orginality, and in thought, style, phrase, and clearness of expression, no less than in their symmetrical structure and exquisite orchestration, are eminently independent and individual works. The advance between the Symphony in C minor (1824), which we call 'No. I,' though it is really 'No XIII,' and the Italian Symphony (Rome, 1831) is immense. The former is laid out quite on the Mozart plan, and the working throughout recalls the old world. But the latter has no model. The melodies and the treatment are Mendelssohn's alone, and while in gaiety and freshness it is quite unrivalled, it is not too much to say that the slow movement is as great a novelty as that of Beethoven's Concerto in G major. The Scotch Symphony is as original as the Italian, and on a much larger and grander scale. The opening Andante, the Scherzo, and the Finale are especially splendid and individual. The Concert-overtures are in all essential respects as original as if Beethoven had not preceded them by writing Coriolan—as true a representative of his genius as the Hebrides is of Mendelssohn's. That to the Midsummer Night's Dream, which brought the fairies into the orchestra and fixed them there, and which will always remain a monument of the fresh feeling of youth; the Hebrides with its intensely sombre and melancholy sentiment, and the Melusina with its passionate pathos, have no predecessors in sentiment, treatment, or orchestration. Ruy Blas is as brilliant and as full of fire as the others are of sentiment, and does not fall a step behind them for individuality.

In these works there is little attempt at any modification of the established forms. Innovation was not Mendelssohn's habit of mind, and he rarely attempts it. The Scotch Symphony is directed to be played through without pause, and it has an extra movement in form of a long Coda, which appears to be a novelty in pieces in this class. There are unimportant variations in the form of the concertos, chiefly in the direction of compression. But with Mendelssohn, no more than with Schubert, do these things force themselves on the attention. He has so much to say, and says it so well, the music is so good and so agreeable, that it never occurs to the hearer to enquire if he has altered the external proportions of his discourse.

His Scherzos are still more peculiarly his own

offspring, and really have no prototypes. That in a movement bearing the same name as one of Beethoven's most individual creations, and occupying the same place in the piece, he should have been able to strike out so entirely different a path as he did, is a wonderful tribute to his originality. Not less remarkable is the variety of the many Scherzos he has left. They are written for orchestra and chamber, concerted and solo alike, in double and triple time indifferently; they have no fixed rhythm, and notwithstanding a strong family likeness—the impress of the gay and delicate mind of their composer—are all independent of each other. In his orchestral works Mendelssohn's scoring is remarkable not more for its grace and beautiful effect than for its clearness and practical efficiency. It gives the Conductor no difficulty. What the composer wishes to express comes out naturally, and, as already remarked, each instrument has with rare exceptions the passages most suitable to it.

Mendelssohn's love of 'Programme' is obvious throughout the foregoing works. The exquisite imitation of Goethe's picture in the Scherzo of the Octet (p. 258*b*) is the earliest instance of it; the Overture founded on his Calm sea and Prosperous voyage is another; and as we advance each Overture and each Symphony has its title. He once said, in [1] conversation with F. Schneider on the subject, that since Beethoven had taken the step he did in the Pastoral Symphony, every one was at liberty to follow. But the way in which he resented Schumann's attempt to discover 'red coral, sea monsters, magic castles and ocean caves' in his Melusina [2] Overture shows that his view of Programme was a broad one, that he did not intend to depict scenes or events, but held fast by Beethoven's canon, that such music should be 'more expression of emotion than painting'—*mehr Ausdruck der Empfindung als Malerei.* Thus he quotes the first few bars of the Hebrides Overture (see p. 264*a*) not as his recollection of the sound of the winds and the waves, but 'to show how extraordinarily Fingal's cave had affected him'—*wie seltsam mir auf den Hebriden zu Muthe geworden ist.* True, in the M.N.D. Overture we are said to hear the bray of Bottom in the low G of the Ophicleide; and in the three North Wales caprices (op. 16) we are told of even more minute touches of imitation (see p. 264*b*); but these, if not imaginary, are at best but *jeux d'esprit.*

Connected with this tendency to programme is a curious point, namely, his belief in the absolute and obvious 'meaning' of music. 'Notes,' [3] says he, 'have as definite a meaning as words, perhaps even a more definite one,' and he devotes a whole letter to reiterating that music is not too indefinite to be put into words, but too definite; that words are susceptible of a variety of meanings, while music has only [4] one. This is not the place to discuss so strange a doctrine, which, though true to him, is certainly not true to the majority of men, and which obviously rests on the precise force of the word 'to mean' (*heissen*); but it is necessary to call attention to it *en passant.*[5]

His great works in chamber music are on a par with those for the orchestra. The Octet, the Quintets, and the 6 Quartets are thoroughly individual and interesting, nothing far-fetched, no striving after effect, no emptiness, no padding, but plenty of matter given in a manner at once fresh and varied. Every bar is his own, and every bar is well said. The accusation which is sometimes brought against them, that they are more fitted for the orchestra than the chamber is probably to some extent well-founded. Indeed Mendelssohn virtually anticipates the charge in his preface to the parts of the Octet, which he desires may be played in a symphonic style; and in that noble piece, as well as in parts of the Quintet in B♭, and of the Quartets in D and F minor, many players have felt that the composer has placed his work in too small a frame, that the proper balance cannot always be maintained between the leading violin and the other instruments, and that to produce all the effect of the composer's ideas they should be heard in an orchestra of strings rather than in a quartet of solo instruments. On the other hand, the P.F. Quartet in B minor and the two P.F. Trios in D minor and C minor have been criticised, probably with some justice, as not sufficiently concertante, that is as giving too prominent a part to the Piano. Such criticism may detract from the pieces in a technical respect, but it leaves the ideas and sentiments of the music, the nobility of the style, and the clearness of the structure, untouched.

His additions to the technique of the Pianoforte are not important. Hiller [6] tells a story which shows that Mendelssohn cared little for the rich passages of the modern school; his own were quite sufficient for him. But this is consistent with what we have just said. It was the music of which he thought, and as long as that expressed his feelings it satisfied him, and he was indifferent to the special form into which it was thrown. Of his Pianoforte works the most remarkable is the set of 17 Serious Variations; but the Fantasia in F♯ minor (op. 28), the 3 great Capriccios (op. 33), the Preludes and Fugues, and several of the smaller pieces, are splendid works too well known to need further mention. The Songs without Words stand by themselves, and are especially interesting to Englishmen on account of their very great popularity in this country. Mendelssohn's orchestral and chamber works are greatly played and much enjoyed here, but it is to his Oratorios, Songs, Songs without Words, and Part-songs, that he owes his firm hold on the mass of the English people. It was some time (see 135*a*) before the Songs without Words reached the public; but when once they became

[2] L. Jan. 30, 1836. The reference is to an article in the N.M.Z. When asked what he meant by this overture he once replied 'Hm, une mesalliance.'

[3] L. Genoa, July 1831.

[4] L. Oct. 15, 1842, to Souchay; and compare that to Frau von Pereira, Genoa, July 1831.

[5] Mrs. Austin (Fraser's Mag., April 1848) relates that he said to her on one occasion 'I am going to play something of Beethoven's, but you must tell them what it is about; what is the use of music if people do not know what it means?' She might surely have replied, 'What then, is the use of the imagination?'

[6] II. 154, 155.

known, the taste for them quickly spread, and probably no pieces ever were so much and so permanently beloved in the country. The piece, like the name, is virtually his own invention. Not a few of Beethoven's movements—such as the Adagio to the Sonate pathétique, or the Minuet to op. 10, no. 3—might be classed as songs without words, and so might Field's Nocturnes; but the former of these are portions of larger works, not easily separable, and the latter were little known; and neither of them possess that grace and finish, that intimate charm, and above all that *domestic* character, which have ensured the success of Mendelssohn's Songs without Words in many an English family. They soon became identified with his name as it grew more and more familiar in England; some of them were composed here, others had names or stories attached to their [1] origin: there was a piquancy about the very title—and all helped their popularity. His own feeling towards them was by no means so indulgent. It is perhaps impossible for a composer to be quite impartial towards pieces which make him so very popular, but he distinctly says, after the issue of Book 3, 'that he [2] does not mean to write any more at that time, and that if such *animalculæ* are multiplied too much no one will care for them,' etc. It is difficult to believe that so stern a critic of his own productions should not have felt the weakness of some of them, and the strong mannerism which, with a few remarkable exceptions, pervades the whole collection. We should not forget, too, that he is not answerable for the last two books, which were published after his death, without the great alterations which he habitually made before publication. One drawback to the excessive popularity of the Songs without Words is, not that they exist—for we might as well quarrel with Goethe for the 'Wandrers Nachtlied' or the 'Heidenröslein'—nor yet the number of imitations they produced, but that in the minds of thousands these graceful trifles, many of which were thrown off at a single sitting, are indiscriminately accepted as the most characteristic representatives of the genius of the composer of the Violin Concerto and the Hebrides Overture.

His Songs may be said to have introduced the German *Lied* to England, and to have led the way for the deeper strains of Schumann, Schubert, and Brahms, in English houses and concert-rooms. No doubt the songs of those composers do touch lower depths of the heart than Mendelssohn's do, but the clearness and directness of his music, the spontaneity of his melody, and a certain pure charm pervading the whole, have given a place with the great public to some of his songs, such as 'On song's bright pinions,' which they will probably retain for a long time to come. Others, such as the Nachtlied, the Volkslied ('Es ist bestimmt'), and the Schilflied, are deeply pathetic; others, as the Lieblingsplätzchen, are at the same time extremely original; others, as 'O Jugend,' the Jagdgesang, and the 'Diese Rosen,' the soul of gaiety. He was very fastidious in his choice of words, and often marks his sense of the climax by varying the last stanza in accompaniment or otherwise, a practice which he was perhaps the first to adopt. One of his last commissions to his friend Professor Graves, before leaving Interlaken in 1847, was to select words from the English poets for him to set.

His Part-songs gave the majority of English amateurs a sudden and delightful introduction to a class of music which had long existed for Germans, but which till about 1840 was as much unknown here as our glees still are in Germany. Many can still recollect the utterly new and strange feeling which was then awakened in their minds by the new spirit, the delicacy, the pure style, the delicious harmonies, of these enchanting little compositions!

Ever since Handel's time, Oratorios have been the favourite public music here. Mendelssohn's works of this class, St. Paul, Elijah, the Lobgesang, soon became well known. They did not come as strangers, but as the younger brothers of the Messiah and Judas Maccabæus, and we liked them at once. Nor only liked them; we were proud of them, as having been produced or very early performed in England; they appealed to our national love for the Bible, and there is no doubt that to them is largely owing the position next to Handel which Mendelssohn occupies in England. Elijah at once took its place, and it is now almost, if not quite, on a level with the Messiah in public favour. Apart from the intrinsic qualities of the music of his large vocal works, the melody, clearness, spirit, and symmetry which they exhibit, in common with his instrumental compositions; there is one thing which remarkably distinguishes them, and in which they are far in advance of their predecessors—a simple and direct attempt to set the subject forth as it was, to think first of the story and next of the music which depicted it. It is the same thing that we formerly attempted to bring out in Beethoven's case, 'the thoughts and emotions are the first thing, and the forms of expression are second and subordinate' (vol. i. 203 *b*). We may call this 'dramatic,' inasmuch as the books of oratorios are more or less dramas; and Mendelssohn's letters to Schubring in reference to Elijah, his demand for more 'questions and answers, replies and rejoinders, sudden interruptions,' etc., show how thin was the line which in his opinion divided the platform from the stage, and how keenly he wished the personages of his oratorios to be alive and acting, 'not mere musical images, but inhabitants of a definite active [3] world.' But yet it was not so much dramatic in any conscious sense as a desire to set things forth as they were. Hauptmann has [4] stated this well with regard to the three noble Psalms (op. 78), 'Judge me, O God,' 'Why rage fiercely the heathen?' and 'My God,

[1] Such as the well-known one in A, which, though in Germany known as Frühlingslied, was in England for a long time called 'Camberwell Green,' from the fact of its having been composed on Denmark Hill. The Duet (Bk. iii. no. 6) was for long believed to represent a conversation between the composer and his wife.

[2] Letter, March 4, 1839.

[3] L. Nov. 2, Dec. 6, 1838.

[4] Haupt. ii. 102.

why hast thou forsaken me?' He says that it is not so much any musical or technical ability that places them so far above other similar compositions of our time, as the fact that Mendelssohn has 'just put the Psalm itself before him; not Bach, or Handel, or Palestrina, or any other style or composer, but the words of the Psalmist; and the result is not anything that can be classed as new or old, but the Psalm itself in thoroughly fine musical effect; the music not pretending to be scientific, or anything on its own account, but just throwing life and feeling into the dry words.' Any one who knows these psalms will recognise the truth of this description. It is almost more true in reference to the 114th Psalm, 'When Israel out of Egypt came.' The Jewish blood of Mendelssohn must surely for once have beat fiercely over this picture of the great triumph of his forefathers, and it is only the plain truth to say that in directness and force his music is a perfect match for the splendid words of the unknown Psalmist. It is true of his oratorios also, but they have other great qualities as well. St. Paul with all its great beauties is an early work, the book of which, or rather perhaps the nature of the subject, does not wholly lend itself to forcible treatment, and it is an open question whether it can fully vie with either the Lobgesang or Athalie, or still more Elijah. These splendid compositions have that air of distinction which stamps a great work in every art, and which a great master alone can confer. As instances of this, take the scene of the Watchman and the concluding Chorus in the Lobgesang—'Ye nations'; or in Elijah the two double Quartets; the Arioso, 'Woe unto them,' which might be the wail of a pitying archangel; the Choruses, 'Thanks be to God,' 'Be not afraid,' 'He watching over,' 'The Lord passed by'; the great piece of declamation for soprano which opens the second part; the unaccompanied trio 'Lift thine eyes,' the tenor air 'Then shall the righteous.' These are not only fine as music, but are animated by that lofty and truly dramatic character which makes one forget the vehicle, and live only in the noble sentiment of the scene as it passes.

'Lauda Sion,' though owing to circumstances less known, has the same great qualities, and is a worthy setting of the truly inspired hymn in which St. Thomas Aquinas was enabled to rise so high above the metaphysical subtleties of his day. This piece of Roman Catholic music—Mendelssohn's only important one—shows what he might have done had he written a Mass, as he [1]once threatened to do. It would have been 'written with a constant recollection of its sacred purpose'; and remembering how solemn a thing religion was to him, and how much he was affected by fine words, we may well regret that he did not accomplish the suggestion.

Antigone and Œdipus, owing to the remoteness of the dramas, both in subject and treatment, necessarily address themselves to a limited audience, though to that audience they will always be profoundly interesting, not only for the lofty character of the music, but for the able and thoroughly natural manner in which Mendelssohn carried out a task full of difficulties and of temptations to absurdity, by simply 'creating music for the choruses in the good and scientific style of the present day, to express and animate their [2]meaning.'

The Midsummer Night's Dream music is a perfect illustration of Shakspeare's romantic play, and will be loved as long as beauty, sentiment, humour, and exquisite workmanship are honoured in the world.

How far Mendelssohn would have succeeded with an opera, had he met with a libretto entirely to his mind—which that of Loreley was not—it is difficult to say. Fastidious he certainly was, though hardly more so than Beethoven (see vol. i. p. 196 *b*), and probably for much the same reasons. Times had changed since the lively intrigues and thinly-veiled immoralities of Da Ponte were sufficient to animate the pen of the divine Mozart; and the secret of the fastidiousness of Beethoven and Mendelssohn was that they wanted librettists of their own lofty level in genius and morality, a want in which they were many generations too early. Opera will not take its proper place in the world till subjects shall be found of modern times, with which every one can sympathise, treated by the poet, before they come into the hands of the composer, in a thoroughly pure, lofty, and inspiriting manner.

Camacho is too juvenile a composition, on too poor a libretto, to enable any inference to be drawn from it as to Mendelssohn's competence for the stage. But, judging from the dramatic power present in his other works, from the stage-instinct displayed in the M. N. D. music, and still more from the very successful treatment of the Finale to the first Act of Loreley—the only part of the book which he is said really to have cared for—we may anticipate that his opera, when he had found the book he liked, would have been a very fine work. At any rate we may be certain that of all its critics he would have been the most severe, and that he would not have suffered it to be put on the stage till he was quite satisfied with his treatment.

We must now close this long and yet imperfect attempt to set Mendelssohn forth as he was. Few instances can be found in history of a man so amply gifted with every good quality of mind and heart; so carefully brought up amongst good influences; endowed with every circumstance that would make him happy; and so thoroughly fulfilling his mission. Never perhaps could any man be found in whose life there were so few things to conceal and to regret.

Is there any drawback to this? or, in other words, does his music suffer at all from what he calls his 'habitual cheerfulness'? It seems as if there was a drawback, and that arising more or less directly from those very points which we have named as his best characteristics—his happy healthy heart, his single mind, his

[1] L. Jan. 26, 1835.

[2] Letter, March 12, 1845.

unfailing good spirits, his simple trust in God, his unaffected directness of purpose. It is not that he had not genius. The great works enumerated prove that he had it in large measure. No man could have called up the new emotions of the M.N.D. Overture, the wonderful pictures of the Hebrides, or the pathetic distress of the lovely Melusina, without genius of the highest order. But his genius had not been subjected to those fiery trials which seem necessary to ensure its abiding possession of the depths of the human heart. 'My music,' says Schubert, 'is the product of my genius and my misery; and that which I have written in my greatest distress is that which the world seems to like best.' Now Mendelssohn was never more than temporarily unhappy. He did not know distress as he knew happiness. Perhaps there was even something in the constitution of his mind which forbad his harbouring it, or being permanently affected by it. He was so practical, that as a matter of duty he would have thrown it off. In this as in most other things he was always under control. At any rate he was never tried by poverty, or disappointment, or ill-health, or a morbid temper, or neglect, or the perfidy of friends, or any of the other great ills which crowded so thickly around Beethoven, Schubert, or Schumann. Who can wish that he had been? that that bright, pure, aspiring spirit should have been dulled by distress or torn with agony? It might have lent a deeper undertone to his Songs, or have enabled his Adagios to draw tears where now they only give a saddened pleasure. But let us take the man as we have him. Surely there is enough of conflict and violence in life and in art. When we want to be made unhappy we can turn to others. It is well in these agitated modern days to be able to point to one perfectly balanced nature, in whose life, whose letters, and whose music alike, all is at once manly and refined, clever and pure, brilliant and solid. For the enjoyment of such shining heights of goodness we may well forego for once the depths of misery and sorrow.

The following opening of the first movement of a symphony was found among the loose papers of Mendelssohn belonging to his daughter, Mrs. Victor Benecke, and is here printed by her kind permission. The MS. is in full score, and has been compressed for this occasion by Mr. Franklin Taylor, so as accurately to represent the scoring of the original. No clue to its date has yet been discovered.

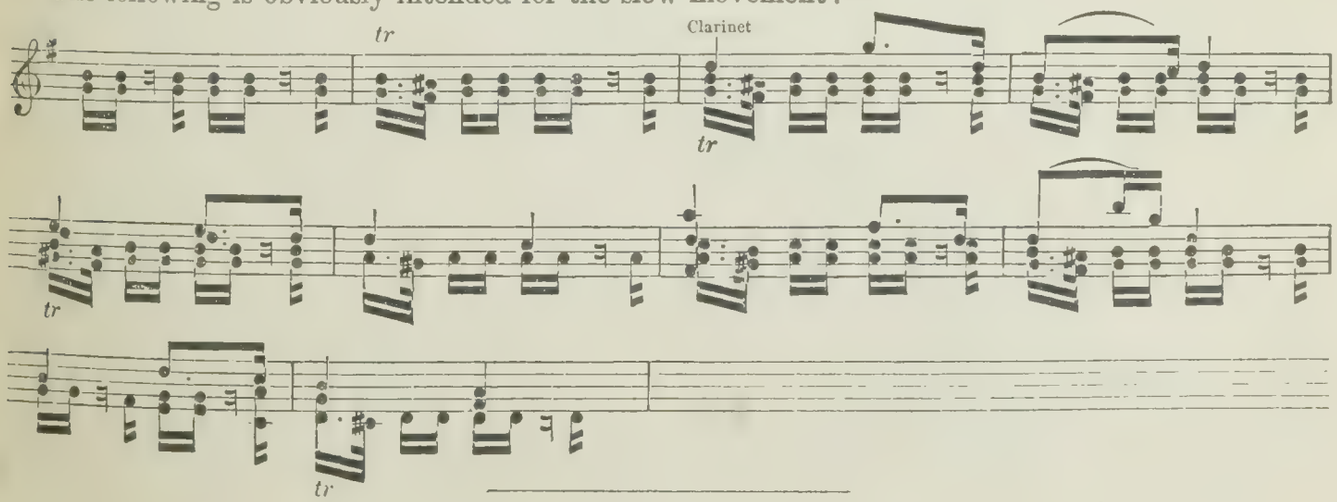
The following is obviously intended for the slow movement :—



List of Mendelssohn's published works, from the Thematic Catalogue (B. & H. 1873), with the addition of the dates of composition, when discoverable, and the names of the Dedicatees.

The dates have been obtained in most cases from the autographs, and occasionally from letters or other sources. The autographs are distinguished from the author's own copies by having the initials H.D.m. or L.v.g.G. at the top.

I. WITH OPUS-NUMBER.

Op. 1. Quartet, P.F. and Strings, No. 1 (C min.) ‖ *Begun*, Secheron, Sept. 20, 1822; *ended*, Berlin, Oct. 18, 1822. ‖ *Ded.* Anton, Count Radziwill.

2. Do., do. No. 2 (F min.). ‖ Nov. 19; Nov. 30; Dec. 3, 1823. ‖ *Ded.* Prof. Zelter.

3. Do., do., No. 3 (B min.). ‖ Oct. 7. 1824; Jan. 3, 1825; *at end*, Jan. 18, 1825. ‖ *Ded.* Goethe.

4. Sonata, P.F. and V. (F min.). ‖ *Ded.* E. Ritz.

5. Capriccio, P.F. (F♯ minor). ‖ Berlin, July 23, 1825.

6. Sonata, P.F. (E). ‖ Berlin, March 22, 1826.

7. Seven Characteristic pieces, P.F. ‖ *Ded.* Ludwig Berger.

8. 12 Songs (No. 12 Duet), Voice and P.F. Parts 1 and 2.—N.B. Nos. 2, 3, 12 by Fanny M.-B.

111 (40). Tu es Petrus, 5-pt. Chor. and Orch. ‖ Nov. 1827.

112 (41). 2 Sacred Songs, Voice and P.F.

113 & 114 (42 & 43). 2 Concerted pieces for Clar. and Basset-horn, with P.F. accompt. (F and D min.). ‖ No. 1. Berlin, Jan. 19, 1833. ‖ *Ded.* Heinrich Bärmann, sen., and Carl Bärmann, jun.

115 (44). 2 Sacred Choruses, for Male Voices.

116 (45). Funeral Song, for Mixed Voices.

117 (46). Album-Blatt, Song without words, P.F. (E min.).

118 (47). Capriccio, P.F. (E).

119 (48). Perpetuum mobile, P.F. (C.)

II. WITHOUT OPUS-NUMBER.

Etude, P.F. (F min.). ‖ For the Méthode des Méthodes.

Scherzo, P.F. (B min.).

Scherzo and Capriccio, P.F. (F♯ min.). ‖ For The Pianists' Album.

2 Romances of Lord Byron's, Voice and P.F. ‖ No. 2. Düsseldorf, Dec. 31, 1834. ‖ For the Album of 1838.

Prayer, Chorus and Orch. (Verleih' uns Frieden. ‖ Rome, Feb. 10, 1831. ‖ *Ded.* President Verkenius.

Andante cantabile and Presto agitato, P.F. (B). ‖ Berlin, June 22, 1838. ‖ For the Album of 1839.

The Garland, a poem by Moore, for Voice and P.F. ‖ London, May 24, 1829.

Ersatz für Unbestand, poem by Rückert, for 4 Male Voices. ‖ Nov. 22, 1839. ‖ For Tauchnitz's Musen-almanach.

Festgesang, Male Chor. and Orch. ‖ For Festival at Leipzig in celebration of invention of Printing.

Gondellied, P.F. (A). ‖ Leipzig, Feb. 5, 1837, 'Lied auf einer Gondel.'

3 Volkslieder, 2 Voices and P.F.

'Lord have mercy upon us,' Chorus for Evening Service, Voices only (A minor). ‖ For Mr. Attwood.

Berlin, March 24, 1833. ‖ In the Album für Gesang.

Prelude and Fugue, P.F. (E min.). ‖ Prel., Leipzig, July 13, 1841. Fugue, June 16, 1827. ‖ For the Album Notre temps.

3 Hymns for Alto Solo, Chorus, and Organ. Comp. op. 96.

Hymn for Sop. Solo, Chorus, and Organ. (Hear my prayer.) ‖ Jan. 25, 1844. Afterwards orchestrated. ‖ *Ded.* W. Taubert.

Warnung vor dem Rhein, poem by Simrock, Voice and P.F.

2 Songs, Voice and P.F. ‖ No. 1. Berlin, Aug. 17, 1835.

2 Songs, Voice and P.F. ‖ No. 1. April 20, 1841.

2 Clavierstücke (B♭ and G min.).

Seemann's Scheidelied, poem by Hoffmann v. Fallersleben, Voice and P.F.

Nachtgesang, 4 Male Voices.

Die Stiftungsfeier, 4 Male Voices.

Des Mädchens Klage, Romance for Voice and P.F.

Kyrie eleison, Mixed Voices, Dble. Chorus. (Deutsche Liturgie), Oct. 28, 1846.

Duo concertant, Variations upon the March in Preciosa, by Mendelssohn and Moscheles.

III. NOT INCLUDED IN THE THEMATIC CATALOGUE.

Handel's Dettingen Te Deum, with addl. accts. Score and pts. Kistner.

Handel's Acis and Galatea, with ditto. Chorus and string pts. only. Novello.

Præludium for the Organ (C minor). ‖ Leipzig, July 9, 1841. ‖ For Henry E. Dibdin, Esq. (In facsimile, Patersons, Edinburgh).

Bach's Chaconne, with P.F. acct. Ewer, Novello, & Co.

Additional Chorus to the 95th Psalm (op. 46). Novello.

String Quartet in E♭ (March 5-30, 1823). Erler, Berlin. Autograph in British Museum.

The latest publication was the Quartet in E♭ (1823), which appeared in December 1879, and was first played in England at the Monday Popular Concert of Jan. 5, 1880. The green volumes in the Library at Berlin (1820–1847), already mentioned, contain a great many pieces not published either in the first or second series of the posthumous works, or elsewhere. The unpublished pieces are mostly in autograph, and principally before 1830. They comprise 11 Symphonies for Strings, and one for full orchestra; many Fugues for Strings; Concertos for P. F., for Violin, for P. F. and Violin, with Quartet; and 2 ditto for 2 Pianos and Orchestra; a Trio for P. F., Violin, and Viola; 2 Sonatas for P. F. and Violin (one of them 1838); one ditto P. F. and Viola; one ditto P. F. and Clarinet; 2 ditto for P. F. solo; many Studies, Fantasias (one for 4 hands), Fugues, etc., for P. F. solo; many Fugues for Organ; an organ part to Handel's 'Solomon'; 5 Operas, and music to Calderon's 'Steadfast Prince'; 1 secular and 3 sacred Cantatas; various Motets, and many Songs and vocal pieces.

The Mendelssohn literature is not yet very extensive.

I. His own letters.

Two volumes have been published by authority. The first by his brother Paul—'Reisebriefe ... aus den Jahren 1830 bis 1832' (Leipzig 1861); the second by his brother and his eldest son—'Briefe aus den Jahren 1833 bis 1847' (Leipzig 1863), with an Appendix purporting to be a List of all Mendelssohn s compositions, by Julius Rietz, which is however both vague and incomplete. These were translated (not adequately) by Lady Wallace—'Letters from Italy and Switzerland,' etc., and 'Letters,' etc. (Longmans 1862 and 1863). At a later date some important letters were added to the German edition of vol. ii., amongst others one containing Mendelssohn's translations of Dante, Boccaccio, etc., and Indexes were appended; but no change has been made in the contents of the English translation. There is reason to believe that the letters of vol. i. were in many ways altered by the Editor; and it is very desirable that a new edition should be published in which these changes should be rectified, and the letters given as Mendelssohn wrote them.

(2) Eight letters published for the benefit of the Deutschen Invaliden-Stiftung—'Acht Briefe ...' (Leipzig 1871). The name of the lady to whom they are written is suppressed, but it is understood that she was Mrs. Voigt, a musical amateur of Leipzig. The last of the eight contains a facsimile of a sketch by Mendelssohn.

(3) 'Musiker Briefe,' by Nohl (Leipzig 1867), contains 30 letters by Mendelssohn, from 1826 to Aug. 26, 1847. They are included by Lady Wallace in her translation of the entire work—'Letters of distinguished musicians' (Longmans 1867).

(4) Other letters are contained in Devrient's Recollections; Hiller's Mendelssohn; Goethe and Mendelssohn; Polko's Reminiscences; Hensel's Die Familie Mendelssohn; Moscheles' Life; Chorley's Life; and other works named below.

II. Biographical works.

(1) Lampadius. 'F. M. B. ein Denkmal,' etc. (Leipzig 1848), translated into English by W. L. Gage, with supplementary sketches, etc. (New York 1866; London 1878).

(2) Benedict. 'A Sketch of the Life and Works of the late Felix Mendelssohn Bartholdy,' by Jules Benedict London 1850; 2nd ed., with additions, 1853). A sketch by one who knew him well; attractive and, as far as it goes, complete.

(3) Devrient. 'Meine Erinnerungen an F. M. B. . . von Eduard Devrient' (Leipzig 1869). Translated into English by Mrs. Macfarren (London 1869). Containing 32 letters and portions of letters. The work of an old and intimate friend, but written with all the impartiality of a stranger.

(4) Carl Mendelssohn Bartholdy. 'Goethe und Felix Mendelssohn Bartholdy' (Leipzig 1871). By the composer's eldest son; an account of the three visits paid to Goethe, from journals, letters, etc., with a poor engraving from Begas's portrait. In English by Miss M. E. von Glehn—'Goethe and Mendelssohn, with additions and with letters of later date' (London 1872); 2nd ed. 'with additional letters,' 37 in all (1874).

(5) Ferdinand Hiller. 'Mendelssohn. Letters and Recollections,' etc., first published in Macmillan's Magazine (Jan.—May 1874) in English by Miss M. E. von Glehn. Then in a volume (London 1874); and then in German (Cologne 1874). Contains 26 letters not before printed. A thoroughly good book, genial, discriminating, and accurate; by one well able to judge.

(6) Polko. 'Erinnerungen an F. M. B. von Elise Polko' (Leipzig 1868). Contains 12 letters. English translation by Lady Wallace—'Reminiscences,' etc. (London 1869), with Appendix of 33 additional letters and fragments of letters. A poor gushing book, from which however some traits may be picked up. Chiefly valuable for the letters.

(7) Hensel. 'Die Familie Mendelssohn (1729-1847) . . . von S. Hensel, mit 8 Portraits' (3 vols., Berlin 1879). By the son of Fanny Hensel—the Sebastian of the Letters; compiled from journals and family papers, and containing 73 letters or portions of letters hitherto unpublished. The title of the book would perhaps be more appropriately 'Fanny Hensel and her family'; but it is a most valuable addition to our knowledge of Felix, and a good specimen of the copious information still remaining in the hands of his family: the notices and letters of Abraham Mendelssohn are especially new and valuable. Some of Felix's letters are first-rate. The portraits would be useful if one knew how far the likenesses could be trusted.

(8) Hogarth. 'The Philharmonic Society of London . . . by George Hogarth' (London 1862). Contains notices of Mendelssohn's connection with the Philharmonic, with 3 letters in the body of the work and 7 others in the appendix.

(9) Moscheles. 'Aus Moscheles Leben . . . von seiner Frau (2 vols., Leipzig 1872 and 1873). English translation by A. D. Coleridge (2 vols., Hurst & Blackett, 1873). Contains many valuable notices, and one or two letters.

(10) Schubring. 'Erinnerungen an F. M. B.' In the Magazine 'Daheim' (Leipzig) for 1866, No. 26. English translation in 'Musical World,' May 12 and 19, 1866. One of the most detailed, valuable, and interesting of all the notices. Every word that Schubring writes carries conviction with it.

(11) Horsley. 'Reminiscences of Mendelssohn, by Charles Edward Horsley.' First published in 'Dwight's Journal of Music' (Boston, U.S.A.), and reprinted in 'The Choir' (London) for Jan. 11, 25, Feb. 8, 15, 1873. By a gifted pupil and friend. Full of information, now and then a trifle exaggerated.

(12) Dorn. 'Recollections of F. M. and his friends.' An article in 'Temple Bar' for Feb. 1872; probably translated from a German original. Slight, but interesting, and apparently trustworthy.

(13) Chorley. 1. 'Modern German Music,' by Henry F. Chorley (2 vols., London 1854). Contains scattered notices of Mendelssohn. 2. 'Memoirs of H. F. Chorley, by H. G. Hewlett' (2 vols., Bentley 1873). Contains some information, and 6 letters before unpublished. 3. Notice prefixed to Lady Wallace's translation of the 'Reisebriefe.'

(14) Marx. 'Erinnerungen aus meinem Leben, von Adolf Bernhard Marx' (2 vols., Berlin 1865). Contains many recollections of the Mendelssohn house from 1824-1832, and personal anecdotes of Felix, with whom Marx was at one time extremely intimate. He was a person of strange temper and overweening opinion of himself; but he appears to be strictly honest, and in matters of fact may probably be trusted implicitly.

(15) Rellstab. 'Aus meinem Leben' (2 vols., Berlin 1861). This autobiography of the well-known Berlin critic contains (vol. ii. chap. 11) an account of Mendelssohn's playing at Goethe's house at Weimar in 1821.

(16) Lobe has reported some conversations with Mendelssohn in his 'Fliegende Blätter für musik' (Leipzig 1853). He has also described the evening at Goethe's mentioned just above, in the 'Gartenlaube' for 1867, No. 1.

I take the opportunity of expressing my deep obligations for assistance received in the compilation of the foregoing article from the various members of the Mendelssohn family, Miss Jung and Dr. Klengel; Mme. Schumann, Dr. Hiller, Mrs. Moscheles, Mme. Frege, Dr. Härtel, Dr. Schleinitz, Mr. Joachim, Mrs. Klingemann, Herr Taubert, Mr. Otto Goldschmidt and Mme. Goldschmidt, Mr. Paul David, the Bishop of Limerick, the Duke of Meiningen, Lord Frederick Cavendish, the Dean of Westminster, Professor Munro, Mr. J. C. Horsley, R.A., and Miss Sophy Horsley, Mr. Chas. Halle, Signor Piatti, Mr. W. S. Rockstro, Mr. Kellow Pye, Prof. G. A. Macfarren, Mr. Sartoris, Mr. W. J. Freemantle, Mr. A. G. Kurtz, Mrs. Bartholomew and Miss Mounsey, Mr. Wiener, Mr. Rosenthal, Mr. Franklin Taylor. Also from the Sterndale Bennett family, Mr. Bruzaud (of Erard's), Mr. J. W. Davison, Mr. James C. Dibdin, Messrs. Glen, Mr. A. J. Hipkins (of Broadwood's) Mr. E. J. Hopkins, Mr. W. H. Holmes, Mr. W. H. Husk, Mr. E. J. Lincoln, Mr. H. Littleton (Novello's), Mr. Stanley Lucas, Mr. Julian Marshall, Mr. John Newman, Mr. Joseph Robinson, Mme. Sainton-Dolby, Mr. Speyer, Mr. Tom Taylor, Mr. J. T. Willy, and Mr. Turle. [G.]

MENDELSSOHN SCHOLARSHIP. This is the most valuable musical prize in the United Kingdom. It originated in a movement among the friends of Mendelssohn at Leipzig, who, shortly after his death, resolved to found scholarships in his memory, to be competed for and held in that Conservatorium in the foundation of which, not long before, he had greatly assisted. They appealed for help in this undertaking to English admirers of the departed composer, and were met with ready sympathy and co-operation. A committee was formed in London, with Sir G. Smart as Chairman, Mr. Carl Klingemann, Mendelssohn's intimate friend, as Secretary, and Mr. E. Buxton, Treasurer.

The first effort towards raising money was made in the shape of a performance of the 'Elijah' on a large scale, to which Mlle. Jenny Lind gave her willing and inestimable services. This took place Dec. 15, 1848, under the direction of Sir Julius (then Mr.) Benedict, with a full band and chorus, the Sacred Harmonic Society and Mr. Hullah's Upper Schools contributing to the efficiency of the latter force. A large profit was derived from the performance; and this, with a few donations, was invested in the purchase of £1050, Bank 3 per cent annuities—the nucleus of the present Scholarship Fund.

The original plan of amalgamating the London and Leipzig projects fell through, and the money was allowed to accumulate till 1856, when the first scholar was elected—Arthur S. Sullivan, now Dr. Sullivan, head of the 'National Train-

ing School for Music.' He was then one of the 'Children of Her Majesty's Chapel Royal,' and he held the Scholarship for about four years, studying at the Royal Academy of Music, London, and afterwards at the Conservatorium at Leipzig.

In 1865, the funds having again accumulated, Mr. (now Dr.) C. Swinnerton Heap, of Birmingham, was elected to the Scholarship, which he held for rather more than two years. He was succeeded in the early part of 1871 by Mr. W. Shakespeare, a pupil of the Royal Academy of Music, who pursued his studies at Leipzig and subsequently in Italy. At the time of his election, a two years' Scholarship of £20 per annum was offered, out of the accumulated interest; and this was held for a year by Miss Crawford, and again (1873) by Mr. Eaton Faning. The Society's capital then consisted of £1350 in 5 per cent India Stock, now (1879) increased to nearly £2000 by fresh subscriptions and donations, enabling the Society to give their Scholar a stipend of about £90 per annum.

In June, 1875, Mr. F. Corder was elected Mendelssohn Scholar; and he held the Scholarship for four years, studying at Cologne under Dr. Hiller. Miss Maude V. White, the present scholar, was elected in February, 1879.

The Committee has consisted, since the institution of the Scholarship, of the following names:—*Sir G. Smart, *Mr. C. Klingemann, *Mr. E. Buxton, Sir Julius Benedict, *Sir W. Sterndale Bennett, Mr. W. J. Beale, Mr C. V. Benecke (*Trustee*), Mr. A. D. Coleridge, Mr. W. G. Cusins, Mr. J. W. Davison, Mr. Otto Goldschmidt, Sir John Goss, Mr. G. Grove, Mr. C. Halle, Mr. John Hullah, Mr. A. G. Kurtz, Mr. H. Leslie, Prof. G. A. Macfarren, Rev. Sir F. A. G. Ouseley, Bt., Mr. Kellow J. Pye, Mr. L. Sloper (resigned), Dr. J. Stainer, Mr. Arthur S. Sullivan, Mr. R. R. Pym (*Trustee* and *Hon. Treasurer*), and Mr. Julian Marshall (*Hon. Secretary*). Mr. W. Godden is the Hon. Solicitor. Death has removed some of the above names (marked with asterisks) from the list, others having been put in their places from time to time. [J. M.]

MÉNESTREL, LE. This weekly musical periodical, of which the first number was issued Dec. 1, 1833, originally consisted of a romance occupying 2 pages, with printed matter at the back; increased in 1840 to 4 pages of musical information and criticism; and since Dec. 1858 has contained 8 folio pages on fine paper, besides music. Its great success is due to the editor, M. Jacques Heugel, who during the last twenty years has inserted contributions from almost every musician of note in France, including MM. Barbedette, Blaze de Bury, Paul Bernard, Gustave Chouquet, Félix Clément, Oscar Commettant, Ernest David, Octave Fouque, Edouard Fournier, A. de Gasperini, Eugène Gautier, Gevaert, Léon Halévy, G. Héquet, B. Jouvin, Adolphe Jullien, Lacome, Th. de Lajarte, A. de Lauzières, Marmontel, Amédée Méreaux, A. Morel, H. Moreno, Ch. Nuitter, A. de Pontmartin, Prosper Pascal, Ch. Poisot, Arthur Pougin, Alphonse Royer, J. B. Weckerlin, and Victor Wilder. The Ménestrel has also published, among others, the following works afterwards printed separately:—articles on Schubert, Mendelssohn, Haydn, Chopin, and Weber, by Barbedette; Blaze de Bury's 'Meyerbeer'; B. Jouvin's 'Auber' and 'Hérold'; de Gasperini's 'R. Wagner et la nouvelle Allemagne'; Méreaux's 'Les Clavecinistes et leurs œuvres'; Bertrand's 'Les Nationalités musicales dans le drame lyrique'; Héquet's 'A. Boieldieu'; Marmontel's 'Les Pianistes célèbres'; and Wilder's 'Vie de Mozart' and 'Jeunesse de Beethoven.' [G.C.]

MENGOZZI, Bernardo, distinguished both as a singer and a composer, was born in 1758 at Florence, where he first studied music. He afterwards had instruction at Venice from Pasquale Potenza, cantor of St. Mark's. In Lent of 1785, Lord Mount-Edgcumbe found him singing in oratorio at Naples, with Signora Benini, whom he soon afterwards married. After singing together at several Italian theatres, the two came to London in 1786, but our climate was very ill-suited to Mengozzi, whose voice, a good tenor, but wanting in power, suffered much and permanently from its rigour. He was too ill, indeed, to appear with Benini in the first opera in which she sang here, the 'Giannina e Bernardone' of Cimarosa, with new songs by Cherubini. He played, however, the principal part in 'Il Tutor Burlato' of Paisiello, and showed himself 'a good musician, with a good style of singing, but still too feeble to excite any other sensation in the audience than pity for the state of his health' (Burney). In March, Handel's 'Giulio Cesare' was revived, with additions from others of his works; and in this pasticcio (1787) Mengozzi took part. But he did not do himself justice, and was soon superseded by Morelli, as his wife was by la Storace.

From London Mengozzi went to Paris, where he was heard to advantage in the concerts given by Marie Antoinette, and among the Italian company of the Théâtre de Monsieur, with Mandini and Viganoni. He remained at Paris after the Revolution, and supported himself by giving lessons and writing operettas for the Feydeau and Montansier Theatres. When the Conservatoire was established, he was named 'Professeur de Chant,' and is remembered as having formed several distinguished pupils.

Mengozzi had, during many years, compiled the materials for a 'Méthode de Chant' for the Conservatoire; but he died, before he had completed it, in March, 1800. The work was edited by Langlé. Fétis gives a list of his operas, now all long forgotten. [J.M.]

MENO MOSSO, lit. 'with less motion'; hence, rather slower. A direction, which, like Più lento, generally occurs in the middle of a movement, the latter term properly being used where the whole movement is already a slow one, and the former in a quick movement. These terms, however, are constantly used for one another.

Beethoven uses 'Meno mosso e moderato' in the Fugue for strings in B♭, op. 133, and 'Assai meno presto'—'very much less quick'—in the Trio of Symphony No. 7. It occurs frequently in Chopin's Polonaises, etc., and the Scherzo, op. 39. Schumann uses 'Poco meno mosso,' with its German equivalent 'Etwas langsamer,' in Kreisleriana, Nos. 2 and 3. When the former time is resumed, the direction is Tempo primo. [J.A.F.M.]

MENTER, Joseph, a celebrated violoncellist, born at Teysbach, in Bavaria, January 18, 1808. His first instrument was the violin, but before long he transferred his attention to the violoncello, which he studied under P. Moralt at Munich. In 1829 he took an engagement in the orchestra of the Prince of Hohenzollern-Heckingen, but in 1833 became a member of the Royal Opera band at Munich. With the exception of various artistic tours in Germany, Austria, Holland, Belgium and England, he remained at Munich till his death, in April 1856. [T.P.H.]

MERBECKE, John, lay clerk and afterwards organist of St. George's Chapel, Windsor, was about 1544 arrested, together with three other inhabitants of the town, on a charge of heresy, i. e. favouring the principles of the Reformation. Their papers were seized, and notes on the Bible and an English Concordance in the handwriting of Merbecke were found, and he was moreover charged with having copied an epistle of Calvin against the Mass. He and his three fellows were tried and condemned to the stake, but, whilst the sentence was immediately carried into execution against the others, Merbecke, owing to the favour of Gardiner, Bishop of Winchester, and the interposition of Sir Humphrey Foster, one of the Commissioners, obtained a pardon. He indulged his opinions in secret until the death of Henry VIII, but afterwards avowed them, and in 1550 published his Concordance, and also the work by which he is best known, 'The Boke of Common Praier noted,' being an adaptation of the plain chant of the earlier rituals to the first liturgy of Edward VI. Merbecke escaped the Marian persecution and afterwards published 'The Lives of Holy Saincts,' etc., 1574; 'A Book of Notes and Common Places,' etc., and 'The Ripping up of the Pope's Fardel,' 1581; 'A Dialogue between Youth and Age,' and other works. He died about 1585. His 'Booke of Common praier noted,' was beautifully reprinted in facsimile by Whittingham for Pickering in 1844; an edition by Rimbault was issued in 1845, and a reprint was included in vol. ii. of Dr. Jebb's 'Choral Responses and Litanies,' 1857. A hymn for 3 voices by Merbecke is given in Hawkins's History, and portions of a mass for 5 voices by him, 'Per arma justitiæ,' are contained in vol. vi. of Burney's Musical Extracts (Add. MS. 11,586, Brit. Mus.) [W.H.H.]

MERCADANTE, Saverio, born in 1797 at Altamura near Bari, entered at 12 the Collegio di San Sebastiano at Naples, of which Zingarelli was chief, and where he learnt the flute and violin, and became leader in the orchestra. For some unknown reason (the account given by Fétis is absurd) he was suddenly dismissed, and to gain a living attempted composing for the stage. His first work, a cantata for the Teatro del Fondo (1818) was followed by another, 'L'Apoteosi d'Ercole,' produced at San Carlo (1819) with extraordinary success. In the same year he produced his first opera buffa, 'Violenza e costanza,' and after this came several 'opere serie,' of which 'Elisa e Claudio' (Milan 1822) was the most successful. From this period Mercadante steadily maintained his reputation, and the verdict of Italy in his favour was endorsed by Vienna in 1824. He passed the years 1827 and 28 in Madrid, 29 in Cadiz, and in 31 returned to Naples. In 1833 he became Generali's successor as maestro di capella at the cathedral of Novara. In 1836 he composed and superintended the production of 'I Briganti' in Paris. His next fine opera was 'Il Giuramento' (Milan 1837). In the opera buffa 'I due illustri rivali' he changed his style, marking the accents strongly with the brass instruments. In this respect he set an example which has unfortunately been widely followed, for the Flügel-horn seems to be the favourite instrument of Italian composers of the present day. In 1840 he became director of the Conservatorio of Naples. He was a member of the Institut de France. Though he lost an eye at Novara, he continued to compose by dictation; but he became totally blind in 1862, and died at Naples on Dec. 13, 1870. [F.G.]

MERCURE DE FRANCE. This title embraces a series of periodical publications difficult to verify completely, but of so much interest to the history of the arts, that we will endeavour with the aid of the catalogue of the Bibliothèque nationale, to give a list of them. The first newspaper published in France was called the 'Mercure Français.' Originally started in 1605, it was continued in 1635 by Théophraste Renaudot, a physician and founder of the 'Gazette de France' (1631); it dropped in 1644, but was revived in 1672 as the 'Mercure Galant,' by a prolific but mediocre writer named Donneau de Vizé. After the first 6 volumes (1672 to 74) it ceased for two years, but in 1677 was resumed by de Vizé, and published in 10 volumes with the title 'Nouveau Mercure Galant.' It first became of real importance in 1678, when it was issued in monthly volumes 12mo at 3 francs, with a kind of quarterly supplement, called from 1678 to 85 'Extraordinaires du Mercure,' and from 1688 to 92 'Affaires du Temps.' From May 1714 to Oct. 1716, 33 volumes of the 'Nouveau Mercure Galant' came out, including three of 'Relations.' The 54 volumes from 1717 to May 1721 are called 'Le Nouveau Mercure,' and the 36 volumes from June 1721 to December 1723, simply 'Le Mercure.' In 1724 the monthly review founded by de Vizé became 'Le Mercure de France, dedié au Roi,' and 977 volumes appeared with this celebrated title. On Dec. 17, 1791, it resumed its original title of 'Le Mercure Français,' and 51 volumes came out between that date and the year VII of the Republic, but

with many changes in the manner of publication. On the 15th of Dec. 1792 the form was changed to 8vo and it was issued daily up to March 25, 1793, then weekly up to the 30th Pluviose of the year VII (Feb 19, 1799). The 84 volumes (eight 12mo and twelve 8vo) from the year VII to 1820 are again called the 'Mercure de France.' To this collection of 1772 volumes may be added 'Le Mercure au XIX siècle' 1823 to 27 (18 volumes); 'Le Mercure de France au XIX siècle' 1827 to 32 (18 volumes numbered 19 to 36); 'Le Mercure' 1832 (one volume numbered 37); and finally 'Le Mercure de France' Nov. 1851 to Feb. 1853, consisting of one folio and two quarto volumes.

A few words more are necessary to show the importance of the Mercure in the history of music. In founding his periodical, de Vizé gave particular attention to court news, anecdotes, and poetry, reserving only a small space for the announcement and criticism of new works. His chief aim was to flatter Louis XIV, and obtain the post of 'historiographe de France'; but as we approach the Revolution the interest and importance of the information contained in the 'Mercure' increases with every step. Analyses of new operas, programmes and reports of the 'Concerts Spirituels,' biographical notices of artists, articles on the 'Guerre des Bouffons'—the struggle between French and Italian music—lines addressed to singers or musicians, reviews of treatises on music, announcements of new music, or newly invented instruments—all these and more are to be found in these monthly volumes, which are moreover particularly easy to consult from their well-arranged indexes. A 'Choix des anciens Mercures, avec un extrait du Mercure Français' (Paris 1757 to 64, 108 volumes 12mo, generally bound in 54, with an additional volume of index), was drawn up by La Place, Bastide, Marmontel, and de la Porte, but there is still room for a collection of the matter most interesting to musicians. The writer of this article has long wished to undertake such a work, but lacking the requisite leisure hopes to see it accomplished by some one else. [G. C.]

MERCY, or MERCI, Louis, an Englishman of French extraction, born in the early part of the 18th century, was an eminent performer on the flute-a-bec, or English flute, for which he composed several sets of solos. But he lived at a time when his favourite instrument was gradually becoming superseded by the Traverse, or German flute, and in the hope of averting the change he, about 1735, allied himself with Stanesby the instrument maker, in an endeavour to promote the use of a modified form of the flute-a-bec manufactured by the latter, and published 12 solos, six of which were said to be adapted to the Traverse flute, Violin, or Stanesby's New English Flute, with a preface strongly insisting on the merits of Stanesby's invention. But their efforts failed, and the flute-a-bec became a thing of the past. Mercy's solos were much esteemed in their day. [W. H. H.]

MÉRIC, Madame. [See Lalande.]

MERIC, Madame de, an accomplished singer, who appeared in London in 1832, and was very successful in an unsuccessful season. She was the first singer of a moderate company, and though not a great, was far from an unpleasing, performer. She was a clever actress, with a good voice and considerable versatility of talent, rendering her very useful, as she sang in serious or comic operas, first parts or second, and in any language. While in this country, she performed in Italian, German, French, and English, and could have done so equally well in Spanish, had it been required.

She appeared in 'Der Freischütz' on its first production here with the original German words, when German opera, for a time at least, drove Italian from the London boards. Madame de Meric played also Donna Elvira to the Donna Anna of Schröder-Devrient, who rather eclipsed her; but in Chelard's 'Macbeth' she distinguished herself by singing a most cramped and difficult song with astonishing truth and precision, a feat which added much to the estimation in which she was held. She did not, however, appear again in England. [J. M.]

MERIGHI, Antonia, a fine operatic contralto profondo, who was first engaged for the London stage by Handel, as announced in the 'Daily Courant' of July 2, 1729. The first part she undertook was that of Matilda in 'Lotario' (Handel), Dec. 2, 1729, in which she created a favourable impression; but her songs, when printed in the published opera, were transposed into much higher keys. This opera was followed by a revival of 'Tolomeo,' in which she sang soprano music transposed for her, and next by 'Partenope,' in which Merighi appeared as Rosmira with equal success in 1730 and 31. In the latter year she sang the part of Armida in the revival of 'Rinaldo.'

After the close of that season however her name was not found again in the bills, until 1736. The 'Daily Post' of November 18 in that year informs us that 'Signora *Merighi*, Signora *Chimenti*, and the *Francesina*, had the honour to sing before her Majesty, the duke, and princesses, at Kensington, on Monday night last, and met with a most gracious reception.'

In January, 1738, Merighi appeared in the new opera, 'Faramondo,' just finished by Handel after his return from Aix-la-Chapelle, and again in 'La Conquista del Vello d'Oro' (Pescetti). In April of the same season she took the part of Amastre in 'Serse,'—the last she sang in England. [J. M.]

MERK, Joseph, a distinguished Austrian violoncellist, born at Vienna in 1795. His first musical studies were directed to singing, the guitar, and especially to the violin, which last instrument he was obliged to abandon (according to Fétis) in consequence of an accident to his arm. He then took to the cello, and under the tuition of an excellent master, named Schindlöckers, speedily acquired great facility on the instrument. After a few years of desultory engagements he settled at Vienna as principal cellist at the Opera (1818), professor at the newly

founded Conservatorium (1823), and Kammervirtuos to the Emperor (1834). He died at Vienna in June 1852. He was much associated with Mayseder, and was often called the Mayseder of the violoncello.

His compositions for his instrument are numerous and of merit :—Concertos, Variations, Fantasias, Polonaises, etc., and especially 20 Exercises (op. 11), and 6 grand Studies (op. 20), which are valuable contributions to the répertoire of the instrument. [T. P. H.]

MERKEL, Gustav, born in 1827 at Oberoderwitz in Saxony, studied music under Julius Otto, and the eminent organist, Dr. Johann Schneider of Dresden, and also received some instruction from the composers Reissiger and Schumann; was appointed organist of the Waisenkirche, Dresden, in 1858, of the Kreuzkirche, in 1860, and court organist in 1864. From 1867 to 1873 he was director of the Dresden Singakademie, and since 1861 has been a professor at the Conservatorium there. Merkel's printed compositions have reached the number of 130. Of these, a large proportion is for his instrument, for which he has composed Preludes, Fugues, Fantasias, Variations, Sonatas, etc., and pieces for violin (or cello) and organ. He has also published many solos and duets for pianoforte, motets (op. 106) and songs with pianoforte accompaniment. As organist and organ composer, Merkel deservedly ranks very high. His organ music is of great excellence, and is not surpassed by any living composer for that instrument, being written by a true disciple of the lofty and imperishable school of which his great compatriot, Sebastian Bach, was founder and consummate master. Many of Merkel's fugues are 'alla capella,' and in five parts, and all are well constructed. Promise of dignity and grandeur of style in fugue writing, which has been subsequently realised, was first manifested in an early work (op. 5), the Fantasie, etc., dedicated to Schneider. His later organ sonatas (op. 80, 115, and 118), are noble specimens of that great form of writing, and would alone entitle him to the highest position as a composer for his noble instrument. [H. S. O.]

MERSENNUS, Marin, le Père Mersenne, born in the village of Oizé, in Maine, Sept. 8, 1588, educated at Le Mans and La Flèche; became a Minorite, entering upon his noviciate July 17, 1611, and receiving full orders (after a course of theology and Hebrew in Paris) from Monsignor de Gondi in 1613. For a time he taught philosophy at Nevers, but soon returned to Paris, where with other kindred spirits, such as Descartes, Pascal (père), Roberval, and Peiresc, he studied deeply both mathematics and music. He corresponded with Doni, Huyghens, and other learned men in Italy, England, and Holland; and visited Italy three times (1640, 41, and 45). He died Sept. 1, 1648, after a painful operation. His most important work is his 'Traité de l'harmonie universelle' (1627), of which he published an epitome in Latin; 'Harmonicorum libri XII' etc. (1648, with the names of three publishers, Baudry, Cramoisy, and Robert Ballard). These are more important even than Cerone's great work as sources of information on music in the 17th century, especially French music and musicians. [F. G.]

MERULO, Claudio, or Claudio da Correggio, organist and distinguished teacher, born at Correggio, in 1533.[1] At the age of 24, after competition with nine other candidates, he took his place at the 2nd organ of S. Mark's, Venice. This early success points to a first-rate education, received probably at Venice itself, but possibly at Brescia, where he had been appointed organist in the previous year (Sept. 17, 1566). Venice was rich in great musicians at the time, and Claudio's duties would bring him into daily intercourse with Willaert, Cipriano di Rore, Zarlino, A. Gabrieli, Annibale Padovano, and Costanzo Porta. It is delightful to be carried back[2] to a May evening more than 300 years ago, to find Zarlino waiting on the Piazza of S. Mark till vespers are over, that he may present 'M. Claudio Merulo soavissimo organista del detto tempio' to Francesco Viola,[3] who was visiting Venice, and then to follow them all to the house of old Adrian Willaert, kept at home by the gout, yet holding a grand reception, and ready to discuss with them the subjects of Zarlino's famous book. Claudio satisfied his employers as well as his colleagues, and while they increased his salary from time to time,[4] they repeatedly expressed their appreciation of his services, and their anxiety to retain them.[5] But his income was never a large one, and it was probably for this reason that he set up as a publisher in 1566,[6] and 12 years later (in his 46th year) as a composer of motets and madrigals,[7] neither attempt succeeding very well, or lasting more than 3 years.

After 27 years service Claudio left Venice, went first to Mantua, and thence to Parma, in May 1586, as organist of the Steccata, or ducal chapel. Here he lived 16 years, was knighted by the Duke, and died at the age of 71, May 4, 1604. The following letter was written at the time by one of his pupils to Sig. Ferrante Carli.[8]

According to your wish I send you some particulars of Sig. Claudio's death. On Sunday, the 25th of April, S. Mark's Day, after playing the organ at Vespers in the

[1] Entered in baptismal register of S. Quirino on April 8 as son of Antonio and Giovanni Merlotti, which was the true form of his name.

[2] Dimonstrationi Harmoniche (Zarlino, Venice 1571). See Introduction.

[3] Chapelmaster to the Duke of Ferrara, and an old pupil of Willaert's.

[4] Catelani, 'Memorie della Vita . . . di C. Merulo' (Milan, Ricordi).

[5] They had learnt a lesson from Jachet de Buus, who, having appealed in vain for an increase of salary, ran off from S. Mark's on pretence of a holiday, and found the Emperor glad enough to take him on his own terms.

[6] Editing madrigals by Verdelot, and, as a partner with Betanio, a set of the same by Porta. Betanio only joined him for a short time, perhaps owing to an unexpected pressure of work at St. Mark's by the resignation of the other organist and delay in appointing another. Claudio published one set of madrigals (à 5) of his own.

[7] Between 1578 and 81. Gardane printed 2 books of Sacræ Cantiones (à 5) and 2 books of Madrigals (à 4 and à 3). The 1st and 2nd books of Motets (à 6) were not printed till 1583 and 93 respectively. To the various collections Claudio did not contribute much till late in life. 2 Masses (à 8 and à 12) and Litanies (à 8), published some years after his death, complete the list of his vocal works.

[8] G. Tiraboschi, 'Biblioteca Modenese,' tom. vi. pt. i. (Modena 1786).

Steccata, he enjoyed an evening walk before going home. In the night he was aroused by a pain in his right side, succeeded by great fever and violent sickness. The fever continued from day to day, giving him no rest even for a few minutes. The doctors, Sig. Cernidore and Cerati, his son-in-law, after using many remedies with little or no success, determined at last to give him a medicine with strong ingredients—rhubarb, etc. This was on Sunday, May 2nd. When the poor old man had taken the draught he cried out, 'Alas! how cruelly these doctors have treated me'; for they had given him to understand it was merely a syrup. The effect was so severe that he died just as the clock struck 12 on the 4th of May. The Duke arranged the funeral, and had him crowned with laurel and ivy, these marks of respect giving great consolation to all. He was dressed as a Capuchin monk, music books were placed on his coffin, at each corner of which one of his scholars, clothed in black, held a lighted candle. They were D. Chris. Bora, M. Ant. Bertanelli, M. And. Salati, the fourth scarcely venturing to add his name, for he had only been under the good old man's care for a month, thanks first to his own gentleness and kindness, and next to that of our Sig. Christophero, who introduced me and entered me at S. Claudio's great school. . . . The Monday following, May 10th, the service took place in the Cathedral, when he was buried next to Cipriano [Rore], near the altar of S. Agatha. . . . . We sang the mass with double choir, one placed near the organ, the other on the opposite side. . . . .

Your affectionate servant,
ALESSANDRO VOLPIUS.

Parma, May 14, 1604.

As for Claudio's Organ [1]Toccatas and Ricercari, given to the world late in life, all indeed but one book posthumous, we do not think the composer's greatness is to be gauged by them at all. They cannot bring back to us the wonderful power of his playing, which could fascinate the most orthodox musicians, and attract students from all parts of Italy, Germany, and the North of Europe. As a faint resemblance of the living man (perhaps the little organ at Parma on which he played could recall him to us as strongly) these organ pieces are very welcome. They compare favourably with other works of the period. As historical examples they are also valuable. In them we have classical instrumental music quite distinct from vocal, we have again chord-as distinct from part-writing, the greatest result the organists had achieved and the ultimate death-blow to the modal system. Claudio lived close on the borders of the new tonality. In his compositions he does not abandon himself to it, but he no doubt went much further in his playing than on paper, and had he lived a few years longer, Frescobaldi's bold and apparently sudden adoption of the tonal system would not perhaps have come upon him unawares. [J.R.S.-B.]

MESSIAH. Oratorio by Handel; libretto from Holy Scriptures by Charles Jennens. Composition commenced Aug. 22, 1741; first part completed Aug. 28; second part, Sept. 6; third part Sept. 12; instrumentation, etc., filled in Sept. 14;—in all 24 days only. First performed (during Handel's sojourn in Ireland) in the Music Hall, Fishamble Street, Dublin, for the benefit of the Society for relieving Prisoners, the Charitable Infirmary, and Mercer's Hospital, April 13, 1742. The principal singers were Signora Avolio, Mrs. Cibber, Church, and Rosingrave; principal violin, Dubourg; organist, Maclaine. First performed in England at Covent Garden Theatre, March 23, 1743. Performed annually by Handel from 1750 to 1758 in the Chapel of the Foundling Hospital for the benefit of the charity. It was the last oratorio given by Handel, viz. on April 6, 1759, eight days only before his death. After the original performance Handel revised and rewrote many portions of the oratorio with great care. In 1789 Mozart composed his additional accompaniments to it, so admirably executed as to have received almost universal acceptance and to be regarded as nearly an integral part of the composition. No musical work has had such long, continuous, and enduring popularity as the Messiah, nor has any other so materially aided the cause of charity. Much of the veneration with which it is regarded is, doubtless, owing to the subject, but much also must be attributed to the splendid music, some of which —the stirring 'Glory to God,' the stupendous 'Hallelujah,' and the magnificent 'Amen'—is 'not for an age, but for all time.' The published editions of the oratorio, in various forms, are exceedingly numerous; the most interesting being the facsimile of the original holograph score (now in the music library at Buckingham Palace) in photo-lithography, published by the Sacred Harmonic Society in 1868. Many historical and descriptive pamphlets, analyses of the work, etc., have been issued at various times. [W.H.H.]

MESTO, 'sadly'; a term used three times by Beethoven, in the pianoforte sonatas, op. 10, no. 3, and op. 59, and in the slow movement of Quartet op. 18, no. 7. The slow movement of the first of these is called Largo e mesto, and of the second and third Adagio molto e mesto. It is also used by Chopin in the Mazurkas, op. 33, nos. 1 and 4. [J.A.F.M.]

METASTASIO, PIETRO ANTONIO DOMENICO BONAVENTURA, a celebrated Italian poet, son of Trapassi, of Assisi, a papal soldier, was born in Rome Jan. 3, 1698. As a child he showed an astonishing power of improvisation, which so struck Gravina, that, with his parents' consent, he took him into his family, had him educated, and changed his [2]name. He was studying the classics, and engaged in translating the Iliad into Italian verse, when his benefactor died suddenly—a loss he felt deeply, although he was eventually consoled by the attachment of Maria Bulgarini the singer. In the meantime his fame had reached Vienna, and, at the instigation of Apostolo Zeno, the late court poet, the Emperor Charles VI. offered him that post. He arrived in Vienna in 1730, and remained there till his death, April 12, 1782, living with his friend Martines in the 'Michaeler Haus.' Henceforth he furnished the principal attraction at the private festivals of the Court, composing verses to be recited or sung by the young Archduchesses, set to music in the latter case by the Court composers, Reutter, Predieri, Caldara, or

[1] 'Toccate d'Intavolatura d'Organo di C. di M.' etc., IIb. 1°. (Rome 1598). An early example of copper-plate engraving. Another book of Toccate and 3 books of Ricercari were posthumous.

[2] 'Metastasio,'=trapassamento, or transition, is a play on Trapassi.

Bonno. Metastasio was also musical; he played the harpsichord, sang ('come un serafino,' as he used to say) and composed.[1] He may be considered as the originator of a real improvement in the musical drama, though long since superseded. His popularity as a dramatic poet was great; the charm, grace, melody, and sweetness of his verse induced the composers to overlook the absence of contrast and strong passion; and in consequence some of his libretti have been set as many as thirty or forty times.

Mozart's 'Clemenza di Tito' is the solitary example of Metastasio's dramas to be seen on the boards at the present day. His poems include 29 dramas, 8 oratorios, 39 pièces de circonstance, nearly 50 cantatas and scenas; elegies, idyls, sonnets, canzonas, sestines, terzines, etc., published in nearly 50 different editions.[2] His portrait has often been engraved; that by Mansfield and Heath after Steiner is the best. Burney describes his appearance in 1772 in enthusiastic terms.[3] There are also busts and medallions of him. He was buried in a vault in the Michaeler church, and in 1855 an amateur named Galvagni placed a marble monument to his memory (by Luccardi) in the church of the Minorites, bearing the following lines by the Abbé Guido Ferrari:—

'Dat patriam Assisium, nomen Roma, Austria famam,
Plausum orbis, tumulum haec urna Metastasio.'

Chronological List of Metastasio's Secular Dramas, with the chief composers, and dates of production.

One drama, 'Per la Fest. di S. Natale,' composed by G. Costanza, was performed at Rome, 1727, in a theatre with scenery and action. [C.F.P.]

METRE, the rhythmic element of Song: as exemplified, in Music, in the structure of melodious phrases—in Poetry, in that of regular Verses.

As the rhythm of Poetry is measured by syllables and feet, so is that of Music by beats and bars. The two systems, notwithstanding their apparent difference, may almost be described as interchangeable: since it would be quite possible to express the swing of a Melody in Dactyls and Spondees, or the scansion of a Verse in Crotchets and Quavers. Upon this coincidence, Music and Poetry are almost entirely dependent for the intimacy of their mutual relations: and, as we shall presently shew, these relations influence pure Instrumental Composition no less forcibly than Vocal Music; the themes of a Sonata being as easily reducible to metrical feet as those of an Opera. Themes which are not so reducible—in other words, Melodies which exhibit no rhythmic correspondence with any imaginable kind of poetical Verse—may, indeed, be safely assumed to be bad ones. We shall most readily make this position intelligible, by considering the syllables and feet which form the basis of Poetical Metre; and then shewing their application to the phrases of a regularly-constructed Melody.

Syllables are of three kinds; long (–), short (⏑), and common (–⏑). One long syllable is reckoned as the equivalent of two short ones. A common syllable may be treated either as long, or short, at pleasure. In Classical Prosody, the length or shortness of syllables is determined by the laws of quantity. In modern Poetry, it is dependent upon accent alone; all accented syllables being considered long, and all unaccented ones short, whatever may be the quantity of their respective vowels. This distinction is of great importance to the Composer; for Poetry regulated by quantity has very little affinity with the Sister Art. The association of what we now call Tune, with Sapphics or Elegiacs, would probably be impracticable. But the regular cadence of English or Italian verses, in which the claims of quantity are utterly ignored, seems almost to demand it as a necessity.[4]

The union of two, three, or four syllables, constitutes a foot. Four forms only of the dissyllabic foot are possible—

Pyrrhic . . . . . ⏑ ⏑	Iambus . . . . . ⏑ –
Spondee . . . . . – –	Trochee, (or Chorius) . – ⏑

Of trisyllabic feet there are eight varieties—

Tribrach . . . . . ⏑ ⏑ ⏑	Antibacchius (or Palimbacchius) . . . . – – ⏑
Molossus . . . . . – – –	Amphibrachys . . . ⏑ – ⏑
Dactyl . . . . . – ⏑ ⏑	Amphimacer (or Cretic) . . . . . – ⏑ –
Anapæst . . . . . ⏑ ⏑ –	
Bacchius . . . . ⏑ – –	

1 Cappi of Vienna published his 'XXXVI Canzoni a Sole tre voci.'

2 Vol. i. of 'Opere del Signor Abbate Pietro Metastasio,' 17 small vols. 12mo. (Nice 1785), contains a life by Cristini.' A selection of his poems was published in Paris (1804) with the title 'Pensieri di Metastasio.' Burney wrote his 'Memoirs' (London 1796).

3 'For that time of life [he was about 74] he is the handsomest man I ever beheld. There are painted on his countenance all the genius, goodness, propriety, benevolence, and rectitude which constantly characterise his writings. I could not keep my eyes off his face, it was so pleasing and worthy of contemplation.—Present State of Music in Germany, i. 295.

4 Not very long ago, a celebrated Poet, experimenting upon the possibility of producing good English Hexameters, wrote some curious examples in accordance with the laws of quantity—a proceeding which left the real point at issue untouched.

Tetrasyllabic feet—always divisible into two dissyllabic members—are sixteen in number—

Proceleusmaticus	⏑ ⏑ ⏑ ⏑	Pæon primus	– ⏑ ⏑ ⏑
Dispondæus	– – – –	Pæon secundus	⏑ – ⏑ ⏑
Diiambus	⏑ – ⏑ –	Pæon tertius	⏑ ⏑ – ⏑
Ditrochæus	– ⏑ – ⏑	Pæon quartus	⏑ ⏑ ⏑ –
Choriambus	– ⏑ ⏑ –	Epitritus primus	⏑ – – –
Antispastus	⏑ – – ⏑	Epitritus secundus	– ⏑ – –
Ionicus a majore	– – ⏑ ⏑	Epitritus tertius	– – ⏑ –
Ionicus a minore	⏑ ⏑ – –	Epitritus quartus	– – – ⏑

Two feet usually constitute a Metre (or *Dipodia*). But, in Dactylic Verse, each foot is regarded as a complete Metre in itself, even when the characteristic Dactyl is intermixed with feet of some other kind. Each tetrasyllabic foot is also treated, by reason of its composite character, as an entire Metre.

Verses[1] are classed according to the number of Metres they contain: thus, the Monometer, Dimeter, Trimeter, Tetrameter, Pentameter, and Hexameter, contain one, two, three, four, five, and six Metres, respectively.

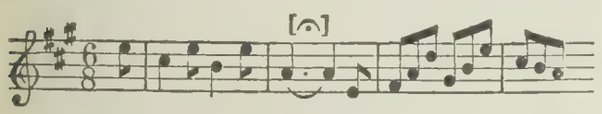
When all the Metres are perfect, the Verse is called Acatalectic. When the last syllable of the last foot is wanting, it is Catalectic. When two syllables are wanting, or an entire foot, it is Brachycatalectic. When a superfluous long syllable is added on, at the end of the Verse, it is called Hypercatalectic.

Most Verses are marked, in or near the middle, by a slight pause, called a *Cæsura*, which must necessarily fall, either on a monosyllable, or on the last syllable of a word; as in the well-known Alexandrine—

[𝄐]

'Which, like a wounded snake, drags its slow length along':

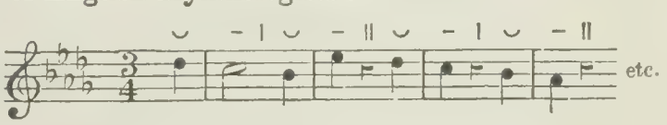
and a similar peculiarity is observable in innumerable well-constructed Melodies; as in the Giga of Corelli's Sonata in A—



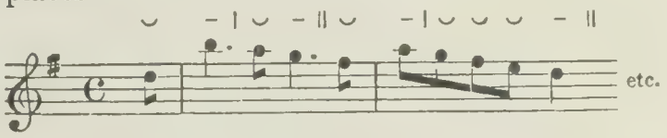
The five species of Verse most frequently used are, the Iambic, the Trochaic, the Spondaic, the Anapæstic, and the Dactylic, each of which may be used in the form of a Dimeter, Trimeter, or Tetrameter, either Catalectic, or Acatalectic. But no kind of Verse is strictly limited to feet of one particular order. We constantly find an Iambus substituted for a Trochee; or, a Trochee for a Spondee. In Dactylic Verse, especially, the Spondee is of very frequent occurrence, and the Trochee by no means uncommon. In like manner, the phrasing of a Melody may, at any moment, be relieved by the introduction of a subordinate figure, though, if the Melody be good, the new feature will be no less reducible to rule than the original one.

The variety of Metre permissible in modern Poetry is unlimited; and as an equal amount of freedom is claimed in the rhythm of modern Music, it would manifestly be impossible to enumerate even a tenth part of the different forms now in common use. Nevertheless, as all are constructed upon the same general principle, the Student will find no difficulty in making an analysis of any that may fall under his notice. This analysis cannot be too carefully conducted. Its importance is obvious enough, where words have to be set to music: but, as we have already intimated, it is equally important in other cases; for, without a sound practical acquaintance with the laws of Poetical Metre, it is not easy to invest even the subject of a Fugue with the freshness and individuality which so plainly distinguish the works of the Great Masters from writings of inferior merit. An instrumental Theme, devoid of marked rhythmic character, is never really effective. Great Composers seem to have felt this, as if by instinct; hence, their Subjects are always reducible to metrical feet. All the Metres most common in Poetry, and innumerable others, have been used by them, over and over again: sometimes, in their strictest form; but, generally, with greater variety of treatment than that allowable in Verse, and with a more frequent employment of the various tetrasyllabic feet, every one of which falls into its proper place in the economy of Instrumental Music. We do not, indeed, always find the foot and the bar beginning together. This can only be the case when the foot begins with a long syllable, and the musical phrase with a strong accent. But, in all cases, the correspondence between the two modes of measurement is uniform, and exact; and to its all-powerful influence many a famous melody owes half its charm. We cannot carefully examine any really fine composition, without convincing ourselves of the truth of this great law, which we will endeavour to illustrate by the aid of a few examples, selected from works of universally acknowledged merit.

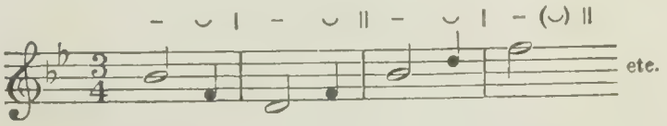
The theme of the Scherzo in Beethoven's *Sonata quasi una Fantasia* in C♯ minor (op. 27) is in Iambic Dimeter Acatalectic—the 'Long Metre' of English Hymnologists:—



The Rondo of Mendelssohn's Pianoforte Concerto in G minor (op. 25) also begins in Iambic Dimeter; with the peculiarly happy use of a Pæon quartus, in the fourth, and several subsequent places—



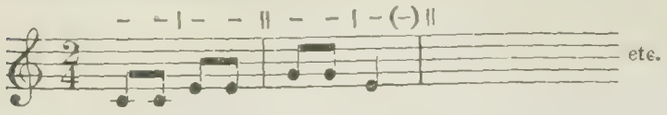
Mozart's Sonata for Pianoforte and Violin, in B♭, starts in Trochaic Dimeter Catalectic—



The well-known Subject of the Slow Movement

[1] Throughout this article, the word Verse, is used in its strict sense, as indicating a single line of Poetry. In common parlance, the word is frequently treated as the synonym of Stanza: but a Stanza is really a combination of several Verses.

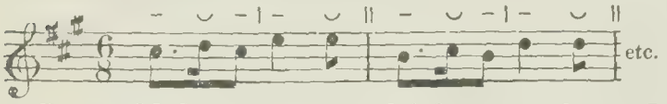
in Haydn's 'Surprise Symphony' is in Spondaic Dimeter Catalectic—



The Theme of Weber's *Rondo brillante* in Eb (op. 62), is in Anapæstic Tetrameter Brachycatalectic, very rigidly maintained—

The Slow Movement of Beethoven's Symphony in A, is in alternate verses of Acatalectic and Catalectic Dactylic Tetrameter, with a Spondee in each of the even places—

A no less captivating alternation of Amphimacers and Trochees is found in the Tema of Mozart's Pianoforte Sonata in A—



It would be easy to multiply examples, *ad infinitum*; but these will be sufficient to shew, on no mean authority, the importance of a subject, which, though too often neglected as a branch of musical education, will well repay a little diligent study. [W.S.R.]

METRONOME (Germ. *Metronom*, and *Taktmesser*; Fr. *Métronome*. From the Gr. μέτρον, a measure, and νόμος, a law). An instrument, constructed for the purpose of enabling composers to indicate the exact pace at which they wish their works to be performed.

The Great Masters of the earlier Schools left the *Tempi* of their compositions entirely to the discretion of the executant. In doing this, they incurred no risk whatever of misconception: for, until the close of the 16th century, and even later, the Composer was almost always a Singer in the Choir for which he wrote; and his relations with his fellow Choristers were infinitely closer than those existing between a modern Composer and the Orchestra under his control. But, the change of style introduced by Claudio Monteverde, added to the impulse given to Instrumental Music and Vocal Music with Instrumental Accompaniments, after the beginning of the 17th century, changed these relations very materially. The invention of the Opera brought new ideas into the field. The individuality of the Composer began gradually to throw the characteristics of the 'School' into the background: and Musicians, no longer guided by traditional laws, soon became alive to the necessity for giving some sort of direction as to the manner in which their pieces were to be sung or played. Hence arose the employment of such words as *Grave*, *Allegro*, *Adagio*, and other terms of like import, which have remained in common use to the present day. As the resources of modern Art became more fully developed, even these directions were found to be insufficient for their intended purpose. A hundred different varieties of *Allegro* were possible. How was it possible to indicate to the performer which of these the Composer intended him to adopt? The number of technical terms was multiplied indefinitely; but, it was clear that none were sufficiently explicit to remove the difficulty; and, at a very early period, the use of the Pendulum was suggested as the only rational means of solving it.

To Etienne Loulié—not François, as has been sometimes supposed—belongs the credit of having first turned this idea to practical account. In a work, entitled *Élémens ou principes de Musique, mis dans un nouvel ordre*, (Paris, 1696, Amsterdam, 1698), he describes an instrument, called a *Chronomètre*, formed of a bullet, suspended to a cord, and provided with means for lengthening or shortening the latter at pleasure, in such a manner as to indicate seventy-two different degrees of velocity. This was a good beginning. Nevertheless, the machine does not seem to have become generally known; for, in many curious treatises of later date, we find vague glimmerings of similar ideas, put forth in apparent ignorance of Loulié's discovery. Joseph Sauveur —the inventor of the word 'Acoustics,' and the author of a series of valuable papers on Music contributed to the *Mémoires de l'Academie*, between the years 1700 and 1711—is said to have proposed a *Chronomètre* of his own. In 1732, an article on a species of Musical Time-keeper was contributed to the *Mémoires des Sciences* by Enbrayg. Gabory recommended the use of the Pendulum, in his *Manuel utile et curieux sur la mesure du tems*, (Paris, 1771). John Harrison's 'Description concerning such a machine as will afford a nice and true mensuration of time; as also an account of the Scale of Music,' (London, 1775), serves to shew that the connection between Music and Chronometry was not unnoticed in England. Davaux wrote an article on the subject for the *Journal Encyclopédique*, in 1784. Not long afterwards, Pelletier made use of the Pendulum in a way sufficiently ingenious to call forth a treatise on his invention from Abel Burja, of Berlin, in 1790. In the same year, Breitkopf & Härtel printed, at Leipzig, *Zwölf geistliche prosaische Gesänge, mit Beschreibung eines Taktmessers*, by J. G. Weiske. And enough was done, both in France, and in Germany, to shew, that, even before the close of the 18th century, the matter had attracted no small amount of serious attention.

In 1813, Gottfried Weber advocated the use of a Pendulum, formed of a small bullet attached to the end of a string, upon which the necessary divisions were marked by knots; the whole being so contrived that it could be carried in the pocket — a far more simple and convenient arrangement than that of Loulié.[1] New plans were proposed by G. E. Stöckel, Zmeskall, and other Musicians of reputation; and Beethoven is known to have discussed them with interest. The subject excited an equal amount of attention in England, where many attempts were made to produce a perfect instrument. Dr. Crotch, discarding Loulié's cord, used, in place of it, a stiff Pendulum, formed of a long thin strip of box-wood, graduated in inches, and hung upon a suitable frame. Another Musical Time-keeper, invented by Mr. Henry Smart (brother to the late Sir George), is described in the Quarterly Musical Review (vol. iii., London, 1821). Both are now obsolete: but the writer remembers seeing instruments of the kind recommended by Dr. Crotch, exposed for sale, not very many years ago, at Messrs. Erat's Harp Manufactory, in Berners St.

All these inventions failed, however, more or less completely, through the inconvenience caused by the length of the Pendulum necessary to produce beats of even moderate slowness. In order to perform sixty oscillations in a minute, a Pendulum must, in our latitude, be 39·2 inches long. One long enough to execute forty would be difficult to manage. This difficulty, which had long been recognised as a bar to farther improvement, was eventually removed, through the ingenuity of a celebrated Mechanist, named Winkel, an inhabitant of Amsterdam, who first entertained the idea of constructing a Metronome upon a system before untried, involving the use of a certain kind of Double-Pendulum, the motions of which are governed by mathematical laws of extreme complexity, though, practically considered, the principle is so simple that we trust a very few words may suffice to explain it.

If a rod be suspended from its centre, and equally weighted at both ends, its centres of motion and gravity will coincide, and its position, when at rest, will be perfectly horizontal. But, if the weight at one end be diminished, or moved a little nearer to the central pivot than the other, the centre of gravity will be displaced, and the unaltered end will gradually descend, until the rod hangs perpendicularly; the rapidity with which the change of position takes place depending upon the amount of diminution to which the upper weight is subjected, or its nearness to the pivot. In either case, the upper weight will exercise so strong a retarding influence on the lower one, that by carefully adjusting the proportion between weights and distances, it will be found possible to make a Double Pendulum, of the kind we have described, oscillate as slowly as an ordinary one five or six times its length.

[1] A pocket Metronome was registered by Greaves in 1850, and another, 'scala Malzl, system Decher,' has just been patented by Albl, of Munich.

The possibility of constructing a Metronome upon this principle is said to have first suggested itself to Winkel about the year 1812; but it is difficult, in the face of conflicting statements, to arrive at a just conclusion as to the circumstances under which his invention was first given to the world. It is, indeed, known to have been warmly commended by the Dutch Academy of Sciences, in a report dated Aug. 14, 1815; and, judging from this, we may surmise that it had, by that time, assumed a complete, if not a perfect form. We have, however, no definite proof of its then condition. It may have been finished, or it may not: but, finished or unfinished, it is certain that Winkel derived very little benefit from his discovery. Johann Nepomuk Maelzel, an accomplished Musician, and a Mechanist of European reputation, had long meditated an improvement upon Stöckel's machine for beating time; and succeeded, about this time, in producing a species of so-called 'Chronometer,' which fairly satisfied Salieri, Weigl, and even Beethoven himself. Fortified by the approval of these high authorities, he determined to bring out his invention in London. Meanwhile, he exhibited it, in company with other mechanical curiosities, in a travelling museum, which he carried about with him, from city to city, through some of the principal countries of Europe. Among other places, he visited Amsterdam, where he saw Winkel's instrument. Struck with the superiority of the Double-Pendulum to the principle adopted in his own time-keeper, he at once offered to purchase the invention. Winkel declined to cede his rights; but Maelzel, having now learned all he wanted to know, proceeded to Paris, patented the Double-Pendulum in his own name, and in 1816 set up the first Metronome Manufactory on record. Winkel afterwards obtained possession of one of the Paris instruments; established its identity with his own; and (as Wurzbach states) took advantage of Maelzel's return to Holland to submit his case to the 'Niederländische Akademie' for decision. A Commission was appointed, to investigate its merits: and, as it was proved that the graduated scale was the only part of the instrument really originated by Maelzel, a formal judgment was recorded in Winkel's favour—too late, however, to do him full justice, for, to this day, his share in the work is, by common consent, suppressed, and Maelzel is universally regarded as the inventor of the instrument which bears his name.[2]

The first Metronomes made at the new Manufactory differed so little, in any point of vital consequence, from those now in daily use, that a description of the one will include all that need be said concerning the other. The most important part of the business is a flat steel rod,

[2] We are indebted, for most of these particulars, to Mr. A. W. Thayer, whose careful researches have placed him in possession of much valuable information on this subject. Bernsdorf tells a different story, to the effect, that Maelzel, unable to overcome some difficulty connected with his improvement of Stöckel's Time-keeper, took Winkel into consultation; that Winkel solved the problem for him; and that he then proceeded to Paris, and there patented Winkel's invention in his own name.

about seven and a half inches long, and an eighth of an inch in breadth, pierced, at a distance of about five and a half inches from its upper end, by a hole, through which is passed the pivot upon which it is made to oscillate. This rod—answering to the Double-Pendulum already described—is suspended, by means of the pivot, in front of a wooden case, and kept in a perpendicular position by a stout leaden bullet, fixed to its shorter end, which, thus weighted, sinks, of course, when at rest, to the lowest place. On its upper and longer end is placed a smaller weight, of brass, made to slide up and down at will, and so proportioned to the lower weight, that, by changing its position, the Pendulum may be made to execute any number of oscillations, between 40 and 208, in a minute. As a guide to the position of the upper weight, the rod is backed by a graduated scale—really the invention of Maelzel—affixed to the wooden case: and, by means of this, the instrument may be so adjusted as to beat, silently, for a few minutes, at any required pace. To render it still more effective—capable of beating for a longer time, and, with a distinctly audible sound—it is provided with a strong spiral spring, adapted to an escapement exactly similar to that of an ordinary loud-ticking clock.[1] In this form, it is complete enough to answer its intended purpose, perfectly: nevertheless, an attempt is sometimes made to increase its efficiency still farther, by the addition of a little Bell, which can be made to strike at every second, third, fourth, or sixth oscillation of the Pendulum, and thus to indicate the various accents, as well as the simple beats of the bar. The scale does not include all the units between 40 and 108—which, indeed, would be a mere useless encumbrance—but proceeds, from 40, to 60, by twos; from 60, to 72, by threes; from 72, to 120, by fours; from 120, to 144, by sixes; and, from 144, to 208, by eights. In order to indicate the exact *Tempo* in which he wishes his piece to be performed, the Composer uses a formula, beginning with the letters M. M. followed by a Musical Note, connected, by the sign =, with a number. The letters signify Maelzel's Metronome. The Note implies that the beats of the Pendulum are to be understood as representing Minims, Crotchets, or Quavers, as the case may be. The number indicates the place on the graduated scale to the level of which the top of the upper weight must be raised, or lowered. Thus, 'M. M. 𝅗𝅥 = 60,' would shew that the Metronome was to be so arranged as to beat Minims, at the rate of sixty in a minute: 'M. M. ♩ = 100,' that it was to beat Crotchets, at the rate of a hundred in a minute. Some Metronomes are marked with the words *Andante, Allegretto, Allegro,* etc., in addition to the numbers. This is a new, and utterly useless contrivance: for it is evident, that, if ♩ = 100 be held to indicate *Moderato*, 𝅗𝅥 = 100 will stand for *Allegro*, and 𝅝 = 100 for *Largo*. The word *Moderato*, therefore, without the Minim, Crotchet, or Quaver, to qualify it, means nothing at all; and it is absurd to encumber the scale with it, or with any other technical terms whatever.

By far the best Metronomes now attainable are those manufactured in England for Messrs. Cocks, Chappell, Ashdown & Parry, and other well-known Music Publishers. French Metronomes are far less durable than these; and, as a general rule, far less accurate time-keepers; though it is sometimes possible to meet with one which will beat evenly enough, as long as it lasts. A very large and loud Metronome is made by Messrs. Rudall & Carte, of London, for Military Bands; and an instrument of this kind may often be used, with great advantage, when a number of vocal or instrumental performers practise together: for, apart from its primary intention, the Metronome is invaluable as a means of teaching beginners to sing or play in time, and will, indeed, make 'good timists' of many who would be a long while learning to count accurately without its aid. [W.S.R.]

MEVES, Augustus Antoine Cornelius, son of Augustus Anthony William (known as William) Meves, a miniature painter, was born in London Feb. 16, 1785. He was early taught the pianoforte by his mother, a pupil of Linley and Sacchini, and appeared in Edinburgh in 1805 as Mr. Augustus, with considerable success. He followed his profession in London until the death of his father, Aug. 1, 1818, when he gave up teaching for speculation on the Stock Exchange, continuing however to compose and arrange for his instrument. He died suddenly in a cab, May 9, 1859. In the latter part of his life he assumed to be the Dauphin of France, son of Louis XVI., and alleged that he had been rescued from captivity in the Temple through the instrumentality of William Meves. His story may be read in detail in 'Authentic Historical Memoirs of Louis Charles, Prince Royal, Dauphin of France,' etc., by his sons Augustus and William Meves (London, Ridgway, 1868). [W.H.H.]

MEYERBEER, Giacomo, famous dramatic composer, was born at Berlin, of Jewish parents, Sept. 5, 1791 or [1]94. His father, Herz Beer, a native of Frankfort, was a wealthy banker in Berlin; his mother (*née* Amalie Wulf) was a woman of rare mental and intellectual gifts, and high cultivation. He was their eldest son, and was called Jacob Meyer, a name he afterwards contracted and Italianized into Giacomo Meyerbeer. He seems to have been the sole member of his family remarkable for musical gifts, but two of his brothers achieved distinction in other lines; Wilhelm as an astronomer, and Michael (who died young) as a poet.

His genius showed itself early. When hardly more than an infant he was able to retain in

[1] In the first Time-keeper made by Maelzel, in his attempt to improve upon Stöckel's Chronometer, the sound was produced by a Lever, (*Hebel*), striking upon a little Anvil, (*Amboss*). This explains a curious expression contained in a letter written, by Beethoven, to Zmeskall—'*Erste Schwungmann der Welt, und dies ohne Hebel.*' ('First Swingman of the world, and that without a lever.') For a description of the instrument—known as the 'Stöckel-Maelzel Chronometer'—see the Allgemeine Musikalische Zeitung for Dec. 1, 1813.

[1] Both dates are given.

memory the popular tunes he heard, and to play them on the piano, accompanying them with their appropriate harmony. His first instructor was Lauska, an eminent pianoforte player, and pupil of Clementi; and old Clementi himself, although he had long given up teaching, was so much struck, during a visit to Berlin, with the promise displayed in the boy's performance as to consent to give him lessons. As early as seven years old he played in public the D minor Concerto of Mozart, and two years later was reckoned one of the best pianists in Berlin. The fact that, owing to the example and patronage of royalty, music was 'the fashion' in the Prussian capital did not prevent its being regarded by the wealthier classes in the light of a mere pastime, and it is to the credit of the Beers that they not only recognised their son's especial bent, but did their best to give him a sound professional training. It was as a pianist that he was expected to win his laurels, but as he had also, from an early age, shown much talent for composition, he was placed under Zelter for instruction in theory, and subsequently (for Zelter's rigid severity was insupportable to the young prodigy) under Bernard Anselm Weber, director of the Berlin Opera, and a pupil of the then celebrated Abbé Vogler. An amiable, accomplished man, full of enthusiasm for art, Weber was an inspiring companion, but not a competent theoretical teacher for such a pupil. The boy, whose industry was equal to his talent, brought one day to his master a fugue on which he had expended an unusual amount of time and pains, as he thought, with success. So thought Weber, who, proud and joyful, sent off the fugue as a specimen of his pupil's work to his old master, the Abbé Vogler, at Darmstadt. The answer was eagerly looked for, but months elapsed and nothing came. At last there appeared—not a letter, but a huge packet. This proved to contain a long and exhaustive treatise on Fugue, in three sections. The first of these was theoretical, setting forth in rule and maxim the 'whole duty' of the fugue-writer. The second, entitled 'Scholar's Fugue,' contained Meyerbeer's unlucky exercise, dissected and criticised, bar by bar, and pronounced bad. The third, headed 'Master's Fugue,' consisted of a fugue by Vogler, on Meyerbeer's subject, analysed like the preceding one, to show that it was good.[1]

Weber was astonished and distressed, but Meyerbeer set to work and wrote another fugue, in eight parts, in accordance with his new lights. This, with a modest letter, he sent to Vogler. The answer soon came. 'Young man! Art opens to you a glorious future! Come to me at Darmstadt. You shall be to me as a son, and you shall slake your thirst at the sources of musical knowledge.' Such a prospect was not to be resisted, and in 1810 Meyerbeer became an inmate of Vogler's house.

This notorious Abbé, regarded by some people as the most profound theoretician of Germany, by others (including Mozart) as an impudent charlatan, was possessed of some originality, much eccentricity, and unbounded conceit, not so much a learned man as an enthusiast for learning in the abstract, and with a mania for instructing others. His imperturbable self-confidence ('he gives out that he will make a composer in three weeks and a singer in six months,' says Mozart in one of his letters) certainly had an attraction for young ardent minds, for among his pupils were several men of genius. After many years of a wandering, adventurous life, he had settled at Darmstadt, where he was pensioned and protected by the Grand Duke. In his house Meyerbeer had for companions Gänsbacher (afterwards an organist of repute at Vienna) and Carl Maria von Weber, who had studied with Vogler some years before, and was now attracted to Darmstadt by his presence there, and between whom and Meyerbeer, eight years his junior, there sprang up a warm and lasting friendship. Each morning after early mass, when the young men took it in turns to preside at the organ, they assembled for a lesson in counterpoint from the Abbé. Themes were distributed, and a fugue or sacred cantata had to be written every day. In the evening the work was examined, when each man had to defend his own composition against the critical attacks of Vogler and the rest. Organ fugues were improvised in the Cathedral, on subjects contributed by all in turn. In this way Meyerbeer's education was carried on for two years. His diligence was such, that often, when interested in some new branch of study, he would not leave his room nor put off his dressing-gown for days together. His great powers of execution on the pianoforte enabled him to play at sight the most intricate orchestral scores, with a full command of every part. His four-part 'Sacred Songs of Klopstock' were published at this time, and an oratorio of his, entitled 'God and Nature,' was performed in presence of the Grand Duke, who appointed him Composer to the Court. His first opera, 'Jephthah's Vow,' was also written during this Vogler period. Biblical in subject, dry and scholastic in treatment, it resembled an oratorio rather than an opera, and although connoisseurs thought it promising, it failed to please the public. A comic opera, 'Alimelek, or the Two Caliphs,' met with a similar fate at Munich. It was, however, bespoken and put in rehearsal by the manager of the Kärnthnerthor theatre in Vienna. To Vienna, in consequence, Meyerbeer now repaired, with the intention of making his appearance there as a pianist. But on the very evening of his arrival he chanced to hear Hummel, and was so much impressed by the grace, finish, and exquisite *legato*-playing of this artist that he became dissatisfied with all he had hitherto aimed at or accomplished, and went into a kind of voluntary retirement for several months, during which time he subjected his *technique* to a complete reform, besides writing a quantity of pianoforte music, which however was never

[1] This treatise was published after Vogler's death. It is unfortunate that his criticism is often unsound, and that his own fugue will not bear close examination.

published. He made a great sensation on his first appearance, and Moscheles, who heard him at this time was wont to say that, had he chosen a pianist's career, few *virtuosi* could have rivalled him. But to be a composer was the only goal worthy of his ambition, although at this moment it seemed to recede as he pursued it. The 'Two Caliphs,' performed in 1814, had again been an utter failure. Dejected—disheartened to such a degree as almost to doubt whether he had not from the first deceived himself as to his vocation, he was somewhat consoled by the veteran Salieri, who reassured him, affirming that he wanted nothing in order to succeed but freedom from scholastic trammels and, above all, knowledge of the human voice and how to write for it, a knowledge, Salieri added, only to be acquired in Italy. Accordingly, in 1815, Meyerbeer went to Venice. It was Carnival time. Rossini's fascinating 'Tancredi' was then at the height of its pristine popularity; its new and irresistible melodiousness had created a universal delirium; all Venice resounded with 'Di tanti palpiti.' To Meyerbeer, accustomed to associate Italian opera with the dreary works of Nicolini, Farinelli, Pavesi, and others, this was a revelation, and he surrendered spell-bound to the genial charm. Hope awoke, emulation was rekindled. He had no style of his own to abandon, but he abandoned Vogler's without regret, and set to work to write Italian operas. His success was easy and complete. 'Romilda e Costanza' (produced at Padua in 1815, Pisaroni in the leading part), 'Semiramide riconosciuta' (Turin, 1819), 'Eduardo e Cristina' and 'Emma di Resburgo' (Venice, 1820), were all received with enthusiasm by the Italian people, and this at a time when it was difficult for any one but Rossini to obtain a hearing. The last-named opera was played in Germany under the title of 'Emma von Leicester,' and not unsuccessfully. 'Margherita d' Anjou,' the best of these operas, was written for the Scala at Milan. 'L'Esule di Granata' made but little impression. 'Almansor' was commenced at Rome, but not completed. In 1823, while engaged in writing the 'Crociato,' the composer went to Berlin, where he tried, but failed, to get a performance of a three-act German opera—'Das Brandenburger Thor.' This was a time of transition in his life. He was wearying of the Italian manner, and he could not be insensible to the murmurs of dissatisfaction which everywhere in Germany made themselves heard at the degradation of his talent by his change of style. Foremost among the malcontents was C. M. von Weber, who had looked on his friend as the hope of that German opera in which were centred his own ardent aspirations, and who in 1815 at Prague, and subsequently at Dresden, had mounted 'The Two Caliphs' with extraordinary care and labour, hoping perhaps to induce him to return to his old path. 'My heart bleeds,' he wrote, 'to see a German composer of creative power stoop to become an imitator in order to win favour with the crowd.' In spite of all this the friendship of the two men remained unshaken. On his way back to Italy Meyerbeer spent a day with Weber, who wrote of it, 'Last Friday I had the happiness of having Meyerbeer with me. It was a red-letter day—a reminiscence of dear old Mannheim. . . . . We did not separate till late at night. He is going to bring out his 'Crociato' at Trieste, and in less than a year is to come back to Berlin, where perhaps he will write a German opera. Please God he may! I made many appeals to his conscience.' Weber did not live to see his wish fulfilled, but the desire which he expressed before his death that an opera he left unfinished should be completed by Meyerbeer, showed that his faith in him was retained to the last.

The 'Crociato' was produced at Venice in 1824, and created a *furore*, the composer being called for and crowned on the stage. In this opera, written in Germany, old associations seem to have asserted themselves. More ambitious in scope than its predecessors, it shows an attempt, timid indeed, at dramatic combination which constitutes it a kind of link between his 'wild oats' (as in after years he designated these Italian works) and his later operas.[1] In 1826 he was invited to witness its first performance in Paris, and this proved to be the turning-point of his career. He eventually took up his residence in Paris, and lived most of his subsequent life there. From 1824 till 1831 no opera appeared from his pen. A sojourn in Berlin, during which his father died, his marriage, and the loss of two children, were among the causes which kept him from public life. But in these years he undertook that profound study of French character, French history, and French art, which resulted in the final brilliant metamorphosis of his dramatic and musical style, and in the great works by which his name is remembered.

Paris was the head-quarters of the unsettled, restless, tentative spirit which at that epoch pervaded Europe,—the partial subsidence of the ferment caused by a century of great thoughts, ending in a revolution that had shaken society to its foundations. Men had broken away from the past, without as yet finding any firm standpoint for the future. The most opposite opinions flourished side by side. Art was a conglomeration of styles of every time and nation, all equally acceptable if treated with cleverness. Originality was at an ebb; illustration supplied the place of idea. Reminiscence, association, the picturesque, the quaint, 'local colour,'—these were sought for rather than beauty; excitement for the senses, but through the medium of the intellect. Men turned to history and legend for material, seeking in the past a torch which, kindled at the fire of modern thought, might throw light on present problems. This spirit of eclecticism found its perfect musical counterpart in the works of Meyerbeer. The assimilative power that, guided by tenacity of purpose, enabled him to identify

[1] It is significant that, with the exception of the 'Crociato,' not one of these early works, so enthusiastically received, held the stage after their composer had left Italy.

himself with any style he chose, found in this intellectual ferment, as yet unrepresented in music, a wellnigh inexhaustible field, while these influences in return proved the key to unlock all that was original and forcible in his nature. And he found a fresh stimulus in the works of French operatic composers, abounding, as they do, in quaint, suggestive ideas, only waiting the hand of a master to turn them to full account.

'He did not shrink, as a man, from the unremitting, insatiable industry he had shown as a boy, and he buried himself in the literature of French opera, from the days of Lulli onwards. . . . . It was interesting to see in his library hundreds of opera-scores great and small, many of which were hardly known by name even to the most initiated. . . . In his later works we see that to the flowing melody of the Italians and the solid harmony of the Germans he united the pathetic declamation and the varied, *piquant*, rhythm of the French.' (Mendel.) Last, but not least, in his librettist, Eugène Scribe, he found a worthy and invaluable collaborator.

Many vicissitudes preceded the first performance, in 1831, of 'Robert le Diable,' the opera in which the new Meyerbeer first revealed himself, and of which the unparalleled success extended in a very few years over the whole civilized world. It made the fortune of the Paris Opera. Scenic effect, striking contrast, novel and brilliant instrumentation, vigorous declamatory recitative, melody which pleased none the less for the strong admixture of Italian-opera conventionalities, yet here and there (as in the beautiful *scena* 'Robert! toi que j'aime') attaining a dramatic force unlooked for and till then unknown, a story part heroic, part legendary, part allegorical,—with this strange picturesque medley all were pleased, for in it each found something to suit his taste.

The popularity of the opera was so great that the 'Huguenots,' produced in 1836, suffered at first by contrast. The public, looking for a repetition, with a difference, of 'Robert,' was disappointed at finding the new opera quite unlike its predecessor, but was soon forced to acknowledge the incontrovertible truth, that it was immeasurably the superior of the two. As a drama it depends for none of its interest on the supernatural. It is, as treated by Meyerbeer, the most vivid chapter of French history that ever was written. The splendours and the terrors of the sixteenth century,—its chivalry and fanaticism, its ferocity and romance, the brilliance of courts and the 'chameleon colours of artificial society,' the sombre fervour of Protestantism—are all here depicted and endued with life and reality, while the whole is conceived and carried out on a scale of magnificence hitherto unknown in opera.

In 1838 the book of the 'Africaine' was given to Meyerbeer by Scribe. He became deeply interested in it, and the composition and recomposition, casting and recasting of this work, occupied him at intervals to the end of his life. His excessive anxiety about his operas extended to the *libretti*, with which he was never satisfied, but would have modified to suit his successive fancies over and over again, until the final form retained little likeness to the original. This was especially the case with the 'Africaine,' subsequently called 'Vasco de Gama' (who, although the hero, was an afterthought!), and many were his altercations with Scribe, who got tired of the endless changes demanded by the composer, and withdrew his book altogether; but was finally pacified by Meyerbeer's taking another libretto of his, 'Le Prophète,' which so forcibly excited the composer's imagination that he at once set to work on it and finished it within a year (1843).

A good deal of his time was now passed in Berlin, where the King had appointed him Kapellmeister. Here he wrote several occasional pieces, cantatas, marches, and dance-music, besides the three-act German opera, 'Ein Feldlager in Schlesien.' The success of this work was magically increased, a few weeks after its first performance, by the appearance in the part of the heroine of a young Swedish singer, introduced to the Berlin public by Meyerbeer, who had heard her in Paris,—Jenny Lind.

He at this time discharged some of the debt he owed his dead friend, C. M. von Weber, by producing 'Euryanthe' at Berlin. His duties at the opera were heavy, and he had neither the personal presence nor the requisite nerve and decision to make a good conductor. From 1845 he only conducted—possibly not to their advantage—his own operas, and those in which Jenny Lind sang.

The year 1846 was marked by the production of the overture and incidental music to his brother Michael's drama of 'Struensée.' This very striking work is its composer's only one in that style, and shows him in some of his best aspects. The overture is his most successful achievement in sustained instrumental composition. A visit to Vienna (where Jenny Lind achieved a brilliant success in the part of Vielka in the 'Feldlager in Schlesien'), and a subsequent sojourn in London occurred in 1847. In the autumn he was back in Berlin, where, on the occasion of the King's birthday, he produced, after long and careful preparation, 'Rienzi,' the earliest opera of his future rival and bitter enemy, Richard Wagner. The two composers had seen something of one another in Paris. Wagner was then in necessitous circumstances, and Meyerbeer exerted himself to get employment for him, and to make him known to influential people in the musical world. Subsequently, Wagner, while still in France, composed the 'Fliegende Holländer,' to his own libretto. The score, rejected by the theatres of Leipsic and Munich, was sent by its composer to Meyerbeer, who brought about its acceptance at Berlin. Without claiming any extraordinary merit for these good offices of one brother-artist to another, we may, however, say that Meyerbeer's conduct was ill-requited by Wagner.

'Le Prophète,' produced at Paris in 1849, after long and careful preparation, materially added to its composer's fame. Thirteen years had elapsed since the production of its predecessor. Once again the public, looking for something like the 'Huguenots,' was disappointed. Once again it was forced, after a time, to do justice to Meyerbeer's power of *transferring himself*, as it were, according to the dramatic requirements of his theme. But there are fewer elements of popularity in the 'Prophète' than in the 'Huguenots.' The conventional operatic forms are subordinated to declamation and the coherent action of the plot. It contains some of Meyerbeer's grandest thoughts, but the gloomy political and religious fanaticism which constitutes the interest of the drama, and the unimportance of the love-story (the mother being the female character in whom the interest is centred), are features which appeal to the few rather than the many. The work depends for its popularity on colouring and chiaroscuro; the airy *verve* of the ballet-music, and the splendid combinations of scenic and dramatic effects in the fourth act being thrown into strong relief by the prevailing sombre hue.

Meyerbeer's health was beginning to fail, and after this time he spent a part of every autumn at Spa, where he found a temporary refuge from his toils and cares. Probably no great composer ever suffered such a degree of nervous anxiety about his own works as he did. During their composition, and for long after their first completion, he altered and retouched continually, never satisfied and never sure of himself. During the correcting of the parts, the casting of the characters, the 'coaching' of the actors, he never knew, nor allowed any one concerned to know, a moment's peace of mind. Then came endless rehearsals, when he would give the orchestra passages scored in two ways, written in different coloured inks, and try their alternate effect; then the final performance, the ordeal of public opinion and of possible adverse criticism, to which, probably owing to his having been fed with applause and encouragement from his earliest years, he was so painfully susceptible that, as Heine says of him, he fulfilled the true Christian ideal. for he could not rest while there remained one unconverted soul, 'and when that lost sheep was brought back to the fold he rejoiced more over him than over all the rest of the flock that had never gone astray.' This peculiar temperament was probably the cause also of what Chorley calls his 'fidgettiness' in notation, leading him to express the exact amount of a *rallentando* or other inflection of *tempo* by elaborate alterations of time signature, insertions or divisions of bars, giving to many of his pages a patchwork appearance most bewildering to the eye.

Faithful to change, he now challenged his adopted countrymen on their own especial ground by the production at the Opéra Comique in 1854 of 'L'Etoile du Nord.' To this book he had intended to adapt the music of the 'Feldlager in Schlesien,' but his own ideas transforming themselves gradually while he worked on them, there remained at last only six numbers of the earlier work. 'L'Etoile' achieved considerable popularity, although it aroused much animosity among French musicians, jealous of this invasion of their own domain, which they also thought unsuited to the melodramatic style of Meyerbeer. The same may be said of 'Le Pardon de Ploermel' (Dinorah), founded on a Breton idyl, and produced at the Opéra Comique in 1859. Meyerbeer's special powers found no scope in this comparatively circumscribed field. The development of his genius since 1824 was too great not to be apparent in any style of composition, but these French operas, although containing much that is charming, were, like his Italian 'wild oats,' the result of an effort of *will*—the will to be whomsoever he chose.

After 1859 he wrote, at Berlin, two cantatas, and a grand march for the Schiller Centenary Festival, and began a musical drama—never finished—called 'Göthe's Jugendzeit,' introducing several of Goethe's lyrical poems, set to music. His life was overshadowed by the death of many friends and contemporaries, among them his old coadjutor, Scribe, to whom he owed so much.

In 1861 he represented German music at the opening of the London International Exhibition by his 'Overture in the form of a March.' The next winter he was again in Berlin, still working at the 'Africaine,' to which the public looked forward with impatience and curiosity. For years the difficulty of getting a satisfactory cast had stood in the way of the production of this opera. His excessive anxiety and fastidiousness resulted in its being never performed at all during his lifetime. In October, 1863, he returned, for the last time, to Paris. The opera was now finished, and in rehearsal. Still he corrected, polished, touched, and retouched: it occupied his thoughts night and day. But he had delayed too long. On April 23 he was attacked by illness, and on May 2 he died.

The 'Africaine' was performed after his death at the Académie in Paris, April 28, 1865. When it appeared in London (in Italian) on the 22nd July following, the creation by Mdlle. Lucca of the part of 'Selika' will not soon be forgotten by those who had the good fortune to see it.

The work itself has suffered somewhat from the incessant change of intention of its composer. The original conception of the music belongs to the same period as the 'Huguenots'—Meyerbeer's golden age—having occupied him from 1838 till 1843. Laid aside at that time for many years, and the book then undergoing a complete alteration, a second story being engrafted on to the first, the composition, when resumed, was carried on intermittently to the end of his life. The chorus of Bishops, and Nelusko's two airs, for instance, were written in 1858; the first duet between Vasco and Selika in 1857; while the second great duet took its final form as late as the end of 1862. The excessive length of the opera on its first production (when the performance occupied more than six hours) necessitated considerable curtailments

detrimental to coherence of plot. But in spite of all this, the music has a special charm, a kind of exotic fragrance of its own, which will always make it to some minds the most sympathetic of Meyerbeer's works. It is, in fact, the most purely *musical* of them all. None is so melodious or so pathetic, or so free from blemishes of conventionality; in none is the orchestration so tender: it may contain less that is surprising, but it is more imaginative; it approaches the domain of poetry more nearly than any of his other operas.

It is common to speak of Meyerbeer as the founder of a new school. Fétis affirms that whatever faults or failings have been laid to his charge by his opponents, one thing—his originality—has never been called in question. 'All that his works contain,—character, ideas, scenes, rhythm, modulation, instrumentation,—all are his and his only.'

Between this view and that of Wagner, who calls him a 'miserable music-maker,' 'a Jew banker to whom it occurred to compose operas,' there seems an immeasurable gulf. The truth probably may be expressed by saying that he was unique rather than original. No artist exists that is not partly made what he is by the 'accident' of preceding and surrounding circumstances. But on strong creative genius these modifying influences, especially those of contemporary Art, have but a superficial effect, wholly secondary to the individuality which asserts itself throughout, and finally moulds its environment to its own likeness. Meyerbeer's faculty was so determined in its manifestations by surrounding conditions, that, apart from them, it may almost be said to have had no active existence at all. He changed music as often as he changed climate, though a little of each of his successive styles clung to him till the last. A born musician, of extraordinary ability, devoted to Art, and keenly appreciative of the beautiful in all types, with an unlimited capacity for work, helped by the circumstance of wealth which in many another man would have been an excuse for idleness, he seized on the tendencies of his time and became its representative. He left no disciples, for he had no doctrine to bequeath: but he filled a gap which no one else could fill. As a great actor endows the characters he represents with life—since to the union of his personality with the outlines suggested by the dramatist, they do in fact owe to him their objective existence, and are said to be *created* by him—so Meyerbeer, by blending his intellect with the outlines and suggestions of a certain epoch, gave to it a distinct art-existence which it has in his works and in his only. His characters stand out from the canvas with—his contemporary eulogists say—the vividness of Shakespeare's characters; we should say rather of Scott's. The literary analogue to his operas is to be found, not in Tragedy, they are too realistic for that, but in the Historical Novel. Here the men and women of past times live again before our eyes, not as they appear to the Poet, who 'sees into the life of things,' but as they appeared to each other when they walked this earth. This is most compatible with the conditions of the modern stage, and Meyerbeer responds to its every need.

It is consistent with all this that he should have been singularly dependent for the quality of his ideas on the character of his subject. His own original vein of melody was limited, and his constructive skill not such as to supplement the deficiency in sustained idea. This defect may have been partly owing to the shallow pedantry of his instructor, at the time when his youthful talent was developing itself. Wagner (whose antipathy to Meyerbeer's music was rather intensified than otherwise by the fact that some of the operatic reforms on which his own heart was set were first introduced, or at least attempted, by that composer) compares him to a man who, catching the first syllable of another man's speech, thereupon screams out the whole sentence in a breath, without waiting to hear what it really should have been! However this may be, Meyerbeer's own ideas rarely go beyond the first syllable; the rest is built up by a wholly different process, and too often—as though his self-reliance failed him at the crucial point—a melody with a superbly suggestive opening will close with some conventional phrase or vulgar *cadenza*, all the more irritating for this juxtaposition. As a striking case in point it is enough to adduce the baritone song in 'Dinorah.' The first phrase is beautiful. The second, already inferior, seems dragged in by the hair of its head. The third is a masterly augmentation—a *crescendo* on the first. The fourth is a tawdry platitude. Something of the same sort is the case with his harmonies. He often arrests the attention by some chord or modulation quite startling in its force and effect, immediately after which he is apt to collapse, as if frightened by the sudden stroke of his own genius. The modulation will be carried on through a sequence of wearisome sameness, stopping short in some remote key, whence, as if embarrassed how to escape, he will return to where he began by some trite device or awkward makeshift. His orchestral colouring, however, is so full of character, so varied and *saisissant* as to hide many shortcomings in form. His grand combinations of effects can hardly be surpassed, and are so dazzling in their result that the onlooker may well be blinded to the fact that what he gazes on is a consummate piece of mosaic rather than an organic structure.

But in some moments of intense dramatic excitement he rises to the height of the situation as perhaps no one else has done. His very defects stand him here in good stead, for these situations do not lend themselves to evenness of beauty. Such a moment is the last scene in the fourth act of the 'Huguenots,' culminating in the famous duet. Here the situation is supreme, and the music is inseparable from it. Beyond description, beyond criticism, nothing is wanting. The might, the futility, the eternity of Love and Fate—he has caught up the

whole of emotion and uttered it. Whatever was the source of such an inspiration (and the entire scene is said to have been an afterthought) it bears that stamp of truth which makes it a possession for all time. If Meyerbeer lives, it will be in virtue of such moments as these. And if the 'Prophète' may be said to embody his intellectual side, and the 'Africaine' his emotional side, the 'Huguenots' is perhaps the work which best blends the two, and which, most completely typifying its composer, must be considered his masterpiece.

Presenting, as they do, splendid opportunities to singers of dramatic ability, his operas hold the stage, in spite of the exacting character which renders their perfect performance difficult and very rare. They will live long, although many of the ideas and associations which first made them popular belong already to the past.

Subjoined is a list of his principal works:—

OPERAS AND DRAMATIC PIECES.

1. Jephtha's Gelübde. Performed 1811; 2. Les Amours de Teve-linde, (in German, Monodrama for Soprano, Chorus, and Clarinet obbligato, in which the instrumentalist figured as a dramatic personage); 3. Alimelek, or The Two Caliphs (German, Wirth und Gast), 1813; 4. Romilda e Costanza, 1815; 5. Semiramide riconosciuta, 1819; 6. Emma di Resburgo, 1819; 7. Margherita d'Anjou, 1820; 8. L'Esule di Granata, 1822; 9. Das Brandenburger Thor, 1823; 10. Il Crociato in Egitto, 1824; 11. Robert le Diable, 1831; 12. Les Huguenots, 1836; 13. Ein Feldlager in Schlesien, 1840; 14. Struensée (overture and entr'actes), 1846; 15. Le Prophète, 1849; 16. L'Etoile du Nord, 1854; 17. Le Pardon de Ploermel (Ital. Dinorah), 1859; 18. L'Africaine, 1864.

An Oratorio—Gott und die Natur. Performed 1811.

CANTATAS AND VOCAL MUSIC.

7 sacred cantatas of Klopstock, for 4 voices, unaccompanied.

An Gott. Hymn, by Gubitz. For 4 voices.

Le Génie de la Musique à la Tombe de Beethoven. For Solos and Chorus.

Cantata, for 4 voices. Written for the inauguration of Gutenberg's statue at Mayence.

Cantata, 'Maria und ihr Genius.' Composed for the silver wedding of Prince and Princess Charles of Prussia. For Solos and Chorus.

Serenade, 'Braut geleite aus der Heimath.' Composed for the wedding of Princess Louise of Prussia. For 8 voices, unaccompanied.

La Festa nella Corte di Ferrara. Grand Cantata, with tableaux.

March of the Bavarian Archers.

Cantata for 4 voices and Male Chorus, with accompaniment of brass instruments.

Ode to Rauch the sculptor. Solos, Chorus, and Orchestra.

Festal Hymn. Composed for the silver wedding of the King of Prussia. 4 voices and Chorus.

Freundschaft. Quartet for men's voices.

The 91st Psalm, for 8 voices. Composed for the Choir of Berlin Cathedral. Published, in score, by Brandus, at Paris.

Pater Noster, for 4 voices, with organ accompaniment.

12 Psalms, for Double Chorus, unaccompanied. (MS.)

Stabat Mater. (MS.)

Miserere. (MS.)

Te Deum. (MS.)

SONGS.

A large number of Songs with P. F. accompaniment, among which the best known are perhaps 'Le Moine' (for Bass) and 'Das Fischermädchen.' The whole of them have been published, together with 'Le Génie de la Musique à la tombe de Beethoven,' in one volume, entitled 'Quarante Mélodies à une et plusieurs voix,' by Brandus, at Paris.

'Neben Dir,' Song, for Tenor voice, with Violoncello obbligato.

'Des Jäger's Lied,' for Bass voice, with Horns obbligati.

'Dichter's Wahlspruch,' Canon for 3 voices.

'A Venezia,' Barcarole.

'Des Schäfer's Lied,' for Tenor voice with Clarinet obbligato.

And many others of less importance.

INSTRUMENTAL MUSIC.

First Dance, with Torches (Fackeltanz), for brass orchestra. Composed for the King of Bavaria's wedding, 1846.

Second ditto, for the wedding of Princess Charlotte of Prussia, 1850.

Third ditto, for the wedding of Princess Anne of Prussia, 1853.

Grand March, for the Schiller Centenary Festival, 1859.

Overture, in the form of a March, for the opening of the International Exhibition in London. 1862.

Coronation March, 1863.

A quantity of P.F. music, written in youth, all unpublished.

[F.A.M.]

MEZZO, MEZZA (Ital.), 'half' or 'medium'; whence Mezza Voce, 'with restrained force,' and Mezzo Soprano, the female voice intermediate to the Soprano and Contralto. [J.H.]

MICHELI, an extremely useful basso, who sang second parts, serious and comic, on the London stage in most of the operas which were performed, from the 'Buona Figliuola' in 1767 to the 'Viaggiatori Felice' in 1782. He was one of the company engaged by Mr. Gordon, in the autumn of 1766, and seems to have remained a faithful servant of the establishment for 18 years. [J.M.]

MI CONTRA FA. In pure Ecclesiastical Music, the use of the *Tritonus*, or Augmented Fourth, is strictly forbidden; as is also that of its inversion, the *Quinta falsa*, or Diminished Fifth. It is scarcely necessary to say that the presence of these intervals is felt, whenever F and B are brought either into direct or indirect correspondence with each other, whatever may be the Mode in which the contact takes place. Now, according to the system of Solmisation adopted by Guido d'Arezzo, B, the third sound of the *Hexachordon durum*, was called MI; and F, the fourth sound of the *Hexachordon naturale*, was called FA. Mediæval writers, therefore, expressed their abhorrence of the false relation existing between these two sounds, in the proverb—

Mi contra fa est diabolus in musica.

When the use of the Hexachords was superseded by a more modern system of immutable Solmisation (see Solmisation; Hexachord), F still retained its name of FA, while B took that of the newly-added syllable, SI: and the old saw then ran thus—

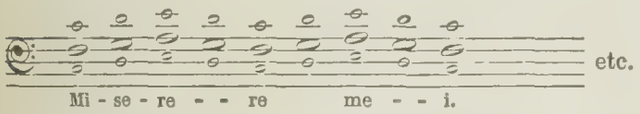
Si contra fa est diabolus in musica.

In this form it became more readily intelligible to musicians unacquainted with the machinery of the Hexachords; while its signification remained unchanged, and its teaching was as sternly enforced as ever. That that teaching continues in full force still is proved by the fact, that neither Pietro Aron, nor any other early writer, ever censured the 'False relation of the Tritone' more severely than Cherubini, who condemns it, with equal rigour, whether it be used as an element of Harmony, or of Melody. [W.S.R.]

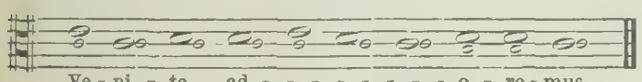
MICROLOGUS (from the Gr. adj. μικρολόγος, having regard to small things—from μικρός, little, and λόγος, a word; Lat. *Sermo brevis*, an Epitome, or Compendium). A name, given, by two celebrated authors, to works containing an epitome of all that was known of music at the time they were written.

I. The Micrologus of Guido d'Arezzo is believed to have been compiled about the year 1024. Valuable MS. copies of this curious work are preserved in the Vatican Library, as well as in the 'King's Library' at Paris, and in other European collections. The treatise was printed, in 1784, by Gerbert, Prince Abbat of S. Blasien, in his great work entitled *Scriptores ecclesiastici de musica*; and, in 1876, Hermesdorff published a copy of the original text, at Treves, side by side with a German translation. Considerable variations occur in the antient MSS.;

but full dependence may be placed upon the readings given in the two printed editions we have mentioned. The work is divided into twenty Chapters, some of which throw great light, both upon the state of musical science at the time of its production, and upon its subsequent progress. The first Chapter is merely introductory; the second treats of the different kinds of Notes; and the third, of 'the Disposition of the Monochord,' which the author strongly recommends as a means of teaching Choristers to sing in tune [see MONOCHORD]: and it is worthy of notice, as a chronological 'land-mark,' that Guido here uses the long-since universally rejected division of Pythagoras, which resolves the Perfect Fourth (*Diatessaron*) into two Greater Tones and a Limma, instead of the truer section of Ptolemy, who divides it into a Greater and Lesser Tone, and a Semitone. Chapter V treats of the Octave, (*Diapason*), and of the seven letters by which its sounds are represented. Chapters XVIII, and XIX, entitled, *De Diaphonia, id est Organi precepta*, and *Dictæ Diaphoniæ per exempla probatio*, are filled with still more interesting matter, and contain a detailed description of the method pursued in accompanying a Plain Chaunt Melody with Discant—here called *Diaphonia*, or *Organum*. Earlier authorities had decreed, that, with the exception of the Octave, no intervals were admissible in Discant, but the Perfect Fourth, and its inversion, the Perfect Fifth, used as in the following example—quoted in the Micrologus—in which the Plain Chaunt occupies the middle part:—



But Guido, though he speaks of the Fourth as the most important interval, permits, also, the use of the Major Second, and the Major and Minor Third; and gives the following example of the manner in which they may be introduced:—



Neither in the chapters we have selected for our illustration, nor in any other part of the work, do we find any mention whatever of the Harmonic Hand, the Solmisation of the Hexachord, or the use of the Lines and Spaces of the Stave; nor do Guido's other writings contain any allusion to these aids to Science sufficiently explicit to identify him as their inventor. His claim to this honour rests entirely on the authority of Franchinus Gafurius, Vicentino, Glareanus, Vincenzo Galilei, Zarlino, and other early writers, whose verdict in his favour is, however, so unanimous, that it would be dangerous to reject the traditions handed down to us through so many consentient records.

II. A less celebrated, but scarcely less valuable treatise, entitled *Musice active Micrologus*, was printed, at Leipzig,—in 1517, by Andreas Ornithoparcus (or Ornitoparchus)—a German Musician, of acknowledged eminence, whose true patronymic, in its mother tongue, was Vogelsang, or Vogelgesang. This work, written in the quaint Latin peculiar to the 16th century, contains the substance of a series of Lectures, delivered by the author at the Universities of Heidelberg, Mainz, and Tübingen; and is divided into four separate books. The First Book, comprising twelve Chapters, treats of the different kinds of Music, of the Clefs, the Ecclesiastical Modes, the Hexachords, the rules of Solmisation and Mutation, the various Intervals, the Division and Use of the Monochord, the laws of *Musica ficta*, Transposition, and the Church Tones. [See MODES, THE ECCLESIASTICAL; HEXACHORD; SOLMISATION; MUTATION; MUSICA FICTA; TONES, THE ECCLESIASTICAL.]

The Second Book, divided into thirteen Chapters, treats of Measured Music, [see MUSICA MENSURATA], and contains an amount of information even more valuable than that conveyed in Morley's 'Plaine and Easie Introduction,' inasmuch as it is expressed in more intelligible language, and freed from the involutions of a cumbrous and frequently vague and meaningless dialogue. In the Second Chapter of this Book, the author describes eight kinds of notes—the Large, Long, Breve, Semibreve, Minim, Crotchet, Quaver, and Semiquaver. The Third Chapter is devoted to Ligatures: and, as the Ligatures in common use at the beginning of the 16th century differed, in some particulars, from those employed in the time of Palestrina, the rules here given are of inestimable value in decyphering early compositions. [See LIGATURE.]

In the Fourth and Fifth Chapters of the Second Book, the author defines the various species of Mode, Time, and Prolation; and, complaining, as bitterly as Morley does, of the diversity of the signs by which they are represented, [see MODE; TIME; PROLATION], proceeds to give his readers directions, which will be found exceedingly useful to those who wish to score the works of Josquin des Prés, and other writers who flourished before the middle of the 16th century. The remaining Chapters treat of Augmentation, Diminution, Rests, Points, Proportion, and other matters of deep interest to the student of Antient Music.

The Third Book, disposed in seven Chapters, is devoted to the consideration of Ecclesiastical Music; and, chiefly, to the Accents used in reciting the Divine Office. [See ACCENTS.]

The Fourth Book, in eight Chapters, contains an epitome of the Laws of Counterpoint; and treats, in detail, of the difference between Consonances and Dissonances, the 'General Precepts of Counterpoint,' the nature of different Voices, the formation of Cadences, the 'Special Precepts of Counterpoint,' the use of Rests in Counterpoint, and the different Styles of Singing. On this last point, the author's remarks are cruelly caustic. He tells us that the English carol, the French sing, the Spanish weep, the Italians of Genoa caper, other Italians bark; but 'the Germans, I am ashamed to say, howl like wolves.'

It is impossible to over-estimate the value of the information contained in this most instructive treatise. The first edition—of which a copy is happily preserved in the Library of the British Museum—is so excessively rare, that, until M. Fétis fortunately discovered an example in the Royal Library at Paris, a reprint, of 1519, was very commonly regarded as the *editio princeps*. The edition described by Burney, and Hawkins, is a much later one, printed, at Cologne, in 1535. In 1609, our own John Dowland printed a correct though deliciously quaint English translation, in London; and it is through the medium of this that the work is best known in this country. Hawkins, indeed, though he mentions the Latin original, gives all his quotations from Dowland's version. [W. S. R.]

MIDSUMMER NIGHT'S DREAM MUSIC, by Mendelssohn, consists of two parts. 1. The Overture was written between July 7 and Aug. 6, 1826, with the latter of which dates the score (in the Berlin Bibliothek) is signed. It appears from Marx's statement (Erinn. ii. 231–3) that the work, as we possess it, is a second attempt. The former one, of which the first half was completed, began with the four chords and the fairy figure. On these followed a regular overture, in which the theme

represented the proceedings of the lovers. Nothing else has survived. The Bergomask dance and other most characteristic features are all new, and appear to have been the result of the representations of Marx, who urged that the overture should not only be formed on the subject of the play but should adopt it as a Programme. It was first performed in public at Stettin in Feb. 1827. Mendelssohn brought it with him to London in 1829, and it was played under his direction at a concert given by Drouet at the Argyll Rooms, on June 24, Midsummer night. On returning from the concert the score was left in a hackney coach and irrecoverably lost.

The coincidence between the melody at the close of the overture and that in the 'Mermaid's song' in the Finale to the 2nd act of Weber's 'Oberon' is no doubt a mere coincidence. Weber's sketch of the Finale was finished in Dresden on [1] Jan. 7, 1826, immediately after which he started for London; and it is very improbable that any of the *motifs* of the opera should have become known before its performance, April 12, 1826. But apart from this, it is so extremely unlike Mendelssohn to adopt a theme from another composer, that we may be perfectly sure that the idea was his own. He introduces it in the beginning of the work, at the first *fortissimo*; it then twice recurs in the course of the working, and appears in an extended form as a cantilène in the coda. Mendelssohn appear to have felt some difficulty as to the notation of the overture. He first wrote it with the fairy subject in quavers, and two minims in a bar. He then published an arrangement for the P. F. with Cramer & Co., which has the fairy subject in semiquavers; and lastly returned to the original notation, in which the score is printed. The score was published with those of the Hebrides and Meeresstille, as '3 concert overtures,' by Breitkopfs, in March or April 1835.

2. The music for the Play was composed in 1843 in obedience to the desire of the King of Prussia, and was produced on the stage at the New Palace at Potsdam, on Oct. 14 of that year, after 11 rehearsals. It contains 12 numbers—Scherzo; Fairy march; 'You spotted snakes' for 2 sopranos and chorus; Melodrama; Intermezzo; Melodrama; Notturno; Andante; Wedding march; Allegro commodo; Bergomask dance; Finale. Its first performance at the Philharmonic was under the composer's direction, May 27, 1844. [G.]

MILAN. A school of music was founded at Milan in 1483 by Lodovico Sforza, Duke of Milan. Some writers affirm that this was the first public school of music in Italy, but that of Bologna, founded in 1482 by Pope Nicholas V, preceded it by one year. Franchino Gafurio of Lodi was the first public professor of music in Milan. He was born at Lodi in 1451, and studied music at Mantua, Verona, Genoa and Naples. Driven from Naples by the inroads of the Turks, he returned to Lodi, where he gave instruction in music till summoned to Milan by Roberto Barni, canon of Lodi. In 1482 he was made chapel-master of the cathedral, and public professor of music in that city. He continued there many years teaching and translating into Latin the ancient Greek writers on music. Among his works are:—1. Theoricum Opus harmonicæ disciplinæ. (Milan, 1492, in fol.) 2. Practica Musicæ utriusque cantus. (Milan, 1496.) 3. De harmonica musicorum instrumentorum. (Milan, 1498.)

This last treatise gave rise to a fierce dispute, embraced by all the musicians of the day, between Gafurio and Spataro, the professor of the rival school at Bologna. To Spataro's attack, entitled 'Errori di Franchino Gafurio,' etc., Gafurio replied in his 'Apologia Franchini Gafurii Musici adversus Joannem Spatarium et complices Bononiensis.' The school of music was for the time overthrown in Milan by the fall of Lodovico Sforza, and Franchino Gafurio retired to Padua, where he became a professor of astrology. He died at the age of 71.

Burney, in his History of Music (vol. iii. p. 153), speaks in the highest terms of Gafurio: 'It was at Milan,' he says, 'that Gafurio composed and polished most of his works; that he was caressed by the first persons of his time for rank and learning; and that he read Lectures by public authority to crowded audiences, for which he had a faculty granted him by the Archbishop and chief magistrates of the city in 1483, which exalted him far above all his cotemporary brethren: and how much he improved the science by his instructions, his lectures and his writings, was testified by the approbation of the whole city; to which may be added the many disciples he formed, and the almost infinite number of volumes

[1] Weber's Life, by his son, ii. 639, 643.

he wrote, among which several will live as long as music and the Latin tongue are understood.'

Costanzo Porta, the pupil of Willaert, Zarlino, Caimo, Gastoldi Biffi, and others, were also eminent composers in the old Lombard school of music, but Claude Monteverde (born at Cremona 1570) was the first to found a new epoch in this school, and to make it one of the richest and most powerful in Italy. He first attracted the notice of the Duke of Mantua by his performance on the Tenor Viola; and by his direction, and applying himself to the study of composition under Ingegnere, the Maestro di Capella of that Court, he became a considerable composer for the Church. The result of his studies appears in some valuable innovations in the old rules of counterpoint, which, although they excited much cavil and discussion at the time, were soon adopted not only by dilettanti but professors.

Besides making these important discoveries, he is considered to be one of the first inventors of recitative in the Musical Drama. Orazio Vecchi, born about 1550, was another writer of operatic music of the Lombard school. His opera of 'L' Amfi Parnaso,' was one of the earliest operatic representations. These and many other writers of dramatic music were formed in the Lombard school, which was also illustrated by composers for the Church, such as Viadana, Noscimbeni, Simpliciano Olivo, Giuseppe Vignati, Antonio Rosetti, Gio. Andrea Fioroni, etc., etc.

In the first part of the 18th century the famous school of singing of Giuseppe Ferdinando Brivio flourished at Milan, but there does not seem to have been any special 'Accademia' or Conservatorio for public musical instruction till the year 1807, when, by a decree of Napoleon Buonaparte, the present Royal Conservatorio of Milan was established.

By order of the viceroy, Eugène Beauharnais, the building annexed to the church of Santa Maria della Passione, formerly a convent, was set apart for the new musical institute. It was opened on September 8, 1808, and formally inaugurated by the Marquis de Brème, minister of the interior; and it was to be modelled on the pattern of the old Conservatorios of Naples.

The first president of the Conservatorio was Bonifazio Asioli, chosen by the celebrated Gian Simone Mayr, who traced out the rules for the new institution; and the first professors of the various branches of musical instruction were Federigi, Secchi, Ray, Piantanida, Negri, Rolla, Sturioni, Andredi, Adami, Belloli, Buccinelli. In 1814, on account of the large increase of pupils, two extra professors were nominated. During the years 1848 and 1849, when the Austrians were in Milan, the Conservatorio was also occupied by their troops, but the musical instruction of the pupils was carried on in the private houses of the professors. In 1850 the Conservatorio was reopened under the presidency of Lauro Rossi on a larger scale, with a considerable change in its form of government, and fresh provision was made for instruction in the organ, the harp, the history and philosophy of music. In 1858 a school of instruction in singing for the performers at the royal theatres was likewise added.

An Academical Council was instituted in 1864, to determine what prizes should be distributed to the pupils, and every year those who distinguish themselves most at the yearly examinations receive a monthly pension arising out of the endowment of the Institution. In this same year the 'Società del Quartetto' was formed, of which many of the most notable musicians of the present day are honorary members. Every year this society causes six or eight concerts of classical music to be performed, and offers a prize for the best musical composition on a given subject. The 'Scuole popolari' for the lower classes of the people, at the cost of the State, are also offshoots of the great Milanese Conservatorio.

The programme of musical instruction in the Royal Conservatorio, as translated from the report of January 1873, of the president, Signor Lodovico Melzi, comprehends two kinds of instruction in music, artistic and literary, and these may again be subdivided into a preliminary and a superior course of instruction in either of these two branches.

The Conservatorio professes to give a complete musical and a fair literary education. The musical instruction is directed by 29 Professors, and by about 30 Teachers selected from the best pupils of both sexes. For the literary branch there are 7 Professors. There are two other Professors, one for deportment, pantomine, and ballet, the other for drill.

Each pupil previous to admission must pass through a preliminary examination to see if he has any capacity for the branch of musical instruction he intends to pursue. This examination when passed only gives the pupil a right to enter the Conservatorio probationally for a year, and not till he has passed the second examination at the end of the probationary year is he admitted as a pupil. On admission he pays an entrance fee of 20 lire, and every year, until his studies are completed, he pays to the Institute 5 lire monthly, with the exception of the months of September and October.

Nine years are allowed to each pupil for study in composition, and for attaining proficiency in *stringed instruments*, ten years for wind instruments, eleven years for instruction in singing.

Since its foundation, to the date above named, the Conservatorio had instructed 1627 pupils, of whom 124 finished their course in 1872. [C.M.P.]

MILANOLLO, the sisters, celebrated violinists, were both born at Sevigliano near Turin, where their father lived as a poor silk-spinner; Teresa in 1827, Maria in 1832. Teresa was but four years of age when she heard a violin solo in a mass, and was so much impressed by the sound of the instrument that from that moment she could think and talk of nothing else, and would not rest till she got a fiddle of her own. Her first teacher was Giovanni Ferrero, a local musician, and afterwards Gebbaro and Mora

at Turin. She was not yet seven years old when she made her first public appearance at Turin and other towns of Piedmont. But the pecuniary results of these concerts being quite insufficient to extract the family from the state of absolute poverty they were living in, the father was advised to emigrate to France. Accordingly he set out with his wife and two children, Teresa, then seven years old, and Maria, an infant in arms, and after having crossed the Alps on foot, the little caravan made its first halt at Marseilles. Here Teresa played three or four times with much success, and then went to Paris, furnished with an introduction to Lafont, who took much interest in her talent and instructed her for some time. After having appeared with much success at Paris, she travelled for some time with Lafont in Belgium and Holland. She next came to England, appeared in London and the provinces and on a tour through Wales, played within less than a month in forty concerts with Bochsa, the harpist, who however, according to Fétis, absconded with the whole of the proceeds. Meanwhile Teresa had begun for some time to instruct her younger sister Maria, who shewed a talent hardly inferior to her own, and who began to play in public at the age of six. Henceforth the two sisters invariably appeared together, and on their journeys through France, Germany, and Italy were received everywhere with the greatest enthusiasm. Their performances shewed all the best peculiarities of the Franco-Belgian school of violin-playing—great neatness of execution of the left hand, facility of bowing, gracefulness and piquancy of style. Teresa's playing appears to have been distinguished by much warmth of feeling, while Maria, the younger, had remarkable vigour and boldness of execution. These qualities, combined with the charm of their personal appearance, never failed to enlist the sympathies of the public. At Vienna especially, where the sisters gave within a few months not less than 25 concerts, their success was almost unprecedented. They visited England once more in 1845, and played at the Philharmonic on June 9. Their reception in England appears hardly to have been in accordance with their enormous continental reputation, and the critics of the day severely condemn the exaggerated style and incomplete technique of the sisters—with what right it is difficult to say. In 1848 Maria, the younger, died suddenly of rapid consumption at Paris, and was buried at Père la Chaise. Teresa after some time resumed her life of travel, but since her marriage with M. Parmentier, an eminent French military engineer, has retired into private life. [P. D.]

MILDER-HAUPTMANN, Pauline Anna, a celebrated German singer and tragic actress, the daughter of Milder, a courier in the Austrian service, was born at Constantinople in 1785. She lived afterwards at Vienna, where, having lost her father, she was compelled to enter the service of a lady of rank as lady's-maid. Her fine voice and handsome person attracted the notice of Schikaneder, the well-known Viennese manager, who urged her to enter the profession, offering to be responsible for her musical education and to superintend her début on the stage. The offer was accepted, and she became the pupil of an Italian singing-master named Tomascelli, and subsequently of Salieri. She made her first public appearance on April 9, 1803, as Juno, in Süssmayer's opera 'Der Spiegel von Arkadien.' As an artist, she seems to have profited but little by instruction. With the kind of Oriental indolence that always distinguished her, she was content to rely for success on her splendid natural gifts, which were such as to procure for her, almost at once, an engagement at the Imperial Court theatre. That the part of 'Fidelio' should have been written for her is sufficient testimony to the capabilities of the organ which caused old Haydn to say to her 'Dear child, you have a voice like a house!'

Her fame spread rapidly, and in 1808 she made a brilliantly successful professional tour, obtaining, on her return to Vienna, a fresh engagement at Court as *prima donna assoluta*. In 1810 Anna Milder married a rich jeweller named Hauptmann. Her greatest series of triumphs was achieved at Berlin, where she appeared in Gluck's 'Iphigenia in Tauris,' in 1812. After singing with equal *éclat* in other great German towns, she contracted, in 1816, a permanent engagement with the royal theatre of Berlin, where for twelve years she reigned supreme. She played in all the principal *rôles* in the répertoire, but her great parts were those of the classical heroines of Gluck — Iphigenia, Alcestis, Armida — for which she was pre-eminently fitted, both by her imposing presence, and by her magnificent soprano voice, full, rich, and flawless, which both in amount and quality seems to have left nothing to desire. It was, however, unwieldy, and this natural inflexibility so little overcome by art as to be incapable of the simplest trill or other florid embellishment. At times, especially in her later years, she attempted some lighter parts, such as Mozart's Donna Elvira, and Susanna, but her lack of execution prevented her from succeeding in these as she did in Weigl's opera 'Die schweizer Familie' (made celebrated by her impersonation of Emmeline), or in the broad declamatory style of Gluck. Although 'Fidelio' became one of her principal *rôles*, her performance in this opera was never either vocally or dramatically irreproachable. Thayer (Life of Beethoven, ii. 290) relates a conversation with her, in 1836, when she told him what 'hard fights' she used to have with the master about some passages in the Adagio of the great scena in E major, described by her as 'ugly,' 'unvocal,' and 'inimical (*widerstrebend*) to her organ.' All was in vain, however, until in 1814 she declared herself resolved never again to appear in the part, if she had to sing this ungrateful air as it stood—a threat which proved effective.

Her manner in society is described as cold and apathetic, and her degree of musical culture so

small that she could only learn her parts by having them played to her over and over again. In spite of this (in which indeed she is not singular), she was as much admired by composers and critics as by the court and the public. Zelter describes her golden voice as 'positively belonging to the class of rarities,' and herself as 'the only singer who gives you complete satisfaction.' There is no doubt that her success and steady hold on the public favour had a most important influence in upholding German opera and the classical style, and in counteracting the frivolous fashion for foreign talent of every kind which reigned at Berlin.

Chorley tells an amusing story, on the authority of an eye-witness, of an occasion when Mme. Milder's stately calm was for a moment overcome during one of her magnificent impersonations of Gluck's heroines. 'At the moment where Blum, the bass singer, who used to strengthen himself for the part of Hercules upon champagne, was carrying off the colossal Alcestis from the shades below, Queen Milder, aware of the risk she ran in arms so unsteady, and overpowered with sudden terror, exclaimed, "Herr Jesu! Ich falle!" This exclamation elicited a simultaneous roar from all parts of the theatre. And from that day forward, Milder was *led*, not carried, from the stage by the God of Strength.' (Modern German Music, vol. i. p. 186.)

In 1829 she abdicated her sceptre in Berlin, owing to misunderstandings and differences with the opera-director, Spontini. She then visited Russia, Sweden, and Denmark, but her voice was failing fast. Her last public appearance was at Vienna in 1836, two years before her death, which happened at Berlin on May 29, 1838. [F. A. M.]

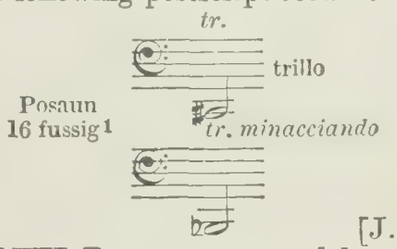
MILITARY DRUM is another term for the side drum. [DRUM, 3.] [V. de P.]

MILLER, EDWARD, Mus. Doc., born at Norwich in 1731, studied music under Dr. Burney, and was elected organist of Doncaster July 25, 1756, upon the recommendation of Nares. He graduated as Mus. Doc. at Cambridge in 1786. He died at Doncaster, Sept. 12, 1807. His compositions comprise elegies, songs, harpsichord sonatas, flute solos, psalm tunes, etc., and he was the author of 'The Elements of Thorough-bass and Composition' and a 'History of Doncaster,' 1804. [W. H. H.]

MILLICO, GIUSEPPE, a good composer and better singer, was born in 1739 at Terlizzi (Poviglio), Modena. Gluck, who heard him in Italy, thought him one of the greatest soprani of his day, and, when Millico visited Vienna in 1772, and was attached to the Court Theatre, Gluck showed his estimation of him by choosing him as singing-master for his own niece. In the spring of that year, Millico had already come to London, where however he found the public but little disposed in his favour. Though a judicious artist and a most worthy man, he was not an Adonis, and his voice had received its greatest beauties from art (Burney); 'Of a singularly dark complexion, ill-made, and uncommonly plain in features' (Lord Mount-Edgcumbe). By the end of the season, Millico had reversed the first unfavourable impression, and his benefit was a bumper. He had then appeared in 'Artaserse' and 'Sofonisba,' and he took part in 'Il Cid' and 'Tamerlano' in the following year. In 1774 he appeared here in 'Perseo,' after which he went to Berlin. In 1780 he was in Italy again, attached to the Neapolitan Court, where he is said to have profited by his own influence to oppress other artists. Fétis gives a list of his compositions, including 3 operas, 3 cantatas, a collection of canzonette, published in London (1777), and other pieces. [J.M.]

MILTON, JOHN, father of the poet, was of an ancient Roman Catholic family seated at Milton, Oxfordshire. He was educated at Christ Church, Oxford, but being disinherited for embracing Protestantism, commenced business as a scrivener in Bread Street, Cheapside, at the sign of the Spread Eagle, the family arms. He was a skilled musician, and admitted into fellowship with the best composers of his time. To 'The Triumphes of Oriana,' 1601, he contributed the six-part madrigal 'Fayre Oriana in the morne,' and to Leighton's 'Teares or Lamentacions,' 1614, four motets. Ravenscroft's 'Whole Booke of Psalmes,' 1621, contains some tunes by him, among them the well-known 'York' and 'Norwich.' He is said to have composed an 'In Nomine' in 40 parts, and presented it to a Polish prince, who rewarded him with a gold chain and medal. His musical abilities are celebrated by his son in a Latin poem, 'Ad Patrem.' He died at an advanced age in March 1646-7, and was buried at St. Giles', Cripplegate. Specimens of his compositions are given by both Hawkins and Burney. [W. H. H.]

MINACCIANDO, 'threateningly'; a term used once by Beethoven, in a letter to Schott, dated Jan. 28, 1826 (Nohl, Neue Briefe Beethoven's, p. 282), in which, after some playful abuse, the following postscript occurs :—



[J.A.F.M.]

MINGOTTI, REGINA, a very celebrated singer, whose family name was VALENTINI, was born at Naples, of German parents, in 1728. Her father, an officer in the Austrian service, being ordered to Grätz in Silesia in the same year, took his daughter with him. Here he died, leaving her to the care of an uncle, who placed her in the Ursuline Convent, where she received her first instruction in music. At the age of 14, however, she lost her uncle by death, and the pension which ensured her an asylum with the nuns ceased with his life. Compelled to return to her family, she spent some time very unhappily.

[1] Trombone, 16 ft.

In order to escape from this miserable life, though still a mere child, she married Mingotti, an old Venetian musician, impresario of the Dresden opera. Perceiving all the advantage that might be derived from the great gifts of his young wife, Mingotti placed her at once under the tuition of Porpora, where she made rapid progress in her art. From a slender salary, she soon rose to receiving more considerable pay, while her growing popularity aroused the jealousy of a powerful and established rival, the celebrated Faustina, who actually vacated the field and left Dresden for Italy. Soon afterwards the younger singer went also to Italy, and obtained a lucrative engagement at Naples. There she appeared with great *éclat* (1748) in Galuppi's 'L'Olimpiade,' astonishing the Italians no less by the purity of her pronunciation than by the beauty of her voice and style. Engagements were immediately offered her for many of the great Italian operas, but she refused all in order to return to Dresden, where she was already engaged. Here she played again in 'L'Olimpiade' with enormous success. Faustina and her husband, Hasse the composer, were also now again in Dresden; and Burney tells an anecdote which, if true, shows that their jealous feeling towards Mingotti had not ceased. According to this story, which he had from the lips of Mingotti herself, Hasse composed a new air specially for the young singer, which she was to sing in his 'Demofoonte' (1748). In spite of her success in brilliant music, it was still supposed that she was incapable of singing a slow and pathetic air. Accordingly, Hasse had written for her an interesting *Adagio*, with which she was much taken, till she noticed that the accompaniment was for violins, *pizzicati*, probably with the intention of leading her to sing out of tune for want of proper support. By dint of study, however, she mastered the difficulty, and sang the song in such a way as to convert her detractors to admiration. From Dresden she went to Spain (1751), where she sang with Gizziello in the operas directed by Farinelli, who was so strict a disciplinarian that he would not allow her to sing anywhere but at the Opera, nor even to practise in a room that looked on the street! Burney illustrates this with another anecdote, too long to quote here.

After spending two years in Spain, Mingotti went to Paris, and thence to London for the first time. Her arrival here retrieved the fortunes of the opera in England, which were in a languishing condition. In November, 1755, Jommelli's 'Andromaca' was performed, but 'a damp was thrown on its success by the indisposition of Mingotti' (Burney). She told that writer, indeed, in 1772, 'that she was frequently hissed by the English for having a tooth-ache, a cold, or a fever, to which the good people of England will readily allow every human being is liable, except an actor or a singer.' She seems to have been a very accomplished singer and actress; her only fault, if she had one, being a little want of feminine grace and softness.

Her contentions with Vaneschi, the manager, occasioned as many private quarrels and feuds as the disputes about Handel and Buononcini, Gluck and Piccinni, or Mara and Todi. Mingotti addressed a letter 'to the town,' but in such cases 'not a word which either party says is believed' (Burney). As the story goes, on one occasion, Mrs. Fox Lane, afterwards Lady Bingley, a zealous friend and protectress of Mingotti, having asked the Hon. General Carey his decided opinion as to the disputes between her *protégée* and Vaneschi; the General, after listening patiently to her long statement of the *casus belli*, at length retorted 'And pray, ma'am, who is Madam Mingotti?' 'Get out of my house,' answered the incensed lady, 'you shall never hear her sing another note at my concerts, as long as you live.' Vaneschi gave way, and Mingotti (with Giardini) carried the same company through the next winter with great *éclat*,—but little profit, in spite of appearances; and, after this season, the new managers gave up the undertaking.

At the close of the season of 1763, Signora Mattei left England, and Giardini and Mingotti again resumed the reins of opera-government, and Mingotti sang in 'Cleonice' ('in the decline of her favour'—Burney), 'Siroe,' 'Enea e Lavinia,' and 'Leucippe e Zenocrita.' And here the reign of Giardini and Mingotti seems to have ended, after an inauspicious season (Burney). She afterwards sang with considerable success in the principal cities of Italy, but she always regarded Dresden as her home, during the life of the Elector Augustus. In 1772 she was settled at Munich, living comfortably, well received at court, and esteemed by all such as were able to appreciate her understanding and conversation. It gave Dr. Burney 'great pleasure to hear her speak concerning practical music, which she did with as much intelligence as any *maestro di Capella* with whom he ever conversed. Her knowledge in singing, and powers of expression, in different styles, were still amazing. She spoke three languages, German, French, and Italian, so well that it was difficult to say which of them was her own. 'English she likewise spoke, and Spanish, well enough to converse in them, and understood Latin; but, in the three languages first mentioned, she was truly eloquent.' She afterwards played and sang to him 'for near four hours,' when he thought her voice better than when she was in England.

In 1787 Mingotti retired to Neuborg on the Danube, where she died in 1807, at the age of 79. Her portrait in crayons, by Mengs, is in the Dresden Gallery. It represents her, when young, with a piece of music in her hand; and, if faithful, it makes her more nearly beautiful than it was easy for those who knew her later in life to believe her ever to have been. 'She is painted in youth, plumpness, and with a very expressive countenance.' The dog in Hogarth's 'Lady's last stake' is said to be a portrait of Mingotti's dog. [J.M.]

MINIM (Lat. and Ital. *Minima*; Fr. *Blanche*; Germ. *Halbe Note*). A note, equal in duration

to the half of a Semibreve; and divisible into two Crotchets (Semiminimæ majores), or four Quavers (Semiminimæ minores).

The Minim derives its name from the fact, that, until the invention of the Crotchet, it was the shortest note in use. We first find it mentioned, early in the 14th century, by Joannes de Muris; though Morley says it was employed by Philippus de Vitriaco, who flourished during the latter half of the 13th. Its form has undergone but little change, in modern times. It was always an open note, with a tail. Formerly its head was lozenge-shaped, and its tail turned always upwards: now, the head is round, inclining to oval, and the tail may turn either upwards, or downwards.

In antient music, the Minim was always imperfect: that is to say, it was divisible into two Crotchets only, and not into three. As time progressed, a quasi-exception to this rule was afforded by the *Hemiolia minor*: but it was never used in ligature. [See HEMIOLIA; LIGATURE.]

The Minim Rest resembles that of the Semibreve, except that it is placed above the line, instead of below it—a peculiarity which is observed in the oldest MSS. in which Minims occur. [W.S.R.]

MINOR. When intervals have two forms which are alike consonant or alike dissonant, these are distinguished as major and minor. The minor form is always a semitone less than the major.

The consonances which have minor forms are thirds and sixths; the dissonances are seconds, sevenths and ninths; of these the minor thirds and sixths are the roughest of consonances, and the minor second is the roughest and the minor seventh the smoothest of dissonances.

Minor scales are so called because their chief characteristic is their third being minor. Minor tones are less than major by a comma. [See MAJOR.] [C.H.H.P.]

MINOR CANONS, priests in cathedrals and collegiate churches whose duty it is to superintend the performance of daily service. They are not of the chapter, but rank after the canons and prebendaries. They were formerly called vicars choral, and were originally appointed as deputies of the canons for church purposes, their number being regulated by the number of the capitular members. Laymen were frequently appointed as vicars choral, but it is necessary that minor canons should be in holy orders. According to the statutes, they should also be skilled in church music. (Hook's Church Dictionary.) [W.B.S.]

MINUET (Fr. *Menuet*; Ger. *Menuett*; Ital. *Minuetto*). A piece of music in dance rhythm, and of French origin. The name is derived from the French *menu* (small), and refers to the short steps of the dance. The exact date of its first invention is uncertain. According to some authorities it came originally from the province of Poitou, while others say that the first was composed by Lully. In its earliest form the minuet consisted of two eight-bar phrases, in 3-4 time, each of which was repeated; sometimes commencing on the third, but more frequently upon the first, beat of the bar, and of a very moderate degree of movement. The well-known minuet in the first finale of 'Don Giovanni' is a very faithful reproduction of this original form of the dance. As a complement to the short movement, a second minuet was soon added, similar in form to the first, but contrasted in feeling. This was mostly written in three-part harmony, whence it received its name Trio, a name retained down to the present time, long after the restriction as to the number of parts has been abandoned. A further enlargement in the form of the minuet consisted in the extension of the number of bars, especially in the second half of the dance, which frequently contained sixteen, or even more, bars, instead of the original eight. It is in this form that it is mostly found in the Suite.

In the works of the composers of the 18th century, especially Handel and Bach, the minuet is by no means an indispensable part of the Suite. As compared with some other movements, such as the Allemande, Courante, or Sarabande, it may be said to be of somewhat infrequent occurrence. Its usual position in the Suite is among the miscellaneous dances, which are to be found between the Sarabande and the Gigue, though we exceptionally meet with it in the 3rd Suite of Handel's second set as a final movement, and with three variations. In Handel, moreover, it is very rare to find the second minuet (or Trio) following the first. On the other hand, this composer frequently gives considerable development to each section of the movement, as in the 8th Suite of the second set, where the minuet (written, by the way, as is frequently the case with Handel, in 3-8 instead of 3-4 time), contains 34 bars in the first part, and 71 in the second. This piece has little of the character of the ordinary minuet excepting the rhythm. Handel also frequently finishes the overtures of his operas and oratorios with a minuet; one of the best-known instances will be found in the overture to 'Samson.'

The minuets of Bach are remarkable for their variety of form and character. In the Partita in B♭ (No. 1) the first minuet contains 16 bars in the first section and 22 in the second; while the second minuet is quite in the old form, consisting of two parts of eight bars each. The minuet of the fourth Partita (in D) has no Trio, and its sections contain the first eight, and the second twenty bars. In a Suite for Clavier in E♭ (Book 3, No. 7, of the Peters edition of Bach's works), we find an early example of a frequent modern practice. The first minuet is in E♭ major, and the second in the tonic minor. It may be remarked in passing that Bach never uses the term 'Trio' for the second minuet, unless it is actually written in three parts. In the 4th of the six Sonatas for flute and clavier we meet with another variation from the custom of the day which ordained that all movements of a suite must be in the same key. We here see the first minuet in C major, and the second in A minor—a precedent

often followed in more modern works. Another example of the same relation of keys will be found in the fourth of the so-called 'English Suites'—the only one which contains a minuet. Here the first minuet is in F and the second in D minor. Of the six French Suites four have minuets, two of which are worth noticing. In the second minuet of the 1st Suite the latter half is not repeated—a very rare thing; and in the 3rd Suite we meet with a genuine Trio in three parts throughout, and at the end the indication 'Menuet da Capo.' Though it was always understood that the first minuet was to be repeated after the second, it is very rare at this date to find the direction expressly given. One more interesting innovation of Bach's remains to be mentioned. In his great Concerto in F for solo violin, two horns, three oboes, bassoon, and strings, will be found a minuet with three trios, after each of which the minuet is repeated. (Bach Ges. xix. p. 27). We shall presently see that Mozart, half a century later, did the same thing.

The historic importance of the minuet arises from the fact that, unlike the other ancient dances, it has not become obsolete, but continues to hold a place in the symphony (the descendant of the old Suite), and in other large instrumental works written in the same form. The first composer to introduce the minuet into the symphony appears to have been Haydn; for in the works of this class which preceded his (those of C. P. E. Bach, Sammartini, and others) we find only three movements. And even with Haydn (as also in many of the earlier works of Mozart) we find the minuet at first by no means of invariable occurrence. On the other hand, we sometimes see in the same work two minuets, each with a trio, one before and one after the slow movement. Examples will be met with in Haydn's first twelve quartets (ops. 1 and 2) and also in some of Mozart's serenatas, divertimenti, etc. (Köchel's Catalogue, Nos. 63, 99, 204, 247, and others.) The detailed examination of the numerous minuets which Haydn has left us in his quartets and symphonies would be deeply interesting, but would lead us too far. Only a few of the prominent characteristics can be mentioned. While in general retaining the old form of the minuet, Haydn greatly changes its spirit. The original dance was stately in character, and somewhat slow. With Haydn its prevailing tone was light-hearted humour, sometimes even developing into downright fun. The time becomes quicker. While in the earlier works the most frequent indications are *Allegretto,* or *Allegro ma non troppo,* we find in the later quartets more than once a *Presto* (ops. 76 and 77). These minuets thus become an anticipation of the Beethoven scherzo. Curiously enough, in one set of quartets, and in only one (op. 33), Haydn designates this movement 'Scherzando,' in Nos. 1 and 2, and 'Scherzo' in Nos. 3 to 6. As the tempo here is not more rapid than in the other minuets, it is evident that the term only refers to the character of the music, and is not used in the modern sense. As we learn from Pohl's 'Haydn' (p. 332) that the composer carefully preserved the chronological order of the quartets in numbering them, we are in a position to trace the gradual development of the minuet through the entire series. We find one of Haydn's innovations in some of the later works, in putting the trio into a key more remote from that of the minuet, instead of into one of those more nearly related (Quartet in F, op. 72, No. 2—minuet in F, trio in D♭; Quartet in C, op. 74, No. 1—minuet in C, trio in A major). This relation of the tonics was a favourite one with Beethoven. In only one of Haydn's quartets (op. 9, No. 4), do we find a trio in three parts, though the name is always given to the second minuet. A curious variation from the ordinary form is to be seen in the quartet in E♭, op. 2, No. 3. Here the trio of the second minuet has three variations, one of which is played, instead of the original trio, after each repetition of the minuet.

It is no uncommon thing in the works of Haydn to meet with another variety of the minuet. The finales of his smaller works are often written in a 'Tempo di Minuetto.' Here the regular subdivisions of minuet and trio, sometimes also the double bars and repeats, are abandoned. In the piano sonatas and trios many examples will be met with. A well-known instance of a similar movement by Mozart is furnished in the finale of his sonata in F for piano and violin. Haydn's predilection for the minuet is further shown by the fact that in several of his sonatas in three movements the minuet and trio replace the slow movement, which is altogether wanting.

With Mozart the form of the minuet is identical with that of Haydn's; it is the spirit that is different. Suavity, tenderness, and grace, rather than overflowing animal spirits, are now the prevailing characteristics. It is in Mozart's concerted instrumental works (serenatas, etc.) that his minuets must be chiefly studied; curiously enough, they are singularly rare in his pianoforte compositions. Of seventeen solo sonatas, only two (those in E♭ and A major) contain minuets; while out of 42 sonatas for piano and violin, minuets are only found in four as intermediate movements, though in the earlier works a 'Tempo di Minuetto' often forms the finale. In many of the earlier symphonies also we find only three movements, and even in several of the later and finer symphonies (*e.g.* Köchel, Nos. 297, 338, 444, 504) the minuet is wanting. On the other hand, in the serenades and divertimenti, especial prominence is given to this movement. Frequently two minuets are to be found, and in some cases (Köchel, Nos. 100, 203, 250) three are to be met with. The variety of character and colouring in these minuets is the more striking as the form is approximately the same in all. One example will suffice in illustration. In the Divertimento in D (Köchel, 131), for strings, flute, oboe, bassoon, and four horns, there are two minuets, the first of which has three trios and the second two. The first minuet in D major is given to strings alone; the first trio (also in D major) is a quartet for the four horns; the second (in G) is a trio for flute, oboe, and bassoon; while the third (in D

minor) is for the seven wind instruments in combination. After the last repetition of the minuet, a coda for all the instruments concludes the movement. The three trios are as strongly contrasted in musical character as in orchestral colour. Many similar instances might easily be given from the works of Mozart.

To Beethoven we owe the transformation of the minuet into the Scherzo. Even in his first works this alteration is made. Of the three piano trios, op. 1, the first and second have a scherzo, and only the third a minuet. The examination of the different varieties of the scherzo will be treated elsewhere (SCHERZO); it will be sufficient here to explain that the difference between the minuet and the scherzo is one of character rather than of form. The time is frequently quicker; the rhythm is more varied (see, for instance, the scherzi in Beethoven's 4th Symphony, in the Sonata, op. 28, and in the Bagatelle, op. 33, No. 2); and sometimes, as in the 7th and 9th Symphonies, the form itself is enlarged. Still Beethoven does not entirely abandon the older minuet. Out of 63 examples of the minuet or scherzo (not counting those in common time) to be found in his works, 17 are entitled 'Minuet,' or 'Tempo di Minuetto.' Besides this, in two works (the Piano and Violin Sonata in G, op. 30, No. 3, and the Piano Solo Sonata in E♭, op. 31, No. 3), the Tempo di Minuetto takes the place of the slow movement; in the Sonata, op. 49, No. 2, it serves as finale (as with Haydn and Mozart); and in the Sonata, op. 54, the first movement is a Tempo di Minuetto. In these minuets we sometimes find a grace akin to that of Mozart (Sonata, op. 10, No. 3; Septet), sometimes, as it were, a reflexion of the humour of Haydn (Sonata, op. 22); but more often the purest individuality of Beethoven himself. In some cases a movement is entitled 'Minuet,' though its character is decidedly that of the scherzo (*e.g.* in the 1st Symphony). The only one of the nine symphonies in which a minuet of the old style is to be seen is No. 8. Occasionally we meet in Beethoven with minuets simply entitled 'Allegretto' (*e.g.* Sonata quasi Fantasia, op. 27, No. 2; Trio in E♭, op. 70, No. 2); in other cases the same term is used for what is in reality a veritable scherzo (Sonatas, op. 14, no. 1, op. 27, no. 1). It may be said that with Beethoven the minuet reached its highest development.

The transformation of the minuet into the scherzo, just adverted to, has had an important influence on modern composers. In the large majority of works produced since the time of Beethoven, the scherzo has replaced its predecessor. Occasionally the older form still appears, as in Mendelssohn's 'Italian Symphony,' the third movement of which is a genuine minuet, and in the second movement of Schumann's E♭ Symphony; but with Beethoven the history of the minuet practically closes. One of the best specimens of a modern minuet will be seen in Sterndale Bennett's Symphony in G minor. [E.P.]

MIREILLE. Opera in 5 acts; words by M. Carré (from Mirèio, a Provençal poem by Mistral), music by Gounod. Produced at the Théatre Lyrique March 19, 1864. Reduced to 3 acts, with the addition of the waltz, and reproduced Dec. 15. 1864 at the same theatre. In London, in Italian and 5 acts, as Mirella, at Her Majesty's Theatre, July 5, 1864. [G.]

MISERERE. The Psalm, *Miserere mei Deus*, as sung in the Sistine Chapel, has excited more admiration, and attained a more lasting celebrity, than any other musical performance on record. Its effect has been described, over and over again, in sober Histories, Guide-books, and Journals without end; but, never very satisfactorily. In truth, it is difficult to convey, in intelligible language, any idea of the profound impression it never fails to produce upon the minds of all who hear it; since it owes its irresistible charm, less to the presence of any easily definable characteristic, than to a combination of circumstances, each of which influences the feelings of the listener in its own peculiar way. Chief among these are, the extraordinary solemnity of the Service into which it is introduced; the richness of its simple harmonies; and, the consummate art with which it is sung: on each of which points a few words of explanation will be necessary.

The *Miserere* forms part of the Service called *Tenebræ*; which is sung, late in the afternoon, on three days, only, in the year—the Wednesday in Holy Week, Maundy Thursday, and Good Friday. [See TENEBRÆ.] The Office is an exceedingly long one: consisting, besides the Miserere itself, of sixteen Psalms and a Canticle from the Old Testament, (sung, with their proper Antiphons, in fourteen divisions); nine Lessons; as many Responsories; and the Canticle, Benedictus Dominus Deus Israel. The whole of this, with the exception of the First Lesson, [see LAMENTATIONS], and the Responsories, is sung in unisonous Plain Chaunt: and the sternness of this antient music forms the most striking possible preparation for the plaintive tones which are to follow, while the Ceremonial with which it is accompanied adds immeasurably to the intended effect.

At the beginning of the Service, the Chapel is lighted by six tall Candles, on the Altar; and fifteen others, placed on a large triangular Candlestick, in front. Of these last, one is extinguished at the end of each division of the Psalms. The six Altar-Candles are put out, one by one, during the singing of Benedictus. The only light then remaining is the uppermost one on the triangular Candlestick. This is removed, and carried behind the Altar, where it is completely hidden from view, though not extinguished. The Chapel is, by this time, so dark, that it is only just possible to discern the red Vestments of the Pope, as he kneels at his Genuflexorium, in front of the Altar. Meanwhile, a single Soprano voice sings, with exquisite expression, the Antiphon, 'Christus factus est pro nobis obediens usque ad mortem.' An awful silence follows, during which the Paternoster is said in secret—and the first sad wail of the Miserere then swells, from the softest possible *pianissimo*, into a bitter cry for mercy, so thrilling

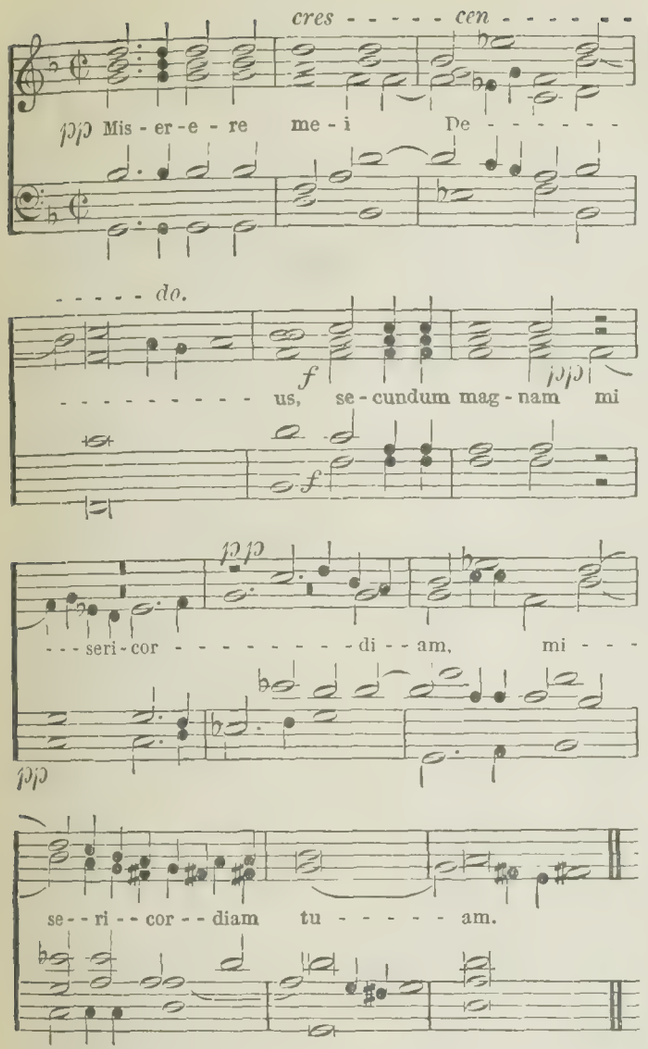
in its effect, that Mendelssohn—the last man in the world to give way to unnatural excitement—describes this part of the Service as 'the most sublime moment of the whole.'

There is reason to believe that the idea of adapting the Miserere to music of a more solemn character than that generally used for the Psalms, and thus making it the culminating point of interest in the Service of Tenebræ, originated with Pope Leo X, whose Master of Ceremonies, Paride Grassi, tells us that it was first sung to a Faux-bourdon in 1514. Unhappily, no trace of the music used on that particular occasion can now be discovered. The oldest example we possess was composed, in 1517, by Costanzo Festa, who distributed the words of the Psalm between two Falsi-bordoni, one for four Voices, and the other for five, relieved by alternate Verses of Plain Chaunt—a mode of treatment which has survived to the present day, and upon which no later Composer has attempted to improve. Festa's Miserere is the first of a collection of twelve, contained in two celebrated MS. volumes preserved among the Archives of the Pontifical Chapel. The other contributors to the series were, Luigi Dentice, Francesco Guerrero, Palestrina, Teofilo Gargano, Francesco Anerio, Felice Anerio, an anonymous Composer of very inferior ability, Giovanni Maria Nanini[1], Sante Naldini, Ruggiero Giovanelli, and, lastly, Gregorio Allegri—whose work is the only one of the twelve now remaining in use. So great was the jealousy with which these famous compositions were formerly guarded, that it was all but impossible to obtain a transcript of any one of them. It is said, that, up to the year 1770, only three copies of the Miserere of Allegri were ever lawfully made—one, for the Emperor Leopold I; one, for the King of Portugal; and, a third, for the Padre Martini. Upon the authority of the last-named MS. rests that of nearly all the printed editions we now possess. P. Martini lent it to Dr. Burney, who, after comparing it with another transcription given to him by the Cavaliere Santarelli, published it, in 1790, in a work (now exceedingly scarce), called 'La Musica della Settimana Santa,' from which it has been since reproduced, in Novello's 'Music of Holy Week.' The authenticity of this version is undoubted: but it gives only a very faint idea of the real Miserere, the beauty of which depends almost entirely on the manner in which it is sung. A curious proof of this well-known fact is afforded by an anecdote related by Santarelli. When the Choristers of the Imperial Chapel at Vienna attempted to sing from the MS. supplied to the Emperor Leopold, the effect produced was so disappointing, that the Pope's Maestro di Capella was suspected of having purposely sent a spurious copy, in order that the power of rendering the original music might still rest with the Pontifical Choir alone. The Emperor was furious, and despatched a courier to the Vatican, charged with a formal complaint of the insult to which he believed himself to have been subjected. The Maestro di Capella was dismissed from his office: and it was only after long and patient investigation that his explanation was accepted, and he himself again received into favour. There is no reason to doubt the correctness of this story. The circumstance was well known in Rome: and the remembrance of it added greatly to the wonderment produced, nearly a century later, by a feat performed by the little Mozart. On the Fourth Day of Holy Week, 1770, that gifted Boy—then just fourteen years old—wrote down the entire Miserere, after having heard it sung, once only, in the Sistine Chapel. On Good Friday, he put the MS. into his cocked hat, and corrected it, with a pencil, as the Service proceeded. And, not long afterwards, he sang, and played it, with such exact attention to the traditional abellimenti, that Cristoforo, the principal Soprano, who had himself sung it in the Chapel, declared his performance perfect.

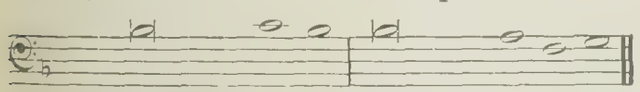
Since the time of Mozart, the manner of singing the Miserere has undergone so little radical change, that his copy, were it still in existence, would probably serve as a very useful guide to the present practice. Three settings are now used, alternately—the very beautiful one, by Allegri, already mentioned; a vastly inferior composition, by Tommaso Bai, produced in 1714, and printed both by Burney and Novello; and another, contributed by Giuseppe Baini, in 1821, and still remaining in MS. These are all written in the Second Mode, transposed; and so closely resemble each other in outward form, that, not only is the same method of treatment applied to all, but a Verse of one is frequently interpolated, in performance, between two Verses of another. We shall, therefore, confine our examples to the Miserere of Allegri, which will serve as an exact type of the rest, both with respect to its general style, and to the manner in which the far-famed Abellimenti are interwoven with the phrases of the original melody. These Abellimenti are, in reality, nothing more than exceedingly elaborate four-part Cadenze, introduced in place of the simple closes of the text, for the purpose of adding to the interest of the performance. Mendelssohn paid close attention to one which he heard in 1831, and minutely described it in his well-known letter to Zelter: and, in 1840, Alessandro Geminiani published, at Lugano, a new edition (now long since exhausted) of the music, with examples of all the Abellimenti at that time in use. Most other writers seem to have done their best rather to increase than to dispel the mystery with which the subject is, even to this day, surrounded. Yet, the traditional usage is not so very difficult to understand; and we can scarcely wonder at the effect it produces, when we remember the infinite care with which even the choral portions of the Psalm are annually rehearsed by a picked Choir, every member of which is capable of singing a Solo.

The first Verse is sung, quite plainly, to a Faux-bourdon, for five Voices, exactly as it is printed by Burney, and Novello; beginning *pianissimo*, swelling out to a thrilling *forte*, and again taking up the point of imitation *sotto voce*.

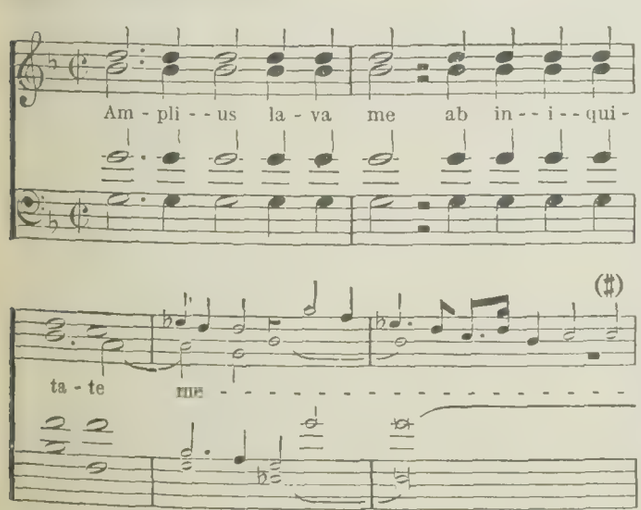
[1] Nanini's work is little more than an adaptation of Palestrina's, with an additional Verse for nine Voices.



The second Verse is sung, in unisonous Plain Chaunt, to the Second Tone, transposed.



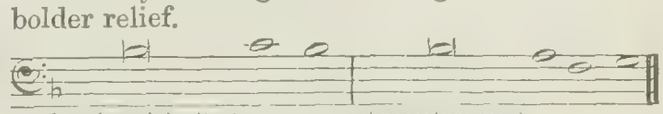
We first meet with the Abellimenti in the third Verse, which is sung in the form of a Concertino—that is to say, by a Choir of four choice Solo Voices. In the following example, the text of the Faux-bourdon is printed in large notes, and the two Abellimenti—one at the end of each clause—in small ones.[1]



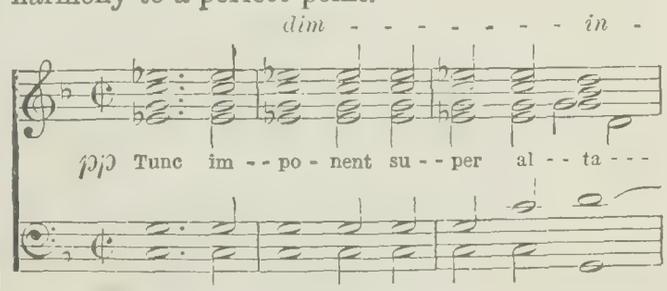
[1] The accidentals in brackets are undoubtedly due to the caprice of individual Singers.

In describing this beautiful passage, Mendelssohn says, 'The *Abellimenti* are certainly not of antient date; but they are composed with infinite talent, and taste, and their effect is admirable. This one, in particular,[2] is often repeated, and makes so deep an impression, that, when it begins, an evident excitement prevades all present. . . . The Soprano intones the high C, in a pure soft voice, allowing it to vibrate for a time, and slowly gliding down, while the Alto holds its C steadily; so that, at first, I was under the delusion that the high C was still held by the Soprano. The skill, too, with which the harmony is gradually developed, is truly marvellous.'

The unisonous melody of the fourth Verse serves only to bring this striking effect into still bolder relief.

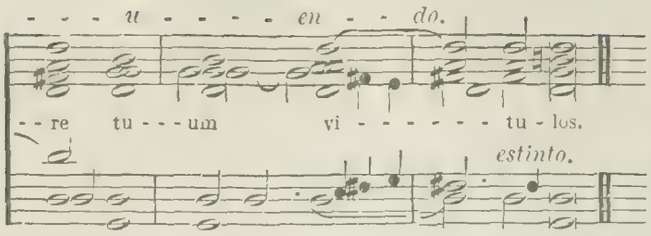


The fifth Verse is sung like the first; the sixth, like the second; the seventh, like the third; and the eighth, like the fourth: and this order is continued—though with endless variations of *Tempo*, and expression—as far as the concluding Strophe, the latter half of which is adapted to a Double Chorus, written in nine parts, and sung very slowly, with a constant *ritardando*, 'the singers diminishing or rather extinguishing the harmony to a perfect point.'[3]



[2] That is, the last shewn in our example.

[3] These words are Burney's. Adami's direction is, *L'ultimo verso del Salmo termina a due Cori, e però sarà la Battuta Adagio, per finirlo Piano, smorzando poco a poco l'Armonia.*



When the last sounds have died away, a short Prayer is sung by the Pope: at a signal given by the Master of Ceremonies the last Candle is brought forth from its hiding-place behind the Altar: and the congregation disperses. It would be impossible, in an article like the present, to enter into the symbolical meaning attached, either to the hiding of the Candle, or to any other part of the Ceremony. Suffice it to say that everything has a symbolical meaning, which is explained, to some extent, in a little pamphlet,[1] annually sold, in Rome, during the Holy Week. That this elaborate system of symbolism tends to predispose the mind of the hearer towards a fuller appreciation of the beauty of the music is undeniable. On the other hand, it will be readily understood that much of the effect produced depends upon the quality of the Voices employed—especially, that of the Sopranos. Fifty years ago, a very celebrated Sopranist, named Mariano, sang the higher passages with wonderful delicacy and pathos: but, even with Voices of ordinary capacity, the habit of constantly practising together, without instrumental accompaniment of any kind, leads to a perfection of style quite unattainable by those who are accustomed to lean on the Organ for support. [W.S.R.]

MISSA BREVIS. A Mass of moderate length, intended rather for use on ordinary occasions, than on Festivals of very great solemnity.

The subjects of the Missa Brevis are almost always original; as in the charming example, by Andrea Gabrieli, printed, on the authority of a valuable MS. copy, in the first volume of Proske's 'Musica Divina.' This rule, however, is not universal. Palestrina's Missa Brevis—a work of unapproachable beauty, and perfectly complete in all its parts, notwithstanding the comparatively short time it occupies in performance—is founded upon Canti fermi derived from the melody of 'Audi filia,' a Plain Chaunt *Tractus*, which has also been very finely treated, in a Mass of earlier date, by Claude Goudimel. [W.S.R.]

MISSA PAPÆ MARCELLI. A very celebrated Mass, composed in the year 1565 by Palestrina; and printed in 1567 in his Second Book of Masses, dedicated to Philip II. King of Spain. The origin of its title has been hotly disputed; though all that is really known upon the subject is, that the only name by which it has ever been distinguished was given to it by the Composer himself, fully ten years after Pope Marcellus II. had breathed his last. It was written at the instance of a Commission, appointed by Pope Pius IV. to suppress certain vicious Schools of Ecclesiastical Music condemned by the Council of Trent; and gave such unqualified satisfaction, that it was at once accepted as a model of the style to be thenceforth generally adopted. For a more detailed analysis of its characteristics, and a fuller account of the circumstances which led to its production, see MASS, and PALESTRINA. [W.S.R.]

MISSA SINE NOMINE. A Mass, composed upon original subjects, in place of a Plain Chaunt Canto fermo. Examples will be found among the works of Josquin des Prés, Palestrina, and other composers of the 15th and 16th centuries. [W.S.R.]

MISSA SUPER VOCES MUSICALES (*Missa, Do, Re, Mi, Fa, Sol, La*). A Mass in which the six sounds of the Hexachord are used as a Canto fermo. [See HEXACHORD.] Splendid specimens of the style are extant, by Josquin des Prés, Palestrina, and Francesco Suriano. [W.S.R.]

MITCHELL, JOHN, deserves a place in these columns on account of his close connection with musical enterprise in London for many years. He was born there April 21, 1806, and died December 11, 1874. For a large part of his life he was one of the most prominent musical managers and agents in the metropolis. In 1837 he introduced opera buffa at the Lyceum Theatre; including Betly, L'Italiana in Algieri, Elisa e Claudio, and others, for the first time in England. In 1849 and 1850 he opened the St. James's Theatre with an excellent French company for comic opera, with Le Domino Noir, L'Ambassadrice, La Dame blanche, Zanetta, Richard Cœur de Lion, Le Chalet, and many other first-rate works. Of the French plays which he produced at the same theatre, with Rachel, Regnier, and many other great actors, through a long series of years, this is not the place to speak. In 1842 Rossini's 'Stabat Mater' was brought out under his direction for the first time in England. In 1853 he first brought over the Cologne Choir to England. Few men were better known than John Mitchell in all musical circles. Whatever he did was done as well as he could possibly do it, and he was esteemed and beloved as an honourable man of business and generous friend. [G.]

MIXED CADENCE. The two most distinct and obvious forms of cadence are such as are formed either by the succession of dominant or of subdominant and tonic harmony, and these are respectively called Authentic and Plagal cadences. The term 'Mixed' has been applied to a cadence which is in some senses a combination of these two forms, by having both subdominant and dominant harmony in close juxtaposition immediately before the final tonic chord, by which means the tonality is enforced both by the succession of the three most important roots in the key, and also by giving all the diatonic notes which it contains. [C.H.H.P.]

MIXED MODES. Writers on Plain Chaunt apply this term to tonalities which embrace the entire compass of an Authentic Mode, in combination with that of its Plagal derivative: thus, the Mixed Dorian Mode, extends from A, to the next D but one above it; the Mixed Phrygian,

[1] 'Manuel des Cerémonies qui ont lieu pendant la Semaine Sainte.' (Rome, Imprimerie de Saint-Michel.)

from B, to the next E but one; the Mixed Lydian, from C, to the next F but one; and the Mixed Mixolydian, from D, to the next G but one. [See MANERIA.]

A very fine example of Mixed Mixolydian, (Modes VII and VIII, combined), is to be found in the Melody of 'Lauda Sion.' [See LAUDA SION.]

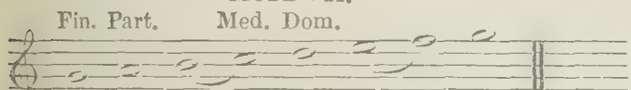
Polyphonic Music for unequal Voices is always, of necessity, written in Mixed Modes: since, if the Treble and Tenor sing in the Authentic Mode, the Alto and Bass will naturally fall within the compass of its Plagal congener; and, *vice versa*. The Composition is, however, always said to be in the Mode indicated by its Tenor part. [W.S.R.]

MIXED VOICES. The English term for a combination of female and male voices, as opposed to 'Equal voices,' which denotes male or female voices alone. Thus Mendelssohn's part-songs for S.A.T.B. are for mixed voices, and those for A.T.T.B. for equal voices. [G.]

MIXOLYDIAN MODE. (Lat. *Modus Mixolydius*; *Modus Angelicus.*) The Seventh of the Ecclesiastical Modes. [See MODES, THE ECCLESIASTICAL.]

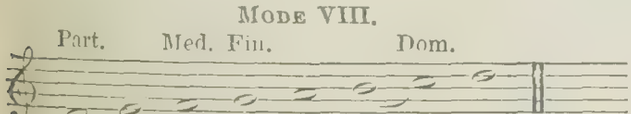
The Final of the Mixolydian Mode is G. Its compass, in the Authentic form, extends upwards from that note to its octave; and its semitones occur between the third and fourth, and the sixth and seventh degrees. Its Dominant is D, its Mediant, C (B being rejected, on account of its forbidden relations with F), and its Participant, A. Its Conceded Modulations are B, and E; and its Absolute Initials, G, B, C, D, and sometimes, though not very frequently, A. The subjoined example will give a clear idea of its most prominent characteristics:—

MODE VII.



In its Plagal, or Hypomixolydian form, (Mode VIII, *Modus Hypomixolydius. Modus perfectus*), its compass lies a Fourth lower—from D to D; and the semitones fall between the second and third, and the sixth and seventh degrees. The Dominant of this Mode is C; B being inadmissible, by reason of its *Quinta falsa* with F. Its Mediant is F—for which note A is sometimes, though not very frequently, substituted, in order to avoid the false relation of *Mi contra Fa*, with B. [See MI CONTRA FA.] Its Participant is the lower D. Its Conceded Modulations are, the upper D, and B; and its Absolute Initials, the lower C, (below the normal compass of the mode), D, F, G, A, and C.

MODE VIII.



In performance, Mode VII is almost always transposed, in order to escape the high range of its upper notes. Mode VIII, on the contrary, lies well within the compass of ordinary Voices.

The Antiphon, 'Asperges me,' as given in the Roman Gradual, and the Sarum Melody of 'Sanctorum meritis,' printed in the Rev. T. Helmore's 'Hymnal Noted,' may be cited as highly characteristic examples of the use of Mode VII; and an equally perfect illustration of that of Mode VIII will be found in the Melody of 'Iste confes sor,' as given in the Roman Vesperal.[1]

In Polyphonic Music, the Mixolydian Mode is used, with great effect, both in its Authentic and Plagal form. We can scarcely call attention to a finer instance of the use of the VIIth mode than Palestrina's Missa 'Dies sanctificatus'; or, of that of the VIIIth, than his Missa 'Iste confessor.' [W.S.R.]

MIXTURE. An organ stop ordinarily furnished with from two to five comparatively small pipes to each key. It is compounded of the higher-sounding and therefore shorter members of the 'foundation' and 'mutation' classes of stops, combined or 'mixed,' and arranged to draw together, as they, practically, are seldom required to be used separately. The Mixture represents or corroborates the higher consonant harmonic sounds suggested by nature, and in the bass produces tones to the third or fourth octave above the unison or chief foundation tone. As the musical scale ascends, the higher harmonics become weak and inaudible to the ear; hence in a Mixture stop it is customary to discontinue the higher ranks as they ascend, one or more at a time, and insert in lieu a rank of lower tone than was previously in the stop, but appearing as a separate stop. This alteration is called a 'break.' These return-ranks serve the best of purposes. In a Pianoforte it is well known that the strings increase in number from one in the bass to two higher up, and afterwards to three, to preserve an evenness in the tone. In a similar manner the return-ranks, when well managed, considerably reinforce the strength of the treble part of the organ. [MUTATION.] [E.J.H.]

MIZLER (Mitsler), LORENZ CHRISTOPH, born at Heidenheim, Würtemberg, July 25, 1711, died at Warsaw March 1778; was educated at the Gymnasium of Anspach and the University of Leipzig. He was one of Bach's scholars. In 1734 he became a magistrate, and was generally a cultivated and prominent person. His claim to perpetuity is his connexion with the 'Association for Musical Science,' which he founded at Leipzig in 1738 and kept together. Amongst its members were Handel, Bach, and Graun. Bach composed a 6-part Canon and the Canonical Variations on 'Vom Himmel hoch,' as his diploma pieces. Mizler wrote a treatise on Thorough Bass (Generalbasslehre), in which he seems to have pushed the connexion of music and mathematics to absurdity. (See Spitta, Bach, ii. 502–506.) [G.]

MOCK DOCTOR, THE. The English version, by Chas. Kenny, of Barbier and Carré's adaptation of Gounod's 'Médecin malgré lui'; produced at Covent Garden, Feb. 27, 1865. [G.]

[1] Care must be taken to distinguish these Melodies from the Roman 'Sanctorum meritis,' and the Sarum 'Iste confessor', which are not in the Modes here indicated.

MODE (Lat. *Modus*; Ital. *Modo*; Old Eng. *Moode*). A term employed in mediæval music, to indicate the relative duration of the Large, the Long, and the Breve.

Mode is of two kinds—the Greater, and the Lesser. The former regulates the proportions of the Large (maxima) to the Long: the latter, that of the Long to the Breve. Both kinds may be either Perfect, or Imperfect.

In the Great Mode Perfect, the Large is equal to three Longs. In the Great Mode Imperfect, it is equal to two only.

In the Lesser Mode Perfect, the Long is equal to three Breves. In the Lesser Mode Imperfect, it is equal to two.
